LOCOMOTIVES, ROLLING STOCK & ACCESSORIES

December 2021

Dear O Scale Model Railroader,

Welcome to the Winter 2021/22 Atlas O Premier Catalog. Since the Atlas acquisition of the majority of MTH's Premier line of locomotives and rolling stock molds, the team at Atlas has been working tirelessly to deliver the products announced in the first Premier Catalog. Concurrently, research and development has continued behind the scenes on additional products and we are happy to offer those announcements on the pages within!

Catalogs such as this one are the basis of Atlas' distinctive "guaranteed" pre-order system. Before the Research & Development department gives the final go ahead for production, Atlas announces to its customers the products we are preparing to make. This announcement comes in the form of our Atlas Model (HO & N) and Atlas O Premier Catalogs that provide our customers with the opportunity to arrange a guaranteed pre-order if placed by the given deadline. If possible, Atlas will try to fill orders placed after a given deadline, but these can not be guaranteed. Occasionally, we offer 'Limited Availability' products for which we have speculated on order quantities and therefore these orders cannot be guaranteed. Either way, its best to place orders as soon as possible for your best chances at acquiring a selected product.

Currently, the Atlas O locomotive line is being expanded with offerings of the Premier P-42 Genesis, featuring prototypical Amtrak 50th Anniversary paint schemes, and F40PH locomotives. All of these offerings will come equipped with MTH DCS, Proto-Sound 3.0! They will also be joined by a third run of the ever popular Atlas Master line EMD F-7 A/B locomotives, with Lionel TMCC.

Two types of passenger cars are featured in this months Catalog, including: the Atlas O Premier 50th Anniversary Amfleet® cars, decorated in cooperation with Amtrak, will match the Atlas O prototypically decorated 50th Anniversary Amtrak P-42 Genesis locomotives. In addition, the previously announced Atlas O Master Horizon Comet cars will match the Atlas O Premier F40PH offerings. There are several rolling stock models being announced in the Master, Premier and Trainman lines including: Russell Snow Plows, Centerflow Hoppers, 55' All Door Box Cars and C&O Cabooses - with authentic prototypical paint schemes, including schemes to match the F7 Locomotives. Rounding out the announcements are a full complement of structures, accessories and electronics to make your layout complete! To remain updated on all Atlas O products and special announcements, sign up for the Atlas Insider Email at <https://shop.atlasrr.com>.

Wishing you and your families the very best in the coming Holiday Season,
Drew Postle, Atlas Sales Manager

Amtrak's Genesis was the first newly designed American passenger diesel in nearly four decades. Beginning in 1993, it replaced Amtrak's fleet of EMD F40PH diesels, which were really modified freight engines — designed to be resellable in case Amtrak went out of business.

Amtrak's president at the time was Graham Claytor, a lover of trains who had previously headed the Southern Railway and been Secretary of the Navy. Cesar Vergara, a young industrial designer who was Amtrak's Manager of Car Design, asked Claytor for the chance to give the new engine a bold new look. The result was unlike anything else on American rails. It launched Vergara into a career of designing new passenger equipment for railroads across North America and around the world, from Talgo trains in the Pacific Northwest to the newest engines today in Boston area commuter service.

Unlike most diesels, whose structural strength comes from a heavy frame, the Genesis features monocoque construction, in which the body shell carries much of the load instead of just going along for the ride. This allows for a lighter frame, less weight overall, and greater fuel economy. The Genesis is one-third more powerful than the F40PH it replaced, but burns 22% less fuel. Its height is also 14" shorter than its predecessor, allowing it to travel anywhere Amtrak goes, including the tunnels into Penn Station and Grand Central Station in New York.

To make the body easy to fabricate and repair, Vergara used only flat surfaces and sections of cylinders and cones; there are no compound curves like those on the "bulldog" nose of older E-units and F-units. The Genesis name, intended to signify a break from past designs, was chosen in an employee contest at General Electric's Erie, PA plant, which built the locomotives. The design has won several awards, including a Brunel Award, which recognizes outstanding railway designs around the world, and a Presidential Design Award from the U.S. government. The look of the Genesis is not without its detractors, however. Trains magazine contributor Fred Frailey wrote that "the front of a P42 looks like an armored tank, those shallow windows the slits from which the weapons officer gains sight of targets."

