GLOBAL IMPACT OF MITSUBISHI ELECTRIC

Through Mitsubishi Electric's vision, "Changes for the Better" are possible for a brighter future.

Changes for the Better

"Changes for the Better" represents the Mitsubishi Electric Group's attitude to "always strive to achieve something better", as we continue to change and grow. Each one of us shares a strong will and passion to continuously aim for change, reinforcing our commitment to creating "an even better tomorrow".

Mitsubishi Electric is involved in many areas including the following:

Energy and Electric Systems
A wide range of power and electrical products from generators to large-scale displays.

Electronic Devices
A wide portfolio of cutting-edge semiconductor devices for systems and products.

Home Appliance
Dependable consumer products like air conditioners and home entertainment systems.

Information and Communication Systems
Commercial and consumer-centric equipment, products and systems.

Industrial Automation Systems
Maximizing productivity and efficiency with cutting-edge automation technology.

#41
2019 Forbes
TOP 100 DIGITAL COMPANIES

Our advances in AI and IoT are adding new value to society in diverse areas from automation to information systems. The creation of game-changing solutions is helping to transform the world, which is why we are honored to be recognized in the 2019 "Forbes Digital 100" as one of world's most influential digital corporations.

(Note) The characteristic values and numerical values without tolerances mentioned in this manual are representative values.

CNC LINEUP

M800VW

Premium CNC with separated type provides expandability and flexibility

· Separated type, a control unit separated from display
· Windows-based display which provides excellent expandability
· Four expansion slots are provided as standard specifications, allowing for expansion using option card slot

M800VS

High-grade CNC well suited to high-speed high-accuracy machining and multi-axis multi-part system control

· Panel-in type, a control unit with integrated display
· Multi-CPU architecture allows for high performance and high functional graphics
· Non-Windows-based display provides easy operability

M80VW

Standard CNC with separated type provides expandability and flexibility

· Separated type, a control unit separated from display
· Windows-based display which provides excellent expandability
· Packaged type for selecting a machine type easily
· Two expansion slots are provided as standard specifications, allowing for expansion using option cards slot

M80V

Standard CNC provides high productivity and easy operability

· Panel-in type, a control unit with integrated display
· Provided in package (TypeA/TypeB) for easier selection
· Non-Windows-based display provides easy operability

E80

Simple CNC E80 Series, offering easy operability and high cost performance

· Panel-in type, a control unit with integrated display
· Provided in package (TypeA/TypeB) for easier selection
· Non-Windows-based display provides easy operability

C80

iQ Platform compatible CNC C80 Series incorporated with Mitsubishi Electric's state-of-the-art technologies

· Easy linkage with many and varied MELSEC units.
· MELSEC sequencer for PLC and GOT2000 for display unit are used.
· Three of C80 can be mounted on one base and the control system with up to 21 part systems/48 axes can be established.

SELECTION PROCEDURE

Selection procedure flow chart

Start selecting the NC specifications!

STEP 1 | Check the machine type and specifications |

▼

· Machine type: lathe / machining center / grinding machine / special-purpose machine, etc.
· Details of control, required accuracy, with/without auxiliary axes (for workpiece feeding, turret, etc.)

STEP 2 | Decide the NC specifications | P4

▼

· Number of axes, axis configuration, number of part systems, with/without spindles, number of I/O points
· Check the position detection method and detection performance (absolute/relative position, number of pulses)
· Select the size of the display unit, keyboard

STEP 3 | Decide the servo motor | P96

▼

· Select the servo motor capacity (NC Servo Selection)
· Check the outline dimensions, encoder, and whether it has a scale or break

STEP 4 | Decide the spindle motor | P102

▼

· Check the spindle's base/maximum rotation speed, output, torque, outline dimensions and whether it has a keyway
· Frame-type or built-in spindle motor
· With/without optional specifications (orientation, spindle/C-axis, synchronization, etc.)
· Check the C axis accuracy and the speed (when C axis is used)

STEP 5 | Decide the drive unit | P131

▼

· Check the capacity and the dimensions of a drive unit
· Check the power regeneration/resistor regeneration

STEP 6 | Decide the power supply unit | P143

▼

· Select the power supply unit only when a power regenerative drive unit is used

STEP 7 | Decide the hardware options | P47,P69,P176

▼

· Check the options (manual pulse generator, synchronous encoder, vibration cutting control, availability of network connection and PLC connection, etc.)
· Check the required cables and connectors

STEP 8 | Decide the software options | P11

▼

· Check the number of programs stored (memory capacity), number of variable sets, etc.
· Check the required functions

STEP 9 | Check the development tools | P193

▼

· Check the screen development tool (when screen customization is required)

NC specification selection completed!

M850VW	M830VW	M850VS	M830VS	M80VW —	M80V TypeA	M80V TypeB	E80 TypeA	E80 TypeB	C80 —	General explanation
○3	○3	○3	○3	○3	○3	○3	○3	○3	○3	The NC axis, spindle, and PLC axis are generically called the control axis.
○16 △32	○16 △32	○16 △32	○16 △32	11	11	9	6	4	16	The NC axis can be manually or automatically operated using a machining program. The PLC axis can be controlled using a sequence program. The number of axes that is within the max. number of control axes, and that does not exceed the max. number given for the NC axis, spindle and PLC axis, can be used. * Rotary axis up to 1 axis
○16	○16	○16	○16	9	9	5	5*	3	16	
6	6	6	6	4	4	2	1	1	7	
8	8	8	8	6	6	6	2	0	8	The number of PLC axes available to be used as indexing axis.
8	8	8	8	4	4	4	1	0	8	
8	4	8	4	4	4	4	4	3	4	Number of axes with which simultaneous interpolation control is possible.
○8 △12	○8 △12	○8 △12	○8 △12	8	8	5	5*	3	8	Max. number of NC axes possible to control in the same part system. * Rotary axis up to 1 axis
○	○	○	○	○	○	○	—	—	○	The axis name (command axis name) to issue the absolute/incremental command to NC control axis can be expanded to two letters.
1	1	1	1	1	1	1	1	1	1	One part system is the standard.

○2	○2	○2	○2	—	—	—	—	—	—	
○	○	○	○	○	○	○	○	○	—	In this mode, operation is performed using the machining program data from the RS-232C interface built in the CNC unit.
○	○	○	○	○	○	○	○	○	○	Machining programs stored in the memory of the CNC module are run.
○	○	○	○	○	○	○	○	○	○	MDI data stored in the memory of the CNC unit are executed.
△	△	—	—	○	—	—	—	—	—	The machining program stored in SD card can be operated by installing a SD card in the control unit SD card interface.
△	△	△	△	○	○	○	○	○	—	The machining program stored in the built-in disk of the display unit can be operated. The built-in disk of the display unit is mounted in the personal computer for M800VW/M80VW (Windows-based display unit). For M800VS/M80V/E80, the SD card inserted into SD card I/F on the back of the display unit is equivalent to the built-in disk of the display unit.
—	—	—	—	—	—	—	—	—	△	This function allows high-speed transfer of machining programs from the FTP server to the large-capacity buffer memory in CNC CPU via Ethernet to execute the program.
○	○	○	○	○	○	○	○	○	—	The machining program stored in a SD card can be operated. This SD card is installed to the front-side SD card I/F.
○	○	○	○	○	○	○	○	○	—	The machining program stored in a USB memory can be operated. This USB memory is installed to the front-side USB memory I/F.
										The data increment handled in the controller includes the input setting increment and command increment. Each type is set with parameters.
○	○	○	○	○	○	○	○	○	○	Possible to command in increments of 0.001mm (linear axis) and 0.001° (rotary axis).
○	○	○	○	○	○	○	○	—	○	Possible to command in increments of 0.0001mm (linear axis) and 0.0001° (rotary axis).
△	△	△	△	—	—	—	—	—	—	Possible to command in increments of 0.00001mm (linear axis) and 0.00001° (rotary axis).
△	△	△	△	—	—	—	—	—	—	Possible to command in increments of 0.000001mm (linear axis) and 0.000001° (rotary axis).
										The least control increment determines the CNC's internal operation accuracy.
○	○	○	○	○	○	○	○	○	○	Possible to control in increments of 0.00001mm (linear axis) and 0.00001° (rotary axis).
○	○	○	○	○	○	○	○	○	○	Possible to control in increments of 0.000001mm (linear axis) and 0.000001° (rotary axis).
○	○	○	○	○	○	○	○	○	○	This function limits the command value for the rotary axis.
○	○	○	○	○	○	○	○	○	○	The unit systems of the data handled in the controller include the metric system and inch system. The type can be designated with a parameter and a machining program.
○	○	○	○	○	○	○	○	○	○	The program's command increment can be multiplied by an arbitrary scale with the parameter designation. This function is valid when a decimal point is not used for the command increment.
										G code (program) format
—	—	—	—	—	—	—	—	—	—	
—	—	—	—	—	—	—	—	—	—	G code list for the lathe system. The G code list is selected by parameter.
—	—	—	—	—	—	—	—	—	—	
○	○	○	○	○	○	○	○	○	○	G code list for the machining center system. The G-code list is selected by parameter.
○	○	○	○	○	○	○	○	—	○	
—	—	—	—	—	—	—	—	—	—	The formats of the fixed cycle for turning machining (G77 to G79), compound type fixed cycle for turning machining (G71 to G76) and fixed cycle for drilling (G80 to G89) can be switched to the MITSUBISHI CNC special formats.
—	—	—	—	—	—	—	—	—	—	This function is designed to switch the program format (G code list) using G codes or PLC signal. When you run a lathe-based multi-tasking machine, and if you change to the G code list of machining center system, you can use a free-curved surface machining program made with CAM without modifying the program.
○	○	○	○	○	○	○	○	○	○	For the decimal point input type 1, the unit of the last digit of a command without a decimal point is the same as that of the least command increment. For decimal point input type 2, the last digit of a command without a decimal point is interpreted in millimeters during the metric mode, in inches in the inch mode, or in seconds for a time-based command.
○	○	○	○	○	○	○	○	○	○	When axis coordinate data are issued in a machining program command, either the incremental command method, which commands a relative distance from the current position, or the absolute command method, which commands a movement to a designated position in a predetermined coordinate system, can be selected.

Machining center system

M850VW	M830VW	M850VS	M830VS	M80VW —	M80V TypeA	M80V TypeB	E80 TypeA	E80 TypeB	C80 —	General explanation
—	—	—	—	—	—	—	—	—	—	The designation method of an axis command value can be changed over with parameters between the radius designation or diameter designation. When the diameter designation is selected, the scale of the length of the selected axis is doubled. (moves only half (1/2) the commanded amount)
○	○	○	○	—	—	—	—	—	—	Diameter/Radius designation switch function enables you to switch the diameter/radius designation of each axis using a G code at your desired timing.
○	○	○	○	○	○	○	○	○	○	This function carries out positioning at high speed using a rapid traverse rate with the travel command value given in the program.
△	△	△	△	○	○	○	○	○	△	The G code command always moves the tool to the final position in the direction determined by parameters.
○	○	○	○	○	○	○	○	○	○	Linear interpolation is a function that moves a tool linearly by the travel command value supplied in the program at the cutting feedrate designated by the F code.
○	○	○	○	○	○	○	○	○	○	This function moves a tool along a circular arc on the plane selected by the travel command value supplied in the program.
○	○	○	○	○	○	○	○	○	○	With this function, any two of three axes intersecting orthogonally are made to perform circular interpolation while the third axis performs linear interpolation in synchronization with the arc rotation. This control can be exercised to machine large-diameter screws or 3-dimensional cams.
△	△	△	△	○	○	—	—	—	△	This function interpolates arcs where the start point and end point are not on the circumference of the same circle into spiral shapes.
△	△	△	△	○	○	○	○	○	△	This function transfers the shape that is on the cylinder's side surface (shape yielded by the cylindrical coordinate system) onto a plane, and when the transferred shape is designated in the program in the form of plane coordinates, the shape is converted into a movement along the linear and rotary axes of the original cylinder coordinates, and the contours are controlled by means of the CNC unit during machining.
△	△	△	△	—	—	—	—	—	△	This function converts the commands programmed by the orthogonal coordinate axes into linear axis movements (tool movements) and rotary axis movements (workpiece rotation) to control the contours. It is useful for cutting linear cutouts on the outside diameter of the workpiece, grinding cam shafts, etc.
—	—	—	—	—	—	—	—	—	—	When a lathe with linear axes (X, Z axes) and rotary axis (C axis) serving as the control axis is to perform milling at a workpiece end face or in the longitudinal direction of the workpiece, this function uses the hypothetical axis Y, which is at right angles to both the X and Z axes, to enable the milling shape to be programmed as the X, Y and Z orthogonal coordinate system commands.
△	△	△	△	—	—	—	—	—	—	This function sets one of the axes of the helical interpolation or spiral interpolation, including a linear axis, as a hypothetical axis (axis with no actual movement), and performs pulse distribution. This enables SIN or COS interpolation, which corresponds to the side view (view from the hypothetical axis) of the helical interpolation or spiral interpolation.
△	△	△	△	○	○	—	—	—	—	Tools can be moved along the involute curve. This function can also move a tool helically (spirally) while moving the tool along the involute curve. This can be used for scroll machining of involute gears or compressors, and smooth accurate machining can be performed without stepping of path from the command by fine segment or without acceleration/deceleration by segment length.
△	△	△	△	—	—	—	—	—	—	With this function, the rotary axis movement is changed into exponential functions vis-a-vis the linear axis movements.
△	△	△	△	○	○	—	—	—	△	This function automatically generates spline curves that smoothly pass through rows of dots designated by a fine-segment machining program, and performs interpolation for the paths along the curves. This enables high-speed and high-accuracy machining.
△	△	△	△	—	—	—	—	—	—	This function realizes NURBS curve machining by commanding NURBS curve parameters (number of stages, weight, knot, control point). The path does not need to be replaced with fine segments.
△	△	△	△	○	○	—	—	—	—	An arc shape determined by three points (start point, intermediate point, end point) designated in the three-dimensional space can be machined.
△	△	△	△	○	○	—	—	—	△	This function automatically generates curves that smoothly pass in the tolerance error range, and moves on the paths along the curves. This enables smooth machining.
1000	1000	1000	1000	1000	1000	1000	1000	1000	1000	The rapid traverse rate can be set independently for each axis using parameters.
1000	1000	1000	1000	1000	1000	1000	1000	1000	1000	This function specifies the feedrate of the cutting commands, and gives a command for a feed amount per spindle rotation or feed amount per minute.
1000	1000	1000	1000	1000	1000	1000	1000	1000	1000	The manual feedrates are designated as the feedrate in jog mode or incremental feed mode for manual operation and the feedrate during dry run ON for automatic operation. The manual feedrates are set using external signals.
○	○	○	○	○	○	○	○	○	○	This function multiplies the rotary axis' command speed by ten during initial inching.
○	○	○	○	○	○	○	○	○	○	By issuing a G command, the command from the block is issued directly with a numerical value following F as the feedrate per minute (mm / min or inch / min).
△	△	△	△	○	○	○	○	○	△	By issuing a G command, the command from the block is issued directly with a numerical value following F as the feedrate per spindle revolution (mm / rev or inch / rev).
△	△	△	△	○	○	—	—	—	△	This function can issue one block of machining time (inverse) commands in F commands, in place of normal feed commands. This enables the machining speed on the cutting surface to be constantly controlled and prevents the loss of accuracy, even if radius compensation is applied to the machining program that expresses the free curve surface with fine segment lines.
○	○	○	○	○	○	○	○	○	○	The feedrate registered by parameter in advance can be assigned by designating a single digit, following address F.
△	△	△	△	○	○	○	○	—	△	By enabling a manual speed command and selecting either handle feed or jog (manual) feed in the memory or MDI mode, automatic operation can be carried out at this feedrate.
△	△	△	△	○	○	—	—	—	△	Feedrates can be specified for G00 (positioning command). The speed of tool exchange, axis movement of gantry, etc. can be specified with the machining program so that the mechanical vibration can be suppressed.
△	△	△	△	—	—	—	—	—	—	This function enables designation of the feedrate of a specific axis (with the command F).
○	○	○	○	○	○	○	○	○	○	Override can be applied to manual or automatic rapid traverse using the external input signal.
○	○	○	○	○	○	○	○	○	○	Override can be applied to the feedrate command designated in the machining program using the external input signal.
○	○	○	○	○	○	○	○	○	○	Override can be further applied as a second-stage override to the feedrate after the cutting feed override has been applied.
○	○	○	○	○	○	○	○	○	○	By turning on the override cancel external signal, the override is automatically set to 100% for the cutting feed during the automatic operation mode (tape, memory and MDI).

Machining center system

class	M850VW	M830VW	M850VS	M830VS	M80VW (—)	M80V TypeA	M80V TypeB	E80 TypeA	E80 TypeB	C80 (—)	General explanation
4 Acceleration / Deceleration											
1 Automatic acceleration / deceleration after interpolation	○	○	○	○	○	○	○	○	○	○	Acceleration / deceleration is automatically applied to all commands. The acceleration / deceleration patterns can be selected using a parameter from the following types: linear acceleration/deceleration, soft acceleration / deceleration, exponent function acceleration / deceleration and exponent function acceleration / linear deceleration.
2 Rapid traverse constant-gradient acceleration / deceleration	○	○	○	○	○	○	○	○	○	○	This function performs acceleration / deceleration at a constant-gradient during linear acceleration / deceleration by the rapid traverse command or the linear interpolation command. Compared to the method of acceleration / deceleration after interpolation, the constant-gradient acceleration / deceleration method enables improved cycle time.
3 Rapid traverse constant-gradient multi-step acceleration / deceleration	△	△	△	△	○	○	○	—	—	△	This function carries out the acceleration / deceleration according to the torque characteristic of the motor in the rapid traverse mode during automatic operation. (This function is not available in manual operation.) The rapid traverse constant-gradient multi-step acceleration / deceleration method makes for improved cycle time because the positioning time is shortened by using the motor ability to the maximum.
5 Thread cutting											
1 Thread cutting (Lead / Thread number designation)	△	△	△	△	○	○	○	○	○	△	Thread cutting with a designated lead can be performed. Inch threads are cut by designating the number of threads per inch with the E address.
2 Variable lead thread cutting	—	—	—	—	—	—	—	—	—	—	By commanding the lead increment/decrement amount per thread rotation, variable lead thread cutting can be performed.
3 Synchronous tapping											* With digital I/F spindle
1 Synchronous tapping cycle	○	○	○	○	○	○	○	○	○	○	This function performs tapping through synchronized control of the spindle and servo axis. This eliminates the need for floating taps and enables tapping to be conducted at a highly accurate tapping depth.
2 Pecking tapping cycle	△	△	△	△	○	○	○	○	○	△	The load applied to the tool can be reduced by designating the depth of cut per pass and cutting the workpiece to the hole bottom with a multiple number of passes.
3 Deep-hole tapping cycle	△	△	△	△	○	○	○	○	○	△	In the deep-hole tapping, the load applied to the tool can be reduced by designating the depth of cut per pass and cutting the workpiece to the hole bottom with a multiple number of passes.
4 Multiple spindle synchronous tapping	—	—	—	—	—	—	—	—	—	△	This function enables two or more spindles to perform synchronous tapping at a time, thereby improving the tapping efficiency.
5 Synchronous tapping with analog I/F spindle	○	○	○	○	○	○	○	○	○	—	This function performs tapping using the analog-connected spindle. A dedicated inverter with position controller is required.
4 Chamfering	—	—	—	—	—	—	—	—	—	—	Chamfering can be enabled during the thread cutting cycle by using external signals.
6 Circular thread cutting	—	—	—	—	—	—	—	—	—	—	Circular thread in which the lead is in longitudinal direction can be cut.
8 High-speed synchronous tapping (OMR-DD)	○	○	○	○	○	○	○	—	—	○	The servo axis directly detects and compensates the spindle's delay in tracking by using the communication between drive units over the high-speed optical servo network. By minimizing the synchronization error, the accuracy of the synchronous tapping is increased.
10 Thread recutting	—	—	—	—	—	—	—	—	—	—	The function stores a thread groove position and compensates a start position of spindle thread cutting automatically so that the tool can pass along the memorized position of the thread groove at the thread cutting execution.
11 Thread cutting override	—	—	—	—	—	—	—	—	—	—	The thread cutting feedrate can be changed by changing the spindle override depending on rough cutting, finish machining, etc.
12 Variable feed thread cutting	—	—	—	—	—	—	—	—	—	—	This function changes the cutting feedrate by the spindle override at the time of the thread cutting. The machining condition during thread cutting can be changed.
13 Thread cutting time constant switch	○	○	○	○	○	○	○	○	○	—	"Thread cutting time constant" can be applied to the acceleration/deceleration time constant of the NC control axis during the tread cutting.
6 Manual feed											
1 Manual rapid traverse	○	○	○	○	○	○	○	○	○	○	The tool can be moved at the rapid traverse rate for each axis separately. Override can also be applied to the rapid traverse rate by means of the rapid traverse override function.
2 Jog feed	○	○	○	○	○	○	○	○	○	○	The tool can be moved in the axis direction (+ or -) in which the machine is to be moved at the per-minute feedrate.
3 Incremental feed	○	○	○	○	○	○	○	○	○	○	The tool can be moved for the designated amount (incremental amount) in the axis direction each time the jog switch is pressed.
4 Handle feed	○	○	○	○	○	○	○	○	○	○	The machine can be moved in very small amounts by rotating the manual pulse generator.
5 Manual feedrate B	○	○	○	○	○	○	○	○	○	○	Manual feedrate B is a function that sets an arbitrary axis feedrate from the user PLC separately from the manual feedrate.
6 Manual feedrate B surface speed control	△	△	△	△	—	—	—	—	—	—	When machining with the manual feedrate B function by moving the orthogonal axis while rotating the rotary table, the table rotation speed is controlled according to the distance from the rotation center.
8 Manual speed clamp	○	○	○	○	○	○	○	○	○	○	The maximum speed for manual feed can be switched to the rapid traverse rate or the manual feed clamp speed.
7 Dwell											
1 Dwell (Time-based designation)	○	○	○	○	○	○	○	○	○	○	The G code command temporarily stops machine movements and sets the machine in the stand-by status for the time designated in the program.
2 Dwell (Revolution-based designation)	○	○	—	—	○	—	—	—	—	—	When G04 is commanded in the synchronous feed mode (G95), the machine waits for the spindle to rotate for the number of the revolutions designated.
5 Program memory / editing											
1 Memory capacity											
1 Memory capacity (number of programs stored)											
230kB [600m] (400 programs)	—	—	—	—	—	—	—	○	○	—	Machining programs are stored in the NC memory, NC memory 2, data server or external memory devices (front SD card, built-in disk of display unit, etc.). To use the extended memory, select the device "NC memory 2". (Note) For a multi-part system, the specifications shown here is the total for all part systems. * Up to 2000 programs for C80
500kB [1280m] (1000 programs)	○	○	○	○	○	○	○	—	—	○	
1000kB [2560m] (1000 programs)	△	△	△	△	—	—	—	—	—	△*	
2000kB [5120m] (1000 programs)	△	△	△	△	—	—	—	—	—	△*	
2 Extended Memory											
2000kB [5120m] (1000 programs)	○	○	○	○	○	○	○	—	—	—	
2 Editing											
1 Program editing	○	○	○	○	○	○	○	○	○	○	This function enables program editing such as correction, deletion and addition.
2 Background editing	○	○	○	○	○	○	○	○	○	○	This function enables one machining program to be created or edited while another program is running.
3 Buffer correction	○	○	○	○	○	○	○	○	○	○	During automatic operation (including memory, tape, SD card or Data Server (DS) operation) or MDI operation, this function initiates single block stop and enables the next command to be corrected or changed. When a program error has occurred, the function enables the block in which the error occurred to be corrected and operation to be resumed without having to perform NC resetting.
5 Multi-part system simultaneous program editing	○	○	○	○	—	—	—	—	—	—	When an operation to open a machining program in the NC memory is performed on the edit screen, machining programs are opened in the right and left areas at the same time; the specified machining program of the displayed part system in the edit area being selected and the machining program of another part system with the same name in the unselected edit area.

Machining center system

class	M850VW	M830VW	M850VS	M830VS	M80VW —	M80V TypeA	M80V TypeB	E80 TypeA	E80 TypeB	C80 —	General explanation
6	△	△	△	△	○	○	—	—	—	—	When the left and right edit areas are displaying the same named programs of different part systems stored on the NC memory, the display is switched to the synchronized display of the left- and right- side programs aligned using the timing synchronization symbols.
7	△	△	△	△	○	○	○	—	—	—	This function shows the machining shape according to the command at the time the machining program is input. The machining shape can be confirmed easily without performing the automatic operation or the graphic check.
1	—	—	—	—	—	□	□	○	○	—	The setting and display unit consists of the display unit and the keyboard unit. Refer to "*HARDWARE*" described later for the details. (Note) Only software keyboard is available and there is no hardware keyboard for the separated-type color touchscreen display (19-type LCD TFT/Windows8 or 19-type horizontal LCD TFT/Windows8).
2	—	—	□	□	—	□	□	—	—	—	
3	—	—	□	□	—	□	□	—	—	—	
4	—	—	□(Note 1)	□(Note 1)	—	□(Note 1)	□(Note 1)	—	—	—	
8	□	□	—	—	□	—	—	—	—	—	
9	□	□	—	—	□	—	—	—	—	—	
10	□	□	—	—	□	—	—	—	—	—	
11	—	—	—	—	—	—	—	—	—	○	Select a GOT in its lineup. For details, refer to catalogs : "GOT2000 series".
1	○	○	○	○	○	○	○	○	○	○	In addition to the method of directly inputting numeric data, a method to input the operation results using four basic arithmetic operators and function symbols can be used for specific data settings.
2	○	○	○	○	○	○	○	○	○	○	When setting the data, the absolute/incremental setting can be selected from the menu.
3	—	—	—	—	—	—	—	—	—	○(GOT)	Using an Ethernet hub, one CNC module can be connected to and switched between up to eight displays. (Note that the max. number of connectable displays is limited depending on the machine operation panel specifications.)
4	—	—	—	—	—	—	—	—	—	○(GOT)	Using an Ethernet hub, one display can be connected to and switched between up to 64 CNC modules. (Note that the max. number of connectable displays is limited depending on the machine operation panel specifications.)
5	○	○	○	○	○	○	—	—	—	○	The part system displayed on the screen can be changed.
6	○	○	○	○	○	○	○	○	○	○	The menu list function displays the menu configuration of each screen as a list, making it possible to directly select the menu for other screens.
7	○	○	○	○	○	○	○	○	○	○	The screen display changes when the screen mode selection switch is changed.
8	○	○	○	○	○	○	—	—	—	○	The screen display changes with the signal from PLC.
9	○	○	○	○	○	○	○	○	○	○(GOT)	The screen saver function protects the display unit by turning the backlight OFF after the length of time specified in a parameter.
10	○	○	○	○	○	○	○	○	○	○	This function displays the details of the parameters or the operation methods according to the state of the screen currently displayed.
11	○	○	○	○	○	○	○	○	○	○	Guidance is displayed for the alarm currently issued.
12	△	△	△	△	—	—	—	—	—	—	If an illegal input is found in the decimal point after the current cursor position, the cursor will move to that position, and a warning message will appear.
14	—	—	○	○	—	○	○	○	○	○(GOT)	This function allows to output a bitmap file of a screen displayed on the setting and display unit to USB memory or SD card.
15	○	○	○	○	○	○	○	○	○	○	This function allows to change the display order of the main menu in the "Monitor", "Setup" and "Edit" screens, and to change display / non-display selection.
16	○	○	—	—	○	—	—	—	—	—	This function supports to restore the connection when the network connection fails between the display unit and the control unit.
17	○	○	○	○	○	○	○	○	○	—	This function can set or change the user backed up area of the PLC device from the NC screen.
18	○	○	○	○	○	○	○	○	○	—	This function can set or change the SRAM open area for machine tool builders from the NC screen.
19	○	○	○	○	○	○	○	○	○	○	Menu items on the "Monitor", "Setup" and "Edit" screens (of Mitsubishi Electric standard format) can be moved within a screen or hidden as desired. The custom screen menu items added by machine tool builders, on the contrary, cannot be moved or hidden.
20	—	—	△	△	—	○	○	—	—	—	This enables the operation of the external personal computer on the screen of NC with UltraVNC Server embedded.
21	—	—	△	△	—	○	○	—	—	—	This function enables status confirmation and remote operation by displaying the NC screen display on the external computer/tablet type computer.
1	○	○	○	○	○	○	○	○	○	○	The status of the program currently being executed is indicated.
2	○	○	○	○	○	○	○	○	○	○	The clock is built in, and the date (year, month, date) and time (hour, minute, second) are displayed.
3	○	○	○	○	○	○	○	○	○	○	Various information related to operation, such as the axis counter, speed display and MSTB command are displayed.
4	○	○	○	○	○	○	○	○	○	○	Tool/workpiece related settings, user parameter settings, MDI editing, counter setting, manual numeric command issuing and pallet program registration (option) can be carried out.
5	○	○	○	○	○	○	○	○	○	○	Machining program editing (addition, deletion, change) and checking, simple program creation, and machining program input / output can be carried out.
6	○	○	○	○	○	○	○	○	○	○	The following operations related to the CNC diagnosis can be carried out. (1) Display the hardware and software configuration. (2) Display the CNC options. (3) Diagnose the PLC interface. (4) Display the drive unit information. (5) Display the alarm message / alarm history list etc.
7	○	○	○	○	○	○	○	○	○	○	Parameter setting and display, and NC data input/output, etc., can be carried out.
8	○	○	—	—	○	—	—	—	—	—	19-type vertical display unit has the expansion applications that display the machine status, software keyboard, etc. in the lower half of the screen in no linkage with the upper half.
9	○	○	○	○	○	○	○	○	—	—	Home screen is able to display the machine status (including spindle loads and positions of linear and rotary axes) which can be monitored by an operator. Also, each application can be called by pressing the application button on the home screen.

(Note 1) This specification is under development, please contact us for details.

Machining center system

class	M850VW	M830VW	M850VS	M830VS	M80VW —	M80V TypeA	M80V TypeB	E80 TypeA	E80 TypeB	C80 —	General explanation
Languages 1–6	○	○	○	○	○	○	○	○	○	○	
Traditional / Simplified Chinese	○	○	○	○	○	○	○	○	○	○	
Korean–Czech	○	○	○	○	○	○	○	○	○	○	Available display languages.
Indonesian	○	○	○	○	○	○	○	○	○	—	
Vietnamese	○	○	○	○	○	○	○	○	○	—	
Input / Output data (1–7)	○	○	○	○	○	○	○	○	○	○	Certain kinds of data handled by the NC system can be input and output between the NC system's memory and external devices.
RS-232C I/F	○	○	○	○	○	○	○	○	○	—	Port 1 and 2 are available with the RS-232C interface. The connection point for a connector depends on the product model.
Control unit-side SD card I/F	○	○	—	—	○	—	—	—	—	—	Interface card to use SD card can be attached inside the NC control unit.
Front-side SD card I/F	○	○	○	○	○	○	○	○	○	—	Interface card to use SD card can be attached in front of the display unit.
Ethernet I/F	○	○	○	○	○	○	○	○	○	○(GOT)	Ethernet interface card can be attached onto the NC unit.
Display unit-side data server I/F	○	○	○	○	○	○	○	○	○	—	A built-in disk of display unit can be used.
Front-side USB memory I/F	○	○	○	○	○	○	○	○	○	—	A USB memory can be mounted.
USB I/F (GOT front-side USB I/F)	—	—	—	—	—	—	—	—	—	○	Interface card to use USB memory can be attached inside the GOT.
SD I/F (GOT back-side SD card I/F)	—	—	—	—	—	—	—	—	—	○	Interface card to use SD card can be attached inside the GOT.
Image input I/F	—	—	□(Note 1)	□(Note 1)	—	□(Note 1)	□(Note 1)	—	—	—	This function enables the image of IPC (industrial PC) applications and the monitor image of the machine interior camera to be displayed on the NC screen. It is possible to operate the IPC applications on the NC screen. *The image input expansion unit is required.
Computer link B	△	△	△	△	○	○	○	—	—	—	Computer link B is a function to receive/send data between the host computer and the CNC.
Handy terminal connection	○	○	○	○	○	○	○	—	—	—	This function controls the serial communication (RS232C) of CNC and handy terminal. Handy terminal is a downsized machine operation panel which enables you to operate the machine including setup at hand.
IP filter setting	○	○	○	○	○	○	○	○	○	—	This function prevents unauthorized access from external devices by filtering the IP address of the access source when the NC is being connected to Ethernet.
Spindle control functions											The spindle rotation speed is determined in consideration of the override and gear ratio for the S command given in automatic operation or with manual numerical commands, and the spindle is rotated.
Spindle digital I/F	○	○	○	○	○	○	○	○	○	○	This interface is used to connect the digital spindle (AC spindle motor and spindle drive unit).
Spindle analog I/F	○	○	○	○	○	○	○	○	○	△(MELSEC)	Spindle control can be executed using an analog spindle instead of the digital spindle.
Coil switch	○	○	○	○	○	○	○	○	○	○	Constant output characteristics can be achieved across a broad spectrums down to the low-speed ranges by switching the spindle motor connections. This is a system under which commands are assigned from the PLC.
Automatic coil switch	○	○	○	○	○	○	○	○	○	○	Constant output characteristics can be achieved across a broad spectrums down to the low-speed ranges by switching the spindle motor connections. This is a system under which the CNC module switches the coils automatically in accordance with the motor speed.
Encoder input I/F	□	□	○	○	□	○	○	○	○	—	With this function, arbitrary pulse can be input by parameters set in R register. *Encoder I/F expansion unit is required for M800VW/M80VW.
Spindle-mode servo motor control	△	△	△	△	○	○	○	—	—	△	This function controls a spindle using the combination of servo motor and servo drive unit (MDS-E Series) which controls NC axis.
Spindle-mode rotary axis control	△	△	△	△	○	○	—	—	—	—	This function enables a rotary axis driven by a servo motor to be controlled as a spindle. This enables lathe-turning machining, including synchronous feed and thread cutting, to be performed in synchronization with the feedback speed of the rotary axis (spindle-mode rotary axis mode).
Turret gear change control	—	—	—	—	—	—	—	—	—	—	This function enables axes in the semi-closed system to select four types of gear ratios which are set to the spindle specification parameters according to the control input from the PLC.
Spindle control with pulse train output	—	—	—	—	○	○	○	○	○	—	This function controls spindles by pulses output from the NC.
S code output	○	○	○	○	○	○	○	○	○	○	When an 8-digit number following address S (S0 to S±99999999) is commanded, signed 32-bit binary data and start signal, or non-signed 32-bit binary data and start signal will be output to the PLC.
Constant surface speed control	○	○	○	○	○	○	○	○	○	○	With radial direction cutting, this function enables the spindle speed to be changed in accordance with changes in the radial direction coordinates and the workpiece to be cut with the cutting point always kept at a constant speed (constant surface speed).

