Fort Bragg	Mendocino	21/22	New	Road Maintenance & Rehabilitation	Street and Alley Pavement Maintenance 21-22	This project will include: Procurement of Road Maintenance and Rehab Materials, Repair and Servicing of Public Works Equipment When small localized areas of pavement are found to be in poor condition they are treated with small scale pavement repair. Small scale pavement repair must be done in a timely fashion; as potholes grow and allow water intrusion which leads to more large scale deterioration of the pavement. Surface patching and crack sealing are the two primary intermediary actions taken to conserve the existing conditions of pavement. Pothole patching is the most common local technique, done by milling a portion of the pavement to a depth that removes all deteriorated material and then the pothole is filled with asphalt and compacted. The goal of this project is to prevent the local/residential streets and alleys with low PCI's from deteriorating into an un-usable state as these street categories often go unselected for full treatment due to the algorithm used to by the Pavement Management Program.
