⁵³ Also available in Master Pack version ¹¹⁹ This replaceable cartridge can be converted to spin-on type. Refer to the conversion kit section of the Interchange-Product Numeric Catalog.
¹⁵⁵ Standard version ¹⁸⁰ The 84791 is Extra-Efficiency (glass-cellulose combo media) Better - ^{85791XE} is High-Efficiency (100% glass media) Best ⁴¹⁹ With self-venting drain
⁴²⁰ With standard drain ⁴²² High Capacity

TRUCKS BUSES

⁵³ Also available in Master Pack version ¹¹⁹ This replaceable cartridge can be converted to spin-on type. Refer to the conversion kit section of the Interchange-Product Numeric Catalog.
¹⁸⁰ The 84791 is Extra-Efficiency (glass-cellulose combo media) Better - 85791XE is High-Efficiency (100% glass media) Best ⁴¹⁹ With self-venting drain ⁴²⁰ With standard drain

In particular, without limiting the foregoing, no part of this Catalog may be incorporated into another work of any kind in any format that catalogs, lists, offers or specifies aftermarket automotive parts, equipment or supplies or related services *not* sold by Affinia Group Inc.

If you *are* a Customer, your use of this Catalog is subject to the following Customer Agreement:

By using this Catalog, you agree to be bound by this Agreement. If you do not wish to be bound by this Agreement, then do not use this Catalog, and do not reproduce, record or use any Content from this Catalog.

Content

All information in any medium or format furnished by Affinia herein, including text, images, data, graphics, links, captions, or other information (collectively, "Content") is owned by Affinia or our Content providers. All Content is protected by U.S. and international copyright laws. All rights not specifically granted under this Agreement are reserved to Affinia.

You may, subject to the terms and conditions of this Agreement:

- a) Use the Catalog for your internal use, solely to look up information related to aftermarket automotive parts, equipment or supplies or related services referenced in the website in the ordinary course of business;
- b) Use the Catalog to investigate respond to inquiries from, or to provide quotations, purchase orders or invoices, to your customers; and
- c) If necessary in relation to either a) or b) above and to directly facilitate the sale of Affinia's aftermarket automotive parts, equipment or supplies or related services, make a limited number of photocopies of one or more pages of this Catalog (but not all or substantially all of the Catalog).

You may *not*:

- a) Deliver, provide access to, directly or indirectly, or otherwise make the Content available to any third parties;
- b) Remove any copyright or other proprietary notices from the Catalog or any Content;
- c) Reformat or extract data from the Catalog or any Content, or incorporate the Catalog or any Content in whole or in part into another work of any kind in any format, including, without limitation, any work that catalogs, lists, offers or specifies aftermarket automotive parts, equipment or supplies or related services *not* sold by Affinia Group Inc.

General

By using this Catalog, you acknowledge that you have read this Agreement, understand it and agree to be bound by its terms and conditions. You further agree that it supersedes any proposal or prior agreement, oral or written, and that it cannot be modified except by signed written agreement. If you do not comply with the terms and conditions above, this Agreement shall automatically terminate, and the notice above directed to non-Customers shall apply to you.

Technical Service Bulletin

Over-Pressurized Lube Oil Filters

From time to time every filter manufacturer has had a filter that has been severely over-pressurized returned from a customer. Often the deformed filter is the only sign the car owner has that a problem existed in their lube oil system.

It's possible that the damaged filter was not noticed until it was removed during the next scheduled oil change. However, if the pressure was sufficient to blow out the gasket or unroll the lockseam, the car owner may have experienced immediate and costly problems.

With the "evidence" in their hands, they tend to put the blame on the damaged filter. It's not surprising that they are more than a little aggravated when the filter manufacturer denies any responsibility for the damage. What, then, has caused the over-pressurization?

A look at how a lube oil system functions will show that oil pressure is created by the oil pump. The upper limit of this pressure is controlled by a pressure regulating valve, which is usually an integral part of the pump.

Figure 1 is a simplified diagram of the lube oil system showing the pump, regulating valve, filter and bearings.

The pump supplies sufficient flow to lubricate the bearings and other moving parts of the engine. This oil must be under pressure if it is to properly separate the highly loaded parts of an engine and prevent excessive wear. The purpose of the regulating valve is to provide this pressure, which on most passenger cars is between 40 PSI (280kPa) and 60 PSI (410kPa).

The regulating valve is made up of a ball or plunger, which regulates pressure with the aid of a spring. The spring is calibrated so that the plunger will lift off its seat when the oil pressure reaches the desired amount. Once the valve is open, the pressure remains fairly constant with only small changes occurring as the engine speed varies.

