Stand Out From The Crowd. Available in stock.

Why Voltec's SJEOW is Superior?

ALL-FLEX™ products are uncompromised and provide greater flexibility over a longer working life than most of the other products.

Voltec's ALL-FLEX™ SJEOW extension cords are made to withstand the most extreme conditions. With a temperature rating of -58°F to +228°F this cord can be used in freezing cold winters and sweltering hot summers. Our cords also resist the negative effects of oil, water, weather, abrasion and ozone, while providing a unit that weighs considerably less than rubber cords. **Our ALL-FLEX™** products are all cULus listed.

ALL-FLEX™ are available in 300V and 600V wire type in 16, 14, 12, and 10 gauge. Connector Ends include Power Block, Locking and E-ZEELock™

Customized Cords

Customize to Benefit the Need

- ✓ Advertise your Company Name.
- ✓ Prevent Loss of cords from jobsite.
- ✓ Identify a color or stripe to a specific length and gauge.
- ✓ Provide a safe work area with high visibility colors.

Custom Colors

Choose from many of our custom colors. Customize a color to meet your preference.

- ✓ Company Colors
- ✓ Personal Choice

Custom Striping

Clearly add identification to cords with striping. The color and stripe combinations are endless.

- ✓ Single stripe
- ✓ DOUBLE stripe

Advertise with Custom ID

Keep cords on the jobsite. Personalize by advertising your company name and number on every extension cord. Choose from a standard indent wheel or ink printed.

- ✓ Company Name & Phone No.
- ✓ "Property of ABC"

Tailor Fit Your Need.

Choose your Plug and Connector End. Choose any of our standard plugs and receptacles to fit your exact need. Molded ends come in a variety of custom colors. The Choice is Yours!

Unique Features are an Option Too

- ✓ E-ZEELock™ Locking Connector - prevents annoying disconnects
- ✓ Illuminated Ends - timesaver, quickly shows you've got power.

Generator Power Products

Use your generator to its full potential. **Voltec's** line of heavy duty 10 and 12 AWG cords and adaptors allow you to fully utilize your 15amp and 20amp power tools. Our adaptor products will convert generator NEMA configurations to single, dual, triple and quad receptacle ends, while also converting 20/30 amp receptacles to locking, u-ground or **E-ZEELock®** versions.

PORTABLE GFCI

Ground Fault Circuit Interrupters

Voltec has a full line of portable GFCI adapters, including right angle and in-line configurations, to fit every application. Choose from both 15 Amp u-ground and 20 Amp locking configurations. GFCI's protect the user from an electrical shock resulting from an unequal flow of electricity caused by current leakage. The Occupational Safety and Health Administration (OSHA) regulations state "it is the employer's responsibility to provide GFCI's on all 120 volt, single phase, 15 and 20 Amp receptacles on job sites that are not part of the permanent wiring of the structure." All of Voltec's GFCI's meet or exceed all UL, cUL and OSHA requirements.

Temporary Lighting

Light Strings - Voltec's wide variety of light strings are the perfect solution to your temporary lighting needs at locations such as construction sites, parking lots, marinas and tree lots. Light strings are available in 50 or 100 ft lengths and are made with heavy-duty molded 150 watt sockets, which are spaced every ten feet. All of our light strings have pre-assembled plastic or metal cages which saves you time, as well as the cost of installation.

Garbage Disposal/AC Power Supply Repair Cords

SPT-3 Replacement Cords

We recommend these power cords for use with electrical appliances such as garbage disposals and equipment with electrical motors that accept flat parallel wire. **Voltec's** repair cords are constructed with 3-conductor wire, and are provided to you with a choice of molded-on straight or right angle style plugs.

Heavy-Duty Power Supply Cords

Our heavy-duty power supply cords are made to replace used and worn out cords on most portable power tools. Available in 3-conductor, these cords feature molded plugs for added strength and durability. Choose from a selection of oil resistant, water resistant, or temperature resistant outer jacket compounds.

E-ZEELINK™ Locking Connector

Introducing the E-ZEE LINK™ line of Locking Extension Cords and Cord Reels! The E-ZEE LINK™ Link system keeps your tools and electrical devices securely plugged in, reducing the danger from exposed live contacts and the inconvenience of unforeseen disconnects that arise around your home, garage or worksite. Whether plugging in a tool or any other electronic device, the E-ZEE LINK™ Link system provides a positive easy to engage and disengage locking power solution. The E-ZEE LINK™ Link system is easy enough for everyday use in home garages or workshops, but can withstand the rigors of jobsites and industrial applications as well.

