Ref: (a) COMASWFORLANT (C) ltr ser 0315/71 of 9 Oct 1967

Encl: (1) McLaurin, J. A. "1401 Computer Program Documentation for Behavioral Tasks," COMASWFORLANT Working Paper 101B27.100

1. Reference (a) established a Coordinated Human Factors Program supported by a small computer application team for the storage and retrieval of ASW human performance data. This paper documents the ADP procedures used to collect and print the officer and enlisted data from the Bureau of Naval Personnel for those ASW sensor personnel assigned to the Atlantic ASW System.

2. Each section of this paper is designed to serve different functions and readers. A general nontechnical view of the operational capability of the ADP system can be gained by reading the Functional Description section. Professional research personnel will find their requirements are best met by reading the Data Requirements Document and System Specification sections. Computer programmers and operating technicians will find the Program Specification and Operations Manual sections the most useful.

3. Enclosure (1) is forwarded for information and retention.

1401 COMPUTER PROGRAM DOCUMENTATION FOR BEHAVIORAL TASKS

Working Paper 101B27.100

by

John A. McLaurin

Commander Antisubmarine Warfare Force
United States Atlantic Fleet
Norfolk, Virginia 23511
April 1968

PREFACE

This paper was written to support the Commander Antisubmarine Warfare Force, U. S. Atlantic Fleet human performance data collection, analysis, storage, and retrieval. program.

Funding is under Chief of Naval Operations (Op-95) and Office of Naval Research PO8-0037 of 1 August 1967.

The assistance given to COMASWFORLANT by the Assistant Chief of Naval Personnel for Management Information (Pers-N) in the retrieval of selected records contained in the Bureau of Naval Personnel data bank is gratefully acknowledged. This supportive relationship is proving to be more valuable to COMASWFORLANT because of the aperiodic updating requirements of the ASW Human Performance Data Bank.

The programming of the PS-03 program, which is in reality the first updating change to the basic program, was completed by Mrs. P. P. Mason. This valuable addition will enable the several Scientific Advisory Teams in the Atlantic ASW System to use the most current retrieval program in their demographic analyses.

ABSTRACT

This paper was written to document the ADP procedures used to collect and print the Officer and Enlisted data from BUPERS for those ASW sensor and weapons personnel assigned to COMHUKFORLANT, COMTAIRWINGSLANT and COMOCEANSYSLANT. Each section of this paper is designed to be informative at different levels.

The Functional Description reflects the initial analysis of the system and defines the operational capability to be developed without going into the details of each individual operation. An overall non-technical view of the system may be obtained by reading this section.

The Data Requirements Document defines the data elements used within the system. This section gives detailed information about inputs and outputs of the system.

The System Specification is a more detailed documentation of the entire system. Detailed requirements are given for program design and the system environment is described.

The Program Specification describes program design so as to permit program production. Each program within the system is defined in a separate Program Specification and only information pertaining to that program and how it relates to other operations within the system is presented in these sections. Program listings are included in this section.

The Operations Manual documents the operating procedures necessary to operate each function within this system. Instructions are given for initiating, running, terminating, interrupting and restarting each function within the system.

TABLE OF CONTENTS

LIST OF CHARTS

Functional Description
101B27.100
FD-01

1. General

1.1 Purpose of Functional Description. The Functional Description for Project 101B27.100 is written to fulfill the following objectives:

(a) To provide in writing the system requirements as a basis for mutual understanding between user and developer.

(b) To provide a definition of performance requirement, preliminary design, and user impacts.

(c) To provide a basis for the development of system test.

1.2 Project Reference. The Active Duty Enlisted/Officer Master Magnetic Tape Record Print Procedure, Project No. 101B27.100, objective is to acquire from BUPERS the Active Duty Enlisted/Officer Master Magnetic Tape Record file for enlisted and officer personnel in COMHUKFORLANT, COMFAIRWINGSLANT and COMOCEANSYSLANT and provide the Scientific Advisory Teams at these commands with a detailed list of this file.

1.3 Applicable Documents.

(a) Manual of the Active Duty Enlisted Master Magnetic Tape Record, NAVPERS 15,949A Oct 1962.

(b) Manual of the Active Duty Officer Master Magnetic Tape Record, NAVPERS 15,921A May 1965.

(c) BUPERS ltr Pers-N103-PA of 13 Nov 1967. Manual of the Active Duty Officer Automated Record (Preliminary Revision to NAVPERS 15,921A).

(d) COMASWFORLANT OPORDER 71-(YR).

(e) COMASWFORLANT ltr ser 71/71 of 6 Feb 1968.

2. Scope

2.1 General System Description. This system will contain four major steps.

(a) Preparation of crew data cards from crew list by the three commands in paragraph 1.2.

(b) Sorting crew data cards into service number sequence by COMASWFORLANT.

(c) BUPERS processing of crew data cards and producing Active Duty Enlisted/Officer Master Magnetic Tape Records for those service numbers contained in these cards.

(d) COMASWFORLANT producing a detailed printout of the Active Duty Enlisted/Officer Master Magnetic Tape Record file.

2.2 Existing Methods and Procedures. Not applicable.

2.3 Proposed Methods and Procedures. The three commands named in paragraph 1.2 will provide COMASWFORLANT with a deck of crew data cards produced from their crew list. When the crew cards are received in COMASWFORLANT they will be sorted into service number sequence and sent to BUPERS. BUPERS will furnish a tape containing the Active Duty Enlisted/Officer Master Magnetic Tape Record for those enlisted men and officers included in the crew decks. Upon receiving the Active Duty Enlisted/Officer Master Record tape from BUPERS, COMASWFORLANT will produce a detailed printout by command and send a copy to the appropriate command.

