WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

1 Safety Precaution

1.1. General Guidelines

1. IMPORTANT SAFETY NOTICE

There are special components used in this equipment which are important for safety. These parts are marked by

⚠ in the Schematic Diagrams, Circuit Board Layout, Exploded Views and Replacement Parts List. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent X-RADIATION, shock, fire, or other hazards. Do not modify the original design without permission of manufacturer.

2. An Isolation Transformer should always be used during the servicing of AC Adaptor whose chassis is not isolated from the AC power line. Use a transformer of adequate power rating as this protects the technician from accidents resulting in personal injury from electrical shocks. It will also protect AC Adaptor from being damaged by accidental shorting that may occur during servicing.
3. When servicing, observe the original lead dress. If a short circuit is found, replace all parts which have been overheated or damaged by the short circuit.
4. After servicing, see to it that all the protective devices such as insulation barriers, insulation papers shields are properly installed.
5. After servicing, make the following leakage current checks to prevent the customer from being exposed to shock hazards.

1.2. Leakage Current Cold Check

1. Unplug the AC cord and connect a jumper between the two prongs on the plug.
2. Measure the resistance value, with an ohmmeter, between the jumpered AC plug and each exposed metallic cabinet part on the equipment such as screwheads, connectors, control shafts, etc. When the exposed metallic part has a return path to the chassis, the reading should be between $1\text{ M}\Omega$ and $5.2\text{ M}\Omega$. When the exposed metal does not have a return path to the chassis, the reading must be infinity.

1.3. Leakage Current Hot Check (See Figure 1.)

1. Plug the AC cord directly into the AC outlet. Do not use an isolation transformer for this check.
2. Connect a $1.5\text{ k}\Omega$, 10 W resistor, in parallel with a $0.15\text{ }\mu\text{F}$ capacitor, between each exposed metallic part on the set and a good earth ground, as shown in Figure 1.
3. Use an AC voltmeter, with $1\text{ k}\Omega/\text{V}$ or more sensitivity, to measure the potential across the resistor.
4. Check each exposed metallic part, and measure the voltage at each point.
5. Reverse the AC plug in the AC outlet and repeat each of the above measurements.
6. The potential at any point should not exceed 0.75 V RMS . A leakage current tester (Simpson Model 229 or equivalent) may be used to make the hot checks, leakage current must not exceed $1/2\text{ mA}$. In case a measurement is outside of the limits specified, there is a possibility of a shock hazard, and the equipment should be repaired and rechecked before it is returned to the customer.

Hot-Check Circuit

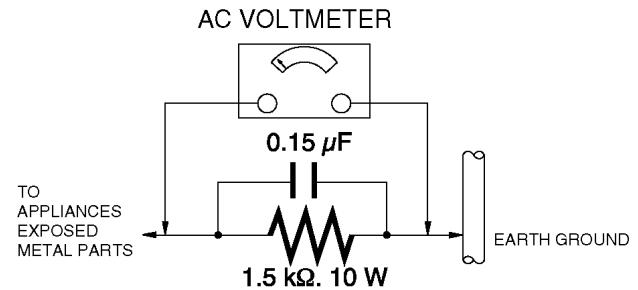

Figure. 1

1.4. How to Discharge the Capacitor on Main PCB

- This unit equipped with two pieces of capacitors as flash charging capacitors.
- “Either one of the capacitor discharging operation” makes discharging for others as well.

CAUTION:

1. Be sure to discharge the capacitor on MAIN PCB.
2. Be careful of the high voltage circuit on MAIN PCB when servicing.

[Discharging Procedure]

1. Refer to the disassemble procedure and Remove the necessary parts/unit.
2. Put the insulation tube onto the lead part of Resistor (ERG5SJ102:1kΩ /5W).
(an equivalent type of resistor may be used.)
3. Put the resistor between both terminals of capacitor on MAIN PCB for approx. 5 seconds.
4. After discharging confirm that the capacitor voltage is lower than 10V using a voltmeter.

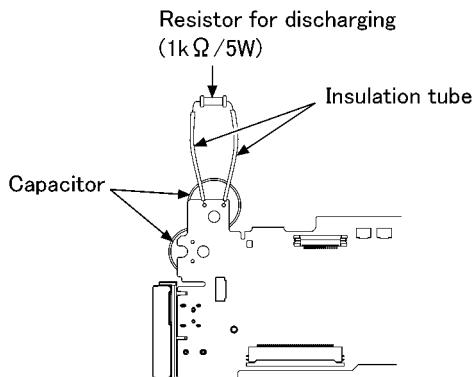

Fig. F1

2 Warning

2.1. Prevention of Electro Static Discharge (ESD) to Electrostatically Sensitive (ES) Devices

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices.

Examples of typical ES devices are CCD image sensor, IC (integrated circuits) and some field-effect transistors and semiconductor "chip" components.

The following techniques should be used to help reduce the incidence of component damage caused by electro static discharge (ESD).

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any ESD on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging ESD wrist strap, which should be removed for potential shock reasons prior to applying power to the unit under test.
2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an antistatic solder removal device. Some solder removal devices not classified as "antistatic (ESD protected)" can generate electrical charge sufficient to damage ES devices.
5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.

CAUTION :

Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.

8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity (ESD) sufficient to damage an ES device).

2.2. How to Recycle the Lithium Ion Battery (U.S. Only)

ENGLISH

A lithium ion/polymer battery that is recyclable powers the product you have purchased. Please call 1-800-8-BATTERY for information on how to recycle this battery.

FRANÇAIS

L'appareil que vous avez acheté est alimenté par une batterie au lithium-ion/polymère recyclable. Pour des renseignements sur le recyclage de la batterie, veuillez composer le 1-800-8-BATTERY.

2.3. Caution for AC Cord (For EB/GC/SG)

2.3.1. Information for Your Safety

IMPORTANT

Your attention is drawn to the fact that recording of pre-recorded tapes or discs or other published or broadcast material may infringe copyright laws.

WARNING

To reduce the risk of fire or shock hazard, do not expose this equipment to rain or moisture.

CAUTION

To reduce the risk of fire or shock hazard and annoying interference, use the recommended accessories only.

FOR YOUR SAFETY

DO NOT REMOVE THE OUTER COVER

To prevent electric shock, do not remove the cover. No user serviceable parts inside. Refer servicing to qualified service personnel.

2.3.2. Caution for AC Mains Lead

For your safety, please read the following text carefully.

This appliance is supplied with a moulded three-pin mains plug for your safety and convenience.

A 5-ampere fuse is fitted in this plug.

Should the fuse need to be replaced please ensure that the replacement fuse has a rating of 5 amperes and it is approved by ASTA or BSI to BS1362

Check for the ASRA mark or the BSI mark on the body of the fuse.

If the plug contains a removable fuse cover you must ensure that it is refitted when the fuse is replaced.

If you lose the fuse cover, the plug must not be used until a replacement cover is obtained.

A replacement fuse cover can be purchased from your local Panasonic Dealer.

If the fitted moulded plug is unsuitable for the socket outlet in your home then the fuse should be removed and the plug cut off and disposed of safely.

There is a danger of severe electrical shock if the cut off plug is inserted into any 13-ampere socket.

If a new plug is to be fitted please observe the wiring code as shown below.

If in any doubt, please consult a qualified electrician.

2.3.2.1. Important

The wires in this mains lead are coloured in accordance with the following code:

Blue	Neutral
Brown	Live

As the colours of the wires in the mains lead of this appliance may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows:

The wire which is coloured BLUE must be connected to the terminal in the plug which is marked with the letter N or coloured BLACK.

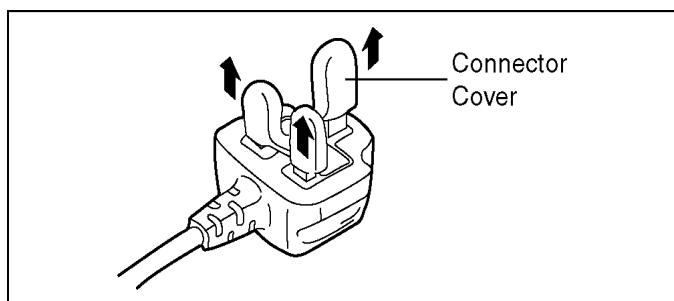

The wire which is coloured BROWN must be connected to the terminal in the plug which is marked with the letter L or coloured RED.

Under no circumstances should either of these wires be connected to the earth terminal of the three pin plug, marked with the letter E or the Earth Symbol.

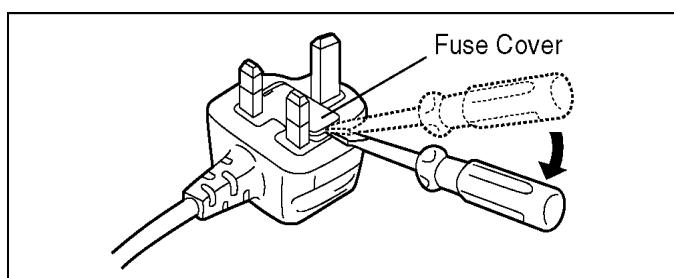

2.3.2.2. Before Use

Remove the Connector Cover as follows.

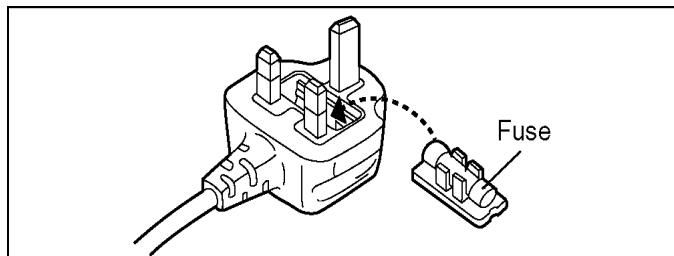

2.3.2.3. How to Replace the Fuse

1. Remove the Fuse Cover with a screwdriver.

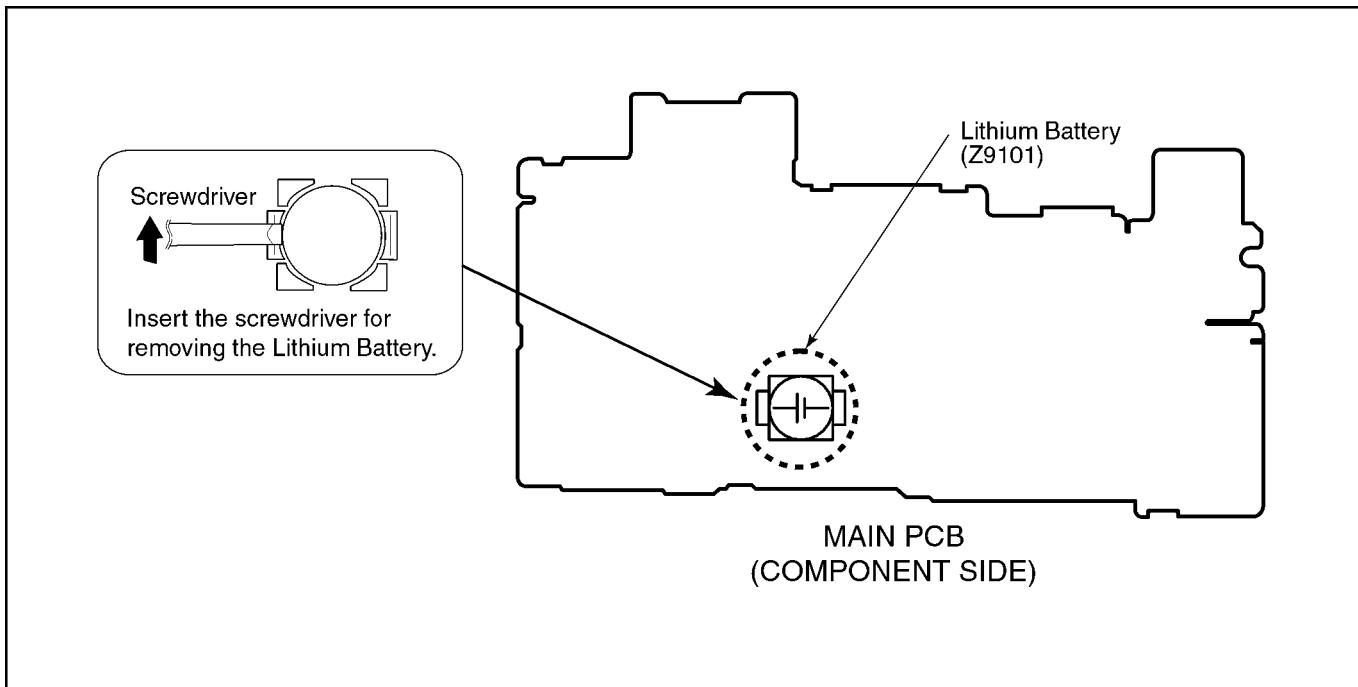

2. Replace the fuse and attach the Fuse cover.

2.4. How to Replace the Lithium Battery

2.4.1. Replacement Procedure

1. Remove the MAIN PCB. (Refer to Disassembly Procedures.)
2. Remove the Lithium battery (Ref. No. "Z9101" at component side of MAIN PCB) and then replace it into new one.

NOTE:

This Lithium battery is a critical component.

(Type No.: ML-421S/ZT Manufactured by Matsushita Battery Industrial Co.,Ltd.)

It must never be subjected to excessive heat or discharge.

It must therefore only be fitted in requirement designed specifically for its use.

Replacement batteries must be of same type and manufacture.

They must be fitted in the same manner and location as the original battery, with the correct polarity contacts observed.

Do not attempt to re-charge the old battery or re-use it for any other purpose.

It should be disposed of in waste products destined for burial rather than incineration.

