

NSi

Electrical Catalog 2010

About Us

Serving the Commercial and Industrial sector since 1980, through a nationwide network of over 5,000 electrical distributors and recently several regional retail locations, NSi Industries, LLC is regarded as a leading innovator and manufacturer of connectors and wire management products.

In 2007, NSi acquired the TORK® brand and its full line of time switches and controls. TORK® brought with it a rich history and reputation for quality. The strength of our brand is in the unique products that we bring to the market, combined with our exceptional ability to provide quality products proudly manufactured in the USA!

We maintain inventories at levels conducive to complete on-time deliveries and have earned reputable status for our same-day delivery program. We aim to keep our policies customer-friendly and strive to offer extraordinary service on a daily basis.

NSi Industries is made up of a team of individuals who love our products and our company. We enjoy coming to work every day to provide excellent service and to make it easy on our distributors.

From the NSi Team to you,
Happy Selling and thank you for supporting us

NSi Industries, LLC
Electrical Products Division Est. 1980

TRANSFORMER STUD CONNECTORS

TRANSFORMER STUD CONNECTORS

Versatile and reusable set screw connectors made from high strength 6061-T6 aluminum alloy for superior electrical and mechanical performance. Clear plated for low contact resistance; stud is tin plated copper which provides low contact resistance for connection to transformer. Suitable for use with both copper and aluminum conductors. Rated 600 volts. Meets or exceeds ANSI C119.4 Class A specifications. Also available with the following options: tin plating, anodized set screws or disc pad screws. Contact NSi Customer Service for details.

ONE & TWO BOLT ALUMINUM PARALLEL GROOVE CLAMPS - STANDARD

Made of high-strength, heat-treated aluminum alloy. Galvanized steel hardware. Recommended for copper-to-aluminum applications when ordered pre-filled with oxide inhibitor.

Recommended torque:
 5/16" bolt – 180 in/lb.
 3/8" bolt – 240 in/lb.
 1/2" bolt – 480 in/lb.

EXTRUDED ALUMINUM PARALLEL GROOVE CLAMPS

High strength aluminum extruded alloy fittings assembled with steel or anodized high strength aluminum flat washers for heavy duty service entrance or for use as heavy duty distribution armor rod clamps. The serrated grooves provide increased contact. Supplied pre-filled with oxide inhibitor. For galvanized steel hardware, add the suffix -SH to each part number.

When using fine and extra-fine stranded wire, we recommend a compression connector when possible. If you are unable to use a compression connector, we suggest that you use flexible cable sleeves to ensure that fine-stranded wires are not broken or weakened when making the connection. Sleeves ensure that the circular shape of the conductor is maintained, thereby reducing stress points in the connection.

BRONZE EYEBOLT TERMINALS FOR COPPER CABLE TO COPPER FLAT

SINGLE TYPE

This versatile connector can be used for many applications including flat studs, bus, spades and for grounding cables to steel substation structures. The bodies are manufactured from corrosion resistant, high conductivity copper alloy. The eyebolts are made from a special aluminum bronze alloy for maximum strength. Supplied with silicon bronze or stainless steel nuts and lock washers.

ALUMINUM SERVICE WEDGE CLAMPS

- For dead-ending self-supporting drop wire.
- Saves conductor – drop wire may be cut to exact length.
- Can be attached to bare neutral in any point in the span.
- Adjustment in drop wire sag are easily made.
- Grips ACSR, AAAC or aluminum conductor.

UTILITY CONNECTORS

COPPER HOT LINE CLAMPS

The clamping stem is manufactured from high-strength silicon bronze and the saddle is made of high-strength copper alloy, ensuring continued clamping force on the main conductor. The threads of the clamping stem are protected inside the body, preventing any damages due to arcing during installation or removal. The hot line clamp also has a double coil stainless steel washer that helps maintain continuous pressure on the main conductor regardless of conditions. A retainer pin captivates the saddle for easy installation.

SILICON BRONZE VISE GRIP CONNECTORS

Manufactured from cast bronze and supplied with a silicon bronze hex bolt for stronger, more rigid connector of the vise-type grip. Design creates more grip on the conductor and full compression with any conductor combination. Easy to install.

ALUMINUM LUGS - AL SERIES - ONE HOLE

Produced from high conductivity Aluminum tubing. Center stop assures proper cable installation. Tin plated to provide corrosion resistance. Marked with die index. Connector bores are coated with oxide inhibitor and capped. Listed for 35 KV maximum when properly installed.

See Appendix A for proper Connection instructions PG 81

Connectors

DUAL RATED COMPRESSION CONNECTORS

ALUMINUM LUGS - AL-N SERIES - TWO HOLE

See Appendix A for proper Connection instructions PG 81

Produced from high conductivity Aluminum tubing. Center stop assures proper cable installation. Tin plated to provide corrosion resistance. Marked with die index. Connector bores are coated with oxide inhibitor and capped. Listed for 35 KV maximum when properly installed.

OFFSET PIN TERMINALS - PTO SERIES

All-aluminum pin terminal designed for termination of aluminum and copper conductors. Pin is offset for use in tight spaces and for ease of installation in side-by-side terminations. The solid pin is made of aluminum and is tin-plated and pre-filled with oxide inhibitor. A cover is provided for quick insulation. Rated 600 volts.

Connectors

DUAL RATED COMPRESSION CONNECTORS

WIDE RANGE TAP CONNECTORS - WR SERIES

- For combinations of aluminum and aluminum-copper conductors
- Standard compression tools and dies install in all sizes
- Formable ribs provide broader contact area
- Fold-in tabs provide positive tab interlock as tool closes
- Made of 1350 aluminum alloy
- All connectors reversible

Connectors

DUAL RATED COMPRESSION CONNECTORS

INSULATING COVERS FOR WR SERIES TAP CONNECTORS

Hinged polyurethane cover for easy installation of WR Series tap connectors. Eliminates taping. Drain ports prevent accumulation of moisture. Ultraviolet stabilized.

NSi

GENTLEMEN, START YOUR COMPRESSION

NSi Offers You The New Startup Series

For Aluminum and Copper Compression Connectors

**Stock Up
on Compression Lugs
and Receive Valuable
NSi Tools for FREE!**

- 1** Place an order of compression lugs valued at \$700 or more and receive M-250 tool FREE with your order!

Limit one (1) tool per customer per year

- 2** Place an order for D500 and receive 365 days dating. Purchase \$7,000 compression lugs within the terms of the invoice and the tool is FREE!

Limit one (1) tool per customer per year

- 3** Place an order for D1000 and receive 365 days dating. Purchase \$10,000 compression lugs within the terms of the invoice and the tool is FREE!

Limit one (1) tool per customer per year

FD-94 GL SERIES STARTUP

The FD-94 GL Series Startup contains our popular short barrel, peep hole copper compression connectors for wire sizes from 6 AWG to 600 MCM. Easy to install and the peep hole allows for visual inspection. Includes our standard barrel copper compression splices for 6 AWG to 600 MCM.

FD-96 AL SERIES STARTUP

For the ultimate in flexibility. Dual rated aluminum compression connectors for use with copper or aluminum conductors for wire sizes from 6 AWG to 600 MCM. Also includes our dual rated aluminum compression splices for 6 AWG to 600 MCM. A very small investment gets you in the compression connector business.

FD-95 L SERIES STARTUP

Features our heavy duty long barrel, copper compression connectors for wire sizes from 6 AWG to 600 MCM. Easy to install. Also includes our standard barrel copper compression splices for wire sizes from 6 AWG to 600 MCM.

UTILITY CONNECTORS

» *MAXIMUM STRENGTH*

» *DEPENDABLE CONDUCTIVITY*

» *EASY TO INSTALL*

NSi ...another great connection.

ALUMINUM COMPRESSION CONNECTORS WITH TWO MOUNTING HOLES, COPPER OR ACSR

Made of EC Grade high purity aluminum. Prefilled with oxide inhibitor and capped at the factory. Wire brushing of aluminum conductors is required before installation. The end of the cable is protected from the environment by completely closed transitions. Installed with existing crimping tools.

Connectors

UTILITY CONNECTORS

ALUMINUM TO ALUMINUM OR COPPER TO COPPER COMPRESSION SPLICES STANDARD BARREL - 5/8" O.D.

Aluminum compression splices are forged from pure aluminum and are provided with an integral solid center barrier. They are supplied pre-filled with oxide inhibitor and supplied with color-coded caps. Easy push-through caps reduce the push force by 25%, prevent contamination during storage and installation and ensure that the oxide inhibitor covers the strands of the conductor. The oxide inhibitor ensures a tight, highly-conductive connection as well as keeping dirt, air and moisture out of the joint. On aluminum to copper connections, it also eliminates the effects of galvanic corrosion. Can be installed with either hydraulic or hand tools.

ALUMINUM TO ALUMINUM OR COPPER TO COPPER COMPRESSION SPLICES LONG BARREL

Aluminum compression splices are forged from pure aluminum and are provided with an integral solid center barrier. Designed for service entrance and non-tension loop slice application. They are supplied pre-filled with oxide inhibitor and supplied with color-coded caps. Easy push-through caps reduce the push force by 25%, prevent contamination during storage and installation and ensure that the oxide inhibitor covers the strands of the conductor. The oxide inhibitor ensures a tight, highly-conductive connection as well as keeping dirt, air and moisture out of the joint. On aluminum to copper connections, it also eliminates the effects of galvanic corrosion. Can be installed with either hydraulic or hand tools.

Can be supplied with studs bonded to terminal – Add suffix “-S” to catalog number. Other sizes available. Contact factory.

Example: UTT50-2-S

LONG BARREL COPPER LUGS - L SERIES - ONE HOLE

See Appendix B for proper Connection instructions PG 82

Produced from high conductivity copper tubing. Tin-Plated to provide corrosion resistance. Marked with die index and color coded. Listed for 35 KV maximum when properly installed. For applications greater than 2000 volts, consult the cable manufacturer for voltage stress relief instructions.

STACKING ADAPTERS FOR ALUMINUM AND COPPER COMPRESSION TERMINALS

Tin-plated pure aluminum for good conductivity and corrosion resistance. Allows for stacking of standard two-hole compression lugs and keeps inventories to a minimum. To stack four-hole NEMA drilled terminals, use two adapters assembled in parallel.

TWO HOLE NEMA

See Appendix B for proper Connection instructions PG 82

Produced from high conductivity copper tubing. Allows easy inspection of the termination to assure complete cable insertion. Tin-Plated to provide corrosion resistance. Marked with die index and color coded. Listed for 35 KV maximum when properly installed. For applications greater than 2000 volts, consult the cable manufacturer for voltage stress relief instructions. Additional hole spacing options available on request.

Connectors

COPPER COMPRESSION CONNECTORS

PEEP HOLE COPPER LUGS - GL SERIES - ONE HOLE

See Appendix B for proper Connection instructions PG 82

Produced from high conductivity copper tubing. Tin-Plated to provide corrosion resistance. Marked with die index and color coded. Listed for 35 KV maximum when properly installed. For applications greater than 2000 volts, consult the cable manufacturer for voltage stress relief instructions.

TINNED COPPER SPLICES – SC SERIES STANDARD BARREL

Produced from high conductivity copper tubing. Serrations indicate proper crimp locations. Tin plated to provide corrosion resistance. Marked with die index and color code. Suitable for use at voltages up to 35 KV provided connector is properly taped. 5 KV is the maximum voltage in all bare splices. For applications greater than 2000 volts, consult the cable manufacturer for voltage stress relief instructions.

See Appendix B for proper Connection instructions PG 82

COMPRESSION LUGS FOR FLEXIBLE COPPER CABLE - ONE HOLE - SHORT BARREL (PEEP HOLE)

Connector end has a gentle, continuous flare to ensure ease of cable insertion of flexible and extra-flexible cables such as locomotive, welding, mining cable and more. The flared end also reduces pressure on the cable strands after installation and protects them from chafing and breakage as a result of cable movement. Tin-plated for corrosion resistance. Rated 600 volts for copper cables only. Single mounting hole.

COMPRESSION LUGS FOR TELECOMMUNICATIONS - TWO HOLE - SHORT BARREL (PEEP HOLE)

These connectors are the same as the GL-N Series – Short Barrel Copper Compression Lugs (with Peep Hole) except that the mounting hole sizes and spacings are common to the telecommunications industry. Produced from high conductivity copper tubing, they are tin-plated to provide corrosion resistance. Also, they are marked with die index and color coded. Listed for 35 KV maximum when properly installed. For bolt hole sizes not listed, please contact NSi.

C-TAPS

1

2

These taps ensure positive, all-around compression with low resistance and high pull-out values. Made of high conductivity copper, they satisfy the requirements of NEC250-81 and 250-91 for connecting to the grounding electrode system. Rated for 600 V applications.

EASY-TAP™ INSULATION PIERCING CONNECTORS - IPCS SERIES (UL)

- Safe to use
- No need to strip wire
- Totally insulated
- No tape or cover needed
- No contact at any point with a live part
- Can be installed on energized conductors
- Versatile
- Reliable
- No spacer required between connections
- Exclusive "turbo spacer" keeps tap side open while main conductor is being tightened
- No need for a third hand to install
- Watertight, corrosion-free

- Connection sealed by a rubber grommet
- No migration of water
- No contamination between main and tap
- Connectors handle a large wire range of #14 AWG to 750 MCM
- Double shear-head bolts ensure perfect connection every time
- Hot spots eliminated
- Can be used as a splice or a tap
- Easy to install
- No special tools required
- For copper-to-copper, copper-to-aluminum and aluminum-to-aluminum applications

- Suitable for solid and/or stranded wires
- 4 sizes are approved for use with bare wire (from 4/0 to #10) - these connectors come with a blue insert which re-creates the insulation and avoids any damage to the conductor
- UL486B listed
- Meets ANSI C119.4 requirements
- 600 Volt, 90°C Rated
- Competitively priced
- Always in stock

*Cannot be used with bare wire or as a splice

**Cannot be used with bare wire

All sizes can be installed on energized main conductor, however, the tap must not be under load.

Not recommended for use with extra-flexible cables.

Not approved for submersible applications.

Connectors

POWER DISTRIBUTION & TERMINAL BLOCKS

CONNECTOR BLOKS™ - SINGLE PRIMARY - MULTIPLE SECONDARY

Each block can stand alone or combine with other blocks to form a multi-block set. Add as many holes as you need, in any configuration you want! There are no end pieces or connector pieces to fool around with. The connector body is made from high-strength, high-conductivity aluminum alloy and is mounted in a high-strength glass-filled polyester base.

DOUBLE ROW TERMINAL BLOCKS - 9/16" CENTERS, 600V

Heavy duty construction with corrosion-resistant terminal plates ensures dependable, easy-access multiple termination block. Made from strong, glass-filled polyester, these blocks are rated for 30 amps and 600 volts maximum. Screws are #8 stud size. Other sizes and styles available. Contact NSi for price and availability. Temperature rated to 208°C

QUICK-CONNECTS, 20 AMPS 250V

Quick connects are a compact double-row-style barrier block, designed for applications requiring either a row of screw-type terminals or a quick-connect terminal in conjunction with branch circuit quick-connect terminals. All quick-connect terminal tabs are .032" x .250" tin-plated brass male tabs. The bases are made of high temperature phenolic, UL rated 94V-O, 150°C. Also available with up to six terminals per pole, straight or formed 45 degrees or 90 degrees. Contact NSi for price and availability.

TERMINAL BLOKS™ - 2 POLE, 250V

Terminal Bloks™ Power Terminal Blocks are made from high-conductivity bodies and will accept either copper or aluminum conductors on the line side. The bases are manufactured from high-strength phenolic compound rated 150°C. Also available with many different combinations on the load side. Contact NSI for price and availability.

POWER DISTRIBUTION & TERMINAL BLOCKS

RAIL MOUNTED MODULAR TERMINAL BLOCKS

NSi Din Rail Mounted Terminal Blocks are a cost-effective and intelligent solution to connecting and terminating a wide variety of sizes and styles of wiring in a neat and professional manner. Individual blocks can easily be inserted or removed without disturbing adjacent blocks. Insertion is made simply by snapping the block in place by hand. Only a screwdriver

is needed for removal. The mounting rail is simply fastened by screws to the mounting surface. No special brackets or hardware are needed. The design of all component pieces is such that they may be mixed in an assembly. The blocks form their own barriers. Blocks include integral mounting feet with screw slot for direct panel mounting, if desired.

