x530L Series

Stackable Intelligent Layer 3 Switches

The Allied Telesis x530L Series stackable Layer 3 switches feature high capacity, resiliency and easy management, making them the ideal choice for network access applications.

Overview

110011001010010

The Allied Telesis x530L Series are a high-performing and feature-rich choice for today's networks. A choice of 24 or 48 Gigabit ports and 4 x 10 Gigabit uplinks, combined with the ability to stack multiple units, make the x530L Series a versatile solution for enterprise applications.

Power over Ethernet Plus (PoE+) models enable connecting and powering wireless access points, IP surveillance cameras, and other devices.

Powerful network management

Allied Telesis Autonomous Management Framework™ (AMF) automates many everyday tasks including configuration management, easing the workload of modern networks. The entire network can be managed as a single virtual device with powerful centralized features. Growing the network can be accomplished with plug-and-play simplicity, and network node recovery is fully zero-touch.

AMF secure mode increases network security with management traffic encryption, authorization and monitoring. AMF Guestnode allows third-party devices, such as IP phones and security cameras, to be part of the AMF network.

Resilient

Today's converging online services mean there is increasing demand for highly-available networks with minimal downtime. Allied Telesis Virtual Chassis Stacking (VCStack™), in conjunction with link aggregation, provides a network with no single point of failure and application resiliency.

x530L Series switches can form a VCStack of up to eight units for enhanced resiliency and simplified device management. Mixed stacking allows the x530L Series to stack with x530 Series Switches. Virtual Chassis Stacking over Long Distance (VCStack™ LD), which enables stacks to be created over long distance fiber links, makes the x530L Series the perfect choice for distributed environments too.

Allied Telesis Ethernet Protection Switched Ring (EPSRing™), and the standards-based G.8032 Ethernet Ring Protection, ensure that distributed network segments have high-speed, resilient access to online resources and applications.

Reliable

The x530L Series was designed with reliability in mind, and guarantees continual delivery of essential services. With dual built-in Power Supply Units (PSUs) and near-hitless online stack reconfiguration, maintenance can be performed without affecting network uptime.

Secure

A secure network environment is guaranteed. The x530L Series offers powerful control over network traffic types, secure management options, loop quard to protect against cabling mistakes, and tri-authentication for comprehensive access control.

Future proof

The x530L Series ensures a future-proof network, with superior flexibility and the ability to stack multiple units. All x530L models feature 10 Gigabit uplink ports and a comprehensive IPv6 feature set, to ensure they are ready for future network traffic demands.

Environmentally friendly

The x530L Series supports Energy Efficient Ethernet (EEE), automatically reducing the power consumed by the switch whenever there is no traffic on a port. This sophisticated feature significantly lowers operating costs by reducing the power requirements of the switch and any associated cooling equipment.

Key Features

- ► Autonomous Management Framework[™] (AMF)
- ▶ VCStack[™] up to 8 switches
- ▶ VCStack LD for distributed resilient backbones
- ► EPSRTM and G.8032 Ethernet Ring Protection for resilient rings
- ▶ Up to 740W Power Over Ethernet (PoE+)
- ► Continuous PoE
- ► Active Fiber Monitoring (AFM)
- ▶ Dual fixed PSUs
- ▶ OpenFlow for SDN

Key Features

Autonomous Management Framework™ (AMF)

- AMF is a sophisticated suite of management tools that provide a simplified approach to network management. Powerful features like centralized management, auto-backup, auto-upgrade, autoprovisioning and auto-recovery enable plug-andplay networking and zero-touch management.
- Any x530L Series switch can operate as the AMF network master, storing firmware and configuration backups for other network nodes. The AMF master enables auto-provisioning and auto-upgrade by providing appropriate files to new network members. New network devices can be pre-provisioned, making installation easy because no onsite configuration is required.
- AMF Guestnode allows Allied Telesis wireless APs and other switching products, as well as third-party devices such as IP phones and security cameras, to be part of an AMF network.

