PREFACE

This report presents the results of an Air Force Electronic Principles survey of 37 selected Air Force specialties. Authority for conducting Electronic Principles (EP) surveys is contained in AFR 35-2.

Results presented in this report are part of an EP survey of 81 Air Force specialties. This survey was requested by the Chief, Common Electronics Training Program (CETP) Program Management Team (PMT) in October 1985.

The Electronic Principles Inventory (EPI) used to collect EP survey data was originally developed in 1976 by Dr Hendrick Ruck and Major Thomas O'Connor. Mr Theodore Wilcox revised and validated the EPI in 1986 as part of this survey project.

First Lieutenant Robert Hampel analyzed the data and wrote the final report. Computer programming support was provided by Ms Olga Velez and Mr Wayne Fruge, and Ms Raquel A. Soliz provided administrative support. This report was reviewed and approved by Mr Gerald Clow, Chief, Management Applications Branch, Occupational Analysis Division, USAF Occupational Measurement Center.

This report is distributed to Air Staff sections, major commands, and other training and management personnel. Requests for additional copies should be sent to: Chief, Occupational Analysis Division (OMY) USAF Occupational Measurement Center, Randolph AFB, Texas 78150-5000.

REPORT SUMMARY

1. BACKGROUND: This report provides data on the electronic principles (EP) used by airmen in 37 Air Force specialties (AFSS) with initial training at Lowry Technical Training Center (TTC).
2. METHODOLOGY: The USAF Electronic Principles Inventory (AFPT 90-EPI-825) was administered to random samples of fully qualified job incumbents representing the 37 AFSS in this report. The data were collected from March 1987 to March 1989. Some AFSCs have been affected by RIVET Workforce changes. Details are enumerated in the SURVEY ADMINISTRATION section.
3. RESULTS: Complete survey data is provided in two appendices:
 - Appendix A: Lowry TTC AFSCs EP data in EPI job inventory order
 - Appendix B: Lowry TTC AFSCs EP data matched to Electronic Fundamentals/Applications (EF/A) STS

NOTE: A "generic" version of the Electronic Fundamentals/Applications (EF/A) is used in Appendix B--complete analysis requires the use of AFSC-specific proficiency codes, rather than the generic set used in the appendix.

4. DISCUSSION AND IMPLICATIONS: Although there is no specific regulatory guidance on the use of EPI data, the survey data lends itself to the use of cutoff scores for deciding which EPI items to include in centralized training for each AFSC. Once the training needs of the individual AFSCs have been determined, the possibility for consolidated EP training can be considered.

Survey data showed that AFSC 40450 personnel use as many or more EPI items than nine of the 32 AFSCs in this report which currently attend the Lowry EP course. AFSC 404X0 personnel should be considered for enrollment in the course.

There was no match of EPI survey data to the Lowry EP course POI, because the POI was undergoing major revisions. This match should be accomplished once the new POI is complete, to determine whether or not the survey data support the new POI objectives.

ELECTRONIC PRINCIPLES SURVEY REPORT LOWRY TECHNICAL TRAINING CENTER

INTRODUCTION

From missile systems maintainers to telephone switching specialists, from avionics technicians to biomedical equipment personnel, the US Air Force employs more than 50,000 worker-level (primarily 5-skill level) personnel who require electronic principles (EP) training. These highly skilled, technically trained airmen work in over 80 Air Force specialties (AFSS) spanning 11 career fields. Furthermore, the depth and breadth of required EP training varies based on specialty needs. In short, the USAF spends vast amounts of money, manpower, and time to ensure that airmen are properly trained in electronic principles.

To make the best use of these resources, the USAF Common Electronics Training Program (CETP) was designed to consolidate and standardize Air Force EP training where possible and practical. This is primarily accomplished through special EP courses taught at four USAF Technical Training Centers (TTCs). These EP courses teach the electronic principles common to two or more AFSS. Another part of the CETP is the development of common training modules. Specific blocks of EP instruction are developed by one TTC, then shared with the other TTCs which teach that EP subject. By selectively combining and standardizing Air Force EP training, the USAF makes best use of limited training resources. (SDW)

Not all Air Force electronic principles training is conducted in special EP courses, however. For example, some EP subjects are used in only one AFSS. Students learn these generally advanced topics in AFSC-awarding courses, building on the more basic EP subjects from the common EP course. Also, some AFSS require very few electronic principles, and airmen in these specialties receive EP training only in their AFSC-awarding courses.

