⸭⸭⸭ Virus checking function

Even if an infected file is saved to the TeraStation,
it will be automatically removed and made inaccessible.

Only safe files are
accessible.

Choice of virus scan method

Real-time Scan *Default setting

Scan is performed in the background. Files are scanned
automatically when you access to the Terastation (by
saving/modifying/viewing).

Scheduled Scan

Scan is performed on specified days or at specified intervals.

Manual Scan

Scan is performed immediately whenever desired.

Real-time Scan   Scheduled Scan   Manual Scan

Virus detection is indicated on the LCD screen & notified by e-mail

When virus is detected, a message is displayed on the LCD
screen.
Also e-mail notification is sent* to the administrator.

* You need to set up mail notification service in advance.

Upon detection of virus

Indicated on LCD screen   Notified by e-mail

Scheduled software update

You can specify the schedule and frequency of software
update.
Schedule the update during off hour to keep the latest status
while avoiding interruption in business operation.

* Internet connection is required.
* Although this function can be used along with the timer ON/OFF function provided
by this product, it is essential to set the timer to switch power on at the scheduled
updating
