INTRODUCTION

Elder Neal C. Wilson asked for and received from the 1986 Annual Council in Rio de Janeiro authorization to develop a global strategy to take the "everlasting gospel" to every nation, tongue and people. It is a tangible map of the world mission of the Adventist Church. It is a plan so large that it forces the church to place all its resources in the hands of its Lord. It is a concrete manifestation of the blessed hope of our Lord's return in glory and power!

Strategy requires information. The foundation for envisioning and undertaking a global strategy is a worldwide information base. This volume seeks to provide that factual framework for the benefit of leaders, planners and communicators.

For Adventist *leaders* it sketches the task to be accomplished, pinpointing the location of unreached nations, cities and people groups where congregations need to be planted and ministries begun. This volume describes the frontiers of mission in very specific terms, indicating the level of Adventist penetration and the size of the Adventist community in every part of the world.

For Adventist *planners* it reveals the barriers to and assets for church growth. This volume describes the terrain for mission--the degree of urbanization, the languages and cultural minority groups, and the religious profile of each segment of the globe. It also shows where God's people are deployed and the kinds of ministries underway in each part of the world.

For Adventist *communicators* it gives texture and substance to the elusive picture of a world mission. The volume provides concrete and specific details for every corner of the globe. It can help make mission stories, reports, articles and promotional materials more personal, hard-edged and compelling. It can take the reader immediately to the front line of missionary endeavor anywhere on the globe and provide a keyhole view of that locale's reality.

The *Global Mission Databook* helps us to think globally and act locally. It will become a standard reference for denominational staff and committee members as the church moves into a global strategy for reaching the unreached.

The information on which this volume is based has been collected by a network of volunteer researchers and is housed in an electronic database at the world headquarters of the Seventh-day Adventist Church in Silver Spring, Maryland, U.S.A. It is continually updated and expanded, and as you

use this book we would ask for your assistance in refining the information to make it more complete and accurate.

For purposes of strategic planning and information collection, the world's population has been divided into 5,234 segments of about one million persons each. These are the target areas of the global strategy.

These segments target people, not geopolitical units. About half of these are highly urbanized, consisting of an entire city or a portion of a metropolitan area 2 million or greater in population. The other half are of varying geographic size, each encompassing as much territory as necessary to include one million persons or a major fraction. Often this involves entire provinces or states, sometimes entire regions or nations, or even a cluster of small nations.

Dividing the world into unique population segments averaging one million was accomplished using the following procedures:

1. The *World Population Data Sheet* (WPDS) published by the Population Reference Bureau was selected as the standard in this volume for validation of the world population total and the country totals that result from summing the population figures in the appropriate segments. This standard was selected because it provides optimum sources, consistency of treatment and yearly updates. This book uses the 1989 edition of the WPDS, (175 countries, defined as "all geopolitical entities with populations of 150,000 or more and all members of the U.N.") supplemented to include all 215 of the countries on the United Nations list appearing in the *SDA Annual Statistical Report*.

2. Each division of the General Conference of the Seventh-day Adventist Church and the other organizations directly attached to the denominations world headquarters was assigned a number of population segments or "target areas" equal to the rounded sum of country population totals in its territory divided by one million. And each union and local field was similarly assigned a number of population segments. Very small geopolitical entities were included in an adjacent segment if the association was a logical one. These appear printed in all capitalized type.

3. Where there is more than one union in a country (such as in the U.S.A., U.S.S.R., Brazil, Philippines, or India) or more than one conference in a country (such as Argentina or Canada), the WPDS country population totals were subdivided using official census records from the U.S. Bureau of the Census Center for International Research, Washington,

D.C., and the *Encyclopedia Britannica*. Population subtotals were used from first, second and third-level governmental subdivisions. The data is of variable recency and has been projected to 1989 by dividing the WPDS country total by the source total and using the product as a factor by which to multiply each subtotal. The sources, dates and projection factors are all summarized in a SuperCalc4 file entitled POPSPROJ.CAL and available in the Global Strategy office at the General Conference headquarters.

The resulting list of "target areas" is the skeleton on which all of the other information and planning processes involved in global strategy hang. They are listed in this volume in the same order that unions and local fields appear in the *SDA Yearbook*, usually in alphabetical order. The bulk of the material published here appears as a large, multi-page table for each of the world divisions of the General Conference and equivalent organizations. To assist users and provide technical notes, each column in this table is described below.

Column Explanations for Data Tables

Target Area lists the identification (ID) number and unique *name* of each population segment. The ID number is made up of the three-letter symbol for the General Conference division followed by a sequential number from 001 to the division total. The name usually has three part—capitalized symbol for the union and local field; a country, province, region or group designation; and a unique label element such as a district, city, island or area. Four approaches have been used in naming the population segments.

First, administrative subdivisions with populations of 500,000 to 1.5 million and mapped boundaries might be selected. Or second, a number of adjacent administrative subdivisions, the population total of which does not exceed 1.5 million, might be clustered.

Third, a group of census units might be identified, the boundaries of which are not known, but for which relative locations can be determined, such as the counties within prefectures in China.