(Note 1) This specification is under development, please contact us for details.

Machining center system

	M800VW		M800VS		M80VW	M80V		E80		C80	General explanation
	M850VW	M830VW	M850VS	M830VS	—	M80V TypeA	M80V TypeB	E80 TypeA	E80 TypeB	—	
○	○	○	○	○	○	○	○	○	○		This function applies override to the rotation speed of a spindle or milling spindle assigned by the machining program command during automatic operation or by manual operation.
											Multiple-spindle control is a function that controls all the spindles except the first spindle (main spindle) in a machine tool equipped with the second, third and fourth spindles (sub-spindles) in addition to the first spindle.
—	—	—	—	—	—	—	—	—	—		This function controls the spindles in a machine tool equipped with several spindles.
○	○	○	○	○	○	○	—	—	○		With this function, commands to the spindle are performed with one S command, and a signal from the PLC determines which spindle is selected.
○	○	○	○	○	○	○	○	○	○		This function stops the spindle rotation at a certain position.
○	○	○	○	○	○	○	○	—	○		This function enables one spindle drive unit to be also used as the C axis (rotary axis) using an external signal.
△	△	△	△	—	—	—	—	—	△		This control enables C axis positioning while a long workpiece is controlled by front and back spindles that are in synchronization with each other. Under this control, the machine can perform milling at the center of workpiece.
○	○	○	○	○	○	○	—	—	○		In a machine with two or more spindles, this function controls the rotation speed and phase of one selected spindle (synchronized spindle) in synchronization with the rotation of the other selected spindle (basic spindle). There are two methods for giving commands: G code and PLC.
○	○	○	○	○	○	○	—	—	○		
—	—	—	—	—	—	—	—	—	—		This function is used for a machine with a spindle motor to rotate a guide bushing. It synchronizes the guide bushing spindle (G/B spindle) with the spindle motor used as a reference (basic spindle).
△	△	△	△	○	○	○	○	○	—		In a machine containing a rotary tool axis and that has a spindle controlled as the workpiece axis, spindle-spindle polygon machining can be carried out by controlling the workpiece axis rotation in synchronization with the rotation of the rotary tool axis.
△	△	△	△	○	○	○	○	○	—		In a machine containing a workpiece axis and that has a spindle controlled as the rotary tool axis, spindle-spindle polygon machining can be carried out by controlling the rotary tool axis rotation in synchronization with the rotation of the workpiece axis.
△	△	△	△	○	○	—	—	—	—		This function controls the workpiece (spindle) and tool (NC axis) so that they synchronously rotate at the commanded ratio, allowing polygon machining.
△	△	△	△	○	○	—	—	—	—		This function is to cut the gear with a hob (hob cutter).
○	○	○	○	○	○	○	○	○	○		The spindle rotation speed is clamped between max. rotation speed and min. rotation speed.
△	△	△	△	—	—	—	—	—	—		This function reciprocates (oscillates) the spindles with designated amplitude and frequency.
—	—	—	—	—	—	—	—	—	—		Spindles are controlled by superimposing the rotation speed of one spindle on the rotary speed of other spindle. Use this function when the tool spindle needs to be rotated with the superimposed speed on the spindle rotation speed.
—	—	—	—	—	—	—	—	—	○		By setting the parameter, spindle synchronization I, tool spindle synchronization IA/IB (spindle-spindle, polygon), tool spindle synchronization II (hobbing) and spindle superimposition control can be executed simultaneously for multiple sets of spindles.
△	△	△	△	○	○	○	○	○	—		When this function is valid and the spindle actual speed fluctuates for the commanded speed by the program due to external factors such as load fluctuation, the NC outputs the signal to PLC and the operation error occurs. PLC can take the necessary measure for the fluctuation of the spindle speed using the output signal from the NC.
○	○	○	○	○	○	○	○	○	—		This function outputs spindle temperature to an R register assigned for each spindle.
○	○	○	○	○	○	○	○	○	○		The tool function is commanded with an 8-digit number following the address T (T0 to T99999999) to specify the tool No. In the controller for a lathe, the tool compensation (tool length compensation, tool nose wear compensation) Nos. are also indicated.
○	○	○	○	○	○	○	○	○	○		Miscellaneous function, or M function, is used to command auxiliary functions for NC, such as rotating the spindle forward / backward or stopping it, as well as turning the cooling oil ON/OFF.
○	○	○	○	○	○	○	○	○	○		Multiple sets of M commands can be issued in a block.
○	○	○	○	○	○	○	○	○	○		When the M00, M01, M02 or M30 command is issued during an automatic operation (tape, memory, MDI) or by a manual numerical command, the signal of this function is output. It is turned OFF after the miscellaneous function finishes or by the reset & rewind signal.
○	○	○	○	○	○	○	○	○	○		These signals inform the CNC system that a miscellaneous function (M), spindle function (S), tool function (T) or 2nd miscellaneous function (A, B, C) has been issued, and that the PLC that has received it has completed the required operation. They include miscellaneous function finish signal 1 (FIN1) and miscellaneous function finish signal 2 (FIN2).
—	—	—	—	—	—	—	—	—	○		This function controls the timing at which miscellaneous functions are output, and it outputs a miscellaneous function when the axis reaches the designated position movement.
○	○	○	○	○	○	○	○	○	○		This function shortens a processing time per miscellaneous function.
○	○	○	○	○	○	○	○	○	○		The code data and start signals are output when an 8-digit number is assigned following the address code A, B or C . whichever does not duplicate the axis name being used.
○	○	○	○	○	○	○	○	○	○		The 2nd miscellaneous function name same as the additional axes (A, B, C) can be used by specifying the command address of the 2nd miscellaneous function with two characters.
○	○	○	○	○	○	○	○	○	○		These commands make it possible to control the axis movement by offsetting the position of the end point of the travel command by the amount set in the tool compensation screen.
○	○	○	○	○	○	○	○	○	○		This function uses commands to control the movement by changing the end point positions of the movement commands to positions which have been extended or reduced for a tool compensation amount.
—	—	—	—	—	—	—	—	—	—		The tool compensation for a lathe is valid for the X and Z axes. If an additional axis (Y axis) is added, the tool compensation will be validated for the additional axis.
△	△	△	△	—	—	—	—	—	—		The position compensation of a turning tool is executed when turning is performed in a machine of machining center system. * Option is "turning machining tool compensation".

○Standard △Optional □Selection

5 CNC SYSTEM

The following table combines the Lathe system and Machining center system columns. Each data group (Lathe / Machining center) has the sub-columns listed in the header.

class	L: M850VW	L: M830VW	L: M850VS	L: M830VS	L: M80VW	L: M80V TypeA	L: M80V TypeB	L: E80 TypeA	L: E80 TypeB	L: C80	MC: M850VW	MC: M830VW	MC: M850VS	MC: M830VS	MC: M80VW	MC: M80V TypeA	MC: M80V TypeB	MC: E80 TypeA	MC: E80 TypeB	MC: C80	General explanation
2 Tool radius																					
1 Tool radius compensation	—	—	—	—	—	—	—	—	—	—	○	○	○	○	○	○	○	○	○	○	This function provides tool radius compensation. Through a combination of the G command and D address assignment, the actual tool center path is compensated either inside or outside the programmed path by an amount equivalent to the tool radius.
2 3-dimensional tool radius compensation	△*	△*	—	—	—	—	—	—	—	—	△	△	△	△	—	—	—	—	—	—	This command serves the function of compensating the spherical radius of ball end mills. It compensates the actual tool center path to be either more outside or inside the programmed path by an amount equivalent to the tool radius amount in accordance with the 3-dimensional vectors. *This function is available during program format switch for L system.
3 Tool nose radius compensation (G40 / 41 / 42)	○	○	○	○	○	○	○	○	○	○	△	△	△	△	—	—	—	—	—	—	The tool nose of the specified tool No. is assumed to be a half circle of the radius R, and compensation is applied so that the half circle touches the programmed path. *Option for M system is "turning machining tool compensation".
4 Automatic decision of nose radius compensation direction (G46 / 40)	○	○	○	○	○	○	○	○	○	○	—	—	—	—	—	—	—	—	—	—	The nose radius compensation direction is automatically determined from the tool tip and the specified movement vector.
5 Tool radius compensation diameter designation	—	—	—	—	—	—	—	—	—	—	○	○	○	○	○	○	○	○	○	○	Tool diameter designation handles the compensation amount as diameter value and compensates the amount set in the tool compensation amount screen when tool radius compensation (G41/G42) is commanded.
3 Tool offset amount																					
1 Number of tool offset sets																					
1 99 sets	—	—	—	—	—	—	○	○	○	—	—	—	—	—	—	—	—	—	○	—	The number of configurable sets of tool data such as tool length compensation and tool radius compensation.
2 128 sets	○	○	○	○	—	—	—	—	—	○	—	—	—	—	—	—	—	—	—	—	
3 200 sets	—	—	—	—	—	—	—	—	—	—	○	○	○	○	—	—	—	○	—	○	
4 256 sets	—	—	—	—	○	○	—	—	—	△	—	—	—	—	—	—	—	—	—	—	
5 400 sets	△	△	△	△	—	—	—	—	—	—	△	△	△	△	○	○	○	—	—	△	
6 999 sets	△	△	△	△	—	—	—	—	—	—	△	△	△	△	—	—	—	—	—	—	
2 Offset memory																					
1 Tool shape / wear offset amount	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	This function registers the tool shape compensation and wear compensation amounts.
2 Compensation type selection by parameter	—	—	—	—	—	—	—	—	—	—	○	○	○	○	○	○	○	—	—	—	This function switches the tool compensation type to the tool compensation type III with the parameter. This function enables tool compensation for a turning tool by registering the tool compensation amount of the base axes IJK and tool tip point for a machining center system.
3 Number of tool offset sets allocation to part systems	○	○	○	○	○	○	○	—	—	—	○	○	○	○	—	—	—	—	—	—	* Variable number of per-part-system tool offset sets. The number of tool offset sets can be set per part system. There are two types of the allocation: "Arbitrary allocation" which allocates the number of tool offset sets to each part system arbitrarily and "Fixed allocation" which automatically allocates the number of tool offset sets to each part system equally, and the type can be selected using the parameter.
10 Coordinate system																					
1 Coordinate system type and setting																					This shows the coordinate systems handled by the NC. The points that can be commanded with the movement command are points in the local coordinate system or machine coordinate system.
1 Machine coordinate system	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	The machine coordinate system is used to express the prescribed positions (such as the tool change position and stroke end position) that are specific to each machine, and it is automatically set immediately upon completion of the first dog-type reference position return after power ON, or immediately after power ON if the absolute position specifications apply.
2 Coordinate system setting	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	The zero point position of the program coordinate system can be shifted to an arbitrary position by G92 command.
3 Automatic coordinate system setting	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	After turning the power ON, even without executing the reference position return, the basic machine coordinate system and the workpiece coordinate system are set automatically.
4 Workpiece coordinate system selection																					
1 Workpiece coordinate system selection (6 sets)	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	When multiple workpieces with the same shape are to be machined, these commands enable the same shape to be machined by executing a single machining program in the coordinate system of each workpiece.
2 Extended workpiece coordinate system selection (48 sets) G54.1P1 to P48	△	△	△	△	○	○	○	○	○	△	△	△	△	△	○	○	○	○	—	△	In addition to the six workpiece coordinate systems G54 to G59, 48/96 sets of workpiece coordinate systems can be used by assigning G54.1Pn command.
3 Extended workpiece coordinate system selection (96 sets) G54.1P1 to P96	—	—	—	—	—	—	—	—	—	—	△	△	△	△	—	—	—	—	—	—	
4 Extended workpiece coordinate system selection (300 sets) G54.1P1 to P300	—	—	—	—	—	—	—	—	—	—	△	△	△	△	—	—	—	—	—	—	
5 External workpiece coordinate offset	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	An external workpiece coordinate offset that serves as a reference for all the workpiece coordinate systems is available outside the workpiece coordinates. By setting the external workpiece coordinate offset, the external workpiece coordinate system can be shifted, and all the workpiece coordinate systems can be simultaneously shifted by an amount equivalent to the offset.
6 Workpiece coordinate system preset (G92.1)	○	○	○	○	○	○	○	○	○	○	△	△	△	△	—	—	—	—	—	—	This function presets the workpiece coordinate system, which has been shifted by the programmed command or the manual operation, as the workpiece coordinate system which has been offset by the programmed command (G92.1) from the machine zero point by an amount equivalent to the workpiece coordinate offset amount.
7 Local coordinate system	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	This function is for assigning another coordinate system in the workpiece coordinate system currently selected. This enables the workpiece coordinate system to be changed temporarily.
8 Coordinate system for rotary axis	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	The rotary axis includes the rotating type (short-cut valid/invalid) or the linear type (workpiece coordinate position linear type, all coordinate position linear type). The workpiece coordinate position range is 0 to 359.999° for the rotating type, and 0 to 99999.999° for the linear type.
9 Plane selection	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	By issuing a G code, it is possible to specify the planes for the arc, tool radius compensation, coordinate rotation and other commands.
10 Origin set / Origin cancel	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	Origin set is a function that shifts the coordinate system so that the current position is set as the zero point in the workpiece coordinate system containing the workpiece coordinate system's offset value. Origin cancel is a function that manually cancels all deviated amounts, and shifts to the designated zero point with the workpiece offset.
11 Counter set	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	The relative position counter can be set to an arbitrary value from the setting and display unit screen.
12 Workpiece position offset for rotary axis	—	—	—	—	—	—	—	—	—	—	△	△	△	△	○	○	—	—	—	—	For a machine equipped with a table rotary axis, this function corrects installation errors between workpiece coordinate zero point and workpiece reference position.
13 Workpiece coordinate system shift	○	○	○	○	○	○	○	○	○	○	—	—	—	—	—	—	—	—	—	—	When a workpiece coordinate system which is considered at programming is misaligned with an actual set workpiece coordinate or a workpiece coordinate set by automatic coordinate system setting, the measured workpiece coordinate system can be shifted to the workpiece coordinate system at the program creation so that the machining can be performed without modification of the machining program.
2 Return																					
1 Manual reference position return	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	This function enables the tool to be returned manually to a position specific to the machine (reference position).
2 Automatic 1st reference position return	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	By commanding the G code during an automatic operation, the 1st reference position return is executed. If an intermediate point is commanded, a positioning is made to the point at rapid traverse rate, then each axis returns to its 1st reference position.

○Standard △Optional □Selection

[M800V/M80V]S/W ver.A2　[E80]S/W ver.F7　[C80]S/W ver.B9

5 CNC SYSTEM

class	Lathe M850VW	M830VW	M850VS	M830VS	M80VW	M80V TypeA	M80V TypeB	E80 TypeA	E80 TypeB	C80	MC M850VW	M830VW	M850VS	M830VS	M80VW	M80V TypeA	M80V TypeB	E80 TypeA	E80 TypeB	C80	General explanation
3 2nd, 3rd, 4th reference position return	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	As in the automatic 1st reference position return, by commanding the G code during an automatic operation, an axis returns to a certain position specific to the machine (2nd/3rd/4th reference position).
4 Reference position check	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	By issuing a G code, a machining program where the tool is programmed to start off from the reference position and return to the reference position can be checked if the tool will return successfully to the reference position.
5 Absolute position detection	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	With this function, a battery stores the relation of the actual machine position and the machine coordinate kept in the CNC even during the power OFF, and an automatic operation is enabled without executing a reference position return.
6 Tool exchange position return	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	By specifying the tool change position in a parameter and also assigning a tool change position return command in a machining program, the tool can be changed at the most appropriate position.
11 Operation support functions																					
1 Program control																					
1 Optional block skip	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	When "/" (slash code) is programmed at the head of a block, and the optional block skip input signal from the external source is turned ON for automatic operation, the block with the "/" code is skipped.
2 Optional block skip addition	○	○	○	○	○	○	○	—	—	○	○	○	○	○	○	○	○	—	—	○	When "/n (n: 1 to 9)" is programmed at the head of a block, and the optional block skip input n signal from the external source is turned ON for automatic operation, the block with the "/n" code is skipped.
3 Single block	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	The commands for automatic operation can be executed one block at a time (block stop) by turning ON the single block input signal.
2 Program test																					
1 Dry run	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	F code feed commands for automatic operation can be switched to the manual feedrate data of the machine operation board by turning ON the dry run input signal.
2 Machine lock	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	When the machine lock input signal is set to ON, the CNC operations can be executed without actually moving the NC axis.
3 Miscellaneous function lock	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	When the "External input" signal or "Miscellaneous function lock" signal is turned ON, the output signals of M, S, T, and B (2nd miscellaneous function) will not be output to the PLC. This is useful when checking only travel commands in a program check.
4 Graphic check																					
1 Graphic check	○	○	○	○	○	○	○	○	○	—	○	○	○	○	○	○	○	○	○	—	This function traces the programmed movement path without executing an automatic operation. It enables three-dimensional drawing and also rotary axis drawing. 3D machining simulation enables the shape of the workpiece and the movement and interference of the tool during cutting to be checked. By using this function, machining programs can be checked before they are actually run.
2 3D solid program check	○	○	○	○	○	○	○	○	○	—	○	○	○	○	○	○	○	○	○	—	
3 Graphic check rotary axis drawing	△	△	△	△	○	○	○	○	○	—	—	—	—	—	—	—	—	—	—	—	
4 3D machining simulation	—	—	—	—	—	—	—	—	—	—	△	△	—	—	—	—	—	—	—	—	
5 Graphic trace																					
1 Graphic trace	○	○	○	○	○	○	○	○	○	—	○	○	○	○	○	○	○	○	○	—	This function traces the machine tool's machine positions. It draws the movement path of an actual automatic or manual operation, and the tool tip movement path. The function also monitors the machine operations during machining. It enables the drawing of a rotary axis as well.
2 Graphic trace rotary axis drawing	△	△	△	△	○	○	○	○	○	—	—	—	—	—	—	—	—	—	—	—	
6 Machining time computation	○	○	○	○	○	○	○	○	○	—	○	○	○	○	○	○	○	○	○	—	This function analyzes the machining program without moving the axis and calculates the approximate time required for machining.
7 Manual arbitrary reverse run (Program check operation)	△	△	△	△	○	○	○	○	○	△	△	△	△	△	○	○	○	—	—	△	The manual arbitrary reverse run can be performed by controlling the feedrate being in the automatic operation in the memory or MDI mode in proportion to the manual feedrate by jog or the rotation speed by manual handle.
8 High-speed simple program check	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	This function checks whether a program error occurs by operating the machining program without the axes movements. The estimated machining time can be checked in time shorter than the actual execution time of the machining program.
3 Program search / start / stop																					
1 Program search	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	This function specifies the program No. of the program to run automatically and calls the program.
2 Sequence number search	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	Blocks can be indexed by setting the program No., sequence No. and block No. of the program to run automatically.
3 Verification stop	○	○	○	○	○	○	○	—	—	○	○	○	○	○	○	○	○	—	—	○	This function enables the single block stop status to be established at any block without having to turn the SINGLE BLOCK switch ON.
4 Program restart	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	When a machining program is to be resumed after suspended midway due to tool damage or for some other reason, this function searches the program and the block to resume and enables machining to be resumed from the block.
5 Automatic operation start	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	With the input of the automatic operation start signal (change from ON to OFF), automatic operation of the program that was found by an operation search is started by the controller (or the halted program is restarted).
6 NC reset	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	This function enables the controller to be reset.
7 Feed hold	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	When the feed hold signal is set to ON during automatic operation, the machine feed is immediately decelerated and stopped.
8 Search & Start	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	If the "Search & Start" signal is input when the memory mode is selected, the designated machining program is searched and executed from the beginning.
10 Auto-restart	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	A machining program is restarted automatically at the completion of the machining program execution.
4 Interrupt operation																					
1 Manual interruption	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	Manual interrupt is a function that enables manual operations to be performed during automatic operation.
2 Automatic operation handle interruption	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	The handle command can interrupt and be superimposed onto a command without suspending automatic operation to move the machine by rotating the manual pulse generator during automatic operation.
3 Manual absolute switch	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	The program absolute positions are updated by an amount equivalent to the distance by which the tool is moved manually when the manual absolute switch signal is turned ON.
4 Thread cutting cycle retract	○	○	○	○	○	○	○	—	—	○	○	○	○	○	○	○	○	—	—	—	This function suspends the thread cutting cycle if a feed hold signal has been input during thread cutting cycle.
5 Tapping retract	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	If tapping is interrupted by a reset or emergency stop signal that is input during tapping and the tap is left engaged inside the workpiece, the tap tool engaged inside the workpiece can be rotated in the reverse direction so that it will be disengaged by inputting the tap retract signal.
6 Manual numerical value command	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	On the screen of the setting and display unit, the M, S and T (and B when 2nd miscellaneous function is valid) commands can be executed by setting numerical values and pressing [INPUT].
7 Arbitrary reverse run	—	—	—	—	—	—	—	—	—	—	○	○	○	○	○	○	○	—	—	—	This function allows a program to run the executed blocks backward after the block stop in the automatic operation.
8 MDI interruption	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	This function enables MDI programs to be executed during automatic operation in the single block stop status. When the modal status is changed in a MDI program, the modal status in the automatic operation mode is also changed.
9 Simultaneous operation of manual and automatic modes	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	This function enables manual operations to be performed during automatic operation by selecting an automatic operation mode (tape, MDI or memory) and manual mode (handle, step, jog or manual reference position return) simultaneously. (Arbitrary feed based on the PLC is also possible.)

Machining center system

class	M850VW	M830VW	M850VS	M830VS	M80VW —	M80V TypeA	M80V TypeB	E80 TypeA	E80 TypeB	C80 —	General explanation
10 Simultaneous operation of JOG and handle modes	○	○	○	○	○	○	○	○	○	○	When executing the jog feed and handle feed, both these feeds are available without changing the mode each time by inputting the jog mode signal and simultaneous operation of jog and handle modes signal to the control unit.
11 Reference position retract	○	○	○	○	○	○	○	○	○	○	When the retract signal is turned ON during the automatic and manual operation, this function can retract the tool immediately to a set reference position.
12 Tool retract and return	△	△	△	△	○	○	○	—	—	—	Even if the machining program's operation is halted and the tool is retracted to change the tool or check the workpiece, etc., the tool can be returned to the halted point (machining halted point) and resume machining.
13 Skip retract	○	○	○	○	○	○	○	—	—	○	This function is used to return in the direction opposite the travel direction when the skip signal is input during G31 command.
14 PLC interruption	○	○	○	○	○	○	○	○	○	○	The interrupt program set with the R register is executed with the signals from the PLC during single block stop in program operation or during the manual mode.
16 Machining interruption	—	—	—	—	—	—	—	—	—	△	Machining interruption is a function which enables interrupt operations while a program is normally executed.
12 Program support functions											
1 Machining method support functions											
1 Program											
1 Subprogram control [Layers]	○10	○10	○10	○10	○10	○10	○10	○10	○10	○8	When the same pattern is repeated during machining, the machining pattern is registered as one subprogram, which can be called from the main program as required, thereby realizing the same machining easily. This enables the efficient use of programs.
2 Figure rotation	△	△	△	△	—	—	—	—	—	—	If the same pattern is used repeatedly on a concentric circle, one of the rotary machining patterns can be registered as a subprogram. When the subprogram is called from the main program, if the rotation center is designated, a path similar to the rotary phase can be easily created on the concentric circle. This simplifies the creation of a program.
3 Scaling	△	△	△	△	○	○	○	○	—	△	The shape commanded by a program can be extended or reduced to the desired size by applying a scale factor to the movement axis command position.
4 Axis name switch	—	—	—	—	—	—	—	—	—	—	The axis name switch function switches the name of a command axis and a control axis.
2 Macro program											
1 User macro [Layers]	○4	○4	○4	○4	○4	○4	○4	○4	○4	○4	In order to execute one integrated function, a group of control and arithmetic instructions can be used and registered as a macro program.
2 Machine tool builder macro	○	○	○	○	○	○	○	○	○	○	This function enables macro programs exclusively designed for use by a specific machine tool builder to be registered in addition to the regular user macro programs.
3 Macro interruption	○	○	○	○	○	○	○	○	○	○	By inputting a user macro interrupt signal from the PLC, the program being currently executed is interrupted and other programs can be called instead.
4 Variable command											
1 200 sets	—	—	—	—	—	—	—	—	○	—	Programming can be made flexible and versatile by designating variables instead of directly assigning numbers to addresses in programs and by supplying the values of those variables as required when running the programs. Arithmetic operations (adding, subtracting, multiplying and dividing) can also be conducted for the variables.
2 600 sets	—	—	—	—	—	—	○	—	—	—	
3 700 sets	○	○	○	○	○	○	—	—	—	○	
4 8000 sets	△	△	△	△	○	○	—	—	—	—	
6 (600+100×number of part systems) sets	○	○	○	○	○	○	—	—	—	○	
7 (7900+100×number of part systems) sets	△	△	△	△	○	○	—	—	—	—	
3 Fixed cycle											
1 Fixed cycle for drilling	○	○	○	○	○	○	○	○	○	○	These functions enable drilling, tapping and other hole machining cycles to be assigned in a simple 1-block program. Special fixed cycles must always be used in combination with fixed cycles.
2 Fixed cycle for drilling (Type II)	—	—	—	—	—	—	—	—	—	—	
3 Special fixed cycle	△	△	△	△	○	○	○	○	○	△	
4 Fixed cycle for turning machining	○	○	○	○	○	○	—	—	—	—	The shape normally programmed in several blocks for rough cutting, etc. in the turning machining can be commanded in one block. This function is useful for simplifying machining programs.
5 Compound type fixed cycle for turning machining	—	—	—	—	—	—	—	—	—	—	
6 Compound type fixed cycle for turning machining (Type II)	—	—	—	—	—	—	—	—	—	—	
7 Small-diameter deep-hole drilling cycle	○	○	○	○	○	○	○	○	○	○	In deep hole drilling, cutting and retract are repeated and the workpiece is machined multiple times. In addition, when PLC signals are input during cutting, the cutting for the time concerned is skipped. In this way, the load applied to the tool is reduced.
8 Two-dimensional barcode engraving cycle	○	○	○	○	○	○	○	—	—	○	This function creates a program for engraving a QR code easily using a fixed cycle. The QR code engraved on a workpiece helps to choose the machining program and tool as well as implementing workpiece traceability.
4 Mirror image											
1 Mirror image by parameter setting	○	○	○	○	○	○	○	○	○	○	A parameter is used to designate the axis for which the mirror image function is to be executed before the machining program is run.
2 Mirror image by external input	○	○	○	○	○	○	○	○	○	○	Signals from an external device (PLC) request the mirror image operation either during or before the execution of a machining program.
3 Mirror image by G code	○	○	○	○	○	○	○	○	○	○	Using a program for the left or right side of an image, this function can machine the other side of the image when a left/right symmetrical shape is to be cut.
4 Mirror image for facing tool posts	—	—	—	—	—	—	—	—	—	—	With machines in which the base tool post and the facing tool post are integrated in one post, this function enables the programs prepared for cutting at the base side to be executed by the tools on the facing side as well.
5 T code mirror image for facing tool posts	—	—	—	—	—	—	—	—	—	—	When tools that correspond to tool Nos. 1 to 64 are selected (T commands) but these are the tool Nos. for which the facing tool post mirror image function has already been designated with a parameter, the status equivalent to G68 (facing tool post mirror image ON) is established.
5 Coordinate system operation											
1 Coordinate rotation by program	△	△	△	△	○	○	○	○	○	△	When it is necessary to machine a complicated shape at a position that has been rotated with respect to the coordinate system, you can machine a rotated shape by programming the shape prior to rotation on the local coordinate system, and then specifying the rotation center coordinates and rotation angle by means of this coordinate rotation command.
2 Coordinate rotation by parameter	△	△	△	△	○	○	○	○	—	—	If a deviation occurs between the workpiece alignment line and the machine coordinate system's coordinate axis when the workpiece is mounted, the machine can be controlled to rotate the machining program coordinates according to the workpiece alignment line deviation.
3 3-dimensional coordinate conversion	△	△	△	△	○	○	—	—	—	△	With the 3-dimensional coordinate conversion function, a new coordinate system can be defined by rotating and moving in parallel the zero point in respect to the X, Y and Z axes of the currently set workpiece coordinate system.
6 Dimension input											
1 Corner chamfering / Corner R	△	△	△	△	○	○	○	○	○	△	This function executes corner processing by automatically inserting a straight line or arc in the commanded amount between two consecutive travel blocks.
2 Linear angle command	△	△	△	△	○	○	○	○	○	△	The end point coordinates are automatically calculated by assigning one element (one component of the selected plane) of the end point coordinates and the linear angle.
3 Geometric command	△	△	△	△	○	○	○	—	—	△	When it is difficult to find the intersection point of two straight lines with a continuous linear interpolation command, this point can be calculated automatically by programming the command for the angle of the straight lines.
4 Polar coordinate command	△	△	△	△	○	○	○	—	—	△	With this function, the end point position is commanded with the radius and angle.