	DESCRIPTION	CATALOG NO.	UPC CODE	CARTON QUANTITY
25 Amp Terminal Block				
	Will accept #22 to two #12 wires per terminal and include captive wire clamps for use with stranded or solid wire or ring terminals. Flat top marking with either pen or stick-on labels. Rated 25 Amps, 600 Volts.	DRTB25F	16780	50
50 Amp Terminal Block				
	The DRTB50 block uses a box type connector to accept up to a #8 str. Requires only 3/8" per point, allowing 32 points per foot. Provides 3/8" square marking area. Rated 50 Amps, 600 Volts, 94V-0 Rated housing.	DRTB50	16781	25
Single Pole Disconnect				
	The DRD Series of Disconnect Blocks may be used in a single-pole function or linked together with other disconnects to form multiple pole assemblies. Rated 15 Amps per pole. Accepts #22 to two #12 wires per terminal.	DRDTB-1	16782	10
2 Pole Disconnect				
	Two single-pole disconnects with an interlocked handle so that operation on any pole operates all poles. This unique assembly makes it possible to interlock the isolation of different control panel functions without using expensive relays or cam switches.	DRDTB-2	16783	6
3 Pole Disconnect				
	Three single-pole disconnects with an interlocked handle. Also available up to 6 poles. Contact NSi for price and delivery.	DRDTB-3	16784	3

RAIL MOUNTED MODULAR TERMINAL BLOCKS

	DESCRIPTION	CATALOG NO.	UPC CODE	CARTON QUANTITY
DRFTB Fuse Block				
	The DRFTB Fuse Block accepts 13/32" dia. by 1 1/2" long cartridge fuses through 25 Amps, 600 Volts. The fusible block requires 3/4" rail taking exactly two standard terminal blocks.	DRFTB	16785	10
Fuse Puller				
	The FTBFB is supplied red as standard.	FTBFP	16786	25
End Barrier				
	Each assembly of blocks requires only an end barrier on each end of the assembly. It acts as both the end barrier for the block and retains the blocks on the rail.	DREB	16787	50
Jumper				
	Jumper strap from one point to another on 25 Amp terminal block.	DRJS2	16788	100

DIN RAIL

Made from 35 mm unplated 6061-T6 Aluminum alloy providing for a strong, lightweight rail for mounting sockets, terminal blocks or other electro-mechanical devices. Comes supplied with oval holes 1.1 cm, approximately x 0.4 cm apart. Standard 10 mm height allows for ease of installation vs. traditional 7.5 mm height. Other sizes, lengths and profiles available. Also available without mounting holes.

POWER DISTRIBUTION & TERMINAL BLOCKS

INSULATED TERMINAL BLOCKS

- Nylon 66 housing ensures 'touchproof' safety
- Recessed screws and tubular contacts provide additional safety and help prevent short circuits
- Integrated stainless steel spring wire protectors prevent twisting and breaking of stranded wires during installation
- Tubular contacts connect stripped solid or stranded un-terminated wire directly to each contact
- Modular design allows for connector to be cut into smaller sections or stacked end-to-end
- Brass metal alloy, nickel plated terminal insert
- Zinc plated, yellow chromed screws
- Rated UL 94V-2
- Operating temperature rated at 110°C
- Rated 300 volts.

MULTIPLE CONNECTORS - USED IN NEUTRAL BAR ASSEMBLIES & GROUNDING APPLICATIONS

Multiple connectors are made from either copper or aluminum bar and can be used in a variety of neutral and grounding applications. The aluminum connectors are tin plated for low contact resistance and are suitable for use with copper or aluminum conductors. Aluminum connectors are dual rated for use with aluminum and copper cables. The copper connectors are suitable for use with copper wire only. The 4-14 AWG multiple connectors can be custom made in any number of wire holes up to 190 holes. Contact NSi for price and delivery information.

COMBINATION CONNECTORS

Multiple combination connectors are made from aluminum and are tin-plated for low contact resistance. Suitable for use with both copper and aluminum conductors. Each connector contains a combination of 1/0-14 AWG and 6-14 AWG wire holes. Very economical and compact due to innovative design and hole spacing. Dual rated for use with aluminum and copper cables.

225A NEUTRAL 600 VAC

These stacked neutral assemblies offer the ultimate in compact design and performance. Wire holes are stacked to minimize width. One-piece construction provides superior mechanical performance. Made from high-strength 6061T-6 aluminum alloy. Options include a 350 MCM main lug and a high-strength, glass-filled polyester mounting base for isolated – mounting. Available in 12 to 42 wire holes (4-14 AWG).

Connectors

NM SPLICE & TAP

NMS - 2 (SPLICE)

For splicing 12 or 14 awg solid conductor, 2-conductor cable with ground. Hinged cover makes termination fast and easy. The NMS-2 kit includes everything required to make a two conductor splice.

NMS - 3 (SPLICE)

For splicing 12 or 14 awg solid conductor, 3-conductor cable with ground. The NMS-3 kit includes everything required to make a three conductor splice.

NMT - 2 (TAP)

For tapping into 12 or 14 awg solid conductor 2-conductor cable with ground. The NMT-2 kit includes everything required to complete a two conductor tap.

ELIMINATE COSTLY AND TIME-CONSUMING JUNCTION BOXES

The NSi NM Splice & Tap method provides a fast and reliable way to connect 12 and 14 AWG circuits using non-metallic (NM) cable.

It eliminates the need for junction boxes, covers, fittings, connectors – and is

approved for use in a variety of applications including: residential branch circuits, manufactured housing and pre-fabricated building structures. When adding new circuits in residential applications, NM connectors eliminate both the need to cut into the existing wiring and the extra junction boxes and associated hardware required for the tap connection.

In factory installations within pre-fabricated structures, the NM connectors eliminate costly time-consuming on-site wiring. As individual modules are joined, splices and taps are simply snapped together easily by assembly crews with no special training or tools.

Termination is easy. Split the cable, remove the sheathing and cut the splice conductors to length (if necessary). With the tap, individual conductors do not need to be stripped, only exposed. Clear cover installation is done with slip-joint pliers. The installation displacement contacts eliminate the need to strip individual conductors. Simply plug the connectors together and the installation is complete.

NSi

These NSi
Grounding clamps
meet 2005
NEC Code
250.52

- G-1-S-DBR
- G-140DB
- GLC-140DB
- GLC-12DB
- GLC-12RDB

rebar • water pipe • copper tubing • ground rods

GO DEEP!

WITH NSi'S DIRECT BURIAL GROUNDING OFFERING

NSi's Heavy Duty Direct Burial Clamps are UL listed for direct burial in earth or concrete; handling just about any size ground wire and just about any application. Meeting the 2005 NEC Code 250.52 for UFER grounding method, NSi's G-1-DBR, G-140DB, GLC-140DB, GLC-12DB, and GLC-12RDB are suitable up to 1" diameter for: rebar, water pipe, copper tubing and grounding rods.

OTHER GREAT GROUNDING PRODUCTS:

- Isolated Ground Bars
- Dual Rated Ground Clamps
- Winged Grounding Connectors
- Solid Wire Grounding Pigtails
- Stranded Wire Grounding Pigtails
- Flexible Braid Jumper Straps

...another great connection.

APPENDIX A:

INSTALLATION INSTRUCTIONS FOR DUAL RATED ALUMINUM CONNECTORS

1. Select proper lugs or splice connector for the size of cable being installed, make sure that the size matches the description in the table below.
2. Strip the insulation from the conductor to a length so that the stripped area of the conductor can be completely inserted into and fill up the barrel of the lug or splice. Carefully strip the insulation from the conductor without nicking the strands.
3. Wire brush the stripped portion of the conductor to remove any oxide films.
4. The stripped portion of the conductor must be clean and inserted completely into the connector barrel.
5. Install 1 crimp for cable range 6 AWG to 1 AWG per insertion and 2 crimps for cable range beginning from 1/0 AWG to 750 MCM per insertion.

NOTES

USE SINGLE OR MULTIPLE CRIMPS. FILL THE CONNECTOR BARREL WITH CRIMPS.

The following mechanical crimp tools can also be used with NSi Compression Connectors.

A. Up to 4/0 AWG Class B & C Aluminium or Copper Cable - Penn-Union TDM-250 or TDM-500 & Burndy MY29-3.

B. Up to 500 MCM Class B & C Aluminium or Copper Cable - Penn-Union TDM-500.

APPENDIX B:

INSTALLATION INSTRUCTIONS FOR COPPER COMPRESSION CONNECTORS

1. Select the proper lug or splice connector for the size of the cable being installed. Make sure that the size matches the description and details in the table.
2. Strip the insulation from the conductor to a length so that the stripped area of the conductor can be completely inserted into and fill up the barrel of the lug or splice. Be careful not to nick the copper conductor when stripping the installation.
3. Wire brush the stripped portion of the conductor to remove any oxide films.
4. The stripped portion of the conductor must be clean and inserted completely into the connector barrel.
5. Select the correct installation die from below and install using one of the following approved tools - NSi, Burndy, Thomas & Betts, IlSCO or Huskie. Install as many crimps as possible leaving a space of 1/8 inch maximum between successive crimps unless overlapped to fill the connector barrel. Narrow dies will require more crimps than wide dies.

The following mechanical crimp tools can also be used with NSi Compression Connectors.

A. Up to 250 MCM Class B & C Copper Cable - NSi M-250, Penn-Union TDM-250, TDM-500 & Burndy MY29-3.

B. Up to 500 MCM Class B & C Copper Cable - Penn-Union TDM-500, M-500.

C. Up to 3/0 AWG Class I & K Copper Cable - Penn-Union TDM-250XF & Burndy MY29-11.

INNOVATION.

Polaris™ The Original

The centerpiece of NSi's incredible product offering, Polaris™ in original black is the insulated connector that every other connector copies. Its introduction marked the beginning of a new age, providing the fastest, safest, most professional connection possible. In-line, wire entry from either side, multi-cable, stacked – if you have a need, there's a Polaris™ that works for you.

FLEXIBILITY.

Polaris™ Custom

What's better than the best insulated connector on the market? The best insulated connector that YOU configure, of course! Choose your wire combination & quantity of ports and we'll custom engineer and fabricate your connector. Your custom connector will even be UL rated! Weather Black, Grey or Blue, we'll build the connector you specify. Shipment can be made in only 3-4 days, call us at 800.321.5847 to discuss your custom Polaris™ today.

DETAIL.

Polaris Grey™

Perfect for motors, Polaris Grey™ provides the unique ability to connect or terminate fine-stranded, flexible, and ultra-flexible copper cable whenever maintenance or repair are required. With an integral sleeve that protects fine strands and reduces stress on the conductor, you can connect, disconnect and reconnect with ease.

UL listed for use with fine-stranded, flexible and ultra-flexible copper cables.

VISION.

Polaris Blue™

Finally, a Polaris™ for everything: Polaris Blue™ is UL listed for direct burial AND submersible applications. Its only limitation is the cable's limitation...so it goes everywhere you need it to. And of course, custom Polaris Blue™ is also an option.

UL486D for Direct Burial/Below grade use and submersible.

POLARIS™
CONNECTORS

IT SERIES 

Insul-Tap connectors are suitable for connecting two wires. For sizes 3/0 AWG and smaller, they are available in two styles – with wires being connected from the same side of the connector (Figure 1) or opposite sides of the connector (Figure 2).

For sizes 250 MCM and larger, they are provided with open wire entry ports on both sides of the connector (Figure 3), which allows for access from either side. This style is supplied with removable access plugs to close the entry port not being utilized.

Abrasion and chemical resistant. UV rated. Will not support combustion. Cold temperature rated to -45°C. Dual rated for use with copper and/or aluminum cables. 600 volts. 90°C. To receive the material in bags, add “-B” to the catalog number.

Not recommended for fine-stranded, flexible wire. See Polaris Grey™ Series page 88.

ISW SERIES - DIRECT BURIAL AND SUBMERSIBLE IN-LINE SPLICER/REDUCERS

ISW Series connectors are suitable for connecting two wires in-line and are UL Listed for direct burial and submersible applications (UL486D). Insulated with specially formulated high-strength dielectric plastisol and molded for precise fit for a direct burial connection. Requires no taping, compounds, heat shrink or cutting-to-size in the

field. Supplied with removable access plugs over the hex screws. Abrasion and chemical resistant. UV rated. Will not support combustion. Cold temperature rated to -45°C. Suitable for use with aluminum and/or copper conductors. 600 volts. 90°C. Reusable.

 A properly installed connector will have no more than one conductor per port.

POLARIS BLUE CUSTOM CONNECTORS

Let us custom engineer and fabricate a UL Listed direct burial and submersible insulated connector for your next project. Choose any combination and quantity of our standard Polaris Blue and we'll build a connector to

meet your exact requirements. Wire entry can even be from either side of the connector, based on your specific project needs. UL486D for direct burial or below grade use and submersible applications.

ISPB AND ISPC SERIES - SUBMERSIBLE PEDESTAL CONNECTORS

These hefty pedestal connectors are manufactured from high strength 6061-T6 aluminum alloy, providing premium electrical and mechanical performance. Radial tipped set screws reduce conductor strand damage, and the range taking design allows for many sizes and types of conductors – all in one connector. Encapsulated in rubber with a nominal thickness of 125mils and high dielectric

strength. Connectors meet or exceed ANSI C119.4 Class A specifications. Clear pedestal connectors (ISPC) allow for an easier installation. Abrasion and chemical resistant. UV rated. Will not support combustion. Cold temperature rated to -45°C. Suitable for use with aluminum and/or copper conductors. 600 volts. 90°C.

Polaris™

Take a close look.

- Insulated with high-dielectric strength plastisol
- Molded for precise fit and supplied with removable access plugs over the hex screws
- Option with wire entry ports on both sides of the connector allow for access from either side
- Supplied with removable plugs to close the entry port not being utilized
- Eliminates the need for cover and taping
- Abrasion and chemical resistant
- UV rated

POLARIS GREY™

Perfect for fine-stranded wire.

Connect, disconnect, and reconnect with ease when you use Polaris Grey™ for your fine-stranded, flexible, and extra-flexible copper cable connections. Motor replacement and maintenance have never been this simple; strip the cable upon installing, and never strip again. No need to replace the wire because you had to cut off the connector. Polaris Grey™ unique sleeve makes the connection as reliable as a compression connection, but so much easier! Polaris Grey™ has the same exceptional features as original Polaris

(black) with the unique ability to connect and terminate fine-stranded cables easily and safely whenever maintenance or replacement is required. For copper cables only, Polaris Grey™ is abrasion and chemical resistant, cold temperature rated to 45°C, rated 600V, 90°C, and three sizes cover 14 to 3/0 AWG. Its reuseability makes perfect for **cabletrays, troughs, wireways, raceways, ducts, and motor junction boxes**. UL listed for use with fine-stranded, flexible, and extra-flexible copper cables.

...a reliable connection.

POLARIS GREY™  Polaris Grey™ can be used with virtually any kind of copper conductor, but is specifically designed for use with fine-stranded, flexible and extra-flexible copper conductors. This includes DLO cable and motor lead wire, which makes it excellent for use in motor connect/disconnect applications.

Polaris Grey™ combines all the exceptional features of original support combustion. It is cold temperature rated to -45°C, rated 600V, 90°C.

- Safe: insulated with high dielectric strength plastisol for tough mechanical protection;
- Factory applied insulation provides consistent quality and protection;
- Abrasion and chemical resistant;

- Fast: eliminates the need for cover and taping – supplied with removable access plugs over the hex screws to protect against contamination;
- Easy: three sizes cover 14 to 3/0 AWG;
- UL Listed for all types of flexible, fine-stranded wires, uniquely color-coded grey;
- Reusable: ideal for cabletrays, troughs, wireways, raceways, ducts and motor junction boxes;
- Economical.

For display bags with a mounting hole for hanging, add the suffix "-B" to the part number.

Protect those fine-stranded wires with Polaris Grey™.

Here's our secret: Polaris Grey™ comes with an integral sleeve which protects the fine strands and helps the conductor maintain its shape during the tightening process. The sleeve eliminates breakage of the strands and reduces stress on the conductor and therefore the potential for hot-spots. Replacement sleeves can be purchased separately.

Specially designed for connecting and terminating fine-stranded, flexible copper conductors. Polaris Grey™ combines the reliability and safety of a compression connection with the ease, affordability and flexibility of a mechanical connection.

Motor replacement is now really easy. Simply strip the cable, insert it into Polaris Grey™, tighten the hex head screw, replace the cap.