E-ZEE LAMP

Makes Bulb Replacement Easy

VOLTEC'S Full line of patented E-ZEE Lamp Fluorescent Products make bulb replacement simple. No more splitting the case or removing the handle base, simply remove the lens and easily replace the bulb. Voltec's high quality lights are made from tough, rugged plastic. They feature dual hanging hooks, protective bumper guards, and an ergonomically designed handle. Voltec's E-Zee Lamp design is also available on our retractable reels.

- E-ZEE LAMP BULB REPLACEMENT
- PATENTED BULB RATCHETING DESIGN
- HIGH QUALITY LIGHTS
- DUAL HANGING HOOKS
- PROTECTIVE BUMPER GUARDS
- ERGONOMICAL HANDLES

Fluorescent Work Lights

Fluorescent – Cold to the touch and energy efficient, our fluorescent work lights come in 13 and 26-watt tube and angle styles. The units are equipped with SVT, SJT, and SJTW cords. These lights are available with 2 and 3-conductor plugs. Some lights are also available with 3-conductor grounding outlets in the handles. All lights utilize a standard 13-watt compact fluorescent bulb, which is included with each fixture, (the 26 watt accepts two 13 watt bulbs). Our fluorescent work lights are UL and cUL approved.

Booster Cables

Voltec offers a full line of durable booster cables. These cables are resistant to extreme temperatures, oil and chemicals. They are available in medium-duty 10 and 8 AWG as well as heavy-duty 6 and 4 AWG, and extra-heavy duty 2 AWG. We offer these in a variety of lengths to match every need.

Understanding Power Inverters

What does a power inverter do, and what can I use one for?

A power inverter converts D/C power or direct current to standard A/C power or alternating current, which allows you to run electrical equipment off your car or marine battery for mobile applications, emergencies or simple convenience. The inverter draws its power from a 12 Volt battery (preferably deep-cycle), or several batteries wired in parallel. The battery will need to be recharged as the power is drawn out of it by the inverter. Items like TV's, microwaves, radios, computers and power tools are just a few applications that can be used on a power inverter. Below is a diagram to get a better understanding on how it can look hooked up.

What size inverter should I buy?

The size you choose depends on the watts (or amps) of what you want to run (find the power consumption by referring to the specification plate on the appliance or tool). We recommend you buy a larger model than you think you'll need (at least 10% to 20% more than your largest load). The following helpful formulas are an approximation.

Convert AMPS to WATTS:

Multiply: $AMPS \times 120 = WATTS$

(ie: $2.5AMPS \times 120 = 300 \text{ watts}$)

Convert WATTS to AMPS

Divide: $WATTS / 120 = AMPS$

(ie: $300WATTS / 120 = 2.5 \text{ amps}$)

Do I need Modified Sine Wave, or Pure Sine Wave?

A Modified sine wave inverter is the most common types of power inverters on the market. The power wave is not exactly the same as electricity from the power grid. It has a wave form that appears as a choppy squared-off wave when viewed through an oscilloscope. Modified Sine Wave works well for most uses, and is the most common type of inverter on the market, as well as the most economical.

A Pure sine wave inverter produces a nearly perfect sine wave output (<3% total harmonic distortion) that is essentially the same as utility-supplied grid power. Pure Sine Wave inverters (also called True Sine Wave) are more suited for sensitive electrical or electronic items such as laser printers, computers and certain specialized applications such as medical equipment.

Helpful Tips:

- Inverters **1000W – 3000W** require cables (cables sold separately)
- Rule of thumb, when purchasing cables for every **6'-10'** drop down a gauge, if not you will experience a voltage drop, therefore making the inverter run incorrectly.
- All inverters carry a 1 year manufacturers defect warranty only from date of purchase.
- To achieve maximum output on Inverters ranging from 1000W to 3000W, connect directly to a 12V 100 to 120AH batteries.

RV Adapters with **E-ZEE GRIP**

PRO SERIES product

Voltec's Power and Lighting's Patented E-ZEE Grip series combines quality power products with innovative features that make using your RV cords and adapters easier to use! Our handle is large and ergonomic for a comfortable grip, and is replaceable. The handle sits flat into junction boxes enabling it to close completely for safety.