Fourth, large cities or other populations for which detailed maps are not available have been arbitrarily divided using compass points to identify the segments. If a city is divided into two segments, they might be labeled North and South, or East and West. If three segments, North, Central and South. If four segments, North, East, South, West. If five, Central, North, East, South, West. If six, North, North Central, South Central, South, East and West. If seven or eight segments were needed, the divisions were North, North-east, East, Southeast, South, Southwest, West, Northwest.

Population is from the WPDS or projected as described above. Each segment is about one million persons as of December 31, 1989—no less than 500,000 and no more than 1,500,000.

Presence has three elements: Service, Proclamation, and Density. Service and Proclamation are scaled 0 if no

SDA activity, 1 if less than three years, 2 if more than three years. Density is the number of members per thousand population.

Companies are groups of members who belong to the conference church and have not yet developed the self-sustaining leadership and/or finances necessary to be organized as a church. In some cases a 1 has been entered in this column although there is a zero under the Members column. This is a segment in which an Adventist presence was reported in the 1986 reports from division global strategy coordinators, but for which no membership was reported in the 1990 supplemental statistical reports from division secretaries. Anecdotal reports led the editors to believe that in many cases an informal Adventist group is present.

Churches is the number of organized local SDA congregations according to a supplementary report from each union secretary collected in the first half of 1990 and reflecting totals as of December 31, 1989. Or in some cases projected from reports collected in 1986, using the growth factor calculated from a comparison of the 1986 and 1989 year-end statistical reports for the union in question.

Members is the number of baptized Seventh-day Adventist Church members according to a supplementary report from each union secretary collected during 1990 and reflecting totals as of December 31, 1989, or in some cases projected from reports collected in 1986, using the growth factor calculated from a comparison of the 1986 and 1989 year-end statistical reports for the union in question.

Urban is the percentage of the population living in an urban environment. It is coded as follows: U (urban) means that 71% or more of the population is urbanized; S (suburban) means that 25% to 70% of the population is urbanized; R (rural) means that less than 25% of the population is urbanized. The source for this information is *Prospects for World Urbanization, 1988*, United Nations Population Studies Number 112 (1989, U.N. Department of International Economic & Social Affairs, New York).

Ethno-linguistic or Socio-economic Clusters is a listing that begins with the three-letter code for the official language or predominant language in use in the target area, and includes major minority languages or other minority groups. Each is thought to be a significant people group that will require a focused ministry in order to be reached with the Adventist message. The three-letter codes for official languages are defined in a box at the end of this introduction.

In some cases a particular language is listed on the first line within a nation with an asterisk in front of it. This means that it represents more than 50,000 speakers in that nation, but it cannot be located with certainty in one segment.

The primary sources for this information include *Ethnologue* (11th edition, Summer Institute of Linguistics, Dallas, Texas) and *Encyclopedia Britannica*. In some cases researchers have personal knowledge of particular areas and relied on this knowledge in supplying information. In the U.S.A. the source was *We The People: An Atlas of Americas Ethnic Diversity* (1988, MacMillan).

Religions includes the major religions present among the population segment in approximate rank order of the number of adherents. In some cases a percentage of the population was available for each religion. These do not total 100% because of unknown percentages of smaller religions, and lack of space to reproduce all of the available data. The primary sources for this information included the *World Christian Encyclopedia* (1978, Oxford University Press) and the *Encyclopedia Britannica*. In the U.S.A. the source was *Churches and Church Membership in the United States 1980* (1982, Glenmary Research Center).

Acknowledgements

A number of volunteer researchers collaborated in the production of this volume, including Walton J. Brown, Matthew Bediako, Carl Sahlin, Melvin Sickler, David Shen, and Bruce Campbell Moyer. We want to thank them for their painstaking work and the contribution they have made to bringing together the information needed for world evangelization.

