ClearPass Visibility - Understand what's connected to your multi-vendor network

What is ClearPass Visibility?

A software packaged service that positions and deploys **ClearPass** (Link to ClearPass introduction), focused primarily on visibility. Both visibility of what's connecting to the network and visibility into what's changing on the network.

Value to the customer

Security & Networks are concerned; they don't know what's out there. They are being pressured to provide network transformation, but you can't control and segment what you can't see. Visibility is the first step – and possibly the only step in the customer's mind right now.

- Understanding points of vulnerability
- 63% percent of respondents highlighted the importance of network traffic visibility
- Over half said that network access control provides network visibility and was a key component of their overall security strategy
- 52% say NAC is a key solution for both wired and wireless networks

*Ponemon/Aruba – How AI and Automation can close the IT Security Gap

VISIBILITY: PROFILE ALL THE THINGS

KNOW WHATS CONNECTED

REAL TIME 24x7

AGENTLESS

De-risk the network

Get Built-In reports with simple to view charts along with detailed drill down info, plus custom report creation. These include Device category breakdown – device types and counts, and Endpoint classification status – known, unknown, disabled; location and IP, MAC address.

Aruba ClearPass can factor in differing switch levels into its policy – e.g. be able to provide the maximum level of security that the infrastructure will support on every occasion, on multi-vendor switching and WLAN's.

Time to value

Understand what's on your network by receiving a proposed vulnerability report in just **2 days.** ClearPass Visibility provides that starting point as well as the seamless path to full control.

Multi-vendor output - What's included with ClearPass Visibility?

• Virtual Appliance (VMWare ESXi, Hyper-V or KVM).

• 100 Access licenses – Provides Device Visibility, plus Access Control for up to 100 concurrent TACACS/RADIUS, or Guest connections.

• Built-In reports with simple to view charts along with detailed drill down info, plus custom report creation.

Why buy ClearPass Visibility

- Automatic detection and categorization of endpoints for security and audit demands. Monitoring of all devices, including those that come and go.
- Agentless visibility that lets you find devices like BYOD smart phones, and IoT.
- Contextual attribute sharing that extends visibility to a wide range of security and IT-services solutions.

With the ClearPass Visibility starter bundle, your customers can protect their network for just 0.17% of the average global data breach
