Eurocardan overrunning clutch provide a safe way to protect operators and machinery where inertia units: i.E. Rotary mowers, balers, hay conditioners, etc. Can overrun driving source. They feature a quick detach pin to quickly disconnect from the unit. They take the push out of the driven machine and eliminate the chance of broken or twisted P.T.O. Shafts. Overrunning clutch drive solidly from tractor to driven implement, but overrun smoothly when implement exceeds P.T.O. Speeds.
