## iNX: Mid-Block Crossing Push Button Station

### iDX: iNX with iDetect Touchless Actuation Option

The iNX push button station is designed for use at a pedestrian crosswalk with in-pavement or overhead flashing yellow lights. The system consists of a 9"x12" instructional sign, a push button with directional arrow (bidirectional and blank buttons also available) for activating the flashing lights, a voice message, and one yellow LED above the push button that flashes when the street warning lights are flashing.

The iNX uses the same rugged housing as Polara's "iNS" iNavigator. In addition to the push button, the iNX contains a speaker, a 10-watt RMS audio amplifier, a noise monitoring microphone for auto volume control, and LED indication.

The iNX operates off of the warning light system control unit via six wire connections (see page 2). The iNX has the same Bluetooth configuration interface as the "iNS" iNavigator, which is used to select audio messages, change settings, and download firmware updates. The Bluetooth can also communicate with other buttons, eliminating the need for separate radios to perform this function.

**iNX/iDX is not compatible with XAVCU controllers.**

#### iDX Features:

- Detects movement typically within 1-4 inches
- Inconspicuous Radar Detection - Vandal Resistant

The unit is supplied with mounting hardware and installation instructions.
