INTRODUCTION

Under contract F29601-77-C-0091 with the Air Force Test and Evaluation Center (AFTEC), Kirtland Air Force Base, New Mexico, ARINC Research Corporation performed a document search and developed a series of checklists for the qualitative assessment of maintainability design features. This report presents the results of the checklist development efforts. ↑

2
DATA COLLECTION AND REVIEW

Initial efforts were the identification, collection and review of documents that were potentially applicable to the development of the checklists. A total of 43 documents were identified. From this total, 21 were selected as directly applicable to the projects, 20 additional documents were duplicative of more informative sources or were not applicable for other reasons, and two were unobtainable within the time frame allotted for the project. A complete list of these documents is provided in Table 1.

Prior to the actual development of checklists, categories of subjects applicable to the qualitative assessment of maintainability features were developed. Additionally, a method was developed for coding the subject categories and the source documents for each question presented in the checklists. A typical listing follows:

AC001 A3/DN2G3/P2.4.2,A Are captive fasteners used whenever feasible?

This coding format was developed for use with 80 column automatic data processing (ADP) cards. In the following explanation of the coding, the column numbers refer to those on ADP cards:

- | | |
|-----------------------|---|
| Columns 1 through 5 | - Item identifiers |
| Columns 1 and 2 | - Categories (see Table 2) |
| Columns 3 - 5 | - Subcategories and item numbers |
| Column 6 | - Plus (+) continuation card |
| Columns 7 through 26 | - Reference source code |
| Columns 7 and 8 | - Alpha number source code unique identifiers (see Table 3) |
| Columns 9 - 26 | - Identifies the page, design note or other reference within the document. Additionally, Tables (T), Figures (F) or Paragraphs (P) are identified from which the checklist item was extracted. These letter designators are followed by the table, figure or paragraph numbers. |
| Column 27 | - Blank |
| Columns 28 through 78 | - Text |
| Columns 79 and 80 | - Blank |

Table 2 presents a listing of subject categories covered by the checklists. Table 3 provide a cross reference of the source code designators to the documents utilized in preparing the checklists. Appendix A is a print-out of the detailed checklists.