Virtual Chassis Stacking (VCStack™)

- ➤ Create a VCStack of up to 8 units with 40 Gbps of stacking bandwidth for each unit. Stacking links are connected in a ring so each device has dual connections to further improve resiliency. VCStack provides a highly-available system where network resources are spread out across stacked units, reducing the impact if one of the units fails. Aggregating switch ports on different units across the stack provides excellent network resiliency.
- Mixed stacking allows the x530L Series to stack with x530 Series switches, providing flexible deployment options.

Long-Distance Stacking (VCStack™ LD)

 VCStack LD allows a VCStack to be created over longer distances, perfect for distributed network environments.

Ethernet Protection Switched Ring (EPSRing™)

- ► EPSRing and 10 Gigabit Ethernet allow several x530L Series switches to form high-speed protected rings capable of recovery within as little as 50ms. This feature is perfect for high performance and high availability in enterprise networks.
- Super-Loop Protection (SLP) enables a link between two EPSR nodes to be in separate EPSR domains, improving redundancy and network fault resiliency.

G.8032 Ethernet Ring Protection

- G.8032 provides standards-based high-speed ring protection, that can be deployed as standalone, or interoperate with Allied Telesis EPSR.
- Ethernet Connectivity Fault Monitoring (CFM) proactively monitors links and VLANs, and provides alerts when a fault is detected.

Power over Ethernet Plus (PoE+)

- With PoE, a separate power connection to media endpoints such as IP phones and wireless access points is not necessary. PoE+ reduces costs and provides even greater flexibility, providing the capability to connect devices requiring more power (up to 30 Watts) such as pan, tilt and zoom security cameras.
- The x530L Series allows the configuration of the overall power budget, as well as the power limit per port.

Active Fiber Monitoring (AFM)

AFM prevents eavesdropping on fiber communications by monitoring received optical power. If an intrusion is detected, the link can be automatically shut down, or an operator alert can be sent.

Continuous PoE

Continuous PoE allows the switch to be restarted without affecting the supply of power to connected devices. Smart lighting, security cameras, and other PoE devices will continue to operate during a software upgrade on the switch.

High Reliability

► The x530L Series feature front to back cooling and dual PSUs.

Voice VLAN

Voice VLAN automatically separates voice and data traffic into two different VLANs. This automatic separation places delay-sensitive traffic into a voice-dedicated VLAN, which simplifies QoS configurations.

sFlow

sFlow is an industry-standard technology for monitoring high-speed switched networks. It provides complete visibility into network use, enabling performance optimization, usage accounting/billing, and defense against security threats. Sampled packets sent to a collector ensure a real-time view of network traffic.

VLAN Mirroring (RSPAN)

VLAN mirroring allows traffic from a port on a remote switch to be analyzed locally. Traffic being transmitted or received on the port is duplicated and sent across the network on a special VLAN.

Optical DDM

Most modern optical SFP/SFP+/QSFP transceivers support Digital Diagnostics Monitoring (DDM). This enables real-time monitoring of various parameters of the transceiver, such as optical output power, temperature, laser bias current and transceiver supply voltage. Easy access to this information simplifies diagnosing problems with optical modules and fiber connections.

Tri-authentication

▶ Authentication options on the x530L Series also include alternatives to IEEE 802.1x port-based authentication, such as web authentication to enable guest access and MAC authentication for endpoints that do not have an IEEE 802.1x supplicant. All three authentication methods—IEEE 802.1x, MAC-based and Web-based—can be enabled simultaneously on the same port for tri-authentication.

TACACS+ Command Authorization

Centralized control over which commands may be issued by a specific AlliedWare Plus device users. TACACS+ command authorization complements authentication and accounting services for a complete AAA solution.

Premium Software License

▶ By default, the x530L Series offers a comprehensive Layer 2 and basic Layer 3 feature set that includes static routing and IPv6 management features. The feature set can easily be elevated to full Layer 3 by applying the premium software license. This adds dynamic routing protocols and Layer 3 multicasting capabilities.