There are actually three versions of the Genesis. The original 1993 version, model P40DC, has 4,000 horsepower and a 103 mph top speed. Under the hood it is basically a 16-cylinder General Electric Dash 8. Model P32AC, introduced in 1995, was designed specifically for service into New York City, where diesel power is prohibited in stations and approach tunnels under the Hudson River. The P32AC is equipped with retractable pickup shoes for drawing power from the electrified third rail into Grand Central and Penn Station.

The third version and the prototype for our Premier model is the P42DC, built from 1996-2001. Over 200 in number, this class of engines is the backbone of Amtrak service everywhere except the electrified Northeast Corridor. Compared with the earlier P40DC, the P42 features an improved engine uprated to 4200 hp, more modern electronics and cab displays, and a higher top speed of 110 mph.

Features:

- Intricately Detailed, Durable ABS Body
- Die-Cast Truck Sides, Pilots and Fuel Tank
- Metal Chassis
- Metal Handrails and Horn
- Moveable Roof Fans
- Metal Body Side Grilles
- Detachable Snow Plow
- (2) Handpainted Engineer Cab Figures
- Authentic Paint Scheme
- Metal Wheels, Axles and Gears
- (2) Remote-Controlled Proto-Couplers
- O Scale Kadee-Compatible Coupler Mounting Pads
- Prototypical Rule 17 Lighting
- Directionally Controlled Constant Voltage LED Headlight
- Lighted LED Cab Interiors
- Illuminated LED Number Boards
- Lighted LED Front Marker Lights
- Operating LED Ditch Lights
- (2) Precision Flywheel-Equipped Motors
- Operating ProtoSmoke Diesel Exhaust
- Onboard DCC/DCS Decoder
- Locomotive Speed Control In Scale MPH Increments
- 1:48 Scale Proportions
- Proto-Scale 3-2 3-Rail/2-Rail Conversion Capable
- Proto-Sound 3.0 With The Digital Command System
- Featuring Passenger Station Proto-Effects
- Unit Measures: 18 1/2" x 2 1/2" x 3 3/4"
- Operates On O-31 Curves (3-Rail)

It is hard to match the excitement and beauty of a long, sleek passenger train speeding down the rails. Atlas' Premier Line scale streamlined passenger cars and sets will bring exactly the right, realistic look to your passenger consists.

These Atlas Premier Line models feature intricately detailed, yet durable ABS bodies atop smooth rolling die-cast metal trucks resulting in a lightweight car that won't bog down a locomotive struggling to pull heavy aluminum passenger cars. What's more, each Premier Line passenger car features detailed car interiors and overhead lighting for a realistic and authentic appearance.

The F40PH was designed for Amtrak as a commuter and medium-haul engine, to complement its long-haul fleet of SDP40F diesels. But when the SDP40Fs fell from grace due to poor reliability, a rough ride and derailment issues, the F40PH became the backbone of Amtrak's locomotive fleet for decades.

Introduced in 1976, the F40PH was essentially a passenger version of the mid-1960s GP40 freight diesel. It shared the earlier engine's turbocharged V-16 3000 hp (later updated to 3200 hp) model 645 motor, and added an HEP (head-end power) generator for passenger lights, heat and air conditioning. An enclosed cowl afforded en-route, all-weather access to the F40PH's engine room if necessary. In short order, commuter railroads across the United States and Canada followed Amtrak into EMD's order books for this versatile, reliable engine.

Did You Know? The F40PHs were nicknamed "Screamers" because their engines run at a high rpm even at rest, in order to power the HEP generator that keeps the passenger cars comfortable.

Based off of a Pullman-Standard design, the Comet II was the successor to these very popular commuter cars. Purchased in large quantities by multiple commuter agencies, their sleek yet modern design features two end doors, built for high and low level platforms, along with bathrooms and Head-End (HEP) A/C and heating.

Around the same time, their cousins, the Horizon fleet, was built for longer distance services for AMTRAK. These cars feature 2x2 seating and separate cars for food and beverage services.

TURN TO PAGES 24-25 AND CHECK OUT OUR MATCHING CUPOLA CABOUSES!

By the late-1940s, the majority of North American railroads accelerated re-equipping and re-designing their motive power fleets. The war effort had taken its toll on aging steam locomotives and their supporting infrastructure, and new, more powerful diesel locomotives began to be seen as viable replacements in the modern postwar economy. The Electro Motive Division (EMD) of General Motors set the standard for modernization with their E and F series of cab-unit passenger and freight locomotives beginning in the mid-1930s. The most successful of the series, the F7, sold over 3800 units between 1949 and 1953, and was employed on most of the major American railroads, where they often sported a wide variety of colorful paint schemes on both passenger and freight locomotives.