As with other Air Force technical training, EP training programs can profit from objective analysis of specific training requirements. These requirements can be analyzed objectively using occupational survey data. This EP survey provides data which can be used to analyze the specific EP training requirements in CETP courses and AFSC-awarding courses alike. The instrument used to collect EP survey data is the Electronic Principles Inventory (EPI).

BACKGROUND

The USAF Electronic Principles Inventory (EPI) is a knowledge- and skills-based job inventory which identifies the electronic principles, skills, and equipment an airman uses in the performance of his or her job.

APPROVED FOR PUBLIC RELEASE; DISTRIBUTION UNLIMITED

The EPI was originally developed by Dr Hendrick Ruck and Major Thomas O'Connor in 1976. An in-depth discussion of the original concept, development, and validation of the EPI can be found in USAFOMC Technical Note 77-02, "The Development and Application of the Electronic Principles Job Inventory". Mr Theodore Wilcox revised and validated the EPI in 1986 for this survey.

The EPI contains two sections. First is a background section containing demographic and job satisfaction questions. The second section contains 712 electronic principles, skills, and equipment questions covering 39 EP subject areas. Below are some example questions taken from the EPI. The 39 EPI subject areas are listed in Table 1.

After completing the background section, job incumbents respond "Yes" or "No" to the 712 EPI questions. The result is a "profile" of electronic principles, skills, and equipment used by the incumbent in his or her present job. This electronic principles "profile" can be combined with the "profiles" of other job incumbents to produce a "profile" for the entire AFS.

EXAMPLE EPI QUESTIONS

Example Principles Questions

- A4-4 Do you use electron tube characteristic curves?
- G1-20 Do you use parity bit codes?
- H4-33 Do you use "FM" modulation principles?

Example Skills Questions

- C1-8 Do you calculate values of transistor amplifier voltage, current, or power gain?
- E2-1 Do you trace schematic or block diagrams of circuits containing frequency sensitive filters?
- I1-4 Do you measure RF effective power?

Example Equipment Questions

- B4-2 Do you use spectrum analyzers?
- D3-5 Do you perform tasks on variable resistor voltage regulators?
- J1-8 Do you work on dynamic microphones?

SURVEY ADMINISTRATION

As mentioned in the PREF. . . data were collected for this survey from over 80 AFSCs (78 AFSCs, 3 Reporting Identifiers). Survey data were collected in four increments, from March 1987 through March 1989. A total of 24,651 EPI booklets were mailed to active duty airmen worldwide. After each of the first three increments, interim survey reports were published by the USAF Occupational Measurement Center (USAFOMC). These reports are all numbered AFPT 90-EPI-825, and are dated July 1988 (EPI-1), January 1989 (EPI-2), and February 1989 (EPI-3). There was no separate report of data collected in EPI-4. Results were combined with those of the first three increments to produce the final reports. There are a total of five final EPI reports, one for each of the following: Chanute TTC, Keesler TTC, Lowry TTC, Sheppard TTC, and the Air Force Military Training Center (AFMTC), located at Lackland AFB. This report presents results only for AFSCs with technical training courses at Lowry Technical Training Center.

A discussion about data collection and reporting procedures is necessary at this point. Some of the AFSCs included in this EP survey have been affected by RIVET Workforce (RWF) changes during various phases of the survey process. We have tried to keep up with these changes and adapt accordingly to provide the best, most useful survey data possible. Fortunately, not all AFSCs were affected by RWF, and some AFSCs were changed by RWF before survey mailout. These AFSCs did not require any special consideration.

Unfortunately, some AFSCs changed after survey data collection, which presented a challenge. Personnel from various AFSCs were reorganized and redistributed into new AFSCs as a result of RWF changes. These redistributed groups can be easily identified in this report because they carry the generic "X" for the skill-level designation. Using survey data collected from the 'old' AFSCs, we were able to create new data sets representing these 'new' AFSCs, allowing analysis of the data under the 'new' specialty structure.

For example, we collected survey data from the following AFSCs which no longer exist due to RWF changes: 32150, 32151E, 32151G, 32152, 32152Q, 32351, 32352, 32353, 32550, 32551, 32850, 32851, 32852, 32853, 32854, and 32855. These 'old' AFSCs were redistributed among several 'new' AFSCs as a result of RWF changes. The 'new' AFSCs which have initial training at Lowry TTC (and included in this report) include 451X7, 455X3A, 456X0, 456X2A, 456X2B, 457X3A, and 457X3C. As mentioned above, we recombined the survey data provided by airmen in the 'old' AFSCs to make new data sets which match the 'new' AFSCs, making analysis of EP training needs possible.