VLAN Access Control List (ACLs)

 Simplify access and traffic control across entire segments of the network. ACLs can be applied to a VLAN as well as a specific port.

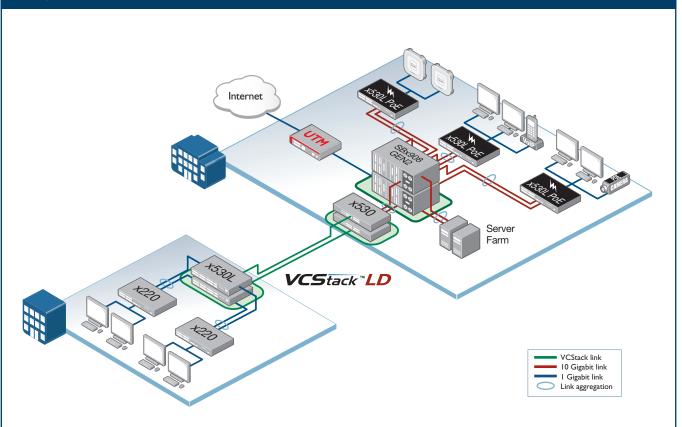

Dynamic Host Configuration Protocol (DHCP) Snooping

▶ DHCP servers allocate IP addresses to clients, and the switch keeps a record of addresses issued on each port. IP source guard checks against this DHCP snooping database to ensure only clients with specific IP and/or MAC address can access the network. DHCP snooping can be combined with other features, like dynamic ARP inspection, to increase security in Layer 2 switched environments, and also provides a traceable history, which meets the growing legal requirements placed on service providers.

Software Defined Networking (SDN)

OpenFlow is a key technology that enables the use of SDN to build smart applications that unlock value and reduce cost.

Key Solutions

Resilient distribution switching

The x530L Series are ideal for distribution solutions, where resiliency and flexibility are required. In the above diagram, distribution switches utilize long-distance Virtual Chassis Stacking (VCStack LD) to create a single virtual unit out of multiple devices. By using fiber stacking connectivity, units can be kilometers apart—perfect for a distributed environment. Mixed stacking allows the x530L Series and x530 Series switches to be stacked together for even more deployment flexibility.

When combined with link aggregation, VCStack provides a solution with no single point of failure, which fully utilizes all network bandwidth.

The x530L Series supports Enterprises and their use of business-critical online resources and applications, with a resilient and reliable distribution solution.

Power at the network edge

The PoE models can provide 740 Watts of power, making the full 30 Watts of PoE+ available to high-power endpoints. This flexible PoE solution can power today's most advanced devices, including PTZ cameras with heaters/blowers, enhanced lighting management, wireless access points and more.

Dual internal PSUs provide redundancy, while Continuous PoE ensures power delivery to endpoints even during a switch firmware upgrade.

With advanced security and access control features, and built-in resiliency, the x530L Series are the ideal choice for connecting and powering devices at the network edge.

Specifications

Performance

- 40Gbps of stacking bandwidth using front panel 10G SFP+ ports
- ► Supports 10KB jumbo frames
- ▶ Wirespeed multicasting
- ▶ 4094 configurable VLANs
- ▶ 16K MAC addresses
- ▶ Up to 1250 OpenFlow v1.3 entries
- ▶ 1GB DDR3 SDRAM, 256MB NAND flash memory
- Packet buffer memory: 3MB

Reliability

- ► Modular AlliedWare Plus operating system
- ► Full environmental monitoring of PSUs, fans, temperature and internal voltages. SNMP traps alert network managers in case of any failure

Expandability

- Stack up to eight units in a VCStack
- ▶ Versatile licensing options for additional features

Flexibility and Compatibility

- 10G SFP+ ports will support any combination of Allied Telesis 1000Mbps SFP and 10GbE SFP+ modules and direct attach cables listed in this document under Ordering Information
- ► Port speed and duplex configuration can be set manually or by auto-negotiation
- Front-panel SFP+ stacking ports can be configured as 1G/10G Ethernet ports