Features:

- Steam generator detail on either the A or B unit as appropriate by railroad
- Highly detailed body with railroad-specific details
- Available in powered and unpowered versions
- All metal grab irons
- Die-cast metal chassis, fuel tank and trucks
- Twin flywheel-equipped motors
- Directional golden-white LED lighting
- Accurate painting and lettering
- Close-coupling between units
- Weight: 5 lbs/unit; Length: Approx. 12.5"/unit
- Minimum diameter curve (3-Rail) (A-unit): O-36
- Minimum diameter curve (3-Rail) (B-unit): O-45
- Minimum radius curve (2-Rail): 36"

3-Rail TMCC Features:

- Electric Railroad Co. "Cruise Commander" Technology
- IMPROVED RailSounds™ digital sound system
- LEGACY COMPATIBLE (100 Speed Steps)
- Operating diesel exhaust unit
- Lionel® TrainMaster Command Control
- "A" units include alternate full scale pilot for great look

2-Rail Gold Features:

- Sound equipped

The first all-steel cabooses built for the Chesapeake & Ohio Railroad were produced in 1937 by the Magor Car Corporation in Clifton, N.J. Magor, along with St. Louis Car Company and ACF, ultimately built a total of 350 cabooses for the C&O using a similar design. The last were produced in 1949. Through subsequent rebuilding and modernization, many remained in service through the end of regular caboose usage in the 1980s. Cabooses of a similar design were also built for Pere Marquette, Missouri Pacific and Chicago & Eastern Illinois.

Features:

- Separately applied see-through running boards, window awnings, window glazing, smoke stack, brake wheels and roof grab irons
- Premium die-cast couplers and friction bearing caboose trucks
- Weighted, detailed plastic underframe
- Interior lighting with on/off control switch on chassis
- 2-Rail cars feature 33" scale wheels and body-mounted scale couplers
- Accurate and colorful decoration
- Minimum diameter curve: O-31 (3 rail)
- Minimum radius curve: 24" (2 rail)
- Some assembly required for undecorated models.

**CSX Licensed Product*

For railroads in much of the U.S. and Canada, dealing with snow is a perennial problem. The earliest railroad plows were likely derived from agricultural plows, and were the first instance of a plow being pushed from behind rather than pulled by horses or oxen. In 1840, little more than a decade after the first steam engine plied American rails, Charles Lowbaert was granted a patent for a wedge, or "bucker," railroad plow. Like our model, that pioneering snowplow featured an inclined plane to bring the snow up off the rails and a pointed, triangular wedge to throw it to both sides of the track. Over time, railroad plows evolved into an arsenal of equipment ranging from engine-mounted blades to the ultimate snow-fighting weapon, the rotary snow plow.

Features:

- Metal Wheels and Axles
- Die-Cast 4-Wheel Trucks
- Operating Die-Cast Metal Couplers
- Colorful, Attractive Paint Schemes
- Fast-Angle Wheel Sets
- Needle-Point Axles
- 1:48 Scale Dimensions
- Stamped Metal Floors
- Separate Metal Handrails
- Operates On O-31 Curves (3-Rail)

Although covered hoppers had achieved widespread use by the 1950s, it wasn't until the following decade that they began to carry North America's grain harvest. Prior to the 1960s, U.S. and Canadian farmers sent their wheat and other grains to market in 40' box cars. The crop was packed in sacks or in cars with disposable grain doors that covered most of the door opening and turned the car into a rolling grain bin. Either way, loading and unloading was labor-intensive and time-consuming.

All that changed with American Car and Foundry's (ACF's) introduction of the Centerflow covered hopper in 1961, followed the next year by Pullman-Standard's competitive PS-2CD covered hopper. Prior to the Centerflow, the typical covered hopper was little more than a coal hopper with a roof. Dry products such as salt were loaded through roof hatches and unloaded by gravity through doors in the floor. Like most freight cars of their era, these cars had a center sill. This support beam ran down the middle of the car between the left and right sets of unloading doors, and that led to problems in emptying the car. Typically some of the load would cake or "bridge" on the center sill, and the car would have to be vibrated to loosen the mess and achieve full unloading. Of course the vibration tended to shorten the life of the car.

