Race Track

Inaugural year

Souvenir

Introducing  
**K G E N**  
Kinetic Generator

JULY, 1990.

A Banner Month in a banner year. On the plains of Kansas, traditional center of conservative midwest morality, a race track opens and parimutuel wagering becomes legal. Alf Landon rolls over in his grave.

A new Race track is born and with it the first general release of

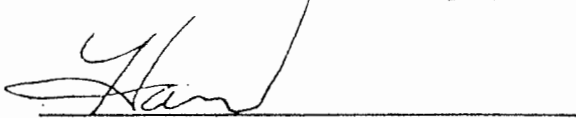

The Kinetic Generator

K G E N

This is PIRCO'S first fully NON-Linear program. It has worked seeming miracles for its Test Group for over a year. It can do the same for You.

This is a dual Seminar. Both Velocity and Energy will be taught, each in its own room. There will be Three General Sessions in which WINNING information will be presented that is vital REGARDLESS of the computer program being used.

Welcome to Kansas City. Now let's go to work!

Sartin

## How to Lose With Energy Without ever really trying

In April of 1990 We began receiving some disturbingly negative Energy Reports from a San Francisco Bay area client. While he previously submitted some excellent reports, his record was cyclic. Some weeks were excellent, others less so.

He seemed to be disqualifying WINNERS in great batches, signifying as his reason: "Horse did not meet Energy Requirement." Upon questioning he said that he meant TOTAL ENERGY (RAW) requirements.

My immediate response, before seeing any examples of his losing races, was--"There are NO Raw Total Energy Requirements providing ALL YOUR CONTENDERS have a legitimate chance in the race.

This 2nd Race at Golden Gate is a good example of his reasoning AND the fault BEHIND his reasoning.

We must always look at the CONDITIONS of ANY race. This one is carded for Non-Winners of two races, Which is another way of saying Non-Winners of ONE except maiden or claiming. In effect, it is carded for horses that broke their maiden at today's level.

Look at the APV's of TEMP and COLONEL. Both won handily with APV's in excess of today's purse. Quoting the Yellow Manual:

### ASSESSING A HORSE'S POTENTIAL FROM ITS MAIDEN WIN

---

Contenders whose Maiden Win pace characteristics qualify it in a Claiming race for Non-Winner of 2 or Non-Winners of one except maiden or claiming, often pay box car mutuels even though they are, by the conditions of the race, obvious choices. First make sure that the above conditions apply. NOW check the APV of ALL contenders. Use the ACTUAL purse distributions at your track. If the maiden win shows an APV within 12% of Today's Purse. It qualifies. If it is ABOVE today's purse, we may well conclude that the race was CARDED FOR THIS ANIMAL.

6 FURLONGS, (1.07%) CLAIMING, Purse \$9,000, 3-year-olds. Bred in California. Weight, 122 lbs. Non-winners of two races since March 15 allowed 3 lbs.; a race since then, 5 lbs. Claiming price \$10,000; if for \$9,000 allowed 2 lbs. (Maiden races, claiming, starter and classified handicap races for \$8,000 or less not considered.)

TEMP's last race can certainly be forgiven. It was for 12,500 just after a maiden win AND the horse had a meaningful trouble line. COLONEL ran well in a route last time but won for fun at today's level two back. Today's class (its 146.4% over purse) and today's distance.

First let's look at the race ignoring his cross outs.

20 DAILY RACING FORM, SATURDAY, MAY 19, 1990.

2nd Golden Gate 051902

AS

6 FURLONGS GOLDEN GATE

6 FURLONGS (1973) CLAIMING, Purse \$3,000. 3-year-olds. Bred in California. Weight, 122 lbs. Non-winners of two races since March 15 allowed 3 lbs.; a race since then, 5 lbs. Claiming price \$10,000; if for \$3,000 allowed 2 lbs. (Maiden races, claiming, starter and classified handicaps races for \$3,000 or less not considered.)

I have used more than one pace line for several of the horses where there could be some question of WHICH LINE TO USE. The client eliminated TEMP because of its LOW RAW TOTAL ENERGY. Then For some strange reason also eliminated COLONEL RUMBO who had the second Highest Total Energy(Raw). Here is his ENGEN readout from which he made his inappropriate decision to eliminate TEMP.