Diagnostic Tools

- Connectivity Fault Management (CFM) Continuity Check Protocol (CCP) for use with G.8032 ERPS
- ► Built-In Self Test (BIST)
- ▶ Ping polling and TraceRoute for IPv4 and IPv6
- ► Optical Digital Diagnostic Monitoring (DDM)
- ► Find-me device locator
- ► Automatic link flap detection and port shutdown
- ► Cable fault locator (TDR)
- ► Uni-Directional Link Detection (UDLD)
- ► Active Fiber Monitoring detects tampering on optical links
- ► Port and VLAN mirroring (RSPAN)

IPv4 Features

- ► Equal Cost Multi Path (ECMP) routing
- ▶ Static unicast and multicast routing for IPv4
- ► UDP broadcast helper (IP helper)
- ▶ Directed broadcast forwarding
- ▶ Black hole routing
- ▶ DNS relay
- ► Policy-based routing
- ► Route redistribution (OSPF, RIP, and BGP)

IPv6 Features

- Device management over IPv6 networks with SNMPv6, Telnetv6 and SSHv6
- ▶ IPv4 and IPv6 dual stack
- ► Log to IPv6 hosts with Syslog v6

- ► NTPv6 client and server
- ► DNSv6 client, DNSv6 relay
- ▶ DHCPv6 relay and client
- ► Static IPv6 unicast and multicast routing
- ► IPv6 aware storm protection and QoS
- ► IPv6 hardware ACLs

Management

- ▶ Industry-standard CLI with context-sensitive help
- ► Built-in text editor and powerful CLI scripting engine
- ➤ Comprehensive SNMP MIB support for standardsbased device management
- Console management port on the front panel for ease of access
- Event-based triggers allow user-defined scripts to be executed upon selected system events
- Eco-friendly mode allows ports and LEDs to be disabled to save power
- USB interface allows software release files, configurations and other files to be stored for backup and distribution to other devices
- ► Front panel 7-segment LED provides at-a-glance status and fault information
- Autonomous Management Framework (AMF) enables powerful centralized management and zero-touch device installation and recovery. Try AMF for free with the built-in Starter license
- ► Web-based Graphical User Interface (GUI)

Quality of Service

- ▶ IP precedence and DiffServ marking based on Layer 2, 3 and 4 headers
- Queue scheduling options for strict priority, weighted round robin or mixed scheduling
- ► Taildrop for queue congestion control
- ► Extensive remarking capabilities
- ► Policy-based QoS based on VLAN, port, MAC and general packet classifiers
- Limit bandwidth per port or per traffic class down to 64kbps
- 8 priority queues with a hierarchy of high priority queues for real time traffic, and mixed scheduling, for each switch port
- ► Policy-based storm protection
- Wirespeed traffic classification with low latency essential for VoIP and real-time streaming media applications

Resiliency Features

- ► EPSRing (Ethernet Protection Switched Rings) with SuperLoop Protection (SLP) and enhanced recovery
- ▶ STP root guard
- ▶ Loop protection: thrash limiting and loop detection
- ▶ Dynamic link failover (host attach)
- Control Plane Prioritization (CPP) ensures the CPU always has sufficient bandwidth to process network control traffic
- ▶ PVST+ compatibility mode
- ▶ VCStack fast failover minimizes network disruption
- ► SFP+ stacking ports can be configured as 10G Ethernet ports

- Long-Distance VCStack with 10G SFP+ modules (VCStack LD)
- ▶ BPDU forwarding

Security Features

- MAC address filtering and MAC address lockdown
- ► Port-based learn limits (intrusion detection)
- Access Control Lists (ACLs) based on layer 3 and 4 headers
- ► Private VLANs provide security and port isolation for multiple customers using the same VLAN
- ► Secure Copy (SCP)
- ▶ BPDU protection
- Network Access and Control (NAC) features manage endpoint security
- ► Dynamic VLAN assignment
- ► Tri-authentication: MAC-based, web-based and IEEE 802.1x
- ► DoS attack blocking and virus throttling
- ► DHCP snooping, IP source guard and Dynamic ARP Inspection (DAI)
- ► Strong password security and encryption
- ► Auth fail and guest VLANs
- ► Secure File Transfer Protocol (SFTP) client
- ► Authentication, Authorisation and Accounting
- Bootloader can be password protected for device security
- ► Configurable ACLs for management traffic
- ► RADIUS group selection per VLAN or port

