COMPARABLE INDEX indicates the average earnings of progeny produced from mares bred to one sire, when these same mares were bred to other sires.

EXCLUSIVE AUCTION EDGE SIRE LIST

EXPLANATION PAGE 1

The Following data is made up of various parts of multiple hips to assist in the creation of the Explanation Pages.

Hip number is followed by mare's name, pedigree line, and breeder. Below is listed the covering sire if mare is in foal. Covering sire's current-year stud fee is listed.

Family information gives number of starts, wins, and earnings for mares and foals and also shows previous sales. For mares and first dams, previous consignors are also listed.

Last claiming price of mares and foals reflecting year, track, amount, and new owner.

When applicable, the Nicking line gives number of foals, strs, wnrs, 2yo wnrs, stakes winners, and the best grade or group race that a horse has won (e.g., gr. I, Eng-II, Fr-III, etc.). For in-foal mares, nicking pertains to her unborn foal.

The **TrueNicks** ratings in Auction Edge can be found for each subject horse (weanlings, yearlings, and 2-year-olds). For broodmares, a rating is provided for the mare's offspring and her in utero foal if she is carrying one.

For more information see pages 9-10 or go to: <http://TrueNicks.com>

Best win, purse and track where won.

Mare and foal's **BEST BRIS® SPEED FIGURE** is shown, in addition to the best win, value of race, type of race, and track where he/she won (in the case of graded races, no dollar amount is given). A glossary of tracks, both domestic and foreign, appears in this book.

EXCLUSIVE BRIS® SPEED RATINGS!

The Class Performance Index (CPI) shows how a horse's earnings compare with other horses of the same sex and age. See page 10 for a detailed description.

(D), (T) or (D, T) indicates if a horse won on dirt, turf, or both.

EXPLANATION PAGE 2

Hip number is followed by sex of weanling, pedigree line, and breeder.

Tells when the first foals of weanling sires hit the ground. Following is the current-year stud fee of the sire and the stud fee that corresponds to the selling horse.

Italicized horses indicate those that broke their maiden at two.

Second dam information is provided when a sale horse's first dam has had no more than four foals.

Asterisks indicate exported horses. Death dates are also given when available.

Ragozin Best BRIS

Expanded auction information reflects in-foal sales of female siblings under first dam, in addition to weanling, yearling, and 2-year-old sales data.

Dosage, a technique for classifying Thoroughbred pedigrees by type. Please go to <http://chef-de-race.com/dosage/review.htm> for a complete description.
 If an in-foal mare is the subject horse, the dosage pertains to her unborn foals

Previous and current-year sales information of the sire of the weanling.

A lower number represents a stronger effort. A figure of 0 is equivalent to a top-class, Grade 1-quality effort.

+ is a quarter-point
 - minus quarter-pt.
 " is a half-point

Please refer to page 12 for a complete explanation.

Abbreviated non-productive year produce line.

NEW! Ragozin Figures

1. What is the TrueNicks rating?

The TrueNicks rating is a score that reflects the degree of affinity between the sire and broodmare sire (or sire line and broodmare sire line) of the subject horse or hypothetical mating. To ensure the rating is the result of true opportunity, the TrueNicks score is based on a calculation that examines all foals and all starters produced from the selected cross.

TrueNicks ratings are calculated by factoring two separate computations:

* The Sire Improvement Index (SII), a comparison of the percentage of stakes winners a sire (or sire line) has achieved with mares by the specific broodmare sire (or sire line), with the percentage of stakes winners that specific sire (or those specific members of the sire line) has achieved with all other mares.

* The Broodmare Sire Improvement Index (BSII), a comparison of the percentage of stakes winners produced by daughters of a particular sire (or broodmare sire line) with the percentage of stakes winners from the same mares when bred to all other sires.

The resultant figure shows the stakes winner-to-starter production rate of the nick, compared to the stakes winner-to-starter production rate of the sire (sire line) and broodmare sire (sire line) when bred to representatives of all other lines. Thus, a TrueNicks score of 2.0 indicates that the cross has produced stakes winners at twice the rate that the sire (sire line) and broodmare sire (sire line) have when bred to all other lines. These ratings are translated into bands from A + + to F.