The Centerflow's key innovation was the elimination of the center sill by relocating the car's main support beams to the bottom edge of each side. This enabled the discharge hopper doors to be located along the centerline of the car, allowing for easier, more complete unloading and banishing the problem of caking on the center sill. In addition, the car sides were curved to allow for more complete filling of the car. Stub center sills at each end provided a place to mount the trucks. The Centerflow was the first larger-capacity covered hopper designed for grain and products of similar density.

By the 1980s, ACF's Centerflow, along with covered grain hoppers from other builders, had spelled the end of the 40' box car in grain service. In addition to grain, Centerflows found work hauling a variety of other light to medium-density dry commodities, including salt, clay, chemicals, phosphates and other minerals.

From the dawn of railroading, the boxcar was the vehicle of choice for transporting solid goods that needed protection from the elements. And one of the biggest bottlenecks in shipping was getting the cargo in and out of a boxcar's doors. Over the years, doors grew wider to speed things up, and other expedients were tried - like end doors on automobile cars and small "lumber doors" on the ends of Milwaukee Road boxcars. Perhaps the ultimate solution was this all-door boxcar, where the entire side consisted of four sliding doors that could be opened in pairs to provide a 25' wide doorway.

The idea for these cars was sketched on a napkin in 1962 by Flake Willis, president of the McCloud River Railroad. A California logging and lumber carrier, the McCloud was looking for a lumber-carrying vehicle with the protection of a boxcar and the ease of loading of a flatcar. Delivered later the same year, the prototype all-door car proved successful enough that the McCloud River, now owned by U.S. Plywood, ordered 100 similar cars in 1967 from Thrall Car Manufacturing Co. and Southern Iron Works. "Thrall Door" cars were purchased by lumber carriers across the U.S. and Canada through the late 1960s and early 1970s.

McCloud retired their fleet in the 1970s. Other carriers, however, continued to roster Thrall-Door cars for several decades. Sporadic railfan sightings into the early 2000s indicated that some all-door cars likely served out the maximum 40-year life in interchange service allowed by the AAR for cars built before 1974.

In the early days of railroading, the job of cleaning up a wreck was usually done by men and horses. The first steam wrecking crane, a relatively small affair with a 20-ton lifting capacity, appeared in 1883. Its maker, Industrial Works of Bay City Michigan, introduced a fully revolving model a decade later. As the product became popular, Industrial Works, now renamed Industrial Brownhoist, and its chief competitor, Bucyrus-Erie of South Milwaukee, introduced larger and larger models to cope with increasing locomotive and car weights. By the World War I era, 120 tons was a common size, and by the Second World War, crane sizes topped out at around 250 tons of lifting capacity.

While a wreck train on the way to a wreck had priority over other traffic, cranes were subject to rather low speed restrictions, typically around 35 mph with the boom trailing and 25 mph if the boom was facing forward. The larger hook closer to the cab was actually the main lifting hook, used for locomotives. The hook at the end of the boom was a lower-capacity auxiliary hook, used when more reach was needed. Slings, chains, and spreader bars were used to attach the hook to the car or locomotive being lifted; the hooks were never attached directly. While some cranes were capable of limited self-propulsion, that was only for positioning at a site, not for travel to and from wrecks or jobs.

Because of their importance and the urgent nature of their work, cranes were usually well maintained and lasted for many decades. Our model represents a typical 250-ton diesel-powered Industrial Brownhoist crane constructed in the post-WW II era; while some of these were built new as diesels, others were upgraded from steam-powered models.

Today wrecking cranes are relatively rare and seldom seen, as most wreck cleanup is done by outside contractors with trucked-in bulldozers and other heavy equipment. Most large railroads, however, still maintain a 250-ton crane or two like our model, just in case.

The crane tender had two jobs: to protect the crane's boom and enable it to be coupled with other cars on the way to a wreck site, and to carry the tools, chains, slings and other gear needed to clear a wreck. Unlike the crane itself, which was a precision piece of gear made by a specialized company, the crane tender was usually a home-built affair, cobbled together from whatever a railroad's shop crew had lying around. Our model represents a typical such car, built from what appears to be an older flatcar and an obsolete bobber caboose, functioning as an equipment shed.

The rest of a typical wreck train usually had the same hand-me-down look. Passenger and freight cars no longer fit for revenue service were recycled into crew, equipment, and tool cars for wreck and maintenance of way service.