E N E R G Y   G E N E R A T O R

E N E R G Y   P R O F I L E

	Total	1st	TT	3rd	Med	2c	2cbl	ESP Type
Average >	167.71	35.71	33.68	30.60	69.40	34.58	2	Early X

NOWHERE do we ever say to eliminate horses that fall BELOW AVERAGE RAW TOTAL ENERGY should be eliminated. We have stated that such horses should be REVIEWED to make sure they are not merely SLOW horses BEFORE we use the "E" Auto adjust to equalize them with the HIGHER Total Energy horses. TEMP qualifies from a wire-to-wire win with a qualifying 80 speed rating. MOON was acceptable to the client of an 80, why would he throw out TEMP? To get a quick appraisal of the Energy variance in a race we look at this read out:

	Total	Med	3rd
HIGH >>>	169.80	69.75	31.30
AVERAGE >>>	167.71	69.40	30.42
LOW >>>	163.25	68.85	29.81

There is a difference of 3.55 in Total Energy between the HIGH and the LOW. Further there is a difference of 2.09 difference between the AVE. and the High. So long as the LOW SPECTRUM Horses qualify on class and overall running ability, we are thus told to use the "E" Auto Adjust. DIAM does NOT qualify off its maiden win because of the above mentioned APV factor. I left it in the readout, however. so you could see that it's rankings were also nowhere.

Even using the AUTOMATIC ADJUSTMENT, with ALL Horses along with 2 different lines for MOON, SOL & DIAM, TEMP is #1 Paragon A and Early EXDC. COLONEL is #1 Sustained, Late & Late EXDC. TEMP has the zero Early deficiency, COLONEL the zero Late deficiency. Note that COL. ALSO has the EVEN EMUV/SMUV numbers so potent in picking In-The-Money Horses. What might cause us to eliminate TEMP from this readout is the SUSTAINED variegate that is derived from the mish-mash of contenders and pace lines that we're asking the program to sort out.

We will use TEMP and MOON. (Diamond really doesn't qualify) off their last race. COLONEL & SOL from 2 back. This is really being quite generous to SOL. I would rather err on the part of generosity for the simple reason that I wouldn't want you to think that we win these races with unfair manipulation.

Now, with the proper contenders from proper pace lines using the "E" Auto adjust, here is the ENERGY readout.

E N E R G Y  
\* \* \* \* \*

2nd Readout

Pace	Matchup			True Contenders	Name	Varius Units of Energy		
	F 1	F 2	F 3			Emuv	Smuy	uXr
TEMP	36.24	33.51	30.23	from appropriate Pace Lines	TEMP	0.000	0.296	0.296*
SOL	35.44	33.61	30.94		SOL	0.189	0.245	0.434
MOON	35.42	33.56	31.00		COL	*0.217	*0.217	0.435
COL	35.36	33.53	31.11		MOON	0.289	0.324	0.613

PARAGON A	PARAGON B	ENERGIZER	VARIEGATE
TEMP	COL	COL	Early

Early

	E P	P R	H E	S P	L X	F X	Muv
TEMP	1	1	3	4	4	1	0.00
SOL	2	3	2	3	3	3	1.72
COL	3	2	1	1	1	1	1.91
MOON	4	4	2	2	2	2	2.94

Paragon A			Paragon B		
TEMP	████████████████████		COL	████████████████████	
COL	████████████████████		SOL	████████████████████	
SOL	████████████████████		MOON	████████████████████	

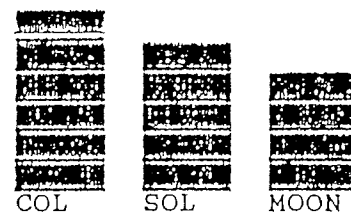

Now the Varlegate changes to EARLY. COLONEL maintains its EVEN EMUV/SMUY, making it the pivotal horse. The rest of the readouts speak for themselves.

Some reminders of what we've learned.

Do your A.P.V. & Class figures FIRST. They are VITAL Eliminators.

\*

The Sort only tells part of the story.

Learn the value of the EXDC matchup; The power of the even EMUV-SMUV horse. (see Alo) The place horse, key to Exacta Profit.

Learn when to use the "E" Manual Adjust.

Properly utilized it will compensate for any time deviations caused by distance or surface variations.

When all contenders have an equi-potential but show a Total Energy disparity caused by distance, surface or daily variations,

USE The "E" Manual Adjustment.

