ABDY (3) was the author who last collated and synthesized the bibliography on the imperial coinage from Augustus to Commodus for the *Survey of Numismatic Research, 2008-2013*. An important commentary on the evolution of scholarship on Roman coins in the past couple of decades, new and developing research areas, and innovative methods was provided by KEMMERS (259). ELKINS (156) provided an entry on "Roman imperial numismatics" for the *Encyclopedia of Global Archaeology*. VAN HEESCH (222) produced a book that reprints a selection of 29 articles and chapters on Roman coinage that he published on between 1975 and 2015. Through a case study on Augustus, BURNETT AND OLDMAN (88) demonstrate the potential for digital resources and databases, and the study of numismatic images, in a chapter aimed at classicists who are not specialized in Roman coinage.

Festschriften

Festschriften from 2014 to 2020 honored several doyens of our field; honorands known particularly for their contributions to the early imperial coinage are MICHEL AMANDRY (BRICAULT, BURNETT, DROST, AND SUSPÈNE [78]), ANDREW BURNETT (BLAND AND CALOMINO [60]), GIOVANNI GORINI (ASOLATI, CALLEGHER, SACCOCCI, AND CRISAFULLI [29]) JOHAN VAN HEESCH (STROOBANTS AND LAUWERS [402]), HANS-MARKUS VON KAENEL (KEMMERS, MAURER, AND RABE [260]), WILLIAM E. METCALF (ELKINS AND EVANS [169]), and WOLFGANG SZAIVERT (BAER, FISCHER-BOSSERT, AND SCHINDEL [36]).

New Journals

Some new numismatic journals that have appeared since the last survey include *Koinon*, first published in 2018 and edited by NICHOLAS MOLINARI; *OZeAN: Online Zeitschrift zur antiken Numismatik*, edited by ACHIM LICHTENBERGER, KATHARINA MARTIN, and ULRICH WERZ with its first issue in 2019; *Dialoghi di Numismatica*, which first appeared in 2019 under the editorship of GIACOMO PARDINI and ALESSANDRO CAVAGNA; and *Ancient Numismatics*, edited by MARIA CRISTINA MOLINARI with its first volume published in 2020.

Notes

For both the reader of this chapter and the author(s) of the next chapter on the imperial coinage of Augustus to Commodus, I note some periodicals that I was unable to consult prior to the submission of my chapter, as my libraries could not get them or they were not yet published. The author(s) of the next installment might wish to check those for inclusion in the next survey. I did not have access to *Numisma* 2018, 2019, and 2020; *NAC* 2020; *AIIN* 2020; and *WN* 2019 and 2020.

Acknowledgements

As work on this survey has progressed over the last couple of years, I have attempted to maintain a list of everyone to acknowledge for their assistance in the compilation of the bibliography; I apologize for any inadvertent omissions. A debt of thanks is owed to JEAN-MARC DOYEN (*Journal of Archaeological Numismatics*), JULIA GENECHESI and CHRISTIAN SCHINZEL (*SNR*), HANS-CHRISTOPH VON MOSCH (*JNG*), and SAMUEL NUSSBAUM (*SM*) for sending me materials from journals that they edit when I did not have access to specific volumes, when my university library could not get items through interlibrary loan, or when they had not yet been received by the library at the American Numismatic Society. The following individuals kindly commented on drafts of my bibliography and brought unknown works to my attention or sent me copies of their own relevant contributions: RICHARD ABDY, MICHEL AMANDRY, MARTIN BAER, RAPHAEL BRENDEL, ANDREW BURNETT, FRANÇOIS DE CALLATAÏ, DARIO CALOMINO, ALESSANDRO CAVAGNA, SARAH COX, JEAN-MARC DOYEN, COREY ELLITHORPE, GIOVANNI GORINI, JOHAN VAN HEESCH, OLIVIER HEKSTER, BEN HELLINGS, FLEUR KEMMERS, STEFAN KRMNICEK, TOMMASO LEONI, STÉPHANE MARTIN, CHRISTOPH MICHELS, MARIA CRISTINA MOLINARI, FRAN STROOBANTS, ULRICH WERZ, DAVID WIGG-WOLF, REINHARD WOLTERS, and BERNHARD WOYTEK. I am also grateful to DAVID HILL, the librarian at the American Numismatic Society, for his great help in locating materials.

FROM PERTINAX TO THE REFORM OF DIOCLETIAN (AD 193–294)

Eleanor Ghey

General works (history and numismatics)

DE BLOIS (31) presents an important historical overview of the wider political background to the period AD 193 to 284 with particular reference to the impact of warfare on aspects of Imperial power. A number of general monographs on individual emperors published during this period consider coinage alongside wider historical discussion. The publication of an updated thesis by LEMPEREUR (120) forms a comprehensive catalogue of the Imperial and Provincial coinage of Pertinax. Other notable biographies include those of Elagabalus by ALTMAYER (5), Valerian by GLAS (84) and a revised edition of the 2013 work on Gallienus by GEIGER (81). The later third century emperors Carus, Carinus and Numerian are the subject of a historical study by ALTMAYER (4)

Numismatic sources form a significant part of a broader historical study of the women of the Severan dynasty by NADOLNY (136). ALEXANDRIDIS (3) reassesses the influence of the Severan empresses through the coin collection of Margarete Bieber. BERTOLAZZI (18) considers the maternal imagery on the coinage of Julia Domna. An article by ACKERS (2) looks at female coin portraiture in the second and third centuries with reference to hairstyles and wigs. CALOMINO (39) includes a chapter on the Severans in a study of the practice of *damnatio memoriae*.

Two volumes of the *Sylloge Nummorum Romanorum Italia* appeared, covering coins from the Severan period in the Museo Archeologico Nazionale di Firenze BANI AND VILLORESI (10, 11). Specific numismatic studies on the coinage of individual emperors starting from the Severan period include ROYO MARTÍNEZ (149) on the early radiate types of Caracalla and Julia Domna and on the VOTA coinage of the Severans, potentially used as *donativa* (148). IMRIE offers an alternative identification of the personification on the reverse of types of Julia Domna under Caracalla (111). EUSTON (77) argues for a bimetallic medallion of Caracalla being given as a New Year's gift in AD 213. The life and legacy of Diva Paulina is reassessed by CALOMINO in the light of her Roman and provincial coinage amongst other sources (38). LEMPEREUR AND BLET-LEMARQUAND (121) demonstrated links between imperial *denarii* and tetradrachms of the early Severan period using LA-ICP-MS.

Among iconographic studies were the symbolism of the sun god of Emesa on coins of Elagabalus discussed by ALTMAYER (6), and WOYTEK (166) on the religious imagery on a new medallion of Elagabalus. WOODS (165) interprets the third century reverse type of the lion holding a thunderbolt in its jaws as a reference to the courage of Alexander the Great.

MICHAUX (126) is a new general overview of the coinage of Gordian III. BARDIN presents a new classification of the medallions of Gordian III, highlighting ceremonial issues (12). The output of Gordian III's Antioch mint is discussed in BLAND (25). Die studies by BLAND of the gold coinage of Philip I and family (21) and of Gordian III (27) are used to discuss estimates of the volume of production in light of patterns of loss. OLBRICH (139) looks at the iconography of the millennium coinage of Philip I. A study of the gold coinage of Aemilian looks at the historic provenance of the corpus and identifies a number of historic forgeries RAMBACH (146).

There has been a significant amount of research published on the coinage of the reigns of Valerian and Gallienus. A new bi-metallic medallion of Gallienus is presented alongside a study of other similar types by DOYEN AND EUSTON (55). In the same volume, DOYEN (52) considers the 'military' bust types from the mint at Viminacium and THIRY (153) a series of coins distributed during Gallienus' visit to Siscia. The mint at Viminacium is also the subject of a further article by DOYEN (53). MENSCH (125) presents a revised description of the depiction of Hercules on a radiate of Gallienus. Other notable studies of single coins include a pendant containing an aureus of Gallienus found in a later fourth century context at the baths at Tongobriga, Portugal, CENTENO (40) and an *aureus* of Gallienus and Salonina with an 18th century provenance, DOYEN AND RAMBACH (57). GHIRALDO (83) makes a further refinement to the sequence of coinage of Saloninus. Research by HOLMES on the coinage of Valerian and Gallienus includes a possible

retribution of a group of medallions to the mint at Rome (104) and discussion of coin types of Valerian II (105) as well as article taking a broader overview of the coinage of the dynasty (106-109). WOLKOW (164) suggests an unmarked series for the 5th series of Gallienus at the mint of Rome and EUSTON (76) links a new PROPECTIO radiate reverse type from Antioch to a visit from the Emperor. A useful guide to the 'zoo' series of Gallienus produced by WOLKOW (163) was among a series of illustrated catalogues aimed at collectors (including a republication of earlier work by DOYEN (54)). BOURDEL (32) gives an accessible overview of the coinage of Valerian and Gallienus in the context of historical events.

WIENAND (161) considers the character and function of the series of Aurelian's antoniniani from Serdica with the legend DEO ET DOMINO. HOLLARD (103) presents an unpublished radiate of Tacitus with a reused die that may be suggest movement of mint workers from Lyon to Arles. A series of important articles by ESTIOT on the coinage of Probus include an argument for a fourth Eastern mint in Asia Minor (69). She also presents work on the gold issues of Probus from the festive 7th series of Rome (73) and his festive series from the mints of Ticinum (70) and Rome (74). Die-links from a recently discovered radiate of Probus are the basis for a proposed restructuring of Bastien's 7th and 8th issues of the Lugdunum mint by OLVA (140). ESTIOT (67) also considers the corpus of modern forgeries of coinage of the usurpers Proculus and Bonosus and the appearance of two recent ancient finds. The same author has also published two studies of the coinage of Carus and his sons at the mints of Ticinum and Siscia respectively (71, 72). The gold coinage of this period from the Fontaine-la-Gaillarde hoard (Yonne, France) has enabled new analysis and interpretation of coins from the mint of Lyon from Aurelian to Probus (GRICOURT, HOLLARD AND BLET-LEMARQUAND (88)). ZANCHI (167) has studied the early coinage of Diocletian from Siscia.

The coinage of Carausius and Allectus has received more attention due to work underway for the new volume of *RIC* and the impact of the discovery of the Frome hoard. MOORHEAD (129) gives an overview of the rare gold coinage of Carausius and BESLY (19) discusses the relationship between the gold and base metal denominations of Allectus. An official coin of Allectus dated to 294 is published by MOORHEAD in the same volume (128). Works by BARKER (13, 14) look at the use of Golden Age ideology in the coinage of Carausius. An article by BURNETT (36) traces the complex history of a particular *aureus* of Allectus.

A number of papers on the coinage of the Gallic emperors focus on their choice of iconography; for example, THYS (154) discusses the iconography of Serapis on the coinage of Postumus. CHRISTOL (45) examines the use of representations of Hercules in the context of the conflict between Gallienus and Postumus. HOLLARD (102) looks at solar or Mithraic imagery on the coinage of Postumus and Victorinus and ESTIOT (68) surveys the use and iconography of the *traiectus* reverse type. More broadly, CLAES (46) demonstrates the ways in which a succession of third century usurpers employed coinage both for legitimation and to gather local support. Three *aurei* from the Fontaine-la-Gaillarde hoard provided new information on the legionary issue of Victorinus from Cologne (GRICOURT AND HOLLARD (87)).

Hoards and coin finds

Many third century hoards have been published during the reporting period and the works listed are a selection only.

Among Severan hoards are GÄZDAC ET AL. (78) a hoard of 104 coins (mostly *denarii*) to AD 217 from a wall tower at Carnuntum. DOPPLER AND WYSS (51) describe a hoard of 39 silver coins (radiates and *denarii*) to Severus Alexander found in a hypocaust at Ennetbaden-Grendelstrasse (Aargau, Switzerland). KRITZINGER (117) presents new work on the context of the large second century *aureus* hoard from Trier Feldstraße, which appears to be an Antonine hoard that was revisited again by the owner for a second phase of deposition c. AD 193-6. DAHMEN (49) presents research into the history and content of a Severan denarius hoard found in Prussia in the 18th century. OAKDEN AND SHOTTER (138) describe an unusual deposit from Acton (Cheshire, UK) of five Severan *denarii* in a conical lead container with a lead stopper.

Base metal hoards include a preliminary account of the large *sestertius* hoard from Orselina (Ticino, Switzerland) ACKERMANN AND PETER (1) and a hoard of 618 *sestertii* and 1 *dupondius* from Tillé (Oise, France) which was excavated in layers within its vessel, PILON ET AL. (145). MEGUELATI (124) provides a catalogue of a hoard from Bray (Eure, France) consisting of 1,049 bronze coins to AD 244-9, the bulk of which are second century.

The Beau Street hoard from Bath (UK) (ANTHONY ET AL. (8), GHEY (82)), is an example of an archaeologically

excavated hoard with internal stratigraphy. There are some similarities in composition with the four separate deposits excavated from the strong-room of the villa at Mané-Véchen, Plouhinec (Morbihan, France) (BESOMBES AND PROVOST (20)). Micro-excavation was also carried out on a silver hoard to AD 238 from Banville (Calvados, France) contained within two leather purses GUIHARD AND LÉON (94).

MišKEC (127) describes a find of two hoards from Drnovo (Slovenia) of 973 and 902 coins, to AD 260-1 and 218-22 respectively, one of which was found in a pot with beads, grain and jewellery including inscribed bracelets. The Mălăieştii de Jos (Romania) hoard SPÂNU, DIMA AND FRÎNCULEASA (150) contained two silver ingots and jewellery which might also have had value as bullion. It was deposited after AD 256-7 and included a pendant made from *denarii* reminiscent of other finds from *Barbaricum*. The hoard from Creil, Picardy, dating to the reign of Tetricus was found in two pots, sorted by metal content VILLEMMAIN ET AL. (155). A hoard from Élincourt (Nord) GRICOURT (85), consisting of over 1,279 radiates to Postumus contained a number of deliberately cut coins.

A corpus of hoards from Bulgaria contains many third century finds (TEODOSIEV (152)). The publication of a hoard of 1,183 coins to AD 260 from Vinkovici (Croatia) by VULIĆ AND FARAC (159) includes a summary of hoards of the period from south eastern Pannonia. VAN ROY (147) also presents a summary of hoards from the area for the Givry III hoard, found in a vicus in Hainaut, Belgium.

The methodological challenges of dealing with large hoards were addressed in a number of papers, for example DROST (59, 61), MOORHEAD (130) on the Frome hoard from Somerset, UK and SPOERRI BUTCHER (151) on the Reka-Devnia hoard from Bulgaria. NAĐ (135) attempts a reconstruction of the enormous lost Serbian Kamenica hoard (mainly *denarii* to the reign of Maximinus I Thrax) from a portion in a private collection. A re-publication of the large British radiate hoards from *Cunetio*, Wiltshire and Normanby, Lincolnshire in a single volume with additional notes by BLAND ET AL. (29) provides a useful reference. The Saint-Germain-lès-Arpajon hoard of 33,965 radiates to AD 281 was found in two vessels in Essonne (France) and excavated in situ. Its full publication by DROST (60) includes discussion of other exceptionally large third century hoards. BEN HADJ NACEUR-LOUM (16) describes current attempts to catalogue the surviving portion of the large El Jem hoard from Tunisia (estimated at 40,416 coins to Probus, with a large proportion of lifetime and posthumous coinage of Claudius II).