2.3.1 Summary of Improvements. The tape and list produced by this system will provide the Scientific Advisory Team members of each command with a list of the enlisted and officer personnel within their commands. This list will indicate to the Scientific Advisory Team members what information is available on this tape for future statistical and analytical reports. After the original review of this tape by each command the list of the entire tape will be produced only on request.

2.3.2 Summary of Impacts. This system will require no additional equipment. This system will be run quarterly and will require the following machine times:

INTEGRATED ADP FLOW CHART

B

084 sorter - 3 hours
1401 computer with one printer and one tape drive - 20 hours

These times are based on an estimate of 12,000 records. Each of the three commands named in paragraph 1.2 will require from six to twelve hours of keypunch and verifier time to prepare the crew data cards that are to be sent to BUPERS.

2.3.3 Specific Performance Requirements.

(a) Crew data cards will be prepared in BUPERS format.

(b) Crew data cards will be sorted into service number sequence.

(c) The program to print the Active Duty Enlisted/Officer Master Magnetic Tape Record will provide for the following:

(1) A tape header label check routine.

(2) A tape read error routine that will print incorrectable read errors.

(3) A wrong length record check that will print records of incorrect length.

(4) A routine to bypass padded records (all 9's).

(5) A routine to select only records matching card input for printing.

(6) A routine to select all records for printing.

(7) A print routine to give a detailed printout of all pertinent fields within the record with appropriate headings.

(8) A program interrupt and restart routine.

2.3.4 System Function. The three commands named in paragraph 1.2 will produce crew data cards from their crew list. These cards will be sent to BUPERS where they will be matched against the Active Duty Enlisted/Officer Master Magnetic Tape Record and a tape file created of those matching records. This tape file will then be sent to COMASWFORLANT and a detailed printout made.

2.3.5 Data Base Magnitude. There will be five data elements used within this system:

(a) Crew data cards. There should not be more than 12,000 cards per quarter in this file. These cards will be retained at least one full quarter.

(b) Active Duty Enlisted Master Magnetic Tape Records. This record will be 500 characters in length and blocked by five on tape. There should not be more than 10,000 records in this file. When this file is produced for all commands at one time the entire file should be contained on one reel of tape, however, it is likely that this data will be obtained for each command separately. This will necessitate the use of three reels of tape, one for each command each quarter.

(c) Enlisted Active Duty Record Printout. This is a detailed printout of the Active Duty Enlisted Master Magnetic Tape Record. There will be one page per record and the entire printout should not be larger than 10,000 pages per quarter.

(d) Active Duty Officer Master Magnetic Tape Record. There are two formats for this tape. The old format, prior to March 1968, and the new format, March 1968 and after. The old format is 1,000 characters in length. The new format is 1,121 characters in length. When this file is produced for all commands at one time the entire file should be contained on one reel of tape and contain approximately 2,000 records. If this file is produced individually for each command, three reels of tape will be required for storage per quarter.

(e) Officer Active Duty Record Printout. This is a detailed printout of the Active Duty Officer Master Magnetic Tape Record. There will be one page per record and the entire printout should not be larger than 2,000 pages per quarter.

2.3.6 Outputs

(a) Active Duty Enlisted Master Magnetic Tape Record.

(b) Active Duty Officer Master Magnetic Tape Record.

(c) Enlisted Active Duty Record Printout.

(d) Officer Active Duty Record Printout.

2.3.7 Accuracy and Validity. Care should be taken by each command to insure that a source card has been produced for each enlisted man and officer within their command and that these source cards contain valid data. The source card supplied by these commands will provide BUPERS with the control information needed to produce the Active Duty Enlisted/ Officer Master Magnetic Tape Record file. Invalid data in the source cards will produce an invalid tape file.

2.3.8 Timing. Throughput time for each phase of this system, with the exception of that phase to be done by BUPERS, is outlined in paragraph 2.3.2. Crew data source cards will be sent to BUPERS by the 10th of the month in which they are to be processed as these cards are included in their normal monthly processing of the Active Duty Enlisted/Officer Master Magnetic Tape Record.

2.3.9 Failure Contingencies. Not Applicable.

3. Environment.

3.1 Equipment Environment.

(a) One central processing unit.

(b) One tape unit.

(c) One on line printer.

(d) One on line card reader.

(e) One card sorter.

(f) Each command must have access to at least one keypunch.

(g) Each command must have access to at least one verifier.

3.2 Software Environment.

(a) One IBM autocoder compiler with ZZERRR macro.

3.3 System Interface. The source cards produced by the three commands are sent to BUPERS and are use ' as inputs in the monthly

update of the Active Duty Enlisted/Officer Master Magnetic Tape Record. These source cards do no actual updating,, but a tape is produced containing all Active Duty Enlisted/Officer Master Magnetic Tape Records that match the source cards. This tape is sent to COMASWFORLANT and a detailed printout is produced. The source cards are unclassified. The Active Duty Enlisted/Officer Master Magnetic Tape Record is also unclassified but should be handled on an official "need to know" basis.

3.4 Security. The data in this system is unclassified but should be distributed only on a "need to know" basis.

Data Requirements Document
101B27.100
RD-01

1. General

1.1 Purpose and Scope of Data Requirements Document. The objectives of writing a Data Requirements Document for Project 101B27.100 are to list and define data elements which the system must handle and to communicate data requirements to the user for support in the data collection activity. The user will need to supply only a deck of data cards containing the name and service number of the enlisted men and officers within their command, however, all data elements used in this system will be described.

1.2 Project Reference. The Active Duty Enlisted/Officer Master Record Print Procedure, Project No. 101B27.100, objective is to acquire from BUPERS the Active Duty Enlisted/Officer Master Magnetic Tape Record file for enlisted personnel and officers in COMHUKFORLANT, COMFAIRWINGSLANT and COMOCEANSYSLANT and provide the Scientific Advisory Teams at these commands with a detailed list of this file.