Adapters

Voltec Power and Lighting has over ten years of distribution experience and draws strength from over twenty years of manufacturing. Our commitment to quality has earned us both ISO 13485 and ISO 9001 ratings for quality control and excellence in manufacturing. We are also a UL registered firm, with products listed for UL, cUL, and ULus. Voltec Power and Lighting reaches into professional markets for PRO users in many categories, giving us a broad product offering for both the front of the store, into service areas.

Voltec Power and Lighting manufactures a full line of RV products, from molded adapters and cords to inverters and generator adapters. Our patented E-Zee Grip series offers a premium product to customers with ungraded features at a great price. Our point of purchase displays and NEW E-Zee grip set make marketing easy! This year, Voltec introduces our new line of RV locking products with our patented E-Zee Grip® handle.

Current Carrying Capacity of Flexible Cords

Based on Ambient Temperature of 30°C (86°F)

Amperage shown is for not more than three conductors in a cord. If cord has from four to six conductors, decrease the values shown.

†The ampacities under subheading A are applicable to three-conductor cords and four-conductor cords with three conductors carrying current. The ampacities under subheading B are applicable to two-conductor cords and three-conductor cords with two conductors carrying current.

AWG Wire Size	Thermoplastic Types ST, STO, SJT, SJTO SVT, SVTO, SPT		Types HPD, HPN, HSJ HSO
	A†	B†	
18	7 Amps	10 Amps	10 Amps
17	-	-	12
16	10	13	15
14	15	18	20
12	20	25	30
10	25	30	35
8	35	40	-
6	45	55	-

NOTE: On extension cords over 50 feet, derate by two wire sizes.

Amperage Ratings for Metric Copper

*General use ratings only. Check with appropriate approval agency for specific applications, as ratings vary from country to country.

Copper Size mm ³	ETSA	Western European*
0.50	3.0 Amps	6.0 Amps
0.75	7.5	10.0
1.00	10.0	12.0
1.50	15.0	16.0
2.50	20.0	20.0

Glossary of Terms

AWG	Abbreviation for American Wire Gauge.	Capacitance	The ability of a dielectric material between conductors to store electricity when a difference of potential exists between the conductors. The unit of measurement is the farad, which is the capacitance value that will store a charge of one coulomb when a one-volt potential difference exists between the conductors. In AC, one farad is the capacitance value that will permit one ampere of current when the voltage across the capacitor changes at a rate of one volt per second.
AWM	Designation for appliance wiring material.	Circuit (Electric)	The complete path of an electrical current. When the continuity is broken, it is called an open circuit; when continuity is maintained, it is called a closed circuit.
Alternating Current	Electric current that continually reverses its direction. It is expressed in cycles per second (hertz of Hz).	Clamp	To hold the current or voltage at a specific fixed level.
Ambient Temperature	The temperature of a medium (gas or liquid) surrounding the object.	Cold Flow	Permanent deformation of the insulation due to mechanical force or pressure (not due to heat softening).
American Wire Gauge (AWG)	A standard system for designating wire diameter. Also referred to as the Brown and Sharpe (B&S) wire gauge.	Color Code	A system for circuit identification through use of solid colors and contrasting tracers.
Ampacity	(See Current Carrying Capacity).	Compound	An insulating or jacketing material made by mixing two or more ingredients.
Ampere	The unit of current. One ampere is the current flowing through one ohm of resistance at one volt potential.	Concentricity	In a wire or cable, the measurement of the location of the center of the conductor with respect to the geometric center of the surrounding insulation.
Anneal	Relief of mechanical stress through heat and gradual cooling. Annealing copper renders it less brittle.	Conductor	An insulated wire suitable for carrying electrical current.
Audio Frequency	the range of frequencies audible to the human ear. Usually 20-20,000 Hz.	Contacts	The parts of the connector that actually carry the electrical current, and are touched together or separated to control the flow.
Basic Protection	A commonly used industry term for partial surge protection, usually a single MOV protecting line-to-neutral (see Full Protection).		
Braid	A fibrous or metallic group of filaments interwoven in cylindrical form to form a covering over one or more wires.		
Breakdown Voltage	The voltage at which the insulation between conductors breaks down.		
Bunch Stranding	A group of wires of the same diameter twisted together without a predetermined pattern.		
Cabling	The twisting together of two or more insulated conductors to form a cable.		

Glossary

Glossary of Terms

Continuity Check A test to determine whether electrical current flows continuously throughout the length of a single wire or individual wires in a cable.

Cord A flexible insulated wire.

Corona Ionization of air surrounding a conductor caused by the influence of high voltage. Causes deterioration of insulation materials.