The filter and all other components in the lube system are subjected to the pressure established by the regulating valve. If this pressure is excessive, filter damage may occur. This is the point that many people who are not familiar with lube systems fail to realize.

What can cause the pressure in the system to exceed the regulating valve setting? The answer is that either the valve must be stuck in the closed position or it is sluggish and slow to move to the open position after the engine has started.

Figure 2 shows the system operating with the regulating valve stuck in the shut position. Under these conditions the pressure builds up equally on all components in the system until something happens to relieve the pressure. If the regulating valve becomes unstuck, the pressure will return to normal.

Normal operating pressure causes no permanent deformation of the filter body. When the system pressure reaches 150 PSI (1,000 kPa) due to a faulty regulating valve, most filters become permanently deformed. At this pressure, the gasket usually will not blow out and the lockseam will remain sound.

If the regulating valve still remains stuck, the pressure will increase further and the gasket between the filter and the base can be blown out. This will probably cause the loss of all the oil in the system.

If the filter has been installed on the tight side, the gasket may not blow out and the lockseam will unwind as the pressure continues to rise.

The main point is that the deformed filter is not the cause of this excessive pressure, but the victim of a faulty regulating valve.

Technical Service Bulletin

If the customer is alert and shuts the engine off at the first sign of trouble (red light on or reduced oil pressure), they can limit their loss to a tow job, oil change and new filter. If the vehicle continues to be driven, engine failure is probable.

The customer may ask if a plugged filter could have caused the over-pressurized condition. The answer is no; if the regulating valve is functioning properly, it will maintain the pressure on the filter at 40 PSI (280 kPa) or 60 PSI (410 kPa) even if the filter is plugged.

In summary, if a lube filter distorts due to excessive pressure in the system, the fault lies with the oil pump pressure regulating valve and not with the filter.

Filtres à huile lubrifiante surpressurisés

De temps à autre, chaque fabricant de filtres rencontre un filtre qui a été sévèrement surpressurisé et retourné par un client. Souvent, le filtre déformé constitue le seul indice que le propriétaire de la voiture possède pour lui indiquer un problème dans son système d'huile lubrifiant.

Il est possible que le filtre endommagé ne soit pas remarqué avant la prochaine vidange d'huile. Si, toutefois, la pression a été suffisante pour déloger le joint ou dérouler le joint d'arrêt, le propriétaire de la voiture peut faire face à des problèmes immédiats et coûteux.

Avec la «preuve» en main, il aura tendance à mettre le blâme sur le filtre endommagé. Il n'est pas surprenant qu'il soit plus qu'irrité lorsque le fabricant de filtres nie toute responsabilité pour les dommages. Alors, qu'est-ce qui a causé la surpressurisation?

Un coup d'oeil sur la façon dont un système d'huile lubrifiante fonctionne démontre que la pression d'huile est engendrée par la pompe à huile. La limite la plus élevée de cette pression est contrôlée par une soupape régulatrice de pression laquelle est normalement incorporée à la pompe.

L'illustration 1 constitue un schéma simplifié du système d'huile lubrifiante; on y voit la pompe, la soupape régulatrice, le filtre et les coussinets.

La pompe fournit un débit suffisant pour lubrifier les coussinets et autres pièces mobiles du moteur. Cette huile doit se trouver sous pression afin de séparer adéquatement les pièces lourdes du moteur et prévenir une usure excessive. Le but de la soupape régulatrice est de fournir cette pression, laquelle, sur la plupart des voitures de tourisme, est de 40 à 60 lb/po². La soupape régulatrice est composée d'une bille, ou plongeur, qui contrôle la pression à l'aide d'un ressort. Le ressort est calibré de façon à permettre au plongeur de se soulever de son siège lorsque la pression d'huile atteint un niveau voulu. Une fois la soupape ouverte, la pression demeure passablement uniforme avec seulement quelques variations suivant la vitesse du moteur.

Le filtre, de même que tous les autres organes du système lubrifiant, sont soumis à la pression établie par la soupape régulatrice. Si cette pression devient excessive, le filtre peut être endommagé. Pour certaines personnes ne connaissant pas les systèmes lubrifiants, cette situation est difficile à comprendre.

Quelle est la cause de cet excès de pression par rapport au réglage de la soupape régulatrice? La réponse: soit la soupape est coincée en position fermée, soit elle est lente et prend trop de temps à s'ouvrir une fois que le moteur a démarré.