1.3 Applicable Documents.

(a) The Active Duty Enlisted/Officer Master Magnetic Tape Record Print Procedure Functional Description.

(b) Manual of the Active Duty Enlisted Master Magnetic Tape Record NAVPERS 15,949A Oct 1962.

(c) Manual of the Active Duty Officer Master Magnetic Tape Record NAVPERS 15,921A May 1965.

(d) BUPERS ltr Pers-N103-PA of 13 Nov 1967. Manual of Active Duty Officer Automated Record (Preliminary Revision to NAVPERS 15,921A).

(e) COMASWFORLANT OPORDER 71-(YR).

1.4 Modification of Data Requirements. Not applicable.

2. Data Description

2.1 Logical Organization of Static System Data.

(a) Crew data cards.

2.2 Logical Organization of Dynamic Input Data.

(a) Active Duty Enlisted Master Magnetic Tape Record.

(b) Active Duty Officer Master Magnetic Tape Record.

2.3 Logical Organization of Dynamic Output Data.

(a) Active Duty Enlisted Master Magnetic Tape Record.

(b) Active Duty Officer Master Magnetic Tape Record.

(c) Enlisted Active Duty Record Printout.

(d) Officer Active Duty Record Printout.

2.4 Internally Generalized Data. Not applicable.

2.5 System Data Constraints. This system will produce only an Active Duty Enlisted/Officer Master Magnetic Tape Record file and a detailed list of these files for those enlisted personnel and officers in the commands named in paragraph 1.2. These files may then be used in other systems to produce statistical and analytical reports. These files will contain approximately 12,000 records on two reels of magnetic tape when produced for all commands at the same time. It is anticipated, however, that this file will be created on an individual basis for each command each quarter and will require eight reels of magnetic tape, two for each command.

3. User Support Required for Data Collection.

3.1 Data Collection Requirement and Scope. Each command named in paragraph 1.2 will submit a deck of crew data cards containing service number, name and constants in the following format for each enlisted man and officer on the crew list.

Column	Enlisted	Column	Officer
1-7	Service Number	1-6	Service Number
8	Blank	7-38	Blank
9-13	99999	39-56	Last, first and middle name
14-29	Blank		
30-32	"INQ"	57-80	Blank
33-38	Blank		
39-56	Last, first and middle name		
57-62	Blank		
63-67	"E145*"		
68-73	999999		
74-80	Blank		

A tape, containing one record for each of the cards described in the preceding paragraph, will be created by BUPERS in the format outlined in the Manual of the Active Duty Enlisted Master Magnetic Tape Record NAVPERS 15, 949A, Oct 1962 and the Manual of the Active Duty Officer Master Magnetic Tape Record. For those officer records received after March 1968 refer to BUPERS letter Pers-N103-PA of 13 Nov 1967. Each command will receive a detailed printout of this tape containing those enlisted personnel and officers under their command.

3.2 Recommend Source of Input Data.

(a) A crew data deck, as described in paragraph 3.1, will be produced by each command named in paragraph 1.2.

(b) BUPERS will produce a tape file with the Active Duty Enlisted/ Officer Master Magnetic Tape Record for each person in the data deck described in paragraph 3.1.

3.3 Data Collection and Transfer Procedures.

(a) Each command named in paragraph 1.2 will submit quarterly, as requested, the data deck described in paragraph 3.1 to COMASWFORLANT Scientific Advisory Team.

(b) COMASWFORLANT will send these data cards to BUPERS. This data must be sent to BUPERS before the 10th of the month in which processing is desired.

(c) BUPERS will send the Active Duty Enlisted/Officer Master Magnetic Tape Records that match the above data cards to COMASWFORLANT.

(d) COMASWFORLANT will list this tape and distribute the list to the appropriate commands.

3.4 Data Base Impacts. The preparation of the data deck described in paragraph 3.1 will impose from six to twelve hours of keypunching and verification time upon each command.

System Specification
101B27.100
SS-01

1. General

1.1 Purpose of System Specification. The System Specification for Project 101B27.100 is written in fulfillment of the following objectives.

(a) To communicate details of the on-going analysis to the user operational personnel for their information, not concurrence.

(b) To allow early completion of the FD by deferring detailed definition of the system functions to this document.

1.2 Project Reference. The outputs of the Active Duty Enlisted/Officer Master Magnetic Tape Record Print Procedure, Project 101B27.100, will be analyzed by the Scientific Advisory Teams at COMHUKFORLANT, COMFAIRWINGSLANT and COMOCEANSYSLANT to determine what future application may be made of these data.

1.3 Applicable Documents.

(a) The Active Duty Enlisted/Officer Master Magnetic Tape Record Print Procedure Functional Description.

(b) The Manual of the Active Duty Enlisted Master Magnetic Tape Record, NAVPERS 15,949A Oct 1962.

(c) The Enlisted Active Duty Master Record Print Procedure Data Requirements Document.

(d) BUPERS ltr Pers-N103-PA of 13 Nov 1967. Manual of Active Duty Officer Automated Record (Preliminary Revision to NAVPERS 15,921A).

(e) COMASWFORLANT OPORDER 71-(YR).

2. Scope

2.1 System Description. This utility system will produce an Active Duty Enlisted/Officer Master Magnetic Tape Record file and list for those enlisted men and officers in COMHUKFORLANT, COMFAIRWINGSLANT and COMOCEANSYSLANT..

2.2 System Functions. Each of the three commands named in paragraph 2.1 will produce a deck of data cards from their crew list. These data cards will then be sorted into service number sequence by COMASWFORLANT and forwarded to BUPERS. BUPERS will produce a tape file containing the Active Duty Enlisted/Officer Master Magnetic Tape Record for each service number in the crew data deck. This tape will be forwarded to COMASWFORLANT where it will be printed in detail. A copy of this printout will be sent to the appropriate command.