First, we placed all survey respondents from the 'old' AFSCs into a single group. Next, using the Uniform Airmen Record (UAR), we created a group which included all assigned personnel in the 'new' AFSCs. We then matched individuals by Social Security Account Number (SSAN), linking their 'old' AFSC to their 'new' AFSC. Finally, we created new data sets based on the results of the match, and these data sets represent the EP use of the personnel in the 'new' AFSCs. (NOTE: It was necessary to include 7-skill level personnel in the 'new' AFSC groups for matching purposes, because some of the personnel in

the 'old' AFSCs had upgraded to 7-level since taking the survey. However, the survey data are still useful, because the data were collected while the respondents were still 5-levels.)

After we performed the match of the 'old' AFSCs to 'new' AFSCs, we found that some of the 'new' AFSCs had sample sizes that were too small to be reliable. The following AFSCs are NOT reported here because of inadequate sample sizes: 455X3B, 455X3C, 455X5A, 455X5B, and 457X3B. However, most of the 'new' AFSC samples were sufficient for use, and are included in this report.

Here is a summary of all AFSCs included in this report:

The survey administration for these 37 AFSCs was spread over all four increments of the EPI, from March 1987 through March 1989. To be eligible for the survey, airmen in these specialties had to have at least 4 weeks' experience in their job, could not be within 90 days of retirement nor expecting reassignment within 60 days. A random sample of survey eligible personnel was selected, and booklets were mailed to airmen worldwide. All useable EPI booklets that were returned to USAFOMC were included in the final samples. Table 2 shows the number of assigned personnel at the time of survey, as well as final sample size, for each AFSC in this report.

RESULTS

Each completed EPI survey booklet shows which electronic principles the respondent uses in his or her present job. When the responses of all survey respondents from a specific group are combined, the results are shown as percent of group members using each of the 712 EP items. This listing of all EPI items and the percent of group members responding "Yes" is the EP "profile" of that group. Appendix A shows percent group members responding "Yes" information for all 712 EPI items, listed in EPI job inventory order.

To facilitate development of Specialty Training Standards (STSs), subject-matter experts (SMEs) matched EPI items to appropriate block(s) of the Electronic Fundamentals/Applications (EF/A) part of the STS, also known as the STS Attachment 2. For this study, a "generic" version of the EF/A STS was used for the match. All blocks of the EF/A were matched, and the proficiency codes are NOT specific to individual AFSCs. Still, this information (located in Appendix B) can be used to determine which blocks of the STS Attachment 2 should be included in individual STSs.

Subject-matter experts also matched EPI items to the objectives from Plans of Instruction (POIs) for Air Force courses which teach electronic principles. This match of EPI items to appropriate POI objective(s), when combined with survey data, shows how well the POI objectives are supported. For example, if many group members respond "Yes" to the EPI items matched to an objective, then that objective is considered well supported by survey data. If, however, few group members respond "Yes", the objective is not well supported.

For this EPI survey, however, no POI match was accomplished, because the Lowry EP POI was undergoing major revisions. This match of EPI items to the Lowry EP course POI objectives should be accomplished once the POI changes are complete. This match will show whether or not the new POI is supported by EPI survey data.

Following is a summary of the Appendices, which show the survey results:

Appendix A: Lowry TTC AFSCs EP data in EPI
job inventory order

Appendix B: Lowry AFSCs EP data matched to Electronic
Fundamentals/Applications (EF/A) STS

DISCUSSION AND IMPLICATIONS

We collect EPI data to assess the use of electronic principles by different Air Force specialties. For each AFSC surveyed, this data shows the percent members responding "Yes" to each of the 712 EPI items. We can use this data to select for each AFSC the items we wish to include in centralized

training. Once we've selected for each AFSC the EPI items we wish to include in centralized training, we can look for commonalities among those items for the possibility of combined electronic principles training.

How should we use the EPI data to select the items we wish to include in centralized training? Currently, there is no regulatory guidance on the use of EPI data for the development of centralized training programs (or STSs). ATC Regulation 52-22 states only that "EPI studies provide valuable information for curriculum development or validation in terms of percent members requiring a range of electronics principles knowledge in the performance of their job." Lacking direction from regulations, we must devise an intelligent method for using this data.

