channel memory configuration
 pairs of Dual-channel memory configuration

tion system may only recognize less than 3GB. Hence, a total installed memory of less than 3GB is r
 erclocking capability.

rich is the standard way of accessing information from a memory module. Under the default state, sc
 onding timing or the loaded XMP Profile is not the JEDEC memory standard. The stability and comp
 e recommend that you install memory modules of the same version or date code (D/C) from the sam

recommended.

Some memory modules for overclocking may operate at a lower frequency than the vendor's recommendation. Compatibility of these memory modules depends on the CPU's capabilities and other installed components. Check with the retailer to get the correct memory modules.