DOPPLER ET AL. (50) describe one of the largest finds of radiates from Switzerland, a find of 4,083 radiates to AD 294 from Ueken (Aargau). ESTIOT, FREY-KUPPER AND ZANCHI (75) have published the 1955 discovery of 2,304 coins to AD 293 found in Thun (Bern, Switzerland) in 1955, the majority of which were post-reform radiates. The large late gold hoard of 249 *aurei* to Probus discovered at Fontaine-la-Gaillarde (Yonne, France) in 2007 (GRICOURT, HOLLARD AND BLET-LEMARQUAND (88)) has furnished material for a number of papers including one identifying links between the hoard and single finds from the area (GRICOURT AND HOLLARD (86)). The hoard contains *aurei* of Gallic usurpers as well as legitimate emperors. Radiates of the Eastern mints predominate in a hoard dating to the reign of Diocletian excavated by the Israel Antiquities Authority (KOOL (116)).

Hoards consisting primarily of ancient forgeries included the hoard of 4,472 coins to Probus from the Bay of Camarina (Sicily) (GUZZETTA (95)), a hoard of radiate copies from Saint-Aubin-sur-Gaillon (Eure) (PILON (144)) and a hoard of 232 cast *denarii* to Elagabalus (GĂZDAC ET AL. (80)).

Papers on site finds cover a broader period by definition but several have particular significance for the period in question. An article on the assemblage from the River Tees at Piercebridge, County Durham, UK dominated by Severan coinage, examines its military character (WALTON (160)). BLAND (28A) compared the Piercebridge coins with four other assemblages from watery places in Britain (Bath, Coventina's Well, London Bridge, and Buxton). Work by KEMMERS (114) on the occurrence of contemporary copies in ritualised deposits is relevant when thinking about the production and use of radiate imitations. The deposition of coinage at Gallo-Roman sanctuaries and the implications of numismatic dating at is discussed in detail in contributions to a dedicated volume of *Gallia*, notably by AUBIN ET AL. (9) on sanctuaries of North-Western France.

VOJVODA AND MRĐIĆ (156) present a comprehensive study of coin finds from burials in a cemetery of Viminacium, Serbia, reflecting economic and cultural changes in the third century. JUHÁSZ (112) gives a detailed study of coin finds from the town of *Brigetio* on the Danube in Hungary, noting an abrupt end to the coinage after the mid third century. Although this is seen as related to regional insecurity, the archaeological evidence points to abandonment rather than destruction.

Coin circulation

Several articles discuss coin supply in the early third century. A paper by WIGG-WOLF (162) on the early Roman coin supply includes brief discussion of a change to military payments made in silver in the Severan period. CREIGHTON (47) analyses *denarius* hoards from Britain to build up a picture of the circulation pool over time, identifying regional differences suggestive of an influx of new coinage in the North in the early third century. KEMMERS (113) also looks at patterning in the supply of Severan period coinage to Britain and Germany, linking the role of iconography aimed at the military to a preference for contemporary issues. HELTINGS (100, 101) studies coins of Septimius Severus from Eastern mints in hoards from Germany, contrasting this to the pattern from Britain. An overview from site find evidence sets out the wider background patterns of coin distribution in Britain, BRINDLE (33).

The relationship between third century debasement and wider events in Roman political and economic history continues to be a focus of research. BUTCHER (35) gives an overview of thinking on the subject in the context of earlier narratives of Imperial decline. ELLIOTT (66) explores the tension between the weight and fineness of early third century *denarii*, emphasizing the significance of Severan reforms as a foundation for the third century monetary crisis. MURPHY (133) traces the cycles of debasement, hoarding and reform in the Severan period, highlighting public awareness of state interventions. VAN HEESCH (98) argues that the practice of re-minting *denarii* in the mid-third century demonstrates the importance of face value rather than metal content.

The monetary reforms of Aurelian are discussed by ARSLAN (7) with reference to weight measurements in the Venèra hoard (Verona, Italy) concluding that the marks XX and XXI do denote differences in weight and value. A similar conclusion is reached by KROPFF (118) who stresses improvement rather than reform. LANGENEGGER (119) studies the impact of the Aurelianic coin reforms, noting regional variation.

CHAMEROY (41) looks at the Gallic empire component of hoards from Gaul and contrasts the responses to the monetary reforms of Aurelian with state policy. Similar themes are explored in a study of hoards from the coastal regions of southern France by GUIHARD (92). An important paper by CHAMEROY elucidates the transport of Gallic Empire coinage across the Mediterranean to North Africa and Asia Minor in the late third century (CHAMEROY (43)).

BERNARDELLI (17) examines bronze supply and circulation in Italy to the late third century, noting the hoarding of *sestertii* in particular, with regional differences between the North and South. This volume in general, MUSEO CIVICO 'CARLO VERRI' (134), sheds light on the monetary circulation of some regions hitherto ignored in discussions of the third century crisis.

Third century crisis and hoard deposition

In addition to the separate hoard studies above, a number of studies have investigated wider patterns in hoard deposition and addressed the causes of peaks in third century hoarding. Publications by BLAND on British hoards (22, 23, 24, 26) gave preliminary results of a project outlining the patterning of British hoards and the reasons for their deposition, with a particular focus on the third century, now published as BLAND ET AL. (30). BLAND (28) also provides a wider geographical overview. MARTÍNEZ-CHICO provides an overview of Iberian hoards (123).

Debate continues on the extent to which patterns of hoarding can be associated with particular conflicts. DE CALLATAÏ (37) gives an overview of some of the arguments. Papers collected by NAYLOR AND BLAND (137) highlight differences in approach to prehistoric and Roman hoards in Britain, notably that of GUEST (90) with reference to the third century AD.

VAN HEESCH (97, 99) discusses the applicability of these arguments to third century north-western Gaul with particular reference to hoards ending with Postumus. VOJVODA AND REDŽIĆ (157) discuss 94 third century coin hoards from Moesia Superior, Dalmatia and Pannonia in the light of local turbulence. GĂZDAC AND NEAGOE (79) link the deposition of a hoard of 1509 silver coins from Gruia, Romania to the Carpic War. DROST AND PLANET (62) are able to see some evidence for the military activities of Clodius Albinus in finds of gold coins, hoards and burials in the Lyon area.

Coins finds outside the empire

The presence of imitations of Roman coins found outside the empire has been the focus of much research in the past few years. VOSS AND WIGG-WOLF (158) give an overview and consider the social dynamics behind coin exchange and use in Germany. An article by BEMMANN (15) sets coin finds alongside other forms of material culture from richly furnished graves to present a nuanced picture of the relationships between elites inside and beyond the

Gallic Empire.

A particular focus of research are the third century imitations of Roman coins produced by the Chernyakhov Culture in the late third century. BURSICHE AND MYZGIN (34) argue that the capture of the imperial treasury at the Battle of Abritus in AD 251 was the source of the influx of Roman coinage in the later third century, setting out the archaeological and numismatic evidence from finds in Poland, Belarus and Ukraine. HORSNAES (110) argues that these imitations of Roman coins were created to fulfil a demand for gold monetiform pendants within that cultural context. The movement, hoarding and imitation of Roman silver outside the Empire is covered in papers by DYMOWSKI AND MYZGIN (65) and DYMOWSKI (63, 64), the latter containing a useful corpus of *denarius* hoards from beyond the empire.

MUNTEANU (131) discusses the patterning of coin finds from sites in Dacia, highlighting the collapse of monetary supply in the region in the later third century. MUNTEANU AND HONCU (132) analyse the evidence of over 100 2nd and 3rd century *denarius* hoards east of the Carpathians in Moldavia with emphasis on their archaeological context and local agency.

Forgeries

Significant research has been undertaken on the production of forgeries in Gaul, with the publication of excavation evidence from several important sites. CHAMEROY (42) places the huge find of mid third century coin moulds from the Löwenbrauerei site in Trier in their wider context. Coin moulds discovered at Sées, Orne (GUIHARD AND FICHET DE CLAIREFONTAINE (93)) were from a third century forger's workshop at which earlier types were also produced, notably Antonine *dupondii*. GUIHARD (91) looks at production techniques in a study of moulds for Severan *denarii* in the Musée de Normandie and HALL (96) examines an important find of 800 2nd and early 3rd century coin moulds discovered during excavations at London Wall.

The mint at Châteaubleau, Seine-et-Marne, France is the subject of a thesis by PILON (143) who considers the problematic distinction between official and unofficial coinage production in the late third century and includes a wider survey of production sites. GRICOURT ET AL. (89) discuss some of the die-links between imitations of Postumus from Châteaubleau and products of the Gallic Mint II. DROST (58) looks at a group of imitations of Tetricus I that may have been produced from a stolen die. KNICKREHM presents the wider evidence from excavations for Gallic Empire and unofficial mints in Trier (115).

CRISAFULLI (48) provides useful discussion of radiate copies in Italy, MANGANARO (122) discusses finds from Sicily and PERASSI (141, 142) reviews the evidence from Malta in relation to wider coin circulation in the region. Analytical work discussed by CHAMEROY (44) has identified a North African workshop producing Divo Claudio copies. DOYEN ET AL. (56) provides a corpus of 1,796 finds of *nummi subferrati* (coins with an iron core), outlining a second phase of sestertius production dating to c. AD 160-222 in Gaul and the Danube.

LATE ANTIQUITY (AD 294–491)

David Wigg-Wolf

Late Antiquity continues to be a period of great scholarly interest, not only among numismatists, no longer being seen purely as a period of decline, but also of transition and transformation. This is reflected in the number of publications that consider the numismatic evidence for the transition from the 4th through the 5th century. Work on the coinage itself, on the other hand, has concentrated more on the 4th century, in particular the first half. This is in part due to the more varied iconographical nature of the coinage of the period, but perhaps also to the fact that the relevant volumes of *Roman Imperial Coinage* are appreciably more dated than volume 10 for the 5th century.

AMANDRY (2) includes a relatively brief but comprehensive overview of many aspects of the coinage of the 4th and 5th centuries. More major contributions on the coinage of the early-4th century are provided by two substantial monographs: MALINGUE (117) on the coinage of Domitius Alexander, the North African usurper, and CLOKE AND TOONE (47) in their detailed work on the coinage of the mint of London from the defeat of Allectus until its closure in 325, the latter with the addition of internet supplements (49) and CLOKE AND TOONE (47).

The publications of three substantial volumes of conference papers are dedicated to the coinage of Late Antiquity, two edited by CHAMEROY AND GUIHARD. *Argentum Romanorum* (45) brings together important new insights into the complex issue of silver in the North-West in the 4th and 5th centuries: BLANCHET ET AL. (19) present the results of chemical analysis of the coinage, GUIHARD (105) looks at the use and circulation of silver in the North-West in the 4th century, CHAMEROY (42) the mints and issuers of the complex silver issues of the 5th and 6th centuries in Gaul, KOMNICK (112) imitations of late Roman silver in northern Gaul and Germania. STROOBANTS (158) reviews finds of 5th-century silver from Belgium, ESMONDE CLEARY (75) the use of silver in Britain and Ireland.

Produktion und Recyceln (44) covers a wide range of topics on coin production and use, including the extended lifecycle of old coins into the 5th century, a topic also addressed by the colloquium *Les trouvailles de monnaies romaines en contete médiéval* (180), which presents a number of articles on the use of (primarily late) Roman coinage in medieval contexts. Thus KEMMERS (111) considers the use of 4th century bronze coins at Frankish settlements in the 5th century, BLANCHET (18) the extended life cycle of 3rd- and 4th-century bronzes in rural Normandy, and DOYEN (60) the division of old coins for use in circulation in 5th-century in Gaul.

The development of the coinage

A number of contributions are concerned with the numerous coinage reforms of the 4th century: various aspects of Diocletian's Price Edict and Coinage Reform are addressed by BRANSBOURG (23), CARRIÉ (39) and KROPFF (114), 'The Constantian Monetary Revolution' by BAGNALL AND BRANSBOURG (7), while it is late-3rd and early-4th century hoards in Gaul that form the basis for an analysis of coinage reforms by CHAMEROY (41). BRANSBOURG (24), CARLÀ-UHINK (38), COLOMBO (50) and GUIHARD (103) discuss the relationship of the various coin metals in the 4th and 5th centuries, while the focus of CARRIÉ (40) is on the role of metal resources and monetary policy.

The earliest gold issues of Maxentius are reconsidered by DE GASPERIS (88), early coinages of Constantine I and Licinius I by DOYEN (63, 64, 65), Constantine I's Isis tokens by RAMSKOLD (138). BRENDDEL reviews recent work on Julian's coinage (25), CAMPO (33) the coinage of Procopius, BRUNI (26) the dating of the Urbs Roma Felix coinage of Priscus Attalus, DOYEN (67) the silver coinage of Majorian in Gaul, FACCHINETTI (77) the solidi of Olybrius from Milan, and SCHINDEL (152) the coinage of Odacer. SACCOCCI (149) revisits the intriguing early imperial bronzes countermarked XLII and LXXXIII in the 5th century.

New material

Recent years have seen a large number of supplements to corpora and short notes on issues of the first half of the 4th century from the mints of Trier: BERTHOD (12,14), CAMPO (31), DHARMADHIKARI (53), DOYEN (66), GAUTIER (99), GAUTIER AND VILLEMUR (102), ZANCHI AND ESTIOT (177) – Lyon: GAUTIER (90, 92, 93, 94), GAUTIER AND HOLLARD

(101) – Trier and Lyon: GAUTIER (91) – Lyon and Heraclea: GAUTIER (89) – Arles: CARION (34, 35, 36) – Siscia: GAUTIER (95); Heraclea: DHARMADHIKARI (56) – Antioch: CAMPO (32) – Alexandria: DHARMADHIKARI (54, 55) and WOODS (174) – Carthage: MALINGUE (116) – eastern mints: UPCHURCH (163).

On the subject of the coinage of Diocletian's reform, GAUTIER (97, 100) provides a synthesis of the smaller bronze denominations and (98) examines the use of dies for aurei to strike silver and bronze in Trier. DROST (68) addresses the question of whether the attribution of a series of unmarked Tetrarchic nummi to Lugdunum is correct. DAVIDDI (51) 'rediscovers' an aureus of Diocletian, GAUTIER (96) an exceptional nummus of Alexandria that had been lost for most of the 20th century. MARGETIĆ (120) considers a donative issue of gold multiples of Diocletian and Maximian, DROST AND BUDE (72) rare bronze radiates of Maxentius.

A series of articles by RAMSKOLD (140, 141, 142) address various aspects of the coinage of the mint at Constantinople following Constantine I's victory over Licinius I, RAMSKOLD AND GAUTIER (143) the first miliarensis of the same emperor.

Among notes on issues of the second half of the 4th century, VONDROVEC (167) considers the siliquae with a star struck for Julian as Caesar, BERTHOD (13) reviews the nummi struck in Arles for Gallus and Julian as Caesars, SOBRA publishes new siliquae types struck in Lyon for Julian (154) and Valens (155), MARTÍNEZ CHICO AND LÓPEZ SÁNCHEZ (123) new nummi types for Aelia Flacilla from Antioch and Nicomedia, and BALL (10) a new miliarensis of Theodosius I. A series of siliquae with the mark SMCS for Constans II are the subject of HOLLARD (107), and new bronzes of Honorius and Valentinian III of DOYEN (58). KOMNICK ET AL. (113) present new finds of early Frankish silver imitative issues.