5 CNC SYSTEM

○Standard △Optional □Selection

[M800V/M80V]S/W ver.A2　[E80]S/W ver.F7　[C80]S/W ver.B9

class	Lathe system										Machining center system										General explanation
	M800VW	M800VW	M800VS	M800VS	M80VW	M80V	M80V	E80	E80	C80	M800VW	M800VW	M800VS	M800VS	M80VW	M80V	M80V	E80	E80	C80	
	M850VW	M830VW	M850VS	M830VS	—	M80V TypeA	M80V TypeB	E80 TypeA	E80 TypeB	—	M850VW	M830VW	M850VS	M830VS	—	M80V TypeA	M80V TypeB	E80 TypeA	E80 TypeB	—	
7 Axis control																					
1 Chopping																					
1 Chopping	△	△	△	△	○	○	○	—	—	△	△	△	△	△	○	○	○	—	—	△	This function continuously raises and lowers the chopping axis independently of program operation. During the grinding operation, chopping can produce a better surface accuracy than using abrasive grain.
2 Normal line control	—	—	—	—	—	—	—	—	—	—	○	○	○	○	○	○	—	—	—	○	This function controls the swiveling of the C axis (rotary axis) so that the tool is always pointing in the normal line direction for the X and Y axes movement commands during program operation.
3 Circular cutting	—	—	—	—	—	—	—	—	—	—	○	○	○	○	○	○	○	○	○	○	In circular cutting, a system of cutting steps are performed; first, the tool departs from the center of the circle, and by cutting along the inside circumference of the circle, it draws a complete circle, then it returns to the center of the circle.
4 Vibration cutting control	□	□	□	□	□	□	□	—	—	—	—	—	—	—	—	—	—	—	—	—	While cutting machining is performed, the chips can be dispersed by applying vibration in synchronization with the spindle rotation to the feed axis so that an air-shot area is made. Difficult-to-cut workpieces such as stainless steel can be machined easily and at high speed. In addition, this function can reduce the heat generated by machining and extend tool life. * A vibration cutting expansion unit is required. * Only one axis per programmed part system vibrates. Even for a cutting command involving two or more axes (e.g. taper machining), only one axis selected vibrates.
8 Multi-part system control																					
1 Timing synchronization between part systems	○	○	○	○	○	○	○	—	—	○	○	○	○	○	○	○	—	—	—	○	The multi-axis, multi-part system compound control CNC system can simultaneously run multiple machining programs independently. This function is used in cases when, at some particular point during operation, the operations of different part systems are to be synchronized or in cases when the operation of only one part system is required.
2 Start point designation timing synchronization	○	○	○	○	○	○	○	—	—	○	○	○	○	○	○	○	—	—	—	○	The synchronizing point can be placed in the middle of a block by designating the start point.
3 Mixed control																					
1 Mixed control (cross axis control)	△	△	△	△	○	○	—	—	—	△	—	—	—	—	—	—	—	—	—	—	This function enables any axis to be replaced with another axis between part systems. There are two methods for giving commands: G code and PLC.
2 Arbitrary axis exchange control	△	△	△	△	○	○	—	—	—	△	△	△	△	△	—	—	—	—	—	△	An arbitrary axis can be exchanged freely across part systems in the multiple part systems. The machining can be freer by exchanging an axis which can be commanded for machining programs in each part system.
4 Control axis superimposition																					
1 Control axis superimposition	△	△	△	△	○	○	—	—	—	△	—	—	—	—	—	—	—	—	—	—	This function enables to superimpose on and control an axis in a part system with an axis in another part system. There are two methods for giving commands: G code and PLC.
2 Arbitrary axis superimposition control	△	△	△	△	—	—	—	—	—	△	—	—	—	—	—	—	—	—	—	—	The arbitrary control axis in other part system can be moved by superimposing on the movement command for the arbitrary control axis in own part system.
5 Control axis synchronization between part systems	△	△	△	△	○	○	○	—	—	△	—	—	—	—	—	—	—	—	—	—	Synchronization control enables an arbitrary control axis in another part system to move in synchronization with the movement command assigned to an arbitrary control axis. There are two methods for giving commands: G code and PLC.
6 Balance cut	○	○	○	○	○	○	—	—	—	○	—	—	—	—	—	—	—	—	—	—	The deflection can be minimized by holding tools simultaneously from both sides of the workpiece and using them in synchronization to machine the workpiece (balance cutting). In addition, since the workpiece is machined by two tools, the machining time is reduced.
7 Common memory for part systems	○	○	○	○	○	○	—	—	—	○	—	—	—	—	—	—	—	—	—	—	For a machine with multiple part systems, the common variables and tool compensation memory which exist for each part system can be made common to all part systems by setting the parameters.
8 Multi-part system simultaneous thread cutting																					
1 Two-part system simultaneous thread cutting	△	△	△	△	○	○	—	—	—	○	—	—	—	—	—	—	—	—	—	—	This function performs synchronous thread cutting for the same spindle using the 1st and 2nd part systems.
2 Multi-part system simultaneous thread cutting	△	△	△	△	○ (Note 1)	○ (Note 1)	—	—	—	—	—	—	—	—	—	—	—	—	—	—	This function performs thread cutting for the same spindle in the different part system. This has two commands; the command (G76.1) for simultaneously cutting threads in multiple places, which is known as "multi-part system simultaneous thread cutting cycle I", and the command (G76.2) for simultaneously cutting a thread by two part systems, which is known as "two-part system simultaneous thread cutting cycle II".
9 Multi-part system program management	○	○	○	○	○	○	○	—	—	○	○	○	○	○	○	○	—	—	—	○	Separate programs, used in each part system, can be managed under a common name in a multi-part system.
10 Synchronization between part systems																					
1 Single block between part systems	△	△	△	△	○	○	○	—	—	△	—	—	—	—	—	—	—	—	—	—	Single block operation with part systems synchronized is the function for executing single block operation while maintaining the synchronization among the part systems when two or more part systems are operated in the multi-part system. When one part system has been stopped by single block stop, the other part systems pause in the cycle operation.
2 Dwell / Miscellaneous function time override	△	△	△	△	○	○	○	—	—	△	—	—	—	—	—	—	—	—	—	—	Override can be applied to dwell time and miscellaneous function finish wait time of all part systems. The synchronization among part systems can be maintained when the multiple machining programs are operated with override.
3 Synchronization between part systems OFF	△	△	△	△	○	○	○	—	—	△	—	—	—	—	—	—	—	—	—	—	Synchronization among part systems and feedrate change are turned OFF in a part of a machining program to eliminate a synchronization relation among part systems by single block operation with part systems synchronized or variation of a machining program feedrate by dry run. This function is effective mainly in blocking the cycle operation pause or feedrate variation in only some of part systems when the sub part system control II function is being used.
11 Sub part system control I	△	△	△	△	○	○	○	—	—	△	△	△	△	△	—	—	—	—	—	—	This function activates and operates any non-operating part system (sub part system) in the multi-part system. An auxiliary axis machining program can be controlled in the sub part system by commanding Sub part system control I (G122) from the main part system.
12 Sub part system control II	△	△	△	△	○	○	—	—	—	△	—	—	—	—	—	—	—	—	—	—	This function activates and operates any non-operating part system (sub part system) in the multi-part system. Using sub part systems enables parallel operation between an operating program in main part system and a program called with Sub part system control II (G144).
9 Data input / output by program																					
1 Parameter input by program	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	The parameters set from the display can be changed using machining programs.
2 Compensation data input by program	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	The value of the workpiece coordinate systems selected can be set or changed using program commands. The tool compensation amounts, that are set from the display can be input using program commands.
3 Tool/Material shape input by program	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	Tool shape data on the tool management screen and workpiece shape data of the 3D solid program check can be set with the machining program.
5 API section and sub-section Nos. input / output by program	○	○	○	○	—	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	NC internal data can be read/written by specifying the section number, sub-section number, part system number and axis number using system variables.
6 R-Navi data input by program	—	—	—	—	—	—	—	—	—	—	△	△	△	△	○	○	—	—	—	—	The R-Navi setup parameter can be set from the machining program. The setting value can be checked and the machining surface can be selected on the setup screen for the parameter set from the machining program.

(Note 1) This specification is under development, please contact us for details.

Machining center system

M850VW	M830VW	M850VS	M830VS	M80VW —	M80V TypeA	M80V TypeB	E80 TypeA	E80 TypeB	C80 —	General explanation
○	○	○	○	○	○	○	○	○	○	When tapping mode commands are issued, the CNC system is set to the internal control modes required for tapping.
○	○	○	○	○	○	○	○	○	○	When a cutting mode command is issued, the CNC system is set to the cutting mode that enables a smoothly cut surface.
△	△	△	△	○	○	○	—	—	△	This function enables the next block to start (overlap) without waiting for positioning (G00) or reference position return (G28/G30). Consequently, cycle time of machining can be reduced.
○	○	○	○	○	○	○	○	○	○	To prevent machining surface distortion due to increase in the cutting load when cutting corners, this function automatically applies an override on the cutting feedrate so that the cutting amount is not increased for a set time at the corner.
○	○	○	○	○	○	○	○	○	○	This function decelerates and stops a motor before executing the next block, which reduces the impact on the machine caused by a rapid change of feedrate, and prevents a corner from being machined round.
○	○	○	○	○	○	○	○	○	○	
○	○	○	○	○	○	○	○	○	○	
○	○	○	○	○	○	○	○	○	○	
—	—	—	—	—	—	—	—	—	—	This function is effective to reduce the extension of cycle time for the cutting at the corner and realize the high edge accurate machining.
△33.7	△33.7	△33.7	△33.7	○33.7	○33.7	○16.8	—	—	△33.7	This function runs a machining program that approximates a free curve with fine segments at a high speed.
△168	△168	△168	△168	○101	○101	○101	—	—	△67.5	
△	△	△	△	○	○	○	○	—	△	Machining errors caused by delays in control systems can be inhibited. This function is useful for machining which needs to make an edge at a corner or reduce an error from an inner route of curved shape.
△	△	△	△	○	○	—	—	—	△	High-accuracy control and high-speed machining mode are available respectively in all part systems. The simultaneous usage of high-accuracy control and high-speed machining mode (including High-speed high-accuracy control I/II/III) are available only in part systems which are limited by the parameter. * Up to 2 part systems
△	△	△	△	○	○	○	—*	—	△	With SSS (Super Smooth Surface) control, the large area path information is used instead of just the angle between the blocks. Thus, optimum speed control that is not adversely affected by minute steps or waviness is possible. This enables machining with a fewer scratches and streaks on the cutting surface compared to the normal high-accuracy control function. Multiple part systems simultaneous high-accuracy function is required to conduct the SSS control in the second or following part systems. * eSSS (There are limitations on the setting of some parameters.)
△	△	△	△	○	○	○	○	—	△	This function enables the smooth operation within the tolerance error range. The desired machining result can be obtained with simple parameter adjustment.
△	△	△	△	—	—	—	—	—	—	This function can perform the acceleration / deceleration during SSS control by setting diverse acceleration to each axis. Therefore, the acceleration for the axis with high responsiveness can be larger than before so that cycle time can be reduced especially in the indexing machining.
△	△	△	△	—	—	—	—	—	—	This extends the upper limit of cutting feed time constant from 5,000[ms] to 30,000[ms] for acceleration/deceleration before interpolation. * 1st part system only
△	△	△	△	—	—	—	—	—	—	The acceleration to be generated at a seam between blocks is evaluated for each axis to control deceleration so that the seam is passed at the optimum speed. This enables highly accurate edge machining. * 1st part system only
△67.5	△67.5	△67.5	△67.5	○33.7	○33.7	○33.7	—	—	△33.7	A machining program that approximates a free curve with fine segments can be run at a high speed and with a high accuracy. This function is effective in decreasing the cycle time of machining dies with free curves. This function is also useful in machining which needs to make an edge at a corner or reduce a path error from inner route of curved shape because the high-accuracy control mode is turned ON automatically.
△168	△168	△168	△168	○101	○101	○101	—	—	△67.5	
△540	△540	△540	△540	○202	○202	—	—	—	△135	
△	△	△	△	○	○	—	—	—	△	A path can be smoothen by compensating commanded positions of a machining program. This function is useful when executing a fine segment program to machine smoothly at low speed or a rough machining program with long segment to machine smoothly.
○	○	○	○	○	○	○	—	—	○	The machining condition parameter set which consists of parameters related to the high-accuracy control can be configured in advance for each machining application (such as part machining or die machining) or machining process (such as rough or finishing), and it can be switched according to the purpose.
—	—	—	—	—	—	—	—	—	—	By reducing the load applied during the NC program analysis and interpolation to the minimum possible level, the machining programs expressed in fine segments are executed at a high processing speed.
○	○	○	○	○	○	○	○	—	○	This function enables creation of a program while proceeding with sample machining by manual (handle or job) feed or mechanical handle feed.
△	△	△	△	○	○	○	○	○	—	This function enables to interactively insert a cycle to assist in the machining and setup for the program opening on the edit screen. The cycle can easily be inserted by editing data in an interactive window.
△	△	△	△	○	○	○	○	○	—	Create a part program by using NAVI MILL (for machining center system) or NAVI LATHE (for lathe system).
○	○	○	○	○	○	○	○	○	○	G code guidance is a function to display illustration of the contents or movements of the commanded format for the G code currently under editing. This is used when creating or editing a machining program.
△	△	△	△	○	○	—	—	—	—	This function allows you to import a DXF drawing file from an external I/O device through DXF data input window, extract the figure element data from the drawing. Extracted data can be set as arbitrary shape data or as hole position data to the cycle being edited using the interactive cycle insertion function.
—	—	—	—	—	—	—	—	—	—	This function allows machining programs to be created by simply selecting menus and entering numerical values and other data for the items that appear on the screen. The programmed shape can be checked as data is entered. The created machining programs can be directly run without being converted to G code programs.

(Note 1) This specification is under development, please contact us for details.

Machining center system

class	M850VW	M830VW	M850VS	M830VS	M80VW —	M80V TypeA	M80V TypeB	E80 TypeA	E80 TypeB	C80 —	General explanation
1 Backlash compensation	○	○	○	○	○	○	○	○	○	○	This function compensates the error (backlash) produced when the direction of the machine system is reversed.
2 Memory-type pitch error compensation [sets]	○32	○32	○32	○32	○16	○16	○16	○16	○16	○10	Machine accuracy can be improved by compensating the errors in the screw pitch intervals among the mechanical errors (production errors, wear, etc.) of the feed screws.
3 Memory-type relative position error compensation	○	○	○	○	○	○	○	○	○	○	Machine accuracy can be improved by compensating the relative error between machine axes, such as a production error or aging.
4 External machine coordinate system compensation	△	△	△	△	○	○	○	○	○	△	The coordinate system can be shifted by inputting a compensation amount from the PLC. This compensation amount will not appear on the counters (all counters including machine position).
5 Circular radius error compensation	△	△	△	△	○	○	○	—	—	△	With commands designated during arc cutting, this function compensates movement toward the inside of the arcs caused by a factor such as servo delay.
6 Ball screw thermal expansion compensation	△	△	△	△	○	○	○	○	○	△	This compensates the axis feed error caused by a ball screw's thermal expansion, etc. using the values set by the PLC.
7 Rotation center error compensation	△	△	△	△	○	○	—	—	—	—	In a machine with a rotary axis, there may be a case where the actual rotation center deviates from the programmed rotation center. (In other words, "machine rotation center error" may be observed.) Higher accuracy machining can be realized by compensating this error.
8 Position-dependent gradually increasing-type backlash compensation	△	△	△	△	○	○	○	○	○	△	With this function, the gradually increasing-type lost motion which depends on the distance from the point where the machine movement direction is reversed can be compensated by controlling the variation of backlash compensation amount according to the distance from the direction reversal point.
9 Bidirectional pitch error compensation	△	△	△	△	○	○	○	—	—	△	Bidirectional pitch error compensation function is used to compensate the pitch error in each direction by setting the pitch error compensation amount when moving in the positive and negative direction.
10 Cyclic error compensation	△	△	△	△	○	○	○	—	—	—	When the machine operation induces certain cyclic errors, this function compensates a series of cyclic errors by setting the compensation amount for a single cycle.
11 Spatial error compensation	△	△	△	△	—	—	—	—	—	—	This function can compensate for three-dimensional errors of a machine tool due to its linear and rotary axes. This measures the spatial errors with a measuring device, inputs the measurement results to the NC to make an error data file and adds the calculated compensation amount of the linear and rotary axes to the drive command position to perform the compensation.
12 Backlash compensation II	△	△	△	△	○	○	○	○	○	—	For a machine under semi-closed loop control, this function restrains quadrant errors caused by backlash being generated when the travelling direction reverses.
1 Smooth high-gain (SHG) control	○	○	○	○	○	○	○	○	○	○	This is a high-response and stable position control method using the servo system. SHG control realizes an approximately three-fold position loop gain compared to the conventional control method.
2 Dual feedback	○	○	○	○	○	○	○	○	○	○	Use position feedback with a motor-side encoder in ranges with high acceleration to enable stable control. In ranges with low acceleration, use position feedback with the machine-side encoder (scale). This will make it possible to increase the position loop gain. A machine-side encoder (scale) is separately required.
3 Lost motion compensation	○	○	○	○	○	○	○	○	○	○	This function compensates the error in protrusion shapes caused by lost motion at the arc quadrant changeover section during circular cutting.
4 OMR II (Backlash with filter)	△	△	△	△	○	○	○	○	○	△	The OMR (Optimal Machine Response) control function estimates the machine or motor model (moment of inertia, clone friction, viscosity coefficient, etc.) that can cause a path error (deviation of the actual tool path from the programmed path). High-accuracy machining is achieved by carrying out feed forward control based on that model. This allows error cased by quadrant protrusions during circular interpolation or quadrants on the inner side of the path to be greatly reduced. OMR-II is a function that focuses on the quadrant protrusions, and improves the path error with this. Quadrant path compensation is included in OMR-II.
6 OMR-FF	△	△	△	△	○	○	○	○	○	△	OMR-FF control enables fine control by generating feed forward inside the drive unit and can realize the strict feedback control to the program command than the conventional high-speed accuracy control.
7 Distance-coded reference position detection	△	△	△	△	○	○	○	—	—	—	This is a function where a distance-coded reference scale is used to establish the reference point in the relative position detection system.
8 Optimum Machine Response-Contour Control	△	△	△	△	○	○	○	—	—	—	OMR-CC (optimum machine response - contour control) is a function that improves the passing speed in curved parts such as arcs and free curved surfaces without increasing the path error (difference between the program path and the tool path) caused by the delay of the servo system. By enabling this function, the machining time can be shortened while maintaining the machining accuracy.
9 Variable torsion compensation	△(Note 1)	△(Note 1)	△(Note 1)	△(Note 1)	△(Note 1)	△(Note 1)	—	—	—	—	This function applies compensation according to the acceleration rate at direction reversal based on the predefined compensation parameters and therefore improves the machining accuracy.
10 Cogging torque compensation	△	△	△	△	○	○	○	—	—	—	This function compensates the torque ripple (cogging torque).
1 Skip	○	○	○	○	○	○	○	○	○	○	When the external skip signal is input during linear interpolation using the G31 command, machine feeding is stopped immediately and the remaining distance is discarded to execute the commands in the next block.
2 Multiple-step skip	○	○	○	○	○	○	○	○	○	○	This function realizes skipping by designating a combination of skip signals for each skip command.
4 PLC skip	△	△	△	△	○	○	○	○	○	△	This function enables skip operations to be performed by signals which are input from the user PLC.
5 Speed change skip	△	△	△	△	—	—	—	—	—	—	This function is used to change the feed rate or to stop the movement by inputting the skip signal during the linear interpolation.
6 Torque limitation skip	△	△	△	△	○	○	○	○	○	—	Axis movement is performed in the torque limited status, and the axis movement command is suspended to proceed to the next block when the current command value reaches the designated torque skip value and the torque skip turns ON.
2 Automatic tool length measurement	○	○	○	○	○	○	○	○	○	○	This function moves the tool in the direction of the tool measurement position by the commanded value between the measurement start position and measurement position. It stops the tool as soon as it reaches the sensor and calculates the difference between the coordinates where the tool has stopped and the command coordinates. It registers this difference as the tool length compensation amount for that tool.
3 Manual tool length measurement 1	○	○	○	○	○	○	○	○	○	○	Simple measurement of the tool length is done without a sensor.
4 Manual tool length measurement 2	○	○	○	○	○	○	○	○	○	○	[M system] When the tool is positioned at the reference position, this function measures the distance from the reference position to the tool tip and registered it as the tool length compensation amount. [L system] A device with a built-in touch sensor is used. Simply by causing the tool nose to touch the touch sensor in manual feed, the tool compensation amount can be calculated and stored in tool compensation amount memory.
5 Workpiece coordinate offset measurement	—	—	—	—	—	—	—	—	—	—	The external workpiece coordinate offset data for the Z axis can be set by cutting the workpiece face by means of manual operations and inputting the workpiece measurement signal.

(Note 1) This specification is under development, please contact us for details.

Machining center system

M850VW	M830VW	M850VS	M830VS	M80VW —	M80V TypeA	M80V TypeB	E80 TypeA	E80 TypeB	C80 —	General explanation
○	○	○	○	○	○	○	○	○	○	The workpiece position measurement function is used to measure each axis' coordinate by installing a sensor on the spindle and the sensor contacting the workpiece with the manual feed or handle feed. The surface, hole center and width center coordinates are calculated from the measured coordinates, and those calculated results are set in the workpiece coordinate offset.
○	○	○	○	○	○	○	—	—	○	The offset of the rotary coordinate system (rotation center and rotation angle) is measured, and the results are set to the workpiece coordinate system offset (rotation center) and the parameters.
△	△	△	△	—	○	—	—	—	—	This function executes automatic measurement with the touch sensor on the reference sphere to calculate the rotation center error compensation amount.
△	—	△	—	—	—	—	—	—	—	This function executes automatic measurement with the touch sensor to calculate the workpiece installation error compensation amount.
○	○	○	○	○	○	○	○	○	○	The tool usage is monitored by accumulating each tool's usage time or the frequency of use.
○	○	○	○	○	○	○	○	○	○	[M system] A spare tool change function is added to the tool life management I. [L system] The life of each tool (time and frequency) is controlled, and when the life is reached, a spare tool of the same type is selected from the same group.
○	○	○	○	○	○	○	○	○	○	The tool usage is monitored by accumulating each tool's usage time and the frequency of use. This function is not controlled by the group No.
—	—	—	—	—	—	—	—	—	—	
—	—	—	—	—	—	—	—	—	—	
○	○	○	○	○	○	○	○	○	○	The max. sets of tools available for tool life management
—	—	—	—	—	—	—	—	—	—	
△	△	△	△	—	—	—	—	—	—	
△	△	△	△	—	—	—	—	—	—	
○	○	○	○	○	○	○	—	—	—	* Variable number of management tools. The number of tool life management tools can be set per part system. There are two types of the allocation: "Arbitrary allocation" which allocates the number of tool life management tools to each part system arbitrarily and "Fixed allocation" which automatically allocates the number of tool life management tools to each part system equally, and the type can be selected using the parameter.
○	○	○	○	○	○	○	○	○	○	This function allows the current limit value of the NC axis to be changed to a desired value in the program, and is used for the workpiece stopper, etc.
○	○	○	○	○	○	○	○	○	—	Auto power OFF function notifies that the control unit's power can be turned OFF after shutting the display unit down by entering "automatic power OFF request" signal from user PLC to NC.
△	△	△	△	○	○	—	—	—	—	This function aims at detecting tool wear or degradation by detecting and monitoring the actual load (current value) on spindle and NC axes on a real time basis.
○	○	—	—	○	—	—	—	—	—	This function turns the power supply ON / OFF, synchronizing the NC control unit and the HMI screen.
—	—	—	—	—	—	—	—	—	○	A current limit is available for the PLC axis as well as for the NC axis. This function can be used for actions such as stopper operation.
□	□	□	□	□	□	□	□	□	—	This function enables a robot to be connected to and directly operated by an NC.
△	△	△	△	○	○	—	—	—	—	This function automatically changes the feedrate so that the cutting load reaches the set target load. For machining with a low cutting load, the feedrate can be increased and the cycle time can be shortened. On the other hand, for machining with a high cutting load, the tool can be protected by reducing the feedrate and reducing the load on the tool.
—	—	—	—	—	—	—	—	—	—	This function detects vibrations between the tool and workpiece that occurs continuously during the cutting process (chatter) and varies the speeds of the spindle and the NC axes periodically to suppress the chatter. *The RT Processing unit and the RTU expansion unit are required.
○	○	○	○	○	○	○	○	○	○	All operations are stopped by the emergency stop signal input and, at the same time, the drive section is stopped and the movement of the machine is stopped.
○	○	○	○	○	○	○	○	○	○	With the input from the user PLC, it is possible to prohibit the parameter setting or deletion, and the program edit from the setting and display unit.
○	○	○	○	○	○	○	○	○	○	Warnings are output by the CNC system. When one of these warnings occurs, a warning number is output to the PLC and a description of the warning appears on the screen. Operation can be continued without taking further action.
○	○	○	○	○	○	○	○	○	○	When an alarm has occurred, an alarm number is output to the PLC, and a description of the alarm appears on the screen. Operation cannot be continued without taking remedial action.
○	○	○	○	○	○	○	○	○	○	The stop cause of automatic operation is shown on the display.
○	○	○	○	○	○	○	○	○	○	When the "EMG" (emergency stop) message is displayed in the operation status area of the display, the cause of the emergency stop can be confirmed.
○	○	○	○	○	○	○	○	○	○	When overheating is detected in the control unit, an overheat signal is output at the same time as the alarm is displayed.
○	○	○	○	○	○	○	○	○	○	When it is time to change the batteries, an alarm and warning are displayed.
○	○	○	○	○	○	○	○	○	○	Limit switches and dogs are attached to the machine, and when a limit switch has kicked a dog, the movement of the machine is stopped by the signal input from the limit switch.
○	○	○	○	○	○	○	○	○	○	
△	△	△	△	○	○	○	—	—	△	The areas where tool entry is prohibited can be set with parameters or program commands. There are multiple types of prohibitions according to the prohibited range and method.
△	△	△	△	○	○	○	—	—	△	
△	△	△	△	○	○	○	—	—	△	
△	△	△	△	○	○	○	—	—	△	By commanding, from the program, the boundary for prohibiting machine entry as a coordinate position in the machine coordinate system, entry into the inner side of that boundary can be prohibited.
—	—	—	—	—	—	—	—	—	—	By limiting the tool nose point movement range, this function prevents the tool from colliding with the chuck or tail stock because of a programming error.
○	○	○	○	○	○	○	○	○	○	The machine movement will decelerate and stop as soon as the interlock signal, serving as the external input, is turned ON. When the interlock signal is turned OFF, the machine starts moving again.
○	○	○	○	○	○	○	○	○	○	This function reduces the feedrate to the deceleration speed set by the parameter when the external deceleration input signal has been set to ON.

(Note 1) This specification is under development, please contact us for details.

Machining center system

class	M850VW	M830VW	M850VS	M830VS	M80VW —	M80V TypeA	M80V TypeB	E80 TypeA	E80 TypeB	C80 —	General explanation
7 Interference check III	△	△	△	△	—	—	—	—	—	—	By checking the relative relation between interference objects, the interference can be prevented from occurring. One interference object is defined by one to sixteen tridimensional objects. The maximum definable number is 128 for the interference objects and is 256 for the tridimensional objects.
8 3D machine interference check	△	△	—	—	○	—	—	—	—	—	The machine pre-reads the position to be moved during the operation to check the interference by the 3D model (machine, tool and jig) registered in advance. When an interference is predicted, an alarm will be shown immediately and all the axes will be decelerated to stop.
9 Door interlock											
1 Door interlock I	○	○	○	○	○	○	○	○	○	○	Under the CE marking scheme of the European safety standards (machine directive), the opening of any protection doors while a machine is moving is prohibited. When the door open signal is input from the PLC, this function first decelerates, stops all the control axes, establishes the ready OFF status, and then shuts off the drive power inside the servo drive units so that the motors are no longer driven.
2 Door interlock II	○	○	○	○	○	○	○	○	○	○	
10 Parameter lock	○	○	○	○	○	○	○	○	○	○	This function is used to prohibit the changing of machine parameters.
11 Program protection (Edit lock B, C)	○	○	○	○	○	○	○	○	○	○	The edit lock function B or C inhibits machining program B or C (group by machining program numbers) from being edited or erased when these programs require protection.
12 Program display lock	○	○	○	○	○	○	○	○	○	○	This function allows the display of only a target program (label address 9000) to be disabled for the program display in the monitor screen, etc.
13 Data protection by user's level	△	△	△	△	○	○	○	○	○	△	Up to 8 levels of access permission helps to prevent you from dispatching defective works.
15 Vertical axis pull-up	○	○	○	○	○	○	○	○	○	○	This function prevents the tool from breakage, through pulling up the cutting tool during emergency stop or instantaneous power interruption at low cutting speed.
16 Machine group-based alarm stop	△	△	△	△	○	○	○	—	—	△	When an alarm occurs for an axis, this function performs an alarm stop only for the axes in a machine group to which the axis belongs.
17 Interference check between part systems	—	—	—	—	—	—	—	—	—	—	This function checks the relative position of up to six cuboids (referred to as interfering objects) all the time, and if a command which causes the interfering objects to collide with each other is issued, the function stops the axis movement to prevent the interference in advance. Such interference can be prevented by covering the tool post, etc. with cuboids. * Up to 4 part systems
18 Spindle protection	○	○	○	○	○	○	○	○	○	—	This function consists of a function of calculating the equivalent load ratio of spindle motor and a function of outputting the equivalent load ratio and temperature of spindle motor to the log file.
19 Real-time 3D machine interference check	△ (Note 3)	△ (Note 3)	—	—	—	—	—	—	—	—	This function checks for interference through look ahead of the position to which the machine is to move using pre-registered 3D models (machine, tool, jig) while operation is running. If interference is anticipated, an alarm is triggered immediately and all axes are decelerated to a stop. The 3D models displayed in real time on the 3D monitor screen help to understand the actual positional relationship of the machine.
4 Maintenance and troubleshooting											
1 Operation history	○	○	○	○	○	○	○	○	○	○	This is a maintenance function which is useful for tracing down the history and NC operation information and analyzing problems, etc. This information is saved in the history data file, and can be displayed on the screen and output to a file.
2 Data sampling	○	○	○	○	○	○	○	○	○	○	The NC data sampling function samples the NC internal data (speed output from NC to drive unit, and feedback data from the drive unit, etc.). This data can be output as text data.
3 NC data backup	○	○	○	○	○	○	○	○	○	○	The NC data back up function backs up the NC parameters, etc., on a built-in disk of display unit or SD card. The data can also be restored.
4 Servo tuning support											
1 NC Analyzer2 (Note 1)	○	○	○	○	○	○	○	○	○	○	With this function, the servo parameters can be automatically adjusted by connecting the CNC and NC Analyzer2, which is an application that runs on a regular personal computer.
5 Automatic backup	○	○	○	○	○	○	○	○	○	○(GOT)	With this function, system data, ladder program and custom software can be automatically backed up in case of system failure.
8 Application error detection	○	○	—	—	○	—	—	—	—	—	Application error detection function observes applications such as CNC standard screen or custom screen. When an error such as screen lock is detected, this function saves information and data in the log to investigate the causes easily.
9 Email notification to operator	△	△	△	△	○	○	○	○	○	—	This function enables NC to transmit emails to network-connected email servers (SMTP servers). With this function, the NC can send emails to PCs and mobile terminals away from machines. You are able to know machining conditions (such as machining completion, stop and failure) even if you are in remote places.
10 NC Configurator2 (Note 2)	○	○	○	○	○	○	○	○	○	○	NC Configurator2 runs on a personal computer to edit the NC data files required for NC control and machine operations such as parameters, tool data and common variables.
11 Diagnosis data output	○	○	○	○	○	○	○	○	○	○	With this function, the information indicating the replacement cycle of the service parts used in NC, drive or motor can be output to the ZR registers.
12 Backup / Restore	—	—	—	—	—	—	—	—	—	○	This function stores the setting information (sequence programs, parameters and the setting values, etc.) of a connected device to the installed data storage in GOT, and restores those data to the device as needed.
13 Security feature for Windows display	△	△	—	—	—	—	—	—	—	—	This function only activates applications that have been allowed to work when the McAfee® Application Control software is installed on the display unit. This software restricts the operations of the application.
14 Field network diagnostics	□	□	□	□	□	□	□	□	□	—	This function displays the statistical information in packet transmission and reception (transmission/reception frequency, number of errors, etc.), which is necessary when the communication status of the function expansion unit (the field network expansion unit) is diagnosed.
15 Remote service iQ Care Remote4U											
1 Connection with RGU	□	□	□	□	□	□	□	□	□	□	This remote service supports remote maintenance of machine tools using IoT technology. It offers operation monitoring of machine tools and remote diagnostics of CNC. *1 The license agreement is required. *2 Remote service gateway unit is required for connection with RGU.
2 Connection with no RGU	△ (Note 3)	△ (Note 3)	△ (Note 3)	△ (Note 3)	○ (Note 3)	○ (Note 3)	○ (Note 3)	—	—	—	
5 Functional safety											
1 Safety observation	△	△	△	△	○	○	○	○	○	—	The safety observation function ensures safe access to the machine's working parts (e.g. for adjustment or preparation) without shutting off the power, which reduces the time required to restart the machine.
2 Smart Safety observation											
1 Safety-related I/O observation	△	△	△	△	○	□	□	—	—	△	Using the dual circuits for processing signals input/output to/from the machine (safety signal compare sequence) and dual execution of safety signal process logic made by users (safety PLC), if one circuit has broken down, the other circuit can detect errors, which improves the safety of signal process. * Functional safety expansion unit is required for M80V.
2 Emergency stop observation	△	△	△	△	○	□	□	—	—	△	Emergency stop signal is doubled and observed to see whether there is any error. When one emergency stop signal is in open state, the whole system can be set in emergency stop condition. * Functional safety expansion unit is required for M80V.

(Note 1) The software sold separately is necessary.
(Note 2) Please contact us to purchase a full function version. A limited function version is also available free of charge.
(Note 3) This specification is under development, please contact us for details.

Machining center system

class	M850VW	M830VW	M850VS	M830VS	M80VW (—)	M80V TypeA	M80V TypeB	E80 TypeA	E80 TypeB	C80 (—)	General explanation
3 Drive safety function											
1 SLS	△	△	△	△	○	□	□	—	—	△	Axis speed (command speed, FB speed) is observed doubly to see whether the speed exceeds the safe speed. * Functional safety expansion unit is required for M80V.
2 SLP	△	△	△	△	○	□	□	—	—	△	Axis absolute position (command position, FB position) is observed doubly to see whether the position exceeds the safe position range. * Functional safety expansion unit is required for M80V.
3 SOS	△	△	△	△	○	□	□	—	—	△	Axis stop speed (command speed, FB speed) is observed doubly whether the speed exceeds the safe stop speed. Axis stop position (command position, FB position) is observed doubly whether the position exceeds the safe stop position range. Observe axis stop position deviation (difference between command position and FB position) doubly to see whether the deviation exceeds the safe stop position deviation. * Functional safety expansion unit is required for M80V.
4 SSM	△	△	△	△	○	□	□	—	—	△	This function uses the safety signals to inform that the axis speed (command speed, FB speed) is equal to or below the safe speed. * Functional safety expansion unit is required for M80V.
5 SBC / SBT	△	△	△	△	○	□	□	—	—	△	The brakes connected to motors are activated by this function. Because there are two circuits for activating the brakes, one circuit can activate the brakes even when the other circuit is broken down. Furthermore, Safe Brake Test (SBT) can diagnose the circuits for activating the breaks and the effectiveness of the brakes (deterioration due to abrasion, etc.). * Functional safety expansion unit is required for M80V.
6 SCA	△	△	△	△	○	□	□	—	—	△	This function uses the safety signals to inform that the axis absolute position (command position, FB position) is within the range of safe position. *Functional safety expansion unit is required for M80V.
7 SS1 / SS2	△	△	△	△	○	□	□	—	—	△	[Safe stop 1 (SS1)] STO function is activated after an axis is decelerated and the speed (command speed, FB speed) becomes equal to or below the safe stop speed. [Safe stop 2 (SS2)] SOS function is activated after an axis is decelerated and the speed (command speed, FB speed) becomes equal to or below the safe stop speed. * Functional safety expansion unit is required for M80V.
8 STO	△	△	△	△	○	□	□	—	—	△	This function shuts OFF power supply to axes. Because there are two power shutoff circuits, one circuit can shut OFF the power supply even when the other circuit is broken down. * Functional safety expansion unit is required for M80V.
9 SCN	—	—	—	—	—	—	—	—	—	△	This function performs safety communication between master station and local station using CC-Link IE field network.

