INTRODUCTION

Ce document met à la disposition du public les données brutes qui ont servi à la publication de l'Atlas géochimique des sédiments de ruisseau de la région de Murdochville - Gaspé (DP 84-04). Il permet aux utilisateurs de l'atlas une consultation facile de données utiles à un complément d'informations.

Les échantillons ont été prélevés aux cours de 15 campagnes distinctes, localisées sur la figure 1. Les campagnes 500-67, 500-68 et 500-69 sont l'oeuvre de la SOQUEM; 30-77, 30-78, 30-79, 30-81 et 30-82 sont celle du service de Géochimie/ Géophysique du MER; 45-65, 18-66, 20-67, 11-68, 28-69 et 26-70 sont des échantillonnages effectués dans le cadre des campagnes de cartographie géologique du MER.

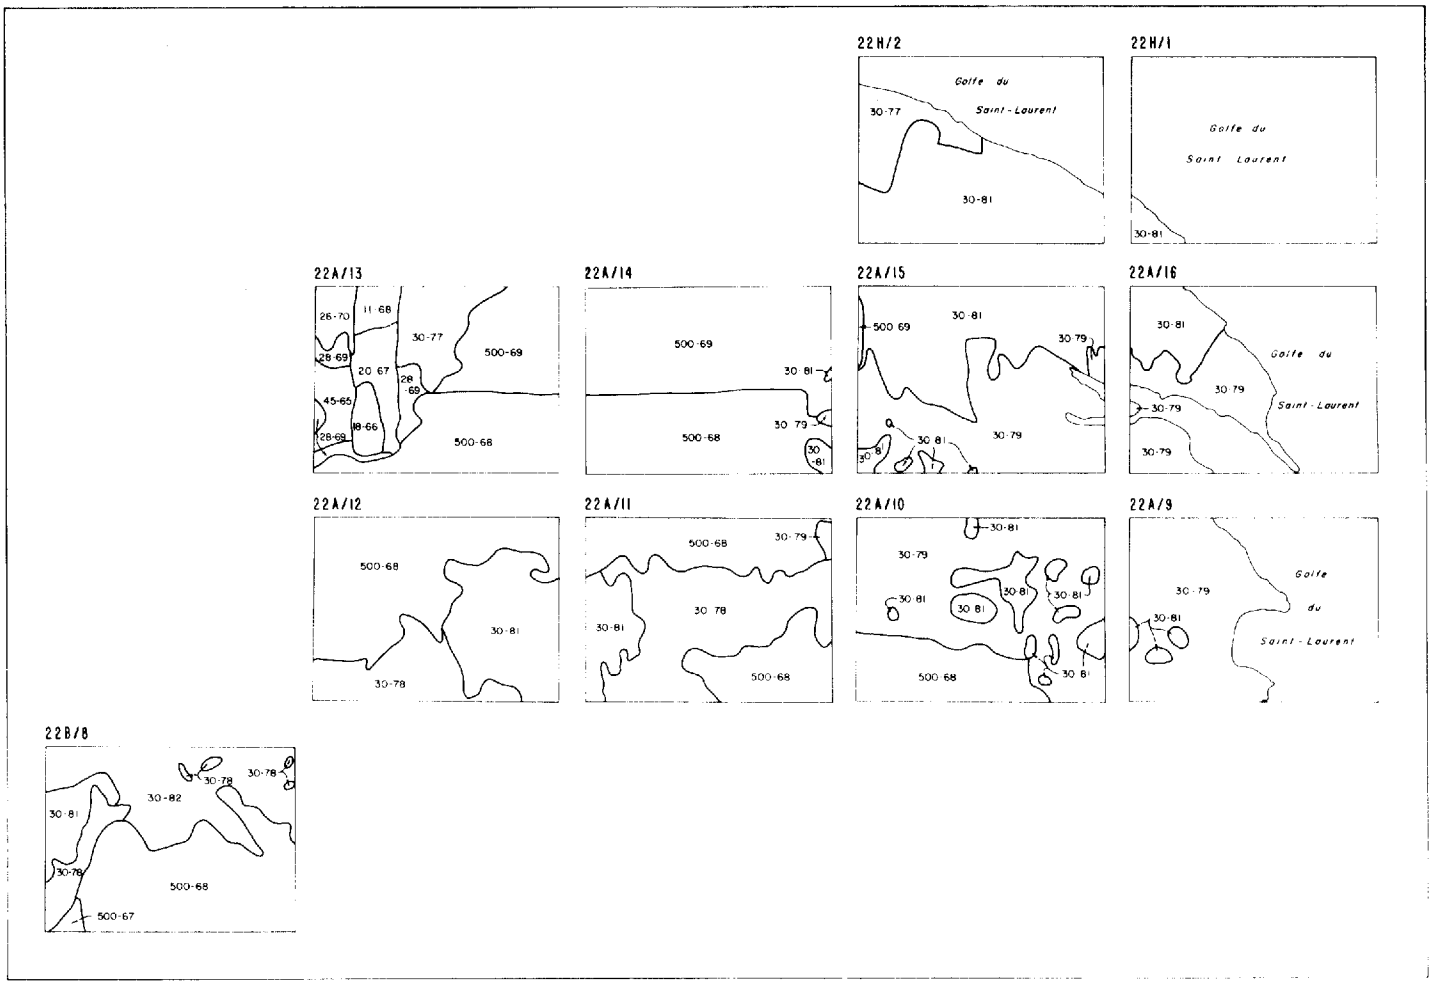

FIGURE 1 - Localisation des campagnes d'échantillonnage.

La première partie du document donne, pour chaque échantillon, les résultats d'analyse et la localisation en coordonnées UTM. Les échantillons sont classés par ordre numérique croissant des feuillets SNRC et en fonction de l'année de prélèvement. Les résultats d'analyse sont donnés en ppm pour chacun des éléments dosés, sauf pour Ag, U et Mo qui sont exprimés en dpm (1 dpm = 0,1 ppm). La perte au feu (PF) est donnée en pourcent.

La deuxième partie présente, dans l'ordre croissant des feuillets SNRC., les caractéristiques pertinentes à chaque site de prélèvement. Ces caractéristiques ne sont disponibles que pour les échantillons prélevés par le Service de la géochimie/géophysique du MER.

Le document comprend également une carte de localisation des sites d'échantillonnage, consistant en onze feuillets de la carte topographique du Canada à l'échelle de 1:50 000. Pour trouver, à partir de la carte, les résultats d'analyse d'un échantillon, il faut d'abord déterminer à quel projet il appartient (p.ex.: 30-78); on consulte ensuite la table des matières.