2.3 Physical Description. The three commands named in paragraph 2.1 will keypunch and verify crew data cards from their crew lists. COMASWFORLANT will sort these cards and send them to BUPERS. BUPERS will produce a tape file containing the Active Duty Enlisted/Officer Master Magnetic Tape Record for each service number in the crew data cards. This file will be sent to COMASWFORLANT where a detailed list will be printed and forwarded to the appropriate command.

2.4 Timing. Crew data cards will be sent to BUPERS before the 10th of the month in which they are to be processed as they are included in the normal monthly processing of the Active Duty Enlisted/Officer Master Magnetic Tape Record file. Machine time other than that required at BUPERS is as follows:

084 sorter	2 hours
1401 computer with one tape drive and printer	17 hours
Keypunch	6 to 12 hours per command
Verifier	Same as keypunch

2.5 Accuracy. Care should be taken by each command to insure that a crew data card has been produced for each enlisted man and officer within their command and that these cards contain valid data. The crew data card to be provided BUPERS with the control information needed to produce the Active Duty Enlisted/Officer Master Magnetic Tape Record file. Invalid data in the crew data cards will produce an invalid tape file.

2.6 Flexibility. This system is designed to produce and print the Active Duty Enlisted/Officer Master Magnetic Tape Record file. Flexibility will be limited to possible changes in the tape records and print formats. Both the old and new officer tapes have print programs. A new enlisted print program will be needed when this tape is revised.

3. Environment.

3.1 Equipment Environment.

(a) One central processing unit.

(b) One tape unit.

(c) One on line printer.

(d) One on line card reader.

(e) One card sorter.

(f) Each command must have access to at least one keypunch.

(g) Each command must have access to at least one verifier.

3.2 Software Environment.

IBM autocoder compiler with ZZERRR macro.

3.3 Interfaces. The crew data cards produced by the commands named in paragraph 1.2 are sent to BUPERS for extracting selected data from the Active Duty Enlisted/Officer Master Magnetic Tape Record. A tape is produced containing all Active Duty Enlisted/Officer Master Magnetic Tape Records that match the crew data cards.

3.4 Security. All data in this system is unclassified but should be handled on a "need to know" basis only.

3.5 Controls. Not applicable.

4. Design Data.

4.1 Program Descriptions.

4.1.1 Program Description. The Print Enlisted Tape program, number PD-01, will read the Active Duty Enlisted Master Magnetic Tape Record file and print each record in detail. The printed output will be in the same format as the tape record except that one or more spaces will separate each field and all fields will have identifying headings printed above them. Also

date fields, as well as any other field requiring editing, will have the appropriate editing such as (/), (-), (.), etc., performed. The program will also include routines to perform:

(a) Printing of only selected records.

(b) Printing all records.

(c) Appropriate tape read checks.

(d) Printing of invalid tape records.

(e) An interrupt routine.

(f) A restart routine.

(g) Check for correct tape header.

(h) Check for end of reel and end file.

(i) Print date of tape on list.

Inputs

(a) Title. Active Duty Enlisted Master Magnetic Tape Record file.

(b) Format. See APPENDIX A.

(1) Header label. 80 characters.

(2) File. 500 characters, including a record mark, blocked in groups of 5.

(3) Trailer label. 80 characters.

(4) Tape marks. One before and after the trailer label.

(c) Number of Items. Approximately 10,000 records for all commands.

(d) Means of entry. Input is by one tape unit.

(e) Frequency. Quarterly.

(f) Priority. Routine.

(g) Source. These data are received from BUPERS and retained by COMASWFORLANT.

(h) Security. Unclassified but handled on a "need to know" basis.

(i) Parameter Cards. See APPENDIX B.

Outputs

(a) Title. Enlisted Active Duty Record list.

(b) Format. See APPENDIX C.

(c) Number of items. One page per input record.

(d) Means of display. One on line printer.

(e) Volume. Approximately 10,000 pages.

(f) Priority. Routine.

(g) User Recipients. COMASWFORLANT, COMHUKFORLANT, COMFAIRWINGSLANT and COMOCEANSYSLANT.

(h) Security. Unclassified but handled on a "need to know" basis.

Data Base

(a) Title. Active Duty Enlisted Master Magnetic Tape Record file.

(b) Description. This file contains a history of each enlisted man's schools, duty stations, rates and other such data.

(c) Number of records. Approximately 10,000.

(d) Storage. Magnetic tape.

(e) Classification. Unclassified but handled on a "need to know" basis

(f) Data Retention. Minimum of two quarters.

4.1.2 Program Description. The Print Officer Active Duty Tape program, number PD-02, description is the same as that described in paragraph 4.1.1 except that it will use the old Active Duty Officer Master Magnetic Tape Record file on input.

Inputs

(a) Title. Active Duty Officer Master Magnetic Tape Record.

(b) Format. See APPENDIX A.

(1) Header Label. 80 characters.

(2) File. 1,000 characters including record mark.

(3) Trailer Label. 80 characters.

(4) Tape Marks. One before and one after the trailer label.

(c) Number of Items. Approximately 2,000 records for all commands.

(d) Means of entry. One magnetic tape unit.

(e) Frequency. Quarterly.

(f) Priority. Routine.

(g) Source. These data are received from BUPERS and retained by COMASWFORLANT.

(h) Security. Unclassified but handled on a "need to know" basis.

(i) Parameter cards. See APPENDIX B.

Outputs

(a) Officer Active Duty Record list.

(b) Format. See APPENDIX C.

(c) Number of items. One page per input record.

(d) Means of display. One on line printer.

(e) Volume. Approximately 2,000 pages.

(f) Priority. Routine.

(g) User Recipients. COMASWFORLANT, COMHUKFORLANT, COMFAIRWINGSLANT and COMOCEANSYSLANT.

(h) Security. Unclassified but handled on a "need to know" basis.