17 Machine support functions											
1 Built-in PLC processing mode	○	○	○	○	○	○	○	○	○	—	An exclusive sequence program that controls various signals between the controller and the machine to realize the operations applicable to each machine can be created and built in.
1 Built-in PLC basic function	○	○	○	○	○	○	○	○	○	△ (MELSEC)	
1 Index modification	○	○	○	○	○	○	○	○	○	△ (MELSEC)	
2 Multi-program	○120	○120	○120	○120	○60	○60	○60	○60	○60	△ (MELSEC)	[M800V/M80V/E80] Basic commands (bit processing commands): LD, LDI, OR, ORI, AND, ANI, OUT, PLS, etc. Function commands: Data transfer, 4 basic arithmetic operations, logic arithmetic operations, large/small identification, binary/BCD conversion, branching, conditional branching, decoding, encoding, etc. [C80] For the details, refer to the manual of Mitsubishi Electric Programmable Controller "MELSEC iQ-R series".
Number of PLC projects: 2	○	○	○	○	—	—	○	○	○	—	
Number of PLC projects: 3	△	△	△	△	○	○	—	—	—	—	
Number of PLC projects: 6	△	△	△	△	—	—	—	—	—	—	
4 Function block (FB)	○	○	○	○	○	○	○	○	○	△ (MELSEC)	
5 Label programming	○	○	○	○	○	○	○	○	○	△ (MELSEC)	
6 ST language	○	○	○	○	○	○	○	—	—	—	
2 PLC exclusive instruction	○	○	○	○	○	○	○	—	—	△ (MELSEC)	PLC-dedicated instruction is provided for some limited applications, enabling a complex machining process, which is difficult to carry out only by the basic instructions and function instructions.
3 Enhanced PLC security mode	○	○	○	○	○	○	○	○	○	—	This function restricts connections to the built-in PLC from applications such as PLC on-board and GX Developer/GX Works2.
1 Alarm message display	○	○	○	○	○	○	○	○	○	—	The contents of the alarms which have occurred during sequence (user PLC) processing can be displayed on the setting and display unit.
2 Operator message display	○	○	○	○	○	○	○	○	○	○*	When some conditions occur where you wish to inform a messages to the operator, an operator message can be displayed separately from the alarm message. * Only the macro alarm message can be displayed.

M850VW	M830VW	M850VS	M830VS	M80VW —	M80V TypeA	M80V TypeB	E80 TypeA	E80 TypeB	C80 —	General explanation
○	○	○	○	○	○	○	○	○	—	PLC switches can be set on the setting and display unit screen, and the ON / OFF control executed.
△	△	△	△	○	○	○	—	—	—	
△	△	△	△	—	—	—	—	—	—	
○	○	○	○	○	○	○	○	○	○	A load meter can be displayed on the setting and display unit.
○	○	○	○	○	○	○	○	○	○	The user PLC version can be displayed in the software list on the Software Configuration screen.
○	○	○	○	○	○	○	○	○	△ (MELSEC)	Ladder program can be edited while PLC is running. This function is available, either by GX Developer or PLC onboard edit.
○	○	○	○	○	○	○	○	○	△ (MELSEC)	[M800V/M80V/E80] For PLC data protection, the file password can be set to each file of PLC data. [C80] For the details, refer to the manual of Mitsubishi Electric Programmable Controller "MELSEC iQ-R series".
○128K	○128K	○128K	○128K	○64K	○64K	○32K	○20K	○20K	△ (MELSEC)	[M800V/M80V/E80] In the program memory, it is possible to store the system area of parameters, intelligent function module parameters, sequence programs, device comments, and device initial values. [C80] For the details, refer to the manual of Mitsubishi Electric Programmable Controller "MELSEC iQ-R series".
△	△	△	△	—	—	—	—	—	—	
△	△	△	△	—	—	—	—	—	—	
○	○	○	○	○	○	○	○	○	△ (MELSEC)	[M800V/M80V/E80] The operation panel I/O unit or the remote I/O unit is selected based on the types of input signals (sink/source) or output signals (source) available for input or output and the number of contacts required. [C80] The device is selected from the I/O modules of the Mitsubishi Electric Programmable Controller "MELSEC iQ-R Series".
○	○	○	○	○	○	○	○	○	○(GOT)	[M800V/M80V/E80] This function enables the operating status of the sequence circuit to be checked on the controller's setting and display unit. [C80] This function enables to display on GOT the operating status of the sequence circuit to be checked. "Sequence program monitor" (GOT2000) is used.
○	○	○	○	○	○	○	○	○	○(GOT)	On-board refers generically to the PLC related operations carried out with the CNC unit. The Mitsubishi Electric CNC on-board realizes functions and operations similar to the MELSEC Series ladder development tool (GX Developer).
○	○	○	○	○	○	○	○	○	—	This function enables the data of the PLC contained inside the NC system to be developed and debugged using the GX Developer.
○	○	○	○	○	○	○	○	○	—	This function enables the data of the PLC contained inside the NC system to be developed and debugged using the GX Works2.
—	—	—	—	—	—	—	—	—	○	Using GX Works3, the sequence programs of the MELSEC CPU can be developed and debugged.
○	○	○	○	○	○	○	○	○	○	The PLC constants set with the data type, and the bit selection parameters set with the bit types can be specified on the screen as the parameters to use in the built-in PLC.
○	○	○	○	○	○	○	—	—	—	
○	○	○	○	○	○	○	○	○	○	For connecting a Mitsubishi Electric Graphic Operation Terminal (GOT), refer to the GOT Catalogs.
○	○	○	○	○	○	○	○	○	△ (MELSEC)	
—	—	—	—	—	—	—	—	—	△ (MELSEC)	
△	△	△	△	—	—	—	—	—	—	Pallet program function assists the machining setups as it allows machining programs to be registered for each pallet of the auto pallet changer.
○	○	○	○	○	○	○	○	○	○	When the servo OFF signal (per axis) is input, the corresponding axis is set in the servo OFF state. When the moving axis is mechanically clamped, this function is designed to prevent the servo motor from being overloaded by the clamping force.
○	○	○	○	○	○	○	○	○	○	This function enables the control axis to be released from control.
△	△	△	△	○	○	○	—	—	△	The synchronous control is a control method whereby both master and slave axes are controlled with the same travel command by designating the travel command for the master axis also to the slave axis. This function is assumed to be used in such equipment as large machine tools, which drive one axis with two servo motors.
△	△	△	△	○	○	○	—	—	△	Even when the control axes in a machine are mounted at an angle other than 90 degrees, this function enables it to be programmed and controlled in the same way as with an orthogonal axis.
○24	○24	○24	○24	○24	○24	○24	○24	○24	○*	Instead of a dog switch on a machine's axis, a hypothetical dog switch is established using a parameter to set a coordinate position to show the axis name and the hypothetical dog position. When the machine reaches the position, a signal is output to the PLC interface. * 24 points for each part system and 32 points for the whole PLC axes.
○	○	○	○	○	○	○	○	○	○	The indexing of the index table can be performed by setting the index axes.
△	△	△	△	—	—	—	—	—	—	(1) Changing the tool length compensation along the tool axis and compensation amount Even if the tool axis direction is not the Z axis direction because the rotary axis is rotated, the tool can be compensated in the tool axis direction. (2) Machine configuration The tool length compensation along the tool axis is carried out in respect to the direction of the tool nose axis (rotary axis). * This function is available during program format switch for L system.
△	△	△	△	—	—	—	—	—	—	This function makes it possible to move the axis with the manual pulse generator in the tool axis direction, tool diameter direction X and tool diameter direction Y in the hypothetical coordinate system over the tool axis.
△	△	△	△	—	—	—	—	—	—	The tool center coordinates, handle interrupt amount (tool axis movement) and tool center point speed are displayed during the tool center point control function, tool length compensation along the tool axis function, and tool handle feed & interrupt function (tool axis direction handle feed, tool handle interrupt, tool diameter direction handle feed, nose center rotation handle feed).
△	△*	△	△*	○*	○*	—	—	—	—	This function controls so that the position command in a machining program is at the tool center point in the coordinate system (table coordinate system) which rotates together with the workpiece. * Restrained to 4-axis simultaneous contouring for M830V, M80VW, M80V TypeA

(Note 1) The software sold separately is necessary.

Machining center system

M850VW	M830VW	M850VS	M830VS	— (M80VW)	M80V TypeA	M80V TypeB	E80 TypeA	E80 TypeB	— (C80)	General explanation
△	—	△	—	—	—	—	—	—	—	Tool cutting point control is a function to control the point (cutting point) where the tool comes into contact with the workpiece so that it moves at the path and speed specified by the machining program. NC automatically compensates the tool length and tool shape (tool radius, corner R). Therefore, machining can be performed without changing the machining program to change tools. This has the advantage of improving the diversion of machining programs. To use this function, additional specifications of both "tool cutting point control" and "tool center point control" are required.
△	△	△	△	○	○	—	—	—	△	An arbitrary spatial plane defined with this function can be machined using normal program commands.
—	—	—	—	—	—	—	—	—	—	* This includes simple tool center point control. This function is used when a lathe with the orthogonal axes XYZ and the turret with B axis performs the milling on the inclined surface in the end face direction. This allows the operator to perform cutting on an inclined surface with no need for considering the inclination angle.
△	△	△	△	—	—	—	—	—	—	This function is to compensate the tool radius of the 5-axis machine with two rotary axes, in accordance with the change of the workpiece direction and inclination of the tool due to the movement of the rotary axis. * This function is available during program format switch for L system.
△	—	△	—	—	—	—	—	—	—	This function is used for a 5-axis machine. This compensates the error when a workpiece is placed off the workpiece coordinate system to enable machining according to the program. * This function is available during program format switch for L system.
△	△	△	△	○	○	—	—	—	△	By selecting the hypothetical coordinate system to be machined, axis can be moved with manual feed (JOG, HANDLE or INCREMENTAL) in the coordinate system with this function. It can be easy to setup because multiple axes is moved by NC according to the tool angle or the inclination of the table.
△	△	△	△	○	○	—	—	—	—	This provides easy setup of index machining (multiple/inclined surface machining) using a rotary axis.
△	△	△	△	○	○	—	—	—	—	This function enables an axis to be synchronized with the axis previously defined as master axis for the synchronous control, and another axis to be synchronized with the slave axis.
△	△	△	△	○	○	—	—	—	—	This function estimates the inertia (or workpiece weight) of mechanical system and changes the speed control gain automatically according to the estimation results to suppress mechanical vibration. Users can expect suppression of vibration caused by inertia fluctuation, as well as reduction of machining time through adaptation of appropriate speed control gain.
△	△	△	△	○	○	—	—	—	—	This function estimates the inertia (or workpiece weight) of mechanical system and optimizes the acceleration/deceleration time constant automatically according to the estimation results. It achieves the cycle time reduction when the inertia of workpiece to machine changes significantly.
△	△	△	△	○	○	○	○	○	—	The servo motor of the axis designated for [Constant torque control] outputs the torque set by the parameter in a constant direction. The servo motor of the axis designated for [Proportional torque stopper control] generates the torque set by the parameter in the stopper direction.
○	○	○	○	○	○	○	○	○	—	This function outputs the position (angle) of external encoder to PLC device based on the input pulses from the encoder. This function can be used to monitor the position of angular head which the external encoder is connected to. * Encoder I/F expansion unit is required for M800VW/M80VW
△	△	△	△	○	○	○	○	—	—	Multiple-axis synchronization control is the function that enables multiple slave axes to be synchronized with commands to the master axis.
—	—	—	—	—	—	—	○	○	—	This function can be used to monitor the position of the turret rotation axis by connecting an encoder compatible with BiSS-C.
○	○	○	○	○	○	○	○	○	○	This is a function to control the NC control axis with command from the PLC in addition to the normal automatic operation command on the NC.
△	△	△	△	—	—	—	—	—	—	By specifying a hypothetical coordinate on the machine coordinate from the user PLC, oblique linear interpolation or circular interpolation is executed with jog / handle feed, manual rapid traverse or incremental feed of either X axis or Y axis.
○	○	○	○	○	○	○	○	—	○	This function allows independent axes to be controlled with PLC-based commands, separately from the NC control axes.
○	○	○	○	○	○	○	○	—	○	PLC axis indexing allows a PLC axis to function as an auxiliary axis with no need for changing the user ladder used conventionally for an auxiliary axis.
△	△	△	△	○	○	○	—	—	△	This function is to use one drive unit by switching the control from the NC or the PLC dynamically. The function of the NC axis can be used during the NC axis control and the function of the PLC axis can be used during the PLC axis control respectively.
○	○	○	○	○	○	○	○	○	○	Control commands to the CNC system are assigned from the PLC. Input signals with skip inputs that respond at high speed can also be used.
○	○	○	○	○	○	○	○	○	○	The status signals are output from the CNC system. They can be utilized by referencing them from the PLC.
○	○	○	○	○	○	○	○	○	○	[M800V/M80V/E80] This function uses the "read window" or "write window" assigned to the R register's user area to read and write the CNC operation status, axis information, parameters and tool data, etc. [C80] This function uses the "read window" or "write window to read and write the CNC operation status, axis information, parameters and tool data, etc.
○	○	○	○	○	○	○	○	○	○	This function enables searching of the program to automatically start from the PLC. The program No., block No. and sequence No. can be designated. In addition, the details of the search in progress can be read.
○	○	○	○	○	○	○	○	○	○	This signal allows an automatic transition to the alarm display screen when an alarm occurs.
○	○	○	○	○	○	○	○	○	—	This function gives a buzzer mounted on the NC keyboard by operating the PLC device. This is effective in applications of sounding a buzzer such as during the alarm occurrence, or for the program operation end notification.
□	□	—	—	□	—	—	□	□	—	
□	□	—	—	□	—	—	□	□	—	Some types of signals can be input/output from the operation panel I/O unit according to the type and No. of contacts.
—	—	□	□	—	□	□	□	□	—	
—	—	□	□	—	□	□	□	□	—	
□	□	□	□	□	□	□	□	□	—	
□	□	□	□	□	□	□	□	□	—	The remote I/O unit equipped with the maximum number of DI/DO points is the one with 64 points for DI and 48 points for DO. Multiple remote I/O units can be used as long as the total number of occupied stations is 64 or less. * Functional safety expansion unit is required for M80V when using **DI:32/DO:32+SDI:8/SDO:4** or **SDI:8/SDO:4**.

[C80] Refer to manuals of each unit of Mitsubishi Electric Programmable Controller "MELSEC iQ-R series" for information on the function and the performance.
□	□	□	□	□	□	□	□	□	—	By mounting EtherNet/IP function expansion unit on NC control unit to connect EtherNet/IP-compatible equipment, PLC devices can be input/output using NC control unit as a scanner or an adapter for EtherNet/IP communication.
□	□	□	□	□	□	□	□	□	△ (MELSEC)	[M800V/M80V/E80] FL-net communication is available by mounting FL-net expansion unit on the NC control unit. [C80] Refer to manuals of each unit of Mitsubishi Electric Programmable Controller "MELSEC iQ-R series" for information on the function and the performance.
○	○	○	○	○	○	○	○	○		CC-Link IE Field Basic enables periodical data communication (cyclic data transmission) between master station and slave station by connecting the NC controller to CC-Link IE Network Basic compatible devices via built-in Ethernet port.
○	○	○	○	○	○	○	○	○	—	It is an optional function that allows a user-created screen or window to be displayed as an HMI screen or another application on the screen.
□	□	16	16	□	16	16	1	1	—	* Capacity depends on memory space for M800VW/M80VW. The number indicates the maximum size of the custom screen module (.o).
6	6	6	6	6	6	6	1	1	—	
○	○	○	○	○	○	○	○	○	—	This function allows an arbitrary character string to be assigned to a key and makes it easy to input a typical character string.
○	○	○	○	○	○	○	○	○	—	This middleware makes it easy to develop applications having the Windows interface.
△	△	△	△	○	○	○	○	○	△	APLC (Advanced Programmable Logic Controller) release is a function that allows the user-generated C language module to be called from the NC. Control operations that are difficult to express in a sequence program can be created with the C language.
○	○	○	○	○	○	○	○	○	—	This function is designed to interface an NC with an application developed by a user. You can set and refer the data for NC using this function. * Please contact us for details.
△	△	△	△	○	○	○	○	○	—	The MES interface library function links the NC internal data and the database of information system (manufacturing execution system) without a communication gateway.
○	○	○	○	○	○	○	○	○	—	Transfers data using the SLMP between an NC and an external device. This function enables easy connection with external devices and read/write NC data through the Ethernet cable.
○	○	○	○	○	○	○	○	○	—	The software designed to help development of an application with Windows interface for Mitsubishi Electric computerized numerical controller. The product can accelerate development by using OLE (object linking and embedding) common to computerized numerical controller without knowing internal processing of the machine.
—	—	—	—	—	—	—	—	—	○	This integrated software is used to create professional screen designs for GOTs.
△ (Note 3)	—	△ (Note 3)	—	—	—	—	—	—	—	This function allows transformation of coordinates different from the NC's rectangular coordinate system, making it possible to control special mechanisms such as parallel link.
△	△	△	△	○	○	○	○	○	—	This function locks the operations of the NC if the release code is not entered before the specified time limit.
○	○	○	○	○	○	○	○	○	○	NC Monitor2 is a PC software tool that monitors information in the NC unit connected with the Ethernet.
○	○	○	○	○	○	○	○	○	○	NC Explorer is a software tool to operate the machining data files of each NC unit connected with a host personal computer by Ethernet connection from the Explorer on the host personal computer.
○	○	○	○	○	○	○	○	○	○	Automatic operation lock function prevents the falsification of APLC (C language module) by a third party.
○	○	○	○	○	○	○	○	○	○	Present power consumption and accumulated power consumption can be acquired with this function. The present power consumption notifies the instantaneous power consumption and the accumulated power consumption notifies the integrated value of the present power consumption.
○	○	○	○	○	○	○	○	○	—	NC system can collect and manage the electric power of the machine tool which is measured by the energy measuring unit "EcoMonitorLight (sold separately)".
—	—	—	—	—	—	—	—	—	○	This is the interface to display the variety of NC data on GOT connected to the CNC CPU. This reads out the running machining program No., the running machining program and the coordinate values, etc. by the device read command.
—	—	—	—	—	—	—	—	—	○	This function enables the recorded data by the data sampling function of the NC to display with a graph on the GOT, and to store the data as a file.
□ (Note 3)	□ (Note 3)	□ (Note 3)	□ (Note 3)	□ (Note 3)	□ (Note 3)	□ (Note 3)	—	—	—	Laser processing control collectively refers to the functions for sheet metal laser cutting which enable the NC to control the laser oscillator via the laser I/F unit. To use laser processing control, the laser I/F unit, the laser oscillator, and other equipment for laser cutting are required.
○ (Note 3)	○ (Note 3)	○	○	○ (Note 3)	○	○	—	—	—	This function enables the NC to exchange data with devices compliant with wireless LAN standards using wireless communication through the built-in wireless LAN card. This enables the NC screen to be monitored on a tablet device and allows the peripheral tools that are previously connected by wires to be connected wirelessly, which leads to reduced network wiring cost.

(Note 1) The software sold separately is necessary.
(Note 2) This tool is free of charge. Please contact us.
(Note 3) This specification is under development, please contact us for details.

EtherNet/IP scanner/adapter unit	FCU8-EX565	EtherNet/IP 1ch (Only LAN1, LAN2 cannot be used)	○	○	○	○	○
PROFINET communication expansion unit	FCU8-EX566	PROFINET 1ch	○	○	○	○	–
FL-net expansion unit	FCU8-EX568	FL-net 1ch (Only LAN1, LAN2 cannot be used)	○	○	○	○	○
Option relay unit	FCU8-EX702	For function expansion unit 1slot	–	–	–	–	○
	FCU8-EX703	For function expansion unit 2slots	–	–	–	–	○
	FCU8-EX704	For function expansion unit 1slot (*1)	–	○	–	○	–
	FCU8-EX705	For function expansion unit 2slots (*1)	–	○	–	○	–
Vibration cutting expansion unit	FCU8-EX744	Vibration cutting control	○	○	○	○	○
Image input expansion unit (Note 1)	FCU8-EX752	19-type display function, Image input function with IPC (Image input I/F: HDMI)	○	○	–	○	○
[Side Memory I/F Unit]							
Side memory I/F Unit (Note 1)	FCU8-EP202-2	SDHC 1ch, USB2.0 1ch Wireless LAN USB communication (between side memory I/F PCB and personal computer) Unit lid (resin molded article), metal plate, etc. Exclusive for 19-type display unit	○	–	○	–	–
[Manual Pulse Generator]							
5V Manual pulse generator	UFO-01-2Z9	Input 5VDC, 100pulse/rev	○	○	○	○	○
12V Manual pulse generator	HD60C	Input 12VDC, 25 pulse/rev	○	○	○	○	○
[Encoder]							
Synchronous feed encoder	OSE1024-3-15-68	Input 5VDC, 1024 pulse/rev, 6000r/min, 68-square flange	○	○	○	○	○
	OSE1024-3-15-68-8	Input 5VDC, 1024 pulse/rev, 8000r/min, 68-square flange	○	○	○	○	○
	OSE1024-3-15-160	Input 5VDC, 1024 pulse/rev, 6000r/min, 160-square flange	○	○	○	○	○
[Handy Terminal]							
Handy terminal	HG1T-SB12UH-MK1346-L5		○	○	○	○	○
[Thermistor Sets]							
Thermistor	PT3C-51F-M2 10P		○	○	○	○	○
[Genuine Memory Card]							
Exclusive SD cards for 1GB	FCU8-SD001G	1GB capacity	○	○	○	○	○
Exclusive SD cards for 4GB	FCU8-SD004G	4GB capacity	○	○	○	○	○
[Durable Parts]							
Battery for control unit	Q6BAT	Battery cumulative data holding time: 45,000 hours (At 0 to 45℃. The life will be shorter if the temperature is high.) Battery life: Approx. 5 years (from date of battery manufacture)	○	○	○	○	○
[RT Processing Unit]							
RT processing unit (Note 1)	FCU8-RT603		○	–	○	–	–
[IoT Unit]							
Remote service gateway unit	FCU8-RT601	For details of a remote service gateway unit, refer to "Remote Service iQ Care Remote4U User's Manual" (IB-1501552).	○	○	○	○	○

DI: Digital input signals, DO: Digital output signals, AI: Analog input signals, AO: Analog output signals

(*1) This is required when FCU8-EX56x/FCU8-EX744 is used in M800VS/M80V series.

(Note 1) This product is under development, please contact us for details.

[C80 Series]

MELSEC iQ-R Series modules

Product		Model	Model code	Remarks
PLC CPU		R04CPU	1FMA00	Program capacity, 40K steps; basic operation processing speed (LD instruction), 0.98 ns
		R08CPU	1FMA01	Program capacity, 80K steps; basic operation processing speed (LD instruction), 0.98 ns
		R16CPU	1FMA02	Program capacity, 160K steps; basic operation processing speed (LD instruction), 0.98 ns
		R32CPU	1FMA03	Program capacity, 320K steps; basic operation processing speed (LD instruction), 0.98 ns
		R120CPU	1FMA04	Program capacity, 1200K steps; basic operation processing speed (LD instruction), 0.98 ns
SD memory card		NZ1MEM-2GBSD	1WC535	SD memory card, 2G bytes
Extended SRAM cassette		NZ2MC-1MBS	1FMB00	1M bytes
Main base		R35B	1FME00	5 slots, for MELSEC iQ-R Series modules
		R38B	1FME01	8 slots, for MELSEC iQ-R Series modules
		R312B	1FME02	12 slots, for MELSEC iQ-R Series modules
Extension base		R65B	1FME07	5 slots, for MELSEC iQ-R Series modules
		R68B	1FME06	8 slots, for MELSEC iQ-R Series modules
		R612B	1FME05	12 slots, for MELSEC iQ-R Series modules
RQ extension base		RQ65B	1FME08	5 slots, for MELSEC-Q Series modules
		RQ68B	1FME03	8 slots, for MELSEC-Q Series modules
		RQ612B	1FME04	12 slots, for MELSEC-Q Series modules
Extension cable		RC06B	1FM001	0.6 m cable for extension and RQ extension base units
		RC12B	1FM002	1.2 m cable for extension and RQ extension base units
		RC30B	1FM003	3 m cable for extension and RQ extension base units
		RC50B	1FM004	5 m cable for extension and RQ extension base units
Power supply		R61P	1FMC00	AC power supply; input, 100 to 240 V AC; output, 5 V DC/6.5 A
		R62P	1FMC02	AC power supply; input, 100 to 240 V AC; output, 5 V DC/3.5 A, 24 V DC/0.6 A
		R63P	1FMC01	DC power supply; input, 24 V DC; output, 5 V DC/6.5 A
		R64P	1FMC03	AC power supply; input, 100 to 240 V AC; output, 5 V DC/9 A
Input	AC	RX10	1FM103	AC input, 16 points; 100 to 120 V AC (50/60 Hz)
	DC(Positive Common/ Negative Common Shared Type)	RX40C7	1FM100	DC input, 16 points; 24 V DC, 7.0 mA
		RX41C4	1FM101	DC input, 32 points; 24 V DC, 4.0 mA
		RX42C4	1FM102	DC input, 64 points; 24 V DC, 4.0 mA
		RX41C4-TS	1FM113	DC input, 32 points; 24VDC, 4.0mA, Spring clamp terminal block
Output	Relay	RY10R2	1FM153	Relay output, 16 points; 24 V DC/2 A, 240 V AC/2 A
		RY18R2A	1FM15A	Relay output, 8 points; 24VDC/2A, 240VAC/2A
	Triac	RY20S6	1FM157	Triac output, 16 points; 100 to 240VAC/0.6A
	Transistor (Sink)	RY40NT5P	1FM150	Transistor (sink) output, 16 points; 12 to 24 V DC, 0.5 A
		RY41NT2P	1FM151	Transistor (sink) output, 32 points; 12 to 24 V DC, 0.2 A
		RY42NT2P	1FM152	Transistor (sink) output, 64 points; 12 to 24 V DC, 0.2 A
	Transistor (Source)	RY40PT5P	1FM154	Transistor (source) output, 16 points; 12 to 24 V DC, 0.5 A
		RY41PT1P	1FM155	Transistor (source) output, 32 points; 12 to 24 V DC, 0.1 A
		RY42PT1P	1FM156	Transistor (source) output, 64 points; 12 to 24 V DC, 0.1 A
		RY41PT1P-TS	1FM15E	Transistor (source) output, 32 points; 12 to 24VDC, 0.1A, Spring clamp terminal block
I/O combined	DC input/ transistor output	RH42C4NT2P	1FM200	DC input, 32 points; 24 V DC, 4.0 mA Transistor output, 32 points; 12 to 24 V DC, 0.2 A
Connector		A6CON1	13L101	Soldering 32 point-connector (40-pin connector)
		A6CON2	13L102	Solderless terminal connection 32 point-connector (40-pin connector)
		A6CON3	13L103	Flat-cable pressure displacement 32 point-connector (40-pin connector)
		A6CON4	13L124	Soldering 32 point-connector (40-pin connector, bidirectional cable mountable)
Spring clamp terminal block		Q6TE-18SN	1W4299	For 16-point I/O modules, 0.3 to 1.5 mm² (22…16 AWG)
Connector/terminal block conversion module		A6TBX70	13L112	For positive common input modules (3-wire type)
		A6TBXY36	13L106	For positive common input modules and sink output modules (standard type)
		A6TBXY54	13L109	For positive common input modules and sink output modules (2-wire type)
Connector/ terminal block conversion module	cable	AC05TB	13L006	For A6TBXY36, A6TBXY54, and A6TBX70 (positive common/sink type), 0.5 m
		AC10TB	13L007	For A6TBXY36, A6TBXY54, and A6TBX70 (positive common/sink type), 1 m
		AC20TB	13L008	For A6TBXY36, A6TBXY54, and A6TBX70 (positive common/sink type), 2 m
		AC30TB	13L009	For A6TBXY36, A6TBXY54, and A6TBX70 (positive common/sink type), 3 m
		AC50TB	13L010	For A6TBXY36, A6TBXY54, and A6TBX70 (positive common/sink type), 5 m
		AC80TB	13L026	For A6TBXY36, A6TBXY54, and A6TBX70 (positive common/sink type), 8 m* *Common current 0.5 A or lower
		AC100TB	13L027	For A6TBXY36, A6TBXY54, and A6TBX70 (positive common/sink type), 10 m* *Common current 0.5 A or lower
Relay terminal module		A6TE2-16SRN	13L131	For 40-pin connector 24 V DC transistor output modules (sink type)
Relay terminal module	cable	AC06TE	13L021	For A6TE2-16SRN, 0.6 m
		AC10TE	13L022	For A6TE2-16SRN, 1 m
		AC30TE	13L023	For A6TE2-16SRN, 3 m
		AC50TE	13L024	For A6TE2-16SRN, 5 m
		AC100TE	13L025	For A6TE2-16SRN, 10 m
Analog input	Voltage input	R60ADV8	1FM503	8 channels for voltage inputs -10 to 10 V DC, -32000 to 32000; 80 μs/CH
	Current input	R60ADI8	1FM504	8 channels for current inputs 0 to 20 mA DC/0 to 32000; 80 μs/CH
	Voltage/ current input	R60AD4	1FM501	4 channels for voltage/current inputs -10 to 10 V DC, -32000 to 32000; 0 to 20 mA DC, 0 to 32000; 80 μs/CH
Analog output	Voltage output	R60DAV8	1FM505	8 channels for voltage outputs -32000 to 32000, -10 to 10 V DC; 80 μs/CH
	Current output	R60DAI8	1FM506	8 channels for current outputs 0 to 32000, 0 to 20 mA DC; 80 μs/CH
	Voltage/ current output	R60DA4	1FM502	4 channels for voltage/current outputs -32000 to 32000, -10 to 10 V DC; 0 to 32000, 0 to 20 mA DC; 80 μs/CH
Temperature control	Platinum temperature- measuring resistor	R60TCRT4	1FY40E	RTD (Pt100, JPt100), 4 channels for input
		R60TCRT4BW	1FY40F	RTD (Pt100, JPt100), 4 channels for input, heater disconnection detection
	Thermocouple	R60TCTRT2TT2	1FY40C	Thermocouple (B, R, S, K, E, J, T, N, U, L, PL@, W5Re/W26Re), 4 channels for input (2 channels can also be used for RTD input)
		R60TCTRT2TT2BW	1FY40D	Thermocouple (B, R, S, K, E, J, T, N, U, L, PL@, W5Re/W26Re), 4 channels for input (2 channels can also be used for RTD input), heater disconnection detection

Product		Model	Model code	Remarks
High-speed counter		RD62P2	1FM50B	5/12/24 V DC input, 2 channels; counting speed, max. 200k pulse/s; external output, transistor (sink type)
		RD62D2	1FM50C	Differential input, 2 channels; max. counting speed, 8M pulse/s; external output, transistor (sink type)
		RD62P2E	1FM50D	5/12/24 V DC input, 2 channels; counting speed, max. 200k pulse/s; external output, transistor (source type)
Ethernet		RJ71EN71	1FM601	1 Gbps/100 Mbps/10 Mbps, 2 ports Multi-network connectivity (Ethernet/CC-Link IE)
Serial communication		RJ71C24	1FM604	Max. 230.4 kbps; RS-232, 1 channel; RS-422/485, 1 channel
		RJ71C24-R2	1FM605	Max. 230.4 kbps; RS-232, 2 channels
		RJ71C24-R4	1FM606	Max. 230.4 kbps; RS-422/485, 2 channels
MES Interface		RD81MES96	1FTD00	1000BASE-T/100BASE-TX/10BASE-T Database connection (MX MESInterface-R is required)
CC-Link IE Control		RJ71GP21-SX	1FM602	1 Gbps, fiber-optic cable, control/normal station
CC-Link IE Field		RJ71GF11-T2	1FM600	1 Gbps, master/local station
CC-Link		RJ61BT11	1FM603	Max. 10 Mbps, master/local station, CC-Link Ver.2 supported
CC-Link Remote I/O module	Screw terminal block type	AJ65SBTB1-16D	1W5131	Input 16 points: 24VDC (positive/negative common shared) 1-wire type Terminal block type Response time 1.5ms
		AJ65SBTB1-32D	1W5141	Input 32 points: 24VDC (positive/negative common shared) 1-wire type Terminal block type Response time 1.5ms
		AJ65SBTB1-16TE	1W5128	Output 16 points: 12/24VDC (0.1A) Transistor output (source type) 1-wire type Terminal block type
		AJ65SBTB1-32TE1	1W5452	Output 32 points: 12/24VDC (0.5A) Transistor output (source type) 1-wire type Terminal block type
	Waterproof connector type	AJ65FBTA4-16DE	1W5108	Input 24VDC (negative common) 4-wire type Thin, waterproof type Response time 1.5ms
		AJ65FBTA2-16TE	1W5103	Output 16 points: 12/24VDC (1.0A) Transistor output (source type) 2-wire type Thin, waterproof type

MELSEC Q Series modules

Product		Model	Model code	Remarks
Extension base		Q63B	1W4E07	3 slots, 1 power supply module required, for Q Series modules
		Q65B	1W4E03	5 slots, 1 power supply module required, for Q Series modules
		Q68B	1W4E04	8 slots, 1 power supply module required, for Q Series modules
		Q612B	1W4E05	12 slots, 1 power supply module required, for Q Series modules
		Q52B	1W4E14	2 slots, power supply module not required, for Q Series modules
		Q55B	1W4E15	5 slots, power supply module not required, for Q Series modules
Extension cable		QC05B	1W4006	0.45 m cable for connecting extension base unit
		QC06B	1W4000	0.6 m cable for connecting extension base unit
		QC12B	1W4001	1.2 m cable for connecting extension base unit
		QC30B	1W4002	3m cable for connecting extension base unit
		QC50B	1W4003	5m cable for connecting extension base unit
		QC100B	1W4004	10m cable for connecting extension base unit
Power supply		Q61P	1W4C11	Input voltage: 100 to 240 V AC, output voltage: 5 V DC, output current: 6A
		Q63P	1W4C02	Input voltage: 24 V DC, output voltage: 5 V DC, output current: 6A
		Q64PN	1W4C12	Input voltage: 100 to 240 V AC, output voltage: 5 V DC, output current: 8.5A
Output	Transistor (Independent)	QY68A	1W4310	8 points, 5 to 24 V DC, 2 A/point, 8 A/module, response time: 10 ms, sink/source type, 18-point terminal block, with surge suppression, all points independent
Analog output	Voltage/current output	Q62DA-FG	1W4571	2 channels, input (resolution): 0 to 12000, -12000 to 12000, -16000 to 16000, output: -12 to 12 V DC, 0 to 22 mA DC, conversion speed: 10 ms/2 channels, 18-point terminal block, channel isolated
MELSECNET/H	Optical loop (SI)	QJ71LP21-25	1W4516	SI/QSI/H-PCF/broadband H-PCF fiber optic cable, dual loop, control network (control/normal station) or remote I/O network (remote mater station)
	Coaxial bus	QJ71BR11	1W4511	3C-2V/5C-2V coaxial cable, single bus, control network (control/normal station) or remote I/O network (remote master station)
FL-net(OPCN-2)	Ver.2.00	QJ71FL71-T-F01	1W4593	10BASE-T, 100BASE-TX
AS-I		QJ71AS92	1W4524	Master station, AS-Interface Specification Version 2.11 compatible
DeviceNet		QJ71DN91	1W4518	Master station/local station combined use, for QCPU, DeviceNet(Release2.0) compatible.