(For English)

CAUTION

Danger of explosion if battery is incorrectly replaced.
Replace only with the same or equivalent type recommended by the manufacturer.
Dispose of used batteries according to the manufacturer's instructions.

(For French)

PRECAUTION

Le fait de remplacer incorrectement la pile peut présenter des risques d'explosion.
Remplacer la pile uniquement par une pile identique ou de type équivalent recommandée par le fabricant. Se débarrasser des piles usagées conformément aux instructions du fabricant.

(For German)

VORSICHT

Bei einer falsch eingesetzten Batterie besteht Explosionsgefahr. Nur mit einer vom Hersteller empfohlenen Batterie vom gleichen Typ ersetzen.
Verbrauchte Batterien beim Fachhändler oder einer Sammelstelle für Sonderstoffe abliefern.

(For Swedish)

WARNING

Explosionsfara vid felaktigt batteribyte.
Använd samma batterityp eller en ekvivalent typ som rekommenderas av apparattilverkaren.
Kassera använt batteri enligt fabrikantens instruktion.

(For Norwegian)

ADVARSEL!

Lithiumbatteri-Eksplorationsfare ved fejlagtig håndtering.
Udskiftning må kun ske med batteri af samme fabrikat og type.
Levér det brugte batteri tilbage til leverandøren.

(For Finnish)

VAROITUS

Paristo voi räjähtää, jos se on virheellisesti asennettu.
Vaihda paristo ainoastaan laitevalmistajan suosittelemaan tyyppiin.
Hävitä käytetty paristo valmistajan ohjeiden mukaisesti.

NOTE:

Above caution is applicable for a battery pack which is for DMC-FZ7 series, as well.

3 Service Navigation

3.1. Introduction

This service manual contains technical information, which allow service personnel's to understand and service this model.

Please place orders using the parts list and not the drawing reference numbers.

If the circuit is changed or modified, the information will be followed by service manual to be controlled with original service manual.

3.2. General Description About Lead Free Solder (PbF)

The lead free solder has been used in the mounting process of all electrical components on the printed circuit boards used for this equipment in considering the globally environmental conservation.

The normal solder is the alloy of tin (Sn) and lead (Pb). On the other hand, the lead free solder is the alloy mainly consists of tin (Sn), silver (Ag) and Copper (Cu), and the melting point of the lead free solder is higher approx.30°C (86°F) more than that of the normal solder.

Distinction of PCB Lead Free Solder being used

The letter of "PbF" is printed either foil side or components side
on the PCB using the lead free solder.(See right figure)

PbF

Service caution for repair work using Lead Free Solder (PbF)

- The lead free solder has to be used when repairing the equipment for which the lead free solder is used.
(Definition: The letter of "PbF" is printed on the PCB using the lead free solder.)
- To put lead free solder, it should be well molten and mixed with the original lead free solder.
- Remove the remaining lead free solder on the PCB cleanly for soldering of the new IC.
- Since the melting point of the lead free solder is higher than that of the normal lead solder, it takes the longer time to melt the lead free solder.
- Use the soldering iron (more than 70W) equipped with the temperature control after setting the temperature at 350±30°C (662±86°F).

Recommended Lead Free Solder (Service Parts Route.)

- The following 3 types of lead free solder are available through the service parts route.
RFKZ03D01K-----(0.3mm 100g Reel)
RFKZ06D01K-----(0.6mm 100g Reel)
RFKZ10D01K-----(1.0mm 100g Reel)

Note

* Ingredient: tin (Sn) 96.5%, silver (Ag) 3.0%, Copper (Cu) 0.5%, Cobalt (Co) / Germanium (Ge) 0.1 to 0.3%

3.3. Important Notice 1:(Other than U.S.A. and Canadian Market)

1. The service manual does not contain the following information, because of the impossibility of servicing at component level without concerned equipment/facilities.
 - a. Schematic diagram, Block Diagram and PCB layout of Main PCB.
 - b. Parts list for individual parts of Main PCB.

When a part replacement is required for repairing Main PCB, replace as an assembled parts. (Main PCB)

2. The following category is/are recycle module part. please send it/them to Central Repair Center.

- MAIN PCB (VEP56031A) : Excluding replacement of Lithium Battery

3.4. How to Define the Model Suffix (NTSC or PAL model)

There are seven kinds of DMC-FZ7, regardless of the colours.

- a) DMC-FZ7S
- b) DMC-FZ7PP
- c) DMC-FZ7EB/EF/EG/EGM/GN
- d) DMC-FZ7EE
- e) DMC-FZ7GD
- f) DMC-FZ7GT
- g) DMC-FZ7PL/GC/GK/SG

(DMC-FZ7S is exclusively Japan domestic model.)

What is the difference is that the "INITIAL SETTINGS" data which is stored in Flash ROM mounted on Main PCB.

3.4.1. Defining methods:

To define the model suffix to be serviced, refer to the nameplate which is putted on the bottom side of the Unit.

a) DMC-FZ7S

DMC-FZ7S is exclusively Japan domestic model.

b) DMC-FZ7PP

The nameplate for this model show the following Safty registration mark.

c) DMC-FZ7EB/EF/EG/EGM/GN

The nameplate for these models show the following Safty registration mark.

d) DMC-FZ7EE

The nameplate for this model show the following Safty registration mark.

e) DMC-FZ7GD

The nameplate for this model show the following Safty registration mark.

f) DMC-FZ7GT

The nameplate for this model show the following Safty registration mark.

g) DMC-FZ7PL/GC/GK/SG

The nameplate for these models do not show any above Safty registration mark.

NOTE:

After replacing the MAIN PCB, be sure to achieve adjustment.

The adjustment instruction is available at "software download" on the "Support Information from NWBG/VDBG-PAVC" web-site in "TSN system", together with Maintenance software.

3.4.2. INITIAL SETTINGS:

CAUTION:

NEVER select "NONE(JAPAN)" if the unit is other than "JAPAN" model.
Otherwise, it can not be reset to the others.

When you replace the Main PCB be sure to perform the initial settings after achieving the Adjustment, by ordering the following procedure in accordance with model suffix.

- **Step 1. The temporary cancellation of factory setting:**

Set the mode dial to "[P]".

While keep pressing [Optical Image Stabilizer] and "[UP] of Cross key" simultaneously, turn the Power on.

- **Step 2. The cancellation of factory setting:**

Set the mode dial to "[Playback]".

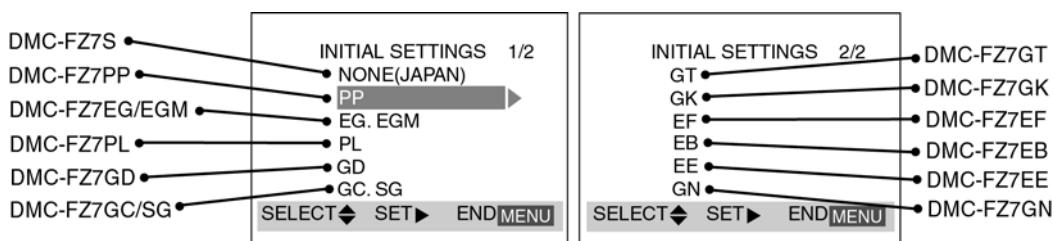

Press [Optical Image Stabilizer] and "[UP] of Cross key" simultaneously, then turn the Power off.

- **Step 3. Turn the Power on:**

Set the mode dial to "[P]", and then turn the Power on.

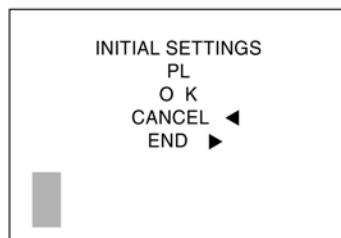

- **Step 4. Display the INITIAL SETTING:**

While keep pressing [MENU] and "[RIGHT] of Cross key" simultaneously, turn the Power off.

- **Step 5. Set the INITIAL SETTING:**

Select the area with pressing "[UP] / [DOWN] of Cross key", and then press the "[RIGHT] of Cross key".

The only set area is displayed, and then press the "[RIGHT] of Cross key" after confirmation.
(The unit is powered off automatically.)

Confirm the display of "PLEASE SET THE CLOCK" in English when the unit is turned on again.

- **Step 6. CONFIRMATION:**

The display shows "PLEASE SET THE CLOCK" when turn the Power on again.

When the unit is connected to PC with USB cable, it is detected as removable media.

(When the "GT" or "GK" model suffix is selected, the display shows "PLEASE SET THE CLOCK" in Chinese.)

1) As for your reference Default setting condition is given in the following table.

- **Default setting (After "INITIAL SETTINGS")**

	MODEL	VIDEO OUTPUT	LANGUAGE	DATE	REMARKS
a)	DMC-FZ7S	NTSC	Japanese	Year/Month/Date	
b)	DMC-FZ7PP/PL	NTSC	English	Month/Date/Year	
c)	DMC-FZ7EB/EE/EF/EG/EGM/GC/GN/SG	PAL	English	Date/Month/Year	
d)	DMC-FZ7GK	PAL	Chinese (simplified)	Year/Month/Date	
e)	DMC-FZ7GT	NTSC	Chinese (traditional)	Year/Month/Date	
f)	DMC-FZ7GD	NTSC	English	Year/Month/Date	

4 Specifications

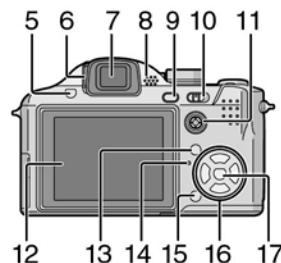

Digital Camera:	Information for your safety
Power Source:	DC 8.4 V
Power Consumption:	2.0 W (When recording with LCD Monitor) 1.9 W (When recording with Viewfinder) 1.0 W (When playing back with LCD Monitor) 0.9 W (When playing back with Viewfinder)
Camera effective pixels:	6,000,000 pixels
Image sensor:	1/2.5" CCD, total pixel number 6,370,000 pixels Primary color filter

About The Mode Dial

Adjust part A to the desired mode.
The mode dial can be rotated 360°. Rotate it slowly and surely to adjust to each mode.
(Do not adjust it to parts where there is no mode.)

P : Program AE mode

The exposure is automatically adjusted by the camera.

A : Aperture-priority AE mode

The aperture value is automatically determined by the shutter speed you set.

S : Shutter-priority AE mode

The shutter speed is automatically determined by the aperture value you set.

M : Manual exposure mode

The exposure is adjusted by the aperture value and the shutter speed which are manually adjusted.

Macro mode

This mode allows you to take a close-up picture of a subject.

Motion picture mode

This mode allows you to record motion pictures.

Scene mode

This mode allows you to take pictures depending on the recording scenes.

Simple mode

This mode is recommended for beginners.

Playback mode

This mode allows you to play back recorded pictures.

6 Service Mode

6.1. Error Code Memory Function

1. General description

This unit is equipped with history of error code memory function, and can be memorized 32 error codes in sequence from the latest. When the error is occurred more than 32, the oldest error is overwritten in sequence.

The error code is not memorized when the power supply is shut down forcibly (when the unit is powered on by the battery, the battery is pulled out) because the error code is memorized to FLASH ROM when the unit is powered off.

2. How to display

The error code can be displayed by the following procedure:

Before perform the error code memory function, connect the AC adaptor or insert the battery, and insert the SD card.

- 1. The temporary cancellation of factory setting:

Set the mode dial to “[P]”.

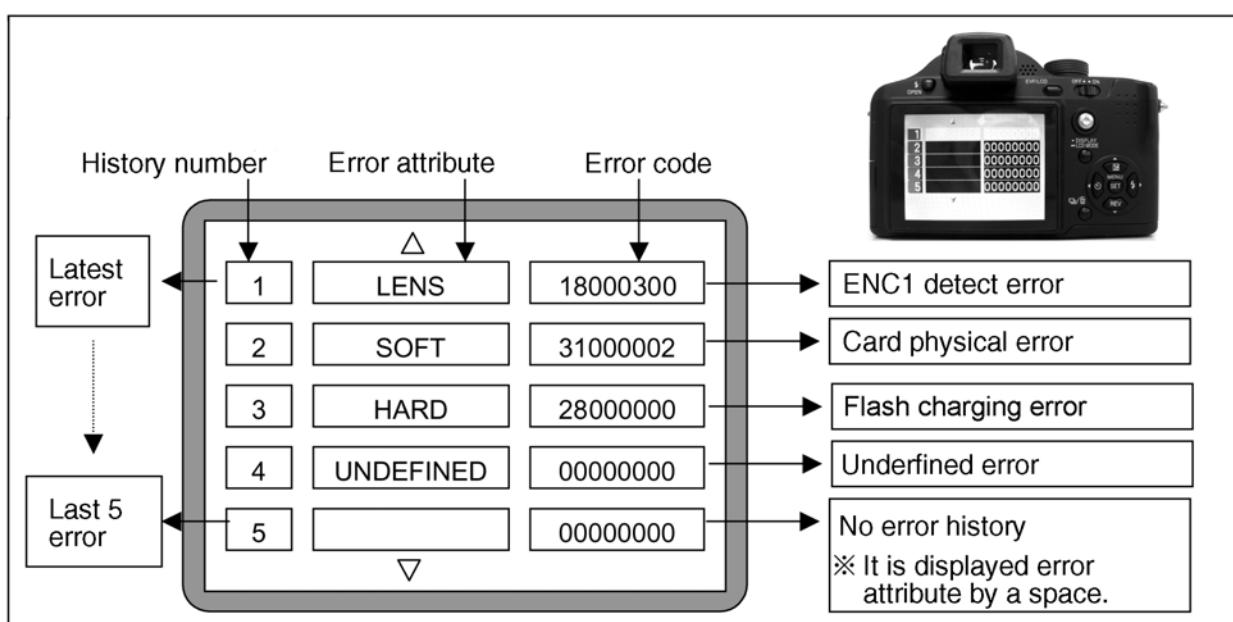

While keep pressing [Optical Image Stabilizer Button] and “[UP] of Cross key” simultaneously, turn the Power on.

