ACKNOWLEDGEMENTS

We would like to express our gratitude to the Center for Food Safety and Applied Nutrition (CFSAN) of the United States Food and Drug Administration (FDA) for so willingly sharing all the information concerning LanguaL™ and other indexing systems at the FDA. Special thanks goes to *Michele R. Chatfield*, *Ann Marie Poulsen* and *Charles E. Exley* of CFSAN for providing the original Factored Food Vocabulary and LanguaL™ files, and for many good discussions concerning LanguaL™ over the years. Special thanks goes to *Elizabeth C. Smith*, whose enthusiasm and energy has been inspiring for us in the EuroFIR food indexing courses and during the assessment of the indexed files, and without whom the LanguaL™ thesaurus would not be where it is today. Also, thanks to *Joanne Holden*, USDA Nutrient Data Laboratory, for following the continued work on LanguaL™ so closely.

LanguaL™ has a foundation that goes far back in time, and we find it important to mention the people, who brought LanguaL™ forward to us. Especially thanks to *Bradley Rosenthal* and *Thomas Hendricks*, both now retired from the FDA, for their enthusiasm and energy in promoting the LanguaL™ ideas in the past. We would especially like to express our gratitude to *Ivan Varsanyi* and his colleague *Judit Monspart-Senyi*, Hungary, who during the bilateral French-Hungarian BALATON and the European COST Action 99 projects persistently invoked updates and changes to the LanguaL™ Thesaurus to make the thesaurus up-to-date.

The most important event since the introduction of the LanguaL™ 2000 Thesaurus in 2000 is the introduction of the LanguaL™ Food Product Indexer, which greatly facilitates the indexing of foods in food data bases. The Food product Indexer was originally developed by *Erik Nørby*, *Polytec*, and *Anders Møller*, Danish Food Information, with a lot of help and constructive criticism from *Jayne Ireland*, Danish Food Information, and *Tue Christensen*, National Food Institute, Danish Technical University. It has taken much thought and many hours to develop the software to the present stage as a user-friendly LanguaL™ indexing tool.

For the most recent versions of the LanguaL™ Thesaurus we also owe special thanks to *Johanna Dwyer* and *Leila Saldanha* of the US Office of Dietary Supplements and to *Heli Reinivuo*, *Elly Buurma*, *Isabelle Berta-Vanrullen* and *Benoit Labarbe* of the national EuroFIR food composition database teams for their expertise in the inclusion of Dietary Supplements in the thesaurus.

We would also like to extend our thanks to *David Haytowitz* of the USDA Agricultural Research Service, to *Antoni Colom Umbert*, *Antoni Colom Fernández*, *Pere Palou Vidal*, *Manuel Moñino Gómez*, *Marta Autonell Caldentey* and *Ignacio Ricci Cabello* of the Ministry of Health and Consumers of the Balearic Islands and to the members of the EuroFIR food composition database teams. The compilers in the USDA and the EuroFIR network indexed the foods in their food composition databases, using the LanguaL™ Food Product Indexer. This work has led to many comments and suggestions, most of which are now included in the LanguaL™ Thesaurus.

Furthermore, we would like to thank *Marie Machackova*, *Irena Sukova* and *Maria Garcia Dias* in the EuroFIR Network for their translations of the thesaurus to Czech and Portuguese, and to *Gig Graham* of Benetta Corporation, USA, for many lively discussions and proposals for updating and extending the LanguaL™ thesaurus.

We also thank *Damion Dooley*, University of British Columbia, and colleagues in the FoodOn food ontology initiative.

Roskilde, January 2018

1 WHAT IS LANGUAL™?

LanguaL™ stands for "Langua aLimentaria" or "language of food". It is an automated method for describing, capturing and retrieving data about food. The work on LanguaL™ was started in the late 1970's by the Center for Food Safety and Applied Nutrition (CFSAN) of the United States Food and Drug Administration (FDA) as an ongoing co-operative effort of specialists in food technology, information science and nutrition. The original name of the thesaurus was Factored Food Vocabulary (FFV).¹ Since then, LanguaL™ has been developed in collaboration with the US National Cancer Institute (NCI), and, more recently, its European partners, notably in France, Denmark, Switzerland and Hungary. Since 1996, the European LanguaL™ Technical Committee has administered the thesaurus.