Data Base

(a) Title. Active Duty Officer Master Magnetic Tape Record file.

(b) Description. This file contains a history of the officer's naval career.

(c) Number of records. Approximately 2,000.

(d) Storage. Magnetic tape.

(e) Classification. Unclassified but handled on a "need to know" basis.

(f) Retention. Minimum of two quarters.

4.1.3 Program Description. The Print New Officer Tape program, number PD-03, description is the same as that described in paragraph 4.1.1 except that it will use the new Active Duty Officer Master Magnetic Tape Record as an input. (NOTE: Care should be taken when printing fields FAYN1 and FAYN2 as these fields use each bit as an indicator. If a bit is on, print an X under the appropriate heading. If a bit is not on, leave this space on the printout blank.)

Inputs

(a) Title. Active Duty Officer Master Magnetic Tape Record file.

(b) Format. See APPENDIX A.

(1) Header label. 80 characters.

(2) File. 1,121 characters.

(3) Trailer label. 80 characters.

(4) Tape marks. One before and one after the trailer label.

(c) Number of items. Approximately 2,000 records for all commands.

(d) Means of entry. One magnetic tape unit.

(e) Frequency. Quarterly.

(f) Priority. Routine.

(g) Source. These data are received from BUPERS and retained by COMASWFORLANT.

(h) Security. Unclassified but handled on a "need to know" basis.

(i) Parameter card - see APPENDIX B.

Outputs

(a) Officer Active Duty Record list.

(b) Format. See APPENDIX C.

(c) Number of Items. One page per input record.

(d) Means of display. One on line printer.

(e) Volume. Approximately 2,000 pages.

(f) Priority. Routine.

(g) User Recipients. COMASWFORLANT, COMHUKFORLANT, COMFAIRWINGSLANT and COMOCEANSYSLANT.

(h) Security. Unclassified but handled on a "need to know" basis.

Data Base

(a) Title. Active Duty Officer Master Magnetic Tape Record file.

(b) Description. This file contains a history of the officer's naval career.

(c) Number of records. Approximately 2,000.

(d) Storage. Magnetic tape.

(e) Classification. Unclassified but handled on a "need to know" basis.

(f) Retention. Minimum of two quarters.

4.2 Logical Flow. Crew data cards will be prepared by each of the three commands in paragraph 1.2 and sent to COMASWFORLANT where they will be sorted into service number sequence. The sorted crew data cards will then be sent to BUPERS where a file of the Active Duty Enlisted/Officer Master Magnetic Tape Record file will be sent to COMASWFORLANT where a detailed list will be prepared and distributed to the appropriate command. See macro charts, APPENDIX D, for logical flow of the Active Duty Enlisted/Officer Master Magnetic Tape Record print programs.

APPENDICES:

A - Data Elements
B - Required Data Elements
C - Officer/Enlisted Active Duty Record
D - Macro Charts

APPENDIX A

Data Elements

The data elements used in this system are described in the Manual of the Active Duty Enlisted Master Magnetic Tape Record, NAVPERS 15, 949A Oct 1962; the Manual of the Active Duty Officer Master Magnetic Tape Record, NAVPERS 15, 921A May 1965 and APPENDIX B.

Program Specification
101B27.100
PS-01

1. General

1.1 Purpose of Program Specification. The objective for writing a Program Specification for Project 101B27.100, PS-01, is to describe the program design to permit program production by the program coder with sufficient detailed information so that the design ultimately may be translated into instructions.

1.2 Project Reference. The outputs of the Enlisted Active Duty Master Record Print Procedure, Project 101B27.100, PS-01, will be analyzed by the Scientific Advisory Teams at COMHUKFORLANT, COMFAIRWINGS-LANT and COMOCEANSYSLANT to determine what future application may be made of these data.

1.3 Applicable Documents.

(a) Functional Description 101B27.100, FD-01.

(b) Data Requirements Document 101B27.100, RD-01.

(c) System Specification 101B27.100, SS-01.

(d) Program Specification 101B27.100, PS-02.

(e) Program Specification 101B27.100, PS-03.

(f) Manual of the Active Duty Enlisted Master Magnetic Tape Record, NAVPERS 15,949A Oct 1962.

(g) COMASWFORLANT OPORDER 71-(YR).

2. Scope

2.1. Program Description. See System Specification 101B27.100, SS-01, paragraph 4.1.1.

2.2 Program Functions. This program will fulfill the requirement to produce a detailed list of the Active Duty Enlisted Master Magnetic Tape Record file. Programs described in Program Specification 101B27.100 PS-02 and PS-03 will fulfill the remaining programming requirements of this system. This program meets these requirements by:

(a) A routine to check for the proper tape header label.

(b) A routine to print incorrectable read errors.

(c) A routine to check for and print wrong length record.

(d) A routine to bypass padded records; those records consisting of all 9's.

(e) A routine to select records by parameter cards for printing.

(f) A routine to select all records for printing.

(g) A routine to print a pertinent field within the record with descriptive headings.

(h) An interrupt and restart routine.

(i) A routine to handle blocked records.

2.3 Timing. It is anticipated that this program will print at the rate of eleven records per minute. When the complete Active Duty Enlisted Master Magnetic Tape Record file is printed throughput time will be approximately 15 hours. Maximum response time for one parameter will be approximately 10 minutes. This time will, of course, vary with the physical location of the record on the tape.

2.4 Accuracy. Not applicable.

2.5 Flexibility. See System Specification 101B27.100, SS-01, paragraph 2.6.

3. Environment

3.1 Software Environment

IBM Autocoder Compiler with ZZZERRR macro.

3.2 Program Interfaces. See System Specification 101B27.100, SS-01, paragraph 3.3.

3.3 Storage.

(a) Core Storage. Approximately 7,000 permanent positions.

(b) Tape Storage. One tape unit.