STACKED CONNECTORS

With Polaris™ Stacked Connectors you will enjoy all the benefits of standard Polaris connectors with an added space-saving bonus. Wire entry holes are stacked on top of each other for the ultimate in compact design. Exceptional for use with large wire sizes, especially in tight-fitting spaces, small wire ways and panels. The wire holes on the bottom row allow for entry from either side of the connector

for even greater versatility. Supplied with removable plugs to close the entry port not being utilized. Abrasion and chemical resistant. UV rated. Will not support combustion. Cold temperature rated to -45°C. Dual rated for use with copper and/or aluminum cables. Rated 600 V, 90°C. Not recommended for fine-stranded flexible wire.

IPLDH SERIES - HEAVY DUTY

Heavy duty IPLDH Series connectors are designed, built and tested to handle even the most demanding applications from 250 MCM to 750 MCM. The connectors are insulated with high-dielectric strength plastisol which is molded for a precise fit. They are supplied with removable access plugs to allow for cable entry from either side of the connector. The connector block is double the size of the standard IPLD Series connector and there are also two pressure

screws provided for each cable to ensure the best connection possible. Eliminates the need for cover and taping. Abrasion and chemical resistant. UV rated. Will not support combustion. Cold temperature rated to -45°C. Dual rated for use with copper and/or aluminum cables. Rated 600 V, 90°C. Not recommended for fine-stranded, flexible wire. To receive the material in bags, add "-B" to the part number.

IPLM SERIES

IPLM Series connectors are insulated with high-dielectric strength plastisol. Molded for precise fit and supplied with removable access plugs over the hex screws. Wire entry ports on one side only. The mounting holes at each end of the connector allow for direct isolated mounting to the trough, panel or wireway. Eliminates the need for cover and taping. Abrasion and chemical

resistant. UV rated. Will not support combustion. Cold temperature rated to -45°C. Dual rated for use with copper and/or aluminum cables. Rated 600 V, 90°C. Mounting holes will accept a 1/4" bolt. Not recommended for fine-stranded, flexible wire. To receive the material in bags, add "-B" to the part number.

*750 MCM not UL listed

**600 Series are ALC7U and 75°C

Note: Mounting holes will accept a 5/16" bolt for 250 MCM and 350 MCM and a 3/8" bolt for 500 MCM and 750 MCM.

PL SERIES

PL Series connectors are made from 6061-T6 aluminum alloy and are plated for corrosion resistance. They are stocked in one hole increments, up to 14 holes and are suitable for use on wire from #4 AWG to 750 MCM. Dual rated for use with copper and/or aluminum cables. Rated 600 V, 90°C. Not recommended for fine-stranded, flexible wire.

*750 MCM not UL Listed

Let us custom engineer and fabricate a UL Listed insulated block system for your next project. Each connector is made with exact hole size and number for the cable runs being used. You may choose to order a customized version of our IPL Series or add one or more of the options listed below. With the numerous configurations and many options available, the combinations we can create and produce are almost unlimited. Connector size can be up to 22" long and is available with or without insulation. Rated 600 V, 90°C.

We custom design a computer program from your specifications and our engineering and production data and put it in our computerized machining system. Your blocks are then directly and precisely machined. We then cover the block with our unique plastisol insulation material/process. Shipment is made within 3 to 4 days! Custom connectors are not returnable.

MOUNTING CAPABILITY

(Letter designation "M")

Mounting holes can be added at each end of the connector block for situations where it must be bolted in place. The mounting holes are provided in each end of the connector block and are isolated from the block with insulated sleeves. When building a custom part number, add the designation "M" to the prefix.

OFFSET WIRE ENTRY

(Letter designation "O")

With this designation, the cable can enter either side of the connector block, based upon your requirements. As shown here, the two primary cables enter from one direction, while the secondary cables enter the opposite side from the opposite direction. This eliminates having to bend the cable around the connector. Any combination of our eight basic sizes can be incorporated in these connectors. When building a custom part number, add the designation "O" immediately prior to the ports that you want to enter from the opposite side.

STACKED WIRE HOLES

(Letter designation "S")

Custom connector blocks can be supplied with one row of wire entry holes on top of the other. This allows the block to be shorter in length and is ideal for use in small wire ways or panels. When building a custom part number, add the designation "S" immediately prior to the ports that you want stacked.

CUSTOM-DESIGNED POLARIS GREY

We can design a connector which will handle any combination and number of fine-stranded wires between the sizes of 14 AWG and 3/0 AWG.

All wire ports can be on one side or opposing sides. The ports can be side by side or stacked on top of each other. Require mounting holes? Also no problem. Essentially, we can do whatever you want, and ship it in three or four days! And best of all, your custom-designed connector is UL Listed.

Building the Catalog Number

Creating a custom catalog number may appear complex at first. In fact, it's quite simple, if you ask yourself the following questions and build your catalog number as you go.

1. Do you require an insulated block? If yes, start with the letter "I". If no, start with the letter "U".
2. Do you require mounting capability? If yes, add the letter "M". If no, add nothing.
3. Now, you need to add the number of ports and size of wire holes (using the letter designation for the wire size as listed below). You may add one size, i.e., 4F (4 ports of 500 MCM) or many sizes, i.e., 4F6B2D (4 ports of 500 MCM, 6 ports of 1/0 and 2 ports of 250 MCM).
4. If you require any ports entering from the opposite direction, group them at the end of the catalog number and use the designation "O" immediately prior to the listing of these ports.
5. If you require any ports to be stacked, group them at the end of the catalog number and use the designation "S" immediately prior to the listing of these ports.

Assembly of Connectors

Wire insulation must be stripped in accordance with the Strip Chart below for Standard Connectors. The wire insulation on a properly installed wire must be inside the insulated connector conductor port no less than 3/8 inch. Pressure screws must be secured at the torque value corresponding to the wire size and connector size shown to the right. The UL listing is for stranded wire only. AL/CU 600 V max. for building wire and 1000 V max. for signs or fixtures. When installing Mounting Connectors, use the Strip Chart below to select the appropriate mounting bolt. Do not exceed 80 inch pounds.

When installing Custom Connectors, wire insulation must be stripped such that when the wire is inserted into the conductor port, there is a minimum of 1/4 inch insulation inside the conductor port. Insert the stripped wire until it stops against the back of the connector.

Call your Inside Sales Representative for help in designing your custom Polaris Connector.

SPLICING

Splicing

EASY-SPlice™ WRAP-AROUND GEL / HTAP GEL SPLICE

EASY-SPlice™ WRAP-AROUND GEL SPLICE KITS

Easy-Splice™ wrap-around gel splice closure sleeves quickly insulate and seal buried electrical connections rated up to 1,000 volts. Engineered to handle direct burial and manhole applications, these splice enclosure sleeves are equally well suited for insulation and jacket repair. Simply wrap and snap the sleeve on any cable in the use range. The sealant gel in the sleeve seals on contact. The splice closure sleeve can be applied on all common compression

connectors and low voltage cables, as well as in-line mechanical connectors.

Qualified to ANSI C119.1-1986 for underground splicing.

A minimum seal length is required on each side of the connector opening or jacket damage. Use these guidelines for minimum seal distance:

WAGS-4/0 series: 1.50" each side

WAGS-500 series: 2.00" each side

WAGS-750 series: 3.00" each side

EASY-SPlice™ H TAP GEL SPLICE COVERS

The Easy-Splice™ low-voltage H-frame closure insulates and seals low-voltage cable-taps and and splices made with H-frame compression connectors. The closure utilizes sealing gel material to seal and protect the connection from moisture ingress, corrosion and pollution.

To install, simply place the connection on the closure and press the closure together. The

low-voltage H-frame closure is ideal for both underground and overhead applications and is especially useful for street lighting applications.

Qualified to ANSI C119.1-1986 for underground splicing. Rated -40°C to 90°C, 1,000 volts, UV resistant.

The Easy-Splice™ H tap gel splice covers do not include connector.

EASY-SPLICE™ IN-LINE GEL SPLICE KIT (WITH CONNECTOR)

The Easy-Splice™ in-line gel splice kit provides a sealed splice for underground, buried and overhead applications. This in-line closure offers a fast and simple method for splicing, insulating and environmentally sealing low voltage cable splices.

Simply install the connector on a copper or aluminum cable, place it in the closure, and snap closed. The splice kit is watertight for use in all locations.

Qualified to ANSI C119.1-1986 for underground splicing. Sealing and corrosion protection provided by sealant gel. Rated -40°C to 90°C, 1,000 volts.

The Easy-Splice™ in-line gel splice kit is UV resistant and includes one dual-rated connector for use with copper or aluminum conductors.

ESGS-4/0	16861	#2 – 4/0 AWG	3

EASY-SPLICE™ GEL TAP SPLICE KITS (WITH CONNECTOR)

The Easy-Splice™ gel tap splice kit provides a fast and simple method for connecting, insulating, and environmentally sealing low-voltage splices. The splice kit is designed for underground and overhead environments and is useful for street lighting applications.

The splice kit's dual-rated mechanical connector splices a wide range of cables, including copper and aluminum. The connector's

four port design allows maximum inventory flexibility. The sealant gel protects the connection from moisture ingress, corrosion and pollution. The hinged splice closure can be installed over the connector in seconds by simply snapping the cover shut.

Qualified to ANSI C119.1-1986 for underground splicing. Rated -40°C to 90°C, UV resistant.

DIRECT BURIAL SPLICE KITS W/HEAT SHRINK, CABLE TAP SPLICES

DIRECT BURIAL SPLICE KITS WITH HEAT SHRINK - SUBMERSIBLE

600-volt maximum, supplied in attractive, clear point-of-purchase packaging.

1. Copper Butt Splice Kits

Utilizing a mechanical copper butt splice and a heavy wall heat shrink tubing to create a fully insulated splice for copper conductors only.

2. Dual Rated Butt Splice Kits

Utilizing a mechanical dual rated splice and matched heavy wall heat shrink tubing to create an insulated splice for copper and/or aluminum cables.

3. UF Cable Splice Kit

For simplified splicing of UF cable designed with heavy wall heat shrink with sealant. This kit will accommodate 14/3 through 8/3 with ground UF cable and create a direct burial splice. Contains one four-position connector.

4. UF Stretcher Kit

Eliminates the need for using two connectors and a short piece of cable when repairing damaged UF cable. Includes one 11.5"

connector that will accommodate 14/3 without GRD minimum and 8/3 with GRD maximum. 600 Volt, 105°C. Utilizes heavy wall shrink with sealant for a quick and reliable repair.

CABLE TAP SPLICES FOR LOW VOLTAGE POWER CABLE

Use as a wrap-around, sealed cable tap splice. Coated with adhesive sealant, our WAHS kits are qualified to ANSI C119.1986, rated to ICEA electrical withstand test for 1,000 volts, and RUS accepted for use with compression and split-bolt connectors.

For use on standard poly- or elastomeric-insulated conductors, UV resistant.

Kits are capable of insulating and sealing wye (3-wire) or H (4-wire) configurations up to 1,000 volts. These kits do not include connectors. The WAHS kits include insulating sleeve, sealant strip and stainless steel channel closure.

EASY-SPLICE™ DIRECT BURIAL “ROLL-ON” SPLICES FOR 1/C POWER CABLE - 1,000 V

The easy “roll-on” way to insulate and seal cable connections up to 1,000 volts. The gripping force of the EPDM elastomer combines with high performance sealant to form a water resistant, UV resistant insulating sleeve appropriate for direct burial application over in-line compression connectors.

For use on standard poly- or elastomeric-insulated cables. Insulates and seals in-line compression connectors or terminal lugs. Cable can be energized immediately.

Ideal for use where gas or electric heating devices are not approved.

Qualified to ANSI C119.1-1986. CSA certified to C22.2 No. 198.2. UL 486D listed, suitable for direct burial. RUS accepted for use as a secondary tap or splice cover.

Each kit includes one Easy-Splice™ sleeve and sealant strips.

EASY-SPLICE™ WRAP-AROUND UF SPLICE KIT

The Easy-Splice™ wrap-around UF splice kit provides a quick and convenient method of splicing underground feeder (UF) cable.

Installers will appreciate the wrap-around design and fast installation. No heating or waiting for compounds to cure. The unique sealing gel entirely encapsulates the splice completely sealing out moisture or other contaminants.

The splice kit is rated for 600 volt applications. Wide product use range. The Easy-Splice™ wrap-around UF splice kit covers UF splices from 14/2 to 8/3 with ground. The kit includes connector and closure.

HEAVY WALL WITH SEALANT – DIRECT BURIAL & SUBMERSIBLE

HEAVY WALL HEAT SHRINK WITH SEALANT - FOR DIRECT BURIAL AND SUBMERSIBLE APPLICATIONS

Made of specially formulated polyolefin, which is irradiated and thermally stabilized to give the material an “elastic memory”. When a proper amount of heat is directly applied to the shrink sleeve, it will permanently shrink to its original unexpanded diameter. The characteristics of these sleeves are such that they will shrink to tightly cover, and in a sense “mold” themselves into irregular shapes. The interior of the sleeve is coated with an adhesive that assures a watertight seal after shrinking. Recommended for installation on applications of up to 1,000 volts. Shrinking temperature is 250-275°F.

For use on standard poly- or elastomeric-insulated/jacketed cables or lead-jacketed cables, which may include aluminum or steel armoring.

UL recognized per UL486D, CSA C22.2, ANSI C119.1-1986. RUS accepted for use as a secondary tap or splice cover. May be used for jacket repair on cables up to 35 kV.

Heavy wall heat shrink is also available without sealant. Medium wall heat shrink and flame retardant heavy wall heat shrink also available, with or without sealant (not UL Listed). Please contact NSi for price and delivery.

Connectors over 6 inches:

recommended cut length = connector length + 5 inches.

DIRECT BURIAL SPLICE KITS WITH RUBBER COVER

Dual-rated for use with copper and aluminum cable, these kits consist of an in-line mechanical set screw connector pre-filled with oxide inhibitor, and an EPDM rubber insulating cover to ensure a watertight seal. UL listed, 600 volt rated.

"ROLL-ON" SPLICE/STUB CONNECTION KITS

EASY-SPLICE™ DIRECT BURIAL "ROLL-ON" STUB CONNECTION INSULATION KITS

Easy-Splice™ ROSS stub kits offer the quick and easy "roll-on" way to insulate and seal stub connections in motors and street lights to 1,000 volts. The elastomeric cap provides the required insulation thickness, withstands abrasion, and forms a water-resistant seal.

Suitable for use with a single conductor, 1,000 volt power cable. Designed for use with compression connectors (connectors not included). Each kit includes three ROSS caps and sealant

strips to insulate three stub connections. Select the appropriate kit based on the feeder cable conductor size. It is not necessary to know the size of the tap conductor.

Qualified to ANSI C119.1-1986. UL 486D listed, suitable for direct burial.

The tool-free ROSS cap is ideal for installation in cramped motor boxes. It slides on easily and will not leak, unravel or slip off.

EASY-SPLICE™ "PUSH ON" GEL STUB SPLICE KITS

Easy-Splice™ gel stub splice kits quickly and conveniently insulate, seal, and protect stub splice connections up to 1,000 volts. The robust yet compact design is engineered to handle the harsh environment of motor and many other connection applications (including street lights).

The specially formulated material provides excellent abrasion resistance, insulation value, and UV resistance (see chart below). In addition, the cap is clear allowing visual inspection of connector positioning during installation and connector performance during service life. Each cap size is designed to fit a wide range of cable sizes. The expandable design keeps the cap as small as possible allowing it to expand only as much as needed

to fit. GSS connector kits provide the fastest installation. Simply slide the cover down over the connection and snap the clamp closed. No extra materials (greases) are required, the sealant gel is already in the cap.

Common uses for the GSS connector are: street lights, motor connection, irrigation systems, HVAC, outdoor lighting, and over wire nuts for a secure seal. Rated 105°C. UL listed.

The GSS-10 kit is designed for three phases in one cap. It includes one gel filled cap, one cap clamp, and one phase separator. The remaining kits include three of each – one per phase.

EASY-SPLICE™ GEL STUB SPLICE KIT (WITH CONNECTOR FOR STREET LIGHTING)

The Easy-Splice™ gel stub splice kit insulates, seals and protects stub splice connections up to 1,000 volts and are frequently used for street lighting connections. The specially formulated material provides excellent abrasion resistance, insulation value and UV resistance. In addition, the cap is clear to allow visual inspection of connector positioning during installation and connector performance during service life.