....I said USE it...

Don't abuse it!

Those with IBM's & Clones

should first look at the picture drawn by the auto-adjust. When you note a contender that has run well but whose Total Energy is from 1.65 to 2.0 or over LESS than the HIGH

Total Energy, use the "E" Alternate.

**MAKE SURE ALL**

**CONTENDERS TRULY** Quality BEFORE making this adjustment.

**OTHERWISE**

You'll be boosting the chances of slow horses & **NON-Qualifiers!**

\*

Throughout North America the "E" Auto Adjust is optimal about 36% of the Time. A FU quote saying only 5% of the time was

erroneous and based on subjective statistics NOT thorough research.

**SUBJECTIVE** Statistics

are dangerous. They are the basis of why 95% of all "Horseplayers **LOSE!**

They represent opinion. The **OPINIONS** of losers are worthless and only beget **LOSING!** Decontaminate your mind. Then Open it to the opportunities that

only ENERGY provides,  
day in, day out. You have  
the key to wealth and  
INDEPENDENCE. USE IT!  
Use ALL of ENERGY'S  
READOUTS.

We learn very little from  
our WINS!

The Various

UxR

-----  
Energy's Most Important  
and often overlooked  
**READOUTS**

I was surprised to read in Follow Up #21, "that in 1987 Energy, as a handicapping concept simply didn't exist."

Energy was conceived in 1976. It was first used by me, publicly, in New Orleans in 1983. Jim "Hat" Bradshaw was so impressed that he was determined to use nothing but the ENERGY! concept from that time forward. Our first working Computer Program was developed in late 1983 I inserted elements of ENERGY into ULTRASCAN in 1985, and Bob Purdy incorporated ENERGY factors in SYNERGISM in 1987.

My initial discontent with Velocity stemmed not from its failure to win races, but the ease with which it could be duplicated by virtually anyone and the prospect of diminished mutuels in the future.

I also observed Velocity losing a number of higher priced mutuels because of the linear nature of Velocity ONLY figures.

My interest in seeking something more advanced and NON-Linear was peaked by this excerpt from an article by HUEY MAHL in Systems & Methods:

// If I were to "weigh" the worth of each rating in a 6-furlong race I would assign them in this ratio:

<u>F1</u>	<u>F-2</u>	<u>F-3</u>
1/4	1/2	3/4
27%	33%	40%

Thus, a 22-23-24 horse would figure like this for emphasis:

	<u>F1</u>	<u>F2</u>	<u>F3</u>
	<u>1/4</u>	<u>1/2</u>	<u>3/4</u>
Sec.	:22	:23	:24
-----			
%	<u>x.27</u>	<u>x.33</u>	<u>x.40</u>
Weighted	29.4	30.4	30.0

Since these "weighted" ratings are all about the same in this case, this indicates to me a pretty smooth dispensation of energy. This is probably the way a horse would like to run if human beings didn't screw around with him so much." \*

\* Copyright. Huey Mahl, 1976  
Reprinted with permission

Huey was "Guesstimating." His figures came off the top of his head. I decided to do a thousand race research project: 350 Routes, 350 Sprints, 200 Mile races and 100 Turf Races.

As my fixed control point I utilized Huey's "WORTH" values:

F-1: 1st Fraction: = 27%  
F-2: 2nd Fraction: = 33%  
F-3: 3rd Fraction: = 40%

It did not take long to discover a fatal flaw in Mahl's "Guesstimate."

Like his predecessor, Hugh Matheson, he was attaching TOO MUCH importance to the 3rd fraction in Sprints. The results of my 1,000 race test were:

SPRINTS(dirt):

F-1 = 33%  
F-2 = 39%  
F-3 = 28%

MILE (dirt)	F-1	=	35%	(1/2 mile)
	F-2	=	32%	(1/4 mile)
	F-3	=	33%	(1/4 mile)

Over 1 Mile(dirt)	F-1	=	27%
	F-2	=	36%
	F-3	=	37%

TURF(Routes)	F-1	=	22%
	F-2	=	39%
	F-3	=	39%

These are generic figures taken from 28 different tracks. Individual tracks are subject to wide variations. So, don't use these numbers as gospel. Remember, these figures represent the weight or importance by fraction. In tracking the ACTUAL percentage of Energy yield for winners by fraction, this was the result:

Dirt Sprints:	F-1	=	35.4%
	F-2	=	33.5%
	F-3	=	31.1%

Dirt Mile:	F-1	=	35.0%
	F-2	=	32.8%
	F-3	=	32.2%

Dirt OVER 1 Mile:	F-1	=	34.9%
	F-2	=	33.5%
	F-3	=	31.6%

Turf Routes:	F-1	=	33.5
	F-2	=	33.2
	F-3	=	33.3

Note the even of Turf fractional Energy yields with the emphasis on HIDDEN Energy.