3.4 Security. Unclassified but handled on a "need to know" basis.

3.5 Controls. Not applicable.

4. Design Data.

4.1 Terminal Procedures.

(a) Start. Check tape header label to assure that the correct tape is being used as input.

(b) Stop. Rewind and unload tape.

(c) Interrupt.

(1) To interrupt when printing only those records selected by parameter cards, press stop on the printer during a page overflow cycle. Remove all parameter cards from the reader and the printed listing from the printer. Rewind and unload the input tape.

(2) To interrupt when printing all records turn on sense switch D. The program will stop printing after the next complete block of records have been printed and a restart card containing the service number of the next record to be printed will be punched; save this card as it is needed to restart the program. The input tape will be rewound and unloaded by the program. Remove the printed listing from the printer and the input tape from the tape unit.

(d) Restart.

(1) To restart when printing only those records selected by a parameter card, reload the program and all parameter

cards with a service number higher than the last one printed before interrupting.

(2) To restart when printing all records, load the program followed by the restart card with sense switches A, C and E on. When the input tape is repositioned the program will halt with address 4444 in the B address register. Turn sense switch E off and press start. The program will start printing with the next sequential record.

4.2 Inputs. See System Specification 101B27.100, SS-01 inputs in paragraph 4.1.1.

4.3 Outputs. See System Specification 101B27.100, SS-01 outputs in paragraph 4.1.1.

4.4 Data Environment.

(a) Title. Active Duty Enlisted Master Magnetic Tape Record.

(b) Description. This record contains history data for enlisted personnel including such items as schools, grades, rate, aptitude, service data and activities.

(c) Start of file. 80 character header label.

(d) End of file. Tape mark, 80 character trailer label and tape mark.

(e) Number of records. A maximum of approximately 10,000.

(f) Start of record. First position blank.

(g) End of record. Last position is a record mark.

(h) Storage. Magnetic tape.

(i) Normal order of file. Service number sequence.

(j) File classification. Unclassified but handled on a "need to know" basis.

(k) Retention cycle. A minimum of two quarters.

4.5 Logical Flow. See macro charts.

Program Specification
101B27.100
PS-02

1. General

1.1 Purpose of Program Specification. The objective for writing a Program Specification for Project 101B27.100, PS-02 is to describe the program design to permit program production by the program coder with sufficient detailed information so that the design ultimately may be translated into instruction.

1.2 Project Reference. The outputs of the Officer Active Duty Master Record Print Procedure, Project 101B27.100, PS-02 will be analyzed by the Scientific Advisory Teams at COMHUKFORLANT, COMFAIRWINGSLANT and COMOCEANSYSLANT to determine what future application may be made of these data.

1.3 Applicable Documents.

(a) Functional Description 101B27.100, FD-01.

(b) Data Requirements Document 101B27.100, RD-01.

(c) System Specification 101B27.100, SS-01.

(d) Program Specification 101B27.100, PS-01.

(e) Program Specification 101B27.100, PS-03.

(f) Manual of the Active Duty Officer Master Magnetic Tape Record NAVPERS 15,921A May 1965.

(g) COMASWFORLANT OPORDER 71-(YR).

2. Scope.

2.1 Program Description. See System Specification 101B27.100, SS-01, paragraph 4.1.2.

2.2 Program Function. This program will fulfill the requirement to produce a detailed list of the old Active Duty Master Magnetic Tape Record file. Programs described in Program Descriptions 101B27.100, PS-01 and PS-03 will fulfill the remaining programming requirements of this system. This program meets these requirements by:

(a) A routine to check for the proper tape header label.

(b) A routine to print incorrectable read errors.

(c) A routine to check for and print wrong length record.

(d) A routine to select records by parameter cards for printing.

(e) A routine to select all records for printing.

(f) A routine to print a pertinent field within the record with descriptive headings.

(g) An interrupt and restart routine.

(h) A routine to handle blocked records.

2.3 Timing. It is anticipated that this program will print at the rate of eleven records per minute. When the complete Active Duty Officer Master Magnetic Tape Record file is printed throughput time will be approximately three hours. Maximum response time for one parameter card will be approximately ten minutes. This time will, of course, vary with the physical location of the record on the tape.

2.4 Accuracy. Not applicable.

2.5 Flexibility. See System Specification 101B27.100, SS-01, para. 2.6.

3. Environment.

3.1 Software Environment.

IBM Autocoder Compiler with ZZERRR macro.

3.2 Program Interfaces. See System Specification 101B27.100, SS-01, paragraph 3.3.

3.3 Storage.

(a) Core storage. Approximately 6,000 permanent positions.

(b) Tape storage. One tape unit.

3.4 Security. The data in this system is unclassified but should be distributed only on a "need to know" basis.

3.5 Controls. Not applicable.

4. Design Data.

4.1 Terminal Procedures. This program is similar to the program described in Program Specification 101B27.100, PS-01 and the terminal procedures are the same.

4.2 Inputs. See System Specification 101B27.100, SS-01 inputs in paragraph 4.1.2.

4.3 Outputs. See System Specification 101B27.100, SS-01 outputs in paragraph 4.1.2.

4.4 Data Environment.

(a) Title. Active Duty Officer Master Magnetic Tape Record.

(b) Description. This record contains officer history data including such items as schools, grades, rank, aircraft experience and activities.

(c) Start of file. 80 character header record.

(d) End of file. Tape mark, 80 character trailer label and tape mark.

(e) Number of Records. A maximum of approximately 2,000.

(f) Start of Record. First position is Gain/Loss indicator.

(g) End of Record. Record mark.

(h) Storage. Magnetic tape.

(i) Normal order of file. File number sequence.

(j) File Classification. Unclassified but handled on a "need to know" basis.

(k) Retention Cycle. Minimum of two quarters.