O SCALE ELECTRONIC COMPONENTS GUARANTEED PRE-ORDERS IF PLACED BY WED. 1/19/2022

Product Info: <https://shop.atlasrr.com/d-668-november-2021-o-scale-catalog.aspx>

ESTIMATED ARRIVAL: **2nd Quarter 2022**

ORDER IN PIECES	ITEM	DESCRIPTION	MSRP / UNIT
	40-1000	Z-1000 Transformer	\$149.95
TOTAL PIECES ORDERED			

Z1000 Transformer - item #40-1000

FEATURES

- U.L. Approved
- 100 Watts Max Power Output
- Controller LED On Light
- Smooth Operating Throttle Knob
- Built-In Circuit Breaker Protection
- Individual Bell, Horn and Direction Buttons
- 14v Accessory Port
- 60Hz Operation Only

The most powerful ready-to-run train set transformer you can find, the Z-1000 boasts 100 watts of power, a U.L. approved design and separate 14v Accessory Ports. Its robust design will provide years of service and power enough for any starter set to a moderate size layout. The Z-1000 is the perfect solution for a growing O Gauge layout.

ESTIMATED ARRIVAL: **2nd Quarter 2022**

ORDER IN PIECES	ITEM	DESCRIPTION	MSRP / UNIT
	40-1000A	Z-1000 100Watt AC Power Brick	\$99.95
TOTAL PIECES ORDERED			

Z1000 100Watt AC Power Brick - item #40-1000A

FEATURES

- U.L. Approved
- 100 Watts Max Power Output
- Built-In Circuit Breaker Protection
- 14v Accessory Port
- TIU/Barrel Jack Adapter Cable

DCS users who don't need a conventional transformer and controller can use this 100 watt power supply for small and moderate sized layouts. Featuring a U.L. approved design & separate 14v AC Accessory Port, its robust design will provide years of service, Use the optional TIU/Barrel Jack adapter to make connecting it to the DCS Track Interface Unit quick and easy.

O SCALE ELECTRONIC COMPONENTS GUARANTEED PRE-ORDERS IF PLACED BY WED. 1/19/2022

Product Info: <https://shop.atlasrr.com/d-668-november-2021-o-scale-catalog.aspx>

ESTIMATED ARRIVAL: 2nd Quarter 2022

ORDER IN PIECES	ITEM	DESCRIPTION	MSRP/ UNIT
	50-1004	Accessory Interface Unit	\$139.95
TOTAL PIECES ORDERED			

FEATURES

- Control up to 10 Switches
- Control up to 10 Accessories
- Easy to Wire
- Operates With AC or DC Powered Switches & Accessories
- Daisy Chain up to Five AIUs per every TIU or WTIU

Accessory Interface Unit - item #50-1004

DCS is a system for controlling your entire layout — multiple sound-equipped engines, switches, and accessories — from one or more smart devices with the DCS App installed. DCS is compatible with all Proto-Sound 2.0- or 3.0- equipped locomotives. In O gauge, it is also compatible with locomotives equipped with Lionel® TMCC® and Legacy™, as well as conventional AC and DC-powered locomotives.

The full DCS Digital Command System is an all-encompassing network of components that brings true interactive wireless control to a model railroad. Users utilize their own smart device — iOS or Android — and an intuitive app to run multiple tracks, hundreds of trains and control switches and accessories. Bi-directional communication between locomotives and the system's WTIU WiFi Track Interface Unit makes adding and programming locomotives simple and easy. No more ID numbers to remember and no complex icons to decipher. It's fast, it's easy and it's fun!

The AIU Accessory Interface Unit is essentially a box containing a bunch of relays that are triggered from either a DCS Remote Handheld Controller or a iOS or Android smart device loaded with the DCS App. The AIU is connected to either the DCS TIU Track Interface Unit or WTIU WiFi Track Interface Unit and is used to operate track switches, lights, accessories and more. Essentially any model railroad component that can be controlled with a physical switch can be controlled with an AIU.

Accessories and switches are wired into the AIU in the same manner that they are connected to a physical switch. The AIU Operator's Manual details all the common accessory and switch hookup combinations. You'll have a layout wired in no time.

Each AIU can handle up to 10 switches and 10 accessories. You can even configure the accessory inputs to operate as switch inputs to allow up to 15 switches to be controlled by a single AIU. AIU's are connected to a TIU or a WTIU by the included special 6 pin harness cable and up to five AIUs can be daisy chained together and plugged into a single TIU or WTIU giving you control of up to 75 switches or 50 accessories for each TIU or WTIU.