The special three wire connector is perfect

for street light connections. There are two ports that accept wires from #14 to 2/0 AWG (feeder cable). Use the single port that accepts #14 to #6 AWG to power the light. To install, simply push the cover down over the connection and snap the clamp closed. Corrosion protection is provided by the sealant gel. The kit includes a UL listed connector for use with copper and/or aluminum conductors, a gel filled cap and a cap clamp.

THIN WALL TUBING

THIN WALL TUBING

Flexible flame-retardant, thin wall, general purpose heat-shrinkable polyolefin tubing has a 2:1 shrink ratio. Used for electrical insulation, wire harness bundling, wire jacket marking and color coding, it also splices and makes functional terminations. Available in black, white, red, green, blue and clear. Standard packaging

is either 6" lengths in blister boxes, or in economical 25' spools.

UL Recognized to Standard 224. Black, white and colored thin wall tubing meet MIL-DTL-23053/5, Class 1. Clear meets MIL-DTL-23053/5, Class 2 and is not flame retardant. Rated 600 volts, 125°C.

THIN WALL AND HEAVY WALL HEAT SHRINK KITS/END CAPS

THIN WALL HEAT SHRINK KITS

These kits have been carefully constructed to include the most common sizes and types in their category. The cases are made of extremely durable polypropylene and have heat sealed hinges. They

provide the ultimate in organization and convenience. Clearly labeled on the inside lid for easy recognition. Convenient size for easy carrying and easy storing.

HEAT-SHRINKABLE END CAPS

Heat-shrinkable end caps provide for efficient and positive cable end sealing. Made of thermally stabilized polyolefin, the interior of the HSC is coated with a meltable sealant to assure a watertight seal, complete insulation, abrasion and corrosion resistance. Seals may be affected over lead, steel, aluminum, copper and all standard plastic and elastomeric insulating materials and conduit. These caps replace greases, tapes, epoxy,

encapsulation, or dips. In most sizes, installation may be accomplished in less than one minute.

HSC end sealing caps are qualified to ANSI C119.1-1986 and rated to ICEA electrical withstand test for 1,000 volts. HSC end sealing caps can be used as a live seal for cables carrying up to 1,000 volts. They can also be used as end seals for storing and pulling de-energized cable.

HOT-MELT SEALANT SLEEVES

Split sealant tubes used to provide a cable block in multi conductor cables. Use a minimum of one sleeve for every two cable conductors. Install HWHS or CRS product over HMSS sealant sleeves to melt sealant sleeves and provide cable block.

CATALOG NO.	UPC CODE	DIMENSIONS		NUMBER OF SLEEVES PER CONDUCTOR	CARTON QUANTITY

EASY-TWIST™
WIRE CONNECTORS

Easy-Twist™

WINGED WIRE CONNECTORS

WINGED WIRE CONNECTORS

- Exceptional design makes twisting easier, ensuring proper installation – especially in tight spaces
- Deep surface ridges provide better grip
- Threaded funnel entry guides the wires into the connector easily
- Swept-back wing design provides handling comfort and increased torquing ability
- Square wire spring provides secure gripping of conductors
- Deep skirt entry provides protection from flashover and shorts
- Flame retardant thermoplastic shell provides excellent electrical insulation
- Temperature rating 105°C (221°F)
- Pre-twisting of wires is not necessary
- 1,000 volt maximum in fixtures and signs.

DIVIDED COMBINATION PAILS

SOCKET TOOLS ARE IN EASY-TWIST™ BAGS

Socket installation tools are included at no extra charge in each **bag** of Easy-Twist connectors (catalog number with B suffix, excluding Blue Winged Wire connectors). They will fit any pneumatic or electrical tool with a 1/4 inch chuck or drive socket.

Handy-Pack and Four-Pack pails offer you the convenience of the most common Easy-Twist connectors. Three different sets are available in two different sized pails.

GROUNDING CONNECTORS

DIMENSIONS

- Color coded GREEN for quick identification as a grounding conductor for copper wire only
- Specifically designed for making positive ground connections and bonding non-metallic sheathed cable

- Live-action square spring draws wires deep into the spring for a safe, tight grip ensuring an excellent connection
- Swept-back wing design enables users to tighten connectors easily by hand.

Easy-Twist™

HIGH TEMPERATURE, COPPER CRIMP SLEEVE & CLOSED END NYLON CONNECTORS

HIGH TEMPERATURE 150°C

- Flame retardant UL 94V-2 thermoplastic shell provides excellent electrical insulation
- Temperature rating 150°C
- Fixed precise square wire spring provides secure gripping of conductors
- Deep skirt entry provides protection from flash-over and shorts
- Sure-grip ribs improve gripping ability and comfort
- Compact design ensures proper installation, especially in tight spaces
- Threaded funnel entry guides the wires into the connector easily
- Pre-twisting of wires is not necessary

EASY-TWIST™ Push-In

Wire Range 22-12 AWG!
solid AND stranded

- Available in 2, 3, 4, 5, 6 and 8 port configurations
- Two-blade construction holds wire more securely
- In-line construction on all sizes (compare to stacked construction) allows for greater flexibility when fitting into boxes & other tight spaces
- Clear construction for visual inspection
- Stranded conductors do not need to be tinned

NSi

c  us

FOR COPPER WIRE ONLY

PUSH-IN WIRE CONNECTORS (FOR SOLID OR STRANDED COPPER WIRES)

- Large wire range: accommodates 22-12 AWG solid or stranded copper wire
- Fast, safe and reliable installation saves time and money
- No twisting or taping of conductors required
- Just strip the wire, insert the connector and you are done
- One wire per opening ensures loose connections are eliminated
- Made of strong, UL 94V-2 flame retardant polycarbonate
- Rated 600 volts (up to 1,000 volts for fixtures and signs)
- Temperature range from -40°F to 221°F (-30°C to 105°C)
- Integrated test port enables continuity testing
- Color coded for easy identification
- Compact design perfect for tight spaces

INSTALLATION

TURN OFF POWER.
Strip wire approximately 0.45 inches (11mm).

Push the stripped conductor into the port of connector fully. No more twisting or taping.

Use a voltage meter to test your connection via the port on connector.

CERAMIC WIRE CONNECTORS

CERAMIC WIRE CONNECTORS

Ceramic wire connectors are made of high quality ceramics and have excellent electrical and heat resistant properties. They are a simple one piece design with threads which are molded into the body. They have a maximum working temperature of 1000°F and are specified instead of plastic for applications above 200°F. Typical uses include appliances, high powered lighting fixtures, ceiling fans, heaters, plastic extrusion/injection molding barrels and similar high-temperature applications.

Miniterms

MINITERM KITS

These kits have been carefully designed to include the most popular NSi miniterm terminals. The cases are made of extremely durable polypropylene. They provide the ultimate in organization and convenience. Clearly labeled on the inside lid for easy recognition. Convenient size for easy carrying and easy storing. Reusable.

ELECTRICAL TAPES: GENERAL PURPOSE & PREMIUM GRADE VINYL

GENERAL PURPOSE

General Purpose Easy-Wrap™ is a 7 mil, economy-grade, sunlight resistant, pressure sensitive vinyl electrical tape. Suitable for use in all kinds of electrical and mechanical applications such as cable insulation, wire bundling, and reinforcing. Extremely flexible

with good adhesion and conformability. Available in standard black and nine assorted colors for easy identification or color coding. Suitable for use at no more than 600V and not more than 80°C (176°F). CSA temperature range: -7°C to 80°C.

600 V RUBBER SPLICING TAPE/DOUBLE-SIDED

RUBBER SPLICING TAPE

High quality unvulcanized rubber that will bond quickly to itself to form a solid mass of watertight protection. Self fusing with liner. Can be used as primary insulation for electrical wires and cable splices up to 600 volts. Conforms to irregular shapes

and is flexible to withstand expansion and contraction. Highly resistant to salt water, steam, oils, detergents and other chemicals. Dielectric strength 490 volts per mil. Meets HH-I-553C Grade B and ASTM D-119; UL 510 listing #2C58.

ELECTRICAL FILLER/GLASS CLOTH/RUBBER MASTIC TAPE/COLD SHRINK TAPE

ELECTRICAL FILLER TAPE

Butyl based insulation is 1/8" thick for build-up. Easy to mold around irregular shapes. Self-amalgamates into solid flexible mass. Will not corrode copper or aluminum and highly resistant to moisture. Rated for applications up to 5 KV.

CATALOG NO.	UPC CODE	COLOR	(INCHES)			PACKAGING		LBS./CTN.

GLASS CLOTH ELECTRICAL TAPE - RUBBER ADHESIVE (UL)

Provides heat stabilized insulation for applications where resistance to high temperature and high mechanical strength are required, such as motor leads, hot spots, switches and controls. Insulation Class: 130°C (266°F). Dielectric strength: 3,300 volts. MIL-I-15126F (type GFT).

STANDARD (NATURAL) CABLE TIES

STANDARD CABLE TIES (NATURAL)

Designed for quick and easy use. Strong and flexible, they can be wrapped around a bundle quickly and the tail easily inserted into a self-locking head. The smaller standard size ties even have bent tails to facilitate rapid tail-to-head insertion by user. Made of high-strength Nylon 66 that resists abrasion and chemicals such as common oils, greases, solvents, dilute acids and alkalines. They are fungus-resistant, self-extinguishing and have

excellent dielectric properties. Designed for continuous use from -40°F to 185°F (-40°C to 85°C) and will withstand temperatures up to 300°F (149°C). 94V-2 flammability rating. Four sizes of canister packs include popular assortments of standard and colored cable ties. The ties are provided in an air-tight canister to prevent them from drying out, thus extending their life.

STANDARD MOUNTABLE CABLE TIES (NATURAL)

Standard mountable cable ties are manufactured from natural Nylon 66 and come complete with a mounting hole. Designed for continuous use from -40°F to 185°F (-40°C to 85°C). 94V-2 flammability rating. Black weather resistant mountable

cable ties are also screw mounted, are manufactured from Weather Resistant Nylon 66 and suitable for outdoor use. Designed for continuous use from -40°F to 185°F (-40°C to 85°C). 94V-2 flammability rating.

AIR HANDLING CABLE TIES

Air handling ties are approved for indoor use in air handling spaces other than plenums and ducts per NFPA-1993. Meets UL 1565 test standards. MIL spec. 3367-1, -7, -2. NEC Sec. 300-22 (C) & (D). Rules 12-010 (3), (4), and (5) and 12-020 of the Canadian Electrical Code.

Part 1. Made of high strength nylon, these ties are self-extinguishing and resist abrasions and chemicals such as oil, greases, solvents, dilute acids and alkalis. Burgundy in color for easy identification. Maximum operating temperature 185° F (85° C).

PUSH MOUNT TIES

Push mount cable ties allow the installer to secure a cable tie to a back panel quickly and easily, eliminating the possibility of adhesive mount failure. Simply drill the mounting hole and insert. Made of high-strength Nylon 66 that resists abrasion and chemicals such as common oils,

greases, solvents, dilute acids and alkalis. They are fungus-resistant, self-extinguishing and have excellent dielectric properties. Designed for continuous use from -40°F to 185°F (-40°C to 85°C) and will withstand temperatures up to 300°F (149°C). 94V-2 flammability rating.

TEFZEL CABLE TIES

Tefzel cable ties are suitable for extreme environments. They are rated for air handling spaces and chemical, weather and radiation resistant. Ideal for high temperature applications,

up to 302°F continuous operating temperature. UL 94V-0 approved. Aqua blue in color, Temperature range -65°F to 302°F. Melting point 520°F.

Wire Management

VELCRO & STAINLESS STEEL

VELCRO CABLE TIES

Velcro cable ties offer a unique back-to-back fastening system – a self-gripping, double-sided strap that is easy to use and cost effective. They feature a molded high performance polyethylene hook fastener laminated on to a non-woven polyester loop. The low peel strength allows for easy entry or removal by the user yet the average shear strength is 3.0 psi, which increases

substantially with each circular rotation. Will not over-cinch delicate cable and fiber optics. Applications include cord & cable management, wire harnesses, inventory control, fibre optics, packaging, in-plant maintenance, etc. Available in five colors, ideal for color coding. Allow for a minimum 2" overlap when installing.

STAINLESS STEEL CABLE TIES

These ties are made of stainless steel grade 304 and are ideally suited for hazardous environments. Stainless steel ties are of a roller-ball design which is self locking and are fast and easy to install. They have smooth edges and will not damage wires, etc. Installation can be either by hand or with a tool. The normal operating temperature is

-80°C to 538°C. Available with a non-toxic, halogen-free polyester coating in a wide choice of colors. Stainless steel ties are also available in Grade 316, for applications that require extremely high corrosion resistance. To order 316SS material, add suffix -316 to part number.

CABLE TIES WITH SS BARB, INSTALLATION TOOLS

CABLE TIES WITH STAINLESS STEEL BARB

In natural and UV Resistant black, nylon cable ties have stainless steel barb; barb is at 45° pitch with 60° cutting angle, setting strap to desired position to suit all diameters in range. Flexible and resistant at low temperatures and humidity-free environments. Cold and fastening resistances are higher than normal cable tie tolerances.

SADDLE MOUNTS/PUSH MOUNTS FOR CABLE TIES

ADHESIVE CABLE TIE MOUNTS

These mounts are used to route and fasten cable-tied bundles to flat surfaces. Cable ties may be inserted from any of four directions, eliminating orientation time. The top of the mount has a cradle design which allows the bundle to fit snugly and a mounting hole for additional support, where required.

POLYETHYLENE NAIL CLIPS

Made from impact resistant, non-corrosive polyethylene. Supplied with corrosion resistant, hardened steel nails already inserted for ease-of-use. The smooth polyethylene surface prevents damage to the insulation.

Wire Management

STANDARD SLOT PANEL CHANNEL

STANDARD SLOT PANEL CHANNEL

Made from high-impact, self-extinguishing, warp-proof PVC for the routing of wires. The restricted slot opening is designed to retain wires and allow for breakout when required. Individual wires are easily traced and removed when necessary. Scored sidewalls allow for easy break-off of Panel Channel sections.

All sizes are supplied complete with mounting holes and non-slip, snap-on and off covers. Optional adhesive backing is available, see page 14. Maximum service temperature: 85°C.

Tested to UL File up to 50°C. 94V-O Rated. For sizes not listed, please contact NSi.

ONE-PIECE LATCHING DUCT/JUNCTION BOXES

ONE-PIECE 600V LATCHING DUCT

One-piece surface raceway is made from high-impact PVC and is UL Listed for power applications up to 600 volts. 94V-0 rated. Meets UL's strict impact test requirements and features a reinforcing arm which prevents crushing and accidental opening on impact. Can be opened and closed repeatedly without cracking. Base is covered with a high-performance adhesive to guarantee secure

installation. May be painted with a latex-based paint. Accessories feature a patented connection system which allows for perfect installation every time. Supplied in standard 6 and 8 foot lengths. Standard colors are off white, white and electric ivory. Note: 600V CAT 5E/6 Compliant fittings are available.

MARK-PRO™ TTLM HANDHELD LABEL & WIRE-MARKING PRINTER

Features:

- prints 6 to 72 point text at 300 dpi resolution
- auto sizing text feature
- thermal transfer print technology
- two line by 16 character LCD display
- point sizes from 6 to 72
- use with your PC or stand alone
- downloadable and scalable fonts
- on-board memory to store label formats
- flash upgradable firmware
- internal battery recharger
- real time clock with time/date stamping ability
- 10 resident bar codes including Code 39 and Code 128
- multi-language prompts including English and Spanish
- alphanumeric sequencing (a-z, 1-999)
- repeat function allows up to 999 copies
- built in cutter and automatic feed control to eliminate waste
- print styles include frame, bold, italic, underline and mirror
- rotate feature for landscape or portrait mode
- vertical or horizontal print formats
- audible key clicks and error messages
- print speed: up to 2 inches per second

NSi Commercial and Industrial Pipe Marking Services

NSi provides ASME A13.1-1996 compliant snap-on, strap-on and pressure sensitive vinyl pipe markers. For commercial and industrial piping systems, refrigeration and medical gas piping applications. Made from high quality PVC, vinyl, polyester and tedlar materials – these products conform to ASME A13.1-1996 and ANSI Z535.1-1998 and are good for both indoor and outdoor applications. Call NSi Customer Service at 1.800.321.5847.