Imitations

The production of imitations in East Gaul are the focus of BURGEVIN (27), early-4th century cast imitations in Egypt of CHAMEROY ET AL. (43) and GUIHARD (104). NÜSSLEIN (126) presents the archaeological evidence for workshops producing bronze imitations in the late-3rd and 4th centuries in North-East France and PILON (131) for the production of imitation in the mid-4th century in north-eastern Gaul. ASOLATI (6) draws attention to the role of bronze imitations in bronze hoards from Gortyn (4th century) and Aquileia (5th century).

The laws against counterfeiting in Late Antiquity are reconsidered by CARLÀ (37).

Hoard and coin find publications

Among numerous new hoards of solidi, two are particularly noteworthy: the late-5th century hoard of solidi from Sovana, Italy presented in ARSLAN AND TURCHETTI (4) and BANI AND TUCI (11) and reviewed by FISCHER (83), and the early-4th century Simitthus hoard from Tunisia in BALDUS (†), KHANOSSI AND VON RUMMEL (8). Smaller hoards include a Theodosian solidus hoard from Belgium published by DOYEN (62) and two from the Netherlands by ROYMANS AND HEEREN: one of solidi from Lienden (148) and one of solidi and hacksilver from Hecht (147). ZAPOLSKA (178, 179) revisits two solidus hoards from Poland.

R.-ALFÖLDI AND QUAST (137) not only publish the Wiesbaden-Mainz-Kastel hoard of siliquae and ornaments, placing it in the context of Germanic officers in Roman military service, but also a further hoard of siliquae from the region without an exact findspot, also dealt with by WIGG-WOLF (171) in his assessment of the distribution of early 5th century silver as a reflection of defensive measures taken by Constantine III following the 'Great Invasion' of 406. Preliminary reports are presented by ESTIOT ET AL. (76) on the Magny-Cours (Nièvre) double hoard of late-3rd century radiates and nummi to AD 303 discovered in archaeological investigations, by ARDEVAN (3) on a large bronze hoard from the Romanian Danube, DROST (70) on the massive Constantinian Seaton Down bronze hoard from England, and BOWEN (22) on part of an early Constantinian bronze hoard from Egypt. REECE (145) analyses the origins of the coins in bronze hoards from Malta, while DROST AND LE BRAZIDEC (71) revisit the Gruissan Tetrarchic hoard from south-western Gaul.

Two extensive regional studies also cover Late Antiquity: MARTÍNEZ CHICO (121) is a comprehensive inventory and analysis of hoards from Hispania, BLAND (21 together with 20) the result of an extensive project on coin hoards in Britain. FISCHER (80, 81, 82) and FISCHER AND LÓPEZ SÁNCHEZ (86) have published extensively on 5th-century solidus hoards in Italy, in particular as evidence for the recruitment and role of Germanic troops from northern Europe and Scandinavia.

A second volume of coin finds and hoards from Belgium is provided by DENGIS (52) and three volumes of a new

corpus of coin finds from Hungary by PROHÁSZKA AND TORBÁGYI (133, 134, 135), all of which include large amounts of Late Antique material. Similarly of relevance are further volumes of the *Ritrovamenti Monetali di Età Romana nel Veneto* for Padova (156) and Verona (5). For CHARRIER (46), a solidus of Valentinian II from Autun is the context for inventories of gold coins from the town, as well as of solidi of the same Emperor found in Gaul. WILLIAMS (173) reconstructs a coin assemblage from the synagogue at Ostia from archival material. The finds from the important late Roman site of Biesheim-Oedenburg in Alsace are considered by BIELLMANN (15) and BIELLMANN ET AL. (16), while BIELLMANN AND MARTY (17) present the numismatic evidence for the nearby battlefield site of Argentaria. SAWAYA AND AL-AKRA (150) publish the finds from the Jemmayzeh excavations in Beirut. Complexes of 4th-century bronze from Sicily are the subject of MANGANARO (118), from Ronda of ORTIZ CÓRDOBA (129), from a late-Roman fort on the Lower Danube of VASILESCU (165), and from the vicus of Tienen in Belgium of VERBEELEN (166).

Analysis of coin finds

LAUWERS' monograph on coin production and use in northern Gaul from the 3rd to 9th centuries (115) includes a detailed analysis of coin use and circulation through Late Antiquity into the Middle Ages in northern Gaul. WIGG-WOLF (169) provides an overview of coin finds, production and use in the Rhineland, and in (170) discusses coin finds as evidence for the fragmentation of the North-West in the late-4th century. DOYEN (57, 61) suggests that bronze from Italian mints was still being supplied to parts of North-West Gaul well into the 5th century. Articles by STROOBANTS (157) and STROOBANTS AND POBLOME (160) address monetisation and coin use at Sagalassos and its territory in Pisidia. On a more theoretical level, the rich coin finds from Augusta Raurica allow PETER (130) to illustrate the importance of contextualisation when analysing coin finds.

Coins in rural contexts are the subject of a number of contributions: DOYEN (59) examines monetisation in rural contexts in northern Gaul, FILIPIAK (78) in the area around Reims, BURGEVIN AND FILIPIAK (28) in the countryside of eastern Gaul, TROMMENSCHLAGER AND BRKOJEWITSCH (162) in villas in the region, and MUNZI (125) in the territory of Leptis Magna.

Funerary contexts and coins are addressed by FILIPOVIĆ AND ŠEPAROVIĆ (79) in the publication of finds from a necropolis on the Croatian Danube and by MARANI (119) for sites in Italy, while DUCHEMIN (73) considers the role of silver in burials in North Gaul, VAN HEESCH AND WEINKAUF (106) coins from graves in Belgium as evidence for coin circulation in the late 3rd and early 4th centuries, and STROOBANTS ET AL. (159) funerary contexts in Sagalassos.

Roman coinage outside the Empire

Several articles deal with Roman coins outside the Empire: BURSCHE AND MYZGIN (30) discuss the role of imitations of Roman coins produced outside the Empire in the origins of Germanic coinage, EREMIĆ (74) Roman gold coins north of the Danube. HORSNÆS (109), with an important review by BURSCHE (29), is a second volume of her inventory and analysis of Roman coins from Denmark. ROYMANS (146) discusses the flow of precious metal across the Lower Rhine to the Franks in the late 4th and early 5th century as evidenced by a series of gold hoards from the region. The burial of the Frankish King Childerich is revisited by QUAST (136), also by FISCHER AND LIND (85) who address the question of whether the denarii in the burial originated from within the Empire or from the northern Barbaricum. ISVORANU AND DIMA (110) publish a small complex of 4th century bronzes from Moldova, SCHALLMAYER ET AL. (151) a hoard of bronze and hackbronze from the right bank of the Upper Rhine, and SIDAROVICH (153) examples of Roman gold coins used as pendants in the eastern Barbaricum.

Iconography

A number of publications concern iconography. HOLLARD AND LÓPEZ SÁNCHEZ (108) examine in detail the role of the phoenix and the Christogram in the 4th century and MITTAG (124) triumphal imagery on coins and medallions. WIGG-WOLF (168) revisits the famous Constantinian silver multiple with Christogram from Ticinum, putting it into a broader chronological context, and MARTÍNEZ CHICO AND LÓPEZ SANCHEZ (122) present a new variety of a solidus of Constantius II with a Christogram on his shield. The Constantinian camp gate type is the subject of two articles: RAMSKOLD (139) considers the three-dimensionality of the representation of camp gates on issues from Rome, WOODS (175) the context of the *sidus salutare*. The Fel Temp Reparatio coinage is the starting point for a discussion of audience and meaning by VANEERDEWEGH (164), Egyptian influences on 4th-century coin iconography for two articles by OLBRIK (127, 128).

Varia

The Late Roman and Early Byzantine Solidi of the Stiernstedt Ancient Coin Collection are published by FISCHER (84), while a number of later Roman pieces are included in the catalogue of the collection of São Paulo university by FLORENZANO ET AL. (87).

On more diverse topics, ABDY (1) considers the clipping of siliquae in Britain, BALL (9) scratches on siliquae in the Fleetwood hoard, RAYNAUD (144) cut gold coins of Diocletian, and WIGG-WOLF (172) the role of coinage in facilitating usurpations in the 3rd to 5th centuries. Three articles address para-numismatic objects: DROST (69) on exagia and the control of the gold coinage under Julian, TEICHMANN (161) on cruciform fibulae from the mint at Thessalonica during the Valentinianic dynasty, ZAGERMANN (176) on coin weights from the Upper Rhine and PROHÁSZKA (132) on lead seals.

Attention is also drawn to digital resources of relevance to Late Antiquity included in the relevant section of the Survey.

LES MONNAYAGES PROVINCIAUX: LES PROVINCES OCCIDENTALES

Vincent Genevieve, Laurent Callegarin et Suzanne Frey-Kupper

Les séries provinciales de péninsule Ibérique (*RPC* 1-487), de Gaule (*RPC* 501-538), d'Italie, Sardaigne et Sicile (*RPC* 601-676) et d'Afrique du Nord (*RPC* 701-886) sont présentées selon l'ordre géographique et chronologique retenu par les auteurs du *Roman Provincial Coinage* et d'après les critères déjà définis dans la recension de 2008-2013. À savoir que sont ici concernées « les frappes civiques ou provinciales intégrées fonctionnellement et symboliquement au système romain, mais dont la raison d'être est locale ou régionale et dont l'autorité émettrice n'est pas en premier lieu le pouvoir central romain ». Depuis le précédent *CIN XV*, le *RPC I* a fait l'objet de quatre suppléments par AMANDRY *et al.* (1, 2, 3) et RIPOLLÈS *et al.* (9). En plus d'actualiser des recensions maintenant anciennes, ces suppléments font aussi le point sur de nouvelles propositions d'attribution. Ce corpus de référence est désormais disponible en ligne (https://rpc.ashmus.ox.ac.uk/search/map?volume_id=1). Plusieurs volumes de *Mélanges* livrent des contributions ayant trait aux provinces romaines occidentales, notamment ceux en l'honneur de M. Amandry (4), M. Bar (7), J. van Heesch (11) ou R. B. Witschonke (12). CALOMINO (5, 6), GORINI (8) ou encore ROWAN (10) abordent aussi ces monnayages au sein d'articles et ouvrages plus généraux.

PENINSULE IBERIQUE

Cette chronique concerne les émissions civiques de l'Hispanie romaine, depuis la mort de César jusqu'au règne de Claude qui marque leur arrêt. Bien que l'on ne puisse ignorer l'existence d'émissions à caractère impérial, seules les frappes civiques dites hispano-romaines, c'est-à-dire issues de l'atelier d'un *municipium* ou d'une *colonia*, font l'objet d'un commentaire.

Catalogues de collections et publications de synthèse

Outre les réactualisations évoquées du *RPC*, signalons la parution ou la mise en ligne de plusieurs collections, tant publiques, par RAMÓN SÁNCHEZ, TORREGROSA YAGO (64) et SINNER, CAMPO (68), que privées, par GARCÍA-BELLIDO, METCALF (43), CALOMINO (5), CORES *et al.* (39), ainsi qu'un corpus contenant des monnaies hispano-romaines par RIPOLLÈS ALEGRE *et al.* (66).

Les ateliers hispano-romains

ARÉVALO GONZÁLEZ (31) évoque la fabrication monétaire, ainsi que les magistrats et artisans en charge de la frappe en Hispanie romaine, et présente la même année, associée à BLÁNQUEZ PÉREZ, ROLDÁN GÓMEZ (33), la possible découverte de l'emplacement de l'atelier de *Carteia*.

Certaines études offrent une vision synthétique sur les frappes provinciales hispaniques, telles celles menées par AMELA VALVERDE (30) sur les premières émissions monétaires des municipes de droit romain (*Bilbilis*, *Calagurris*, *Dertosa*, *Ilerda*, *Osca* et *Turiaso*), montrant qu'ils ont, selon lui, tous obtenus ce statut juridique à l'époque de l'empereur Auguste, par IZQUIERDO (60) sur les ateliers du *conventus* de *Caesaraugusta*, par ROYO MARTÍNEZ (67) autour des marqueurs identitaires, ou encore par GOZALBES GARCÍA (52) pour l'époque de Caligula.

Parmi les travaux monographiques consacrés à la production des nombreux ateliers hispano-romains, il convient surtout de mettre en avant l'ouvrage de GÓMEZ BARREIRO (47) portant sur *Caesaraugusta*. D'autres mises au point et réactualisations des données sont à signaler comme celles d'AGUILERA HERNÁNDEZ (15) sur l'atelier d'*Osca*, de MARQUÉS GONZÁLEZ (61) sur celui de *Segovia*, de MARTÍNEZ CHICO (62) sur les *quadrantes* de *Turiaso* et surtout d'AMELA VALVERDE relatives aux ateliers de *Pax Iulia* (18), *Bilbilis* (19), *Carthago Nova* (22), *Colonia Victrix Iulia Lepida* (23), *Turiaso* (24), *Emporiae* (25), *Cascantum* (26), *Ilici* (27), *Ercavica* (28), *Dertosa* (29) et à l'émission problématique du type *Sacerdos* (20) ; les frappes du Nord-Ouest péninsulaire dites « à la *caetra* » font également l'objet d'une courte synthèse par BALSEIRO GARCÍA (36). La plupart de ces études reviennent fréquemment sur la chronologie et la sériation des émissions, en faisant la part belle à la question de l'origine de la frappe, dite provinciale ou civique, pour chacun des ateliers susmentionnés. Ajoutons quelques travaux qui se concentrent sur la question

des contremarques, notamment GÓMEZ BARREIRO, BLÁZQUEZ CERRATO (48) sur les monnaies de *Caesaraugusta* et HERRERAS BELLED (57, 58, 59) sur les émissions des ateliers de la vallée de l'Èbre, en particulier *Bilbilis*, *Turiaso* et *Calagurris*.

Trouvailles de sites, dépôts et circulation monétaire

La moisson est ici relativement modeste. GOZALBES GARCÍA (53, 54) a procédé à l'étude de lots monétaires issus des sites d'*Ercavica* et de *Valeria*, montrant une belle diversité dans la provenance qui, néanmoins, reste concentrée sur les ateliers de la vallée de l'Èbre, auxquels s'ajoutent ceux de *Segobriga*, d'*Ilici* et de *Carthago Nova*, et à la marge ceux d'*Acci*, de *Carteia* et de *Iulia Traducta*.

Quelques analyses évoquent le caractère résiduel des émissions civiques comme celle d'ARÉVALO GONZÁLEZ, MORA SERRANO (34) portant sur les niveaux tardo-antiques des *cetariae* de *Iulia Traducta* où ont été exhumés des bronzes de *Carteia*, de *Iulia Traducta* et de *Colonia Lepida*. De même, CAMPO *et al.* (38) reviennent sur les monnaies recueillies dans la phase d'abandon (fin du III^e siècle AD) de l'*insula* 30 d'*Emporiae*, parmi lesquelles on compte des unités d'*Emporiae* et un *quadrans* de *Tarraco*.

Le domaine funéraire a été fortement interrogé ces dernières années. Notons les apports des différentes contributions dans ARÉVALO GONZÁLEZ (32), où sont examinés les cas des nécropoles d'*Ebusus*, *Malaca* et *Gades* – cette dernière fait également l'objet d'articles spécifiques dans ARÉVALO GONZÁLEZ, MORENO PULIDO (35).