Peripheral unit

Product		Model	Remarks
Dual signal module	Dual-signal modules	R173SXY	IO redundant monitoring module (Up to three modules)
	Terminal block	FA-TBS40P	Terminal block conversion (separately prepared: Mitsubishi Electric Engineering) UL supported
	Terminal block	FA-LTB40P	Terminal block conversion (separately prepared: Mitsubishi Electric Engineering)
	Cable	FA-CBL□□FMV-M	Terminal block conversion connection cable (length □□= 05: 0.5m, 10: 1m, 20: 2m, 30: 3m, 50: 5m) (separately prepared: Mitsubishi Electric Engineering)
Signal splitter		FCU7-HN387	Option (Necessary when manual pulse generator is used for two or three axes)
FL-net (OPCN-2) Interface module		ER-1FL2-T	10BASE-T, 100BASE-TX

Parts

Product		Model	Remarks
Manual pulse generator		UFO-01-2Z9	5V specification
		HD60C	12V specification, for the operation board signal splitter connection, 12V power supply separately necessary
Encoder		OSE 1024-3-15-68	6000 r/min, no straight type connector enclosed, new JIS key, 68 square flange
		OSE 1024-3-15-68-8	8000 r/min, no straight type connector enclosed, 68 square flange
		OSE 1024-3-15-160	6000 r/min, no straight type connector enclosed, new JIS key, 160 square flange
Grounding plate		Grounding plate D	With cable clamp A(2)
		Grounding plate E	With cable clamp B(1)

CNC SYSTEM GENERAL CONNECTION DIAGRAM

1. M800VW Series Windows-based Display Unit (15-type)

* Refer to "6. 19-type Display Unit (M800VW/M80VW Series Windows-based Display Unit)" described later for details on the connection with the 19-type display unit.

Dotted lines indicate the sections prepared by the machine tool builder.
<> Angle brackets indicates attached cable of unit.

2. M800VS Series (10.4-type Display Unit and 15-type Display Unit)

* Refer to "7. 19-type Display Unit (M800VS/M80V Series)" described later for details on the connection with the 19-type display unit.

Dotted lines indicate the sections prepared by the machine tool builder.
<> Angle brackets indicates attached cable of unit.

(*1) For connections of the drive units, refer to "DRIVE SYSTEM SYSTEM CONFIGURATION DRAWING" described later.
(*2) When using a keyboard unit, install the operation panel I/O unit on the back of the keyboard unit.
(*3) For details of the cable and the connector, refer to "CNC SYSTEM CABLES LIST" described later.
(*4) Q6BAT can be connected to the control unit for backup use.
(*5) Refer to "8. Connecting a RT Processing Unit" described later for details on the connection with the RT processing unit.
(*6) Refer to "10. Connecting a Laser I/F Unit" described later for details of the connection with the laser I/F unit.
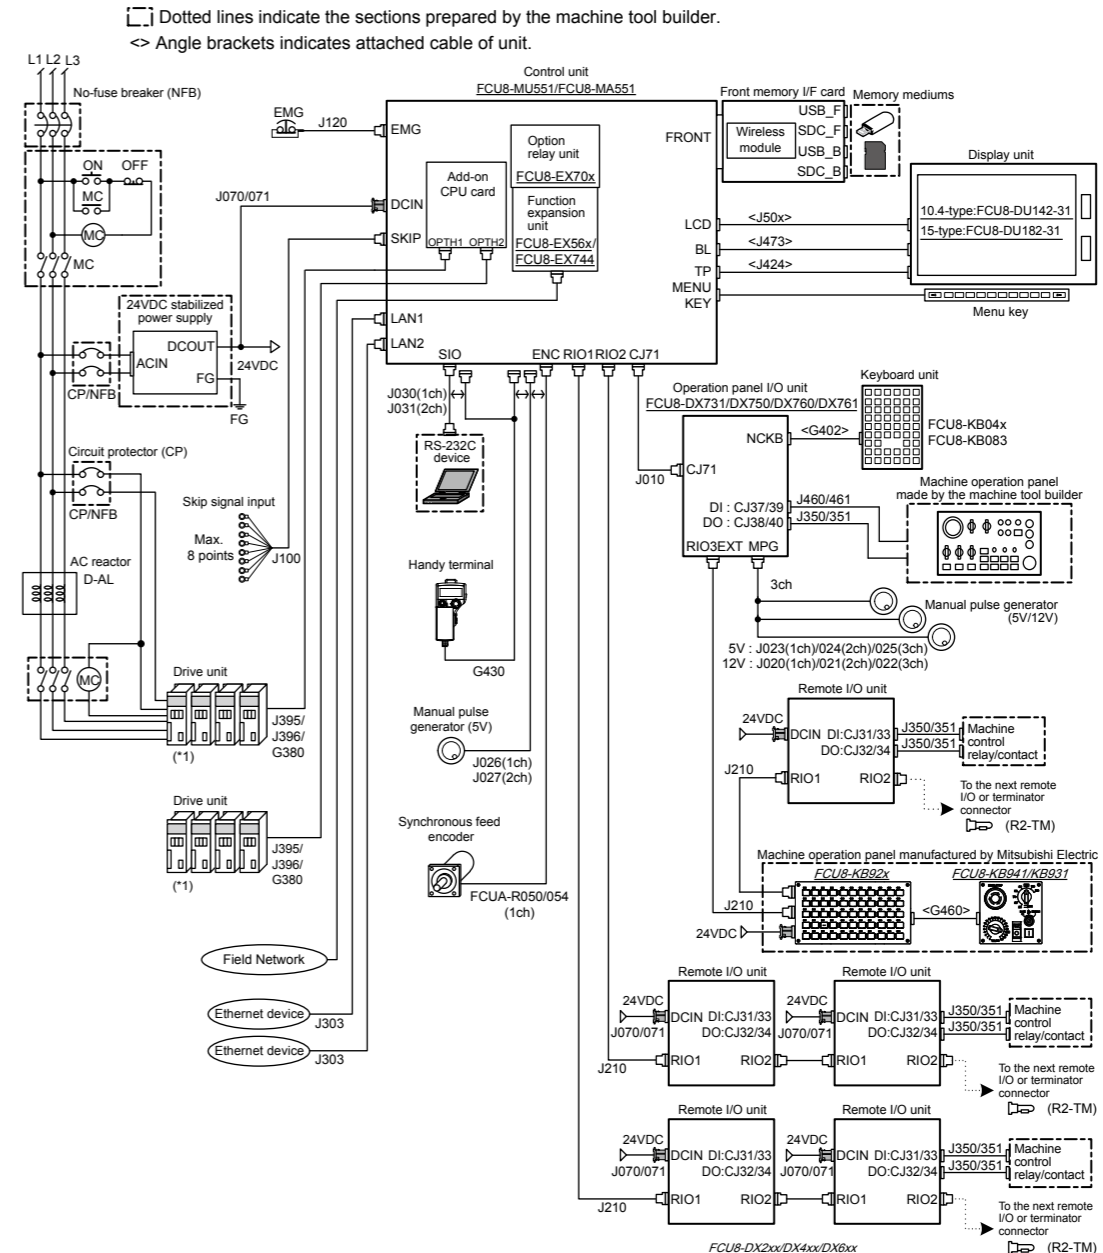

(*1) For connections of the drive units, refer to "DRIVE SYSTEM SYSTEM CONFIGURATION DRAWING" described later.
(*2) For details of the cable and the connector, refer to "CNC SYSTEM CABLES LIST" described later.
(*3) Q6BAT can be connected to the control unit for backup use.
(*4) Refer to "9. Connecting an Image Input Expansion Unit" described later for details on the connection with the image input expansion unit.
(*5) Refer to "10. Connecting a Laser I/F Unit" described later for details of the connection with the laser I/F unit.
(*6) Refer to "11. Connecting an Operation I/O Unit (FCU8-DX834)" described later for details of the connection with the operation board I/O unit (FCU8-DX834).

3. M80VW Series Windows-based Display Unit (15-type)

* Refer to "6. 19-type Display Unit (M800VW/M80VW Series Windows-based Display Unit)" described later for details on the connection with the 19-type display unit.

(*1) For connections of the drive units, refer to "DRIVE SYSTEM SYSTEM CONFIGURATION DRAWING" described later.
(*2) When using a keyboard unit, install the operation panel I/O unit on the back of the keyboard unit.
(*3) For details of the cable and the connector, refer to "CNC SYSTEM CABLES LIST" described later.
(*4) Q6BAT can be connected to the control unit for backup use.
(*5) Refer to "8. Connecting a RT Processing Unit" described later for details on the connection with the RT processing unit.
(*6) Refer to "10. Connecting a Laser I/F Unit" described later for details of the connection with the laser I/F unit.

4. M80V Series (8.4-type Display Unit, 10.4-type Display Unit, and 15-type Display Unit)

* Refer to "7. 19-type Display Unit (M800VS/M80V Series)" described later for details on the connection with the 19-type display unit.
* The general connection diagram with smart safety observation function is as below.
  Without smart safety observation function, functional safety expansion unit will not be installed in the control unit.
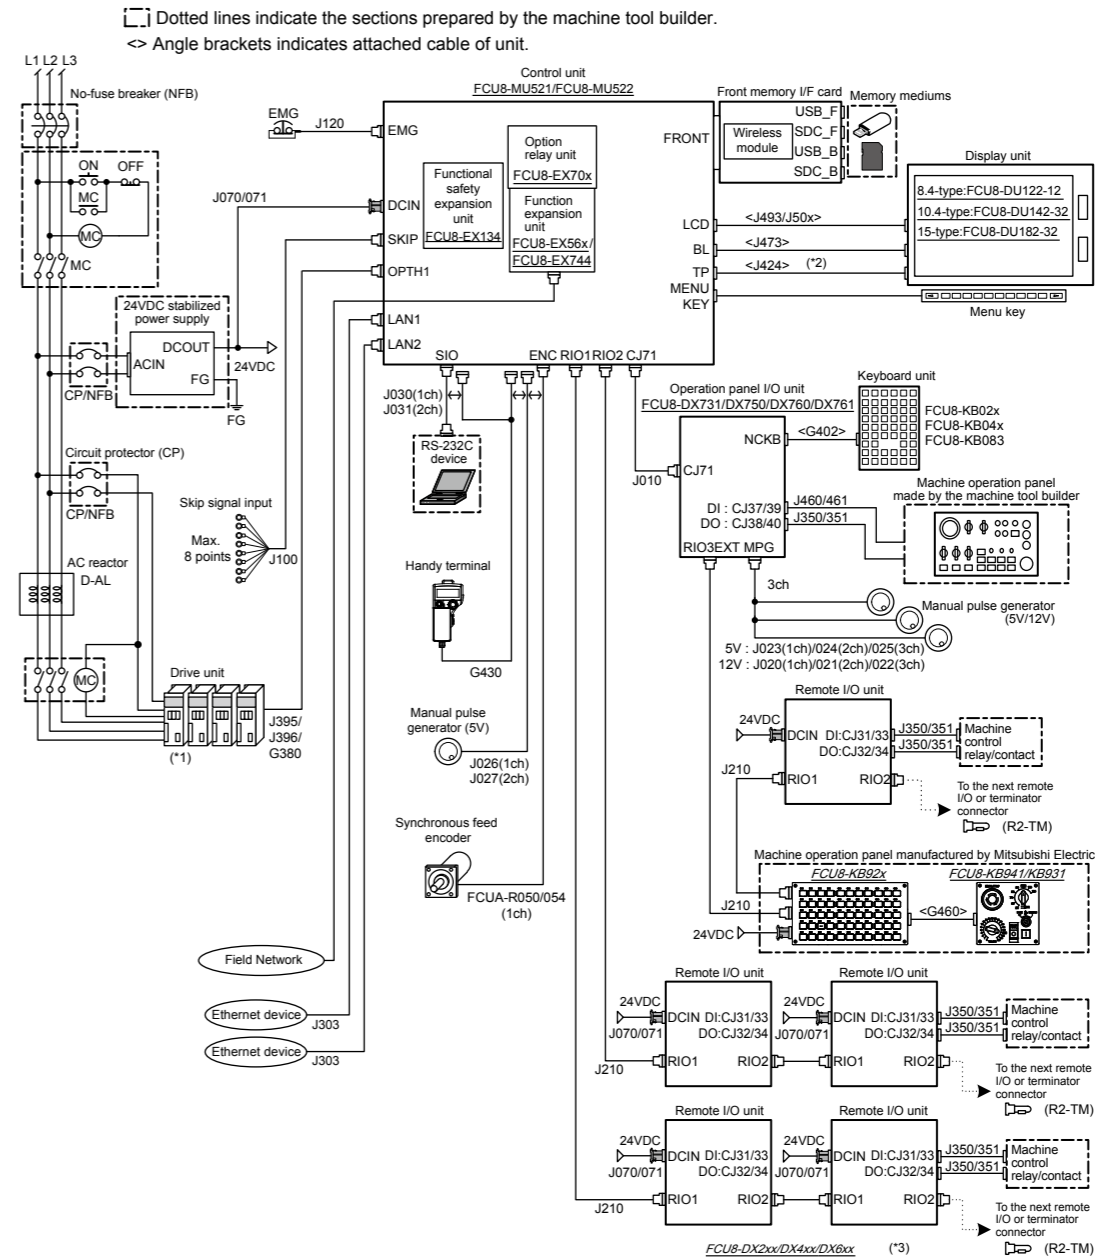

(*1) For connections of the drive units, refer to "DRIVE SYSTEM SYSTEM CONFIGURATION DRAWING" described later.
(*2) The 8.4-type display unit is incompatible with the touchscreen. TP connector is not used.
(*3) The safety remote I/O unit is available only when the functional safety expansion unit is mounted.
(*4) For details of the cable and the connector, refer to "CNC SYSTEM CABLES LIST" described later.
(*5) Q6BAT can be connected to the control unit for backup use.
(*6) Refer to "9. Connecting an Image Input Expansion Unit" described later for details on the connection with the image input expansion unit.
(*7) Refer to "10. Connecting a Laser I/F Unit" described later for details of the connection with the laser I/F unit.
(*8) Refer to "11. Connecting an Operation I/O Unit (FCU8-DX834)" described later for details of the connection with the operation board I/O unit (FCU8-DX834).
(*9) Refer to "12. Connecting a Pulse-controlled Inverter" described later for details on the connection with the pulse-controlled inverter.

5 CNC SYSTEM

5. E80 Series

6. 19-type Display Unit (M800VW/M80VW Series Windows-based Display Unit)

Dotted lines indicate the sections which is different from the 15-type display unit in the 19-type display unit.

Display unit for M800VW Series	Display unit for M80VW Series
FCU8-DU193-75	FCU8-DU193-77
FCU8-DU194-75	FCU8-DU194-77
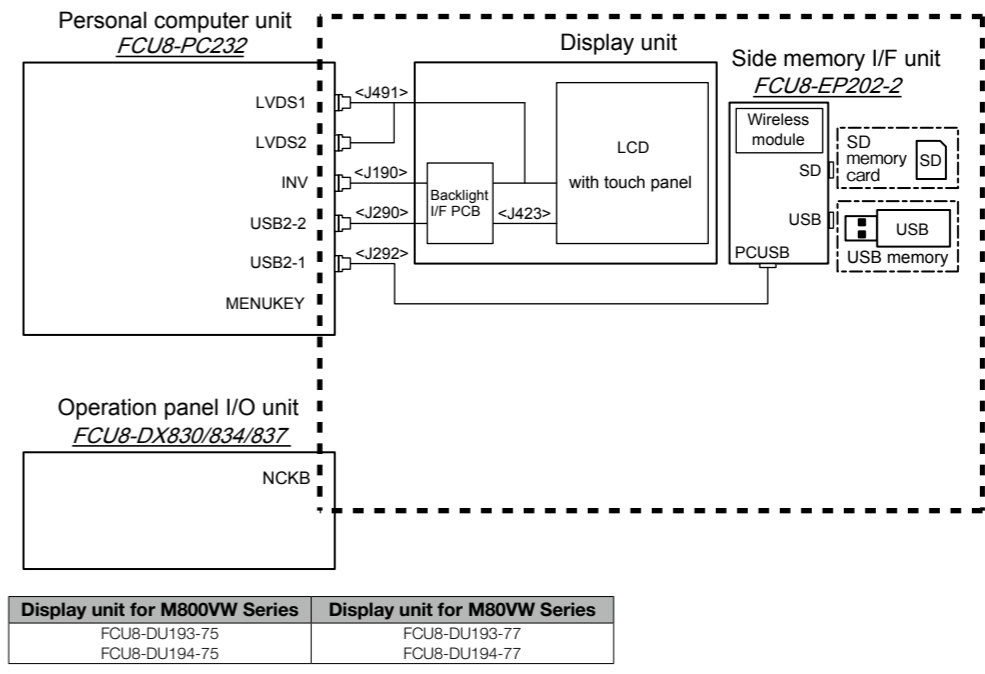

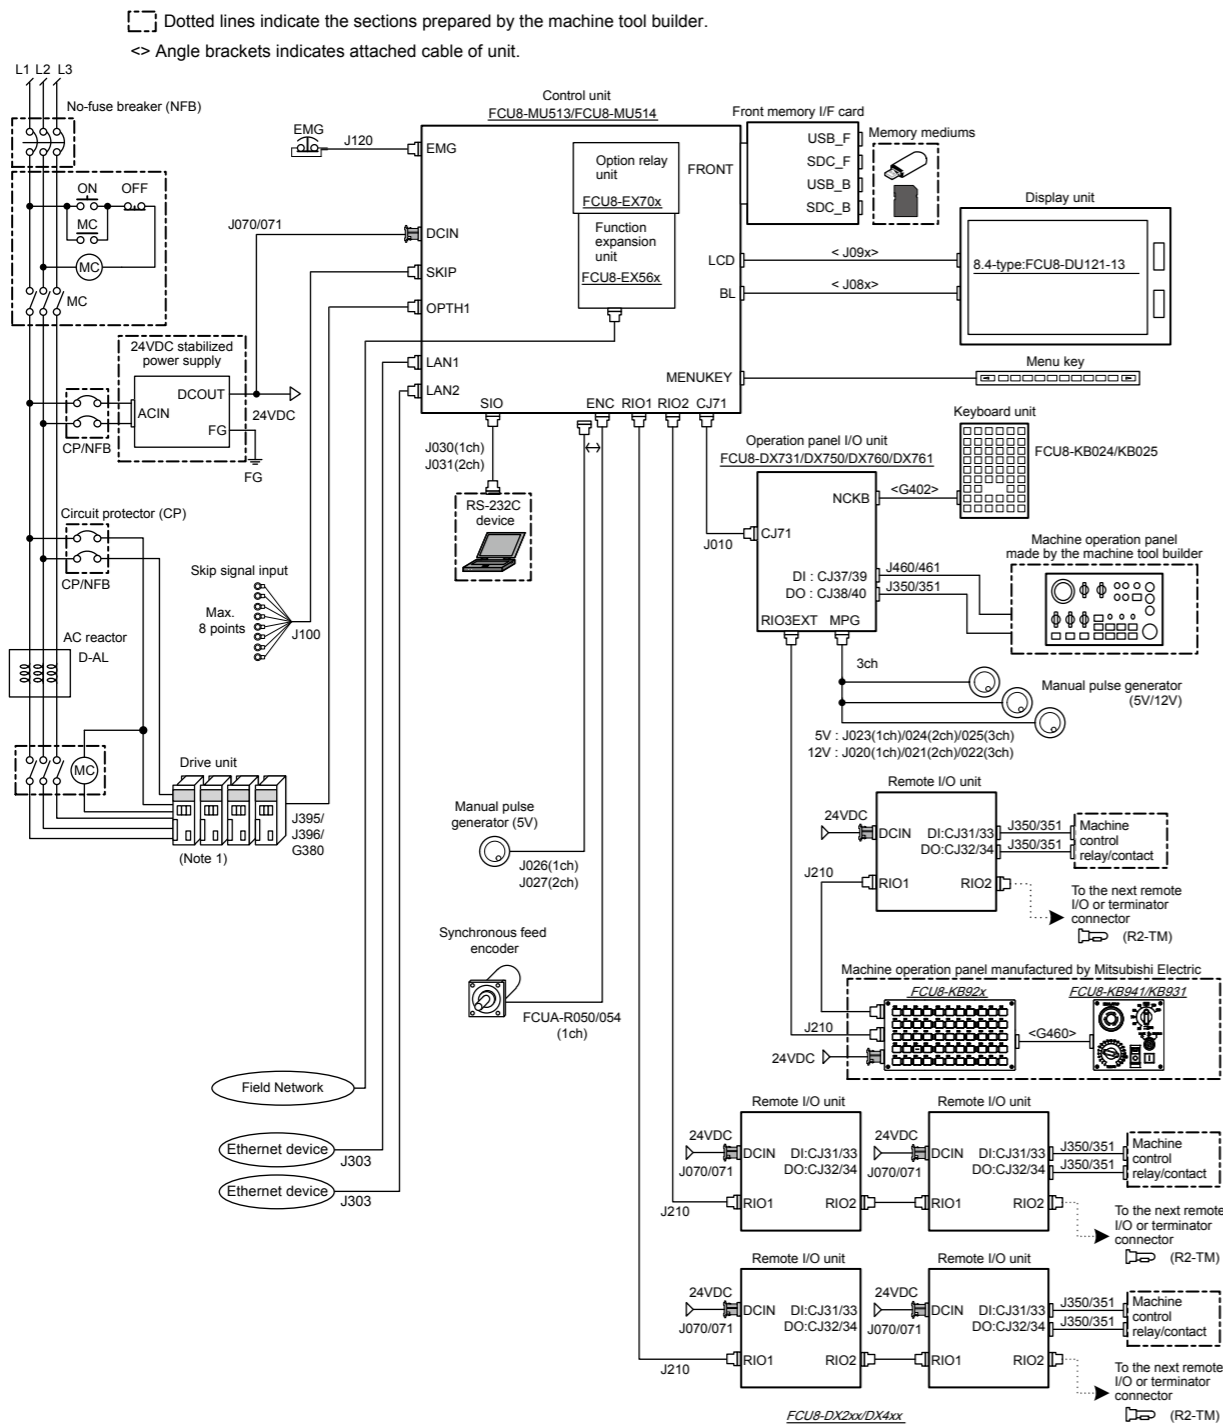

(*1) The personal computer unit is installed on the back of the display unit.

(Reference) 15-type display unit

Display unit for M800VW Series	Display unit for M80VW Series
FCU8-DU183-34	FCU8-DU183-36
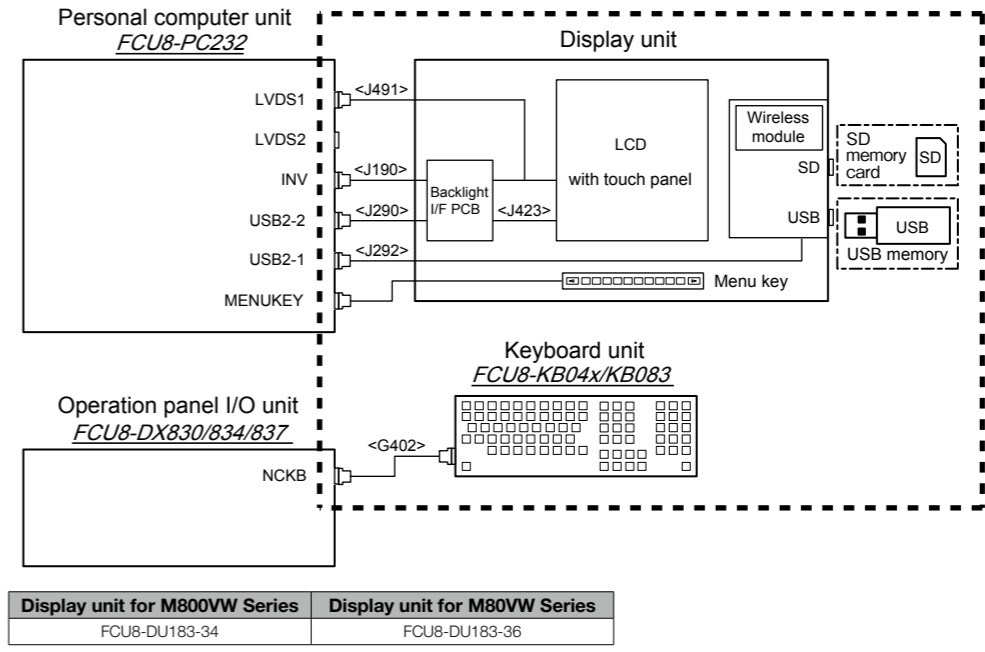

(*1) The personal computer unit is installed on the back of the display unit.
(*2) The operation board I/O unit is installed on the back of the keyboard unit.

(*1) For connections of the drive units, refer to "DRIVE SYSTEM SYSTEM CONFIGURATION DRAWING" described later.
(*2) For details of the cable and the connector, refer to "CNC SYSTEM CABLES LIST" described later.
(*3) Q6BAT can be connected to the control unit for backup use.
(*4) Refer to "11. Connecting an Operation I/O Unit (FCU8-DX834)" described later for details of the connection with the operation board I/O unit (FCU8-DX834).
(*5) Refer to "12. Connecting a Pulse-controlled Inverter" described later for details on the connection with the pulse-controlled inverter.
(*6) Refer to "13. Connecting a Remote Service Gateway Unit" described later for details on the connection with the remote service gateway unit.

7. 19-type Display Unit (M800VS/M80V Series)

Dotted lines indicate the sections which is different from the other display units (8.4-type, 10.4-type, and 15-type) in the display unit (19-type).
To connect the 19-type display unit to the CNC, an image input expansion unit is required.
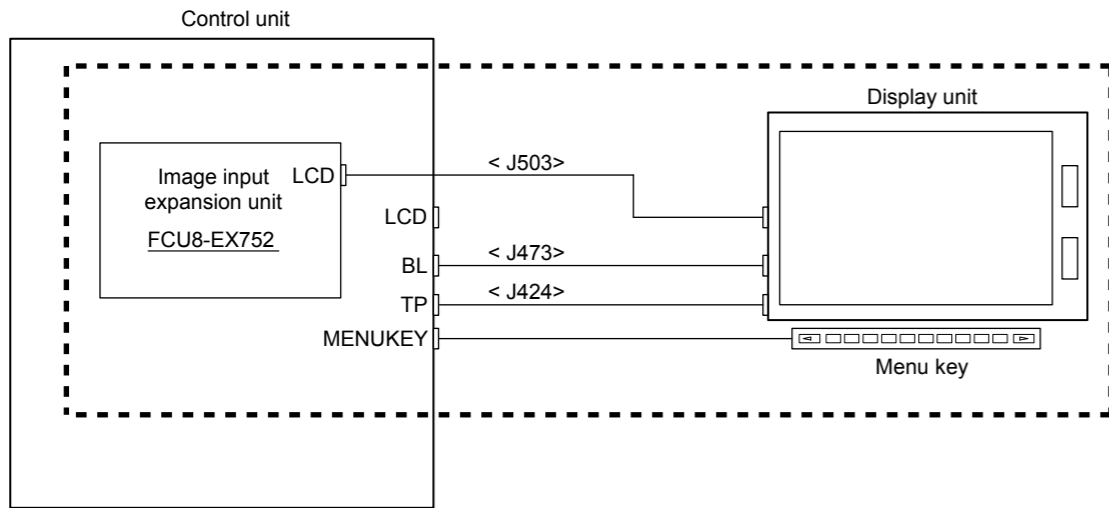

(Reference) Other display units (8.4-type, 10.4-type, and 15-type)
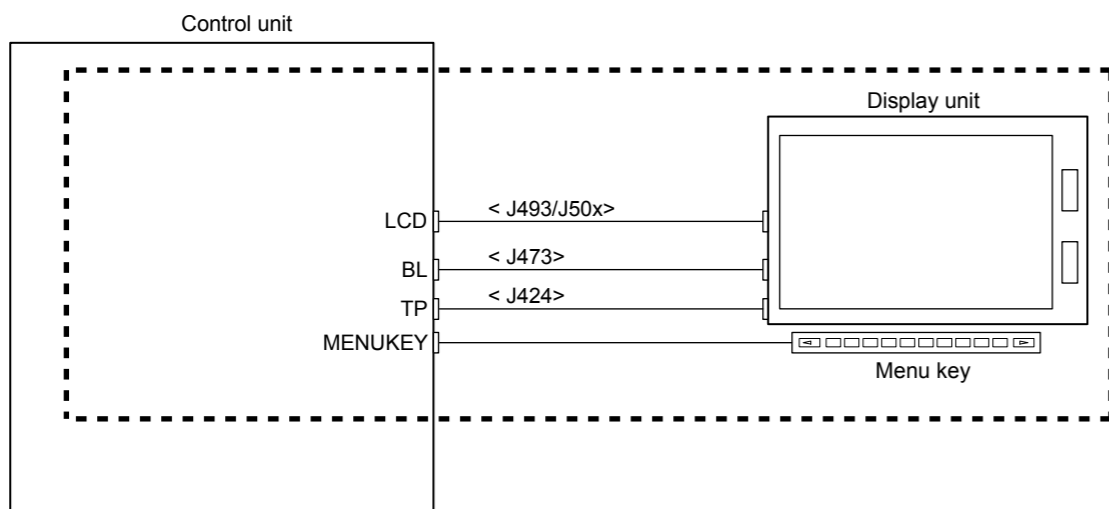

8. Connecting a RT Processing Unit (M800VW/M80VW Series)

Connect the RT processing unit between the control unit and the drive unit.
Connect it to the following connectors of the control unit.
OPTH1
OPTH2
LAN1
RIO1
RT (The connector of RTU expansion unit installed in an function expansion slot of the control unit)

Dotted lines indicate the different sections.
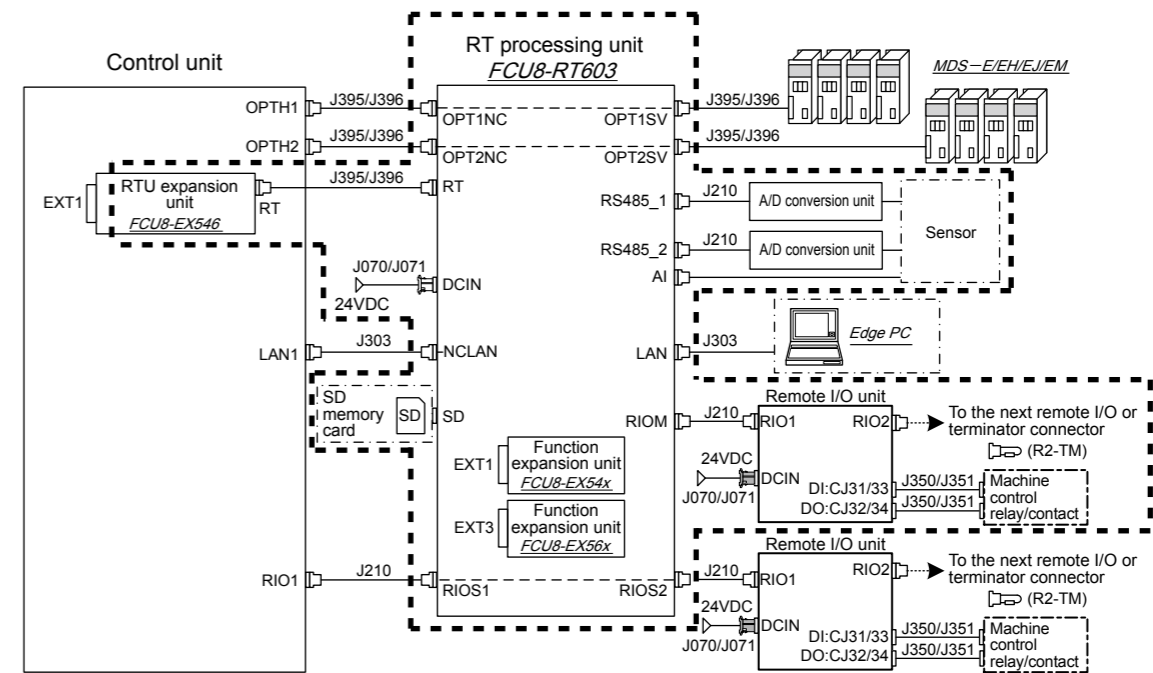

(Reference) Connection without the RT processing unit
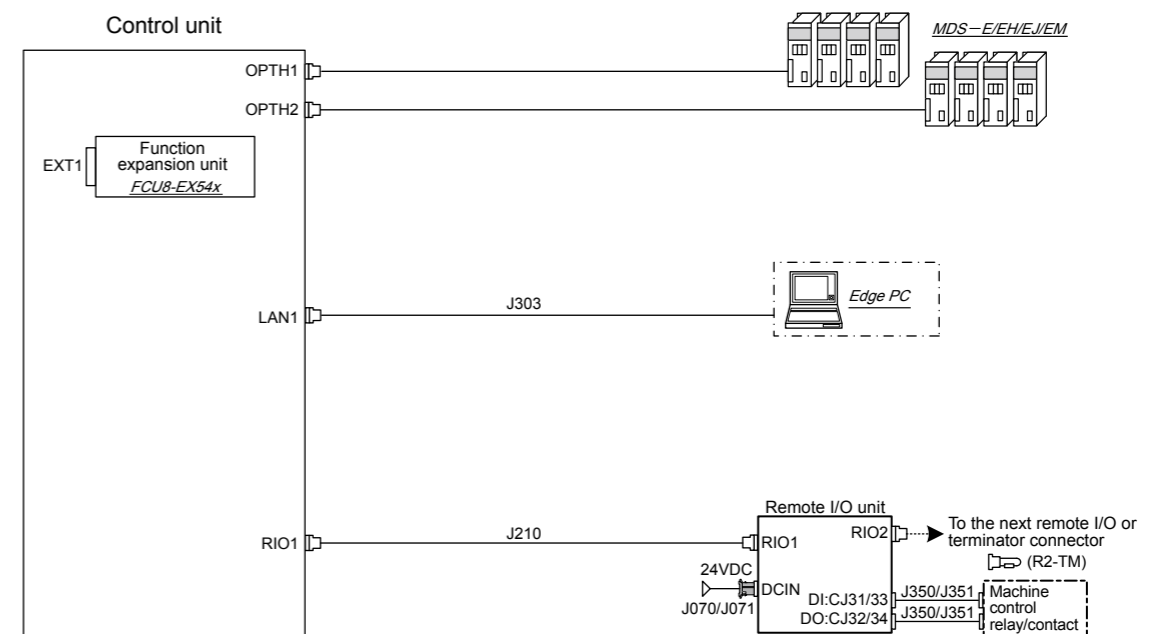

9. Connecting an Image Input Expansion Unit (M800VS/M80V Series)

Some connections differ depending on the display unit type.