4.5 Logical Flow. See macro charts.

Program Specification
101B27.100
PS-03

1. General.

1.1 Purpose of Program Specification. The objective for writing a Program Specification for Project 101B27.100, PS-03 is to describe the program design to permit program production by the program coder with sufficient detailed information so that the design ultimately may be translated into instructions.

1.2 Project Reference. The outputs of the Officer Active Duty Master Record Print Procedure, Project 101B27.100, PS-03 will be analyzed by the Scientific Advisory Teams at COMHUKFORLANT, COMFAIRWINGSLANT and COMOCEANSYSLANT to determine what future application may be made of these data.

1.3 Applicable Documents.

(a) Functional Description 101B27.100, FD-01.

(b) Data Requirements Document 101B27.100, RD-01.

(c) System Specification 101B27.100, SS-01.

(d) Program Specification 101B27.100, PS-01.

(e) Program Specification 101B27.100, PS-02.

(f) BUPERS ltr Pers-N103-PA of 13 Nov 1967. Manual of Active Duty Officer Automated Record (Preliminary Revision to NAVPERS 15,921A).

(g) COMASWFORLANT OPORDER 71-(YR).

2. Scope.

2.1 Program Description. See System Specification 101B27.100, SS-01, paragraph 4.1.3.

2.2 Program Function. This program will fulfill the requirement to produce a detailed list of the new Active Duty Master Magnetic Tape Record file. Programs described in Program Descriptions 101B27.100, PS-01 and PS-02 will fulfill the remaining programming requirements of this system. This program meets these requirements by:

(a) A routine to check for the proper tape header label.

(b) A routine to print incorrectable read errors.

(c) A routine to check for and print wrong length record.

(d) A routine to select records by parameter cards for printing.

(e) A routine to select all records for printing.

(f) A routine to print a pertinent field within the record with descriptive headings.

(g) An interrupt and restart routine.

(h) A routine to handle blocked records.

2.3 Timing. It is anticipated that this program will print at the rate of eleven records per minute. When the complete Active Duty Officer Master Magnetic Tape Record file is printed throughput time will be approximately three hours. Maximum response time for one parameter card will be approximately ten minutes. This time will, of course, vary with the physical location of the record on the tape.

2.4 Accuracy. Not applicable.

2.5 Flexibility. See System Specification 101B27.100, SS-01, paragraph 2.6.

3. Environment.

3.1 Software Environment.

IBM Autocoder Compiler with ZZERRR macro.

3.2 Program Interfaces. See System Specification 101B27.100, SS-01, paragraph 3.3.

3.3 Storage.

(a) Core storage. Approximately 6,000 permanent positions.

(b) Tape storage. One tape unit.

3.5 Controls. Not applicable.

4. Design Data.

4.1 Terminal Procedures. This program is similar to the program described in Program Specification 101B27.100, SS-01 inputs in paragraph 4.1.3.

4.2 Inputs. See System Specification 101B27.100, SS-01 outputs in paragraph 4.1.3.

4.3 Outputs. See System Specification 101B27.100, SS-01 outputs in paragraph 4.1.3.

4.4. Data Environment.

(a) Title. Active Duty Officer Master Magnetic Tape Record.

(b) Description. This record contains officer history data including such items as schools, grades, rank, aircraft experience and activities.

(c) Start of file. 80 character header record.

(d) End of file. Tape mark, 80 character trailer label and tape mark.

(e) Number of records. A maximum of approximately 2,000.

(f) Start of record. First position is Gain/Loss indicator.

(g) End of record. Record mark.

(h) Storage. Magnetic tape.

(i) Normal order of file. File number sequence.

(j) File classification. Unclassified but handled on a "need to know" basis.

(k) Retention cycle. Minimum of two quarters.

4.5 Logical Flow. See macro charts.

Operations Manual
101B27.100
OM-01

1. General.

1.1 Purpose of Operations Manual. The objective of writing an Operations Manual for Project 101B27.100 (OM-01) is to provide control and operator personnel with a general description of the system and its associated environment with which they will be concerned during the performance of their duties.

1.2 System Application. The Active Duty Enlisted/Officer Master Magnetic Tape Record Print Procedure, Project 101B27.100, is designed to acquire from BUPERS a tape file containing the Active Duty Enlisted/Officer Master Magnetic tape record for each enlisted person and officer in the commands of COMHUKFORLANT, COMFAIRWINGSLANT and COMOCEANSYSLANT.

1.3 System Operation. See ADP Flow Chart.

1.4 Program Inventory.

(a) Keypunch and verify Crew Data Cards. Six to twelve hours per command named in paragraph 1.2.

(b) Sort Crew Data Cards into service number sequence. Approximately 3 hours.

(c) Forward Crew Data Cards to BUPERS.

(d) Upon receipt of the Active Duty Enlisted/Officer Master Magnetic Tape Record files program PS-01, PS-02 and PS-03 will be run as follows:

(1) PS-01 will print the enlisted tape. Run time approximately 17 hours.

(2) PS-02 will print the Officer tape in the old format. (Tape prior to March 1968). Run time approximately 3 hours.

(3) PS-03 will print the Officer tape in the new format. (Tapes after March 1968). Run time approximately 3 hours.

B

INTEGRATED ADP FLOW CHART

2. System Control.

2.1 Control Requirements. Crew data cards will be prepared by the commands named in paragraph 1.2 and sent to COMASWFORLANT. These cards will then be sorted by service number and sent to BUPERS. BUPERS will create a tape file containing the Active Duty Enlisted/Officer Master Magnetic Tape Records that match the Crew Data Cards. This file will be sent to COMASWFORLANT where a detailed list will be prepared and sent to the appropriate command. All input data records pertaining to this system will be stored by COMASWFORLANT (NOTE: Enlisted and Officer data will be kept in separate files at all times).

2.2 Control Forms. Not applicable.

2.3 Phasing (ADP). This system has three logical phases.

(a) The preparation of the Crew Data Cards which should be accomplished within one week's time.