The EPI percent members responding "Yes" data lends itself to the use of a cutoff score for selecting items to teach in centralized training. For each AFSC, EPI items at or above the cutoff score are selected for centralized training, while items with scores below the cutoff (in percent members responding "Yes") are left for other training methods, such as on-the-job training (OJT). This cutoff score can theoretically be anything from 1 to 100 percent members responding "Yes". If we select 1 percent as our cutoff, we must train all airmen in all EPI items used throughout the AFSC. If 100 percent is selected, we will only train the EPI items used by every airmen within the AFSC. These cutoffs are the extremes, and we should find some middle ground for our cutoff score.

For example, if we select a cutoff score of 50 percent, it means that the EPI items we train will be used by at least every other student. Similarly, if we select items with 20 percent members responding "Yes" as our cutoff, we know that at least every fifth student will need to know those items. The task is to select a cutoff which provides training that is effective without being excessive. Therefore, the practical upper limit for this cutoff score should be 50 percent members responding "Yes" (any higher, and training would be ineffective). Twenty percent should be considered the practical lower limit (any lower, and training would be excessive).

Table 3 shows the total number of EPI items and the number of EPI items used by 30 percent of members for each AFSC in this report. This cutoff of 30 percent is only an example, but serves to show the trend of EP use among the AFSCs. Table 3 also shows which AFSCs currently attend the Lowry EP course. These data show that 40450 personnel report using more EPI items than nine of the 32 AFSCs in this report which currently attend the course. Management and training personnel for AFSC 404X0 should strongly consider sending their personnel through the Lowry EP course.

Because there was no match to the course POI, no comments can be made concerning the content of the Lowry EP course at this time. However, once the POI revisions are complete, the match should be done to see how well the new POI objectives are supported by the survey data for the AFSCs which attend the course. Such a review, using survey data, will provide the foundation for selection of EPI items to include in centralized training. Of course, other considerations will be important, such as whether or not the 404X0 personnel attend the course, scheduling considerations, and financial constraints. A

complete review and revision of the Lowry EP course, based on the EPI survey data and modified by these other considerations, should result in a plan for training which is mindful of each specialty's needs, while avoiding excesses that waste precious Air Force resources.

Electronic Principles Inventory (EPI) data for Air Force specialties is presented below in job inventory order. Data for this report was collected from job incumbents during the period March 1987 - April 1989

Percent members responding "YES" is shown for each specialty listed. Where skill level is not specified, both 5 and 7 skill levels are included (e.g., DAFSC 000X0 includes 00050 and 00070).

For assistance in using this EPI printout phone USAFOMC/OMYA, at AUTOVON 487-6623.

Electronic Principles Inventory (EPI) data for Air Force specialties is presented below in job inventory order. Data for this report was collected from job incumbents during the period March 1987 - April 1989

Percent members responding "YES" is shown for each specialty listed. Where skill level is not specified, both 5 and 7 skill levels are included (e.g., DAFSC 000X0 includes 00050 and 00070).

For assistance in using this EPI printout phone USAFOMC/OMYA, at AUTOVON 487-6623.

Electronic Principles Inventory (EPI) data for Air Force specialties is presented below in Electronic Fundamentals/Applications order. Data for this report was collected from job incumbents during the period March 1987 - April 1989

Percent members responding "YES" is shown for each specialty listed. Where skill level is not specified, both 5 and 7 skill levels are included (e.g., DAFSC 000X0 includes 00050 and 00070).

For assistance in using this EPI printout phone USAFOMC/OMYA, at AUTOVON 487-6623.

Electronic Principles Inventory (EPI) data for Air Force specialties is presented below in Electronic Fundamentals/Applications order. Data for this report was collected from job incumbents during the period March 1987 - April 1989

Percent members responding "YES" is shown for each specialty listed. Where skill level is not specified, both 5 and 7 skill levels are included (e.g., DAFSC 000X0 includes 00050 and 00070).

For assistance in using this EPI printout phone USAFOMC/OMYA, at AUTOVON 487-6623.

Electronic Principles Inventory (EPI) data for Air Force specialties is presented below in Electronic Fundamentals/Applications order. Data for this report was collected from job incumbents during the period March 1987 - April 1989

Percent member: responding "YES" is shown for each specialty listed. Where skill level is not specified, both 5 and 7 skill levels are included (e.g., DAFSC 00X0 includes 0050 and 0070).

For assistance in using this EPI printout phone USAFOMC/OMYA, at AUTOVON 487-6623.