Iconographie et épigraphie monétaires

Dans ce domaine, les travaux sont pléthoriques, allant de l'étude d'un unique élément typologique (les objets sacrés à *Emerita Augusta* dans DEL RÍO CANEDO *et al.* (65) à celle du programme iconographique d'un unique atelier – AGUILERA HERNÁNDEZ (16) pour *Caesaraugusta* ; BRAVO JIMÉNEZ (37) pour *Iulia Traducta* ; GOZALBES GARCÍA (49) pour *Segobriga* et *Ercavica* ; AMELA VALVERDE (21) pour *Colonia Victrix Iulia Lepida* –, en passant par la diffusion et la signification de l'adoption d'un type spécifique – AGUILERA HERNÁNDEZ (14) pour le rite de fondation ; la couronne civique dans les frappes provinciales hispaniques dans GOZALBES GARCÍA (51) ; l'image du taureau dans les émissions des ateliers de *Citerior* par ce même auteur (55, 56). L'influence du pouvoir impérial dans les choix iconographiques est amplement étudiée, notamment dans GARCÍA VILLALBA (44, 45), GARCÍA VILLALBA, MARTÍN-BUENO (46), GOZALBES GARCÍA (50). Notons enfin, la synthèse réalisée par MORENO PULIDO (63) qui passe en revue l'imagerie de tous les ateliers de la région du détroit de Gibraltar.

Nombre de travaux s'intéressent à l'épigraphie monétaire. Parmi les plus remarquables, citons ceux d'ESTARÁN TOLOSA (40, 41) sur le choix de la langue dans les légendes monétaires, d'ABASCAL PALAZÓN (13) pour *Carthago Nova* ou encore d'AGUILERA HERNÁNDEZ (17) pour l'ensemble des frappes hispano-romaines. Enfin, signalons quelques propositions et révisions de lecture des noms de magistrats gravés dans les émissions de *Caesaraugusta* par FARIA (42).

GAULE

Bien moins nombreux que dans les autres provinces concernées, les monnayages de Gaule ont malgré tout bénéficié d'études variées qui proposent notamment de nouvelles lectures pour certains types, l'examen de séries rares et l'identification de quelques inédits. Les études de sites, nombreuses et largement dominées par les monnaies nîmoises, ne portent jamais exclusivement sur les productions qui nous intéressent ici. Néanmoins, elles livrent des réflexions intéressantes les concernant, même si la plupart pâtissent encore du manque de contextes stratigraphiques fiables permettant une exploitation plus poussée quant à leur usage et leur circulation.

Catalogues de collections et publications de synthèse

Dans le premier volume consacré à la collection De Sanctis Mangelli, CALOMINO (5) consacre une brève synthèse aux monnayages provinciaux gaulois sur la base de 22 exemplaires – *Lugdunum*, 2 ; *Vienna*, 2 (cat. 97 est plus sûrement une imitation) ; *Narbo*, 3 ; *Nemausus*, 14 ; *Cabellio*, 1. S'y ajoute un très rare bronze à la proue que l'auteur classe comme frappé dans un atelier incertain de Gaule (*RPC* 5416) mais dont l'attribution reste toujours sujette à caution ; à noter que cet exemplaire ne figure pas dans les derniers suppléments du *RPC*. Dans un bref article, AMANDRY (71) résume le contexte de la frappe des principales émissions provinciales gauloises de Lyon (*RPC* 514-515), Vienne (*RPC* 517), Narbonne (*RPC* 518), Nîmes (*RPC* 523-525) et Toulouse (*RPC* 533). ROWAN (10) place les monnaies romaines, tardo-républicaines et impériales mais aussi provinciales, comme premiers témoins de la période 49 BC-AD 14 pour aider à mieux comprendre cette période complexe.

Trouvailles de sites, dépôts et circulation monétaire

Deux nouvelles contributions dressent un inventaire réactualisé des monnaies provinciales découvertes dans le nord, par DUCHEMIN (74), et le sud-ouest de la France, par GENEVIÈVE (76) parmi lesquelles figurent quelques exemplaires exotiques pour ces régions.

Dans un article non cité dans la précédente recension, ALMEDA VALVERDE (69) revient sur l'attribution toujours incertaine des bronzes à légende SEX F / T POM (RPC 507) en orientant ses propositions, comme la plupart des autres auteurs avant lui, sur le sud de la vallée du Rhône.

Grâce à l'examen des 53 monnaies gauloises et romaines découvertes isolées sur le site du Petrisberg (Trèves), dont la datation est bien cernée au premier semestre 30 BC, WIGG-WOLF (91) envisage une chronologie relative de trois séries provinciales gauloises : la présence exclusive sur le site de types RPC 514 (*Lugdunum*), qui plus est non fractionnés, suggère une production quelque peu antérieure aux types RPC 515 (*Lugdunum*) et 517 (*Vienna*). Sur ces mêmes monnayages, POUX, en collaboration avec MORILLON et DUBREU (85), s'attarde sur le dépôt de deux bronzes complets viennois (RPC 517) et lyonnais (RPC 515) découverts lors de la construction d'un relais routier à Panossas (Isère) – le premier dans la fondation de l'un des murs du bâtiment, le second associé à sa toiture – et s'interrogent sur une possible « offrande propitiatoire à l'image du *templum* inaugural ». FREY-KUPPER, LIGGI ASPERONI, WOLFE-JACOT (75) publient des trouvailles monétaires en contextes provenant des sanctuaires d'Avenches-*Aventicum*, capitale de cité des Hélvètes. Parmi les émissions de Gaule, un bronze de Vienne (RPC 517) et 18 bronzes de Nîmes (RPC 523-524, complets et coupés en deux) font partie d'un dépôt de 98 monnaies daté de la période tibérienne découvert sous la *cella* du temple Nord d'En Chaplix, au-dessus d'une tombe augustéenne, datée vers 15/10 BC par son mobilier (non numismatique).

Deux flans monétaires trouvés en fouille sur les allées Jean-Jaurès à Nîmes ont pu être étudiés par PELLÉ, BLET-LEMARQUAND (82). Leur examen technique et des analyses élémentaires par ANRC permettent de les rattacher à la deuxième série émise par l'atelier nîmois vers 9/8-3 BC. Un autre flan, découvert lors d'un diagnostic archéologique réalisé au pied de l'enceinte romaine de la ville, a été étudié par les mêmes auteurs et a bénéficié d'analyses identiques (83). Malgré un aspect différent de ceux déjà examinés, sa masse et sa composition suggèrent qu'il ait pu aussi être destiné à la fabrication d'une monnaie au crocodile.

Sans concerner exclusivement ou directement les monnayages provinciaux, les études de circulation monétaire dans le nord-ouest de la Gaule proposées par HELINGS (78), ILISCH (79) ou encore MARTIN (80) intègrent dans leurs réflexions plusieurs exemplaires nîmois, lyonnais et d'autres ; ces monnayages sont aussi évoqués pour les questions de fractionnement et de perforation de certaines séries dans MARTIN (81) et HELINGS (78).

Iconographie

POUX (84) évoque le rarissime bronze inaugural de *Munatius Plancus* (RPC 511), connu à seulement 4 exemplaires. Le revers qui illustre Hercule maîtrisant un taureau était interprété par A. Desbat comme une allégorie de Rome contrôlant le cours du Rhône. L'auteur envisage une lecture duale où Arar aurait les traits d'Hercule et maîtriserait la Saône qui portait anciennement son nom après que le héros local s'est jeté dedans. Selon l'auteur, cette double lecture s'adresserait alors autant à un public romain qu'aux populations locales. WOODS (92) réinterprète le revers au lion des quinaires de Marc Antoine (RPC 512-513), voyant dans le félin à la crinière abondante (*coma*) une représentation de la province dite de Gaule chevelue (*Gallia comata*). CHRISTOL (71) décode un à un tous les éléments qui composent le monnayage de l'atelier de Nîmes en contextualisant les messages épigraphiques et iconographiques savamment agencés pour célébrer la personnalité d'Auguste.

Les réflexions développées par GRICOURT (77), dans son étude magistrale des monnaies de Bliesbruck (Moselle), mais omises lors de notre précédente recension, se devaient d'être abordées ici. À la suite de M. Grant et M. Amandry, l'auteur insistait sur le rapprochement stylistique des types RPC 537 (2 ex., mêmes coins) et RPC 538 (1 ex., même coin de droit que les précédents et trouvé dans les environs de Trèves) au nom d'Auguste divinisé avec le bronze RPC 5431 (1 ex.) au revers figurant une femme assise de face entre deux personnages, accotée des lettres *T(reverorum ?) A(ugusta ?)*. À ces trois monnaies s'associeraient les deux bronzes tibériens RPC 5440-5441 qui pourraient venir émaner du même atelier, possiblement Trèves, comme le suggère l'exceptionnelle monnaie précédente. D. Gricourt propose d'identifier au travers de ces cinq bronzes, qui seraient datables des années 36-37, un groupe monétaire dynastique patronné par le divin Auguste et célébrant la Concorde de l'Empire, avec Livie assise entre Caligula et *Tiberius*

Gemellus, appelés à régner.

Types monétaires nouveaux et raretés

RPC 501-503 (Atelier(s) d'*A. Hirtius*)

DELESTRÉE (72) revient sur les monnayages de bronzes au nom d'*A. Hirtius*, quand il était propréteur de Gaule transalpine en 45-44 BC. Délaissant le type bien connu à l'éléphant (RPC 501), il consacre un examen plus détaillé à celui au lion (RPC 503a-d) et aux quatre notables gaulois dont les noms sont associés à la légende A HIR IMP. L'auteur envisage pour ces quatre émissions, l'existence d'un seul atelier, certainement itinérant, évoluant de part et d'autre de la Seine, autour de Paris. DELESTRÉE, THIBAUT (73) évoquent la découverte, malheureusement non localisée, d'un bronze inédit de ce type au nom d'un cinquième personnage (*Sestriros*) qui accroît un peu plus la portée de ce monnayage peu courant.

RPC 526 (*Nemausus*)

Les quatre contributions de VILLEMUR, BLET-LEMARQUAND, la première au nom des deux auteurs (87), les trois autres auxquelles sont associés BAUX (88), DUVAL (89) et PHÉLINE (90), ont significativement fait avancer nos connaissances sur les rares et énigmatiques monnaies de Nîmes dites « à la patte de sanglier ». Au fur et à mesure de ces articles, les auteurs ont complété le catalogue détaillé des exemplaires connus – à ce jour 20 sont recensés – et réalisé des analyses élémentaires de composition qui ont notamment permis d'écarter quelques faux (six imitations coulées) mais surtout d'authentifier définitivement cette production sur laquelle de nombreux doutes et suspicions pesaient encore. Les lieux de découvertes sont examinés, ainsi que la technique de fabrication de ces monnaies-objets tout en proposant quelques hypothèses sur leur fonction. Plusieurs liaisons de coins confirment que ces curiosités numismatiques ont été produites avec les mêmes matrices que celles utilisées pour la fabrication des monnaies courantes. Les motivations et la périodicité de ces frappes ainsi que les quantités émises soulèvent encore de nombreuses interrogations.

RPC 539 (Colonie incertaine de Gaule narbonnaise, seulement en ligne)

Depuis la publication du premier volume du RPC en 1992, 38 types monétaires provinciaux gaulois sont dénombrés, enrichis depuis de quelques variantes ou de réattributions, mais aucun exemplaire inédit n'avait complété cette liste. Cette fraction d'argent (5 ex. connus) publiée par VILLEMUR, AMANDRY, CHEVILLON (86) constitue donc en soit un petit événement. Sur une face, la mention IIII VIR entre trois lignes pleines évoque assurément une signature par les *quattuorvirs* d'une colonie latine de Narbonnaise. Sur l'autre, les auteurs, hésitant entre COVE (1 ex.), COAE (2 ex.) ou CONE (1 ex.), retiennent cette dernière lecture et proposent soit d'attribuer cette production à Nîmes en lisant CO(*lonia*) NE(*mausus*) soit d'envisager une CO(*lonia*) NE(*ronis*). Ces deux propositions apparaissent pourtant bien fragiles, car reposant notamment sur trois formes de légendes différentes dont une avec cette ligature qui ne nous semble pas avérée. La découverte d'autres exemplaires de même type est évidemment vivement attendue.

Italie, Sicile et îles attenantes

La période recensée regroupe les émissions civiques frappées en Italie, en Sicile et dans les îles attenantes depuis le second triumvirat jusqu'à l'époque tibérienne quand les derniers ateliers ferment leurs portes, ainsi que celles de *Paestum* et *Panormos*. Les études retenues concernent principalement l'examen d'ensembles monétaires ou de trouvailles isolées issues de fouilles archéologiques qui permettent, soit de reconsidérer la chronologie ou l'attribution à des ateliers, soit de compléter nos connaissances sur la circulation monétaire ou l'utilisation spécifique des monnaies, notamment dans des contextes de sanctuaires.

Catalogues de collections et publications de synthèse

Les suppléments du RPC (2, 9) ont intégré l'attribution de *semisses* aux unités (*as*) impériales de *Panormos* (RPC 639A et 641A) et, pour la fin de la période républicaine, de *Ietas* (RPC 647A), intégration rendue possible grâce à l'étude des trouvailles monétaires de Monte Iato (S. Frey-Kupper, voir dernier *Survey*) qui démontrent que la division des dénominations en unités et demis (*as*, *semis*) est systématique pour ces ateliers, selon une tradition qui remonte au I^{er} s. BC. Suite aux recherches de VILLEMUR (115, 116), l'attribution à *Tyndaris* des exemplaires RPC 649-651 est également adoptée, tout comme les nouveaux types RPC 650A ainsi que 670A et B (cf. *infra*). La parution de nouveaux volumes des *Sylloge*, trois en Italie (93, 95 et 98) et un en Russie (109), accroît le nombre d'exemplaires connus pour certaines séries même si aucun ne recense de variantes ou de types nouveaux.

Les ateliers d'Italie et de Sicile

L'étude de BARBATO (96) reconsidère les frappes du préfet *Clovius* (RPC 601) et du préteur *Oppius* (RPC 602).

Fondée sur un recensement systématique des lieux et contextes de découvertes, elle conclut à une proximité, voire une superposition, chronologique des deux types (en accord avec B. Woytek, voir dernier *Survey*), dont la production est ainsi attribuée à Rome en 46-45 BC. À cette occasion, leur circulation hors d'Italie est aussi examinée.

Les nouvelles découvertes de bronzes aux types *Divos Iulius* (RPC 620 et 621) (97), majoritairement officielles plutôt qu'imitées, ne permettent toujours pas de préciser leur lieu exact d'émission, mais continuent d'orienter la localisation de leur production en Italie.

CARBONE (101) a approfondi ses études sur l'atelier de *Paestum* en lui consacrant un corpus et une étude de coins. Ce travail a le mérite d'inclure un nombre impressionnant de monnaies conservées dans des collections locales, à l'époque inconnues ou pas accessibles aux auteurs du *RPC* comme précédemment à M. Crawford. Cependant, cette étude caractérisque ne prend pas en compte plusieurs grandes collections, entre autres celles de Londres, Paris, et Vienne (« core collections » de *RPC*), tout comme les fonds de Berlin, absents du catalogue. En faisant abstraction de celles-ci et des pièces trop corrodées, près de la moitié des monnaies cataloguées est examinée (pourcentages variables selon les types) et livre de premières indications chiffrées quant au nombre minimum de coins produits. Bien que déjà envisagé par les auteurs du *RPC*, CARBONE (102) attribue de manière convaincante à l'époque augustéenne les monnaies signées par les *duovirs* *M. Nun* et *L. Sueti* ainsi que celles de *Minea*, *M. f.*, femme influente et évergète de l'aristocratie locale. L'analyse détaillée de CARBONE (101, reprise dans 100) explore également les noms des magistrats, les questions métrologiques et la circulation monétaire.

