Product overview

The HP 2810 Switch Series consists of two switches: the 24-port HP 2810-24G Switch with 20 10/100/1000 ports, and the 48-port HP 2810-48G Switch with 44 10/100/1000 ports. Each switch also has four dual-personality ports for RJ-45 10/100/1000 or mini-GBIC fiber Gigabit connectivity. Ideal for high-performance and secure 10/100/1000 connectivity, the 2810 switch series offers access security and advanced prioritization and traffic-monitoring capabilities. The series is cost-effective and easy to use, with a shallow, 1U form factor that provides operational flexibility for use in smaller wiring closets.

Features and benefits

Quality of Service (QoS)

- **Class of Service** (CoS): sets the IEEE 802.1p priority tag based on IP address, IP Type of Service (ToS), Layer 3 protocol, TCP/UDP port number, source port, and DiffServ

Overview

- **Layer 4 prioritization**: enables prioritization based on TCP/UDP port numbers
- **Traffic prioritization** (IEEE 802.1p): allows real-time traffic classification with support for eight priority levels mapped to four queues

Connectivity

- **Dual-personality functionality**: four 10/100/1000 ports or SFP slots for optional fiber connectivity such as Gigabit-SX, -LX, and -LH, or 100-FX

Resiliency and high availability

- **IEEE 802.3ad Link Aggregation Protocol** (LACP) **and HP port trunking**: support up to 24 trunks, each with up to 8 links (ports) per trunk
- **IEEE 802.1s Multiple Spanning Tree**: provides high link availability in multiple VLAN environments by allowing multiple spanning trees; provides legacy support for IEEE 802.1d and IEEE 802.1w
- **Optional redundant power supply**: provides uninterrupted power (provided by HP 600 RPS/EPS)

Manageability

- **sFlow** (RFC 3176): wire-speed traffic accounting and monitoring
- **RMON** (remote monitoring): provides advanced monitoring and reporting capabilities for statistics, history, alarms, and events
- **Dual flash images**: provides independent primary and secondary operating system files for backup while upgrading
- **Troubleshooting**: ingress/egress port monitoring enables network problem-solving
- **Single IP Address Management**: single IP address management for a virtual stack of up to 16 switches
- **Multiple configuration files**: allow multiple configuration files to be stored to a flash image

Layer 2 switching

- **VLAN support and tagging**: supports IEEE 802.1Q (4,094 VLAN IDs) and 256 VLANs simultaneously
- **GARP VLAN Registration Protocol**: allows automatic learning and dynamic assignment of VLANs
- **Jumbo packet support**: supports up to 9220-byte frame size to improve the performance of large data transfers

Security

- **Port security**: allows access only to specified MAC addresses, which can be learned or specified by the administrator
- **Protected ports**: provides increased security by allowing specified ports to be isolated from all other ports on the switch; the protected port or ports can communicate only with the uplink or shared resources
- **MAC address lockout**: prevents particular configured MAC addresses from connecting to the network
- **Multiple user authentication methods**:
  - IEEE 802.1X: is an industry-standard method of user authentication using an IEEE 802.1X supplicant on the client in conjunction with a RADIUS server
  - Web-based authentication: similar to IEEE 802.1X, it provides a browser-based environment to authenticate clients that do not support the IEEE 802.1X supplicant
  - MAC-based authentication: client is authenticated with the RADIUS server based on the client's MAC address
- **Switch management logon security**: can require either RADIUS or TACACS+ authentication for secure switch CLI logon
- **Multiple IEEE 802.1X users per port**: provides authentication of up to two IEEE 802.1X users per port; prevents user "piggybacking" on another user's IEEE 802.1X authentication
- **STP BPDU port protection**: blocks Bridge Protocol Data Units (BPDUs) on ports that do not require BPDUs, preventing forged BPDU attacks
- **Secure FTP**: allows secure file transfer to and from the switch; protects against unwanted file downloads or unauthorized copying of a switch configuration file

Overview

- **RADIUS/TACACS+**: eases switch management security administration by using a password authentication server
- **Source-port filtering**: allows only specified ports to communicate with each other
- **Secure Shell**: encrypts all transmitted data for secure remote CLI access over IP networks
- **Secure Sockets Layer** (SSL): encrypts all HTTP traffic, allowing secure access to the browser-based management GUI in the switch

Convergence

- **IP multicast snooping and data-driven IGMP**: automatically prevent flooding of IP multicast traffic
- **IEEE 802.1AB Link Layer Discovery Protocol** (LLDP): is an automated device discovery protocol that provides easy mapping of network management applications
- **Per-port broadcast throttling**: selectively configures broadcast control on heavy traffic port uplinks
- **Software updates**: free downloads from the Web

Ease of use

- **Locator LED** (switch): allows users to set the locator LED on a specific switch to either turn on, blink, or turn off; simplifies troubleshooting by making it easy to locate a particular switch within a rack of similar switches
- **Friendly port names**: allow assignment of descriptive names to ports
- **Find-Fix-and-Inform**: finds and fixes common network problems automatically, then informs administrator
- **HP/IEEE Auto-MDIX**: automatically adjusts for straight-through or crossover cables on all RJ-45 ports