L'illustration 2 présente le système fonctionnant avec la soupape régulatrice coincée en position fermée. Dans ces conditions, la pression s'accumule également sur tous les organes du système jusqu'à ce qu'il se produise quelque chose pour dégager la pression. Si la soupape régulatrice se décoince, la pression revient à la normale. Si elle demeure coincée, un bris se produira.

Une pression de fonctionnement normale ne cause aucune déformation permanente sur le corps du filtre. Lorsque la pression du système atteint 150 lb/po² par suite d'une déféctuosité dans la soupape régulatrice, la plupart des filtres se déforment d'une façon permanente. À ce niveau de pression, le joint ne lâchera pas et le joint d'arrêt restera en bon état.

Si la soupape régulatrice demeure toujours coincée, la pression augmentera de plus en plus et le joint se trouvant entre le filtre et la base peut lâcher, ce qui causera la perte de toute l'huile dans le système.

Si le filtre a été installé bien serré, le joint peut ne pas lâcher et le joint d'arrêt se déroulera alors que la pression continue de monter.

Bulletins d'entretien technique

Si le client est vif et qu'il éteint le moteur au premier signe de problème (voyant rouge allumé ou pression d'huile réduite), il peut limiter les dégâts et s'en tirer avec un simple remorquage de son véhicule, une vidange d'huile et un nouveau filtre. S'il conduit la voiture à la station-service la plus proche, le moteur surchauffera probablement à cause du manque d'huile. Le point le plus important à se rappeler est que le filtre déformé n'est pas la cause de cette pression excessive, mais plutôt le résultat d'une soupape régulatrice défectueuse.

Le client demandera probablement si un filtre complètement bouché peut être la cause des conditions de surpression dans le système. La réponse est non. Si la soupape régulatrice fonctionne adéquatement, elle maintiendra la pression au filtre de 40 à 60 lb/po², même si le filtre est bouché.

En conclusion, si un filtre se déforme par suite d'une surpression dans le système, le problème provient de la soupape régulatrice et non du filtre.

filters/filtres

Warranty for Canada

AFFINIA CANADA ULC warrants each CARQUEST filter to be free from defects in material and workmanship when installed properly and changed in accordance with the engine or equipment manufacturer's service intervals. AFFINIA CANADA ULC will replace any CARQUEST filter which is found to be defective during the warranty period. This warrant does not apply if the filter has been improperly installed, abused, damaged, used in competitive racing or on modified high performance engines.

In addition, AFFINIA CANADA ULC will repair any engine or equipment damage directly caused by the malfunction of a CARQUEST filter if it is installed properly and changed in accordance with the engine or equipment manufacturer's service intervals.

In order to obtain engine or equipment repairs under this warranty, the customer must, within 30 days after discovery of damage, submit a claim to any CARQUEST Representative, your CARQUEST distributor or directly to AFFINIA CANADA ULC. The customer must also allow the CARQUEST Technical Service Department to examine the filter and, if required, the engine or equipment to determine the extent of damage and whether it was caused by a defective CARQUEST filter. The filter must be returned to the CARQUEST Technical Service Department for examination.

New car and equipment warranties remain in effect when CARQUEST filters are used.

GARANTIE

AFFINIA CANADA ULC garantit que chaque filtre CARQUEST est exempt de défauts au niveau de son matériau et de sa fabrication lorsque installé convenablement et changé en conformité avec les intervalles de service suggérés par le fabricant du moteur ou du matériel roulant. AFFINIA CANADA ULC remplacera tout filtre CARQUEST défectueux pendant la période de garantie. Cette garantie ne s'applique pas si le filtre a été installé incorrectement, a fait l'objet d'un abus ou a été endommagé, utilisé en compétition ou sur des moteurs à haute performance modifiés.

De plus, AFFINIA CANADA ULC réparera tout dommage de moteur ou de véhicule causé directement par le mauvais fonctionnement d'un filtre CARQUEST qui a été installé convenablement et changé en conformité avec les intervalles de service suggérés par le fabricant du moteur ou du matériel roulant.

Dans le but d'obtenir des réparations de moteur ou de matériel roulant au titre de cette garantie, le client doit, en-deçà de 30 jours de la découverte de dommages, soumettre une demande d'indemnité à tout représentant CARQUEST, au distributeur CARQUEST ou directement à AFFINIA CANADA ULC. Le client doit également permettre au service technique de CARQUEST d'examiner le filtre et, au besoin, le moteur ou le matériel roulant pour déterminer l'étendue des dommages et si ces derniers ont été causés par un filtre CARQUEST défectueux. Le filtre doit être retourné au Service technique de CARQUEST pour examen.