2. Do nick ratings change over time?

Nick ratings are calculated fresh each time a report is generated to take into account new foals, new starters, and new stakes winners. This ensures that breeders and buyers have the latest information available when considering their mating plans and purchases. Despite the continual updating of information, once a TrueNicks rating has been established, it generally takes several significant events for it to change rating bands.

3. What is the variant score (the number displayed next to the nick rating on a TrueNicks report) and how much weight should I give it?

The TrueNicks variant is a function of the Sire Improvement Index (SII) and Broodmare Sire Improvement Index (BSII).

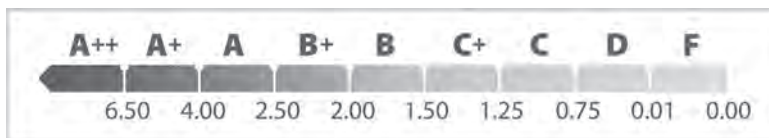

The first step is to establish an SII, which is done by comparing the percentage of stakes winners to starters sired by a sire/sire line out of all mares by a broodmare sire/sire line, with the percentage of stakes winners sired by the same sire (or same representatives of the sire line) out of all other mares. An SII of 2.0 indicates the sire (or sire line) has twice the percentage of stakes winners out of mares by the broodmare sire/sire line as he does when bred to all other mares.

Next, the BSII is established by comparing the percentage of stakes winners to starters sired by a sire/sire line out of all mares by a broodmare sire/sire line, with the percentage of stakes winners produced by those mares when bred to all other stallions. A BSII of 3.0 indicates that the percentage of stakes winners out of mares by the broodmare sire/sire line when bred to the chosen sire/sire line is 3.0 times as high as the percentage of stakes winners produced by that group of mares when bred to all other stallions.

The TrueNicks rating is calculated by multiplying the SII by the BSII. In the example above, an SII of 2.0 and a BSII of 3.0 would result in a TrueNicks score of 6.0, which translates to an A + + TrueNicks rating.

It is important to understand that the rating scale is not linear, so while a below-opportunity rating will have a variant of 0.01 to 0.99, an above-opportunity rating can have a score from 1.01 up to numbers as high as 500.00 and beyond. Generally, extremely high scores are the result of a mating which has had considerable success with limited opportunity. The best

guide to the potential success of the nick is the letter ranking which has been evolved through careful study of the relationship between the general population and the stakes winning population. Note that only 13% of the entire Thoroughbred population earn “A” rankings (A to A++) while 37% of stakes winners rate as “A’s.” Horses rated “B” or better (B to A++) represent just 30% of the entire population, yet three out of four (77%) stakes winners rank “B” or better. Almost half of Thoroughbreds in general—44%—are on the low end of the scale (rated “C” through “F”), yet only two in 25 stakes winners (8%) have these lower rankings.

4. How far back do you go to assign a nick rating?

The TrueNicks program is designed to establish a rating within a minimum number of generations from the sire/broodmare sire cross. As soon as a cross has met statistically significant thresholds, a rating is calculated. The farthest the TrueNicks program will go to calculate a rating is to the third generation of the horse (or prospective mating) in the sire line, and the fourth generation of the horse (or prospective mating) in the broodmare sire line. Ratings beyond those parameters would be meaningless and will yield a No Rating score.

5. What does No Rating mean?

A classification of No Rating signifies that, after going back to the third generation in the sire line and the fourth generation in the broodmare sire line, the program has not found enough statistically significant evidence to calculate a rating.

Although there is insufficient information to calculate a valid TrueNicks rating, the TrueNicks report will list the best five horses bred on the selected cross, and occasionally one will find although there is insufficient data to calculate a rating, the immediate cross has indeed produced a stakes winner.