- 2. The display of error code:

Press [Optical Image Stabilizer Button], [MENU] and “[LEFT] of Cross key” simultaneously with the step 1 condition.

The display is changed as shown below when the above buttons is pressed simultaneously.

Normal display → Error code display → Operation history display → Normal display →

Example of Error Code Display

- 3. The change of display:

The error code can be memorized 32 error codes in sequence, however it is displayed 5 errors on the LCD.

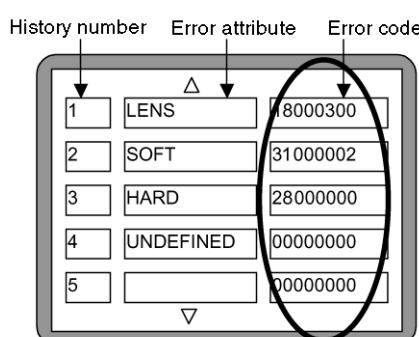

Display can be changed by the following procedure:

“[UP] or [DOWN] of Cross key” : It can be scroll up or down one.

“[LEFT] or [RIGHT] of Cross key” : It can be display last 5 error or another 5 error.

- 4. How to read the error code:

One error code is displayed for 8 bit, the contents of error codes is indicated the table as shown below.

Attribute	Main item	Sub item	Error code		Contents (Upper)	
			High 4 bits	Low 4 bits	Check point (Lower)	
LENS	Lens drive	OIS	1800	1000	PSD (X) error. Hall element (X axis) position detect error in OIS unit. OIS Unit

				3500	I jumped into dummy processing (0-7bit : command, 8-15bit : Status)
			3501	0000	Though record preprocessing is necessary, it is not called.
			3502	0000	Though record preprocessing is necessary, it is not completed.

• 5. How to returned to Normal Display:

Turn the power off and on, to exit from Error code display mode.

NOTE:

The error code can not be initialized.

6.2. Confirmation of Firmware Version

The Firmware version can be confirmed by ordering the following steps.:

- **Step 1. The temporary cancellation of factory setting:**

Set the mode dial to “[P]”.

Insert the SD memory card which has a few photo data.

While keep pressing [Optical Image Stabilizer] and “[UP] of Cross key” simultaneously, then turn the power on.

- **Step 2. Confirm the version:**

Set the mode dial to “[Playback]” and then press [DISPLAY] to switch to LCD with indication. (Fig. A)

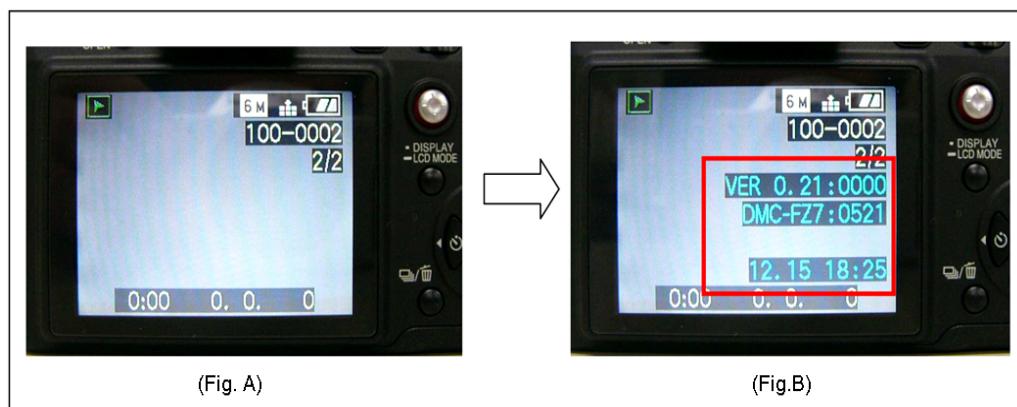

Press [Optical Image Stabilizer] and “[DOWN] of Cross key” simultaneously. (No need to keep pressing.)

(The version information is displayed on the LCD with light blue colour letters.) (Fig. B)

CAUTION:

The version information does not display if the LCD has switched to LCD with indication already.

In this case, press [DISPLAY] to switch to LCD with indication.

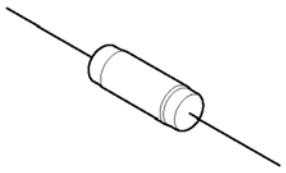

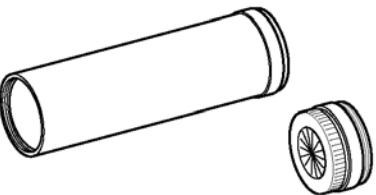

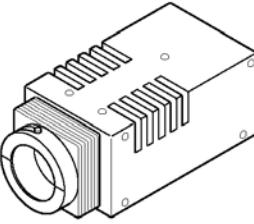

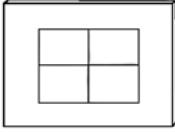

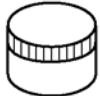

<Point>

- The firmware version and EEPROM version can be confirmed with the information (1).
- The information (2), (3) are just reference.

7 Service Fixture & Tools

7.1. Service Fixture and Tools

The following Service Fixture and tools are used for checking and servicing this unit.

Resistor for Discharging ERG5SJ102	Infinity Lens (with Focus Chart) VFK1164TCM02	LIGHT BOX VFK1164TDVLB
 An equivalent type of Resistor may be used.		 ※ with DC Cable
TR Chart VFK1975	Lens Cleaning Kit (BK) VFK1900BK	Grease (for lens) VFK1829
	 * Only supplied as 10 set/box.	
Furoyl grease (for focus motor) VFK1850	ND Filter ND0.1 Type VFK1164ND01	
	 An equivalent type of Filter may be used.	

7.2. When Replacing the Main PCB

After replacing the MAIN PCB, be sure to achieve adjustment.

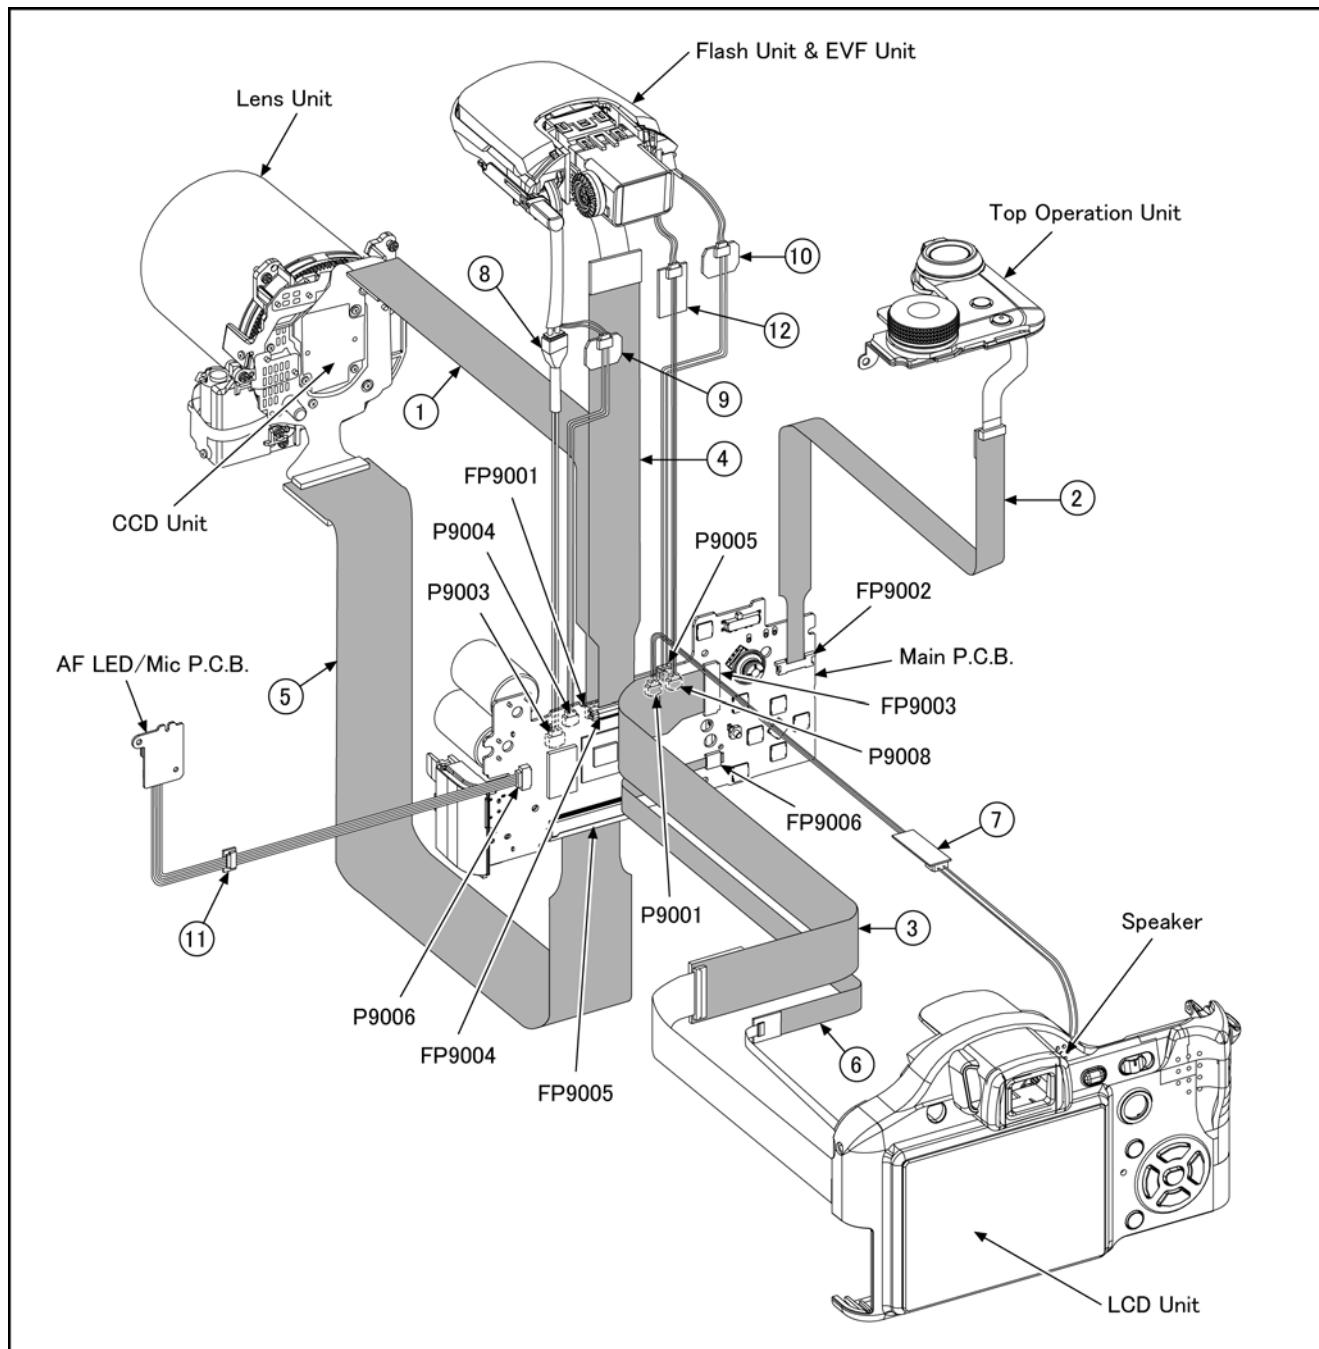

The adjustment instruction is available at "software download" on the "Support Information from NWBG/VDBG-PAVC" web-site in "TSN system", together with Maintenance software.

7.3. Service Position

This Service Position is used for checking and replacing parts. Use the following Extension cables for servicing.