■10.4-type display unit and 15-type display unit
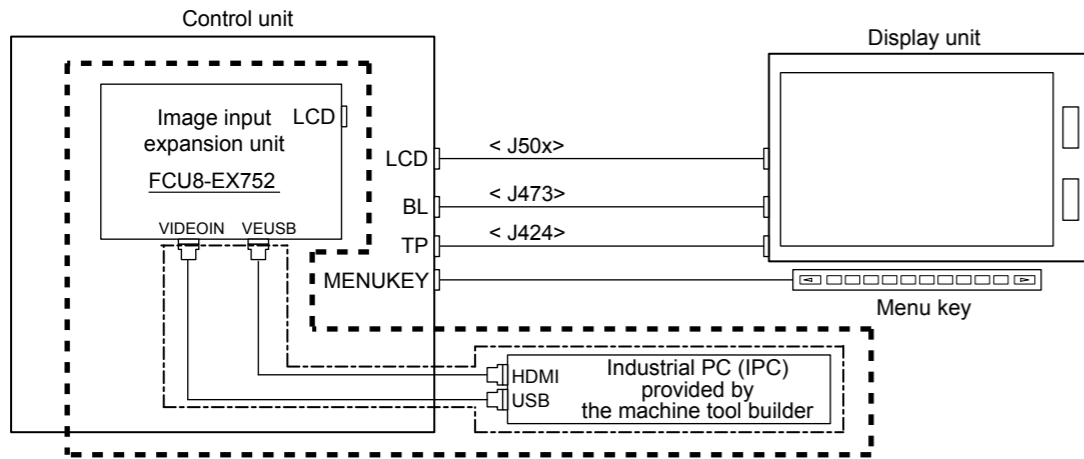

■19-type display unit
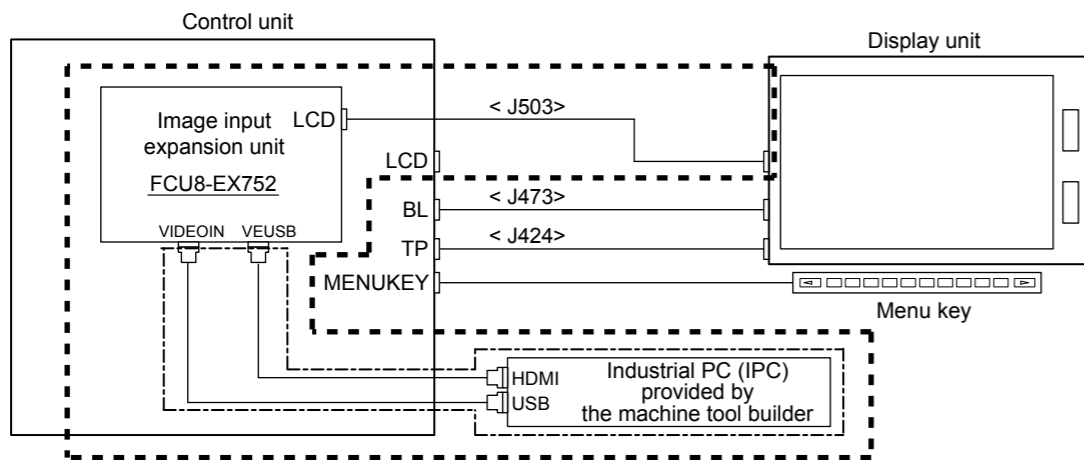

(*1) 8.4-type display unit does not support the image input expansion unit.

(Reference) Connection without the image input expansion unit
10. Connecting a Laser I/F Unit (M800VW/M800VS/M80VW/M80V Series)

Connect the laser I/F unit to RIO1 or RIO2 of the control unit.
The following figure shows an example of connecting the laser I/F unit to RIO2.
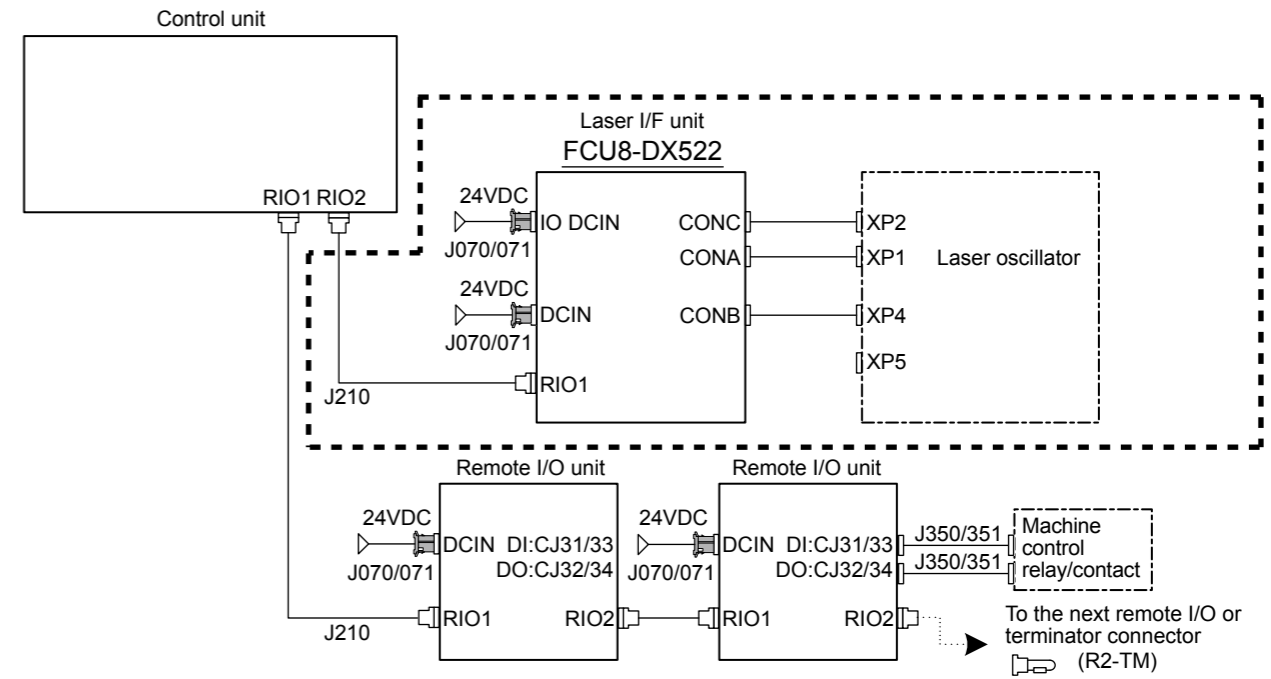

(*1) The laser I/F unit occupies all one channel; therefore, a remote I/O unit cannot be connected before or after the laser I/F unit.

5 CNC SYSTEM

5 CNC SYSTEM

11. Connecting an Operation Board I/O Unit (FCU8-DX834)(M800VS/M80V/E80 Series)

Dotted lines indicate the sections which is different from the FCU8-DX731/DX750/DX760/DX761 units in FCU8-DX834 units.
(Reference) FCU8-DX731/DX750/DX760/DX761
12. Connecting a Pulse-controlled Inverter (M80V/E80 series)

Pulse-controlled inverter refers to an inverter capable of controlling spindle operation through pulse train input.
Connect a pulse-controlled inverter to the RIO1 and RIO2 of the control unit.
Dotted lines in the figures below indicate the different sections.
(*1) When the pulse-controlled inverter is connected, the remote I/O unit cannot be connected to the either of the RIO1 connector or the RIO2 connector.

(Reference) ENC/RIO1/RIO2 when the spindle drive unit is connected
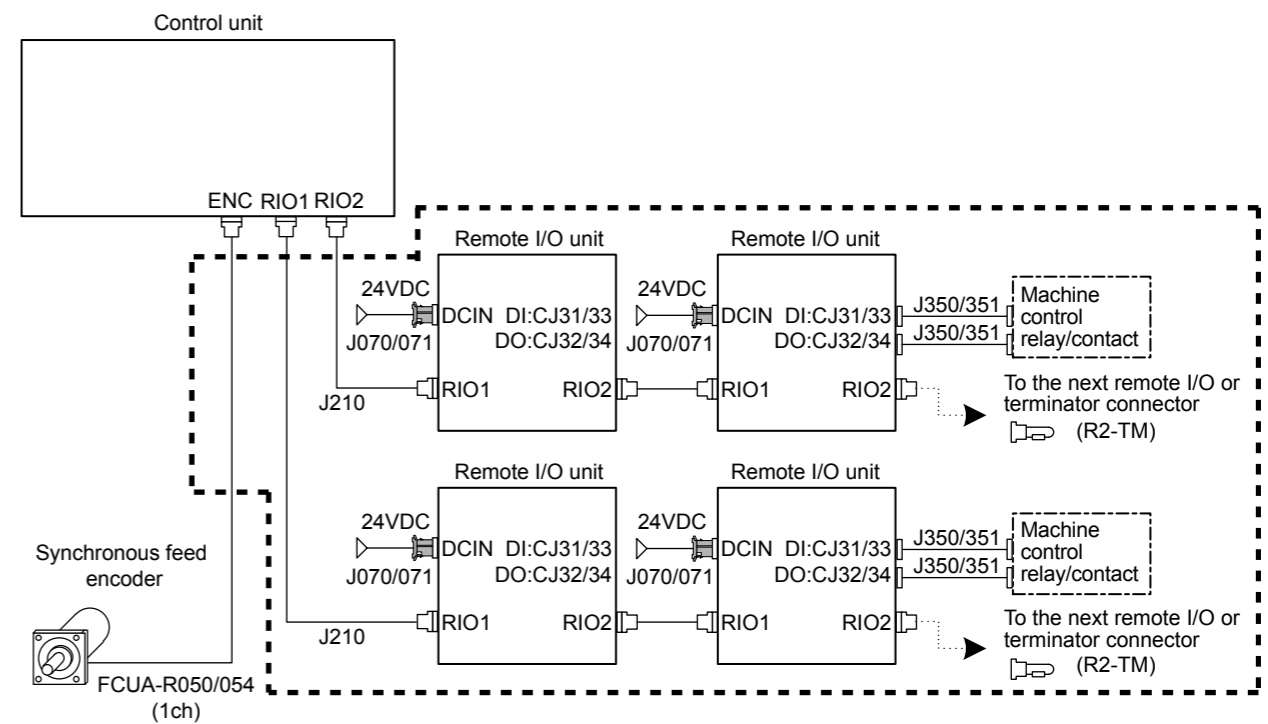

(*1) To connect a spindle drive unit, connect a synchronous feed encoder directly to the ENC connector of the control unit.

13. Connecting a Remote Service Gateway Unit (E80 Series)

Connect the remote service gateway unit to the LAN1/LAN2 of the control unit.
The following figure shows an example of connecting the remote service gateway unit to LAN1.

14. C80 Series

Specifications including unit names, cable names, and maximum lengths of cables are subject to change without notice. Always confirm these details before placing an order.

: Prepared by the machine tool builder.

: Used with connector. Cannot be used with cable H300 at the same time
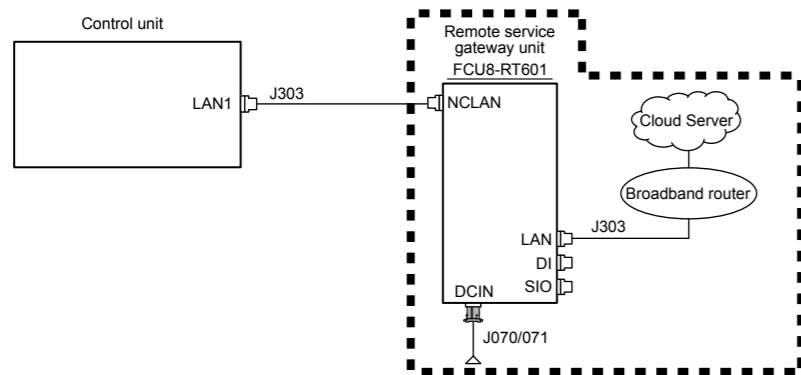

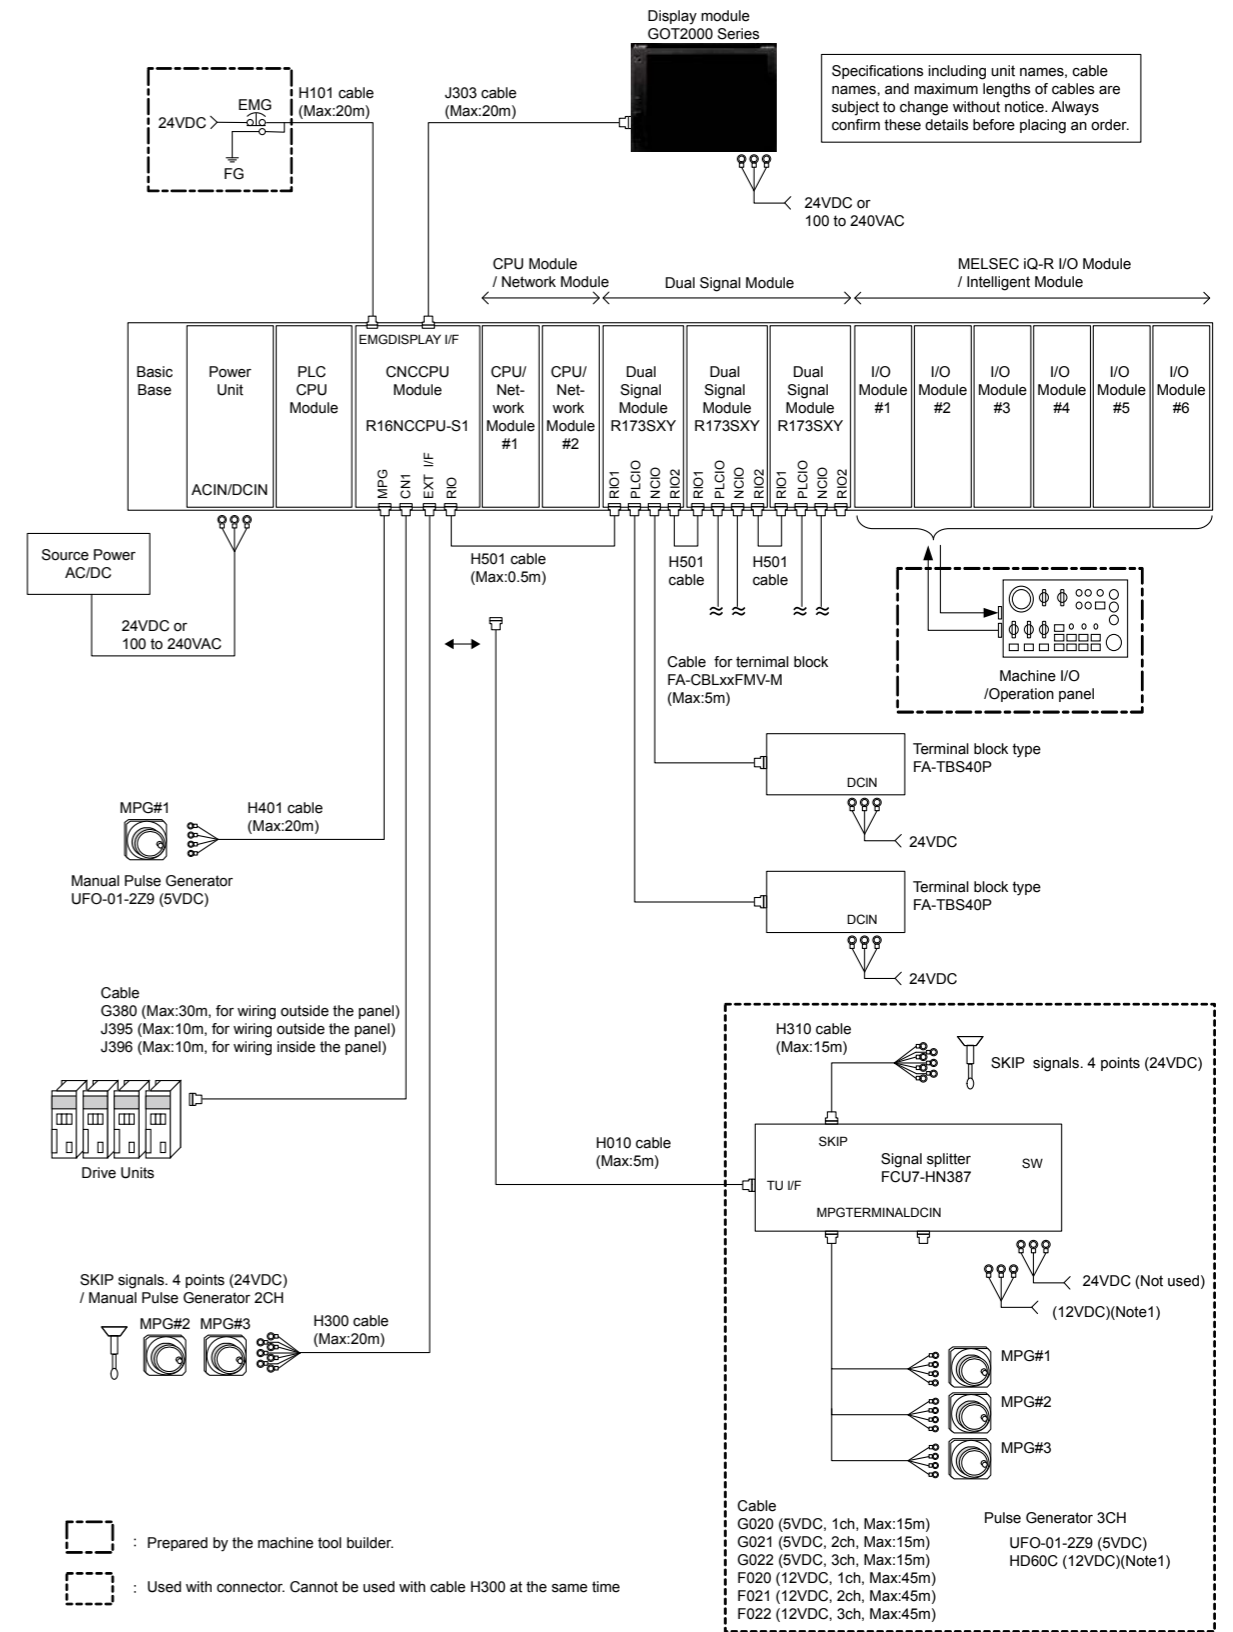

(Note 1) HD60C (12VDC) requires another power source12VDC.
(Note 2) A CPU module can be mounted on the CPU slot of the base unit or the slot No. 0 to 6. A slot between CPU modules can be left empty for reservation. Note that you cannot mount an I/O module or intelligent function module on a slot between CPU modules.

DRIVE SYSTEM

•Drive units

High-performance Servo/Spindle Drive Units
MDS-E/EH Series

•The servo control-dedicated core processor realizes improved control speed, leading to enhanced basic performance. When combined with a higher resolution motor sensor and advanced high-speed optical communication, this drive contributes to high-speed, high-accuracy control.
•The motor power connector is equipped with an anti-misinsertion mechanism. This helps to eliminate connection errors.
•Improved diagnostic and preventive-maintenance features
•Safe Torque Off (STO) and Safe Brake Control (SBC) are also incorporated as additional safety features.

Multi-hybrid Drive Units
MDS-EM/EMH Series

•The multi-hybrid drive units are capable of driving a maximum of three servo axes and one spindle. This contributes to the downsizing of machines and offers technical advantages.
•The motor power connector is equipped with an anti-misinsertion mechanism. This helps to eliminate connection errors.
•Safe Torque Off (STO) and Safe Brake Control (SBC) are also incorporated as additional safety features.
•Fan unit contributes to easier fan exchange
•MDS-EMH 400V system drive unit is available.

All-in-one Compact Drive Units
MDS-EJ/EJH Series

•Ultra-compact drive units with built-in power supplies contribute to smaller control panel size.
•The 2-axis type is added for further downsizing.
•The servo control-dedicated core processor realizes an increase in control speed, leading to improved basic performance. When combined with a higher resolution motor sensor and enhanced high-speed optical communication, this drive contributes to high-speed, high-accuracy control.
•Safe Torque Off (STO) and Safe Brake Control (SBC) are also incorporated as additional safety features.
•MDS-EJH 400V system drive unit is available (Note 1).

PWM Converter
MDS-EX-CVP Series

•Product of the PWM converter series which has a stabilizing DC voltage function and boost function. MDS-EX-CVP series reduces the output deceleration of the spindle motor and improves output in the high-speed range.
•Only 400V system power supply unit is available.

•Spindle motors

High-output, High-speed Spindle Motors
SJ-DG Series

•Addition of S3 rating (%ED rating) has improved output and torque acceleration/deceleration characteristics.
•Balance adjustment ring added to the counter-load side for fine tuning.
•Range:
  S3 rating: 5.5 to 15 [kW]
•Maximum speed: 10,000 to 12,000 [r/min]

Low-inertia, High-speed Spindle Motors
SJ-DL Series

•This series of spindle motors is dedicated to use in tapping machines that require faster drilling and tapping.
•The latest design technologies have made it possible to attain lower vibration and greater rigidity even with the lighter weight.
•Range: 0.75 to 7.5 [kW]
•Maximum speed: 10,000 to 24,000 [r/min]

High-performance Spindle Motors
SJ-D Series

•Motor energy loss has been significantly reduced by optimizing the magnetic circuit.
•High-speed bearings are incorporated as a standard feature, helping to achieve higher speed, lower vibration and improved durability.
•Range: 3.7 to 26 [kW]
•Maximum speed: 8,000 to 12,000 [r/min]

High-torque Spindle Motors
SJ-DN Series

•Higher torque characteristics than those of SJ-D series with the same output. This series has made it possible to drive with the small-capacity multi-hybrid drive unit.
•Suitable for heavy cutting. This helps to improve productivity.
•Range: 7.5 to 18.5 [kW]
•Maximum speed: 8,000 [r/min]

Compact, Lightweight Spindle Motors
SJ-DJ Series

•Spindle motors that are smaller and lighter than those of SJ-D series with the same output. This helps to further downsize machines.
•Range: 5.5 to 15 [kW]
•Maximum speed: 8,000 to 12,000 [r/min]

•Servo motors

Medium-inertia, High-accuracy, High-speed Motors
HG Series

•Sensor resolution has been significantly improved. The servo motors, which boast smooth rotation and outstanding acceleration capabilities, are well-suited to serve as feed axes of machine tools.
•Range: 0.2 to 11 [kW]
•Maximum rotation speed: 2,000 to 6,000 [r/min]
•Safety support sensors are included as standard specification. Sensor connectors are screw-locked and have enhanced vibration resistance. Three sensor resolutions (i.e., 1, 4 or 67 million pulses/rev) are available.
•This can also be used as a tool spindle motor.
•Small-sized connector allows horizontal cable connection, which helps to save space in machines. (Note 2)

Linear Servo Motors
LM-F Series

•Use in clean environments is possible since no ball screws are used, eliminating possible contamination from grease.
•Elimination of transmission mechanisms, including backlash, enables smooth, quiet operation even at high speeds.
•Range:
  Maximum thrust: 900 to 18,000 [N·m]

Direct-drive Servo Motors
TM-RB Series

•High-torque, direct-drive motors combined with high-gain control provide quick acceleration and positioning, which makes rotation smoother.
•Suitable for rotary axes that drive tables or spindle heads
•Range:
  Maximum torque: 36 to 1,280 [N·m]

Built-in Spindle Motors
SJ-BG Series

•The electrical design has been optimized to increase the continuous rated torque per unit volume, contributing to the downsizing of spindle units.
•Options for mold specification and cooling jacket specification are prepared.

Tool Spindle Motors
HG-JR Series

•Compact tool spindle motors are designed to have the small, high-output characteristics of servo motors yet offer high-speed rotation (8,000r/min). These motors contribute to downsizing spindle size, like rotary tool spindles.
•Range: 0.75 to 1.5 [kW]
•Maximum rotation speed: 8,000 [r/min]
•Small-sized connector allows horizontal cable connection, which helps to save space in machines. (Note 2)

(Note 1) For servo motors only
(Note 2) Options supported (Flange size 90SQ only)
* Use Mitsubishi Electric CNC's dedicated drive unit and motor.

■200V Built-in spindle motor

\<SJ-BG Series\> SJ-BG ① ② / ③ – ④ ⑤ ⑥ ⑦

①Stator dimensions

Symbol	Stator dimensions
90	ø90mm
110	ø110mm
120	ø120mm
135	ø135mm
150	ø150mm
160	ø160mm
180	ø180mm
240	ø240mm
300	ø300mm

②Core width (A to Z)

③Maximum rotation speed
Indicates the hundreds place and higher order digits.

④Specification code (01 to 99)

⑤Power line

Symbol	Length of lead
1	500mm
2	1000mm
3	1500mm
4	2000mm

⑥Coil changeover

Symbol	Coil changeover
None	Unavailable
K	Available (人-Δ)
W	Available (人-人)

⑦Option

Symbol	Stator dimensions
None	Standard (varnish)
J	Varnish with sleeve (cooling jacket)
S	With sleeve (cooling jacket), mold without metal ring
F	With sleeve (cooling jacket), mold with metal ring
L	Without sleeve (cooling jacket), mold without metal ring
G	Without sleeve (cooling jacket), mold with metal ring
R	Rotor inner diameter expanded specifications

\<SJ-B Series\> SJ- ① B ② ③ ④ ⑤ ⑥

①Voltage

Symbol	Voltage
2	200V
4	400V

* 400V is available by special order.

②Number of poles

Symbol	Number of poles
2	2 poles
4	4 poles
6	6 poles

③Motor size

Symbol	Stator dimensions
0	ø110
1	ø128
2	ø160
3	ø180
4	ø210
5	ø230
6	ø255
7	ø300
9	ø370
A	ø90
B	ø115

Stator outline (frame No.) is indicated with 0 to 9, A, B.

④Specification code
Specification code (01 to 99)

⑤Overheat protection sensor

Symbol	Overheat protection sensor
T	Thermistor

⑥Coil changeover

Symbol	Coil changeover
None	Unavailable
D	Available (Δ-2//Δ)
K	Available (人-Δ)

\<SJ-PMB Series\> SJ- ① PMB ② ③ ④ – ⑤

①Voltage

Symbol	Voltage
None	200V
4	400V

* 400V is available by special order.

②Continuous rated torque
Indicates with 3 digits.
For 1000 [N·m] or more (for 9999 [N·m] or less), the upper digit is indicated by alphabetic character and the others are indicated by the carried number.
Example) 020 : 20 [N·m] A55 : 1550 [N·m]

③Base rotation speed
Indicates the thousands and the hundreds places (the ten places are rounded off.)
Example) 03 : 250 to 349 [r/min] 15 : 1450 to 1549 [r/min]

④Overheat protection sensor

Symbol	Overheat protection sensor
T	Thermistor

⑤Design management No.
Indicates with 2 digits number or alphabetic characters Example) 00, A1

(Note) This explains the model name system of a spindle motor, and all combinations of motor types listed above do not exist.

6 DRIVE SYSTEM

For the motors not shown in the following tables, contact your Mitsubishi Electric dealer.
For the encoder of the built-in spindle motor, refer to p.163 to 165 "Spindle side PLG serial output encoder (TS5690, MU1606 Series)".

(Note 1) Only the combination designated in this manual can be used for the motor and drive unit. Always use the designated combination.
(Note 2) Actual acceleration/deceleration output is 1.2-fold of "Standard output during acceleration/deceleration" or "Short time rated output".
(Note 3) IP code classifies the degree of protection of the motor body. It does not apply to the other electronic parts such as the cooling fan and the encoder.