6. Does class (or any other factor) impact the TrueNicks rating?

The TrueNicks rating is purely a reflection of the degree of affinity between the sire/sire line and broodmare sire/sire line. Thus, it is best used to differentiate between matings or individuals within a similar commercial range. This reflects the considerations that breeders and buyers are likely to face in “real world” situations. For example, it is more likely that a breeding considering using Storm Cat, might also consider Distorted Humor and A.P. Indy – horses at a similar commercial level – rather than alternative stallions in the \$20,000 range, and vice versa.

When planning or evaluating matings, other factors such as a balance of aptitudes (speed, stamina, preference for dirt, turf, or all-weather tracks), inbreeding, linebreeding and out-cross, and conformation considerations must be kept in mind. TrueNicks is a tool to be used by the Thoroughbred breeder and owner and while studies of over 100,000 horses demonstrates that there is a high correlation between the affinity between the sire/sire line and broodmare sire/sire line that is information that cannot be ignored, it must be given the appropriate weight when considering all other factors that influence eventual racetrack performance.

7. My question isn’t covered here—where can I get more information?

If you have any further questions that you wish to ask the team at TrueNicks, please e-mail scot@truenicks.com.

BRIS Speed Ratings have been recorded for all Thoroughbred horses racing in North America since 1990. Generated by Bloodstock Research Information Services, Inc. (Brisnet.com), the ratings accurately represent how fast a horse has run. More significantly, however, these speed ratings are calculated in such a way that anyone can easily compare the performances of horses running at different tracks or at different distances. Like other popular speed ratings, **BRIS Speed Ratings** are based on the final time of the race and, most importantly, include an accurate "track variant" (which measures the speed of a racetrack on a specific day). Unlike other speed indicators, the track variant is derived by an objective, computer-precise method rather than the subjective opinion of one handicapper. The **BRIS Speed Ratings** have been used by handicappers for years, and are now increasingly being used by owners, bloodstock agents, and trainers as a way to evaluate the racing ability and class in a sale horse's family.

The scale of the **BRIS Speed Rating** is easily understood—the higher the rating, the faster the horse ran. A horse receiving an 85 speed rating has run faster than another horse that received a 75 speed rating. The value in lengths of one speed rating point varies by distance. In sprints, one length equals approximately 1 ½ speed rating points. In routes, one length equals approximately 1 speed rating point.

The highest **BRIS Speed Ratings** (110 and up) will usually only be achieved by the best stakes horses. Males will typically run faster than their female counterparts. And, of course, older horses will typically run faster than their younger counterparts. A 2-year-old might win a stakes race with a 95 **BRIS Speed Rating** or may become a champion with a rating over 100.

The chart below provides the average **BRIS Speed Ratings** for several different classes of older male races at Santa Anita and for each Breeders' Cup World Thoroughbred Championship race:

| | |
|--|-----|
| Santa Anita Park (older males) | |
| Claiming \$10,000-\$14,999..... | 90 |
| Claiming \$15,000-\$24,999 | 92 |
| Claiming \$25,000-\$39,999 | 93 |
| Claiming \$40,000-\$49,999 | 94 |
| Claiming \$50,000-\$74,999 | 96 |
| Maiden Special Weight | 96 |
| Allowance NW1X | 100 |
| Allowance NW2X | 101 |
| Allowance NW3X | 102 |
| Stakes..... | 104 |
| Stakes for older females | 100 |
| Average winning BRIS Speed Ratings for the Breeders' Cup World Thoroughbred Championship: | |

| Classic..... | 113 |

RAGOZIN FIGURES EXPLAINED

Len Ragozin, the “father” of speed ratings, pioneered the production of precise and accurate figures for all horses running at major and most minor tracks in the U.S. and Canada. His system measures how fast each horse has run, taking into account weight carried, wind corrections, ground loss, and the resiliency of the track surface as measured by a daily variant. Len Ragozin and his father were the first to identify that those are the crucial factors in rating a horse’s performance and to apply a serious scientific approach to determine their measurement and relationship to each other.

Accurate gate-to-wire timing and live ground loss data from observers are combined with an office staff that draws on five decades of experience in making track variants to produce the best, most accurate speed ratings in Thoroughbred racing.