Table S1 Extension Cable List

No.	Parts No.	Connection	Form
1	RFKZ0361	FP9001 (MAIN) - CCD UNIT	28PIN 0.5 FFC
2	VFK1440	FP9002 (MAIN) - TOP OPERATION UNIT	10PIN 0.5 FFC
3	VFK1284	FP9003 (MAIN) - LCD UNIT	24PIN 0.5 FFC
4	VFK1443	FP9004 (MAIN) - EVF UNIT	18PIN 0.5 FFC
5	VFK1953	FP9005 (MAIN) - LENS FPC UNIT	40PIN 0.5 FFC
6	VFK1974	FP9006 (MAIN) - LCD UNIT	4PIN 0.5 FFC
7	VFK1576DSC04	P9001 (MAIN) - SPEAKER	2PIN CABLE
8	RFKZ0359	P9003 (MAIN) - FLASH UNIT	2PIN CABLE
9	VFK1576DC202	P9004 (MAIN) - FLASH UNIT	2PIN CABLE
10	VFK1576DC202	P9005 (MAIN) - FLASH UNIT	2PIN CABLE
11	RFKZ0360	P9006 (MAIN) - P9301 (AF LED/MIC)	5PIN CABLE
12	VFK1576DSC04	P9008 (MAIN) - FLASH UNIT	2PIN CABLE

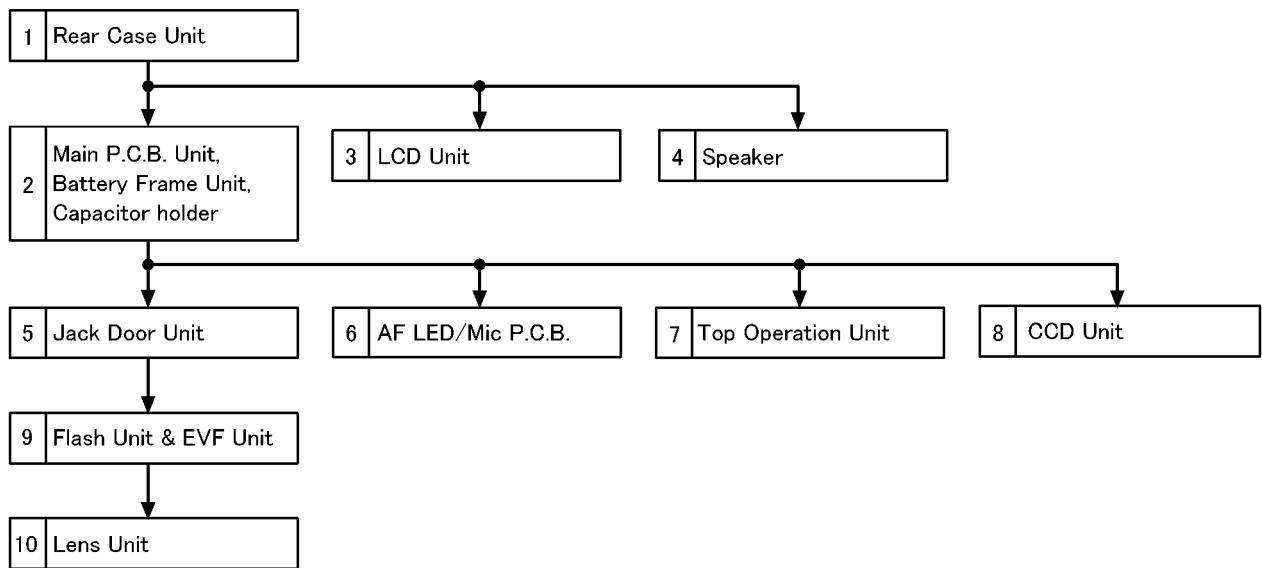

CAUTION-1. (When servicing MAIN PCB)

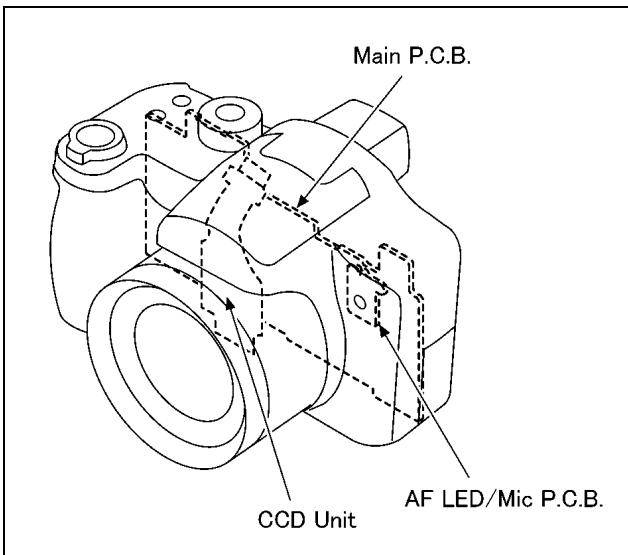

1. Be sure to discharge the capacitor on MAIN PCB.
Refer to "HOW TO DISCHARGE THE CAPACITOR ON MAIN PCB".
The capacitor voltage is not lowered soon even if the AC Cord is unplugged or the battery is removed.
2. Be careful of the high voltage circuit on MAIN PCB.
3. DO NOT allow other parts to touch the high voltage circuit on MAIN PCB.

			Lens Unit

8.3.1. Removal of the Rear Case Unit

NOTE:

When servicing and reassembling, remove the card and battery from the unit.

- Card
- Battery
- Screw (A) × 4
- Screw (B) × 2

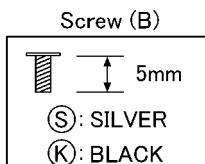

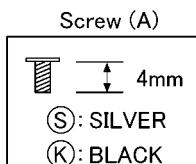

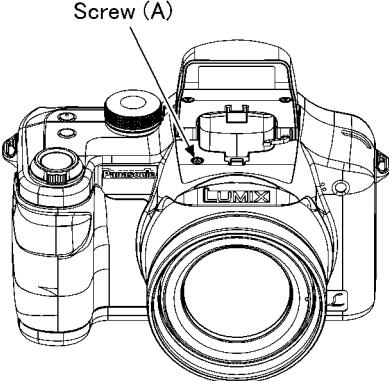

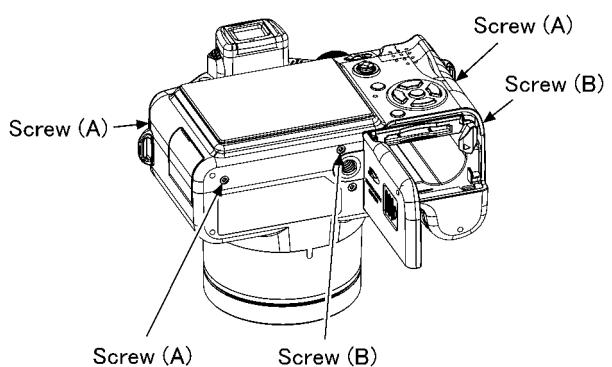

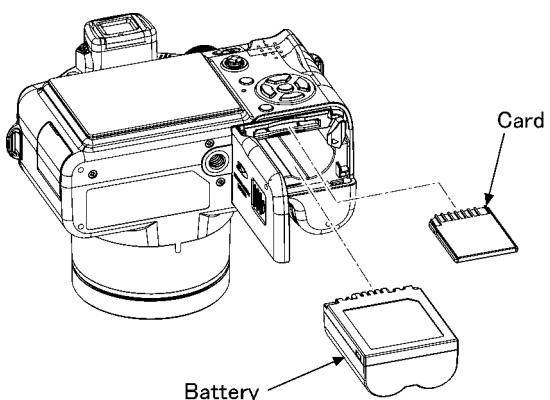

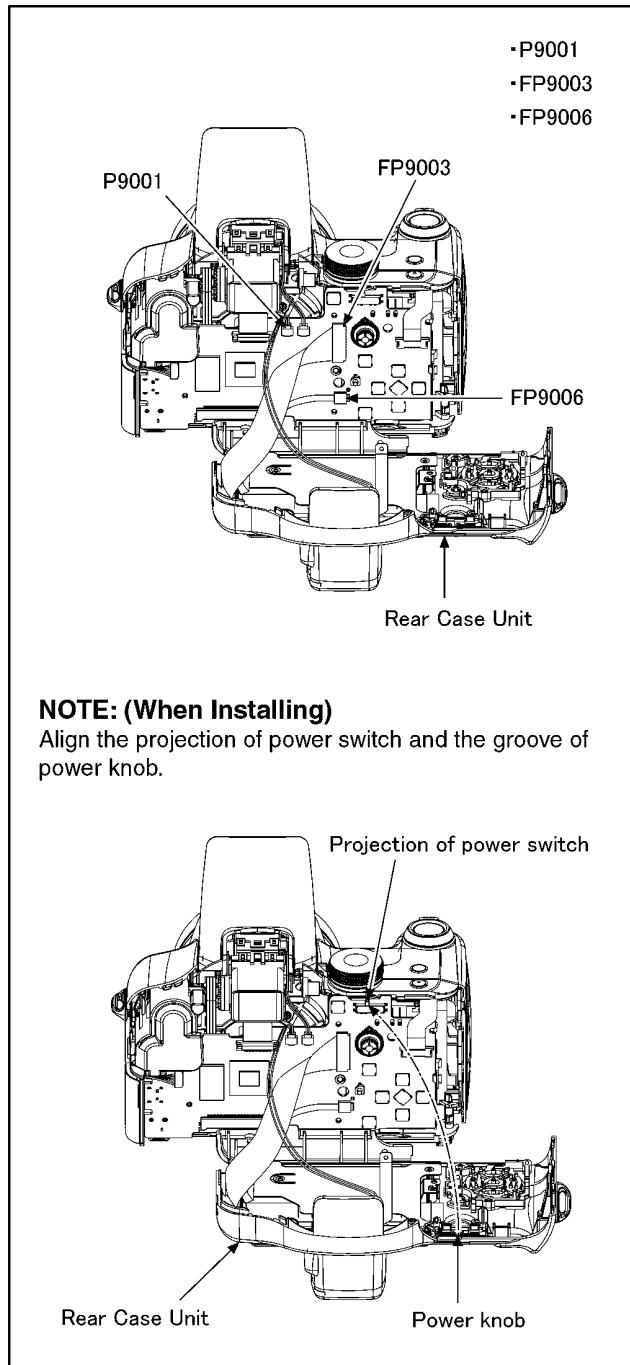

Fig. D1

NOTE: (When Installing)
Align the projection of power switch and the groove of power knob.

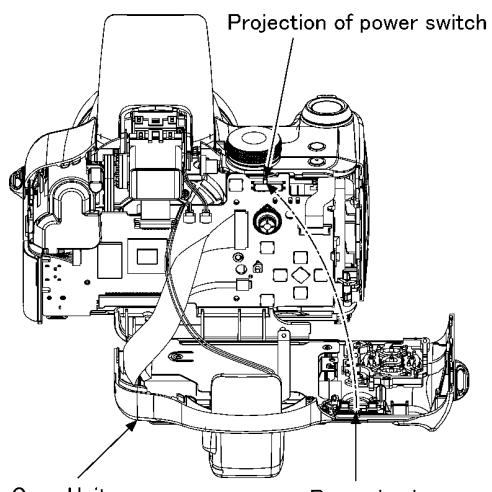

Fig. D2

8.3.2. Removal of the Main P.C.B. Unit, Battery Frame Unit and Capacitor Holder

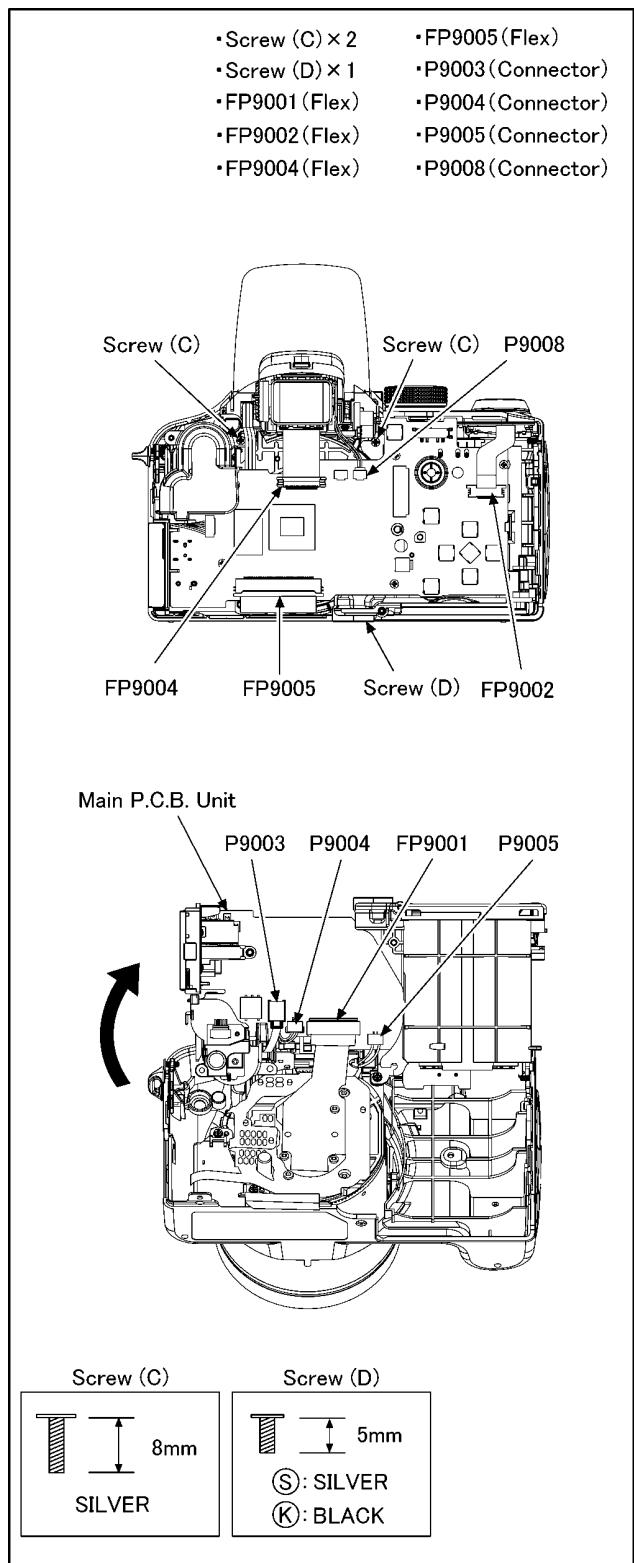

Fig. D3

- This unit equipped with two pieces of capacitors as flash charging capacitors.
- "Either one of the capacitor discharging operation" makes discharging for others as well.