CHINA

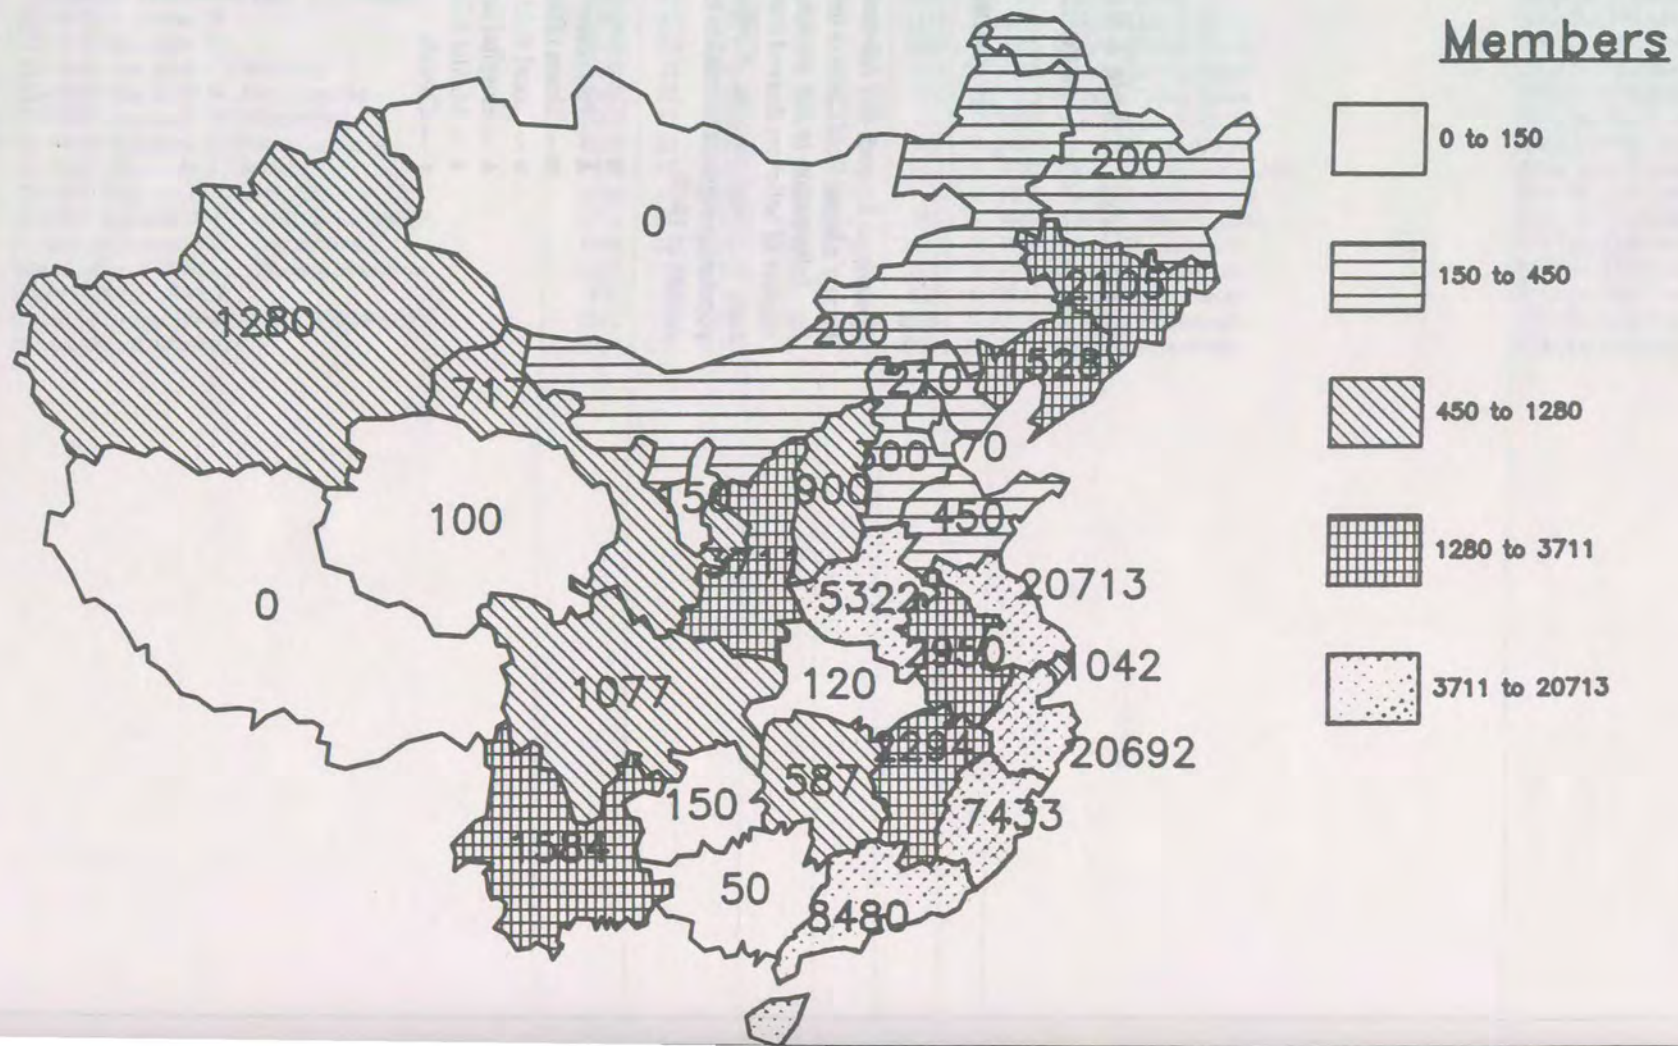

Territory: People's Republic of China and the Mongolian People's Republic

Population: 1,106,000,000

There is no Seventh-day Adventist church organization in the People's Republic of China or the Mongolian People's Republic. Information in this section represents estimates on the number of believers derived from miscellaneous sources and from historical records. Coding attached to the names of population segments identifies locations of organizations that existed in 1949:

- — Division office
- ▲ — Publishing house
- — Union office
- * — Local field
- ⊕ — Hospital or clinic
- ◆ — Middle school
- † — Church