Concernant la Sicile, si les émissions de la partie occidentale de l'île sont désormais bien connues, du travail reste encore à accomplir afin de mieux comprendre celles de sa partie orientale. VILLEMUR (115, 116) réattribue à *Tyndaris* quatre types monétaires précédemment donnés à *Segeste* ou *Panormos*. Cette nouvelle proposition, adoptée dans *RPC* (2 et corpus en ligne) s'appuie sur les trouvailles monétaires et sur des éléments iconographiques. L'auteur évoque les possibilités d'une datation soit à l'époque de Sextus Pompée soit d'Octave, mais la première nous semble plus convaincante, entre autres pour des raisons métrologiques. CRISÀ (104) présente une tessère uniface en terre cuite qui reprend l'avers au *pilei* de ces émissions de *Tyndaris* (RPC 649-651).

Trouvailles de sites, dépôts et circulation monétaire

Des bronzes (*dupondii*) d'Octavien au type du *Divos Iulius* continuent à apparaître dans des dépôts à caractère votif en Italie (RPC 620-621). BARBATO (97) et BARBATO, VALCI (99) s'attardent sur un ensemble trouvé à Rome où une monnaie (RPC 620), probablement accompagnée de deux autres de même type, a été découverte dans une fosse près du Temple B de l'aire sacrée du Largo Argentina. Les onze (ou douze ?) monnaies contenues dans ce dépôt fouillé en 1931 sont aujourd'hui perdues mais les types, y compris le plus récent (*RIC* I², 81, *DAP Providentia*) ont pu être identifiés grâce aux notes du fouilleur G. Marchetti Longhi, tout comme leur contenant, probablement un *thesaurus*. En Italie et ailleurs, ces bronzes au *Divos Iulius* et leurs imitations continuent en fait à circuler jusqu'à l'époque julio-claudienne comme le montre le dépôt de Largo Argentina mais aussi les contextes de l'aire de la *Meta Sudans* à Rome (1998-2003) étudiés par ZEGGIO (117). Les deux exemplaires retrouvés, un bronze RPC 620 (officiel) et une imitation hybride combinant un avers de RPC 620 à un revers de RPC 621 proviennent de niveaux liés au réaménagement du tracé routier menant au *forum* et sont datés des années 14-37 AD environ. FREY-KUPPER, LIGGI ASPERONI, WOLFE-JACOT (75) décrivent un cas similaire à Avenches-*Aventicum* qui associe une imitation (coulée ?) du type RPC 620, un *semis* indéterminé de *Lugdunum* et un as de Rome (*RIC* I², 471 ?) retrouvés dans les remblais de construction (30/40-50/70 AD) du temple maçonné du sanctuaire de Derrière la Tour.

L'ouvrage de CARBONE (101) réunit 1292 monnaies dont 286 sont conservées au médailler du Museo Archeologico Nazionale de *Paestum*, 275 dans la Collezione Sallusto à Salerne et 88 au Museo Archeologico Nazionale de Naples, parmi lesquelles se cachent probablement de nombreuses trouvailles locales. Le peu d'informations dont l'auteur dispose se réfère à *Paestum* même ou, rarement, à Pompéi, tout en mentionnant plusieurs douzaines de trouvailles issues de fouilles récentes conduites à *Paestum* qui ne font pas partie du catalogue. À celles-ci s'ajoute une monnaie provenant du sol d'une petite taverne de la *regio* V, I, 27 à Pompéi publiée par STAUB, DE ROSA (112, n° 73).

En Sicile, pour sa partie occidentale, les fouilles archéologiques continuent de livrer de nombreuses monnaies, notamment à Monte Iato (ancienne cité de *Iaitas*). Des catalogues complets sont publiés annuellement grâce aux équipes des universités de Zurich, par BADERTSCHER (94), ELSENER (105, 106) et TSCHOLL (113, 114), et d'Innsbruck, par FEIL (107). Leurs rapports confirment quelques caractéristiques de circulation connues pour ce site, la présence

de monnaies de Sextus Pompée (*RPC* 671, 2 ex. complets, 1 ex. coupé) et parmi les émissions civiques, celles de *Panormos* (*RPC* 636, 2 ex. ; 642, 1 ex. ; 644, 2 ex. ; 645, 2 ex.) ; plusieurs exemplaires sont issus de couches julio-claudiennes. FREY-KUPPER (108) a recensé une monnaie d'*Entella*, frappée au nom d'*Atratinus* (*RPC* 654) et une de *Panormos* (*RPC* 636), pour le *thesmophorion*, sanctuaire extra-urbain de la Contrada Petrarò à Entella (couche post-médiévale). En Sicile orientale, sur le site de Caronia (ancienne cité de *Kalè Aktè*), trois bronzes de Sextus Pompée (*RPC* 671) ont été rapportés comme trouvailles fortuites par CARROCCIO, COLLURA (103). Sur ce même site, l'exemplaire identifié comme une monnaie d'*Entella* (*Atratinus*) est en fait une frappe de *Panormos* du type « tête d'Arès / triscèle ». Dans son étude consacrée aux monnaies de Tindari, VILLEMUR (115, 116) insiste à la fois sur l'absence, parmi les trouvailles de sites, du type *RPC* 627, à la tête d'Auguste à droite, signé par *L. Mussid(ius) Pr Cos* (dans une couronne de laurier) et *L. Stati P. Cotta []* (autour de cette couronne) et sur l'impossibilité de lire *Tundar* sur un des exemplaires connus et qui ne peut donc être attribué à cette cité. Il en va de même pour une émission proche où apparaissent les mêmes noms autour de la couronne mais qui est signée par le proconsul *Sisenna*. Ce type (*RPC* 668) ne figure pas non plus parmi les trouvailles de Tindari.

PERASSI (111) rédige le premier catalogue complet des trouvailles monétaires maltaises retrouvées lors des fouilles italiennes sur le sanctuaire de Tas-Silġ (Malte). Parmi les 41 exemplaires identifiés, on relève sept *RPC* 672 (signés *C. Arruntanus Balb Propr*) et un *RPC* 673 (monnaie anonyme).

Iconographie

Pour le monnayage de *Paestum*, CARBONE (101) met notamment en évidence la représentation de l'édifice à deux ou parfois trois étages au revers de l'émission 27 au nom de *Minea*, *M. f.* qui, en 15 BC, a financé la reconstruction de la basilique de la cité. Comme d'autres avant lui, l'auteur attire notre attention sur l'iconographie parlante qui fait référence à cet acte de bienfaisance (100, 101, 102). VILLEMUR (115, 116) et CRISÀ (104) soulignent le lien fort entre la cité de *Tyndaris* et le culte des Dioscures, fils de leur père humain *Tyndaros*, roi de Sparte, lien reflété dans l'image récurrente de leurs bonnets sur les monnaies et, *in situ*, sur une mosaïque conservée à l'entrée des bains de l'*insula* IV. PERASSI (110) analyse l'iconographie de la *sella curulis* (*RPC* 672) et du trépied (*RPC* 673) dans le monnayage de *Melite*.

De nombreuses célébrations en Italie et ailleurs en Europe ont commémoré le bimillénaire de la mort d'Auguste le 19 janvier 14 AD à Nola en Campanie. Quelques contributions spécifiques ont été dédiées à son monnayage : GORINI (8) recense les trouvailles de sites d'*Aquileia* et étudie les monnaies d'Octave au nom du *Divos Iulius* conservées au Museo Archeologico Nazionale di Aquileia, tandis que CALOMINO commente un recueil des monnaies frappées pour honorer Auguste divinisé dans les provinces de l'empire (6).

AFRIQUE DU NORD

À l'intérieur de ce groupe africain, on retrouve, en suivant les orientations du *RPC*, des monnayages de rois indépendants numides et maurétaniens, amis et alliés de Rome, et des monnayages romains de municipes ou de colonies.

Catalogues de collections et publications de synthèse

Outre les réactualisations du *RPC* (1, 2, 3, 9), signalons la parution ou la mise en ligne de plusieurs collections contenant des monnaies nord-africaines, tant publiques comme à la BnF de Paris ou à Florence par PIGA (134), que privées, par CORES *et al.* 2020 (122). On note également une recrudescence de publications à caractère historiographique liées à certains fonds muséaux, par MORENO PULIDO (129, 130), GOZALBES CRAVIOTO (125), GOZALBES GARCÍA, GOZALBES CRAVIOTO (127).

Les monnayages nord-africains n'ont pas fait spécifiquement l'objet d'une nouvelle synthèse scientifique, mais ils soutiennent de manière forte le discours de plusieurs articles et monographies historiques consacrés aux monarques africains ou aux guerres de conquête romaines : BRIDOUX (121) s'appuie sur les émissions monétaires des princes africains pour asseoir leur généalogie ; AMELA VALVERDE et MARTÍNEZ CHICO (119) réalisent une synthèse de la politique monétaire de Juba I, tandis qu'ALEXANDROPOULOS (118) mesure les effets de la guerre de Tacfarinas sur le monnayage de la province d'Afrique.

Monnayages et ateliers monétaires nord-africains

Comblant une lacune du *RPC*, SPOERRI BUTCHER (135, 136) a engagé plusieurs études détaillées du monnayage de Juba II afin d'en définir la chronologie et d'apprécier le programme iconographique. De même, les réactualisations

du *RPC* ont apporté leur lot d'émissions et d'exemplaires inédits, mais également de doutes : c'est notamment le cas pour un sesterce (3, *RPC* 866B) attribué, par défaut, à la colonie augustéenne de *Zilil* par VILLEMUR, AMANDRY, RIPOLLÈS (139).

L'atelier de Carthage a fait l'objet d'une étude numismatique approfondie en lien avec la fondation de la colonie augustéenne. WOLTERS (140) identifie trois phases de production, en 4/5, 11 et 15/16 AD. En se fondant sur la typologie, l'épigraphie, ainsi que sur la dispersion des trouvailles, le chercheur démontre que les trois types de la première phase d'émission, attribués par le *RPC* à *Sicca* (*RPC* 706-708), appartiennent clairement à Carthage. La deuxième phase d'émission (*RPC* 745-753) compte trois dénominations – *as*, *semis* (l'auteur pense que les pièces *RPC* 749-751 étaient conçus comme des *semisses* mais produits sous forme d'*as* coupés en deux) et *quadrans* – qui, par l'iconographie et les légendes développées, s'insèrent dans un programme de propagande visant à promouvoir Tibère, sur le modèle des émissions de Rome et de *Lugdunum* datées de 11 AD. Quant aux pièces issues de la troisième période (*RPC* 754-757), elles se réfèrent à l'émission de Rome avec Livie assise (*RIC* P, 33-37 et 71-73).

Le monnayage de *Tingi* a également retenu l'attention des chercheurs : une fraction (*semis* ?) en bronze à légende latine, connue par un unique exemplaire (*RPC* 861A), a fait son apparition grâce à VILLEMUR (138), tandis qu'une meilleure lecture de l'émission *RPC* 860 dans l'un des suppléments *RPC* (3) et dans BERNARD, CALLEGARIN (120) et FARIA (123) a permis d'effectuer une correction de transcription d'un *nomen* – *M. Clodius* au lieu de *M. Curius* – et d'écarter définitivement l'idée de l'élévation de la cité au rang de colonie sous Auguste.

Production et circulation monétaires

En examinant à la fois les volumes émis pour chaque valeur, par centre émetteur et par périodes de fabrication, GOZALBES GARCÍA (126) tente de déterminer les possibles usages des émissions provinciales en Afrique proconsulaire à l'époque julio-claudienne.

FREY-KUPPER (124) présente une analyse complète des trouvailles monétaires faites à Carthage entre 146 BC et le règne de Claude, en se fondant sur les contextes stratigraphiques fournies par les fouilles allemandes ainsi que sur l'ensemble des autres fouilles. Deux aspects saillants sont à relever : d'une part, la présence d'une série de petits bronzes massaliètes reflèterait les activités en relation avec la fondation de la colonie césarienne, vraisemblablement via des contacts avec l'Italie ; d'autre part, le nombre de trouvailles ne se densifie que vers la fin du règne d'Auguste, et surtout sous Tibère, quand le volume d'importation de céramiques de la jeune colonie devient plus important. Pour ce début du I^{er} s. AD, les pièces de *Carthago* représentent une part considérable du numéraire en circulation en Zeugitane (10 ex. sous Auguste, mais 14 de Rome, et 2 d'*Hadrumetum*, *RPC* 781 et 783 ; 12 ex. sous Tibère, contre 10 de Rome et 4 d'*Utica*, *RPC* 423-426). Ces données sont comparées à celles des trouvailles monétaires du sanctuaire d'Henchir el-Hami où les monnaies carthagoises des deuxième et troisième phases (selon la définition de WOLTERS) sont accompagnées et dominées par des émissions d'*Utica*, atelier plus proche du lieu de découverte étudié.

Iconographie

Après plusieurs articles consacrés à l'iconographie monétaire de la région du détroit de Gibraltar, les contributions de MORENO PULIDO (131, 132, 133) livrent une solide synthèse sur l'imagerie de l'Extrême-Occident, revenant notamment sur les portraits gravés dans les émissions de *Tingi*, quand GOZALBES GARCÍA et PADILLA ARROBA (128) examinent les contacts et contaminations entre les divinités puniques et celles de Rome à travers les gravures monétaires des ateliers de Proconsulaire. Enfin, SUSPÈNE (137) analyse le monnayage de Juba II du point de vue de l'iconographie et des caractéristiques techniques. Tout affirme un pouvoir fort et stable, adossé à la personnalité, à l'héritage et aux alliances du roi, ainsi qu'à la prospérité du royaume. Jouant sur la pluralité des relations clientélares, Juba II fait montre d'une véritable expertise dans sa politique monétaire et se pose non pas en subordonné, mais en imitateur d'Auguste. Concernant l'iconographie de Carthage, nous renvoyons à l'étude de WOLTERS (140).

ROMAN PROVINCIAL COINAGES: EASTERN PROVINCES

Fran Stroobants

Introduction and general studies

The last couple of years have seen great progress in the *Roman Provincial Coinage (RPC) series*. The enormous added value offered by the growing number of volumes in this series and their accessibility online has clearly facilitated a large amount of the contributions mentioned in this chapter. It has both facilitated research, and also provides more completeness. Volume III (3; Nerva – Hadrian) and volume IX (37; Trajan Decius to Uranius Antoninus) were both published in printed form, respectively in 2015 and 2016. Also three supplements were added to the series. Supplement 3 (5) included new material from 2005 to 2013, covering the Julio-Claudian period (RPC I), the Flavian period (RPC II), and the coinages of Gordian I to Gordian III struck in the province of Asia (RPC VII, 1). In 2015, a consolidated volume (57) of the supplements 1 to 3 was published. Supplement 4 (6) and 5 (7) added new material for RPC I-III, VII.1 and IX. Furthermore, this period saw the addition of volume I (22), volume II (21), volume III (4), volume VI (27; Asia Minor and Egypt), volume VII.1 (60), volume VII.2 (45), volume VIII (46) and volume IX (36) to the online database, which now consists of 46.913 entries (<https://rpc.ashmus.ox.ac.uk/>). Another important online source is the *Corpus Nummorum* project (<https://www.corpus-nummorum.eu/>), which is an open access numismatic web portal that collects, presents, and offers research tool for regional datasets of Greek and Roman provincial coinage (at present Moesia Inferior, Thrace, Mysia and the Troad).