(b) The processing of the Crew Data Cards by BUPERS. A minimum of two weeks should be allowed for this phase.

(c) The detail listing of this data. If all commands are to be processed at the same time this phase will require approximately 20 hours of computer time.

2.4 Card Deck Sequence.

(a) When selective printing is desired the card deck sequences is object program first followed by parameter cards.

(b) When a printout of all records is desired only the object program is used.

(c) When restarting a selective printout the card deck sequence is as in line (a).

(d) When restarting a printout of all records the card deck sequence is object program followed by the restart card. See Figure 1.

2.5 Graphic Processing Chart (ADP). Not applicable.

2.6 Tape Retention Schedules (ADP). A minimum of two quarters.

2.7 File Query Procedures. This system has a limited query capability. Any record or records within the file may be printed without printing the rest of the file by use of parameter cards with the service number in Columns 1-7 for enlisted data and Columns 1-6 for officer data. (NOTE: Crew data cards may be used in place of parameter cards as the control fields are in the same columns).

3. Operating Procedures.

3.1 EAM Task.

(a) Keypunch and verify Crew Data Cards from crew list. The format is as follows:

Column	Enlisted Personnel	Column	Officer
1-7	Service no.	1-6	File no.
8	Blank	7-38	Blank
9-13	99999	39-56	Last, first & middle name
14-29	Blank		
3-32	"INQ"	57-80	Blank
33-38	Blank		
39-56	Last, first & middle name		
57-62	Blank		
63-67	"E145*"		
68-73	999999		
74-80	Blank		

Enlisted and Officer Crew Data cards are kept separate and labeled. Forward Crew Data Cards to COMASWFORLANT, Scientific Advisory Team, Code 714.

(b) Sort Crew Data Cards.

Enlisted Crew Data Cards Col. 1-7.
Officer Crew Data Cards Col. 1-6.

Forward sorted Crew Data Cards to BUPERS with a minimum of two blank tapes on which BUPERS will create the Active Duty Enlisted/Officer Master Magnetic Tape Record file.

3.2 Equipment Configuration.

(a) EAM keypunching of crew data cards:

Three 029 keypunches (one at each command)
Three 059 verifiers (one at each command)

(b) EAM sorting of crew data cards:

One 084 sorter

(c) EDP processing at BUPERS:

Equipment configuration not applicable.

(d) EDP print of Active Duty Enlisted/Officer Master Magnetic Tape Record file:

One 1401 CPU
One 1403 printer
One 1402 card read/punch
One 7330 tape unit

3.3 EDP Tasks. There are three EDP tasks included in this system, the following instructions apply to all three tasks:

(a) Input Material.

(1) Program 101B27.100, PD-01. Active Duty Enlisted Master Magnetic Tape Record file.

(2) Program 101B27.100, PD-02. Old Active Duty Officer Master Magnetic Tape Record file.

(3) Program 101B27.100, PD-03. New Active Duty Officer Master Magnetic Tape Record file.

(4) Parameter Cards. (NOTE: The Crew Data cards may use parameter cards as the service number fields are the same).

(b) Outputs. A detailed printout of the Active Duty Enlisted/ Officer Master Magnetic Tape Record file.

(c) Procedures.

(1) Setup.

(a) Mount Active Duty Enlisted/Officer Master Magnetic Tape Record file on unit one.

(b) Put 11 1/2 x 14 paper of the requested ply in 1403 printer.

(c) Place object program in reader. If the option to print only those records requested by parameter cards is being utilized place parameter cards in reader after object deck.

(d) Turn on appropriate sense switch.

(1) I/O always on.
(2) A always on.
(3) B on to bypass tape header check.
(4) C on to print all tape records with no selection.
(5) D on for program interrupt when program is utilizing sense switch C.
(6) E on for restart when program is utilizing sense switch C.

(e) Press load button on reader.

(2) Operation.

(a) Halts are identified by a number in the B address register and are as follows:

B address register	Description
1111	Incorrect tape header label. If wrong tape is mounted on unit one, mount correct tape and rental job. If correct tape is mounted on unit

B address register	Description
	one, but has an invalid tape header label, reload tape, turn sense switch B on and press start.
1112	End of reel. Mount next sequenced reel and press start.
1234	End of job.
3333	Job has been interrupted. Check punch hopper for restart card. Save this card for restart procedure.
4444	Input tape has been repositioned during a restart operation. Turn sense switch E off and press start to continue processing.

4. Non-Routine Operations.

(a) Interrupt while printing all records. When it is desired to interrupt turn on sense switch D. Upon complete processing of the next record or block of records a restart card will be punched on the 1402 read/punch and the program will halt at halt 3333. Dismount input tape and output listing, save restart card.

(b) Interrupt when print only those records selected by parameter cards. Remove unprocessed parameter cards from the 1402 read/punch. Program will halt upon completion of the record that is currently being processed.

(c) Restarting when printing all records. Obtain the restart card that was punched at the time of interrupt. Machine setup is the same as during normal processing except place restart card after object program and turn on sense switch E.

(d) Restart when printing only those records selected by parameter cards. Set up instructions are the same as those for normal processing except only those parameter cards which have not been printed are placed after the object deck.

13. ABSTRACT

Each section of this paper is designed to be informative at different levels.

The Functional Description reflects the initial analysis of the system and defines the operational capability to be developed without going into the details of each individual operation.

The Data Requirements Document defines the data elements used within the system.

The System Specification is a more detailed documentation of the entire system.

The Program Specification describes program design so as to permit program production. Each program within the system is defined in a separate Program Specification and only information pertaining to that program and how it relates to other operations within the system is presented in these sections. Program listings are included in this section.

The Operations Manual documents the operating procedures necessary to operate each function within this system. Instructions are given for initiating, running, terminating, interrupting and restarting each function within the system.
