# about computers

ActivTable

The **ActivTable** empowers students to lead their own learning, driving engagement, participation and creativity in the classroom. **ActivTable at a glance:**

- This multi-user collaborative tool for up to six pupils facilitates group work, problem-solving activities and consensus decision making.

- Easy-to-use, intuitive tools, activities and software drive learner engagement.

- Activity reporting tools offer teachers insight into student contributions.

Collaborative Small Group Learning

The ActivTable empowers and motivates students to lead their own learning, driving engagement, consensus decision making and classroom collaboration. This multi-user interactive table allows up to six learners to simultaneously use individual tools, web browsers and resources as their personal efforts move the group toward accomplishing a common goal. All ActivTable activities are aligned to UK and US national standards, and many can be modified by teachers to suit their learning objectives.

Not only is the ActivTable a uniquely powerful tool for learning through small-group collaboration, but it is also a vehicle for building essential 21st century skills such as communication, creativity and critical thinking.

Why ActivTable?

Learning to Collaborate

about computers

Collaboration skills are increasingly recognised as critical for success in later study, adult life and in work. The multi-user architecture of the ActivTable offers teachers and students new types of collaboration not possible elsewhere. Learners can not only work collaboratively on a single activity, such as sorting shapes or building sentences, but can also engage in project-based learning tasks wherein each student accesses interactive tools to accomplish an individual task in order to ultimately achieve a common group objective.

Collaborate to Learn

Effective collaboration technology brings the skills of participants together to solve any given problem, regardless of where they are on their learning journey. Each student brings to the table unique strengths, knowledge and perspective. This collaborative environment facilitates the cooperation and sharing of knowledge that lead the group to a deeper and broader understanding than they might attain on their own.

Differentiated instruction

Divide the classroom into smaller learning groups based on level of comprehension and learning styles. The intuitive and easy-to-use interface enables the creation of tailor-made activities for different teaching approaches.

Supports core curriculum

Meet learning objectives with multi-touch and multi-user applications mapped to the curriculum. A Content Wizard enables teachers to modify many activities to ideally suit their goals and needs.

Key Features

- 46-inch full HD LCD display—The ActivTable features a large, touch-sensitive screen with ample room for collaboration.
- Multi-user—Supports up to six students collaborating at one time.
- Tool library—ActivTable's toolbar offers a variety of intuitive tools, including keyboards, musical instruments, math tools and web browsers, all customisable for each activity.
- Activity Reporting and Tracking Tools—Tracking learner contributions and ensuring that each student is an active participant in classroom collaboration is simple with ActivTable's reporting and tracking tools. Teachers view each pupil's work, time on task, collaboration tools used and more.
- Software for teachers' computers--ActivTable software can also be installed on teachers' computers to support lesson preparation and customisation.