PRE-ORDER DUE DATE: WEDNESDAY JANUARY 19TH 2022

O SCALE ELECTRONIC COMPONENTS GUARANTEED PRE-ORDERS IF PLACED BY WED. 1/19/2022

Product Info: <https://shop.atlasrr.com/d-668-november-2021-o-scale-catalog.aspx>

ESTIMATED ARRIVAL: 2nd Quarter 2022

ORDER IN PIECES	ITEM	DESCRIPTION	MSRP / UNIT
	50-1009	Proto Cast/ Programming 6' Mini-to-Mini Cable	\$9.95
TOTAL PIECES ORDERED			

Proto Cast/ Programming 6' Mini-to-Mini Cable
- item #50-1009

The Proto-Cast 6' Mini-to-Mini Cable is required for use with the DCS TIU Track Interface Unit or WTIU WiFi Track Interface Unit. The cable allows the user to utilize the DCS Proto-Cast function which takes digital sounds from an external device, like a radio, cd player, iPod or home stereo. Simply connect one end of the Proto-Cast cable to the external output jack of the external device and insert the other end of the cable into the TIU or WTIU Proto-Cast jack.

Once connected, you can broadcast the external device's sounds through a selected locomotive on the track by activating the Proto-Cast function via the DCS Remote Handheld Controller or the DCS App in any iOS or Android smart device. Play music or recorded announcements - virtually any type of sound through the locomotives speakers.

The Proto-Cast Cable can also be used to reprogram the TIU or WTIU firmware. Instructions for reprogramming the firmware can be found in the TIU and WTIU operating manuals.

ESTIMATED ARRIVAL: 2nd Quarter 2022

ORDER IN PIECES	ITEM	DESCRIPTION	MSRP / UNIT
	50-1032	TIU/TMCC Legacy 6' Connector Cable	\$24.95
TOTAL PIECES ORDERED			

TIU/TMCC Legacy 6' Connector Cable - item #50-1032

The TIU/TMCC-Legacy Connector Cable is used to connect the DCS Track Interface Unit (TIU) or DCS WTIU WiFi Track Interface Unit to the Lionel Command Base or Lionel Legacy Command Base for users wishing to use the DCS Remote Control Handheld or DCS App and their iOS or Android smart device to run TMCC and/or Legacy equipped locomotives in command mode on the same track as Proto-Sound 2.0 or later equipped locomotives.

When the cable is used with a DCS System being controlled by the DCS Remote Handheld Controller, DCS can control All Legacy equipped locomotives in command mode but does not have access to Legacy-specific features (ie; quillable whistle). All normal TMCC features can be accessed with DCS 4.0 and later firmware. When a DCS System is being controlled by the DCS App, users will have access to most Lionel Legacy features.

FEATURES

- Standard RS232 Serial Jacks
- Measures: 6' In Length

O SCALE ELECTRONIC COMPONENTS GUARANTEED PRE-ORDERS IF PLACED BY WED. 1/19/2022

Product Info: <https://shop.atlasrr.com/d-668-november-2021-o-scale-catalog.aspx>

ESTIMATED ARRIVAL: 2nd Quarter 2022

ORDER IN PIECES	ITEM	DESCRIPTION	MSRP/UNIT
	50-1034	Wi-Fi Interface Unit	\$179.95
TOTAL PIECES ORDERED			

WiFi Interface Unit - item #50-1034

FEATURES

- Simple Setup
- Stand Alone or Network Operating Modes
- Accessible from iOS or Android Smart Phones and Tablets
- 802.11n
- LED Indicators
- Operates On Standard AC Wall Power
- Includes Power Supply
- Includes USB Cable
- Requires TIU Updated With DCS Software Code 5.0
- Unit Measures: 25x35 mm

Owners of the DCS Digital Command System can now control their model railroad from any iOS or Android phone or tablet by simply connecting the DCS WiFi Interface Unit to the DCS TIU Track Interface Unit. The convenience of operating a model railroad with the same device you use throughout your daily life completely changes the DCS operating experience.

The large, bright full-color screens found on today's smart phones and tablets are superior to the 4-line gray-scale screen found on the DCS Remote Handheld Controller and make accessing the DCS features found inside your Proto-Sound 2.0 and 3.0 locomotives much, much easier. Better yet, the expanded range and speed of wifi allows your trains to respond to DCS commands faster and more reliably than ever before.