Software Defined Networking (SDN)

 OpenFlow v1.3 with support for encryption, connection interruption and inactivity probe

Environmental Specifications

- Operating temperature range: 0°C to 50°C (32°F to 122°F)
- ► Storage temperature range: -25°C to 70°C (-13°F to 158°F)
- Operating relative humidity range: 5% to 90% non-condensing
- Storage relative humidity range: 5% to 95% non-condensing
- Operating altitude: 3,048 meters maximum (10,000 ft)

Electrical Approvals and Compliances

- ► EMC: EN55032 class A, FCC class A, VCCI class A, ICES-003 class A
- ► Immunity: EN55024, EN61000-3-levels 2 (Harmonics), and 3 (Flicker) AC models only

Safety

- Standards: UL60950-1, CAN/CSA-C22.2 No. 60950-1-03, EN60950-1, EN60825-1, AS/NZS 60950.1
- ► Certification: UL, cUL

Restrictions on Hazardous Substances (RoHS) Compliance

- ► EU RoHS compliant
- ► China RoHS compliant

10G Bi-Di, 1270 nm TX/1330 nm RX, 40km, industrial temperature, TAA^4

AT-SP10BD40/I-13

10G Bi-Di, 1330 nm TX/1270 nm RX, 40km, industrial temperature, TAA⁴

AT-SP10TW1

1 meter SFP+ direct attach cable

AT-SP10TW3

3 meter SFP+ direct attach cable

1000Mbps SFP Modules

AT-SPTX

10/100/1000T 100 m copper

AT-SPTX/

100 m, 10/100/1000T SFP, RJ-45 industrial temperature

AT-SPSX

1000SX GbE multi-mode 850 nm fiber up to 550 m

AT-SPSX/I

1000SX GbE multi-mode 850 nm fiber up to 550 m industrial temperature

AT-SPEX

1000X GbE multi-mode 1310 nm fiber up to 2 km

AT-SPLX10

1000LX GbE single-mode 1310 nm fiber up to 10 km $\,$

AT-SPLX10/I

1000LX GbE single-mode 1310 nm fiber up to 10 km, industrial temperature

AT-SPBD10-13

1000LX GbE Bi-Di (1310 nm Tx, 1490 nm Rx) fiber up to 10 km

AT-SPBD10-14

1000LX $\,$ GbE Bi-Di (1490 nm Tx, 1310 nm Rx) fiber up to 10 km $\,$

AT-SPBD20-13/I

1000BX GbE Bi-Di (1310 nm Tx, 1550 nm Rx) fiber up to 20 km $\,$

AT-SPBD20-14/I

1000BX GbE Bi-Di (1490 nm Tx, 1310 nm Rx) fiber up to 20 km

AT-SPLX40

1000LX GbE single-mode 1310 nm fiber up to 40 km

AT-SPBD40-13/I

1000LX GbE single-mode Bi-Di (1310 nm Tx, 1490 nm Rx) fiber up to 40 km, industrial temperature

AT-SPBD40-14/I

1000LX GbE single-mode Bi-Di (1490 nm Tx, 1310 nm Rx) fiber up to 40 km, industrial temperature

AT-SPZX80

1000ZX GbE single-mode 1550 nm fiber up to $80\ km$

AT-SPZX120/I

1000ZX GbE single-mode 1550 nm fiber up to 120 km

² Using Cat 6a/7 cabling ³ Up to 100 m running at 1G ⁴ Trade Act Agreemnet Compliant