RIGID & SELF-ADHESIVE SAFETY SIGNS & SELF ADHESIVE LABELS

SAFETY SIGNS

All safety signs are 10" x 14" except NSS-3 and NRP-3 which are 14" x 20". Other sizes and legends available. Contact NSi for details.

Self-adhesive labels are sub-surface printed polyester labels. All labels shown at bottom of this page measure 2 1/4" x 4 1/2".

Rigid signs are available in either polycarbonate or polyester material.

BARRICADE, UNDERGROUND LINE & DETECTABLE TAPES

BARRICADE TAPES

All NSi line tapes are made of long lasting, non-adhesive polyethylene for exceptional quality, durability and performance. Used above ground

to mark off hazards. Supplied in 1,000 ft. rolls. Custom legends are available. Contact your NSi Custom Service representative for details.

UNDERGROUND LINE TAPES

Underground tapes are impervious to alkalines, acids and other soil components for the protection, location and identification of underground utility installations. Consists of a 4 mil overall thickness, inert 100 percent virgin low-

density polyethylene plastic film formulated for underground use. Environmentally safe ink. Supplied in 1,000 ft. rolls. Custom legends are available. Contact your NSi Custom Service representative for details.

LOCKOUT TAGS

VINYL DANGER WARNING TAGS

These durable warning tags are made of rigid vinyl with brass grommets to withstand moisture, dirt and grease. Write on with pencil, ballpoint pen or permanent marker. Meets OSHA requirements for accident prevention tags. Standard size is 3 1/4" x 5 1/2". Custom legends are available. Contact NSi for details. Heavy duty lockout tags can withstand over 80 pounds of pulling pressure.

SUPER LAMINATED, REUSABLE LOCKOUT TAGS

Super laminated tags are printed on high molecular weight polyolefin, which allows the laminating film to actually penetrate the stock and become one. The laminated peel strength is up to six times greater than a common paper laminated tag.

Eyelet size is 1/4" but they are also available up to 7/16" diameter. NSi super laminated tags exceed OSHA lockout requirements. Standard size is 3 1/4" x 5 1/2". Custom tags are also available. Contact NSi for details.

SPIRAL WRAP CABLE HARNESSSES

Permits flexible routing of cable harnesses while forming a neat, protective bundle. It twists on easily and allows lead-outs at any point. All sizes supplied in 100 ft. coils.

Available in three materials:

POLYETHYLENE: For general indoor use with good resistance to ordinary solvents and abrasion.

UV POLYETHYLENE: Ultraviolet resistance for general outdoor use with good resistance to ordinary solvents and abrasion.

NYLON: For use in wider temperature ranges with high resistance to abrasion and good solvent resistance.

WIRE-PULLING LUBRICANT

SLYDER™ CABLE LUBRICANT - STANDARD GRADE

Slider™ is a superior gel lubricant that reduces surface tension on cable to the lowest level. Its excellent adherence to cable ensures maximum performance and easier pulls. It maintains its lubricity even after drying and has

excellent re-wetting characteristics. Slider™ is non-toxic and non-flame propagating and can be used as part of a fire retardant installation. It does not contain any aromatic or petroleum derivative.

- Exceptional lubricity.
- Adheres better so it performs better.
- Superior performance at elbows, multiple turn pulls, tight fitting pulls and higher temperature applications.
- Retains higher lubricity when dry on the cable, making removal or repairs much easier.
- Recovers more than 95% of its original lubricity after re-wetting – even after it has been dry for extended periods.

- Compatible with all types of cable jackets. Will not cause cracking or discoloration of the cable.
- Does not support flame – either as a gel or a dried lubricant.
- Safe. Slider is non-toxic to humans. It is composed of ingredients that are individually listed as non-hazardous at the concentration used.
- Easy to clean up. Easily removed from equipment or personnel with only water.

BAG LUBRICANT QUANTITY FORMULA:

$$N = 0.003 \times Q \times L \times D^*$$

Where: N = number of bags required

Q = one half-gallon bag **OR** two one-quart bags

L = length of pull in **feet**

D = nominal internal dimension of conduit in **inches**

*The quantity appropriate for a difficult pull may be up to +50% above this equation depending on conduit fill, conduit type and condition, number of bends and pulling environment.

SLYDER™ CABLE LUBRICANT - WINTER GRADE

Winter Grade Slider™ Cable Lubricant is designed for all applications and all-weather use; no need to stock several different products depending on the job and/or the weather. Slider Winter Grade (cream colored) is manufactured to perform as a winter grade product and

can be used at temperatures as low as -22°F. Meets IEEE-1210-1996 and ASTM D 1963 stress cracking standards. It is stable, does not separate after 48 hours exposure to 110°F or after seven x 24 hour freeze/thaw cycles.

FIRESTOP™

Firestop™ Products

» *MAXIMUM DURABILITY*

» *MULTIPLE APPLICATIONS*

» *EASY TO USE*

**...making the life in the field
easier and safer.**

FIRESTOP™ INTUMESCENT CAULK

NSi FireStop™ Intumescent Caulk is water-based, single component elastomeric sealant intended for use as a firestop system component. It forms an economical yet durable, flexible and watertight bond with most construction materials. It is applied independently for “caulk and walk” systems or over mineral wool or backer rod to seal the openings where

building services such as pipes and cables penetrate fire rated assemblies. Will not crack or crumble as the physical properties remain stable over time. It tools easily and cleans up with water. May be applied by caulking gun or trowel. ASTM-E 814 and UL 1479.

CAT. NO.	UPC CODE	DESCRIPTION	CTN. QTY.	LBS./CTN.
FSIC-10	05540	FireStop Intumescent Caulk in 10.3 fl. oz. cartridges (304 ml)	12	25

FIRESTOP™ MORTAR

NSi FireStop™ Mortar is a single component non-combustible fiber reinforced, foamed cement mortar. It is intended to provide economical, non-combustible and tight-fitting firestops at openings and penetrations through fire-rated wall and floor assemblies. FireStop™ Mortar powder mixes easily to form a shaving cream-like, non-slumping paste. This feature permits easy installation with a minimum of damming.

When cured, FireStop™ Mortar is self-supporting and therefore may be used for large openings where other firestopping materials are impractical. It requires and contains no solvents and is comprised of materials of low toxicity. It mixes and trowels easily and tools are cleaned with water. Dust protection is recommended. The color is a distinctive charcoal (dark grey). ASTM-E 814 and UL 1479. Coverage per bag is 850 cn in. or 0.49 cn ft.

CAT. NO.	UPC CODE	DESCRIPTION	CTN. QTY.	LBS./CTN.
FSM	05549	FireStop Mortar in 15.5 lb. (7 kg) bags	1	15.5

FireStop™

FIREBLOCK814™, FIREBLOCK136™

FIRESTOP814™ RESIDENTIAL & COMMERCIAL FIRE STOP

NSi FireStop814™ Fire stopping caulk is a single component, non-combustible, non-intumescent material for residential and commercial applications. Colored red for easy inspection, FireStop814™ creates an effective barrier against flames, smoke, and toxic gasses and has superior

adhesion and gunnability. FireStop814™ is for use in annular spaces around wires and pipes, in one- and two-hour fire rated assemblies. It restores the integrity of firestops in residential and commercial construction. Meets UL 1479/ ASTM-E814 standards.

CAT. NO.	UPC CODE	DESCRIPTION	CTN. QTY.	LBS./ CTN.
FS-814	05567	10.3oz Caulk Tube, Red, non-intumescent commercial fire stop	12	14

FIREBLOCK136™ RESIDENTIAL RATED FIRE BLOCK

NSi FireBlock136™ Fire-blocking caulk is a single component, non-combustible material for residential applications. Colored red for easy inspection, FireBlock136™ creates an effective barrier against flames, smoke, and toxic gasses and has superior adhesion and gunnability. FireBlock136™ is for use in annular spaces around wires, pipes, ducts, vents and other penetrating items at ceiling and floor openings; and

room to room in wood and steel frame constructions. It restores the integrity of fireblocks in one and two family construction. Exceeds ASTM-E136 standards for fireblocking residential requirements prescribed by all major-model building codes, and also meets or exceeds requirements of UBC, BOCA, SBC, IRC, NYS and MA codes. Meets UL 1479/ ASTM-E136 standards.

CAT. NO.	UPC CODE	DESCRIPTION	CTN. QTY.	LBS./ CTN.
FS-136	05566	10.3oz Caulk Tube, Red; Non-combustible for residential applications	12	14

FIRE RATED PUTTY STICKS AND PUTTY PADS

NSi Fire Rated Putty is a moldable non-curing, one-component fire rated material for through penetration fire stop systems. In the event of a fire, Putty will expand when exposed to fire, forming an insulating char, which prevents the spread of flames, smoke, gas and water through penetration openings. Installation is easy as there are no additives, there is no mixing and no curing time is required. The putty is applied by hand and adheres to all common building surfaces. Putty can be installed in confined or occupied spaces since there are no volatile solvents or asbestos fillers.

NSi Putty systems are rated up to 3 hours in accordance with ASTM E 814, UL

1479 and ULC/CAN4-S115-M standards. NSi Fire Rated Putty is available in sticks or pads.

Moldable Putty Pads are available in two sizes, 6" x 7" x 1/8" or 7" x 7" x 1/8", and are classified as a wall opening protective material. Use them to protect metal electrical cabinets, outlet boxes and mechanical cabinets. STC Rating 49.

Putty Sticks are 1 1/2" in diameter x 10 inches long, and are classified as a fill, void or cavity material by UL. Use them to seal around cable, electrical conduit and metal pipe to prevent passage of smoke, flame and toxic gases. They will not dry out and can be reused as additional penetrating items are installed or removed.

CAT. NO.	UPC CODE	DESCRIPTION	CTN. QTY.	LBS./CTN.
FSPS	05555	Putty sticks – 1 1/2" diameter x 10" long (18 cu. in.) – Red	12	13
FSP-1	05556	Putty pads – 6" x 7" – Red	20	8
FSP-2	05557	Putty pads – 7" x 7" – Red	20	9

FireStop™

MINERAL WOOL, PILLOWS

FIRESTOP™ MINERAL WOOL

NSi FireStop™ Mineral Wool is a pre-formed, non-combustible mineral wool insulation. It is a semi-rigid combination of basaltic mineral wool and proprietary binders. The mineral wool is pre-cut into various widths and depths in 48 inch lengths for ease of handling and immediate installation. It is intended for use as a

firestop system component and forming material in tested firestop systems and designs. It is friction fitted into openings, joints, gaps, spaces and voids in fire rated assemblies. It is usually used in conjunction with firestop sealant products such as Silicone, Silicone SL and Intumescent Caulk.

CAT. NO.	UPC CODE	DESCRIPTION	CTN. QTY.	LBS./CTN.
FSMW	05550	FireStop Mineral Wool in 25 lb. bags	1	25

FIRESTOP™ PILLOWS

NSi FireStop™ Pillows are a single step firestop system component. They are intended for wall and/or floor openings through fire separations where temporary or permanent firestops are required. They are ideal where cable retrofitting is frequent and anticipated. These pillows allow for quick and clean single product installation. Pillows are self-supporting – no wire lath or mesh is required. They are to be packed tightly into the voids between penetrating items and the perimeter of the opening. During a fire, the intumescent

component within each pillow dramatically expands to seal the opening from fire, thereby maintaining the integrity of the fire separation.

FireStop™ Pillows consist of an intumescent layer sandwiched between non-combustible insulation, all enclosed in a hermetically sealed polyethylene shell. No sealant or putty is required. Easy to install, easy to remove – a quick and clean single product installation. ASTM E 814 and UL 1479.

CAT. NO.	UPC CODE	DESCRIPTION	CTN. QTY.	LBS./CTN.
FSP	05551	FireStop Pillows 2 in. x 4 in. x 8 in. (50 x 100 x 200 mm.)	25	7

FIRESTOP™ BOX GUARDS

NSi FireStop™ Box Guards are one component fire rated pads made of highly intumescent firestop material for use in electrical boxes. They are inserted in the box and adhere to the inside back wall. FireStop™ Box Guards are easy to install and very cost effective. When exposed to fire they expand, forming a char that will seal off the opening, prevent the spread of fire and limit the temperature rise on the unexposed surfaces. When used as

directed, the horizontal separation between outlet boxes on opposite sides of the wall may be less than 24 inches, provided that the boxes are not back-to-back.

FireStop™ Box Guards are classified by UL under Wall Opening Protective Material as found in the Fire Resistance Directory. Available in two sizes to suit single and double boxes. STC Rating 55.

CAT. NO.	UPC CODE	DESCRIPTION	CTN. QTY.	LBS./CTN.
FSBG-1	05558	Single box insert	50	3
FSBG-2	05559	Double box insert	50	7

FIRESTOP™ COVER GUARDS

NSi FireStop™ Cover Guards are one component fire rated gaskets made of highly intumescent firestop material for use in electrical boxes. They are mounted on the inside of the cover plate and installed at the same time as the cover plate. When exposed to fire they expand, forming a char that will seal off the opening, prevent the spread of fire and limit the temperature rise on the unexposed surfaces.

NSi FireStop™ Cover Guards are easy to install and very cost effective. Excellent for use when addressing the 24 inch rule. They

are used when electrical boxes are installed in rated walls facing opposite directions and horizontally separated by less than 24 inches. They can also be used as a solution for standard electrical boxes when the 100 square inch rule is violated. Exceptional for safe, retrofit applications. Can be used for both metal and plastic cover plates.

FireStop™ Cover Guards are available as single switch, double switch, single receptacle, single décor and double décor. An economical alternative to putty pads. STC Rating 54.

CAT. NO.	UPC CODE	DESCRIPTION	CTN. QTY.	LBS./CTN.

UL SYSTEM NO. C-AJ-1509

F Rating – 3 hr., T Rating – 0 hr.

1. **Floor or wall assembly** – Minimum 4½ in. thick reinforced normal weight concrete. Wall may also be constructed of any UL Classified concrete blocks. Maximum diameter of opening is 8 in. See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.
2. **Through Penetrant** – One metallic pipe, conduit or tubing to be installed either concentrically or eccentrically within the firestop system. Pipe, conduit or tubing to be rigidly supported on both sides of floor or wall assembly. A maximum of one pipe, conduit or tubing to be installed within the opening. The space between the pipe, conduit or tubing and the periphery of opening shall be a minimum of 0 in. to a maximum of 2 in. The following types and sizes of metallic pipes, conduits or tubing may be used:
 - a) Steel pipe – Nom. 24 in. diameter (or smaller) Schedule 10 (or heavier) steel pipe
 - b) Conduit – Nom. 6 in. diameter (or smaller) electrical metallic tubing or steel conduit
 - c) Copper tubing – Nom. 6 in. diameter (or smaller) Type L (or heavier) copper tubing
 - d) Copper pipe – Nom. 6 in. diameter (or smaller) Regular (or heavier) copper pipe.
3. **Firestop System** – The firestop system shall consist of the following:
 - a) Packing material – NSi FireStop Mineral Wool. Minimum 4 in. thickness of minimum 4 pcf mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from top surface of floor or from both surfaces of wall as required to accommodate the required thickness of fill material
 - b) Fill, void or cavity material – NSi FireStop Intumescent Caulk. Minimum ¼ in. thickness of fill material applied within the annulus, flush with top surface of floor or with both surfaces of wall. At the point contact location between through penetrant and concrete, a minimum ¼ in. diameter bead of fill material shall be applied at the concrete/through penetrant interface on the top surface of floor and on both surfaces of wall.

UL SYSTEM NO. C-AJ-1510

F Rating – 2 hr., T Rating – 0 hr.