The DCS WiFi Module plugs into any DCS Track Interface Unit (TIU) and provides the user with wifi control over the layout when used with the M.T.H. DCS Mobile App. Setup is simple and quick. The module does not require a home wifi setup to function because the WIU broadcasts its own wifi signal. Simply connect your smart device to that signal as you would when connecting to any other wifi source and you're off and running. If desired, the WIU can also be easily incorporated into a home wifi network.

Product Info: <https://shop.atlasrr.com/d-668-november-2021-o-scale-catalog.aspx>

ESTIMATED ARRIVAL: 2nd Quarter 2022

ORDER IN PIECES	ITEM	DESCRIPTION	MSRP / UNIT
	50-1039	DCS WiFi Digital Command System 2	\$399.95
TOTAL PIECES ORDERED			

Today's DCS Digital Command System features an all-in-one WiFi Track Interface Unit (WTIU) that brings true interactive wireless control to a model railroad. Users utilize their own smart device — iOS or Android — and an intuitive app to run multiple tracks, hundreds of trains and control switches and accessories using the separately sold AIU Accessory Interface Unit. Bi-directional communication between locomotives and the system's WTIU makes adding and programming locomotives simple and easy. No more ID numbers to remember and no complex icons to decipher. It's fast, it's easy and it's fun!

DCS can also be controlled with a separately sold DCS Handheld Controller. Regardless of how you control it, DCS is compatible with all Proto-Sound 2.0 or 3.0 equipped locomotives as well as S Gauge and O Gauge locomotives equipped with Lionel® TMCC® and Legacy™ onboard systems; any conventional AC-powered locomotives; or conventional analog DC-powered locomotives in other scales, including N, HO, and G Gauge.

Featuring four channels, the new WTIU can now control conventional AC or DC locomotives allowing the user to control command and non-command equipped locomotives on the same track at the same time. The WTIU sets up in seconds and doesn't require a home WiFi system to operate and can receive commands from an unlimited number of smart devices.

WHAT IS COMMAND CONTROL?

In conventional model train operation, an AC or DC transformer varies track voltage to adjust engine speed and direction. Command systems such as DCS, however, put a constant voltage on the track (around 18 volts for DCS) and vary speed by telling each engine how much of that voltage to use.

Unlike conventional control, command control allows different engines to do different things, even when they are on the same track — like run at different speeds, go in different directions, or make different sounds. You can even combine several engines into a "lashup," working together under a single throttle.

How it works: In the DCS system, commands such as speed, direction, and sound control are sent as radio signals from a smart device to a receiver, which translates those signals into digital information. That digital signal is sent through the rails and picked up only by the appropriate engine — telling it to go, for example, 37 miles per hour, blow the whistle, or smoke more heavily.

SIMPLE, EASY SETUP!

The DCS System is simple to hook up. You'll have trains running in just minutes using the handheld or the App!

Each WTIU Fixed Input Channel can handle either AC or DC power. You can even mix and run one channel with DC power and the other with AC. This makes it easy to run HO Proto-Sound 3.0 equipped trains using the same WTIU you use to run all other Proto-Sound 2.0 or later locomotives.

Each WTIU Variable Input Channel accepts AC or DC power from virtually all AC or DC power supplies, including all M.T.H. AC transformers like the Z-4000, Z-1000, Z-750 and Z-500.

Once you've got power into the TIU, run the outbound channels directly to the track or to a terminal block for larger layouts. We recommend wiring the channels to the track in 15' sections to best distribute power and the DCS digital signal. Full details are explained in the DCS User Guide.

DCS WiFi Digital Command System 2
- item #50-1039

WTIU WIFI TRACK INTERFACE UNIT FEATURES

- All-In-One Command Control Transmitter
- Built-In WiFi
- 4-Channel Output With Fixed and Variable Voltage Ports
- 4-Channel AC or DC Power Input Ports
- Auxiliary Power Input Port
- USB Input Port
- RS-232 Serial Port
- Ethernet Input Port
- LED Activation Lights
- DCS Handheld Remote Tether Input
- AIU Accessory Interface Unit Input
- (2) Fixed AC and DC Voltage Output For Command Control Tracks
- (2) Variable AC and DC Voltage Outputs For Conventional and Command Control Tracks
- Wireless WiFi Control (iOS or Android) Using DCS App
- Tethered Layout Control Using DCS Handheld Remote