The thesaurus provides a standardised language for describing foods, specifically for classifying food products for information retrieval.² LanguaL™ is based on the concept that:

- Any food (or food product) can be systematically described by a combination of characteristics
- These characteristics can be categorised into viewpoints and coded for computer processing
- The resulting viewpoint/characteristic codes can be used to retrieve data about the food from external databases.³

As constructed, LanguaL™ is a multilingual thesaural system using faceted classification. Each food is described by a set of standard, controlled terms chosen from facets characteristic of the nutritional and/or hygienic quality of a food, as for example the biological origin, the methods of cooking and conservation, and technological treatments.

One problem concerning multilingual thesauri is the multiplicity of natural languages: corresponding terms of different languages are not always semantically equivalent. A first approach would be to limit the terms of different languages in which the descriptors are provided. Another is to render it language-independent. This approach was chosen by the LanguaL™ thesaurus, which is used in the USA and Europe for numeric data banks on food composition (nutrients and contaminants), food consumption and legislation. Each descriptor is identified by a unique code pointing to equivalent terms in different languages (currently Czech, Danish, English, French, German, Hungarian, Italian, Portuguese and Spanish).

This paper will describe the LanguaL™ thesaurus in some detail. It will then present an in-depth example of how LanguaL™ can be applied and give general rules for indexing. Finally, it will review the individual facets of the LanguaL™ thesaurus.

³ FDA/CFSAN. LanguaL™ User's Manual, version 1993.

1.1 INTERNATIONAL USE OF LANGUAL™

LanguaL™ can facilitate direct links to many different food consumption and analytical databases as well as bibliographic files, worldwide. For example, LanguaL™ has been used to index all 1988 USDA Nation-wide Food Consumption Survey (NFCS) foods, foods whose standards are specified by the US Code of Federal Regulations (CFR), and foods in Codex Alimentarius standards. LanguaL™ has also been used by the National Cancer Institute (US NCI) and the International Agency for Research in Cancer (WHO IARC)⁴ in their studies on the relationship of diet and cancer. LanguaL™ is currently being used to index foods in most official food composition databases in Europe.

Figure 1. information flow

The flexibility and multidisciplinary of a multifaceted approach allow expertise on food description to be divided up among smaller, ad hoc expert committees. The Working Group on Food Description thus took over the development of the multilingual LanguaL™ thesaurus in 1996.⁵ The information flow decided upon is illustrated in the figure above.

Although it is not the only food description language, LanguaL™ is considered the most definitive at the present time. Altogether, over 75,000 food products have been indexed in various countries using this system. Despite its shortcomings, the LanguaL™ thesaurus remains a good starting point for development of a truly international and flexible faceted thesaurus for food description.

1.2 CONTACTS

A thesaurus is an evolving language, which should reflect scientific and technological evolutions in the field of foods. Suggestions to introduce new concepts or to improve those proposed in this edition are therefore welcome. Eventual suggestions for updates/corrections should be send to the

LanguaL™ Secretariat:

The LanguaL™ homepage URL: <http://www.langual.org/>.

2 THE MULTILINGUAL LANGUAL™ THESAURUS

2.1 THESAURUS STRUCTURE

A thesaurus is a structured, normalised and dynamic vocabulary destined to cover terminology of a field of specific knowledge. It is used for indexing and retrieving information in a natural language in a system of controlled terms.

English is the *dominant language* used in the LanguaL™ thesaurus. Spelling was originally US English. Later updates include British English, as these updates were based on European legislation. Other languages (*secondary languages*) include Czech, Danish, French, German, Hungarian, Italian, Portuguese and Spanish; the translations having been prepared by the corresponding national centres. The thesaurus has, moreover, been partially translated into Catalan, Dutch, Swedish and Serbian. These translations are available from the national centres.