1. **Floor or wall assembly** – Minimum 2½ in. thick reinforced lightweight or normal weight (100-150 pcf) structural concrete. Floor may also be constructed of any minimum 6 in. thick UL Classified hollow-core precast concrete units. Wall may also be constructed of any UL Classified concrete blocks. Maximum diameter of opening is 26¼ in. Maximum diameter of opening in floors constructed of hollow-core is 7 in. See Concrete Blocks (CAZT) or Precast Concrete Units (CFTV) category in the Fire Resistance Directory for names of manufacturers.
2. **Steel Sleeve** (optional) – Nom. 26 in. diameter (or smaller) Schedule 10 (or heavier) steel pipe cast or grouted into floor or wall assembly, flush with floor or wall surfaces.
3. **Through Penetrant** – One metallic pipe, conduit or tubing, rigidly supported on both sides of floor or wall assembly. The annular space between the pipe or conduit and the periphery of opening shall be a minimum of 0 in. (point contact) to a maximum of 2¼ in. The following types and sizes of metallic pipes, conduits or tubing may be used:
 - a) Copper tubing – Nom. 6 in. diameter (or smaller) Type L (or heavier) copper tube
 - b) Steel pipe – Nom. 24 in. diameter (or smaller) Schedule 10 (or heavier) steel pipe
 - c) Conduit – Nom. 6 in. diameter (or smaller) steel electrical metallic tubing (EMT)
 - d) Iron pipe – Nom. 24 in. diameter (or smaller) cast or ductile iron pipe.
4. **Firestop System** – The firestop system shall consist of the following:
 - a) Packing material – NSi FireStop Mineral Wool. Minimum 4.5 pcf mineral wool batt insulation, tightly compressed and firmly packed into opening as a permanent form to a minimum depth of 2¼ in. Packing material to be recessed from top surface of floor or from both surfaces of wall as required to accommodate the required thickness of sealant
 - b) Fill, void or cavity material – NSi FireStop Intumescent Caulk. Minimum ¼ in. thickness of caulk applied within the annulus, flush with top surface of floor or with both surfaces of wall. In floors constructed of hollow-core precast concrete units, fill material installed symmetrically on both sides of floor. Additional material installed to form a minimum ¼ in. crown bead at the point contact location between the pipe and periphery of the opening. For vertical installations, sealant to be applied symmetrically on both sides of wall.

UL SYSTEM NO. C-AJ-1511

F Rating — 2 hr., T Rating — 0 hr.

- Floor or wall assembly** — Minimum 2½ in. thick reinforced lightweight or normal weight (100-150 pcf) concrete floor. Floor may also be constructed of any minimum 6 in. thick UL Classified hollow-core precast concrete units. Wall may also be constructed of any UL Classified concrete blocks. Maximum diameter of opening is 24 7/8 in. Maximum diameter of opening in floors constructed of hollow-core is 7 in. See Concrete Blocks (CAZI) or Precast Concrete Units (CFTV) category in the Fire Resistance Directory for names of manufacturers.
- Through Penetrant** — One metallic pipe, conduit or tubing to be installed within the firestop system. Pipe, conduit or tubing to be rigidly supported on both sides of floor or wall assembly. The annular space between the pipe or conduit and the periphery of opening shall be a minimum of 0 in. (point contact) to a maximum of 7/8 in. The following types and sizes of metallic pipes, conduits or tubing may be used:
 - Steel pipe — Nom. 24 in. diameter (or smaller) Schedule 10 (or heavier) steel pipe
 - Iron pipe — Nom. 24 in. diameter (or smaller) cast or ductile iron pipe
 - Conduit — Nom. 6 in. diameter (or smaller) steel electrical metallic tubing or steel conduit
 - Copper pipe or tubing — Nom. 6 in. diameter (or smaller) Type L (or heavier) copper tubing.
- Fill, void or cavity material** — NSi FireStop Intumescent Caulk. Minimum ½ in. thickness of caulk applied within the annulus, flush with top surface of floor or with both surfaces of wall. In floors constructed of hollow-core precast concrete units, fill material installed symmetrically on both sides of floor. Additional material installed to form a minimum ¼ in. crown bead at the point contact location between the pipe and periphery of the opening. For vertical installations, sealant to be applied symmetrically on both sides of wall.

UL SYSTEM NO. W-L-1349

F Rating — 2 hr., T Rating — 0 hr.

- Wall Assembly** — The fire-rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300 or U400 Series Wall or Partition Design in the UL Fire Resistance Directory and shall include the following construction features:
 - Studs — Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom. 2 x 4 in. lumber spaced 16 in. oc. Steel studs to be minimum 3 5/8 in. wide and spaced maximum 24 in. oc. When steel studs are used and the diameter of openings exceeds the width of stud cavity, the opening shall be framed on all sides using lengths of steel stud installed between vertical studs and screw-attached to the studs at each end. The framed opening in the wall shall be 4 to 6 in. wider and 4 to 6 in. higher than the diameter of the penetrating item such that, when the penetrating item is installed in the opening, a 2 to 3 in. clearance is present between the penetrating item and the framing on all four sides.
 - Wallboard, Gypsum — 5/8 in. thick, 4 ft. wide with square or tapered edges. The gypsum wall board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300 or U400 Series Design in the UL Fire Resistance Directory. Maximum diameter of opening is 6 5/8 in.
- Through Penetrant** — One metallic pipe, conduit or tubing to be installed either concentrically or eccentrically within the firestop system. The annular space between pipes, conduits or tubing and the periphery of opening shall be a minimum of 0 in. (point contact) to a maximum of ½ in. Pipe, tubing or conduit to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes, tubing or conduits may be used:
 - Steel pipe — Nom. 24 in. diameter (or smaller) Schedule 5 (or heavier) steel pipe
 - Iron pipe — Nom. 24 in. diameter (or smaller) cast or ductile iron pipe
 - Conduit — Nom. 6 in. diameter (or smaller) steel electrical metallic tubing or steel conduit
 - Copper Tubing — Nom. 6 in. diameter (or smaller) Type L (or heavier) copper tubing
 - Copper Pipe — Nom. 6 in. diameter (or smaller) Regular (or heavier) copper pipe.
- Fill, void or cavity material** — Sealant — NSi FireStop Intumescent Caulk. Minimum 1¼ in. thickness of fill material applied within the annulus, flush with both surfaces of wall. At the point contact location between through penetrant and gypsum wall board, a minimum ½ in. diameter bead of fill material shall be applied at the gypsum wallboard/through penetrant interface on both surfaces of wall.

UL SYSTEM NO. W-L-1350

F Rating — 2 hr., T Rating — 0 hr.

1. **Wall Assembly** — The fire-rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300 or U400 Series Wall or Partition Design in the UL Fire Resistance Directory and shall include the following construction features:
 - a) **Studs** — Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom. 2 x 4 in. lumber spaced 16 in. oc. Steel studs to be minimum 3⁵/₈ in. wide and spaced maximum 24 in. oc. When steel studs are used and the diameter of openings exceeds the width of stud cavity, the opening shall be framed on all sides using lengths of steel stud installed between vertical studs and screw-attached to the studs at each end. The framed opening in the wall shall be 4 to 6 in. wider and 4 to 6 in. higher than the diameter of the penetrating item such that, when the penetrating item is installed in the opening, a 2 to 3 in. clearance is present between the penetrating item and the framing on all four sides
 - b) **Wallboard, Gypsum** — ⁵/₈ in. thick, 4 ft. wide with square or tapered edges. The gypsum wall board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300 or U400 Series Design in the UL Fire Resistance Directory. Maximum diameter of opening is 7⁵/₈ in.
2. **Through Penetrant** — One metallic pipe, conduit or tubing to be installed either concentrically or eccentrically within the firestop system. The annular space between pipes, conduits or tubing and the periphery of opening shall be a minimum of 0 in. (point contact) to a maximum of 1¹/₂ in. Pipe, tubing or conduit to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes, tubing or conduits may be used:
 - a) **Steel pipe** — Nom. 24 in. diameter (or smaller) Schedule 5 (or heavier) steel pipe
 - b) **Iron pipe** — Nom. 24 in. diameter (or smaller) cast or ductile iron pipe
 - c) **Conduit** — Nom. 6 in. diameter (or smaller) steel electrical metallic tubing or steel conduit
 - d) **Copper Tubing** — Nom. 6 in. diameter (or smaller) Type L (or heavier) copper tubing
 - e) **Copper Pipe** — Nom. 6 in. diameter (or smaller) Regular (or heavier) copper pipe.
3. **Packing Material** — NSi FireStop Mineral Wool. Minimum 2 in. thickness of minimum 4 pcf mineral wool batt insulation firmly packed into opening as a permanent form. Packing material to be recessed from both surfaces of the wall by ⁵/₈ in.
4. **Fill, void or cavity material** — Sealant — NSi FireStop Intumescent Caulk. Minimum ⁵/₈ in. thickness of fill material applied within the annulus, flush with both surfaces of wall. Additional material to be installed such that a ¹/₄ in. crown bead is formed around the penetrating item.

UL SYSTEM NO. W-L-1351

F Rating — 1 hr., T Rating — 0 hr.

1. **Wall Assembly** — The 1 hr. fire-rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300 or U400 Series Wall or Partition Design in the UL Fire Resistance Directory and shall include the following construction features:
 - a) **Studs** — Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom. 2 x 4 in. lumber spaced 16 in. oc. Steel studs to be minimum 3⁵/₈ in. wide and spaced maximum 24 in. oc. The gypsum wall board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300 or U400 Series Design in the UL Fire Resistance Directory. Maximum diameter of opening is 5 in.
- Through Penetrant** – One metallic pipe, conduit or tubing to be installed either concentrically or eccentrically within the firestop system. The annular space between pipes, conduits or tubing and the periphery of opening shall be a minimum of 0 in. (point contact) to a maximum of 1³/₄ in. Pipe, tubing or conduit to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes, tubing or conduits may be used:
 - Steel pipe – Nom. 3 in. diameter (or smaller) Schedule 5 (or heavier) steel pipe
 - Conduit – Nom. 3 in. diameter (or smaller) steel electrical metallic tubing or galv. steel conduit
 - Copper Tubing – Nom. 3 in. diameter (or smaller) Type L (or heavier) copper tubing
 - Copper Pipe – Nom. 3 in. diameter (or smaller) Regular (or heavier) copper pipe.
- Fill, void or cavity material** – Sealant – NSi FireStop Intumescent Caulk. Minimum 1¹/₄ in. thickness of fill material applied within the annulus, flush with both surfaces of wall. At the point contact location between through penetrant and gypsum wall board, a minimum ³/₈ in. diameter bead of fill material shall be applied at the gypsum wallboard/through penetrant interface on both surfaces of wall.

UL SYSTEM NO. F-C-1128

F Rating – 1 hr., T Rating – 0 hr.

- Floor-Ceiling Assembly** – The 1 hr. fire-rated solid or trussed lumber joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the individual L500 Series Floor-Ceiling Designs in the UL Fire Resistance Directory and shall include the following construction features:
 - Flooring System – Lumber or plywood subfloor with finish floor of lumber, plywood or Floor-Topping Mixture as specified in the individual floor-ceiling design. Maximum diameter of floor opening is 5 in.
 - Wood Joists – Nom. 10 in. deep (or deeper) lumber, steel or combination lumber and steel joists, trusses or Structural Wood Members with bridging as required and with ends firestopped
 - Wallboard, Gypsum – Nom. 4 ft. wide x ⁵/₈ in. thick as specified in the individual floor-ceiling design. Wallboard nailed to wood joists.
- Through Penetrant** – One metallic pipe, conduit or tubing to be installed either concentrically or eccentrically within the firestop system. The annular space between pipe, conduit or tubing and the periphery of opening shall be a minimum of 0 in. (point contact) to a maximum of 1¹/₂ in. Pipe, tubing or conduit to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes, tubing or conduits may be used:
 - Steel pipe – Nom. 4 in. diameter (or smaller) Schedule 10 (or heavier) steel pipe
 - Iron pipe – Nom. 4 in. diameter (or smaller) cast or ductile iron pipe
 - Conduit – Nom. 4 in. diameter (or smaller) steel electrical metallic tubing or steel conduit
 - Copper Tubing – Nom. 4 in. diameter (or smaller) Type L (or heavier) copper tubing
 - Copper Pipe – Nom. 4 in. diameter (or smaller) Regular (or heavier) copper pipe.
- Fill, void or cavity material** – NSi FireStop Intumescent Caulk. Minimum ³/₄ in. thickness of fill material applied within the annulus on top surface of floor. Minimum ⁵/₈ in. thickness of fill material applied within annulus on bottom surface of ceiling. Additional fill material to be installed such that a minimum 1¹/₂ in. thick crown is formed around the through penetrant on top surface of floor-ceiling assembly.

UL SYSTEM NO. F-C-2297

F Rating – 1 hr., T Rating – 0 hr.

- Floor-Ceiling Assembly** – The fire-rated wood joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in the individual L505, L511, or L536 Designs in the UL Fire Resistance Directory and shall include the following construction features:
 - Flooring System – Lumber or plywood subfloor with finish floor of lumber, plywood or Floor-Topping Mixture as specified in the individual floor-ceiling design. Maximum diameter of opening is 2.875 in.
 - Wood Joists – Nom. 2 x 10 in. lumber joists spaced 16 in. oc. with nom. 1 x 3 in. lumber bridging and with ends firestopped
 - Wallboard, Gypsum – Nom. 4 ft. wide x 5/8 in. thick as specified in the individual floor-ceiling design. Maximum diameter of ceiling opening is 2.875 in.
- Through Penetrant** – One nonmetallic pipe or conduit to be installed approximately midway between wood joists and centered within the firestop system. Diameter of openings hole-sawed through flooring system and one layer through gypsum wallboard ceiling to be nom. 1/2 in. larger than the outside diameter of through penetrant. Pipe or conduit to be rigidly supported on both sides of floor-ceiling assembly. The following types and sizes of nonmetallic pipes or conduits may be used:
 - Polyvinyl Chloride (PVC) Pipe – Nom. 2 in. diameter (or smaller) Schedule 40 cellular or solid core PVC pipe for use in closed (process or supply) or vented (drain, waste, or vent) piping systems
 - Acrylonitrile Butadiene Styrene (ABS) Pipe – Nom. 2 in. diameter (or smaller) Schedule 40 cellular or solid core ABS pipe for use in closed (process or supply) or vented (drain, waste, or vent) piping systems
 - Chlorinated Polyvinyl Chloride (CPVC) Pipe – Nom. 2 in. diameter (or smaller) SDR 17 CPVC pipe for use in closed (process or supply) or vented (drain, waste, or vent) piping systems
 - Rigid Nonmetallic Conduit – Nom. 2 in. diameter (or smaller) Schedule 40 PVC conduit installed in accordance with Article 347 of the National Electrical Code (NFPA No. 70).
- Fill, void or cavity material** – NSi FireStop Intumescent Caulk. Minimum 3/4 in. thickness of fill material applied within the annulus on top surface of floor. Minimum 3/8 in. thickness of fill material applied within annulus on bottom surface of ceiling or top plate of chase wall assembly. Additional fill material to be installed such that a minimum 1/8 in. thick crown is formed around the through penetrant on top surface of floor-ceiling assembly.

UL SYSTEM NO. C-AJ-4073

F Rating – 3 hr., T Rating – 1 1/2 hr.

- Floor or wall assembly** – Minimum 5 in. thick reinforced normal weight concrete. Wall may also be constructed of any UL Classified concrete blocks. Maximum area of opening is 288 sq. in. with a maximum dimension of 24 in. See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.
- Cable Tray** – Maximum 12 in. wide by maximum 3 5/8 in. deep (maximum 3 in. deep loading depth) trough type cable tray with channel-shaped side rails formed of No. 18 MSG (0.048 in.) thick galvanized steel and with 4 in. wide by No. 18 MSG (0.048 in.) thick ventilated type rungs spaced 10 in. oc. Maximum one cable tray to be installed either concentrically or eccentrically within the firestop system. The annular space between the cable tray and the periphery of opening shall be a minimum of 1 1/2 in. to a maximum of 7 in. Cable tray to be rigidly supported on both sides of floor or wall assembly.
- Cables** – Maximum four individual cable bundles, each containing a maximum seven cables, to be installed within cable tray. Maximum diameter of individual cable bundles shall be 2 in. Cable bundles to be spaced a minimum 1 1/2 in. to a maximum 3 in. oc. Any combination of the following types and sizes of cables may be used:
 - Maximum 3 pair No. 24 AWG (or smaller) copper conductor cables with polyvinyl chloride (PVC) insulation and jacket
 - Maximum 2 fiber 62.5/125 uM fiber optic cable with PVC insulation and jacket
 - Maximum RG/U (or smaller) coaxial copper conductor cable with fluorinated ethylene insulation and jacket materials.
- Fill, Void or Cavity Materials** – NSi FireStop Pillows. Maximum 8 in. long x 4 in. wide x 2 in. deep thick pillow-like material. Pillows shall be tightly packed into opening to fill the annular space between cables and periphery of opening and between cable tray and periphery of opening. Pillows installed with 8 in. dimension projecting through floor or wall and centered within the opening.

UL SYSTEM NO. C-AJ-4074 (For Horizontal or Vertical Separations)

F Rating – 3 hr., T Rating – 0 hr.