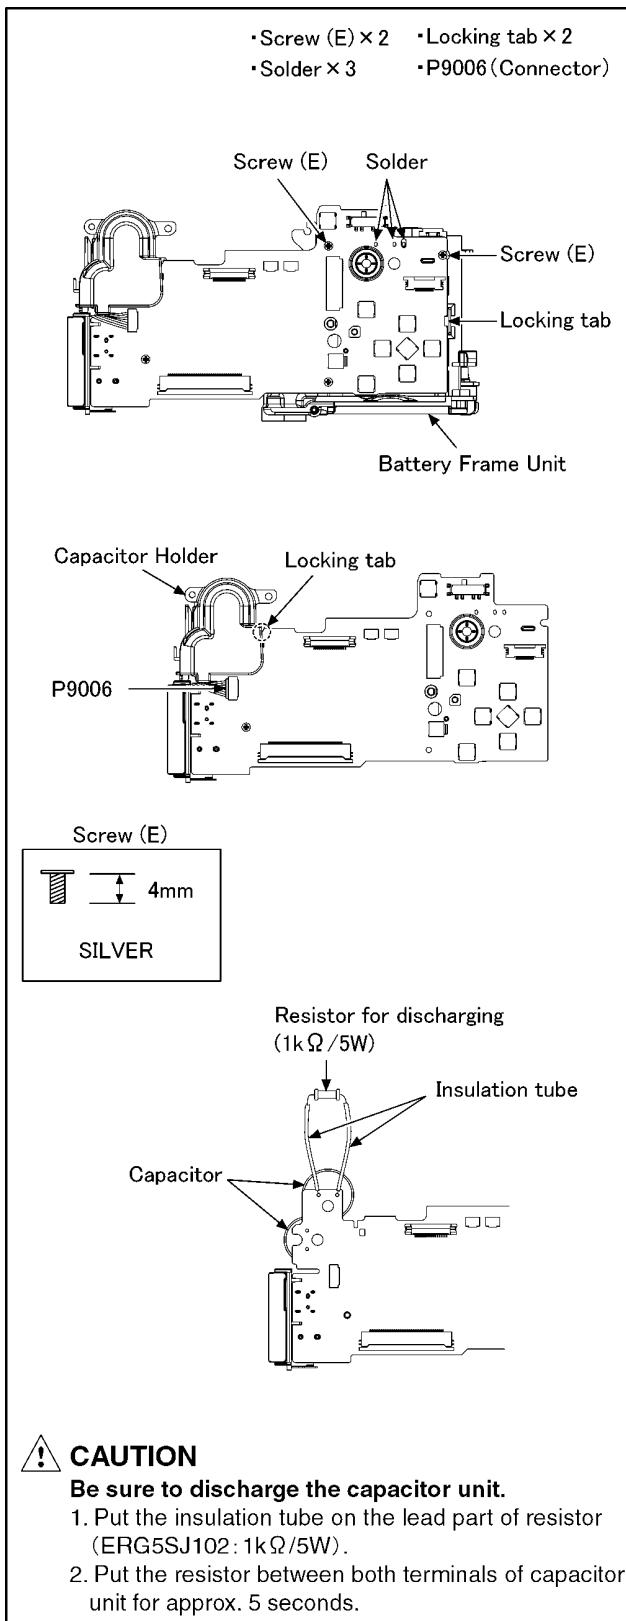

Fig. D4

8.3.3. Removal of the LCD Unit

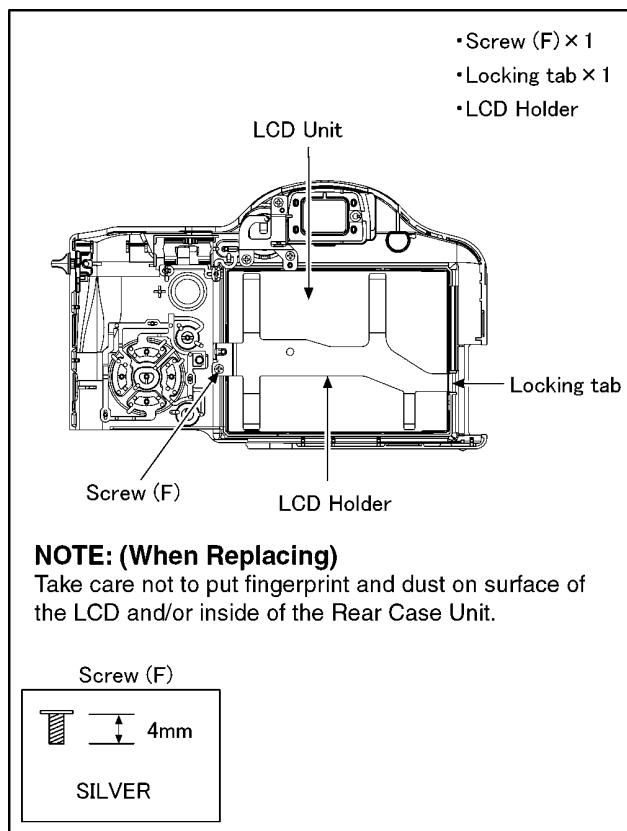

Fig. D5

8.3.4. Removal of the Speaker

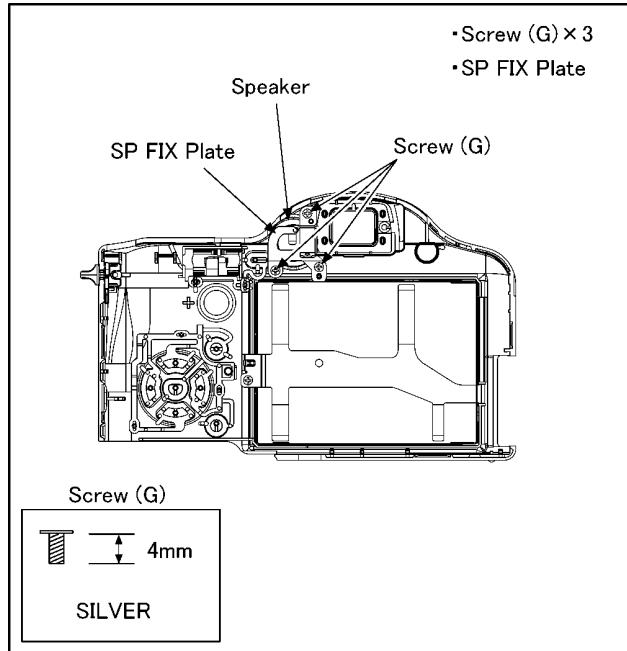

Fig. D6

8.3.5. Removal of the Jack Door Unit

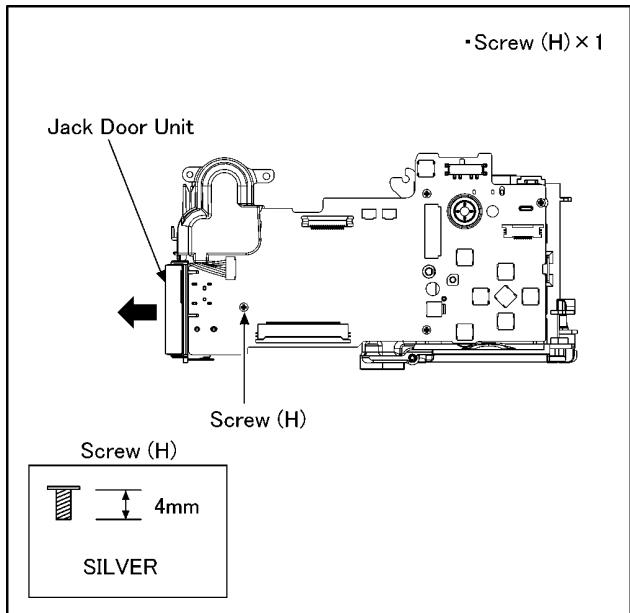

Fig. D7

8.3.7. Removal of the Top Operation Unit

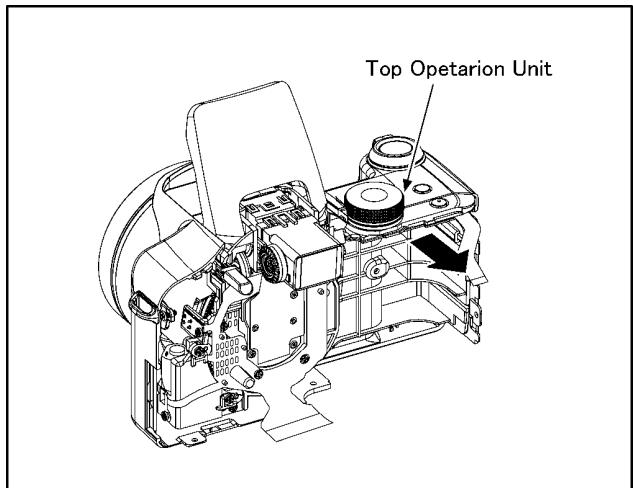

Fig. D9

8.3.6. Removal of the AF LED/Mic P.C.B.

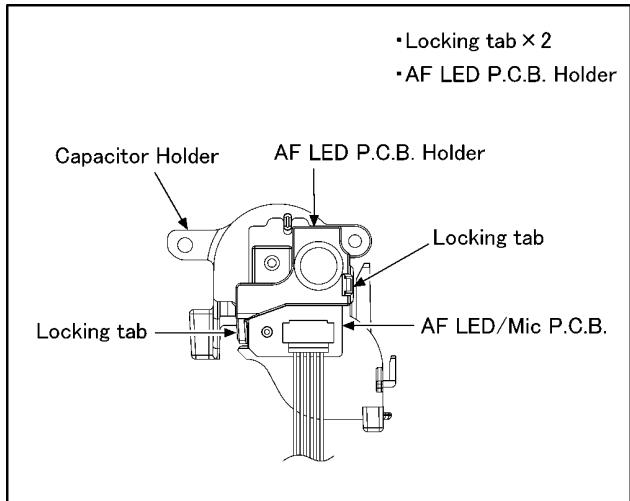

Fig. D8

8.3.8. Removal of the CCD Unit

To prevent the CCD unit from catching the dust and dirt, do not remove the CCD unit except for replacing.

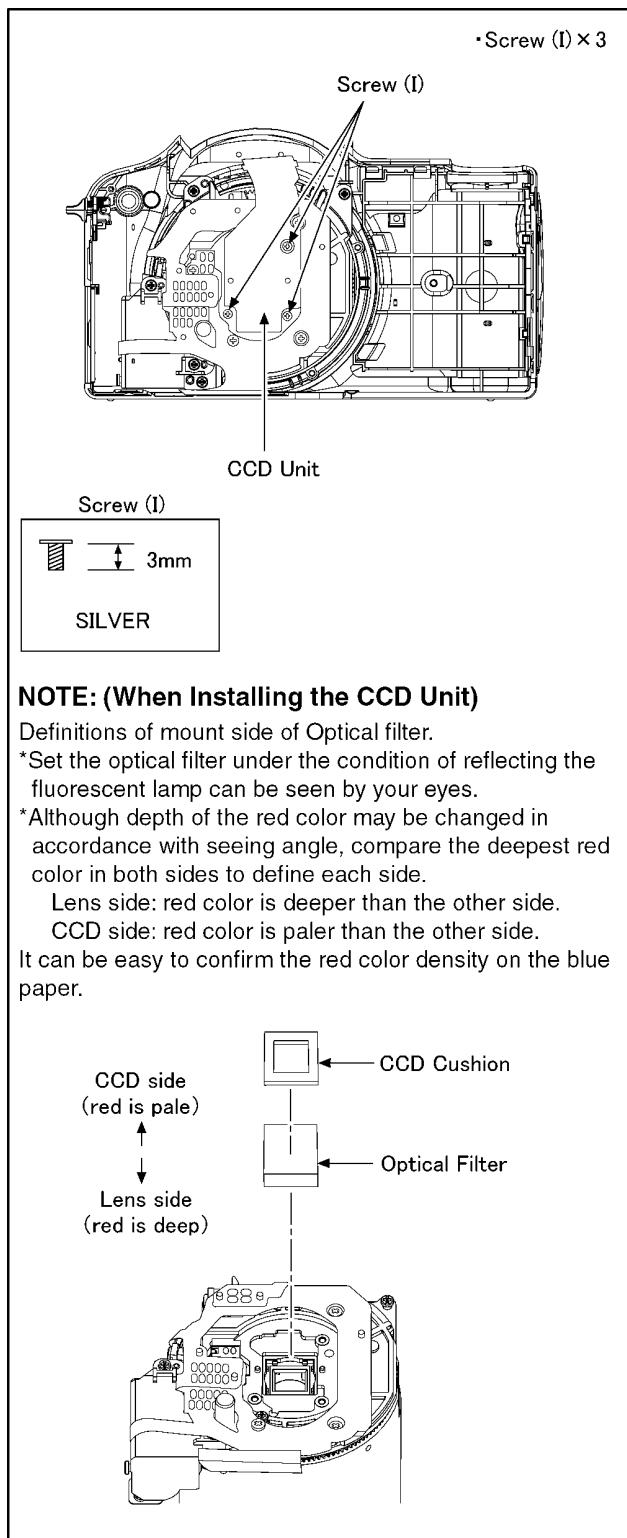

Fig. D10

8.3.9. Removal of the Flash Unit & EVF Unit

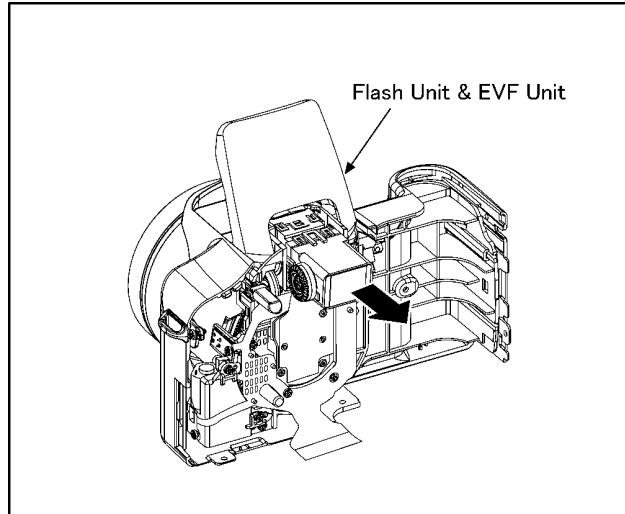

Fig. D11

8.3.10. Removal of the Lens Unit

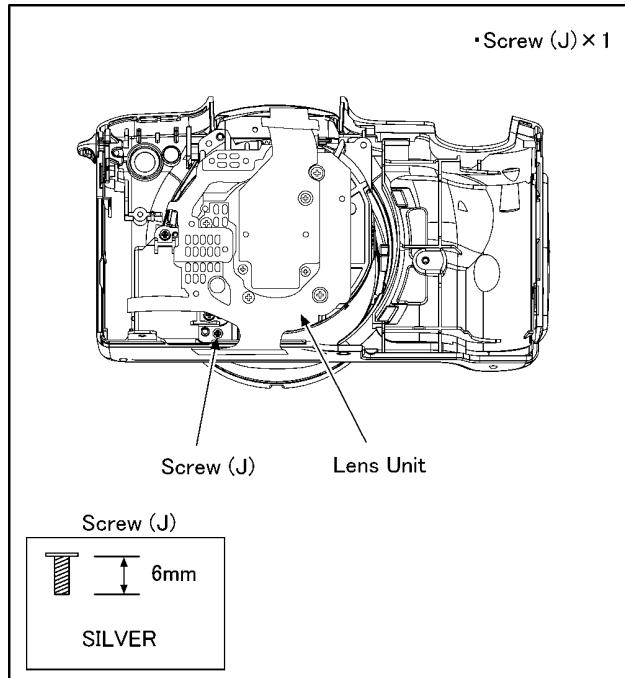

Fig. D12

NOTE: (When Assembling)

Be sure to confirm the following points when assembling.