Contrary to some multilingual thesauri, LanguaL™ does not make use of an *exchange language*. Instead, interchange of food description information is based on the use of descriptor codes.

Terms in the thesaurus are generally expressed as singulars or plurals in accordance with the conventions recognised separately in each of the languages, especially when these are subject to national standards. For example, English indexers select the plural or the singular according to rules associated with the kind of concept represented by the term (count nouns or non-count nouns). In French, singular forms, similar to those found in dictionaries, are generally preferred.

2.2 HIERARCHY

Equally as important as the identification of meaningful characteristics is the arrangement of facet terms in a hierarchic structure so that information can be retrieved at varying levels of specificity. In a particular search, one might be interested in all products with peanut as the food source. In another, one might need products with any nut as the food source. Alternatively, one might search specifically for *VITAMIN A ADDED*, more broadly for *VITAMIN ADDED*, or, still more broadly, for *NUTRIENT OR DIETARY SUBSTANCE ADDED*. These are all examples of hierarchical relationships among facet terms.

Hierarchical relationships are extremely important for searching. Hierarchy is also a useful tool for displaying the thesaurus in a logical way so that both searcher and indexer can easily comprehend it. Finally, it underlies the aggregation of numerical values when the food vocabulary is used in compiling data.

For these reasons, all of the facets are fully structured. Care has been taken to include all useful hierarchical relationships. Some concepts can belong, on logical grounds, to more than one category at the same time; they are then said to possess **poly-hierarchical relationships**. Corresponding to its many uses, for instance, ***FIELD CORN*** appears under several broader terms:

- under ***SUGAR-PRODUCING PLANT***
- under ***STARCH-PRODUCING PLANT***
- under ***OIL-PRODUCING PLANT***
- and under ***GRAIN***

In this example, the term “FIELD CORN” is assigned to subordinate positions based on its generic relationship to four broader terms. In other cases, poly-hierarchical links may be based upon whole-part relationships.

Example:

Example:

Broad terms can be used to describe very general groups of food products, such as vegetables. Such a general description can be made more specific by using narrower terms and/or adding terms from other facets (e.g. ***FROZEN***).

The hierarchical relationships are complemented by additional cross references among facet terms, e.g., ***PROTEIN-PRODUCING PLANT***

- Narrower term ***ALFALFA***
- Narrower term ***SOYBEAN***
- Narrower term ***FIELD CORN***
- Narrower term ***SESAME***

This indicates that any search for plant protein sources should employ ***ALFALFA***, ***SOYBEAN***, ***FIELD CORN*** and ***SESAME***.

2.3 DEFINITIONS

This document follows definitions and conventions given in the International Standards concerning the establishment and development of monolingual thesauri⁶ and of multilingual thesauri⁷. In accordance with these standards, the LanguaL™ thesaurus definitions have been expanded to include *additional information*. The following definitions from the standards are used:

Indexing language: a controlled set of terms selected from natural language and used to represent, in summary form, the systematic description of foods.

Thesaurus: the vocabulary of a controlled indexing language formally organised so that the *a priori* relationships between concepts (for example as “broader” and “narrower”) are made explicit.

Indexing term: the representation of a concept, preferably in the form of a noun or a phrase.

Preferred term: a term used consistently when indexing to present a given concept, also referred to as the **descriptor**.

Non-preferred term: the synonym or quasi-synonym of a preferred term. A non-preferred term is not assigned to documents, but is provided as an entry point in a thesaurus or alphabetical index, the user being directed by an instruction (for example USE or SEE) to the appropriate preferred term; also referred to as **non-descriptor**.

Precombined terms: The thesaurus has been further clarified by including Precombined terms (PCT's), which are food product names to which facet terms have been assigned. These are not to be used for indexing, but are included for either of these reasons:

- (1) The Precombined term explains or illustrates the use of the facet terms, e.g., corned beef hash as an example of a food whose physical state is *SEMISOLID WITH SOLID PIECES*.
- (2) For some foods, it is difficult for an indexer to select the proper combination of facet terms. For example, it might be obvious that the food product "Rhine wine" should be described as a *LIGHT WINE, 7-14% ALCOHOL*, but the indexer might not realise that *ALCOHOL FERMENTED* should be used in facet H (Treatment Applied) to describe the fermentation.