Crazing The minute cracks on the surface of plastic materials.

CSA Abbreviation for Canadian Standards Association, a non-profit, independent organization that operates a listing service for electrical and electronic materials and equipment. The Canadian counterpart of the Underwriters Laboratories.

Current Carrying Capacity The maximum current an insulated conductor can safely carry without exceeding its insulation and jacket temperature limitations.

Dielectric Strength The voltage that an insulation can withstand before breakdown occurs. Usually expressed as a voltage gradient (such as volts per mil).

Direct Capacitance The capacitance measured directly from conductor to conductor through a single insulating layer.

Direct Current An electric current that flows in only one direction.

Drain Wire In a cable, the uninsulated wire laid over the component or components and used as a ground connection.

Drawing In wire manufacture, pulling metal through a die or series of dies to reduce diameter to a specified size.

Electromagnetic Unwanted signals picked up and transmitted over electrical lines, caused by varying magnetic fields.

Eccentricity Like concentricity, a measure of the center of a conductor's location with respect to the circular cross-section of the insulation. Expressed as a percentage of displacement of one circle within the other.

Elongation The fractional increase in length of a material stressed in tension.

Energy Capacity The heat absorption capacity to absorb electrically generated heat, expressed in joules, or watt-seconds.

Filler (1) A material used in multiconductor cables to occupy large interstices formed by the assembled conductors. (2) An inert substance added to a compound to improve properties or decrease cost.

Flame Resistance The ability of a material not to propagate flame once the heat source is removed.

Flex Life The measurement of the ability of a conductor or cable to withstand repeated bending.

Frequency The number of times an alternating current repeats its cycle in one second. (See Hertz)

Gauge A term used to denote the physical size of a wire.

Ground An electrical term meaning to connect to the earth or other large conducting body to serve as an earth, thus making a complete electrical circuit.

HPN Parallel heater cord, typically neoprene-type insulation.

Harness An arrangement of wires and cables, usually with many breakouts, which have been tied together or pulled into a rubber or plastic sheath, used to interconnect an electrical circuit.

Hertz (Hz) A term replacing cycles per second as an indication of frequency.

High Potential A test designed to check the integrity of a conductor's insulation by applying a specified high voltage.

Hybrid Circuit A surge suppressor that uses a combination of two or more types of electronic devices to provide additional or multi-stage surge protection (most surge protection use only MOVs).

Hz Abbreviation for hertz.

Impedance The total opposition that a circuit offers to the flow of alternating current or any other varying current at a particular frequency. It is a combination of resistance R and reactance X, measured in ohms.

Glossary of Terms

Inductance The property of a circuit or circuit element that opposes a change in current flow, thus causing current changes to lag behind voltage changes. It is measured in henrys.

Insulation A material having high resistance to the flow of electric current. Often called a dielectric in radio frequency cable.

Jacket An outer non-metallic protective covering applied over an insulated wire or cable.

Jumper Cable A short flat cable inter-connecting two wiring boards or devices.

Lay The length measured along the axis of a wire or cable required for a single strand (in stranded wire) or conductor (in cable) to make one complete turn about the axis of the conductor or cable.

Longitudinal Shield A tape shield, flat or corrugated, applied longitudinally with the axis of the core being shielded.

L-N An abbreviation for line-to-neutral, the location for the most common type of power surge (see Full Protection).

MTW Thermoplastic insulated machine tool wire.

Multiconductor More than one conductor within a single cable complex.

Mylar A synthetic compound with high dielectric qualities made by Du-pont® and used extensively in the wire and cable industry.

Noise A term for unwanted electrical signals on the power line.

Noise Filter An electronic component, usually a capacitor, designed to minimize unwanted electrical signals.

Ohm A unit of electrical resistance.

Peak Current Another term for energy capacity.

Picosecond One trillionth of a second.

Plasticizer A chemical agent added to plastics to make them softer and more pliable.

Potting The sealing of a cable termination or other component with a liquid that thermosets into an elastomer.

Primary Insulation The first layer of non-conductive material applied over a conductor, whose prime function is to act as electrical insulation.

Put-Up Packaging of finished wire or cable.

Rated Voltage The maximum voltage at which an electrical component can operate for extended periods without undue degradation or safety hazard.

Resistance A measure of the difficulty in moving electrical current through a medium when voltage is applied, measured in ohms.

S Heavy-duty, rubber-insulated portable cord. Stranded copper conductors with separator and individual rubber insulation. Two or more color-coded conductors cabled with filler, wrapped with separator and rubber jacketed overall. 600 V.