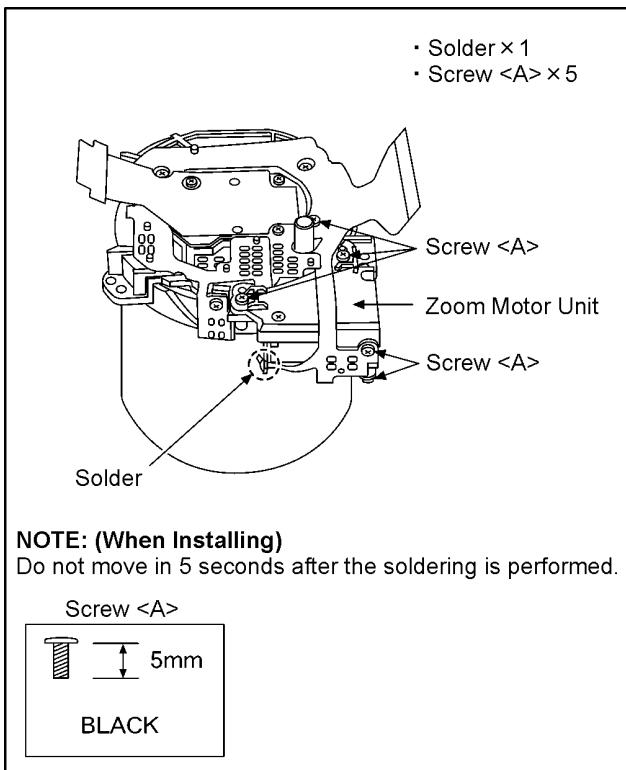

- The Screw is tightened enough.
- Assembling conditions are fine. (No distortion, no illegal space.)
- No dust and/or dirt on every Lens surfaces.
- LCD image is fine. (No dust and dirt on it, and no gradient images.)

8.4. Disassembly/Assembly Procedure for the Lens

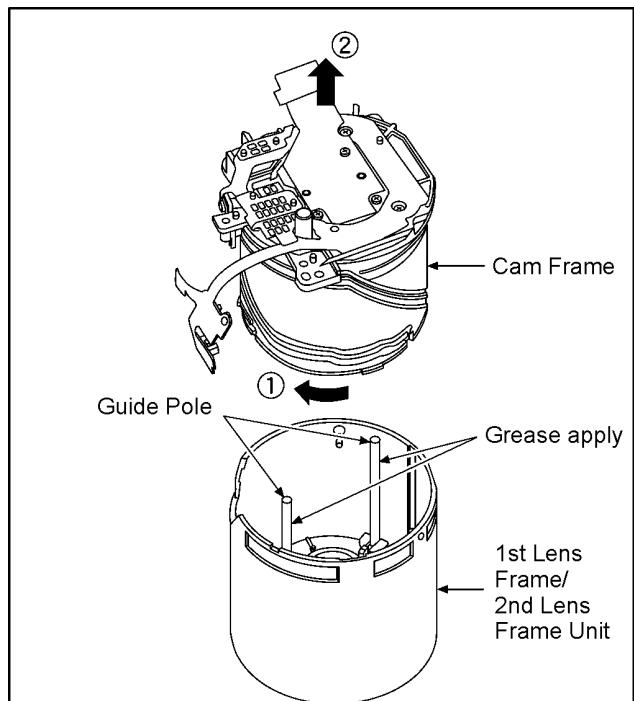

NOTE: When Disassembling and Assembling for the Lens

1. To minimize the possibility of the CCD being dirt, perform disassemble and/or assemble under the condition of the CCD is being mounted.
Disassembling procedures for the CCD unit, refer to item 8.3.8.
2. Take care that the dust and dirt are not entered into the lens.
In case of the dust is putted on the lens, blow off them by airbrush.
3. Do not touch the surface of lens.
4. Use lens cleaning KIT (BK)(VFK1900BK).
5. Apply the grease (VFK1829) to the point where is shown to "Grease apply" in the figure.
When the grease is applied, use a toothpick and apply thinly.

8.4.1. Removal of the Zoom Motor Unit

8.4.2. Removal of the 3rd Lens Frame/ 4th Lens Frame/Drive Frame Unit

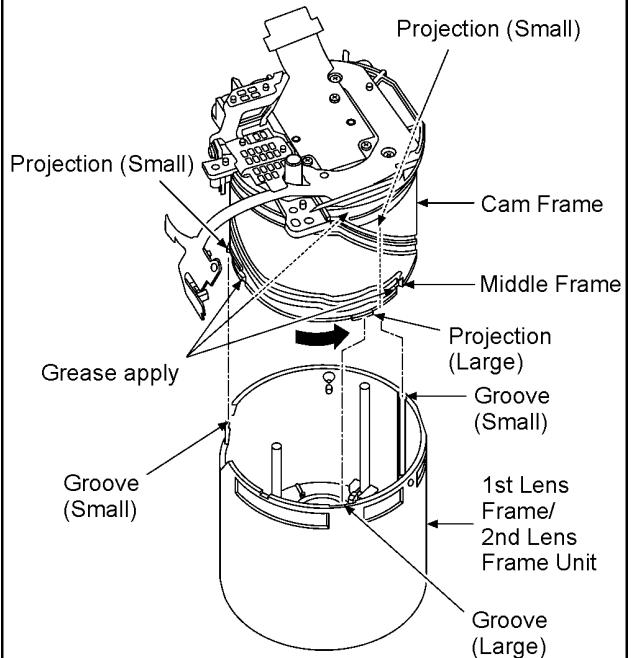

NOTE: (When Removing)

Remove the 1st /2nd lens frame unit by rotating the Cam Frame in arrow directions.

Removal order: ①→②.

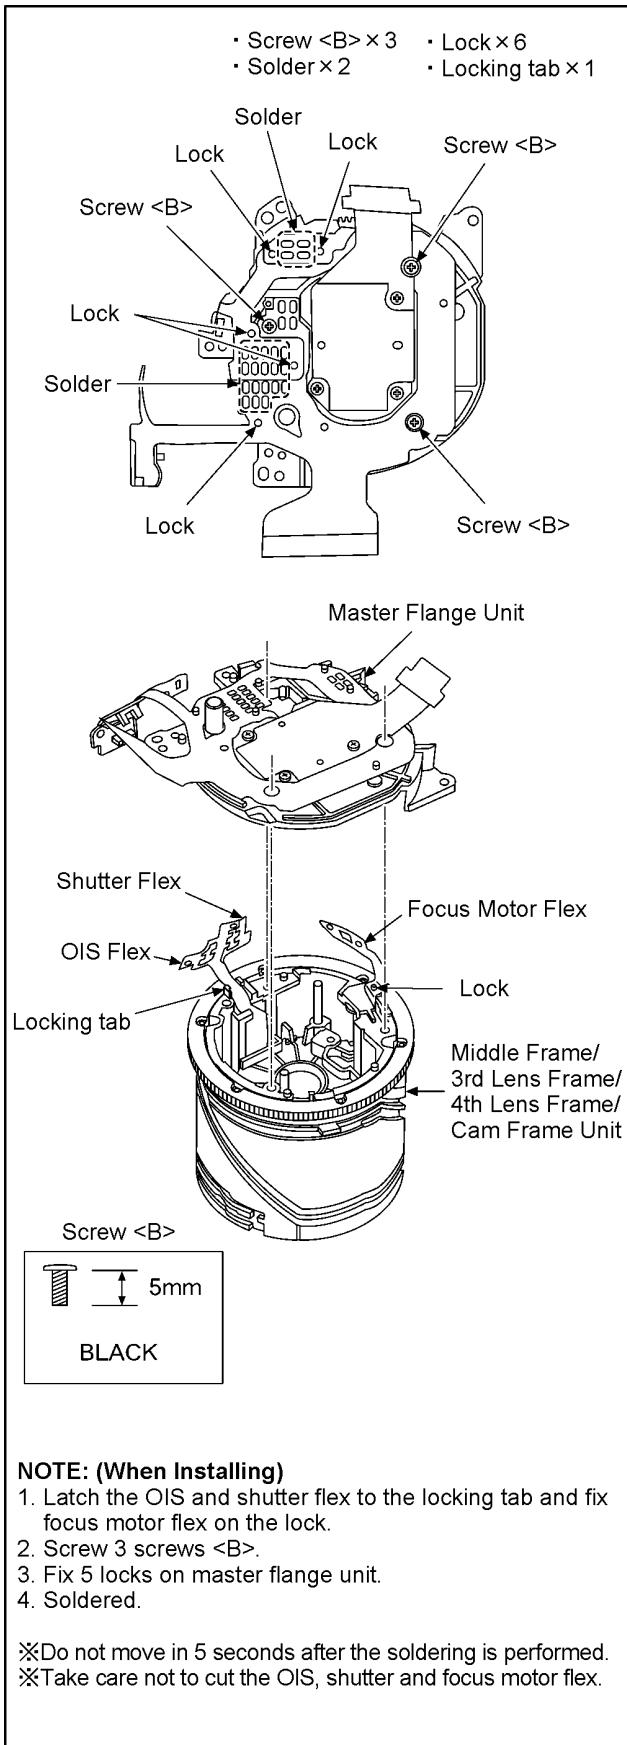

When the Cam Frame is hard to rotate, use the tweezers and rotate round gear of the Cam Frame.

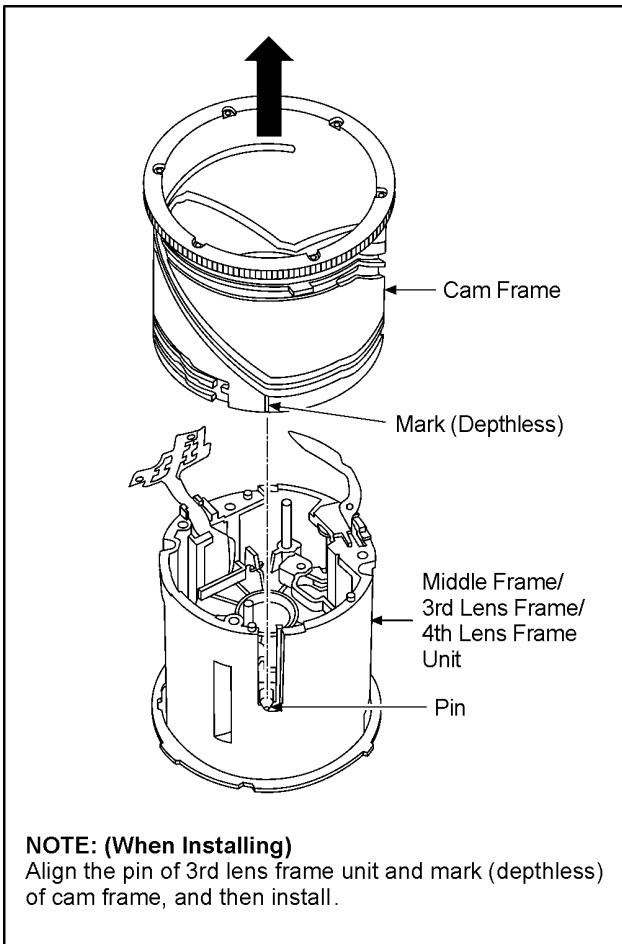

NOTE: (When Installing)

1. Align the cut of middle frame and the groove of cam frame.
2. Apply grease to 2 guide poles.
3. Align the groove of 1st lens frame unit and the projection of middle frame, and then turn the cam frame counterclockwise fully to make retract position.