8 SPINDLE MOTOR/BUILT-IN SPINDLE MOTOR/TOOL SPINDLE MOTOR 200V
8 SPINDLE MOTOR/BUILT-IN SPINDLE MOTOR/TOOL SPINDLE MOTOR 200V

■SJ-DL Series (Hollow shaft specifications)

Motor type			SJ-DL5.5/200-01T-S
Compatible drive unit	1-axis type	MDS-E-SP-	160
	2-axis type	MDS-E-SP2-	16080(L)
	Multi-hybrid type	MDS-EM-SPV3-	–
	Regenerative resistor type	MDS-EJ-SP-	–
Output Actual acceleration/deceleration ☐ Acceleration/Deceleration ☐ Short-time rating ☐☐ Continuous rating ■			
Standard output during acceleration/deceleration [kW]			11
Actual acceleration/deceleration output (Note 2) [kW]			13.2
Continuous base rotation speed [r/min]			2500
Max. rotation speed in constant output range [r/min]			20000
Maximum rotation speed [r/min]			20000
Continuous rated torque [N·m]			14.1
Motor inertia [kg·m²]			0.0046
Degree of protection (The shaft-through portion is excluded.)			IP54
Outline dimension drawing (flange type) [mm]			
Flange fitting diameter [mm]			ø150
Shaft diameter [mm]			ø22
Mass [kg]			28
With leg			Not possible
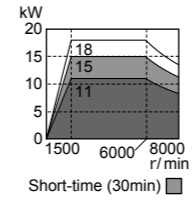

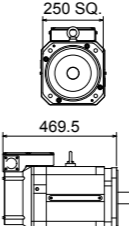

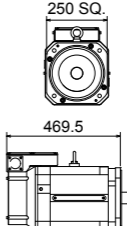

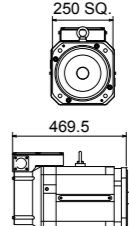

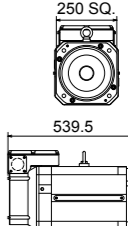

■SJ-DN Series (High-torque specifications)

Motor type			SJ-DN7.5/80-01	SJ-DN11/80-01	SJ-DN15/80-01	SJ-DN18.5/80-01
Compatible drive unit	1-axis type	MDS-E-SP-	160	200	200	200
	2-axis type	MDS-E-SP2-	16080(L)	–	–	–
	Multi-hybrid type	MDS-EM-SPV3-	10040, 10080, 16040S	20080, 200120	20080, 200120	20080, 200120
	Regenerative resistor type	MDS-EJ-SP-	–	–	–	–
Output Actual acceleration/deceleration ☐ %ED rating ☐◩ Short-time rating ☐☐ Continuous rating ■						
Standard output during acceleration/deceleration [kW]			7.5	11	15	18.5
Actual acceleration/deceleration output (Note 2) [kW]			9	13.2	18	22.2
Continuous base rotation speed [r/min]			1000	1000	900	1000
Max. rotation speed in constant output range [r/min]			2500	5000	5000	3500
Maximum rotation speed [r/min]			8000	8000	8000	8000
Continuous rated torque [N·m]			52.5	85.9	117	143
Motor inertia [kg·m²]			0.031	0.10	0.14	0.16
Degree of protection (The shaft-through portion is excluded.)			IP54	IP54	IP54	IP54
Outline dimension drawing (flange type) [mm]						
Flange fitting diameter [mm]			ø180	ø230	ø230	ø230
Shaft diameter [mm]			ø48	ø48	ø55	ø55
Mass [kg]			86	103	131	147
With leg			Possible	Possible	Possible	Possible

(Note 1) Only the combination designated in this manual can be used for the motor and drive unit. Always use the designated combination.
(Note 2) Actual acceleration/deceleration output is 1.2-fold of "Standard output during acceleration/deceleration" or "Short time rated output".
(Note 3) IP code classifies the degree of protection of the motor body. It does not apply to the other electronic parts such as the cooling fan and the encoder.

■SJ-V Series (Normal specifications)

Motor type			SJ-V2.2-01T	SJ-V3.7-02ZT
Compatible drive unit	1-axis type	MDS-E-SP-	40	80

SELECTION OF THE POWER SUPPLY UNIT

For the power supply unit, calculate the spindle motor output and servo motor output each, and select the capacity satisfying the required rated capacity and the maximum momentary output.

■Calculation of Spindle Output
The spindle rated output and spindle maximum momentary rated output are calculated.

(1) Calculation of spindle rated output
The spindle rated output is calculated according to the following procedure.

(a) Spindle motor rated output
The spindle motor rated output is calculated from the following expression.

> **Spindle motor rated output =**
> **MAX (continuous rated output, short-time rated output × short-time rated output coefficient α,**
> **%ED rated output × %ED rated output coefficient β)**

(Note 1) For the spindle motor rated output, use the maximum value of "continuous rated output", "short-time rated output × short-time rated output coefficient α", and "%ED rated output × %ED rated output coefficient β".

(Note 2) Select the maximum value for the spindle motor with multiple %ED rated output characteristics.

For the spindle short-time rated output coefficient α, use the value in the following table.

List of short-time rated output time and short-time rated output coefficient

Short-time rated output time	Short-time rated output coefficient α	Short-time rated output time	Short-time rated output coefficient α
1 minute	0.2	5 minutes	0.7
2 minutes	0.4	6~7 minutes	0.8
3 minutes	0.5	8~9 minutes	0.9
4 minutes	0.6	10 minutes or more	1.0

(Note 1) Select the set time for the short-time rated output of your spindle motor from the list. E.g.) When the set time for the short-time rated output is "1/12h", it means "5 minutes".

(Note 2) For the motor with coil changeover specification, select the set time for the short-time rated output of the high-speed coil.

For the %ED rated output coefficient β, use the value in the following table.

List of %ED rated output time and %ED rated output coefficient

%ED rated output time	%ED rated output coefficient β
More than or equal to 10% but less than 20%	0.7
More than or equal to 20% but less than 30%	0.9
More than or equal to 30%	1.0

(b) Spindle rated output
The spindle rated output is calculated from the following expression.

> **Spindle rated output**
> **=Spindle motor rated output × motor output coefficient γ of the combined spindle drive unit**

For the spindle motor rated output of the above expression, use the value calculated in (a).

For the motor output coefficient of the combined spindle drive unit, use the value corresponding to the used spindle drive unit in the in the following table.

Motor output coefficient list of combined spindle drive unit

< MDS-E Series >

POINT

[1] When the spindle motor applies to the wide range constant output specification or the high-torque specification, the spindle rated output may become large.

[2] The spindle rated output is calculated from the motor output coefficient of the spindle drive unit used in combination with the spindle motor.

(2) Calculation of spindle maximum momentary output

The spindle maximum momentary output is calculated from the following expression.

Spindle maximum momentary output
=MAX (short-time rated output × 1.2, output at acceleration/deceleration × 1.2,%ED rated output×1.2)

(Note) For the spindle rated output, use the largest one among "short-time rated output × 1.2" ,"output at acceleration/ deceleration × 1.2" and "%ED rated output×1.2".

■Calculation of Servo Motor Output

(1) Selection with rated output
(2) Selection with maximum momentary output

For the rated output and maximum momentary output of the servo motor, use the value corresponding to the servo motor in the following table.

Data for servo motor output selection

< 200V series >

Motor HG	46	56	96
Rated output (kW)	0.2	0.4	0.75
Maximum momentary output (kW)	0.85	1.7	3.2

Motor HG	75	105	54	104	154	154 (V3-40)	224	204	354
Rated output (kW)	0.75	1.0	0.5	1.0	1.5	1.5	2.2	2.0	3.5
Maximum momentary output (kW)	2.2	3.5	2.3	5.0	9.0	5.4	12.3	8.0	18.0

Motor HG	123	223	303	453	603	702	703	903	1103	142	302
Rated output (kW)	1.2	2.2	3.0	4.5	6.0	7.0	7.0	9.0	11.0	1.4	3.0
Maximum momentary output (kW)	3.2	6.3	12.0	22.0	26.9	21.2	27.0	41.0	50.0	3.2	6.3

< 400V series >

Motor HG-H	75	105	54	104	154	224	204	354	453	703	903	1502
Rated output (kW)	0.75	1.0	0.5	1.0	1.5	2.2	2.0	3.5	4.5	7.0	9.0	15.0
Maximum momentary output (kW)	2.2	3.5	2.3	5.0	9.0	13.1	8.0	18.0	22.0	27.0	41.0	59.0

Motor HQ-H	903	1103
Rated output (kW)	9.0	11.0
Maximum momentary output (kW)	31.0	47.0

(Note) The maximum momentary output in this table is reference data for selecting the power supply unit and is not data which guarantees the maximum output.

■Selection of the Power Supply Unit

Select the power supply unit from the total sum of the rate output and the maximum momentary output.

(1) Calculation of required rated output

Power supply unit rated capacity > Σ (Spindle rated output) + 0.3 Σ (Servo motor rated output)

Substitute the output calculated from (1) of "Calculation of spindle output"and (1) of "Calculation of servo motor output" to the above expression, and calculate the total sum of the spindle rated output and servo motor rated output. According to this, select the power supply unit satisfying the rated capacity from the following table.

(2) Calculation of required maximum momentary output

Maximum momentary rated capacity of power supply unit ≥
Σ (Spindle maximum momentary output) + Σ (Maximum momentary output of servomotor accelerating/ decelerating simultaneously + Maximum momentary output of direct drive motor accelerating/ decelerating simultaneously)

Substitute the output calculated from (2) of "Calculation of spindle output"and (2) of "Calculation of servo motor output" to the above expression, and calculate the total sum of the "spindle maximum momentary output" and "output of servo motor accelerating/decelerating simultaneously". According to this, select the power supply unit satisfying the maximum momentary rated capacity from the following table.

(3) Selection of power supply unit

Select the power supply unit of which the capacity is larger than that selected in the item (1) and (2).

Power supply unit rated capacity and maximum momentary rated capacity

< MDS-E Series >

Unit	MDS-E-CV-	37	75	110	185	300	370	450	550
Rated capacity (kW)		4.2	8	11.5	19	31	38	46	56
Maximum momentary rated capacity (kW)		16	23	39	60	92	101	125	175

< MDS-EH Series >

Unit	MDS-EH-CV-	37	75	110	185	300	370	450	550	750
Rated capacity (kW)		4.2	8	11.5	19	31	38	46	56	76
Maximum momentary rated capacity (kW)		16	23	39	60	92	101	125	175	180

< MDS-EX-CVP Series >

Unit	MDS-EX-CVP-	1100H
Rated capacity (kW)		90
Maximum momentary rated capacity (kW)		220

⚠ **CAUTION**

1. When reducing the time constant replacing the conventional motor with the HG or HG-H Series motor, the power supply capacity may rise because the motor maximum momentary output increases more than the conventional motor.
   Therefore, make sure to check the selection with maximum momentary rated capacity.

2. When the large capacity drive unit (MDS-E-SP-400/640, MDS-EH-SP-200/320/480/600, MDS-EH-V1-200) is connected to the power supply unit, always install the drive unit proximally in the left side of the power supply unit and connect PN terminal with the dedicated DC connection bar.

3. When using two large capacity drive units or more, the power supply unit is required for each drive unit.

4. For details of selection of MDS-EX-CVP Series, refer to "MDS-EX-CVP Series Specifications and Instruction Manual"(IB-1501587(ENG)).

■Required Capacity of Power Supply

For the power supply capacity, calculate the required spindle rated output and servo motor rated output each, and select the power supply capacity satisfying them.

(1) Spindle rate output required for power supply

The spindle rate output required for power supply is calculated from the following expression.

> **Spindle rate output required for power supply =**
> **MAX (Spindle motor continuous rated output, Spindle motor output at accelerating/decelerating, Spindle motor short-time output) × motor output coefficient γ of combined spindle drive unit**

> (Note) For the spindle rate output required for the power supply, multiply the largest one of "spindle motor continuous rate output", "spindle motor output at acceleration/deceleration" and "spindle motor short-time output" by the motor output coefficient γ of the combined spindle drive unit.
> For the motor output coefficient of the combined spindle drive unit, use the value corresponding to the used spindle drive unit in "Motor output coefficient list of combined spindle drive unit " on (1)-(b) of "Calculation of spindle output"

(2) Servo motor rate output required for power supply

For the servo motor rate output required for power supply, use the value calculated in (1) of "Calculation of servo motor output"

(3) Calculation of rate output required for power supply

> **Rated capacity required for power supply =**
> **Σ (Spindle rate output required for power supply) + 0.3 Σ (servo motor rate output required for power supply)**

> Substitute the output calculated from the item (1) and (2) to the above expression, and calculate the rated capacity required for the power supply.

(4) Calculation of required power supply

> **Power supply capacity (kVA) = Σ {(Required rated capacity calculated in the item (3) (kW) / Capacity of selected power supply unit (kW)) × Power supply capacity base value (kVA)}**

> The power supply capacity base value corresponding to the capacity of the selected power supply unit is as the following table.

< MDS-E Series >

Unit	MDS-E-CV-	37	75	110	185	300	370	450	550
Power supply capacity base value (kVA)		5.3	11.0	16.0	27.0	43.0	53.0	64.0	78.0

< MDS-EH Series >

Unit	MDS-EH-CV-	37	75	110	185	300	370	450	550	750
Power supply capacity base value (kVA)		5.3	11.0	16.0	27.0	43.0	53.0	64.0	78.0	107.0

< MDS-EX-CVP Series >

Unit	MDS-EX-CVP-	1100H
Power supply capacity base value (kVA)		130

■Example for Power Supply Unit and Power Supply Facility Capacity

< MDS-E Series >
(Example 1)

Axis name	Motor	Drive unit	Rated output	Maximum momentary output
X-axis	HG354	(MDS-E-V2-160)	3.5kW	18kW
Y-axis	HG354	(MDS-E-V2-160)	3.5kW	18kW
Z-axis	HG354	(MDS-E-V1-160)	3.5kW	18kW
Spindle	Spindle motor 22kW	MDS-E-SP-320 (Output coefficient 1.0)	22kW	26.4kW
Total			0.3× (3.5×3) +22 =25.15kW <31kW (E-CV-300)	(18×3) +26.4 =80.4kW <92kW (E-CV-300)

The power supply unit satisfying the total of the rate output and the maximum momentary output is MDS-E-CV-300.
Required power supply capacity (kVA) = (25.15 / 30) × 43 = 36.0 (kVA)

(Example 2)

Axis name	Motor	Drive unit	Rated output	Maximum momentary output
X1-axis	HG453	(MDS-E-V2-160)	4.5kW	22kW
X2-axis	HG453	(MDS-E-V2-160)	4.5kW	22kW
Y-axis	HG354	(MDS-E-V2-160)	3.5kW	18kW
Z-axis	HG354	(MDS-E-V2-160)	3.5kW	18kW
Spindle	Spindle motor 15kW	MDS-E-SP-200 (Output coefficient 1.0)	15kW	18kW
Total			0.3× (4.5×2+3.5×2) +15 =19.8kW <31kW (E-CV-300)	22×2+18×2+18 =98.0kW <101kW (E-CV-370)

The power supply unit satisfying the total of the rate output and the maximum momentary output is MDS-E-CV-370.
Required power supply capacity (kVA) = (19.8 / 37) × 53 = 28.4 (kVA)

(Example 3)

Axis name	Motor	Drive unit	Rated output	Maximum momentary output
X-axis	HG354	MDS-E-V1-160	3.5kW	18kW
Y-axis	HG204	MDS-E-V2-80	2.0kW	8kW
Z-axis	HG204	MDS-E-V2-80	2.0kW	8kW
Spindle	Spindle motor 15kW (High-torque motor)	MDS-E-SP-320 (Output coefficient 1.1)	16.5kW	18kW
Total			0.3× (3.5+2.0×2) +16.5 =18.75kW <19kW (E-CV-185)	18+8×2+18 =52kW <60kW (E-CV-185)

The power supply unit satisfying the total of the rate output and the maximum momentary output is MDS-E-CV-185.
Required power supply capacity (kVA) = (18.75 / 18.5) × 27 = 27.4 (kVA)

< MDS-EH Series >
(Example 1)

Axis name	Motor	Drive unit	Rated output	Maximum momentary output
X-axis	HG-H354	(MDS-EH-V2-80)	3.5kW	18kW
Y-axis	HG-H354	(MDS-EH-V2-80)	3.5kW	18kW
Z-axis	HG-H354	(MDS-EH-V1-80)	3.5kW	18kW
Spindle	Spindle motor 22kW	MDS-EH-SP-160 (Output 22kW)	22kW	26.4kW
Total			0.3× (3.5×3) +22 =25.15kW <31kW (EH-CV-300)	(18×3) +26.4 =80.4kW <92kW (EH-CV-300)

The power supply unit satisfying the total of the rate output and the maximum momentary output is MDS-EH-CV- 300.
Required power supply capacity (kVA) = (25.15 / 30) × 43 = 36.0 (kVA)

(Example 2)

Axis name	Motor	Drive unit	Rated output	Maximum momentary output
X1-axis	HG-H453	(MDS-EH-V2-80)	4.5kW	22kW
X2-axis	HG-H453	(MDS-EH-V2-80)	4.5kW	22kW
Y-axis	HG-H354	(MDS-EH-V2-80)	3.5kW	18kW
Z-axis	HG-H354	(MDS-EH-V2-80)	3.5kW	18kW
Spindle	Spindle motor 15kW	MDS-EH-SP-100 (Output coefficient 1.0)	15kW	18kW
Total			0.3× (4.5×2+3.5×2) +15 =19.8kW <31kW (EH-CV-300)	22×2+18×2+18 =98.0kW <101kW (EH-CV-370)

The power supply unit satisfying the total of the rate output and the maximum momentary output is MDS-EH-CV-370.
Required power supply capacity (kVA) = (19.8 / 37) × 53 = 28.4 (kVA)

(Example 3)

Axis name	Motor	Drive unit	Rated output	Maximum momentary output
X-axis	HG-H354	MDS-EH-V1-160	3.5kW	18kW
Y-axis	HG-H204	MDS-EH-V2-80	2.0kW	8kW
Z-axis	HG-H204	MDS-EH-V2-80	2.0kW	8kW
Spindle	Spindle motor 15kW (High-torque motor)	MDS-EH-SP-320 (Output coefficient 1.1)	16.5kW	18kW
Total			0.3× (3.5+2.0×2) +16.5 =18.75kW <19kW (EH-CV-185)	18+8×2+18 =52kW <60kW (EH-CV-185)

The power supply unit satisfying the total of the rate output and the maximum momentary output is MDS-EH-CV-185.
Required power supply capacity (kVA) = (18.75 / 18.5) × 27 = 27.4 (kVA)

■Selection of Regenerative Resistor for Power Backup Unit (R-UNIT-6,7) and Capacitor Unit for Power Backup Unit (MDS-D/DH-CU)

When using the retraction function at power failure with MDS-D/DH-PFU, select to satisfy the stop operation for the regenerative resistor and the continuous rated output of the spindle motor for the capacitor unit.

(1) Selection of regenerative resistor for power backup unit
When using the retraction function at power failure, a resistor unit is required to make the spindle deceleration and stop after the retraction is completed.

⚠
CAUTION

1. When not using a resistor unit, control to coast the spindle motor after the retraction operation is completed.
2. Only the designated combination can be used for the power backup unit and the regenerative resistor.

(2) Selection of capacitor unit for power backup unit
When using the retraction function at power failure, the required number of capacitor units is decided by the continuous rated output [kW] of the spindle motor. Select according to the following specifications.

List of spindle continuous rated output and number of capacitor unit

Spindle continuous rated output	Number of capacitor unit
3.7kW or less	1
5.5kW or less	2
7.5kW or less	3
11kW or less	4
15kW or less	5
22kW or less	6

SELECTION OF THE ADDITIONAL AXIS DRIVE UNIT

When selecting an additional axis drive unit to be connected to TE2 [L+,L-] (Converter voltage input terminal) of MDS-EM/EMH-SPV3, calculate the spindle motor output and servo motor output each, and select the capacity so that the total sum should not exceed the rated capacity and the maximum momentary output of MDS-EM/EMH-SPV3.

The additional axis drive unit is spindle/servo drive unit which is operated by using the built-in power supply section of MDS-EM/EMH-SPV3.

Connectable drive units are determined by the rated capacity of MDS-EM/EMH-SPV3.
The following capacities are available.
Spindle drive unit: MDS-E-SP-20/40/80/160
　　　　　　 : MDS-EH-SP-20/40/80
Servo drive unit　 : MDS-E-Vx-20/40/80
　　　　　　 : MDS-EH-Vx-10/20/40/80

MDS-EM-SPV3-16040S
Spindle drive unit: MDS-E-SP-20/40
Servo drive unit　 : MDS-E-Vx-20/40

MDS-EM-SPV3-320120
Spindle drive unit: MDS-E-SP-20/40/80
Servo drive unit　 : MDS-E-Vx-20/40/80

■Calculation of Spindle Output

The spindle rated output and spindle maximum momentary rated output are calculated.

(1) Calculation of spindle rated output
The spindle rated output is calculated according to the following procedure.

(a) Spindle motor rated output
The spindle motor rated output is calculated from the following expression.

> Spindle motor rated output =
> MAX (continuous rated output, short-time rated output × short-time rated output coefficient α,
> %ED rated output × %ED rated output coefficient β)

(Note 1) For the spindle motor rated output, use the maximum value of "continuous rated output", "short-time rated output × short-time rated output coefficient α", and "%ED rated output × %ED rated output coefficient β".
(Note 2) Select the maximum value for the spindle motor with multiple %ED rated output characteristics.

For the spindle short-time rated output coefficient α, use the value in the following table.

List of short-time rated output time and short-time rated output coefficient

Short-time rated output time	Short-time rated output coefficient α	Short-time rated output time	Short-time rated output coefficient α
1 minute	0.2	5 minutes	0.7
2 minutes	0.4	6 to 7 minutes	0.8
3 minutes	0.5	8 to 9 minutes	0.9
4 minutes	0.6	10 minutes or more	1.0

(Note 1) Select the set time for the short-time rated output of your spindle motor from the list.
　　　E.g.) When the set time for the short-time rated output is "1/12h", it means "5 minutes".
(Note 2) For the motor with coil changeover specification, select the set time for the short-time rated output of the high-speed coil.

For the %ED rated output coefficient β, use the value in the following table.

List of %ED rated output time and %ED rated output coefficient

%ED rated output time	%ED rated output coefficient β
More than or equal to 10% but less than 20%	0.7
More than or equal to 20% but less than 30%	0.9
More than or equal to 30%	1.0

(b) Spindle rated output

The spindle rated output is calculated from the following expression.

Spindle rated output=
(Spindle motor rated output × motor output coefficient γ of the multi-hybrid drive unit) +
(Spindle motor rated output × motor output coefficient γ of the additional axis (spindle) drive unit)

For the spindle motor rated output of the above expression, use the value calculated in (a).

For the motor output coefficient of the combined spindle drive unit, use the value corresponding to the used spindle drive unit in the following table.

Motor output coefficient list of multi-hybrid drive unit
< MDS-EM Series >

Spindle motor rated output	Multi-hybrid drive unit MDS-EM-SPV3-			
	10040/10080	16040/16040S/16080	20080/200120	320120

to 2.2kW	–	1.00	1.15
to 3.7kW	–	1.00	1.05
to 5.5kW	–	–	1.00
to 7.5kW	–	–	1.00

POINT

[1] When the spindle motor applies to the wide range constant output specification or the high-torque specification, the spindle rated output may become large.

[2] The spindle rated output is calculated from the motor output coefficient of the spindle drive unit used in combination with the spindle motor.

(2) Calculation of spindle maximum momentary output

The spindle maximum momentary output is calculated from the following expression.

Spindle maximum momentary output
=MAX (short-time rated output × 1.2, output at acceleration/deceleration × 1.2, %ED rated output×1.2)

(Note) For the spindle rated output, use the largest one among "short-time rated output × 1.2" ,"output at acceleration/ deceleration × 1.2" and "%ED rated output×1.2".

■Calculation of Servo Motor Output

(1) Selection with rated output
(2) Selection with maximum momentary output

For the rated output and maximum momentary output of the servo motor, use the value corresponding to the servo motor in the following table.

Data for servo motor output selection
< 200V series >

Motor HG	46	56	96
Rated output (kW)	0.2	0.4	0.75
Maximum momentary output (kW)	0.85	1.7	3.2

Motor HG-H	75	105	54	104	154	224	204	354	453
Rated output (kW)	0.75	1.0	0.5	1.0	1.5	2.2	2.0	3.5	4.5
Maximum momentary output (kW)	2.2	3.5	2.3	5.0	9.0	13.1	8.0	18.0	22.0

(Note) The maximum momentary output in this table is reference data for selecting the additional axis drive unit connecting to MDS-EM/EMH-SPV3 and is not data which guarantees the maximum output.

■Selection of the Additional Axis Drive Unit

Select the additional axis drive unit so that the total sum of the rated output and the maximum momentary output of spindle motor / servo motor is less than the rated capacity and maximum momentary rated capacity of MDS-EM/EMH-SPV3.

(1) Calculation of required rated output

MDS-EM/EMH-SPV3 rated capacity > Σ (Spindle rated output) + 0.3 Σ (Servo motor rated output)

(Note) Calculate the spindle and servo motor rated output including not only the motor connected to the additional axis drive unit but also those connected to MDS-EM/EMH-SPV3.

Substitute the output calculated from (1) of "Calculation of spindle output"and (1) of "Calculation of servo motor output" to the above expression, and calculate the total sum of the spindle rated output and servo motor rated output. According to this, select the unit so that the rated capacity of MDS-EM/EMH-SPV3 is less than the values in the following table.

(2) Calculation of required maximum momentary output

Maximum momentary rated capacity of MDS-EM/EMH-SPV3 $\geq$
Σ (Spindle maximum momentary output) + Σ (Maximum momentary output of servo motor accelerating/ decelerating simultaneously)

(Note) Calculate the spindle and servo motor maximum momentary output including not only the motor connected to the additional axis drive unit but also those connected to MDS-EM/EMH-SPV3.

Substitute the output calculated from (2) of "Calculation of spindle output"and (2) of "Calculation of servo motor output" to the above expression, and calculate the total sum of the "spindle maximum momentary output" and "output of servo motor accelerating/decelerating simultaneously". According to this, select the unit so that the maximum momentary rated capacity of MDS-EM/EMH-SPV3 is less than the values in the following table.

Power supply unit rated capacity and maximum momentary rated capacity

< MDS-EM Series >

Unit	MDS-EM-SPV3-	16040S	10040/10080/16040/16080/20080/200120	320120
Rated capacity (kW)		15	20	37
Maximum momentary rated capacity (kW)		42	70	101

< MDS-EMH Series >

Unit	MDS-EMH-SPV3-	8040/10040/10060
Rated capacity (kW)		22
Maximum momentary rated capacity (kW)		76

⚠ **CAUTION** When reducing the time constant replacing the conventional motor with the HG or HG-H Series motor, the motor maximum momentary output may increase more than the conventional motor. Therefore, make sure to check the selection with maximum momentary rated capacity.

■Required Capacity of Power Supply

For the power supply capacity, calculate the required spindle rated output and servo motor rated output each, and select the power supply capacity satisfying them.

(1) Spindle rated output required for power supply

The spindle rated output required for power supply is calculated from the following expression.

Spindle rated output required for power supply =
MAX (Spindle motor continuous rated output, Spindle motor output at accelerating/decelerating, Spindle motor short-time output)× motor output coefficient γ of combined spindle drive unit

(Note) For the spindle rated output required for the power supply, multiply the largest one of "spindle motor continuous rated output", "spindle motor output at acceleration/deceleration" and "spindle motor short-time output" by the motor output coefficient γ of the combined spindle drive unit.
For the motor output coefficient of the combined spindle drive unit, use the value corresponding to the used spindle drive unit "Motor output coefficient list of additional axis (spindle) drive unit" on (1)-(b) of "Calculation of spindle output"

(2) Servo motor rated output required for power supply

For the servo motor rated output required for power supply, use the value calculated in (1) of "Calculation of servo motor output"

(3) Calculation of rated output required for power supply

Rated capacity required for power supply =
Σ (Spindle rated output required for power supply) + 0.3 Σ (servo motor rated output required for power supply)

Substitute the output calculated from the item (1) and (2) to the above expression, and calculate the rated capacity required for the power supply.

(4) Calculation of required power supply

Power supply capacity (kVA) = {(Required rated capacity calculated in the item (3)(kW) / Rated capacity of MDS-EM/EMH-SPV3) × Power supply capacity base value of MDS-EM/EMH-SPV3}

The power supply capacity base value of MDS-EM/EMH-SPV3 is as the following table.

< MDS-EM Series >

Unit	MDS-EM-SPV3-	16040S	10040/10080/16040/16080/20080/200120	320120
Power supply capacity base value (kVA)		21	29	54

< MDS-EMH Series >

Unit	MDS-EMH-SPV3-	8040/10040/10060
Power supply capacity base value (kVA)		32

■Example for Additional Axis Drive Unit and Power Supply Facility Capacity

< MDS-EM Series >

(Example 1)

Axis name	Motor	Drive unit	Rated output	Maximum momentary output
X-axis	HG204	MDS-EM-SPV3-200120	2.0kW	8.0kW
Y-axis	HG204		2.0kW	8.0kW
Z-axis	HG354		3.5kW	15kW
MG-axis	HG104	MDS-E-V1-40 (Additional axis)	1.0kW	5.0kW
Spindle	Spindle motor 15kW	MDS-EM-SPV3-200120	15kW	18kW
Total			0.3× (2.0+2.0+3.5+1.0) +15 =17.55kW <20kW (EM-SPV3)	(8.0+8.0+15+5.0) +18 =54kW <70kW (EM-SPV3)

Required power supply capacity (kVA) = (17.55/20) × 29 = 25.5 (kVA)

(Example 2)

Axis name	Motor	Drive unit	Rated output	Maximum momentary output
X-axis	HG104	MDS-EM-SPV3-10040	1.0kW	5.0kW
Y-axis	HG104		1.0kW	5.0kW
Z-axis	HG104		1.0kW	5.0kW
A-axis	HG75	MDS-E-V3-20 (Additional axis)	0.75kW	2.2kW
B-axis	HG75		0.75kW	2.2kW
C-axis	HG75		0.75kW	2.2kW
Spindle (1)	Spindle motor 7.5kW	MDS-EM-SPV3-10040	7.5kW	9.0kW
Spindle (2)	Spindle motor 3.7kW	MDS-E-SP-80 (Additional axis)	3.7kW	4.44kW
Spindle (3)	Spindle motor 3.7kW		3.7kW	4.44kW
Total			0.3× (1.0×3+0.75×3) + (7.5+3.7+3.7) =16.5kW <20kW (EM-SPV3)	(5.0×3+2.2×3) + (9.0+4.44+4.44) =39.5kW <70kW (EM-SPV3)

Required power supply capacity (kVA) = (16.5/20) × 29 = 24.0 (kVA)

< MDS-EMH Series >

(Example 1)

Axis name	Motor	Drive unit	Rated output	Maximum momentary output
X-axis	HG-H204	MDS-EMH-SPV3-10060	2.0kW	8.0kW
Y-axis	HG-H204		2.0kW	8.0kW
Z-axis	HG-H354		3.5kW	15kW
MG-axis	HG-H104	MDS-EH-V1-20 (Additional axis)	1.0kW	5.0kW
Spindle	Spindle motor 15kW	MDS-EMH-SPV3-10060	15kW	18kW
Total			0.3× (2.0+2.0+3.5+1.0) +15 =17.55kW <22kW (EMH-SPV3)	(8.0+8.0+15+5.0) +18 =54kW <76kW (EMH-SPV3)

Required power supply capacity (kVA) = (17.55/22) × 32 = 25.5(kVA)

SERVO OPTIONS

Battery options are required depending on the type of machine end encoder in the full closed loop control system. Check the options to be required referring the following lists.

■System establishment in the full closed loop control

Full closed loop control for linear axis

Machine side encoder to be used			Encoder signal output	Interface unit	Drive unit input signal	Battery option	Remarks
Incremental encoder	Rectangular wave signal output	SR74, SR84 (MAGNESCALE)	Rectangular wave signal	–	Rectangular wave signal	–	
		Various scale	Rectangular wave signal	–	Rectangular wave signal	–	
	SIN wave signal output	LS187, LS487 (HEIDENHAIN)	SIN wave signal	IBV Series (HEIDENHAIN)	Rectangular wave signal	–	
				EIB Series (HEIDENHAIN)	Rectangular wave signal	–	
				MDS-EX-HR-11 (Mitsubishi Electric)	Rectangular wave signal	–	
		LS187C, LS487C (HEIDENHAIN)	SIN wave signal	MDS-EX-HR-11 (Mitsubishi Electric) EIB Series (HEIDENHAIN)	Mitsubishi serial signal	(Required) (Note 1)	Distance-coded reference scale (Note 2)
		Various scale	SIN wave signal	MDS-EX-HR-11 (Mitsubishi Electric)	Mitsubishi serial signal	(Required) (Note 1)	Distance-coded reference scale is also available (Note 2)
	Mitsubishi serial signal output	SR75, SR85 (MAGNESCALE)	Mitsubishi serial signal	–	Mitsubishi serial signal	–	
Absolute position encoder	Mitsubishi serial signal output	OSA405ET2AS, OSA676ET2AS (MITSUBISHI ELECTRIC)	Mitsubishi serial signal	–	Mitsubishi serial signal	Required	Ball screw side encoder
		SR27, SR77, SR87, SR67A (MAGNESCALE)	Mitsubishi serial signal	–	Mitsubishi serial signal	Not required	
		LIC2197M, LIC2199M (HEIDENHAIN)	Mitsubishi serial signal	–	Mitsubishi serial signal	Not required	Mitsu03-4

		HAM Series, H2AM Series (FAGOR)	Mitsubishi serial signal	–	Mitsubishi serial signal	Not required	
		WMFA Series WMBA Series WMRA Series (AMO)	Mitsubishi serial signal	–	Mitsubishi serial signal	Not required	
	SIN wave signal output	MPRZ Series (Mitsubishi Heavy Industries Machine Tool)	SIN wave signal	ADB-K70M (Mitsubishi Heavy Industries Machine Tool)	Mitsubishi serial signal	Not required	

(Note 1) When using the distance-coded reference scale, it is recommended to use with distance-coded reference check function. In this case, the battery option is required.

