****Windows Server 2016 Standard and Datacenter Editions Licensing Models**

The licensing of Windows Server 2016 Standard and Datacenter editions will shift to be based on physical cores from the prior licensing model based on processors. Core based licensing provides a more consistent licensing metric regardless of where the solution is deployed on-premises or in a cloud. The Windows Server 2016 licensing model for Standard and Datacenter will be Cores + CAL.

MINIMUM PURCHASE IS REPRESENTED IN COST. If you are running more than 2 processors/16 cores, please contact your sales rep for pricing.

To license a physical server, all physical cores must be licensed in the server. A minimum of 8 core licenses is required for each physical processor in the server and a minimum of 16 cores is required to be licensed for servers with one processor.
