PRODUCT RANGE FROM SARTORIUS

These filter papers are used for quantitative and gravimetric analyses as well as for pressure or vacuum filtration. They are made out of 100% cotton linters with an α -cellulose content of > 98% and are washed out with acid to make the papers ashless and achieve high purity.

In gravimetric applications, the cake layer is calcined and the residue quantified. For quantitative analysis of the filtrate, the filter paper must not give off any foreign substances. This guarantees that no test results are falsified. That is why it is important that the filters are ash-free.

For some quantitative analyses, the cake layer has to be mechanically removed from the filter (for example, with a water jet or a spatula).

The filter must be wet-strengthened so that it doesn't break when the cake layer is removed.

Made of 100% cotton linters

- Ash-free (Ash content \leq 0.01% according to DIN 54370)
- Wet-strengthened
- Color-coded box for easy selection
- Supplied in rolls, sheets, discs and folded filters

These paper grades are used for analytical purposes that require a low ash content. Grades 292 and 292a are especially suitable for soil analyses because they are low in nitrogen. For phosphate or sodium determination, we recommend grades 131 and 132.

- **Pure cotton linters or cotton linters with refined pulp**
- **No additives, such as wetstrengthening agents**
- **applied in rolls, sheets, discs and folded filters**

APPLICATION NOTES

Cellulose Nitrate Membrane Disc Filters are hydrophilic, non-media migrating, biologically inert, available in wide range of pore sizes from 0.22 μm to 0.45 μm . These Membranes have the absolute retention, narrow pore distribution, low extractable levels & also have high flow rates.

Nylon Membrane Disc Filters are hydrophilic, non media migrating, biologically inert, flexible, durable, plain white absolute membrane filter offering wide chemical compatibility. These Membranes are available in 0.22, 0.45, Micron. In addition to the properties of Cellulose Nitrate Membranes, Nylon Membranes also have no extractables, are high heat resistance & have better base of handling. Nylon Membranes are used for HPLC also & assures that filter will not add artifacts to the sample.

- Both these Membranes are autoclavable at 121°C.

CELLULOSE NITRATE MEMBRANE

Cellulose Nitrate has the advantage of providing uniform pore structure over the wide range of pore sizes. The high non-specific adsorption of this membrane type makes it indispensable for many blotting procedures and diagnostic kits. Cellulose Nitrate assures effective retention with high flow rate. The printed grid eases the counting of bacterial colonies, micro colonies etc.