(Note 2) Use the option of M800V Series for the distance-coded reference scale. It cannot be used with the speed command synchronous control.

(Note 3) Connectable scales besides these are also marketed. Contact each scale manufacturer for details. For the specifications of the scale, including the scales shown in this manual, refer to the manuals issued by the manufacturer.

■System establishment in the synchronous control

Position command synchronous control

The synchronous control is all executed in the NC, and the each servo is controlled as an independent axis.

Therefore, preparing special options for the synchronous control is not required on the servo side.

Speed command synchronization control

The common position control in two axes is performed by one linear scale. Basically, the multi axis integrated type drive unit (MDS-E/EH-V2/V3) is used, and the feedback signal is divided for two axes inside the drive unit.

When the two 1-axis type drive units are used in driving the large capacity servo motor, the linear scale feedback signal must be divided outside.

<Required option in the speed command synchronous control>

| Machine side encoder to be used	For MDS-E/EH-V2/V3	For MDS-E/EH-V1×2 units	Remarks
SIN wave signal output scale	MDS-EX-HR-11 (Serial conversion)	Not possible	
Mitsubishi serial signal output scale	Direct connection	MDS-B-SD (Signal division)	Including the case that an interface unit of the scale manufacturer is used with SIN wave output scale.

(Note) The distance-coded reference scale speed command synchronous control and the rectangular wave signal output scale speed command synchronous control are not available.

■Dynamic brake unit (MDS-D-DBU)

Specifications

Type	MDS-D-DBU
Coil specifications	DC24V 160mA
Wire size	5.5mm² or more (For IV wire)
Compatible drive unit	MDS-E-V1-320W, MDS-EH-V1-160W or larger
Mass	3kg

Outline dimension drawing

MDS-D-DBU
[Unit : mm]

■Battery option

This battery option may be required to establish absolute position system. Select a battery option from the table below depending on the servo system.

Type	MDS-BAT6V1SET	MR-BAT6V1SET	MDSBTBOX-LR2060
Installation type	Drive unit installation	Drive unit installation	Control panel installation
Hazard Class	Not applicable	Not applicable	Not applicable
Number of connectable axes	Up to 3 axes	Up to 3 axes	Up to 8 axes
Change method	Battery option change	Battery option change	Battery change
Appearance		Built-in battery MR-BAT6V1	
Compatible model E/EH	○	–	○
Compatible model EM/EMH	○	○	○
Compatible model EJ/EJH	–	○	○

■Cell battery (MDS-BAT6V1SET)

Specifications

Battery option type	Cell battery MDS-BAT6V1SET
Battery model name	2CR17335A
Nominal voltage	6V
Number of connectable axes (Note 1)	Up to 3 axes
Battery continuous backup time	Up to 2 axes: Approx. 10,000 hours / 3 axes connected: Approx. 6,600 hours
Back up time from battery warning to alarm occurrence (Note 2)	Up to 2 axes: Approx. 100 hours / 3 axes connected: Approx. 60 hours
Compatible model E/EH	○
Compatible model EM/EMH	○
Compatible model EJ/EJH	–

(Note 1) When using ball screw side encoder, both ball screw side encoder and motor side encoder need to be backed up by a battery, so the load becomes double.
(Note 2) This time is a guideline, so does not guarantee the back up time. Replace the battery with a new battery as soon as a battery warning occurs.
(Note 3) A battery load is generated in the axis for which the incremental control is set when a battery is connected.

■Cell battery (MR-BAT6V1SET)

Specifications

Battery option type	Cell battery MR-BAT6V1SET
Battery model name	2CR17335A
Nominal voltage	6V
Number of connectable axes (Note 1)	Up to 3 axes
Battery continuous backup time	Up to 2 axes: Approx. 10,000 hours / 3 axes connected: Approx. 6,600 hours
Back up time from battery warning to alarm occurrence (Note 2)	Up to 2 axes: Approx. 100 hours / 3 axes connected: Approx. 60 hours
Compatible model E/EH	–
Compatible model EM/EMH	○
Compatible model EJ/EJH	○

(Note 1) When using ball screw side encoder, both ball screw side encoder and motor side encoder need to be backed up by a battery, so load becomes double.
(Note 2) This time is a guideline, so does not guarantee the back up time. Replace the battery with a new battery as soon as a battery alarm occurs.
(Note 3) A battery load is generated in the axis for which the incremental control is set when a battery is connected.

■Battery box (MDSBTBOX-LR2060)

Specifications

Battery option type		Battery box
		MDSBTBOX-LR2060
Battery model name (Note 1)		Size-D alkaline batteries LR20×4 pieces
Nominal voltage (Note 2)		6.0V (Unit output: BTO1/2/3)
		3.6V (Unit output: BT(3.6V)
Number of connectable axes (Note 3)		8 axes
Battery continuous backup time (Note 4)		Approx. 10000 hours (when 8 axes are connected, cumulative time in non-energized state)
Back up time from battery warning to alarm occurrence (Note 4)		Approx. 336 hours (when 8 axes are connected)
Compatible model	E/EH	○
	EM/EMH	○
	EJ/EJH	○

(Note 1) Install commercially-available alkaline dry batteries into MDSBTBOX-LR2060. The batteries should be procured by customers. Make sure to use new batteries that have not passed the expiration date. We recommend you to replace the batteries in the one-year cycle.
(Note 2) 3.6V output is for old-type drive unit. It is not used for MDS-E/EH, EM/EMH, and EJ/EJH Series.
(Note 3) When using ball screw side encoder, both ball screw side encoder and motor side encoder need to be backed up by a battery, so the load becomes double.
(Note 4) This time is a guideline, so does not guarantee the back up time. Replace the battery with a new battery as soon as a battery warning (9F) occurs.
(Note 5) A battery load is generated in the axis for which the incremental control is set when a battery is connected.

■Ball screw side encoder OSA405ET2AS, OSA676ET2AS

Specifications

Type		OSA405ET2AS	OSA676ET2AS
Electrical characteristics	Encoder resolution	4,194,304pulse/rev	67,108,864pulse/rev
	Detection method	Absolute position method (battery backup method)	
	Accuracy (*1)	±3 seconds	
	Tolerable rotation speed at power off (*2)	500r/min	
	Encoder output data	Serial data	
	Power consumption	0.3A	
Mechanical characteristics for rotation	Inertia	0.5×10⁻⁴kgm² or less	
	Shaft friction torque	0.1Nm or less	
	Shaft angle acceleration	4×10⁴rad/s² or less	
	Tolerable continuous rotation speed	4000r/min	
Mechanical configuration	Shaft amplitude (position 15mm from end)	0.02mm or less	
	Tolerable load (thrust direction/radial direction)	9.8N/19.6N	
	Mass	0.6kg	
	Degree of protection	IP67 (The shaft-through portion is excluded.)	
	Recommended coupling	Bellows coupling	
Compatible model	E/EH	○	○
	EM/EMH	○	–
	EJ/EJH	○	–

(*1) The values above are typical values after the calibration with our shipping test device and are not guaranteed.
(*2) If the tolerable rotation speed at power off is exceeded, the absolute position cannot be repaired.

SPINDLE OPTIONS

According to the spindle control to be adopted, select the spindle side encoder based on the following table.

No-variable speed control (When spindle and motor are directly coupled or coupled with a 1:1 gear ratio)

●: Control possible ×: Control not possible

Spindle control item	Control specifications	Without spindle side encoder	With spindle side encoder
Spindle control	Normal cutting control	●	
	Constant surface speed control (lathe)	●	
	Thread cutting (lathe)	●	
Orientation control	1-point orientation control	●	This normally is not used for novariable speed control.
	Multi-point orientation control	●	
	Orientation indexing	●	
Synchronous tap control	Standard synchronous tap	●	
	Synchronous tap after zero point return	●	
Spindle synchronous control	Without phase alignment function	●	
	With phase alignment function	●	
C-axis control	C-axis control	● (Note)	●

(Note) When spindle and motor are coupled with a 1:1 gear ratio, use of a spindle side encoder is recommended to assure the precision.

Variable speed control (When using V-belt, or when spindle and motor are connected with a gear ratio other than 1:1)

●: Control possible ×: Control not possible

Spindle control item	Control specifications	Without spindle side encoder	With spindle side encoder		
			TS5690/ERM280/ GEL2449M	OSE-1024	Proximity switch
Spindle control	Normal cutting control	●	●	●	●
	Constant surface speed control (lathe)	● (Note 1)	●	●	● (Note 1)
	Thread cutting (lathe)	×	●	●	×
Orientation control	1-point orientation control	×	●	●	● (Note 3)
	Multi-point orientation control	×	●	●	×
	Orientation indexing	×	●	●	×
Synchronous tap control	Standard synchronous tap	● (Note 2)	●	●	● (Note 2)
	Synchronous tap after zero point return	×	●	●	×
Spindle synchronous control	Without phase alignment function	● (Note 1)	●	●	● (Note 1)
	With phase alignment function	×	●	●	×
C-axis control	C-axis control	×	●	×	×

(Note 1) Control not possible when connected with the V-belt.
(Note 2) Control not possible when connected with other than the gears.
(Note 3) When using a proximity switch, an orientation is executed after the spindle is stopped.
As for 2-axis spindle drive unit, setting is available only for one of the axes.

■Spindle side ABZ pulse output encoder (OSE-1024 Series)

When a spindle and motor are connected with a V-belt, or connected with a gear ratio other than 1:1, use this spindle side encoder to detect the position and speed of the spindle. Also use this encoder when orientation control and synchronous tap control, etc are executed under the above conditions.

Specifications

Type		OSE-1024-3-15-68	OSE-1024-3-15-68-8
Mechanical characteristics for rotation	Inertia	$0.1×10^{-4}$kgm^2 or less	$0.1×10^{-4}$kgm^2 or less
	Shaft friction torque	0.98Nm or less	0.98Nm or less
	Shaft angle acceleration	10^4rad/s^2 or less	10^4rad/s^2 or less
	Tolerable continuous rotation speed	6000r/min	8000r/min
Mechanical configuration	Bearing maximum non-lubrication time	20000h/6000r/min	20000h/8000r/min
	Shaft amplitude (position 15mm from end)	0.02mm or less	0.02mm or less
	Tolerable load (thrust direction/radial direction)	10kg/20kg Half of value during operation	10kg/20kg Half of value during operation
	Mass	1.5kg	1.5kg
	Degree of protection	IP54	
	Squareness of flange to shaft	0.05mm or less	
	Flange matching eccentricity	0.05mm or less	
Compatible model	E/EH	○	○
	EM/EMH	○	○
	EJ/EJH	○	○

(Note1) Confirm that the gear ratio (pulley ratio) of the spindle end to the encoder is 1:1.
(Note2) Use a timing belt when connecting by a belt.

Outline dimension drawing
[Unit : mm]

Spindle side encoder (OSE-1024-3-15-68, OSE-1024-3-15-68-8)

■Spindle side PLG serial output encoder (TS5690, MU1606 Series)

This encoder is used when a more accurate synchronous tapping control or C-axis control than OSE encoder is performed to the spindle which is not directly-connected to the spindle motor.

ENCODER INTERFACE UNIT

■Serial output interface unit for ABZ analog encoder MDS-EX-HR

This unit superimposes the scale analog output raw waves, and generates high resolution position data. Increasing the encoder resolution is effective for the servo high-gain.

Specifications

Type	MDS-EX-HR-11	
Compatible scale (example)	LS186 / LS486 / LS186C / LS486C (HEIDENHAIN)	
Consumption current	150mA	
Analog signal input specifications	A -phase, B -phase, Z-phase (Amplitude 1Vp-p/Min.: 0.8Vp-p Max.: 1.2Vp-p)	
Compatible frequency	Analog raw waveform max.200kHz	
Scale resolution	Analog raw waveform / 16384 division	
Output communication style	High-speed serial communication	
Tolerable power voltage	5VDC±5%	
Maximum heating value	2W	
Mass	0.2kg	
Degree of protection	IP67	
Compatible model	E/EH	○
	EM/EMH	○
	EJ/EJH	○

### Outline dimension drawing

[Unit : mm]

■Serial output interface unit for ABZ analog encoder MDS-B-HR

Convert the analog waves (Phase A and B) output from the relative position linear scale into the Mitsubishi-protocol serial communication (digital) signal. Add the signal from the magnetic polar detection unit to the linear scale's feedback signal.

Specifications

Type	MDS-B-HR-11M	MDS-B-HR-11MP
Compatible scale (example)	LS186 / LS486 / LS186C / LS486C (HEIDENHAIN)	
Analog signal input specifications	A-phase, B-phase, Z-phase (Amplitude 1Vp-p)	
Compatible frequency	Analog raw waveform max. 200kHz	
Scale resolution	Analog raw waveform/512 division	
Input/output communication style	High-speed serial communication I/F, RS485 or equivalent	
Magnetic pole detection	Compatible	
Tolerable power voltage	DC5V±5%	
Maximum heating value	2W	
Mass	0.5kg or less	
Degree of protection	IP65	IP67
Compatible model E/EH	○	○
EJ/EJH	○	○

### Outline dimension drawing
[Unit : mm]

■Serial signal division unit MDS-B-SD

This unit has a function to divide the position and speed signals fed back from the high-speed serial encoder and high-speed serial linear scale. This unit is used to carry out synchronized control of the motor with two MDS-E/EH-V1 drive units.

Specifications

Type	MDS-B-SD
Compatible servo drive unit	MDS-E/EH-V1-□
Input/output communication style	High-speed serial communication I/F, RS485 or equivalent
Tolerable power voltage	DC5V±10%
Maximum heating value	4W
Mass	0.5kg or less
Degree of protection	IP20
Compatible model E/EH	○
EM/EMH	–
EJ/EJH	○

■Serial output interface unit for ABZ analog encoder EIB192M (Other manufacturer's product)

Specifications

Type	EIB192M A4 20μm	EIB192M C4 1200	EIB192M C4 2048
Manufacturer	HEIDENHAIN		
Input signal	A-phase, B-phase: SIN wave 1Vpp, Z-phase		
Maximum input frequency	400kHz		
Output signal	Mitsubishi high-speed serial signal (Mitsu02-4)		
Interpolation division number	Maximum 16384 divisions		
Compatible encoder	LS187, LS487	ERM280 1200	ERM280 2048
Minimum detection resolution	0.0012μm	0.0000183° (19,660,800p/rev)	0.0000107° (33,554,432p/rev)
Degree of protection	IP65		
Outline dimension	98mm×64mm×38.5mm		
Mass	300g		
Compatible model	E/EH	○	○	○
	EM/EMH	○	○	○
	EJ/EJH	○	○	○

■Serial output interface unit for ABZ analog encoder EIB392M (Other manufacturer's product)

Specifications

Type		EIB392M A4 20μm	EIB392M C4 1200	EIB392M C4 2048
Manufacturer		HEIDENHAIN		
Input signal		A-phase, B-phase: SIN wave 1Vpp, Z-phase		
Maximum input frequency		400kHz		
Output signal		Mitsubishi high-speed serial signal (Mitsu02-4)		
Interpolation division number		Maximum 16384 divisions		
Compatible encoder		LS187, LS487	ERM280 1200	ERM280 2048
Minimum detection resolution		0.0012μm	0.0000183° (19,660,800p/rev)	0.0000107° (33,554,432p/rev)
Degree of protection		IP40		
Outline dimension		76.5mm×43mm×16.6mm		
Mass		140g		
Compatible model	E/EH	○	○	○
	EM/EMH	○	○	○
	EJ/EJH	○	○	○

■Serial output interface unit for ABZ analog encoder ADB-K70M Series (Other manufacturer's product)

Specifications

Type		ADB-K70M
Manufacturer		Mitsubishi Heavy Industries Machine Tool Co., Ltd.
Maximum response speed		10,000r/min
Output signal		Mitsubishi high-speed serial signal
Compatible encoder		MPRZ series
Minimum detection resolution		0.000043° (8,388,608p/rev)
Degree of protection		IP20
Outline dimension		120mm×50mm×30mm
Mass		0.15kg
Compatible model	E/EH	○
	EM/EMH	○
	EJ/EJH	○

DRIVE UNIT OPTION

■DC connection bar

When connecting a large capacity drive unit with L+L- terminal of power supply unit, DC connection bar is required. In use of the following large capacity drive units, use a dedicated DC connection bar. The DC connection bar to be used depends on the connected power supply, so make a selection according to the following table.

Specifications

Series		MDS-E			MDS-EH	
Large capacity drive unit		MDS-E-SP-400 MDS-E-SP-640	MDS-E-SP-400 MDS-E-SP-640	MDS-EH-SP-200 MDS-EH-SP-320 MDS-EH-SP-480 MDS-EH-SP-600	MDS-EH-V1-200 MDS-EH-SP-200 MDS-EH-SP-320	MDS-EH-V1-200
Power supply unit		MDS-E-CV-300 MDS-E-CV-370 MDS-E-CV-450	MDS-E-CV-550	MDS-EH-CV-550 MDS-EH-CV-750 MDS-EX-CVP-1100H	MDS-E-CV-300 MDS-E-CV-370 MDS-E-CV-450	MDS-EH-CV-185
Required connection bar		E-BAR-B0606	E-BAR-A0606 (Two-parts set)	E-BAR-A0606 (Two-parts set)	DH-BAR-B0606	DH-BAR-C0606
Compatible model	E/EH	○	○	○	○	○

DH-BAR-B0606

DH-BAR-C0606

■Side protection cover (E-COVER-1/E-COVER-2)

Install the side protection cover outside the both ends of the connected units.

■Regenerative option

Confirm the regeneration resistor capacity and possibility of connecting with the drive unit.
The regenerative resistor generates heats, so wire and install the unit while taking care to safety. When using the regenerative resistor, make sure that flammable matters, such as cables, do not contact the resistor, and provide a cover on the machine so that dust or oil does not accumulate on the resistor and ignite.

■Cable wire

The specifications of the wire used for each cable, and the machining methods are shown in this section. Mitsubishi uses the cables shown in the tables below. When manufacturing the encoder cable and battery connection cable, use the wires shown below or equivalent products.

(1) Encoder cable

(a) Heat resistant specifications cable

Wire type (other manufacturer's product)	Finish outer diameter	Sheath material	No. of pairs	Wire characteristics Configuration	Conductive resistor	Withstand voltage	Insulation resistance	Heat resistance temperature	Flexibility
BD20288 Compound 6-pair shielded cable Specification No. Bangishi-17145 (Note 1)	8.7mm	Heat resistant PVC	2 (0.5mm²)	100 strands/ 0.08mm	40.7Ω/km or less	500VAC/ 1min	1000 MΩ/km or more	105°C	70×10⁴ times or more at R200
			4 (0.2mm²)	40 strands/ 0.08mm	103Ω/km or less				

(b) General-purpose heat resistant specifications cable

Wire type (other manufacturer's product)	Finish outer diameter	Sheath material	No. of pairs	Wire characteristics Configuration	Conductive resistor	Withstand voltage	Insulation resistance	Heat resistance temperature	Flexibility
BD20032 Compound 6-pair shielded cable Specification No. Bangishi-16903 Revision No. 3 (Note 1)	8.7mm	PVC	2 (0.5mm²)	100 strands/ 0.08mm	40.7Ω/km or less	500VAC/ 1min	1000 MΩ/km or more	60°C	100×10⁴ times or more at R200
			4 (0.2mm²)	40 strands/ 0.08mm	103Ω/km or less				

(Note 1) BANDO Electric Wire (http://www.bew.co.jp/)
(Note 2) The Mitsubishi standard cable is the (a) Heat resistant specifications cable. When the working environment temperature is low and so higher flexibility is required, use the (b) General-purpose heat resistant specifications cable.

Compound 6-pair cable structure drawing
Core identification

Pair No.	Insulator color L1	L2
A1 (0.5mm²)	Red	White
A2 (0.5mm²)	Black	White
B1 (0.2mm²)	Brown	Orange
B2 (0.2mm²)	Blue	Green
B3 (0.2mm²)	Purple	White
B4 (0.2mm²)	Yellow	White

(2) Battery connection cable

Wire type (other manufacturer's product)	Finish outer diameter	Sheath material	No. of pairs	Wire characteristics Configuration	Conductive resistor	Withstand voltage	Insulation resistance	Heat resistance temperature	Flexibility
J14B101224-00 Two core shield cable (Note 1)	3.3mm	PVC	1 (0.2mm²)	7strands / 0.2mm	91.2Ω/km or less	500VAC/ 1min	1000MΩ/km or less	80°C	R33mm

SOFTWARE TOOLS

■Process flow from machine design and development to operation and maintenance

| Machine design | Electrical circuitry design | Machine assembly and adjustment | Operation and maintenance |

●NC-related processes

Servo selection	Custom screen creation	Parameter creation	Training
NC Servo Selection	NC Designer2	NC Configurator2	NC Trainer2
	NC Compiler2	Servo/spindle adjustment	Operation and maintenance
	Debug	Machine adjustment	NC Explorer
	NC Trainer2 plus	NC Analyzer2	NC Monitor2
			Operation monitoring and remote diagnostics
			NC Machine Tool Optimizer
			iQ Care Remote 4U

■Machine design

Use the following instructions to set machining parameters

Calculation results of the spindle acceleration/ deceleration times

Servo motor selection

The spindle acceleration/ deceleration times are shown in a graph.

[NC Servo Selection]
Input machining parameters to determine the optimum servo motor. This function automatically calculates spindle acceleration/ deceleration time and selects the optimum power supply module.

■Electrical circuitry design

Combine the parts to customize the screen without programming.

Customize buttons with original pictures.

Edit PLC program with PLC development tool of NC Trainer2 plus.

Customize a screen using NC Designer2 and check its operation using NC Trainer2 plus.

NC Trainer2 plus   NC Designer2   NC Trainer2 plus

[NC Designer2]
We provide a developmental environment where the MTB can customize screens easily. Two types of screen development methods are available; the interpreter method (programming without C++) for simple screen development, and the compilation method with a complex controller (programming with C++).

[NC Compiler2]
NC Compiler2 is required when the compilation method is applied.

[NC Trainer2 Plus]
NC Trainer2 plus supports customization development; it helps to program the ladder programming of the user PLC to be developed by machine tool builders and debug it and check the operations of customized screens.

●Machine assembly and adjustment

Check and setup the parameters list using a computer.

Check the contents of the parameters in the help section.

NC Configurator2

[NC Configurator2]
NC parameters required for NC control or machine operation can be edited on a computer.
It is also possible to create initial parameters simply by inputting the machine configuration.

●Machine assembly and adjustment

Adjusting with simple parameter settings

Servo parameters are adjusted automatically

Results displayed in bode diagram

[NC Analyzer2]
Servo parameters can be adjusted automatically by measuring and analyzing machine characteristics. Measurement and analysis can be done by running a servo motor using the machining program for adjustment, or using the vibration signal. This function can sample various types of data.

●Operation and maintenance

Education

Operation check

Results

•Put skills obtained into practice
•Smooth start-up
•Quick setup/machining

[NC Trainer2]
NC Trainer2 plus supports customization development; it helps to program the ladder programming of the user PLC to be developed by machine tool builders and debug it and check the operations of customized screens.

Machining data file

Drag and drop to transfer machining data files

NC Explorer   Ethernet   Machining data file

NC Explorer

[NC Explorer]
CNC machining data can be managed using Windows® Explorer on a computer when the computer is connected to multiple CNCs via Ethernet.

Monitor the status of multiple CNCs on one computer

Ethernet

NC Monitor2

[NC Monitor2]
Taking advantage of connection with a factory network, CNC operation status can be monitored from remote locations. Several CNCs can be connected and monitored simultaneously.

Application development support

■ Example of application	Development language: VC++/VB
Data collection/monitoring	Operation monitoring
Display/operation panel function	Program creation/edit
Production control	CAD/CAM

■ Example of communication with CNC
•Start/stop the machining program
•Upload/download files
•Acquire coordinate value, alarm/diagnosis information
•Read/write NC data such as tools and variables
•Read/write device information

PC

Mitsubishi Electric CNC Communication Software (FCSB1224W000)

Windows OS

[Mitsubishi Electric CNC Communication Software (FCSB1224W000)]
This software provides a bunch of API functions. They facilitate development of an Windows application which requires connection and communication with Mitsubishi Electric CNC*. You can use the common interfaces for any Mitsubishi Electric CNC model, which leads to high efficiency in development.
* The compatible model is Mitsubishi Electric CNCs after M700/M70.

Ethernet

Mitsubishi Electric CNC   Mitsubishi Electric CNC   Mitsubishi Electric CNC

IoT TOOLS

■Remote diagnostics software (Remote service) iQ Care Remote4U

This remote service supports remote maintenance of machine tools using IoT technology. It offers operation monitoring of machine tools and remote diagnostics of CNC.

### ●System configuration

●NC Remote service for end users

Mitsubishi Electric service personnel remotely diagnoses the status of your CNCs and offers accurate support to the shop floor. It helps reduce machine down time.

| Products | · iQ Care Remote4U user license
· Remote service gateway unit*2 |

●NC Remote service for for machine tool builders

Cloud server is prepared by Mitsubishi Electric, which significantly reduces the initial costs. Data collected from machines enables machine builders to provide distinctive maintenance service.

| Products | · iQ Care Remote4U platform license
· Remote service gateway unit*2 |
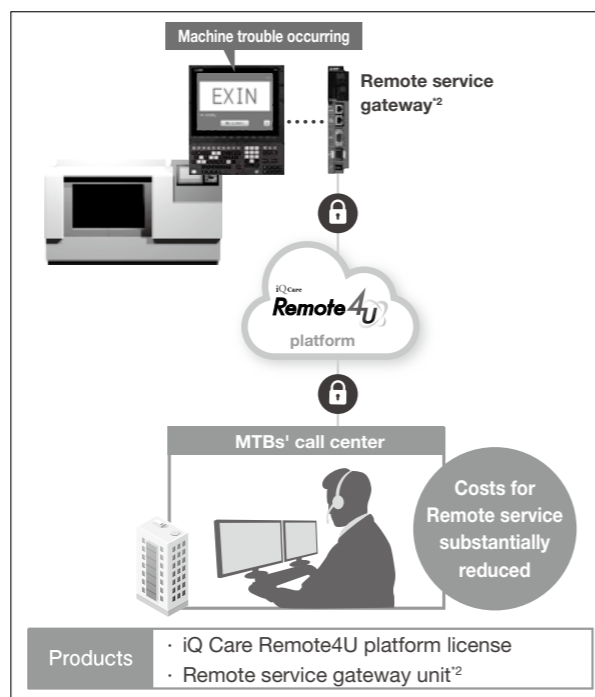

*1 Machine tool builder can also build remote services (iQ Care Remote4U Platform license required).
*2 This unit is not required for M800V/M80V Series (software version A2 or later).

●Specifications

Function	Main functions	User classification	
		Users	Machine tool builder (MTB)
Devices	Listing device information, specifying detailed display object	○	○
Operation	Graph display of operation rate, machining program name, ONB No.	○	–
Use	Servo axis load graph, spindle load graph, power consumption amount	○	–
Alarm	Current alarm, alarm history, total display	○	○
Diagnosis	S/W configuration, H/W configuration, I/F diagnosis, parameter reference, self diagnosis, key operation history, sampling chart	○	○
Utility	Operation status acquisition, alarm diagnosis, email notification settings	○	–
	History data acquisition	○	○
	NC file data	○	○

●System requirements
Operation environment of personal computer

Items	Details
OS	Windows® 8.1/Windows 10 64bit
Browser	Microsoft Edge (Ver38) Google Chrome (Ver65)

Operation environment of smart phones and tablet devices

Items	Details
OS	iOS
Browser	Safari

■Operation monitoring software NC Machine Tool Optimizer (Pro/Lite)

NC Machine Tool Optimize can analyze the operation of our equipment as well as visualizing the utilization. Not only Mitsubishi Electric NC, but third-party NC and MTConnect-compatible controllers can also be connected.

●System configuration
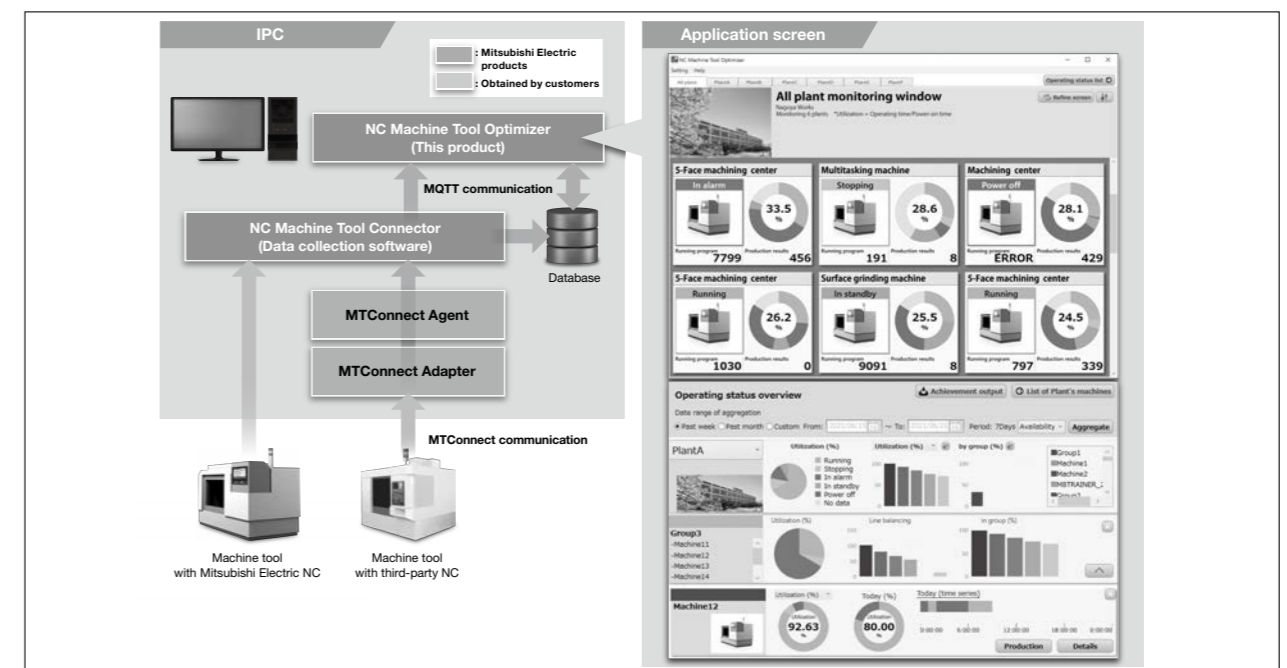

●Operation details window

Easy downtime diagnostics and trend analysis!

The occurrences of alarm stops and other events are presented in various charts, helping you to analyze the trends of the factors contributing to machine stops

●Production results window

Easy comparison and analysis of planned vs. actual production!

The variance between the planned and actual production output (the number of finished goods and the percentage of completion for each machine) provides insights into productivity trends, enabling you to optimize your planning.

●Key specifications

Item			Pro version	Lite version
Maximum number of devices that can be connected			30*1	10*1
Connection specifications	CNC	Mitsubishi Electric	M800(V)/M80(V)/E80/M700(V)/M70(V)/E70 Series, etc. *2	
		Third-party	MTConnect-compatible model	
Communication specifications	MTConnect	Supported version	MTConnect Ver.1.3.1	
		Agent (reference)	CppAgent (Ver1.3.0.11 or newer) issued by MTConnect Institute *3	
	MQTT	Supported version	Protocol Ver.3.1.1	
		Broker	Eclipse Mosquitto 1.3.5	
	Database		PostgreSQL Ver.10.0/SQL99	
Supported language			Japanese, English	

*1 The number of devices per license of this product. Note however that there are the following limitations: up to 20 devices for the API for Mitsubishi Electric CNC, and up to 20 for MTConnect (the number is limited depending on the Adapter/Agent used).
*2 For C70/C80 Series and M60/M600 Series or earlier models, additional hardware is required.
*3 Any MTConnect-compatible agent, not limited to Cpp agent, can be used for connection.

●System requirements

Item	Description
Processor	Intel® Core™-i3 2 cores or better 64-bit architecture
Memory	8 GB or more
Disk space	300 GB or more is recommended
External Interface	RJ-45 (Communication standard: Ethernet)
Display resolution	XGA (1024×768) or higher
OS	The 64-bit version of the following OS is supported. Windows® 10 Pro Windows® 10 Enterprise Windows® 10 IoT Enterprise
Library	.NET Framework 4.5

Mitsubishi Electric offers a wide range of automation equipment from PLCs and HMIs to CNC and EDM machines.

A NAME TO TRUST

Since its beginnings in 1870, some 45 companies use the Mitsubishi name, covering a spectrum of finance, commerce and industry.

The Mitsubishi brand name is recognized around the world as a symbol of premium quality.

Mitsubishi Electric Corporation, established in 1921, is active in space development, transportation, semi-conductors, energy systems, communications and information processing, audio visual equipment and home electronics, building and energy management and automation systems, and has 183 factories, laboratories and offices worldwide in over 140 countries.

This is why you can rely on Mitsubishi Electric automation solution - because we know first hand about the need for reliable, efficient, easy-to-use automation and control in our own factories.

As one of the world's leading companies with a global turnover of over 4 trillion Yen (over $40 billion), employing over 146,000 people, Mitsubishi Electric has the resource and the commitment to deliver the ultimate in service and support as well as the best products.

* Not all products are available in all countries.