SEOW Thermoplastic elastomer (TPE) insulated conductors. Water flame, oil, abrasion, ultraviolet resistant for outdoor use.

SJ Junior hard service, rubber-insulated pendant or portable cord. Same construction as type S, but 300 V. Jacket thickness smaller.

SJEOW Same as SJ, with Thermoplastic elastomer (TPE) jacket and insulated conductors. Water, flame, oil, abrasion, ultraviolet resistant for outdoor use.

SJEOOW Same as SJEOW, but with oil resistant inner and outer jacketing.

SJO Same as SJ, but neoprene, oil-resistant compound outer jacket. Can also be made "water resistant". 300 V, 60°C, 75°C, or 90°C.

SJOOW All rubber, oil, water, flame, abrasion resistant in/out jacket. 300 V, -40°C to 90°C.

SJT Junior hard service thermoplastic insulated conductors with overall thermoplastic jacket, 300 V, 60°C, 75°C, or 90°C. Indoor use.

SJTO Same as SJT, but oil-resistant thermoplastic outer jacket.

SJTW Same as SJT, but outdoor water-resistant outer jacket.

Glossary

Glossary

Glossary of Terms

SO	Hard service cord. Same construction as type S, except thicker oil-resistant neoprene jacket. 600 V, 60°C to 90°C.	Shield	A sheet, screen, or braid of metal, usually copper, aluminum, or other conducting material, placed around or between electric circuits or cables or their components to contain any unwanted radiation, or to keep out any unwanted interference.
SOOW	All rubber, oil, water, flame, abrasion resistant indoor/outdoor jacket. 600 V, -40°C to 90°C.	Spacing	Distance between the closest edges of two adjacent conductors.
SP-1	All rubber, parallel-jacketed, two-conductor light-duty cord for pendant or portable use. 300 V.	Spark Test	A test designed to locate pin-holes in the insulation of a wire or cable by application of high voltage for a very short period of time while the wire is being drawn through the electrode field.
SP-2	Same as SP-1, but heavier construction, with or without a third conductor for grounding purposes. 300 V.	Spiral Wrap	The helical wrap of a tape over a core.
SP-3	Same as SP-2, but heavier construction for refrigerators or room air conditioners. 300 V.	Strand	A single uninsulated wire.
SPT-1	Same as SP-1, except all-thermoplastic. 300 V. With or without third conductor for grounding.	Stranded Conductor	A conductor composed of groups of wires twisted together.
SPT-2	Same as SP-2, except all-thermoplastic. 300 V. With or without third conductor for grounding.	Tensile Strength	The pull stress required to break a given specimen.
SPT-3	Same as SP-3, except all-thermoplastic. 300 V. With or without third conductor for grounding.	Thermoplastic	A material that softens when heated and becomes firm on cooling. Example: PVC (plastic).
ST	Hard service cord, jacketed. Same as type S, except all-plastic construction. 600 V, 60°C to 105°C.	Thermoset	A material that hardens or sets when heat is applied and that, once set, cannot be resoftened by heating. The application of heat is called "curing." Example: rubber.
STO	Same as ST, but with oil-resistant thermoplastic outer jacket. 600 V, 60°C to 105°C.	UL	Abbreviation for Underwriters Laboratories, a non-profit independent organization that operates a listing service for electrical and electronic materials and equipment.
STW	Same as ST, but indoor/outdoor water-resistant outer jacket.	UL 497A	The UL standard covering the basis for UL listing of surge controls for phone lines.
SVT	All plastic construction. Light-duty vacuum cleaner cord. With or without third conductor for ground purposes only. 300 V, 60°C to 105°C.	UL 452	The UL standard covering the basis for UL listing of CATV lines.
Separator	Pertaining to wire and cable, a layer of insulating material such as textile, paper, mylar, etc., which is placed between a conductor and its dielectric, between a cable jacket and the components it covers, or between various components of a multiple-conductor cable. It can be utilized to improve stripped qualities, roundness, and/or flexibility, or can offer additional mechanical or electrical protection to the components it separates.	Voltage	The term most often used in place of electromotive force, potential, potential difference, or voltage drop to designate the electrical pressure that exists between two points and is capable of producing a current when a closed circuit is connected between two points.
		VW-1	A flammability rating established by Underwriters Laboratories for wires and cables that pass a specially designed vertical flame test, formerly designated FR-1. Typically used for individual conductors or parallel-type constructions.