Again these numbers are generic and subject to the vagaries of distance and surface of individual tracks. Clustering all dirt sprints and routes of over 1 mile also produces averages that are subject to variation. Being able to measure a contenders win potential by percentage of Energy yield which is a specific value rather than by pure velocity, which is relative, was a tremendous breakthrough and a boon to enhanced win percentages and profits. It has the added dimension of being less than acceptable by conventional minds and mainstream "Horseplayers."

Because SYNERGISM was the vital Velocity Link to ENERGY we sub-titled it: "On the Threshold of Energy."

In 1986 The "Hat" and I, working together in his Tulsa home, produced the First ENERGY! program for client use. We distributed it to testers in Arkansas for use at Oaklawn Park, purportedly the most "difficult" track in North America. The first testers were Robert Berryman and Tom Taylor. The next tester was Elton Smith at AKSARBEN in Omaha. Aksarben, too, was supposed to be a difficult track.

In 1987 we selected The State of Washington for a final ENERGY! testing.

We did so because that state, along with Portland Meadows in Oregon had produced the fewest winners and loyal clients of any other geographic area in North America. User perception in the Pacific Northwest was that: Their tracks were "different" and our concepts wouldn't work there. The vagaries of the weather was cited as the number one reason. The other problems were universal at all tracks, merely thought of as unique by an isolated society.

The three testers initially involved were Ginny Butler, Dick Hazen and Bruce Jorgenson. Their results were so spectacularly positive that the "Hat" and I decided to release ENERGY! FIRST to a Pacific Northwest Control Group. That was in April of 1988. Our second Control Group consisted of 20 clients who wagered primarily at AKSARBEN in Omaha and FAIRMONT PARK on the Illinois side of the border near St. Louis, Mo. Again - under the direction of Elton Smith - the results were spectacular.

Later in 1988 we released Energy! to Clients in every North American Racing Market.

Initially we offered a free seminar for our Washington and Nebraska control groups. At those Seminars we stressed the overwhelming importance of the VARIUS readouts, especially the UxR.

UxR stands for: Units of Energy (needed to) Recover based on the Dream Race which consists of The best 3 fractions derived from the contenders in the race. In all VARIUS readouts, LOW is Best.

The term VARIUS is NOT a misspelling of Various. VARIUS is a Latin word designating "Shape" especially as applied to the inconsistencies of shape. The shape of races is seldom even which is why predicting their outcome is difficult, especially by designating a Linear Shape. Hence, the VARIUS is non-linear and stresses Inconsistencies and DEFICIENCIES rather than positive factors like velocity where "Most" is Best. In the VARIUS "Least is Best."

Let's review our definition of terms used in the VARIUS.

EMUV (Early Matchup Varius) Represents the degree of DEFICIENCY relative to the Dream Race.

SMUV (Sustained Matchup Varius) shows the degree of DEFICIENCY, Late, relative to the Dream Race.

UxR is the sum of a contenders DEFICIENCIES relative to the Dream Race. Horses are not machines. IF they WERE then the LOWEST UxR numbers would ALWAYS be the most predictive of the winner. As it is, depending on USER skills in picking viable contenders and Pace Lines, the top 3 UxR horses dominate the Winners Circle REGARDLESS of Variegate. We garnered this fact from the THOUSANDS of Energy Reports submitted to us since 1987. This is WHY we ask you to insert the ACTUAL UxR number of the WINNER in your Energy Reports. We also ask for the Winning MUV numbers, which is also vital.

Other than user error the effectiveness of the LOWEST three UxR numbers can also be altered by extreme Sustained/late bias, a race filled slower horses, mixed distances, track conditions and weather.