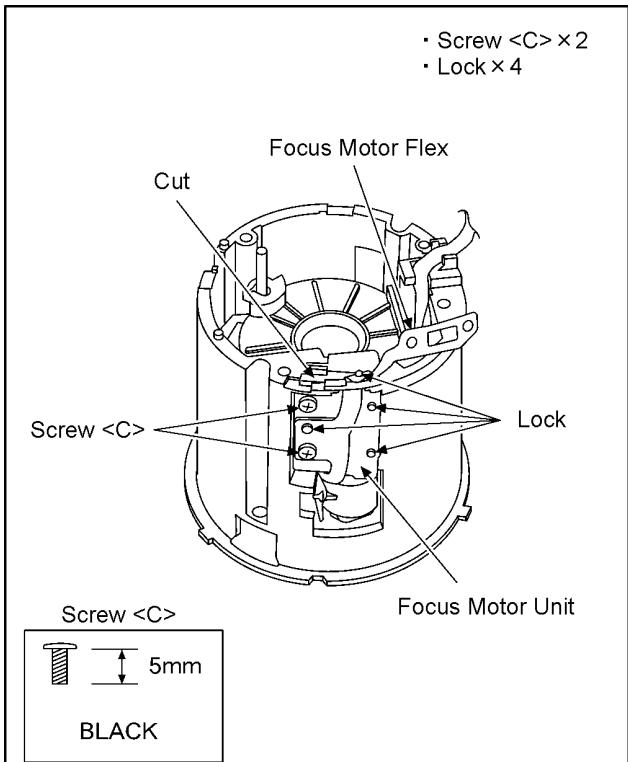

8.4.3. Removal of the Master Flange Unit

8.4.4. Removal of the Cam Frame

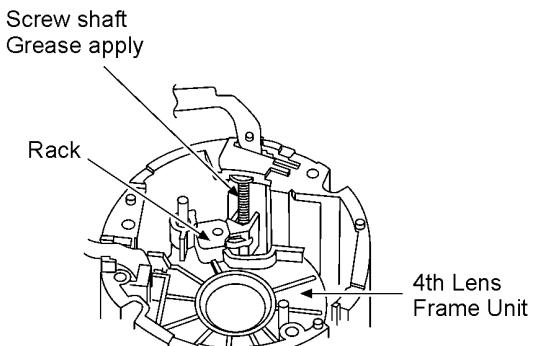

8.4.5. Removal of the Focus Motor Unit

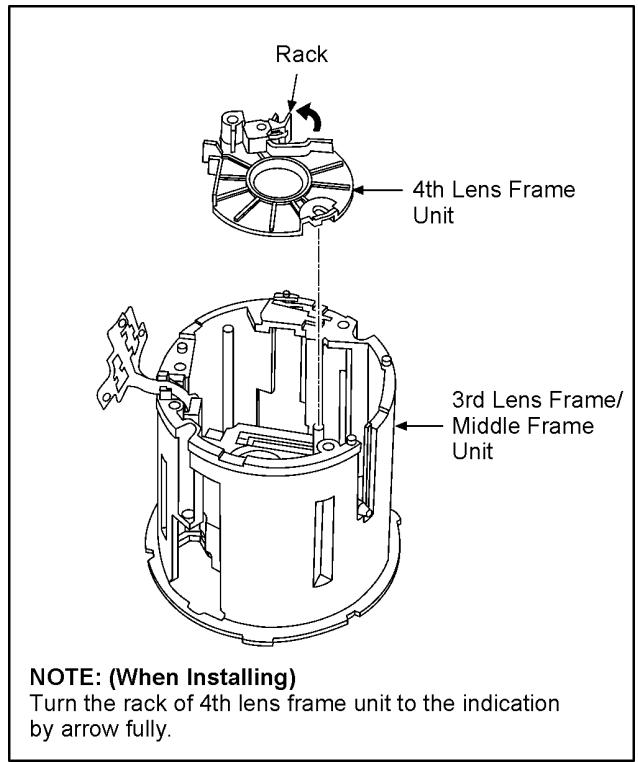

NOTE: (When Installing)

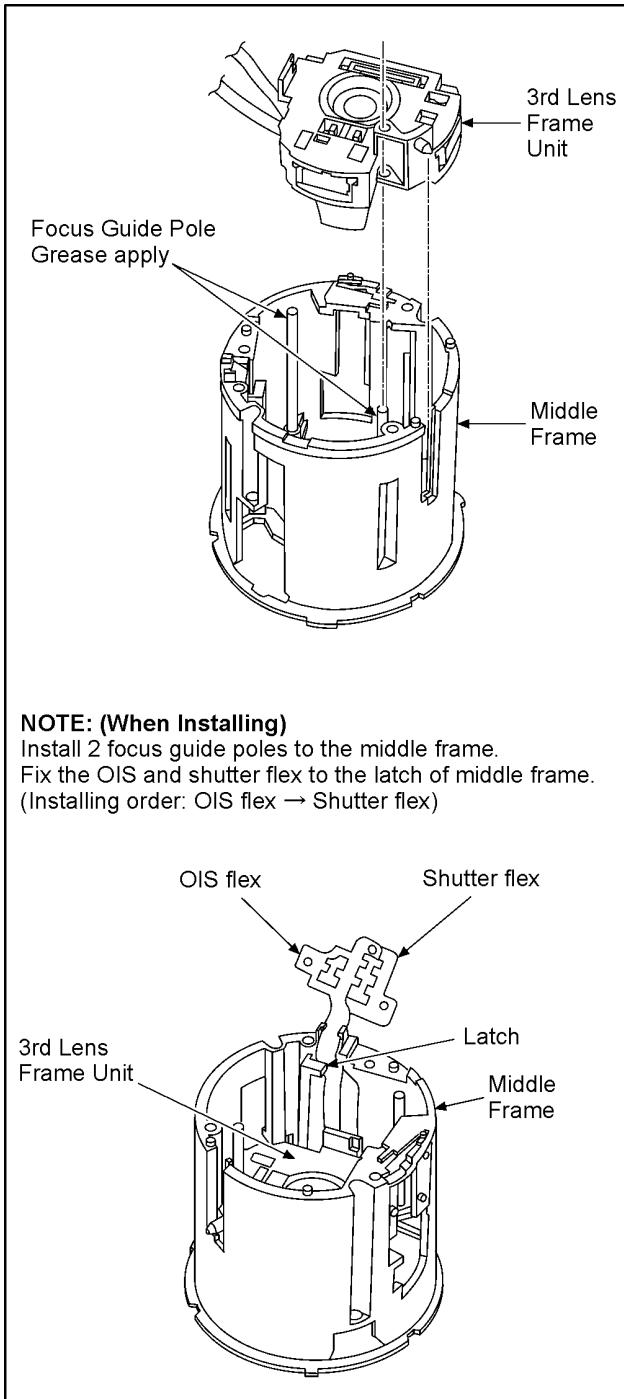

1. Insert the focus motor flex to the cut of middle frame, and then install focus motor unit.
2. Confirm the rack of 4th lens frame unit is engaged with screw shaft of focus motor.

8.4.6. Removal of the 4th Lens Frame Unit

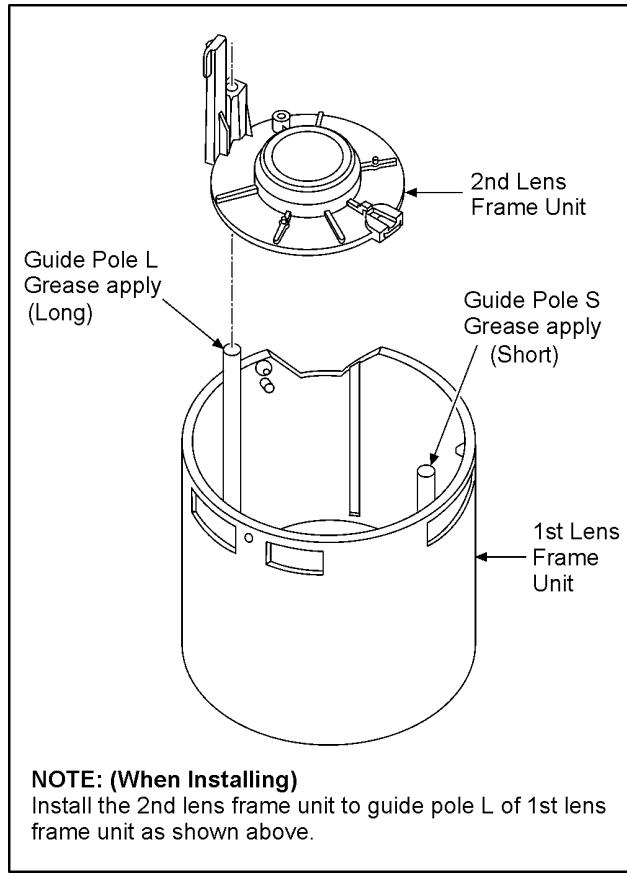

8.4.7. Removal of the 3rd Lens Frame Unit

NOTE: (When Installing)

Install 2 focus guide poles to the middle frame.
Fix the OIS and shutter flex to the latch of middle frame.
(Installing order: OIS flex → Shutter flex)

8.4.8. Removal of the 2nd Lens Frame Unit

9 Measurements and Adjustments

9.1. Adjustment Procedures

The relation between Replaced part and Necessary Adjustment is shown in the following table.

When concerned part is replaced, be sure to achieve the necessary adjustment(s).

As for Adjustment condition/procedure, consult the "Adjustment Manual" which is available in Adjustment software.

The Adjustment software is available at "TSN Website", therefore, access to "TSN Website" at "Support Information from NWBG/VDBG-PAVC".

NOTE:

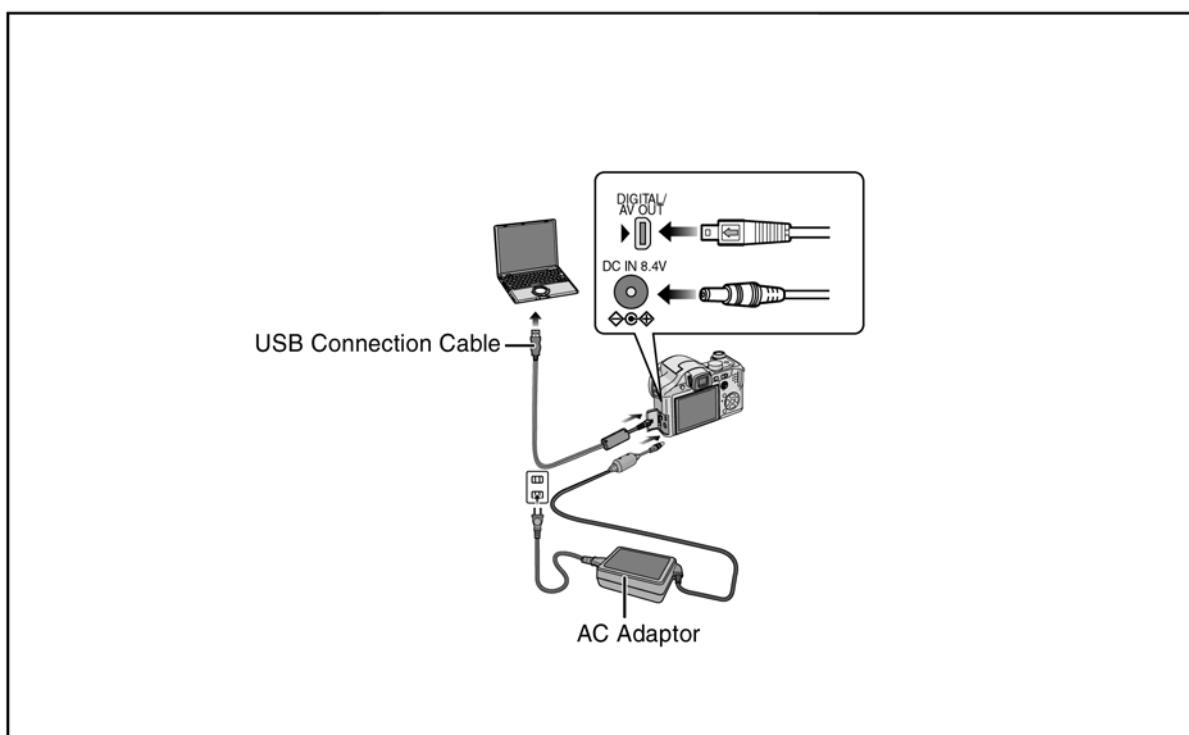

After adjustments have been terminated, make sure to achieve "INITIAL SETTINGS".

		Replaced Part					
Adjustment Item		Main P.C.B.	VENUS (IC6001)	Flash-ROM (IC6004)	Lens Part (Excluding CCD)	CCD Unit	EVF
Camera Section	OIS hall element adjustment (OIS)	O	O	O	O		
	Back focus adjustment (BF)	O	O	O	O		
	Shutter adjustment (SHT)	O	O	O	O	O	
	ISO sensitivity adjustment (ISO)	O	O	O	O	O	
	AWB adjustment High brightness coloration inspection (WBL)	O	O	O	O	O	
	CCD white scratch compensation (WKI)	O	O	O		O	
EVF Section	EVF Rank Setting (EVF)	O		O			O

NOTE:

*There is no LCD adjustment in this model.

*There is no CCD Black scratch compensation adjustment (BKI) in this model.

10 Maintenace

10.1. Cleaning Lens, Viewfinder and LCD Panel

Do not touch the surface of lens, Viewfinder and LCD Panel with your hand.

When cleaning the lens, use air-Blower to blow off the dust.

When cleaning the LCD Panel, dampen the lens cleaning paper with lens cleaner, and the gently wipe the their surface.

Note:

The Lens Cleaning KIT ; VFK1900BK(Only supplied as 10 set/Box) is available as Service Aid.

