* The specification of the extreme overclocking modules listed on this page may be beyond the capabilities of your system hardware. Careful selection of all system components (e.g. CPU, motherboard, PSU) is required to ensure that these modules will function as intended.

These kits are thoroughly tested and verified in house to run at the listed speed. As a backup, we include a 2nd XMP profile at a slower clock speed so you can still achieve great performance if your system cannot handle the included highest speed XMP profile.

As a guide, you can find the processors and motherboard that HyperX used to perform the Intel XMP certification on this page: http://www.intel.co.uk/content/www/uk/en/gaming/extreme-memory-profile-xmp.html. This is not a guarantee of compatibility in your system configuration. We cannot guarantee compatibility with all systems; these modules should be installed and used at your own risk.

**Lighting customisable with motherboard RGB control software.