Precombined terms are always indexed with descriptors from facets A (Product Type), B (Food Source), C (Part of Plant or Animal) and E (Physical State, Shape or Form). Additional descriptors from other facets are assigned as needed to index the product information. Precombined terms are given in the LanguaL™ Users' Manual, edition 29 September 1993 and included in the Food Product Indexer software as indexing examples, but are not included in this version of the thesaurus.

⁶ International Standard ISO 2788 (1986). Documentation – Guidelines for the establishment and development of monolingual thesauri

⁷ International Standard ISO 5964 (1985). Documentation – Guidelines for the establishment and development of multilingual thesauri

The following **abbreviations**, in accordance with the International Standards, are printed as prefixes to terms etc. Each abbreviation indicates the relationship or function of the term or node that follows:

- BT** Broader term.
The term that follows the symbol represents a concept having a wider meaning.
- NT** Narrower Term
The term that follows the symbol refers to a concept with a more specific meaning.
- RT** Related Term
The term that follows the symbol is associated, but it is not a synonym, a quasi-synonym, a broader term or a narrower term.
- USE** Use
The term that follows the symbol is the preferred term when a choice between synonyms and quasi-synonyms exists.
- UF** Use For
The term that follows the symbol is a non-preferred term or synonym.
- SN** Scope Note
A note attached to a term to indicate its meaning within an indexing language. It is not intended to be a dictionary definition, but it serves instead to indicate the *use* of a term. The language of the food field is not always precise. Scope notes are therefore provided for many descriptors in order to achieve consistency in indexing and searching and, perhaps more importantly, to achieve the purpose of a common language for the description of foods.
- AI** Additional Information
In addition to indexing information handled by the scope notes, the LanguaL™ thesaurus also includes a special property named Additional Information (AI), to be used for further description of more lexical or encyclopaedic nature (list of many different properties).
- FTC** Facet Term Code
This symbol is followed by the unique identifier for each descriptor in the LanguaL™ thesaurus. The identifier, the facet term code, consists of one character identifying the facet followed by a four digit number.

In interchange of food description data, the use of facet codes using only the characters A to Z and digits solves the problem of special **character sets**. Using the facet term code in food description data interchange also avoids translation of descriptions.

The following **conventions** are used throughout the LanguaL™ thesaurus.

- a) Preferred terms are printed in upper case.

Examples:

BEVERAGE

CONFECTIONERY

- b) Non-preferred terms are printed in lower case except when the non-preferred term is a proper name requiring an upper case initial, or an abbreviation or acronym which should be printed throughout in upper case.

Examples:

BEVERAGE

UF drink

BREAM

UF abramis brama

DENMARK

UF DK

2.4 DISPLAY OF TERMS AND RELATIONSHIPS

Terms and their interrelationships of the LanguaL™ thesaurus are displayed in a variety of formats to meet different user needs:

- (a) *alphabetical display*, with scope notes and indications of inter-term relationships (originally by FDA called the THESAURUS ENTRY REPORT or VOCABULARY ENTRY REPORT);
- (b) *systematic display*, supported by an alphabetical index and a code index (originally by FDA called the THESAURUS HIERARCHIC REPORT or HIERARCHIC TREE REPORT).

2.4.1 ALPHABETICAL DISPLAY

In this form of thesaurus display, all indexing terms, whether preferred or non-preferred, are organised as a single alphabetical sequence. Broader, narrower and related terms and scope notes may also be included. When ancillary information is appended to preferred terms, it should be listed in the following order:

- | | | |
|----|------------|--|
| 1. | FTC | references to the facet term codes representative of the terms |
| 2. | BT | references to broader terms |
| 3. | NT | references to narrower terms |
| 4. | RT | references to related terms |
| 5. | UF | references to non-preferred terms |
| 6. | SN | scope note |
| 7. | AI | additional information about the terms |

In the LanguaL™ thesaurus alphabetical display, only one level above (BT) is given. The complete hierarchical relationships between terms are given in the systematic display (see below). Non-preferred terms are usually accompanied only by references (for example **USE**) to their preferred equivalents.