The Blood-Horse Auction Edge includes career-best Ragozin figures where available.

Ragozin’s figures are based on a system in which a lower number represents a stronger effort. A figure of 0 is equivalent to a top-class, Grade 1-quality effort, although in recent years a small number of champion horses, like Ghostzapper, have run as fast as -3. The best figures are usually run in races like the Breeders’ Cup Classic (G1), with the winner normally earning between a -2 and 0. Slower winning numbers can be as high as in the 30s for inexpensive maiden claimers.

A quote mark (") after the number equals half a point. A plus sign (+) is one-quarter of a point. A minus sign (-) means one-quarter less. Thus 15- is 14 and three-quarters.

As an example of the practical use of the numbers, a male horse that raced until he was five and never earned a Ragozin figure lower than 12 was essentially no faster than an average \$10,000 claimer competing in California. Conversely, a horse that ran a 2 in the spring of his three-year-old campaign ran comparatively fast enough to win an average Kentucky Derby (G1).

The figure for a top effort also can vary due to a horse’s sex, age, and the time of year. Fillies generally run approximately 3 points slower than males in the same category, while three-year-olds will typically run faster in the fall than in the spring.

The numbers for similar levels of dirt and turf races are usually equal, except in graded stakes, where dirt races have historically come in 1 or 2 points lower.

Below is a table of average Ragozin figures to give readers an idea of what any one number means for any one runner. These figures are for 2007. Since horses’ performances have improved over the past ten years, comparable figures would be about one point higher five years ago and about two points higher ten years ago.

Average Ragozin figures

| Class of race | Typical winning figure | Class of race | Typical winning figure |
|---------------------------------------|------------------------|--|------------------------|
| Grade 1 stakes | -2 to 0 | Grade 3 Triple Crown prep | 6 to 8 |
| Grade 2 stakes | 1 to 4 | 2yo maiden special (Saratoga Race Course) | 8 to 12 |
| Grade 3 stakes | 3 to 6 | 2yo maiden special (Monmouth Park) | 11 to 16 |
| Grade 1 stakes (turf) | 1 to 2 | NW1 allowance (Belmont Park) | 8 to 9 |
| Grade 2 stakes (turf) | 3 to 4 | NW2 allowance (Belmont Park) | 6 to 8 |
| Grade 3 stakes (turf) | 5 to 6 | NW3 allowance (Belmont Park) | 5 to 7 |
| \$50,000 stakes at Calder Race Course | 8 to 10 | NW1 allowance (Hawthorne Race Course/spring) | 10 to 12 |
| Grade 1 stakes (2yo) | 4 to 6 | NW1 allowance (Hawthorne Race Course/fall) | 11 to 13 |
| Triple Crown race | 0 to 3 | \$50,000 claimer (Santa Anita Park) | 7 to 10 |
| Grade 1 Triple Crown prep | 2 to 4 | \$25,000 claimer (Santa Anita Park) | 10 to 12 |
| Grade 2 Triple Crown prep | 4 to 6 | \$25,000 claimer (Hawthorne Race Course) | 12 to 14 |

CLASS PERFORMANCE INDEX (CPI)

The Class Performance Index (CPI) shows how a racehorse's average earnings per start compares with the average earnings per start of all other horses of the same age and sex that are racing in the same country during a given year.

For example, the average earnings per start for all 3-year-old colts racing in the United States in 2004 was \$19,715. If a 3-year-old colt racing that year earned an average of \$49,287, then he would have a 2.50 CPI, meaning he had earned two and half times more on average than his contemporaries. Some CPIs may be zero if a horse raced in a country that does not supply complete racing information to The Jockey Club. The CPI is calculated and supplied by **The Jockey Club Information Systems, Inc.**

SIRE STATISTICAL SUMMARY

Listed below are the sires represented by horses at the **2014 Fasig-Tipton Kentucky November Sale**. The statistical information listed for each sire (foals, runners, winners, 2-year-old winners, and stakes winners) includes both worldwide lifetime totals as well as worldwide current year information. Percentages are based upon the lifetime number of named foals. The graded performances of current-year runners are denoted parenthetically. Stud fees are for 2014 and are in US\$ unless otherwise noted.