The proceedings from several **congresses** contained numerous contributions that are relevant to this section. Important studies on Roman provincial coinages in the eastern provinces were presented at the two international congresses on Anatolian Monetary History and Numismatics, organized by the Suna & İnan Kıraç Research Center for Mediterranean Civilizations (AKMED) in Antalya in 2014 (28) and 2017 (63). Also the proceedings of the 15th International Numismatic Congress in Taormina in 2015 (23) contained numerous articles on the subject. Several **Festschriften** which were published during this period included numerous relevant articles on the Roman provincial coinage of the eastern provinces, like the volumes in honour of Amandry (17), Burnett (11), van Heesch (62), Draganov (13), Demetriadi (65), Witschonke (64), Gorini (8), Salzman (58), Bar (29) and Nollé (52).

The **general development** of Roman provincial coins in the eastern provinces from the reign of Augustus until the 2nd half of the 3rd century AD is addressed in the volume edited by AMANDRY (1) (pp. 183–190 for the 1st century AD, and pp. 195–215 for the 2nd century AD, and pp. 235–247 for the 3rd century AD), which offers a general overview of coinage in antiquity. Several contributions were dedicated to the Roman provincial coinage struck during **specific reigns**. BRANSBOURG (14) analysed the series of so-called fleet coinage, struck mainly in Greece by Mark Antony in 38–37 BC. He complemented the original catalogue of these bronze coins by Amandry with specimens originating from the collection of Rick Witschonke. According to the author, these coins were possibly used to introduce the Roman coin system in the Greek world, and to provide the troops with small change for local transactions. CALOMINO (25) presented a detailed analysis of the different coin types issued for Divus Augustus, both in Rome and the provinces, with issues being produced for over 250 years in c. 50 different cities of Macedonia, Thrace, Asia Minor and the Levant. As an extra, the article presents one hitherto unknown coin type in name of Augustus, probably struck at Byzantium.

JELONEK (43) focused on the Roman provincial coinage struck in a number of colonies in the Roman provinces during the reign of Claudius. The same author (41) studied the patterns in the presence of family members on the imperial coinage of Caligula, and showed how these evolutions were equally followed for the provincial coinage of a number of cities in the eastern provinces. WOYTEK (68) discussed a limited series of Roman imperial coins honouring Divus Nerva struck during the reigns of Trajan, Trajan Decius and Trebonianus Gallus. The author also mentioned a series of silver didrachms of Caesarea in Cappadocia and five civic issues showing the portrait of the deified

emperor from Perinthus, Berytus, the Galatian koinon, Parium and Appolonia ad Rhyndacum. BURNETT (20) focused on the occurrence of the *Optimus* title for the emperor Trajan, relying on evidence from coins from Egypt and other provincial issues, next to inscriptions, diplomata and papyri. CALOMINO (24) discussed the bilingual civic coins struck during the reign of Severus Alexander in Asia Minor, the Levant and Europe. Two case-studies are examined in detail, Nicaea in Bithynia and Nicopolis ad Istrum in Moesia Inferior. The same author (26) analysed the existing evidence from literary, epigraphic and numismatic sources for Diva Paulina, the wife of emperor Maximinus Thrax. The analysis of the inscriptions and coins from the provinces suggest that Paulina may have been still living when Maximinus became emperor, in contrast to what is generally believed. Moreover, the fact that all civic coinages on which Paulina was celebrated come from a relatively limited area in south-eastern Asia Minor, might point to family ties or visits to the region. WATSON (66) focused on the coinage struck in name of Aemilian at Viminacium, Parium, Amisus, Iulia, Antioch ad Pisidiam, Side, Aegeae, Alexandria in Egypt and the province of Dacia, and explored how the information about this emperor – who only ruled for three months – was spread to the eastern provinces.

Other studies discussed **specific phenomena** for the civic coinage of the Eastern provinces. BENNETT (10) reconsidered the question of the so-called pseudo-autonomous bronze coins, using the *RPC* volumes as a background. These issues were abundant, with a great variety and geographical (Asia Minor, but also Balkans and the Levant) and chronological spread. They formed an integral aspect of the local monetary system, mainly used for the small denominations. HAYMANN AND WAHL (35) analysed the presence of dates on the coinage of Antiquity, including some Roman provincial examples. HAYMANN AND HELLBERG (34) focused on the occurrence of anniversary celebrations on civic coins, based on dated issues. MARTINI (47) studied the presence of eight different imperial countermarks with the name of GALBA on civic bronze coins in Pannonia, Moesia, Thrace and Asia Minor. WATSON (67) gathered the new evidence for obverse die-sharing in the Roman provincial coinage, correcting and updating the work of Kraft. WOYTEK (69) provided a general outline of the – rather rare – phenomenon of overstriking and reminting of Roman provincial coinage.

Regarding **iconographic studies**, KRENGEL (44) discussed the design of the two snakes on the Cistophoric coinage, linking it to the orphic cult and the creation of Dionysos. PUDILL (55) gave an overview of the presence of the figure of Antinous on Roman coins and medallions, including Roman provincial ones from about 30 different cities in the Eastern provinces. Also in his more general iconographic study of Antinous, he (56) referred to examples of Roman provincial coinage. AMANDRY (2) presented two Roman provincial coins for which portraits were transformed in modern times to Antinous, respectively from a portrait of Dionysos on a coin of Sardes (Lydia) and one from Amorium (Phrygia) with the bust of Caracalla. BRICAULT (16) discussed the appearance of the *Gens Isiaca* in Graeco-Roman coinage, i.e. the cults centred on Isis and associated with divinities such as Sarapis, Osiris, Harpocrates, Apis and Anubis, during the Hellenistic and Roman periods from the reign of Augustus until the reign of Maximinus Daia. Although the diffusion of the *Gens Isiaca* started slowly and was mainly limited to the city of Alexandria during the 1st century AD, the number of cities using Isis types grew steadily during the 2nd century and reached a peak during the Severan era, with a high popularity in Egypt, Asia Minor and the Middle East. Moreover, the two recent volumes of the *Bibliotheca Isiaca* series (18 & 19), which published new studies and unpublished material related to the Isis distribution in the Greco-Roman world, include Roman provincial examples. In his study on architectural structures on Roman coinage, ELKINS (31) also dedicated a chapter to the provincial issues. He discussed the different types of depicted monuments and studied their influence on the late imperial coinage. BENDSCHUS AND FEUSER (9) analysed the coin designs of ports on Roman coinage, including Roman provincial issues. BREITSPRECHER (15) discussed the image of a frontal temple with standing cult statue which was used by a number of cities with asylum rights between the reigns of Augustus and Domitian. IACULLI (40) presented an iconographical study of athletic games on Roman provincial coinage. JELLONEK (42) analysed the motifs on the coins of the Roman colonies in the East referring to foundation myths. NOLLÉ (50) focused on the provincial coins mentioning gods as their minting authorities, and proposed different hypotheses for their meaning and use. He also (51) discussed the particular motif of the eagle purloining sacrificial meat from an altar occurring at the coinage of different cities in Asia Minor and other eastern provinces, linking it to the foundation on behalf of Zeus. PERASSI (53) studied the resemblance between portraits of different personages on coins during the Hellenistic and Roman period, also including Roman provincial examples.

The **circulation and use** of coinage in the Eastern Roman provinces was a well-studied theme. Regarding the circulation of high-value coins, VAN HEESCH (36) built on the evidence of coin finds to argue that Roman imperial

aurei and *denarii* were the main currencies used to pay the soldiers in the Eastern part of the Roman Empire, only supplemented by local and regional silver series. HOWGEGO (39) analysed the circulation of gold coinage of Vespasian struck in the eastern provinces at Ephesus, Egypt (?), Syria and Judaea, based on old and new material. The finds of such coins in Britain, Italy and Raetia suggest military reasons for the long distance movement of gold coins and attest to a high degree of connectivity in the Roman Empire. STROOBANTS (61) used the city of Sagalassos (southern Asia Minor) and its wider region as a case-study to analyse the use of both imperial and provincial high-value coinage for large transactions, based on historical sources, hoards and isolated coin finds. ZAJAĆ (70) presented a study of the silver coins struck in the name of Trajan in Lycia and Cappadocia and found in Europe, with some conclusions of their circulation in the Roman empire and Barbaricum territories. Also several contributions on the finds of civic coins from the eastern provinces in the western part of the Empire should be mentioned. PFAHL (54) dedicated a monograph to this subject, with a catalogue of 1,173 provincial coins dating from Augustus to Gallienus found in Belgium, Carnuntum, Germany, Eastern France, Liechtenstein, Luxembourg, the Netherlands and Switzerland. The author also analysed the context in which these coins were found and discussed their circulation and possible use. DUCHEMIN (30) presented and synthesized the Greek and Roman provincial coin finds from the Nord-Pas-de-Calais and Picardy regions of Northern France. GENEVIÈVE (32) provided an updated catalogue and discussion of the Roman provincial coinage found in southwestern Gaul. GORINI (33) listed the civic coins found in Venice, both from the western and the eastern part of the empire. BODZEK, KOPIJ AND SMAGUR (12) presented a preliminary report of the project “Finds of Roman Coins in Poland – Lesser Poland” covering coin finds of Republican, Imperial, provincial and Early Byzantine origin, from the 3rd century BC until the 6th century AD. MYZGIN (48 & 49) discussed Roman provincial coins found in Ukraine. SIDAROVICH (59) gave an overview of the Greek and Roman provincial coins from the Eastern provinces found in Belarus.

Collection catalogues

Many new volumes containing Roman provincial coinage were published in the **SNG series**. They are listed here by country in alphabetical order. For Bulgaria, DRAGANOV (79) published the Greek and Roman provincial coins from Apollonia Pontica that are part of the Bobokov Brothers collection in the Numismatic Museum of Ruse. The Ptolemaic and Roman provincial coins from Egypt kept at the Archaeological Museum of Zagreb in Croatia were published by MIRNIK (85). Two SNG volumes were dedicated to the collection of the Bibliothèque nationale de France, respectively on the Alexandrian coins of Hadrian, Antoninus Pius and the Nomes (74), and on the Greek and Roman provincial coins from Paphlagonia, Pontus and Armenia Minor in northern Asia Minor (77). For Italy, ARZONE AND CAPPIOTTI (73) published the Classical, Hellenistic and Roman provincial coinage from the Civici musei d’arte in Verona. Three volumes were devoted to the collection of the northern coast of the Black Sea at the National Museum in Warsaw, respectively covering the coins from the mints from Bosphorus to Chersonesus (99), the coinage of the Bosphoran rulers from Leucon II to Ininthimeus (101), and the coinage of the Bosphoran rulers from Rhescuporis V to Rhescuporis VI, as well as the Greek centres in Sarmatia (102). Also for Poland, MIELCZAREK (84) published the Greek and Roman provincial coins from the Bosphoran Kingdom and Asia Minor in the collection of the Archaeological and Ethnographical Museum in Łódź, and BODZEK (76) dedicated a volume to the coinage from Thrace, Pontus, Dacia, Moesia Superior, Moesia Inferior and Colchis from the collection of the National Museum in Krakow. For Russia, two volumes were added for collections in Moscow: KOVALENKO (83) published the coinage from the Black Sea littoral in the collection of the Pushkin State Museum of Fine Arts, while AMBRAMZON, FROLOVA AND PETER (71) dedicated a volume to the coinage of the northern Black Sea area in the State Historical Museum. Finally, several private collections from Turkey containing Roman provincial issues were the subject of SNG volumes, with three volumes on the Ozkan Arikanturk collection for the regions of Troas (95), Aeolis (96) and Mysia (97), the first part on the collection of Yavuz Tatis with coins from Ionia and Lydia (94), and a volume on the Cetin Erdem Collection with material from Lydia and Phrygia (98).

Other important collection catalogues should also be mentioned here. Several public collections from Bulgaria containing Roman provincial coinage were published in the *Coin Collections and Coin Hoards from Bulgaria (CCCHBulg)* series, more specifically for the Regional Historical Museum at Blagoevgrad (72), the Regional Historical Museum at Pazardzhik (91), the museums at Sandanski, Petrich and Gotse Delchev (80), and the Regional Historical Museum of Sofia (78). In three contributions, PUDILL (88, 89 & 90) published rare and unpublished Roman

provincial coins struck during the reign of Hadrian in the eastern provinces. KLEIN (82) presented an analysis and full catalogue of 161 Roman provincial coins from the collection of the Herzöge von Württemberg-Neuenstadt, kept at the Coin Cabinet of the Landesmuseums Württemberg in Stuttgart. NOESKE *et al.* (86) published the coins from the mint of Alexandria of the Julio-Claudian dynasty in the Graeco-Roman Museum in Alexandria, with a total of 2,689 pieces. RABE AND NOESKE (92) catalogued the coins from Galba to Trajan, with 1,655 specimens. Also for Alexandrian coinage, STAFFIERI (93) offered a full catalogue of his own collection, including 274 coins from the reign of Augustus until Diocletian. Coins from the region of Lydia at the Istanbul Archaeological Museums were published by GÖKYILDIRIM (81), and those from the Manisa Archaeology Museum were catalogued by ÖNDER (87). BODZEK (75) presented an analysis of the ancient coins in the collection of Ignacy Terlecki kept at the National Museum in Krakow, including a small number of Roman provincial coins. WALCZAK (100) went into more detail on this collection, and gave an overview of the coins of the Bosporan rulers.

Cyrenaica and Crete

For the province of Cyrenaica and Crete, CHEVROLIER (111) discussed and compared the coin series struck locally at both regions during the start of the Roman Imperial period. ASOLATI (104) explored the history of the numismatic studies dedicated to Ancient Cyrenaica. The same author (106) published the proceedings of a conference (Padua, 2016) dedicated to the Cyrenaic coinage from the Archaic until the Byzantine period, with several contributions focusing on Roman provincial issues. CANOVARO *et al.* (109) presented the results of archaeometric analyses of the Roman provincial coinage of Cyrenaica during the 1st and 2nd century AD, using different methods. AMANDRY (103) gave an overview of the silver and bronze coins struck for circulation in Cyrenaica during the reign of Trajan, which were previously attributed to Caesarea in Cappadocia. JAWORSKI (113) presented the coin finds from the Polish campaigns at Ptolemais, including 89 coins of Roman Cyrenaica. Other publications on the Roman provincial coinage of the region included CATTANEO (110), who reexamined a series of civic coins showing the head of Roma and a bee most probably struck at Cyrene. On coin circulation, ASOLATI AND CRISAFULLI (107) presented the catalogue and analysis of a hoard of *c.* 1,000 coins found in Benghazi in 1939, consisting of both late Hellenistic, Roman Republican, Roman imperial and provincial silver coins, with the last specimen issued during the reign of Trajan. Hoards related to the Jewish Revolution in AD 115-117 – with special attention to the 1934 hoard from the Agora in Cyrene and the 1939 Benghazi hoard – are discussed in the second part of the monograph on coin hoards in Greek and Roman Cyrenaica by ASOLATI AND CRISAFULLI (108) and by ASOLATI (105). CRISAFULLI (112) summarized some coin finds from the Urbina Archaeological Mission in Cyrene, including 83 Roman provincial – especially Alexandrian – bronzes.