S1. About Indication of The Schematic Diagram

S1.1. Important Safety Notice

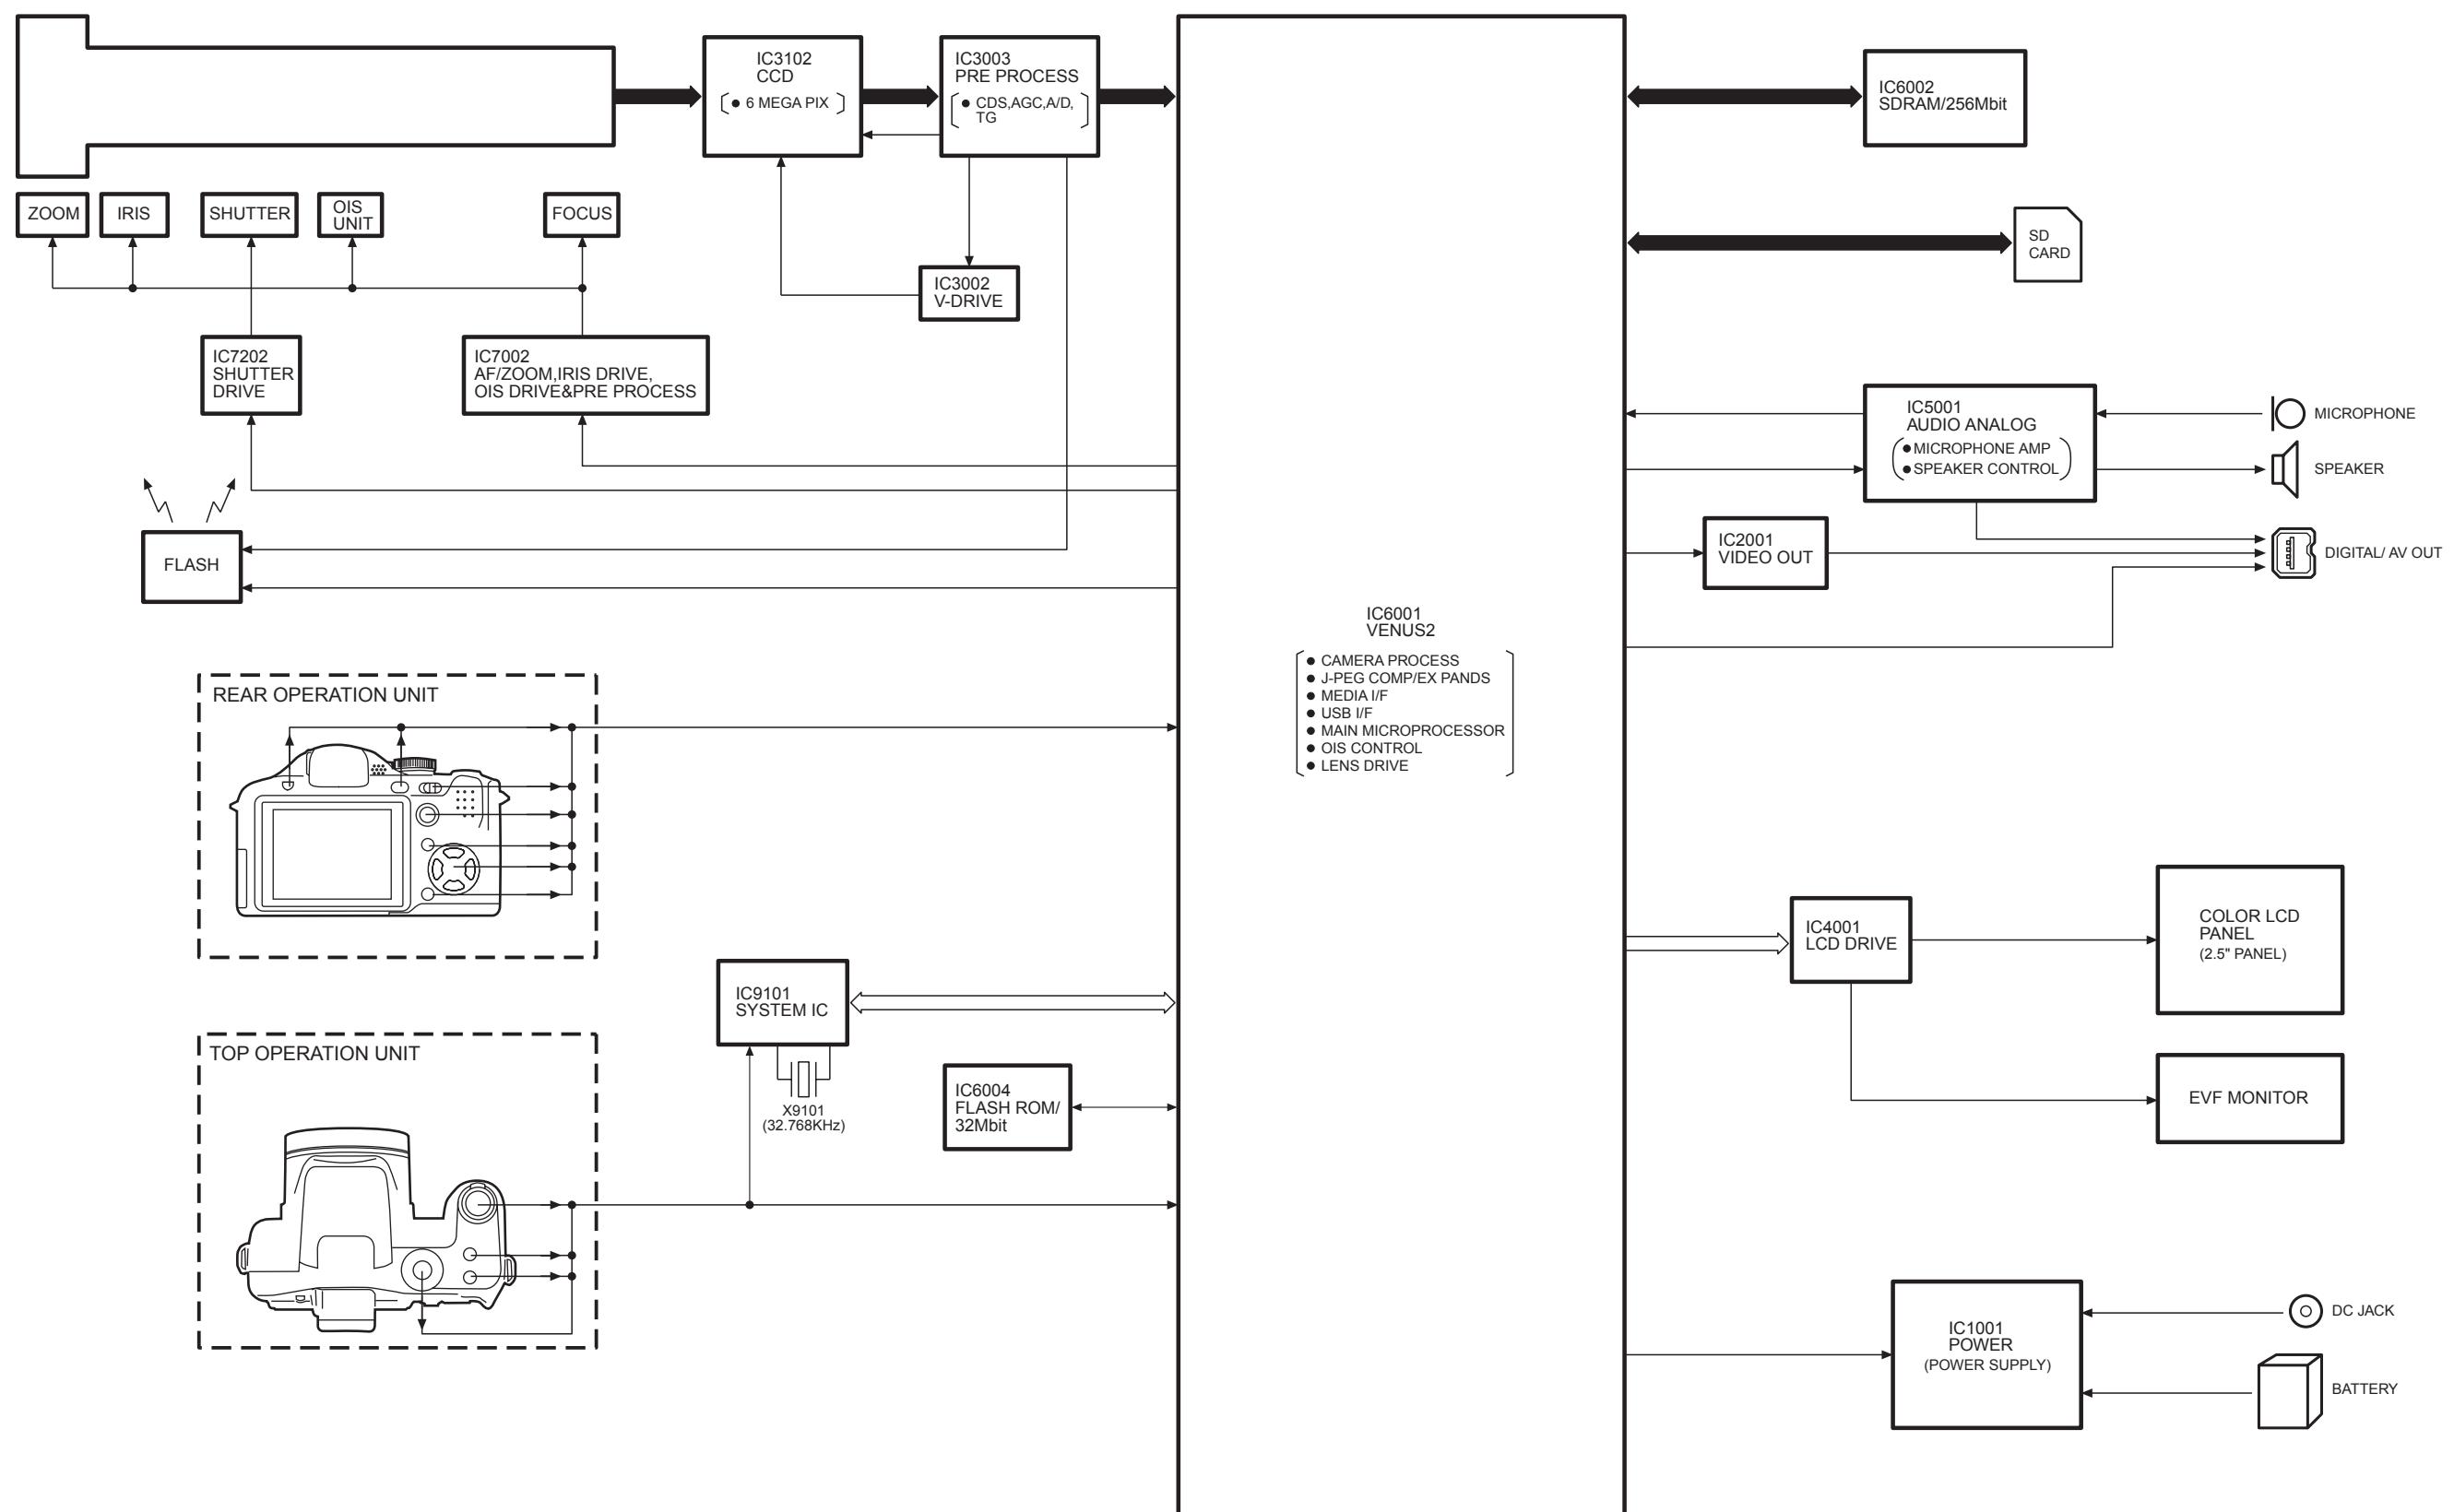

COMPONENTS IDENTIFIED WITH THE MARK  HAVE THE SPECIAL CHARACTERISTICS FOR SAFETY. WHEN REPLACING ANY OF THESE COMPONENTS USE ONLY THE SAME TYPE.

- 1.Although reference number of the parts is indicated on the P.C.B. drawing and/or schematic diagrams, it is NOT mounted on the P.C.B. when it is displayed with "\$" mark.
- 2.It is only the "Test Round" and no terminal (Pin) is available on the P.C.B. when the TP (Test Point) indicated as "●" mark.
- 3.The voltage being indicated on the schematic diagram is measured in "Standard-Playback" mode when there is no specify mode is mentioned.
- 4.Although the voltage and waveform available on here is measured with standard frame, it may be differ from actual measurement due to modification of circuit and so on.
- 5.The voltage being indicated here may be include observational-error (deviation) due to internal-resistance and/or reactance of equipment. Therefore, handle the value indicated on here as reference.
- 6.Use the parts number indicated on the Replacement Parts List .
- 7.Indication on Schematic diagrams:

S5. Replacement Parts List

- Note:
- 1.* Be sure to make your orders of replacement parts according to this list.
 2. **IMPORTANT SAFETY NOTICE**
Components identified with the mark Δ have the special characteristics for safety.
When replacing any of these components, use only the same type.
 3. Unless otherwise specified,
All resistors are in OHMS, K=1,000 OHMS. All capacitors are in MICRO-FARADS (uf), P=uuF.
 4. The marking (RTL) indicates the retention time is limited for this item. After the discontinuation
of this assembly in production, it will no longer be available.

E.S.D. standards for Electrostatically Sensitive Devices, refer to “PREVENTION OF ELECTROSTATIC DISCHARGE (ESD) TO ELECTROSTATICALLY SENSITIVE (ES) DEVICES” section.

Definition of Parts supplier:

1. Parts marked with [MBI] in the remarks column are supplied from
“Matsushita Battery Industrial Co., Ltd.”
2. Parts marked with [PAVC-CSG] in the remarks column are supplied from
PAVC COMPANY CS Group (PAVC-CSG).
Others are supplied from “Panasonic Shikoku Electronics Co., Ltd.” (PSEC-SAIJO).