The Average Earnings Index listed for a sire represents how good his progeny performed at the races compared with the progeny of all other sires for the years raced. The Comparable Index listed for a sire and broodmare sire indicates the relative quality of the mares they've covered, or their daughters, by showing the earning power of the mares' offspring by other stallions. Only 30% of all sires have an Average Earnings Index higher than their mares' Comparable Index.

Statistics are supplied by The Jockey Club Information Systems, Inc., and include monies earned through October 9, 2014.

SIRES OF BROODMARES STATISTICAL SUMMARY

Please find below a list of broodmare sires of weanlings and sires represented by broodmares at the **2014 Fasig-Tipton Kentucky November Sale**. A variety of statistical information reflects lifetime totals for broodmare sires in the sale. Percentages are based upon lifetime number of named foals. Graded performance of current-year runners is denoted parenthetically. Some Southern Hemisphere foals may be included in foal counts.

The Average-Earnings Index listed for a sire is a reflection of progeny racing performance compared with the progeny of all other sires for the years raced. The Comparable Index listed for a sire and broodmare sire reflects the racing performance of mares' produce by stallions other than the sire listed. Only 30% of all sires have an Average-Earnings Index higher than their mares' Comparable Index.

Statistics are supplied by The Jockey Club Information Systems, Inc., and include monies earned through October 9, 2014.

A.P. INDY, 1989, by Seattle Slew

Lifetime as broodmare sire: Sire of 422 dams of 2177 foals, 1565 rns(72%), 1044 wns(48%), 282 2yo wns(13%), 1.75 AEI, 1.52 CI; 117 sw here and abroad.

ACCEPTABLE, 1994, by Capote

Lifetime as broodmare sire: Sire of 16 dams of 486 foals, 29 rns(6%), 19 wns(4%), 5 2yo wns(1%), 1.26 AEI, 1.26 CI; 2 sw here and abroad.

AIR FORBES WON, 1979-2009, by Bold Forbes

Lifetime as broodmare sire: Sire of 196 dams of 1122 foals, 781 rns(70%), 579 wns(52%), 127 2yo wns(11%), 1.09 AEI, 1.29 CI; 41 sw here and abroad.

ALPHABET SOUP, 1991, by Cozzene

Lifetime as broodmare sire: Sire of 127 dams of 482 foals, 328 rns(68%), 201 wns(42%), 48 2yo wns(10%), 0.87 AEI, 1.37 CI; 11 sw here and abroad.

ALWAYS A CLASSIC, 1993, by Deputy Minister

Lifetime as broodmare sire: Sire of 28 dams of 241 foals, 66 rns(27%), 36 wns(15%), 17 2yo wns(7%), 0.76 AEI, 1.27 CI; 3 sw here and abroad.

ANET, 1994-2003, by Clever Trick

Lifetime as broodmare sire: Sire of 19 dams of 75 foals, 49 rns(65%), 29 wns(39%), 10 2yo wns(13%), 0.77 AEI, 1.33 CI; 2 sw here and abroad.

APTITUDE, 1997, by A.P. Indy

GLOSSARY OF RACETYPES

Please find below a glossary of racetypes as supplied by **Equibase**. Foreign racetypes have been changed from their native racetypes to their North American equivalent by **Equibase**. Occasionally, a race may be presented in its native racetype. This is due to how the information was received by **Equibase** and reflects an inability for it to be changed through programming. However, those racetypes are reflected below. Also, the actual racetype may be omitted due to incomplete data from the country of origin. Graded races will appear with the country in front of the grade (e.g., Eng-I, Fr-II, Jpn-III, etc.).

Also, note that sometimes the “best race” for a particular horse may indicate “stks” but the horse is not in bold face. This simply means that the race, while an actual stakes, does not meet international cataloging standards for black type.