PROTO-SOUND 2.0 AND LATER LOCOMOTIVE SOUNDS

- Labor/Drift
- Boost/Brake
- Coupler Operation
- Volume Increase
- Engine Start Up
- Engine Mute
- Volume Decrease
- Engine Shut Down
- Headlight On/Off
- Proto-Cast On/Off
- Passenger Station/Freight Yard Proto-Effect Announcements
- Doppler On/Off
- Bell, Horn, Engine/Accent Volume
- Proto-Whistle
- Chuff Rate
- Proto-Chuff
- Cab Chatter
- Squeaking Brakes
- Wheel Clicky Clack
- Custom Sounds
- Auto Coupler Slack
- Doppler Loop

PROTO-SOUND 2.0 AND LATER LOCOMOTIVE ONBOARD FUNCTIONS

- Smoke Output Intensity Level Control
- Smoke On/Off
- Smoking Whistle
- Headlight On/Off
- Ditch Light Control
- Maximum Engine Speed
- Acceleration Rate
- Deceleration Rate
- Direction Startup Control
- Labored Smoke
- Brake Boost

PROTO-SOUND 2.0 AND LATER LOCOMOTIVE OPERATION FEATURES

- Emergency Stop
- SoftKey Operation
- Remote Control Backlight
- Remote Control Microphone
- Lashup creation
- Route Creation
- Scene Creation
- Session Record/Playback
- Resetting Engine Features
- Reading Engine Information
- 50 or 60Hz AC Power Selection Input
- Operate TMCC/Legacy Engines
- Edit TMCC/Legacy Engine Address
- Operate Conventional Engines
- Switch And Accessory Operation

ATLAS O SCALE TRACK & ACCESSORIES
AVAILABLE FROM YOUR LOCAL HOBBY SHOP OR SHOP.ATLASRR.COM

Product Info: <https://shop.atlasrr.com/default.aspx>

Atlas is proud to offer a wide variety of track in both 2- and 3-Rail. Our track is time-tested and modeler approved and is crafted to be the MVP of your layout.

Modeled for Realism: The scale-sized plastic ties have a realistic wood grain, the tie plates have spikes, the rail joiners have authentic bolt detail and the center rail is blackened.

Versatility: Every track piece has been specially engineered to fit precisely together in an infinite variety of combinations without the need for custom cutting and fitting.

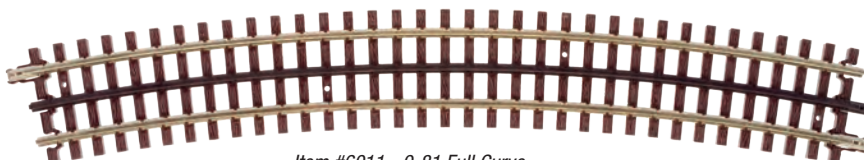

Performance: We chose a SOLID nickel silver T-rail for extra stability and superior electrical conductivity. In addition, the wide, flat surface of the rails provides far greater wheel/rail contact and better traction than tubular track. What's more, solid rails absorb sound better than tubular track so you can enjoy the sounds of your locomotive.

3-RAIL FEATURES:

- SOLID nickel silver rail for realistic shape, sounds and rust prevention
- Super joiners for tight fit and superior electrical connection
- Large and growing list of track: 10 different diameters (0-27- 0-108), 16 different switches, 6 crossings, all the straight pieces you could ever want, flex track and more!
- Geometrically exact layout construction
- UV compatible: great for both indoor and outdoor use

Item #6094 - Track Screws

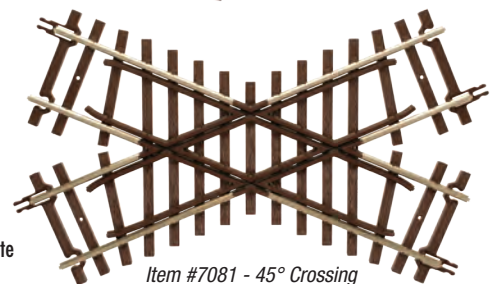

Item #6011 - 0-81 Full Curve

2-RAIL FEATURES:

- Code 148 Solid Nickel Silver Rail
- American prototype ties and tie spacing with correct spike, and tie plate and bolt details
- Dark brown tie strip
- Turnouts feature highly detailed metal insulated frogs and points
- Metal frog can be powered if desired
- UV compatible: great for both indoor and outdoor use