Achaea and Epirus

Regarding the Greek mainland, HUBER (116) studied some new coin types that can be linked to Nero's visit in the years AD 66/67, struck by different cities in Greece and Alexandria. VON MOSCH AND KLOSTERMEYER (124) used a set of medallions featuring Antinous issued by the magistrate Hostillios Markellos to reconstruct the travel route of Hadrian through Asia Minor and Greece in the years AD 131-132, and as possible witnesses of an imperial visit to Corinth and Isthmia. KREMYDI AND WARD (122) discussed the explosion in coin production in the Peloponnese region during the reign of Septimius Severus, with 42 active centres including some small cities who only issued coins during this period. KREMYDI AND IAKOVIDOU (121) studied circulation patterns in Corinth and Athens based on coin finds, comprising both local coins and Roman imperial coins. Regarding specific civic issues, VON MOSCH (123) studied a medallion with the portrait of Antinous, struck in Corinth under the magistrate Hostilios Markellos. KILLEN (117) discussed a coin type from Corinth issued in name of Caracalla, with on its reverse a building that most probably represents the sanctuary of Poseidon. HOSKINS WALBANK (115) used the coin types of civic coins issued during the reign of Hadrian and the Antonines to reconstruct the building programme and architecture of the temple of Palaimon at the sanctuary of Isthmia. KORKA AND LAGOS (118) discussed the civic coinage of the city of Tenea which was limited to the reign of Septimius Severus. The same authors (119) presented the coins found in graves at the excavations of Tenea, including some small civic bronze coins from neighbouring cities. TSAGKALIA (128) analysed a particular coin type from Patrae showing Dionysos on its reverse. VILLEMUR (129) presented some unpublished coins from the small agglomeration of Colonides struck under the Severans, and gave an analysis of the coinage (130). For the region of Megaris, the coinage of the small city of Aigosthenes during the Severan period was the subject of a contribution by KREMYDI AND AMANDRY (120). Regarding the region of Epirus, RINALDI (127) proposed a new interpretation

of a building found at Antigonea as a monetary workshop. For the civic coinage of the Greek islands, LE QUÉRÉ (126) used numismatic data in her historical study of the Cyclades under the Roman Empire, alongside other archaeological, epigraphic and historical sources. CALOMINO (114) presented a study of the civic coins of Corcyra (modern Corfu) from Septimius Severus to Caracalla, identifying three main phases of production and discussing the influence of the transition between workshops on the coin output and quality. POŁOSA (125) studied the coinage struck by the cities of Myrina and Hephaestia in the Northern Aegean island of Lemnos.

Macedonia

Turning to the province of Macedonia, DAUBNER (134) presented an overview of the coinage of the colonies of Pella, Philippi, Dium and Cassandrea, highlighting the particular coin designs of each individual mint. AMANDRY (131) reassessed his own study of the coinage issued for Philippi during the reign of Gallienus, based on the study of 16 new specimens. PAUNOV (136) analysed the very rare bronze coinage of Heraclea Sintica, which was probably issued during the reign of Hadrian and/or Trajan. Regarding coin circulation, the articles by BITRAK AND SEKUNDA (133) and BITRAK, BRILLOWSKI AND SEKUNDA (132) presented the catalogue of the finds from the excavations at Negotina Gradište, respectively during the campaigns of 2009-2011 and 2012. They include *c.* 50 Roman provincial coins mainly from Thessalonica, Stobi and the Macedonian Koinon. KOSMIDOU AND MALAMIDOU (135) discussed the coin finds from the eastern cemetery in Amphipolis, including 124 coins dating to the Roman period. SELKE (137) used a civic coin from the city of Stobi found in Wallersdorf as a starting point for a discussion of the Roman provincial coin finds in Germany.

Thrace and Moesia Inferior

Butcher (143) analysed the value marks and denominational system on 3rd century AD coins of Moesia and Thrace, including the interesting example of a 4 ½ assaria coin from Tomis. For Roman **Thrace** in general, Bricault (142) discussed the presence of the Egyptian god Sarapis on the obverse of the civic coinage, and Nollé (157) did the same for the wine god Dionysos. Boteva (141) analysed the appearance of two face-to-face busts (Gordian III and/or Philip II facing Sarapis/Theos Megas) on the coinage of Marcianopolis, Odessos, Mesambria, Dionysopolis and Tomis between AD 238 and *c.* 249, and suggested a possible interpretation as reference to a political-economic league between these cities. Tachev published type catalogues and analyses of the coinage of Apollonia Pontica (169), Anchialos (170) and Bizye (171). The coinage of Philippopolis was the subject of several publications. In two volumes, Varbanov (173) studied the coinage of this city dating from the reign of Domitian until the reign of Elagabalus. The first volume contains the study of the chronology, coin types and denominations, while the second volume presents the full catalogue. Paunov (159) went further into the start of the provincial coinage at Philippopolis during the reign of Domitian, while Peter (161) studied its pseudo-autonomous coins. The same author also reflected on the coin types of the civic issues in general (164), which showed an interesting interplay between local identity and integration into the Roman Empire. Also the civic coinage of Pautalia was a popular subject. Grozdanova paid attention to the coins issued in name of the emperors (148), readdressed the typical problem of attributing coins to respectively Caracalla or Elagabalus (149), and looked into the civic identity of Pautalia through the medium of coinage (150). Woytek (174 & 175) presented new numismatic evidence for the Thracian governor Asellius Aemilianus through the publication of some unpublished civic coins from the same city. Regarding other Thracian cities, specific iconographic studies on the civic coins from Bizye were published by Amandry (139) and Stoyas (166). Dimova (145) published the catalogue of the 157 provincial bronze coins of Anchialus at the Ancient Nessabar Museum in Bulgaria. Draganov (146) studied the coin types of the coinage of that same city. Peter (162) discusses the authenticity of a medallion from the city of Perinthos, with the portrait of Pupienus.

Turning to **Moesia Inferior**, Peter (163) presented an overview of the so-called pseudo-autonomous coinage, discussing the development of its coin designs. Lazarenko published four volumes on the coinage of Odessos from the reign of Augustus until Gordian III, based on the collections of several Bulgarian museums (153, 154, 155 & 156). Hristova, Höft and Zhekov (152) provided a revised edition of their monograph on the coinage of Nicopolis ad Istrum. Tachev dedicated two volumes (167: analysis and 168: catalogue) to the coinage of Dionysopolis, including the Roman provincial issues. The coinage of this city was also the focus on the article by Calomino (144), who used it as a case-study to discuss some aspects of the coin production in Moesia Inferior during the Severan Age. Peter and Stolba (165) analysed the presence of lighthouses and their connection to the river-god on the coinage of Istros during

the Severan period, including a catalogue of the specimens.

Regarding coin finds and circulation in this region, Tasaklaki (172) studied the monetary circulation and inter-city relations of Topeiros, Abdera, Maroneia, Traianopolis and Plotinopolis based on a statistical analysis of more than 1,200 Roman and provincial coins found in Aegean Thrace. Paunov (158) discussed the c. 3,500 coin finds from the sacred spring of Aquae Calidae, consisting of late Thracian and early Roman issues. Other finds from this region were published by Erol-Özdizbay (147) with a catalogue and analysis of the coins from the excavations at Hadrianopolis (site Edirne Kalesi), including Hellenistic, Roman provincial, Roman imperial, Byzantine and Ottoman material.

For the **Bosporan Kingdom**, Højberg Bjerg (151) presented a new analysis of the coin circulation during the Roman period (49/48 BC to AD 341/342), combining evidence from both single finds and hoards. There were several publications of Bosporan coin hoards, with, for example, Abramzon (138) publishing 109 Bosporan gold coins from the 2nd - early 3rd century AD, found at the settlement of Volna at the Taman peninsula. Bodzek and Madyda-Legutko (140) presented six coins from the Bosporan Kingdom found in Poland. The **Thracian Kingdom** was the subject of a contribution by Paunov (160), who analysed the coinage of the client-king Rhoemetaces I (about 12/11 BC to AD 12/13). His coinage consisted of a considerable series of bronze coins and some rare silver drachms and didrachms, usually showing a combination of both Augustus's and Rhoemetaces's portrait and titulature.

Moesia Superior and Dacia

For **Moesia Superior**, DOYEN (178) analysed a series of coins struck at the provincial mint of Viminacium during the reign of Valerian I and Gallienus bearing the legend IMP [] – PIVS FEL AVG on the obverse, and dated it to the beginning of the year 257, i.e. the last period of production of the mint prior to its transfer to Cologne. VOJVODA AND MRDIĆ (183) dedicated a monograph to the coin finds from the Viminacium Necropolis of Visa Grabalja, consisting of both Roman imperial and provincial coins. STELLA (182) gave an overview of the Viminacium coins found at Aquileia, suggesting that they played a prominent role in supplying bronze coins to the military sites of this territory. MIŠKEC (180) focused on the coins from the same mint found at 33 sites in present-day Slovenia. Turning to the province of **Dacia**, CAVAGNA (176) discussed the dated coinage struck during the 3rd century AD. Regarding coin circulation in the wider region, GĄZDAC (179) discussed hoarding patterns in the Roman provinces of Dacia, Pannonia inferior, Pannonia Superior, Moesia Superior and Moesia Inferior during the 2nd and 3rd century AD. MUNTEANU (181) analysed the Roman coin finds in the “barbarian” territory between the Roman provinces of Dacia and Moesia Inferior, including both hoards and isolated finds. The monetary circulation in the region between Dacia and Pannonia is the subject of a monograph by DOMOCOŞ (177).

Asia Minor

Several contributions focused on specific aspects of Roman provincial coinage for more than one region or **Asia Minor in general**. FILGES (247) published an impressive monograph on the coinage of 14 Roman colonies spread across Asia Minor, i.e. Sinope, Parium, Apamea, Antioch in Pisidia, Lystra, Iconium, Ninica Claudiopolis, Cremna, Alexandria Troas, Comana, Olbasa, Parlais, Germa and Mallus. Based on a corpus of over 8,000 coins, the author especially focused on their designs and showed how their distinctiveness and use functioned as an expression of identity. HOSTEIN (269) approached the theme of city networks and integration in Asia Minor through the information given by the civic coins struck in the AD 240s-250s, and examined the effect of the ‘crisis’ context in which the Roman Empire found itself. WATSON (349) made an impressive contribution to our understanding of the system of coin production and die sharing in southern Asia Minor during the 3rd century AD. Through the study of the civic coinage from Pamphylia, Pisidia and Cilicia – based on a comprehensive die study of more than 6,000 coins – he proposed that shared obverse dies could be the result of loans or sales between cities, whereas stylistic similarities rather point to itinerant die-engravers. Die sharing is also the subject of several articles by the same author, respectively re-examining the connections in the regions of Pamphylia, Pisidia and Cilicia (347), and approaching the production of ‘pseudo-autonomous’ bronze coins from this point of view (348). CALOMINO (214) discussed a die-sharing network across the Hellespont region during the reign of Severus Alexander, and argued that monetary co-operation might have gone hand in hand with relations on a diplomatic and cultural level. Another study on ‘pseudo-autonomous’ coins was presented by HOSTEIN AND MAIRAT (271), who analysed the distribution pattern and the main features of this group struck during the reigns of Decius, Gallus and Aemilian. ÖZTURK (305) focused on the widespread phenomenon of *homonoia* coinage in Asia Minor, commemorating agreements between two cities. Studies on specific iconographical

themes were published by GÜNEY (255), who addressed the possible correlation between earthquakes attested in Asia Minor and the appearance of Poseidon on the coinage, with data from North-Western Asia Minor, Western Asia Minor and Cilicia, and BRICAULT (142), who discusses the appearance of the Egyptian god Sarapis on the obverse of Roman provincial coinage in Asia Minor and Thrace. MARTIN (289) focused on the motif of two clasped hands on civic coins from Amorium, Prynnessus, Laodicea, and Sagalassos, showing the cities' connections to Rome. AMANDRY (186) discussed two series of Roman provincial coins (RPC 5423 and 5448) struck in name of Tiberius but without ethnic, for which the issuing city remains unknown.

HOWGEGO (274) provided a starting point for the discussion of **coin circulation** in Roman Asia Minor, focusing both on low value coins and gold and silver ones. CHAMEROY (221) confronted the data from collections on the one hand and excavation finds on the other in the study of the production and circulation of civic bronze coins, using the cities of Pergamon, Aphrodisias and Ephesos as a case study. He also discussed the circulation of imitations from the Gallic Empire in Western Asia Minor, which were possibly imported through trade with Italy and Egypt (222). Two bibliographies on coin finds during archaeological excavations in Asia Minor were published by ÇIZMELI ÖĞÜN (227) and by ÇIZMELI-ÖĞÜN, ÖZBİL AND YALÇIN (228).

Several articles dealt with **silver coinages** issued in Asia Minor during the Principate. AMANDRY (192) presented a catalogue and a re-examination of the cistophoric coinage of Hadrian struck in Bithynia and Asia, based on the data from RPC III. CALOMINO (217) tackled the question of the mint of the *cistophoroi* issued during the Severan period, proposing Nicaea in Bithynia as production place. BUTCHER (212) analysed the Lycian drachms and fractions dating to the Roman imperial period. He focused more precisely on their occurrence in hoards of *denarii* throughout the empire, arguing that they were circulating at the same value given their similar size, style, weight and silver content. On silver issues issued at the civic level, AMANDRY (185) presented a group of coins struck during the reign of Hadrian in the cities of Aegeae, Seleukeia, Tarsus and Mopsus, which can be linked to imperial visits and civic expenditures. HAYMANN (258) focused specifically on the silver coins struck at Aegeae during this reign, adding 410 new coins to the corpus and presenting a supplement to the existing die-study, a couple of new types, and metallurgical and metrological data for each issue.

For the production of Roman provincial bronzes in the province of **Bithynia-Pontus**, DALAISON (229) focused on the attestations of the Roman imperial cult on civic coinage from Bithynia, Paphlagonia, Pontus and Armenia Minor, and discussed the small set of pseudo-autonomous coinage struck in the same region (230). Also for northern Asia Minor, DALAISON AND RÉMY (234) focused on some distinctive features in the imperial titles on the coinage of 18 cities, including the absence of standard titles, the presence of certain titles before they were officially attributed, or the presence of *cognomina* unknown in the Roman imperial coinage. Moreover, both the empresses Messalina and Octavia and Hadrian's favourite Antinous occur on coins in these regions, although they never made it to the obverses of the official Roman imperial coinage. DALAISON AND FERRIÈS (233) discussed the coinage struck by the colonies of Apameia and Sinope during the reign of Augustus. SAUER (315) compared the civic coin production from the cities of Amaseia, Komana, Pompeiopolis, Neokaisareia, Neoklaudiopolis, Nikopolis, Sebasteia, Sebastopolis and Zela, studying various aspects like chronology, volume of production, circulation, denominations and coin types. Focusing on the region of Bithynia, DEVECIOĞLU (237) presented the study of the civic coins from Iuliopolis struck during the Roman imperial period from the reign of Vespasian until Gallienus, especially focusing on the coin designs of the coinage. GÜNEY published new specimens struck by the city of Nicomedia from several public collections (254 & 256), and a case-study of the *homonioia* coinage struck for the same city and Smyrna, Laodicea, Pergamon and Perinthus (257). NOLLÉ (302) focused on the significance of the cult of Artemis on the coinage of Prusa ad Olympum, showing the influence of Artemis Ephesia. SPOERRI-BUTCHER (321) published a coin without an imperial portrait from Heraclea Pontica dating to the mid 3rd century AD, found in a funerary context in Kerch (Crimea). TÜRKÖĞLU (339) presented the catalogue and analysis of the civic coins from Chalcedon issued during the Greek and Roman period (Tiberius – Gordian III). VON MOSCH (293) focused on the series of bronze medallions struck by the city of Bithynion-Klaudiopolis after the death of its native Antinous. ZAJAÇ published two studies on the reign of Trajan: (352) discussed the similarities between the imperial coinage and some Roman provincial issues, both for the obverse and reverse types. (353) argued for an attribution of 9 groups of coins to Nicaea, Prusias and Amastris. Turning to the region of Paphlagonia, BRICAULT AND DELRIEUX (206) studied the hitherto largely unknown mint and history of

Gangra-Germanicopolis, a city that knew a rather elaborate coin production during the Severan dynasty. The monograph contains a total of 188 coins from public collections, numismatic literature and auction catalogues, and presents more than 40 unpublished pieces. Two addenda to this work were published soon afterwards, adding some new types and specimens (207 & 195). DALAISON, DELRIEUX AND FERRIÈS (232) gave an overview of the history and coinage of Abônoteichos-Ionopolis, with intermittent issues from the reign of Trajan until Trebonianus Gallus. For the **Pontus** region, AMANDRY (189) discussed the rare coinage struck in name of Trajan at the city of Megalopolis Sebasteia, adding two unpublished series. BURNETT (209) identified an unknown piece from Zela in the collection of the British Museum, and suggested that the coin may have been struck in connection with a hitherto unknown visit by Caracalla to the East in AD 207. DALAISON AND DELRIEUX (231) gathered all information on the history, geography and coin production at Neoclaudiopolis, with civic bronzes from the reign of Trajan until the reign of Septimius Severus. WOJAN (350) offered an update to his 2006 catalogue of coins from Trapezus, adding 5 new specimens.