Les garanties en vigueur d'une nouvelle voiture ou d'un nouvel équipement demeurent valables lorsque les filtres CARQUEST sont utilisés.

IMPORTANT

The application, cross-reference and all other data contained in this catalogue are based upon authoritative information. Although every precaution was taken in the compilation of this data, filter options and changes within model years by engine and equipment manufacturers make it impossible to be absolutely certain the filter equipment will be exactly the same as catalogued. For these reasons we cannot accept any responsibility for inaccuracies in print or specifications.

Les utilisations, renvois et autres données figurant dans ce catalogue sont basés sur des renseignements sûrs. Bien que toutes les précautions aient été prises pendant la compilation de ces données, les options et changements apportés aux filtres selon les années de modèles par les fabricants de moteurs et d'équipement font qu'il est impossible d'être absolument certain que le filtre sera la même que celui qui figure dans le catalogue. C'est pourquoi nous ne pouvons accepter aucune responsabilité en cas d'inexactitude d'impression ou de spécification.

Warranty Information USA

Manufacturer's Warranties

Consumer purchasers of automotive filters are sometimes told by an automotive dealer's service writer or mechanic that a brand of replacement filter cannot be used in the consumer's vehicle during the warranty period. The claim is made that use of the brand will "void the warranty" with the statement or implication that only original equipment brand of filters may be used. This, of course, tends to cast doubt on the quality of the replacement filter.

That claim is simply not true. If the consumer asks for the statement in writing, he will not receive it. Nevertheless, the consumer may feel uneasy about using replacement filters that are not original equipment. With the large number of do-it-yourselfers who prefer to install their own filters, this misleading claim should be corrected.

Under the Magnuson-Moss Warranty Act and general principals of the Federal Trade Commission Act, a manufacturer may not require the use of any brand of filter (or any other article) unless the manufacturer provides the item free of charge under the terms of the warranty.

So, if the consumer is told that only the original equipment filter will not void the warranty, he should request that the OE filter be supplied free of charge. If he is charged for the filter, the manufacturer will be violating the Magnuson-Moss Warranty Act or other applicable law.

By providing this information to consumers, the AFMC can help combat the erroneous claim that a brand of replacement filter other than original equipment will "void the warranty".

It should be noted that the Magnuson-Moss Warranty Act is a federal law that applies to consumer products. The Federal Trade Commission has authority to enforce the Magnuson-Moss Warranty Act, including obtaining injunctions and orders containing affirmative relief. In addition, a consumer can bring suit under the Magnuson-Moss Warranty Act.

Limited Warranty

New car and equipment warranties remain in effect when CARQUEST filters are used.

CARQUEST Filters warrants each CARQUEST filter to be free from defects in material and workmanship during the period of service life recommended by the engine or equipment manufacturer. This warranty does not apply if the filter has been improperly installed, abused, damaged, used in competitive racing or on modified high performance engines or if used in any aircraft or aviation application.

If your CARQUEST filter is found to be defective in material or workmanship during the period of service life recommended by the engine or equipment manufacturer, CARQUEST Filters will replace the defective filter with another CARQUEST filter. In addition, CARQUEST Filters will reimburse you for the reasonable costs of the parts and labor required to repair your engine or equipment to the extent the damage was solely attributable to a defect in your CARQUEST filter.

In order to obtain engine or equipment repairs under this warranty, the customer must, within 30 days after discovery of damage, submit a claim to any CARQUEST representative, our CARQUEST distributor, or directly to the address below. The customer must also allow the CARQUEST Technical Service Department to examine the filter and, if required, the engine or equipment, to determine the extent of damage and whether it was caused by a defective CARQUEST filter. The filter must be returned in its original, undamaged condition to the CARQUEST Technical Service Department for examination.

This warranty is exclusive of any other warranty, express or implied. CARQUEST FILTERS EXPRESSLY DISCLAIMS, WITHOUT LIMITATION, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND OF FITNESS FOR A PARTICULAR PURPOSE. The foregoing states CARQUEST Filters entire and exclusive liability and the buyer's exclusive and sole remedy for any damages or claim made in connection with the sale of a CARQUEST filter. CARQUEST Filters shall in no event be liable for any special, incidental, or consequential damages whatsoever, except those specifically provided for in this warranty.

Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitations or exclusion may not apply to you.

This warranty gives you specific legal rights and you may also have other rights, which vary from state to state.