- Floor or wall assembly** – Minimum 4½ in. thick reinforced lightweight (100 pcf) concrete. Maximum size of opening is 288 sq. in. with maximum dimension of 24 in. Wall may also be constructed of any UL Classified concrete blocks. See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.
- Cable Tray** – Maximum 12 in. wide by maximum 3⅝ in. deep (maximum 3 in. deep loading depth) trough type cable tray with channel-shaped side rails formed of No. 18 MSG (0.048 in.) thick galvanized steel and with 4 in. wide by No. 18 MSG (0.048 in.) thick ventilated type rungs spaced 10 in. oc. Maximum one cable tray to be installed either concentrically or eccentrically within the firestop system. The annular space between the cable tray and the periphery of opening shall be a minimum of 1½ in. to a maximum of 7 in. Cable tray to be rigidly supported on both sides of floor or wall assembly.
- Cables** – Aggregate cross-sectional area of cables in cable tray to be 25% of the cross-sectional area of the cable tray based on a maximum 3 in. cable loading within the cable tray. Any combination of the following types and sizes of cables may be used:
 - Maximum 287 lengths of cables, each with 3 pair No. 24 AWG Type D telephone cables with PVC insulation and jacket
 - Maximum 24 lengths of double stranded fiber optic cables, ⅛ in. diameter with PVC insulation and jacket
 - Maximum 12 lengths of coaxial cable, ¼ in. diameter, 22 AWG solid copper conductor with polyethylene insulation and PVC jacket
 - Maximum 12 lengths of data cable, Alcatel 380100, E107890, 24 AWG CMR, with PVC jacket.
- Fill, Void or Cavity Materials** – NSi FireStop Pillows. Maximum 8 in. long x 4 in. wide x 2 in. deep thick pillow-like material. Pillows shall be tightly packed into opening to fill the annular space between cables and periphery of opening and between cable tray and periphery of opening. Pillows installed with 8 in. dimension projecting through floor or wall and centered within the opening.

UL SYSTEM NO. F-C-3084

F Rating – 1 hr., T Ratings – ¾ hr. and 1 hr. (See Item 2)

- Floor-Ceiling Assembly** – The fire-rated wood joist floor-ceiling assembly shall be constructed of the materials and in the manner specified in Design No. L512, L513 or L514 in the UL Fire Resistance Directory and shall include the following construction features:
 - Flooring System – Lumber or minimum ½ in. plywood subfloor with lumber or minimum ¾ in. plywood finish floor or Floor-Topping Mixture as specified in the individual floor-ceiling design. Maximum diameter of floor opening is ⅝ in.
 - Wood Joists – Nom. 2 x 10 in. lumber joists, spaced 16 in. oc. with nom. 1 x 3 in. lumber bridging and with ends firestopped
 - Furring Channels (not shown) – Resilient galv. steel furring installed perpendicular to wood joist between wallboard and wood joist and spaced maximum 24 in. oc.
 - Wallboard, Gypsum – Nom. 4 ft. wide x ⅝ in. thick as specified in the individual floor-ceiling design. Wallboard attached to wood joists or furring channels as specified in the individual floor-ceiling design. Maximum diameter of ceiling opening is ⅝ in.
- Cables** – One cable to be installed either eccentrically or concentrically in opening with annular space between the cable and periphery of opening of min. 0 in. (point contact) to maximum 14 in. Cable to be rigidly supported on both sides of floor-ceiling assembly. The following types of cables may be used:
 - Maximum 3/C (with ground) No. 12 AWG (or smaller) with polyvinyl chloride (PVC) insulation and jacket
 - Maximum 3/C (with ground) No. 14 AWG (or smaller) with PVC jacketed aluminium or steel clad, Type RW90
 - Type RG6U coaxial cable with fluorinated ethylene propylene insulation and jacket
 - Maximum 2/C (with ground) No. 14 AWG (or smaller), type NM90, with nylon jacket
 - Maximum 8/C No. 24 AWG (or smaller), type CMR MPR, with polyvinyl chloride (PVC) insulation and jacket.

The T Rating of the firestop system is dependent upon the type of cable used, as tabulated below:

CABLE TYPE	T-RATING (HR.)
a, b, c and e	1
d	¾

- Fill, void or cavity material** – NSi FireStop Intumescent Caulk. On top of assembly, a minimum 1¼ in. thickness of fill material applied within the annulus on top surface of floor. On bottom assembly, a minimum ½ in. thickness of fill material applied within annulus on bottom surface of ceiling. Additional fill material to be installed such that a minimum ½ in. thick crown is formed around the through penetrant on both sides of floor-ceiling assembly.

UL SYSTEM NO. C-AJ-8147

F Rating – 3 hr., T Rating – 0 hr.

1. **Floor or wall assembly** – Minimum 4½ in. thick reinforced normal weight concrete. Wall may also be constructed of any UL Classified concrete blocks. Maximum area of opening is 312 sq. in. with maximum dimension of 26 in. See Concrete Blocks (CAZT) category in the Fire Resistance Directory for names of manufacturers.
2. **Cable Tray** – Maximum 24 in. wide by maximum 4 in. deep open-ladder cable tray with channel-shaped side rails formed of minimum 0.065 in. thick steel with 3 in. wide by ½ in. deep rungs spaced 14½ in. oc. One cable tray to be installed in the opening. The annular space between the cable tray and the periphery of opening shall be a minimum of 1 in. to a maximum of 6 in. Cable tray to be rigidly supported on both sides of floor or wall assembly.
3. **Cables** – Aggregate cross-sectional area of cables in cable tray to be maximum 40% of the cross-sectional area of the cable tray based on a maximum 3 in. cable loading depth within the cable tray. Any combination of the following types of copper conductor cables may be used:
 - a) Maximum of 1/C-500 kcmil (or smaller) cable with cross-linked polyethylene insulation and jacket
 - b) Maximum 100 pair No. 24 AWG (or smaller) telephone cable with polyvinyl chloride (PVC) insulation and jacket
 - c) Maximum RG 11/U coaxial cable (or smaller) with fluorinated ethylene propylene insulation and jacket

In addition, a maximum of two cable lengths may be installed within the opening. The cables shall be spaced a nom. 2 in. apart and a nom. 2 in. from the periphery of the opening. Cables to be rigidly supported on both sides of floor or wall assembly.

4. **Through Penetrants** – Two pipes, conduits or tubes to be installed within the opening. The space between pipes, conduits or tubes shall be a nom. 6¾ in. The space between pipes, conduits or tubes and the periphery of opening shall be a minimum of 1½ in. to a maximum of 6½ in. Pipes, conduits or tubes to be rigidly supported on both sides of floor or wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:
 - a) Steel pipe – Nom. 3 in. diameter (or smaller) Schedule 40 (or heavier) steel pipe
 - b) Iron pipe – Nom. 3 in. diameter (or smaller) cast or ductile iron pipe
 - c) Conduit – Nom. 3 in. diameter (or smaller) electrical metallic tubing or steel conduit
 - d) Copper Tubing – Nom. 3 in. diameter (or smaller) Type M (or heavier) copper tubing
 - e) Copper Pipe – Nom. 3 in. diameter (or smaller) Regular (or heavier) copper pipe.

In addition, one nom. 2 in. diameter (or smaller) electrical metallic tubing or steel conduit may be installed within the cable tray. The conduit or tubing shall be spaced a nom. 1 in. from the side rail of the cable tray and a minimum 1 in. from the cable bundles.

5. **Pipe Covering** – The following types of pipe coverings may be used on the steel pipe (Item 4a):
 - a) Pipe and Equipment Covering – Materials – Nom. 1 in. thick hollow cylindrical heavy density (min. 3.5 pcf) glass fiber units jacketed on the outside with an all service jacket. Longitudinal joints sealed with metal fasteners or factory-applied, self-sealing lap tape. Transverse joints secured with metal fasteners or with butt tape supplied with the product. See Pipe and Equipment Covering – Materials (BRGU) category in the Building Materials Directory for names of manufacturers. Any pipe covering material meeting the above specifications and bearing the UL Classification Marking with a Flame Spread Index of 25 or less and a Smoke Developed Index of 50 or less may be used
 - b) Pipe Covering Materials – Nom. 1 in. thick unfaced mineral fiber pipe insulation having a nom. density of 3.5 pcf (or heavier) and sized to the outside diameter of pipe or tube. Pipe insulation secured with minimum 8 AWG steel wire spaced maximum 12 in. oc. IIG MINWOOL L L C – High Temperature Pipe Insulation 1200, High Temperature Pipe Insulation BWT or High Temperature Pipe Insulation Thermaloc
 - c) Sheathing Material (not shown) – Used in conjunction with Item 5b. Foil-scrim-kraft or all service jacket material shall be wrapped around the outer circumference of the pipe insulation (Item 5b) with the kraft side exposed. Longitudinal joints and transverse joints sealed with metal fasteners or with butt tape. See Sheathing Materials (BVDV) category in the Building Materials Directory for names of manufacturers. Any sheathing material meeting the above specifications and bearing the UL Classification Marking with a Flame Spread Index of 25 or less and a Smoke Developed Index of 50 or less may be used. The space between the insulated pipe and the periphery of the opening shall be a minimum 1½ in. to a maximum 6½ in. The insulated pipe shall be minimum 2 in. to a maximum 6¾ in. from the other through penetrants (Item numbers 2, 3 and 4).
6. **Firestop System** – The firestop system shall consist of the following:
 - a) Forms (not shown) – Used as a form to prevent leakage of fill material during installation. Forms to be a rigid sheet material, cut to fit the contour of the penetration item and friction fitted into the opening. Forms to be recessed from top surface of floor or both surfaces of wall as required to accommodate the required thickness of fill material. Forms to be removed after fill material has cured
 - b) Fill, void or cavity material – Mortar – NSi FireStop Mortar. Minimum 3 in. thickness of fill material installed flush with top surface of floor and both surfaces of wall. Mortar to be mixed at a rate of 2.7 parts dry mixture to one part water by weight in accordance with the installation instructions supplied with the product.

ITS DESIGN NO. AD/PHV 180-01

Horizontal or Vertical (floor or wall)

F Rating – 3 hr., T Rating – No penetrations - 3 hr., 3a, b, c, d - 15 minutes, 3e - 0 minutes

1. **Floor or wall assembly** – Minimum 3 in. (75 mm) thick normal or lightweight concrete. Maximum size of opening is 57½ in. x 60 in. (1460 mm x 1525 mm).
2. **Fill, void or cavity material** – Mortar – NSi FireStop Mortar mixed with water in accordance with the manufacturer's instructions and trowelled in place to fill the opening to a minimum depth of 3 in. (75 mm).
3. **Through Penetrants**
 - a) Nom. 3½ in. (90 mm) x 24 in. (620 mm) steel ladder type cable tray. Maximum cable and conduit loading not to exceed 32% by area of cable tray
 - b) Type 500 MCM CORFLEX II RA90 XLPE or #6 AWG/4 90 XLPE TECK HL FT4 cables installed individually or ½ in. (13 mm) apart in cable tray
 - c) 2 in. (50 mm) OD and 1¾ in. (5 mm) wall thickness steel conduit, spaced a minimum of 2 in. (50 mm) from the cables in the tray
 - d) Schedule 40 steel pipe, nom. 3½ in. (90 mm) OD
 - e) Nom. 3¼ in. (82 mm) OD copper pipe.

The T Rating is dependent upon the type of penetrant as tabulated below:

PENETRANT TYPE	T-RATING (HR.)
No penetrant	3
3a, b, c, d	15 min.
3e	0

FIRESTOP™ MORTAR

Installation: Clean all openings to be firestopped by removing all foreign matter and contaminants such as oil, dust, grease, frost, water, surface dirt, old sealants, glazing compound, protective coatings, original formwork etc.

Priming and Keying: NSi FireStop Mortar does not generally require any priming. For large horizontal openings, it is recommended that NSi FireStop Mortar be mechanically keyed into the concrete surround, and/or that intermediate support be provided.

Mixing: NSi FireStop Mortar is mixed with water in the ratio of 2.6 US quarts (2.5L) of water to each 15.5 lb. (7 kg) bag. A measuring cup is supplied in each bag for convenience when mixing.

Forming or Damming: Horizontal openings may be dammed temporarily with any convenient material (plywood etc.). Damming is generally not required for vertical openings due to the low slump, dimensional stability and cohesive strength of the mortar paste. Forms, if used, can be removed after 24 hours.

Placement: Apply NSi FireStop Mortar paste into opening with trowel or pour into large horizontal openings from mixer or mixing container. Work paste with trowel to ensure that all voids are filled. Give particular attention to voids between multi-cable/pipe installations. Product may be vibrated for this purpose. Tool surface to desired finish. Clean up with water.

Re-penetration: If it is necessary to penetrate cured NSi FireStop Mortar for new or additional building services, simply drill or poke through mortar to provide opening of sufficient size. After installation of new items, firestop the remaining voids with fresh NSi FireStop Mortar or NSi FireStop Mineral Wool and FireStop Silicone.

Precautions: Avoid inhalation of dust or contact with eyes. Use of dust mask and eye protection is recommended. Thoroughly wash skin after contact and before eating, etc. Keep out of reach of children. To safely use this product, read and abide by Material Safety Data Sheet (MSDS).

Limitations: Do not install when temperature is below 40°F (5°C). In horizontal applications, intermediate support may be required. Do not permit pedestrian or other traffic. Where NSi FireStop Mortar may be subject to acidic exposure, like other Portland cement-based products, it may require a protective coating.

PHYSICAL PROPERTIES*

PROPERTIES	RESULTS
Before Curing	
Mix time	1.5 to 5 min.
Pot life	50 min. (max.)
Workability	Excellent
Wet density	700 ± 10 kg/m ³ (43.7 ± 0.6 pcf)
Set time	10 to 15 hr.
After Curing	
Density	640 ± 40 kg/m ³ (40 ± 2.5 pcf)
Compressive strength (28 days)	3.3 ± 0.3 Mpa (478 ± 44 psi)
Shrinkage	None
Noncombustibility (CAN4-S114)	Noncombustible
Combustibility (CAN4-S114)	Noncombustible
Thermal conductivity (ASTM C-518)	0.197 W/m. °K @ 24°C (1.365 Btu. In/ft ² .h. °F)

*Values given are not intended for specification preparation.

Incorrectly

Correctly

Always install NSi FireStop Mineral Wool so that it is compressed perpendicular to the grain.

FIRESTOP™ MINERAL WOOL

Installation: Install NSi FireStop Mineral Wool to the minimum 25% to 33% compression required by the tested firestop system. See table. Compression must always be perpendicular to the grain. Butt adjacent sections of NSi FireStop Mineral Wool tightly against each other. Leave no voids. NSi FireStop Mineral Wool is the recommended backing material for NSi FireStop Silicone, Silicone SL and Intumescent Caulk. Determine the depth of firestop sealant required and recess the mineral wool to the appropriate depth.

Precautions: To safely use this product, read and abide by Material Safety Data Sheet (MSDS). Avoid inhalation of dust during use and avoid skin and eye contact. Mineral wool, like other nuisance particulates, may cause itching and possible irritation of eyes and/or upper respiratory tract.

PHYSICAL PROPERTIES*

PROPERTIES	RESULTS
Density	Nominal 4 lb./ft ³ (64kg/m ³)
Moisture absorption	<1%; inorganic, will not mildew
Service temperatures	Continues use to 1200°F (649°C)
Linear shrinkage	0% @ 1050°F (551°C); <1% @ 1200°F (649°C)
Recovery after 10% compression	100%
Asbestos	None
Surface burning, CAN4-S102, ASTM E84 and UL723	Flame spread – 5; smoke developed – 0
Non-combustibility, CAN4-S114	Listed as noncombustible by ULC
Non-corrosive, NRC 1.36, ASTM C692, C795 and C871	Will not cause or contribute to corrosion

FIRESTOP PILLOWS

Installation: Do not open bags. NSi FireStop Pillows are installed easily by compressing them to fit tightly in the voids between penetrating items and the perimeter of the opening. They are to be installed with minimum 25% compression of their thickness (the 2 inch dimension). No wire lath or mesh is required. Be careful of sharp corners and protrusions so as not to damage the bags.

Precautions: To safely use this product, read and abide by Material Safety Data Sheet (MSDS). Do not open bags.

Limitations: Do not install NSi FireStop Pillows where they will be subject to abrasion, physical abuse or traffic. They are not structural and are not designed to support the penetration items they protect nor can they support traffic of any kind.