Modeling the VARIUS of winners at a given track, focusing on UxR and MUV, will tell you JUST HOW MUCH DEFICIENCY a contender can have and Still win. The UxR is generally supported by the ENERGIZER, PARAGON "A" and the EARLY EXDC graph. When this is not so, we rely more heavily on the UxR. Sometimes, when a track goes to an EARLY bias, the UxR will take precedence over the Variegate.

An example of this came to us recently from a Florida Client handicapping at Calder Race Course. The track was manifesting an extreme early bias but his Variegate too often said: Sustained or Sustained/Presser. This was because the Early horses, with Med. Energy percentages over 70, and 3rd fractions lower than 30, were hanging on to win. The extreme track surface bias was overwhelming the laws of Physics. The client called in desperation. His win percentage had dropped to 36%. He lost 21 races in two weeks. What should he do? I explained that the reason Energy had so many readouts in addition to the Variegate and Sort, was so the client would be able to win under these and all other possible conditions. I urged him to check the numbers produced by the WINNERS he didn't have in his Paragon A, Early EXDC, MUV AND, ESPECIALLY the UxR. He called the next day to inform me that the LOW 2 in his UxR readouts had won 19 of the 21 races he'd Lost!

One of the greatest assets of the VARIUS is the horse with an EVEN EMUV/SMUV numbers. That is where the two numbers are identical or only minutely separated. These horses, based on appropriate contender selection and Pace Lime entry, are In-The-Money over 80% of the time.

Who is causing the  
Variegate to be  
Sustained/Presser?  
Jack.  
Is Jack a True Contender?  
Let's examine his pace lines.

NOTE: The UxR

Who is LOW?  
Don't discount a .02 Edge.  
.02 is a lot in the UxR.

These are questions that  
must be answered.  
We will use the "E" Alt.  
Adjustment & either take  
JACK out of Variegate  
consideration OR Scratch him.  
Here is what happens.

# Long shots pay \$1,656.80 exacta

By BLAIR KERKHOFF  
Staff Writer

## WOODLANDS NOTEBOOK

The combination of Greek Herclean-Mita Stride put record numbers on the tote board after the sixth race Friday at The Woodlands.

Greek Herclean paid \$111.60 to win and Mita Stride returned \$108.80, record payouts for win and place tickets. The 8-9 combination also produced a record exacta, \$1,656.80 for a \$1 ticket.

The favorite, Gunnabeon T.V., finished third and paid \$3.40.

### 'Flyer' wins feature

Madmoiselle Flyer, a 3-year-old filly making her second start at the Woodlands, handily beat a field of five others in the featured eighth race, a \$7,000 one-mile event.

"This is a very impressive young filly," jockey Rodney Trader said of his ride in the winner's circle. "I didn't have to ask her to

do anything down the stretch. She had plenty left and breezed home."

Madmoiselle Flyer finished third in a similar \$7,000 allowance event June 9.

Madmoiselle Flyer paid \$10.20, \$5.00 and \$3.00 in running a mile in 1 minute, 38 seconds. Won Ton Tobin was second and paid \$4.20 and \$2.80. Lover's Chat paid \$3.20 to show.

### Plaza Handicap is today

Orphan Kist, the career-leading Nebraska-bred distaff money earner, and G.U. Dreamer share the top weight for today's \$25,000-added Plaza Handicap at 6 furlongs for fillies and mares.

Orphan Kist will be guided by regular jockey Tim Brown, and The Woodlands' David Lidberg will be aboard G.U. Dreamer.

Orphan Kist, coming off a victory in the Quivira Handicap at Ak-Sar-Ben, has won \$427,730.

Two Woodlands' winners, Urbanity and Miss Waukesha, will challenge the Nebraska-breds. Also contending is Excess Energy, who scratched out of the Atchison, Topcka and Santa Fe Handicap two weeks ago to point to this event.

### Senior Citizen's Day

Thursday has been designated Senior Citizen's Day at The Woodlands.

Free general admission will be offered to customers who are 60 or older. Admission to the clubhouse, the Turf Club, will be \$3.

"We're responding to feedback we've gotten from our senior citizens," said Woodlands' Director of Marketing Susan Longmire, who added The Woodlands is considering a similar offer for the greyhound track.

### Sixth race

5½ furlongs, Thoroughbreds. Purse \$3,400, Fillies, 4-year olds and upward, Claiming \$4,000. Off: 6:13. Time: 1:05. Owner: Terry Sapp. Trainer: Duane Wallerson.