Example of alphabetical display:

ABALONE	
FTC:	B1408
BT :	ARCHAEOGASTROPOD (B1002)
NT :	BLACKFOOT ABALONE (B2681)
UF :	haloitis
abramis brama	
USE :	BREAM
ACIDIFIED	
FTC:	H0200
BT :	FLAVORING OR TASTE INGREDIENT ADDED (H0117)
UF :	pickled by acidification
SN :	Used when acid is added to a food product at any level.

2.4.2 SYSTEMATIC DISPLAY

The systematic display shows the logical, hierarchical structure of the thesaurus; it consists of two parts:

- *Categories or hierarchies* of terms arranged according to their meanings and logical interrelationships.
- An *alphabetical index* which directs the user to the appropriate part(s) of the systematic section.

The ISO standards explain the link between these two sections to be a system of addresses. An address code is assigned to each of the preferred terms in the systematic section and this code functions as a reference in the alphabetical index. In LanguaL™, these addresses are the *facet term codes*.

The systematic display allows the indexer or retriever to select the most specific term that can be assigned on the basis of the information at hand. It is frequently regarded as the main part of the thesaurus, i.e. the part that carries the most of the definitional and relational information, in which case the alphabetical index assumes the role of a complementary, but secondary, component.

Example of systematic display:

G. COOKING METHOD (G0002)
COOKED BY MOIST HEAT (G0012)
COOKED IN STEAM (G0021)
STEAMED WITH PRESSURE (G0022)
STEAMED WITHOUT PRESSURE (G0023)
COOKED IN WATER OR WATER-BASED LIQUID (G0013)
BOILED (G0014)
BOILED AND DRAINED (G0015)
BOILED IN LARGE AMOUNT OF LIQUID (G0016)
BOILED IN SMALL AMOUNT OF LIQUID (G0017)

Example of alphabetical index of terms:

B1408	ABALONE
B1645	ABALONE MUSHROOM
B1241	abelmoschus esculentus
B1763	abramis brama
B1327	ACACIA
B1241	acacia insuavis
B1762	acanthistius brasilianus
B1630	acanthocybium solanderi
B2303	acanthuridae
B1360	ACEROLA
H0300	ACETIC ACID FERMENTED
H0200	ACIDIFIED

Example of alpha-numerical index of codes:

A0105	DRESSING, CONDIMENT, GRAVY OR SAUCE
A0106	PREPARED GRAIN OR STARCH PRODUCT
A0107	BAKERY PRODUCT, UNSWEETENED
A0108	PASTRY SHELL, UNSWEETENED
A0109	PASTEURIZED PROCESS CHEESE SPREAD
A0110	PASTEURIZED PROCESS CHEESE
A0111	PASTEURIZED PROCESS CHEESE FOOD
A0112	NONALCOHOLIC BEVERAGE
A0113	SPICE OR HERB
A0114	FROZEN DAIRY DESSERT
A0115	CHEESE OR CHEESE PRODUCT

LanguaL™ stands for “**Langua Alimentaria**” or “language of food”. It is an automated method for describing, capturing and retrieving data about food. The work on LanguaL™ was started in the late 1970's by the Center for Food Safety and Applied Nutrition (CFSAN) of the United States Food and Drug Administration (FDA) as an ongoing co-operative effort of specialists in food technology, information science and nutrition. Since then, LanguaL™ has been developed in collaboration with the US National Cancer Institute (NCI), and, more recently, its European partners, notably in France, Denmark, Switzerland and Hungary. Since 1996, the European LanguaL™ Technical Committee has administered the thesaurus.

This report presents the multilingual part of the present version, LanguaL™ 2017 Thesaurus, according to international thesaurus standards.