FIRESTOP™ INTUMESCENT CAULK

Installation: Clean all openings to be firestopped by removing all foreign matter and contaminants such as oil, dust, grease, frost, water, surface dirt, old sealants, glazing compound, protective coatings, etc. Refer to fire test design/system.

Priming and Masking: NSi FireStop Intumescent Caulk does not require any priming. However, in view of the unpredictability of surface characteristics, it is recommended that a test sample of sealant be applied on the surface to test adhesion. Areas adjacent to openings to be firestopped can be masked to assure a neat appearance. The masking tape should not be allowed to touch the clean surfaces to which the caulk is to adhere. Remove masking tape immediately.

Applications: For “caulk and walk” systems, simply apply the product where required and let cure. Where backer material (mineral wool, backer rod, etc.) is required by fire test design or system, install backer material as specified. Surfaces of backer material to receive caulk should be recessed in the opening to a depth equal to the required thickness of the sealant. Apply NSi Intumescent Caulk in a continuous operation to fill and seal the opening. Tool the caulk to spread it against the backer material and the opening surfaces. Simply fill the annular space to the required depth and form a smooth bead or crown at the surfaces. Excess sealant should be cleaned with water. Cured sealant is usually very difficult to remove without altering or damaging the surface to which it has been misapplied.

Precautions: NSi FireStop Intumescent Caulk is a water based product. No acetic acid or objectionable by-products are evolved during application. On direct contact, uncured caulk may irritate eyes. Flush with water and call a physician. Avoid prolonged contact with skin. Keep out of reach of children. To safely use this product, read and abide by Material Safety Data Sheet (MSDS).

Limitations: NSi FireStop Intumescent Caulk is intended for use at interior locations in building only. Protect from direct contact with water until cured. Curing time will vary with temperature and humidity. Do not use where abrasion or physical use is anticipated. Installation in confined or air-free spaces may inhibit cure. Do not apply to surfaces with special protective or cosmetic coatings without prior consultation with NSi and first testing adhesion. For optimum economy and performance, apply to a thickness equal to or slightly greater than the minimum test design thickness. Excessive depth to width ratios may cause sealant failure. Do not apply excessive thickness. We recommend the minimum tested system thickness not be exceeded by more than 25%.

PHYSICAL PROPERTIES*

FIREBLOCK 814™ (COMMERCIAL/RESIDENTIAL)

Installation: Clean the area to be protected so that it is clear of debris. When encountering large voids, mineral or rock wool batts may be used as a backer material to help hold the material in place until cured. Fill the annular space or void with NSi FireBlock814 material to a depth of no less than one inch, making sure there are no visible air passages. Allow 48 to 72 hours for proper cure time.

Applications: NSi FireBlock814 is an approved firestop designed to be applied in openings around wires, pipes, ducts, blank voids or openings and other electrical and mechanical penetrating items at ceiling and floor levels in one- and two-hour fire rated assemblies. FireStop 814 meets UL 1479/ ASTM-E814 standards for firestopping in commercial and residential requirements.

Precautions: No acetic acid or objectionable by-products are evolved during application. Contact with acid will cause evolution of heat. On direct contact, may irritate eyes and skin. Flush with water and call a physician. Avoid prolonged contact with skin. It is recommended to wear rubber gloves, protective eyewear and rubber apron when using NSi FireBlock814. Keep out of reach of children. To safely use this product, read and abide by Material Safety Data Sheet (MSDS).

FIREBLOCK 136™ (RESIDENTIAL)

Installation: Clean the area to be protected so that it is clear of debris. When encountering large voids, mineral or rock wool batts may be used as a backer material to help hold the material in place until cured. Fill the annular space or void with NSi FireBlock136 material to a depth of no less than one inch, making sure there are no visible air passages. Allow 48 to 72 hours for proper cure time.

Applications: NSi FireBlock136 is an approved fire, smoke and draft sealant designed for use in steel and wood frame residential construction. It is to be applied in openings around wires, pipes, ducts, blank voids or openings and other electrical and mechanical penetrating items at ceiling and floor levels in non-rated assemblies. FireBlock exceeds ASTM-E136 standards for fireblocking residential requirements prescribed by all major-model building codes, and also meets or exceeds requirements of UBC, BOCA, SBC, IRC, NYS and MA codes.

Precautions: No acetic acid or objectionable by-products are evolved during application. Contact with acid will cause evolution of heat. On direct contact, may irritate eyes and skin. Flush with water and call a physician. Avoid prolonged contact with skin. It is recommended to wear rubber gloves, protective eyewear and rubber apron when using NSi FireBlock136. Keep out of reach of children. To safely use this product, read and abide by Material Safety Data Sheet (MSDS).

PHYSICAL PROPERTIES*

PROPERTIES	RESULTS
Uncured	
Color	Red
Curing time @ 25°C (77°F)	48 to 72 hours
Specific gravity	1.8
VOC (ASTM D 3960-92)	

*Values given are not intended for specification preparation.

The image features a solid purple background. A white, wavy line flows across the middle of the frame. Below this line, a black, shadow-like shape follows its path, creating a sense of depth. The overall composition is minimalist and modern.

DIELESS HYDRAULIC & BATTERY-OPERATED DIE TYPE CRIMPING TOOLS

DIELESS HYDRAULIC CRIMPING TOOLS

Dieless 500

- Crimps copper or aluminum up to 500 MCM
- Dieless crimping head – no dies to lose or replace
- Patented pressure system automatically changes crimping force for each connector size and type
- Seven-indent profile requires fewer crimps per connector
- Automatic two-speed pump for rapid advance
- Crimping head rotates 180°.
- 8.5 ton max crimping force

Dieless 1000

- Crimps copper or aluminum up to 1000 MCM
- Dieless crimping head – no dies to lose or replace
- Patented pressure system automatically changes crimping force for each connector size and type
- Automatic two-speed pump for rapid advance.
- 15 ton max crimping force.

BATTERY-OPERATED DIE TYPE CRIMPING TOOL

Power 750

- 14.6 tons, 1.65" jaw opening for U-type dies
- Powerful 14.4 Volt battery crimper
- High power Ni-Cad battery
- Head rotates through 180°
- Reinforced molded nylon body
- Pressure release button
- Switch protected against accidental operation
- Battery condition display
- Balanced tool and sculptured body for greater control
- Ergonomically designed center grip handle
- 10,000 PSI rated operating pressure
- Includes steel carrying case, shoulder strap, spare battery and battery charger.

HYDRAULIC CRIMPING TOOL & U-TYPE DIES

HYDRAULIC DIE-TYPE CRIMPING TOOLS

12-Ton Compression Tool for U-Type Dies

- Delivers 12 tons of hydraulic force
- 1 1/2" jaw opening for large conductors and taps
- Automatic two-speed pump action for rapid ram advancement
- Fast ram release with twist of handle
- 180° head rotation
- Accepts all standard U-type dies.

MANUAL COMPRESSION TOOLS

1

Mechanical Single-Indent Lug Crimpers

- Manually operated single-indent compressor tool
- Wire Range: CU-250 MCM to 8 AWG AL-4/0 AWG to 8 AWG
- Requires no dies.

2

- Extendable handle design provides increased leverage and allows you to crimp connectors up to 500 MCM
- Requires no dies.

3

Mechanical Tool

- With 5/8" nose die
- For copper and aluminum.

4

Mechanical Tool

- With 'O' and 'D' nose dies
- For copper and aluminum.

MINITERM TOOLS

1

Insulated Miniterm Tool

A ratchet-action crimping tool for quality crimping of insulated terminals and connectors, including rings, spades, male plugs, female receptacles and disconnects in 22/18, 16/14 and 12/10 AWG wire sizes.

2

Uninsulated Miniterm Tool

An economical combination tool for cutting, stripping and crimping non-insulated terminals in 22/18, 16/14 and 12/10 AWG wire sizes.

3

Coax Crimp Tool

Provides a precise hex crimp for use with one-piece "F" connectors.

4

Coax Strip Tool

Designed to strip RG59, RG6 and Belden 8281 coax cable. To strip the cable, simply turn the tool around the cable 4-5 times and pull the cable from the jaws.

CATALOG NO.	UPC CODE	FIGURE NO.	WEIGHT (LBS.)

CONDUIT BENDERS

All NSi conduit benders have cast in-angle indicators with raised bending points of reference to aid the installer. The bodies are aluminum die cast which are lightweight yet strong enough for everyday use. Handles are tough steel construction and have a black powder coat finish that is textured for better gripping; flared handle corrects overbends.

VOLTAGE, CIRCUIT AND RECEPTACLE TESTERS

TESTERS

CATALOG NO.	UPC CODE	DESCRIPTION	CATALOG NO.	UPC CODE	DESCRIPTION
SCREWDRIVER PROBE VOLTAGE TESTER 			GFI RECEPTACLE TESTER 		
TES-101	78658	Checks 80-250V AC, no test leads required. Insulated screwdriver tip with pocket clip.	TES-131	78664	Tests 110 - 125V AC GFI Receptacle. Detects in correct wiring. Various combinations of three lights indicate if circuit is ok or up to six possible faulty conditions.
SCREWDRIVER PROBE VOLTAGE TESTER 			TWO-POLE VOLTAGE TESTER 		
TES-102	78659	Checks 80-250 AC, no test leads required. Insulated screwdriver tip with pocket clip.	TES-141	78665	This convenient tester has three neon lamp indicators for voltage readings at 120, 240 and 440V AC and 150, 300 and 500V DC.
TWIN LEAD CIRCUIT TESTER 			TWO-POLE VOLTAGE TESTER 		
TES-111	78660	Checks 80V-500V AC/DC. Built in lamp glows if circuit is live. With pocket clip.	TES-142	78666	This economical voltage tester features 2 LED and three neon lamp indicators for voltage readings at 120, with 4.5 to 400 volts AC or DC.
FOUR WAY CIRCUIT TESTER 			TWO-POLE VOLTAGE & CONTINUITY TESTER 		
TES-121	78662	Checks 110V, 220V, 277V and 460V AC/DC. Reinforced case and test leads. Neon indicators.	TES-143	78667	Tests for voltage continuity and polarity. For use with 4.5 to 440V AC/DC applications. Light-emitting diodes let you check polarity at a glance. Tests semi-conductors for continuity. Powered by 12 volt battery.
RECEPTACLE TESTER 			HEAVY DUTY SOLENOID VOLTAGE TESTER 		
TES-122	78663	Tests 110-125V AC. Detects faulty wiring in three wire receptacles. Various combinations of three lights indicate if circuit is ok up to six possible faulty conditions.	TES-151	78668	Tests voltage from 120 to 600V AC/DC. Case serves as prod holder for one hand operation. Dual voltage indication. Solenoid vibration sensing and electronic neon and visual indication. Positive or negative polarity of DC indicated by neon lamp.
			HEAVY DUTY SOLENOID VOLTAGE AND CONTINUITY TESTER 		
			TES-152	78669	Tests voltage from 6 to 600V AC/DC and continuity. Case serves as prod holder for one hand operation. Self storing prods. Positive or negative polarity of DC indicated by LED/s. Ergonomic soft PVC housing for comfort grip. Two AAA batteries included.

DUCT SEALING COMPOUND

Intended for sealing around electrical service entries, junction boxes and other devices where weather-proofing is critical. Will stay soft and pliable for several years and has an excellent shelf life. Will not damage wire covers, glass, wood, painted surfaces, plastics or other materials it may contact. It is chemically

inert, inhibiting no chemical activity and is nontoxic. Contains no asbestos or mineral fibers and no mineral oil which can shorten the effective life of the product. Remains pliable through a wide range of temperatures and will adhere to most clean dry surfaces.

G-2-S-DB	01009	1 1/4 - 2	10 sol - 2/0 str	10	49

HEAVY DUTY BRONZE GROUND CLAMP - DIRECT BURIAL FOR REBAR

Used to connect bare copper wire to water pipe, ground rods and rebar for bonding. Assembled with copper screws and UL Listed for direct burial in earth and concrete. Can accommodate ground wires up to 2 AWG.

CATALOG NO.	UPC CODE	WATER PIPE SIZE (INCHES)	GROUND WIRE RANGE	PIECES PER CARTON	SHPG. WT. LBS./100
G-1-S-DBR	00533	3/8 - 1	10 sol - 2/0 str	20	28

EXTRA HEAVY DUTY DIRECT BURIAL GROUND CLAMP

This incredible ground clamp can handle just about any size ground wire and just about any application. UL Listed for direct burial in earth and concrete, it can be used with rebar, water pipe, copper tubing and ground

rods up to 1 inch in diameter. Assembled with tough, stainless steel screws. Will accommodate ground wires from 8 AWG to 4/0 AWG.

CATALOG NO.	UPC CODE	GROUND WIRE RANGE	PIECES PER CARTON	SHPG. WT. LBS./100
G-140DB	00555	8 stranded - 4/0 stranded	10	45

HEAVY DUTY DIRECT BURIAL GROUND CLAMP WITH LAY-IN FEATURE

The ultimate ground clamp for large ground wires. This incredible ground clamp can handle just about any size ground wire and just about any application. The lay-in feature provides for the ultimate in flexibility. UL Listed for direct burial in earth and concrete, it can

be used with rebar, water pipe, copper tubing and ground rods up to 1 inch in diameter. Screws conveniently pre-assembled. Will accommodate ground wires from 8 AWG to 4/0 AWG.

GROUNDING CONNECTORS FOR ALUMINUM AND COPPER WIRES

These grounding connectors are designed for aluminum and copper wiring related to Telephone, CATV or radio TV antennae. They are corrosion resistant, include ss mounting hardware and provide easy

access for inspection. The lay-in clamp allows for easy installation of grounding wire, while the housing is impact resistant and UV stabilized. UL467 rated, for outdoor use.

COPPER 'C' TAPS

Copper "C" Taps are range-taking compression connectors made from high conductivity copper alloy. They are used for making tap or parallel copper connections from 8 SOL to 4/0 STR conductors. C-Tap connectors provide consistent reliability with heavy wall construction that prevents relaxation of the joint after installation. Installation time is reduced because of its "C" shape. UL CU486A, 467 suitable for direct burial and CSA rated Electrical and Grounding.

C TAPS COPPER COMPRESSION CONNECTORS

C TAPS  

These taps ensure positive, all-around compression with low resistance and high pull-out values. Made of high conductivity copper, they satisfy the requirements of NEC250-81 and 250-91 for connecting to the grounding electrode system. Rated for 600V applications.

SILICON BRONZE INSULATION PIERCING WISE GRIP CONNECTORS TIN PLATED FOR MESSENGER CABLE

This clamp is specifically designed for use on self-supporting rural, figure 8 or IM type telephone cable when connecting the messenger to the ground wire. As the clamp is tightened, its insulation piercing teeth puncture the insulation of the messenger, eliminating the need for wire stripping and forms a positive ground connection. The bolt is made of stainless steel.

TRANSFORMER GROUND CLAMPS

TRANSFORMER GROUND CLAMPS - EYE BOLT STYLE

Transformer ground clamp bodies are cast from high conductivity, high strength copper alloy with cast high strength bronze eyebolts. Stainless steel nuts and lockwashers are standard on all clamps. For silicon bronze hardware, suffix catalog number with "-SB". The HTGE provides a hex or square shoulder for wrench tightening. The flat surface also acts as a seal to the tank. The TGE may be tightened by using a wrench on the body.

COPPER LAY-IN CONNECTORS

Lay-in lugs are used for grounding or in continuous loop bonding and are available in several variations, depending on the application. GLC-4 has a copper body with a steel screw and is used for general grounding applications with copper wire. GLC-4 DB and GLC-4 DBP have copper bodies with stainless steel screws and are UL Listed for direct burial in earth or concrete with copper wire.

FLEXIBLE BRAID JUMPER STRAPS

"FS" flexible braid jumper straps are recommended to compensate for motion due to expansion, contraction, vibration and operational movement of current carrying members. Manufactured from flat, extra-flexible tinned braid, they are available in a wide variety of sizes and amperages. The ferrules are made from pure electrolytic copper and are tin-plated. Standard mounting holes are 9/16" NEMA spaded holes. Other sizes and styles are available. We can also provide the flexible strap, without the end ferrules, on a price per inch basis. Please contact NSi for price and availability information.

FLEXIBLE GROUND STRAP

Woven of high conductivity, annealed, tinned copper wire, this braided ground strap provides maximum flexibility and ease of handling when installing ground or shield continuity. This braid is used for shield and lead-sheath grounding and is easily soldered to lead, copper and tinned metals. It is also used for continuing the fault-carrying capacity of the cable shield as a jumper braid.