Regarding coin circulation and use in the province, ARSLAN (198) presented a group of Roman imperial *denarii*, *antoniniani* and civic bronze coins found in burial contexts at Iuliopolis, which might have served as Charon's obols. Another overview on the coin finds of this necropolis was published by DEVECIOĞLU (238). GÜNEY (251) analyzed the presence of civic coins from Nicomedia in hoards, excavation finds and museum collections. The same author (252) used numismatic evidence alongside historical and epigraphic sources to discuss the economic relations and connectivity between Nicomedia and the Western Black Sea coast under the Roman Principate. CALOMINO (216) addressed the presence of civic bronzes from Bithynia in the Balkan peninsula during the late Severan period and beyond. Through the study of coin finds and archaeological data from modern Serbia and Romania, he was able to define a specific group of Bithynian coins that was intentionally minted for circulation in this region. VOJVODA AND CRNOBRNJA (343) discussed the coinage from the Bithynian mint of Nicaea found in present-day Serbia. LENGER AND ATASOY (286) gave an overview of the 173 coins found during the 2009-2021 excavations at Thios in Bithynia, including 23 civic coins.

For the **province of Asia**, BENNETT (202) published an impressive monograph on the interaction between the civic elites and the coinage they issued, which often displayed their eponymes. In several chapters, he outlined the activities and functions of the local elites in the civic government, presented the current state of the debate on coin eponymes, analysed the numismatic data from Laodikeia (Phrygia) and Thyateira (Lydia), and showed how coins were used as media to express civic pride and self-glorification by the local elites. Another overarching study on Asia was presented by AMANDRY (190), who analyzed a number of coins reminiscent of the proclamation of Caracalla as *augustus*. The pseudo-autonomous coinage of the province was the subject of an article by SPOERRI-BUTCHER (320), who investigated a series issued in the name of the Senate and linked them to specific denominations and the workshop system. Regarding coin circulation, CARBONE (219) discussed epigraphic attestations of imperial *denarii* in the province of Asia between 133 BC and AD 96.

For **Troas**, NOLLÉ (300) used civic coinage to address the mythic traditions in the Propontis region, and showed how it was considered as a border and barrier zone between the continents of Europe and Asia. After an overview of the ancient history of the perception of this border region, he discussed civic coins showing Io, Dardanos, Aeneas, Alexander the Great and Hero and Leander among others. The Roman colony of Alexandria Troas was a very popular area of research. BURNETT AND MARTIN (210) argued for the attribution of an early imperial series of bronze coins to the city (Augustus – Tiberius – Claudius), based on evidence from coin finds and iconographic similarities with later issues. ESCH (244) focused on the wider context of the coin production during the reign of Vespasian. LUCHELLI (287) presented a new type struck at the colony under Commodus, showing a ploughing scene on the reverse. A coin from Alexandria Troas from the reign of Maximinus Thrax showing the emperor riding a *biga* pulled by oxen, is the subject of a study by BOSSMANN (203). ÇİZMELİ ÖĞÜN (225) used the coins with the depiction of the cult statue of Apollo Smintheus to discuss the god's sanctuary in the city. Two publications focused on die-links of Alexandria Troas: HOSTEIN AND MAIRAT (272) analysed some unpublished links from the 3rd century AD based on the material from RPC IX. HOSTEIN (267) tackled the question of the dating of the anonymous issues from the colony, using die links with coins issued during the reign of Valerian and Gallienus. BURSCHE AND MYZGIN (211) discussed a series of gold coins struck by the Goths in their homeland, using the dies and possibly also tools and mint-workers plundered from the mint of Alexandria Troas. HOSTEIN (268) continued this study, discussing the 'barbarian' gold imitations of civic coins.

Regarding other cities in this region, AMANDRY (187) focused on some coins struck in Ilium in name of Commodus Caesar, all reflecting the Trojan identity of the city. STOYAS (322) studied the civic coins from Abydos showing Alexander the Great crossing the Hellespont, struck during the reign of Commodus and also during the first part of the 3rd century AD. NOLLÉ (299: '13') focused on the same iconographic scene, especially for the series of medallions struck at the city during the reign of Maximinus Thrax. The second part of this contribution (299: '14') analysed a coin from Antandros issued under Severus Alexander, depicting Aeneas leaving the Troad. HOSTEIN (270) presented a coin from Dardanos issued in the name of Geta from the BnF collection, with a retouched ethnic on the reverse. WARTENBERG (344) studied a small bronze coin from Skepsis struck during the reign of Trajan. Surprisingly, a Hellenistic die from the city's coinage was reused for the reverse of this limited series, of which only three specimens are known. LENGER (284) discussed in detail a new medallion struck in name of Commodus for the city of Assos, found in a small cistern in the agora. On coin circulation in the Troas region, ÇIZMELI ÖĞÜN (226) studied the hoards buried around the mid. 3rd century AD, arguing for a link to the invasion of Anatolia by the Goths. The same author (224) uses the Smintheion hoard to analyse the movement of the civic issues from Alexandria Troas in the Mediterranean. ESCH (244) added some notes on a hoard that was found in the same city at the site of the forum. LENGER (285) presented an overview of the 228 Greek and Roman provincial coins that were found at Assos during the 1985-2005 campaigns.

Turning to **Mysia**, the Roman colony of Parion was studied by KELEŞ, OYARÇIN AND YILMAZ (278), with a focus on the coin types and the presence of magistrates' names on the civic coinage. Regional circulation patterns were analyzed for the Classical, Hellenistic and Roman Imperial period based on the site finds from the same city (277). TEKIN AND EROL-ÖZDIZBAY dedicated two articles to the coin finds from Allianoi near Pergamon, respectively from the 2000 and 2001 campaign (335 & 336). For Aeolis, BRICAULT (205) studied the presence of Isis, Sarapis and Harpocrates on the coinage of Aegae from the reign of Vespasian until the reign of Severus Alexander. Several studies were published for the city of Kyme. CACCAMO CALTABIANO, CARROCCIO AND PUGLISI (213) presented the coin finds of the Italian excavations, including Greek, Roman imperial, Roman provincial and Byzantine coins. Moreover, the article discussed the coin designs and metrology of Kyme's civic coins, in comparison to similar coin types in the region. Another contribution on the coin finds was published by CARROCCIO *et al.* (220). PUGLISI (311) presented an iconographical study of the civic coinage of Kyme from the reign of Nero until the reign of Gallienus. Also for Aeolis, AMANDRY *et al.* (196) published an unknown coin type from Elaea, found in a monetary depot together with some imperial pieces during excavations in Reims (France). For the island of Lesbos, HILTMANN (262) presented a coin struck in name of Mytilene (probably) during the reign of Antoninus Pius, showing a local female citizen on the obverse. EROL-ÖZDIZBAY (242) studied the coin finds of Pordosilene/Poroselene, a city situated on one of the Hekatonnesoi Islands located between Asia Minor and Lesbos. Next to the Classical and Hellenistic coinage, she identified eight types of Roman provincial coins struck during the 2nd and 3rd century AD in name of the city.

There have been a number of important contributions for the region of **Lydia**. HOCHARD, BLET-LEMARQUAND AND BAUX (264) questioned the existence of a central workshop for the *conventus* of Lydia between the reign of Commodus and the reign of Philip I, based on both die links and metal composition. HOCHARD, BLET-LEMARQUAND AND SIGOT (265) addressed the issue of the end of the Roman provincial coinage in the region through the data obtained from metal analyses. Moreover, several articles focused on the coinage of specific Lydian cities. ALTINOLUK (184) presented a unique coin from Hypaipa in Lydia, and identified the image of a priest on the reverse as a reproduction of a fire ritual taking place in the city's cult for Artemis described by Pausanias. AMANDRY (191) examined the sharing of a die of Septimius Severus by the cities of Akrasos and Thyatira in Lydia and Pergamon in Mysia, with the addition of another reverse type in AMANDRY (194). The same author (193) analysed a number of coins struck in Attaleia during the reign of Septimius Severus. BARBARA (201) discussed a unique issue from Maeonia struck in name of the local archon Quintus II for Marcus Aurelius, which shows Demeter in a biga on its reverse. Moreover, the countermark of a Victory on the obverse dating to *c.* AD 217 suggest that the coin was in circulation for a long time. CALOMINO (215) questioned the use of imperial portraits by provincial workshops, focusing on a coin series from Tralles in Lydia. The coins show the personification of the Senate as a veiled female bust, and is clearly similar to the portrait of Caecilia Paulina, wife of Maximinus I Thrax. These typical characteristics also occur on some anonymous bronze coins and on some series showing the personification of the Boule, suggesting the depersonalization of Paulina's portrait. CLARK

(223) examined the renaming of Philadelphia Neocaesarea using numismatic evidence, which made it possible to date this to the reign of Tiberius. Another contribution on Philadelphia was published by MARTIN (290), who presented an unknown coin type showing the mythological figure Scylla on its reverse and alluding to a *homonoia* with Smyrna.

There have been several contributions on the coinage of Sardis. EVANS (245) studied some provincial coin types from the excavations at the city to address the problem of the Third Neokorate of the city. She also discussed the presence of Kore/Artemis on the 2nd century AD coinage, linking it to the Second Sophistic and the interest in reviving ancient local history (246). Also STRASSER (323) focused on the civic coins from the reign of Elagabalus attesting to the Third Neokorate and to the worship of Helios / Sol and Kore. HEUCHERT (261) focused on two coins from a series issued by the Ionian ‘Koinon of the Thirteen Cities’ – probably centred on Sardis – during the reign of Antoninus Pius. The coins bear the name of Marcus Claudius Fronto, a member of the local government. After a brief overview of the series, he presented one type with tooled reverse legend and one forgery. HOCHARD (263) analysed a provincial coin struck under Titus in the collection of the BnF, and argues for an attribution to the mint of Sardis, but does not believe it to be a *homonoia* coin. Also for this city, VON MOSCH (294) discussed a new medallion with the portrait of Antinous on the obverse.

METCALF (291) analysed the coin issues of Themenotyrae struck during the reign of Valerian I and Gallienus, with a short discussion of the chronology, die and style links with other cities and some iconographic themes. NOLLÉ (298) discussed the coinage of the small city of Mastaura, linking its coin designs to mythological traditions. SAVIO (316) presented an unpublished coin from Thyatira struck in name of Severus Alexander from the collection of the Bibliotheca Oliveriana di Pesaro (Italy). TANRIÖVER (329) examined an anonymous civic coin from Philadelphia with Demos on the obverse and a panther on the reverse, suggesting a link with the Dionysos cult. ÖZBİL (303) presented an overview of the coin finds from the excavations at Nysa from the 1992-2012 campaigns, comprising Hellenistic, Roman imperial and provincial, Byzantine and Islamic coins.

Turning to **Ionía**, KARWIESE (276) published an important volume including die studies, metrological analyses and supplementary commentary on the civic coinage of Ephesos. The monograph supplements the catalogue of the collection kept at the Institut für Numismatik und Geldgeschichte in Vienna, which he published in 2012. KARASCH (275) presented a Roman provincial coin struck in name of Antoninus Pius, mentioning the second Neokoros of Smyrna on its reverse but most probably struck in Ephesos. NOLLÉ (301) reflected on the rare presence of Okeanos on the coins from the city. SCHACHINGER presented the coin finds from the theatre in Ephesos in two articles (317 & 319), and also published an overview and contextual analysis of coin circulation in the city from the Hellenistic until the Byzantine period (318). For Samos, EHLING AND SELKE (240) discussed a coin dating to the reign of Gallienus from the collection of the Staatliche Münzsammlung in Munich, which was probably found on the island by the archaeologist Ernst Buschor. HOSTEIN AND MAIRAT (273) focused on the civic coinage of Colophon from the mid 3rd century AD, discussing several aspects like coin designs, names and titles of local magistrates, and civic-imperial relationships. WOYTEK (351) presented the first known coin with the portrait of Domitian from the city of Metropolis. The coin finds from Smyrna (campaigns 2008-2012) were catalogued and analysed by ERSOY, ÖNDER AND TURAN (243).

Regarding the region of **Caria**, DELRIEUX (235) studied a coin series from Mylasa issued during the reign of Hadrian. The coins mention the name of Iulius Damianus, who supposedly paid for the production of the series. The same author (236) published the Roman provincial coins issued in name of the city of Iasos found during the excavations of the site. ELVERS (241) reflected on a bronze coin of Alabanda, and suggested an alternative identification of the facing portraits on the obverse as Tiberius and Livia, while the reverse might show Drusus Minor, Tiberius and Germanicus Caesar. REQUIER (312) discussed an anonymous civic type from the city of Cos, featuring Heracles and Hera and probably dating to the 230s AD. TÜRKÖĞLU (340) compiled a catalogue of the Roman provincial coinage of Keramos, based on publications, local museum collections and some private collections. A preliminary rapport on the site finds – including Roman provincial coins – from Stratonikeia (campaigns 2008-2014) was published by TEK, KÖKER AND SARIIZ (333).

Turning to the **province of Lycia-Pamphylia**, TEK AND SANCAKTAR (334) discussed a coin type from Arykanda struck during the reign of Gordian III, showing an unknown depiction of Kakasbos and the main source of the Arykandos river on its reverse. On the coin circulation at this city, SANCAKTAR (314) published an article on the finds from the bathing complex, including Roman provincial material. Also for Lycia, TEK (331) studied the rare Roman

provincial coinage from Podalia struck in name of Gordian III and Tranquillina. BULUT AND ŞENGÜL (208) presented the coins found during the excavation campaigns of 2009-2012 at Andriake, including Hellenistic, Roman imperial, Roman provincial and Byzantine coins. In Pamphylia, BRICAULT (204) analysed the appearance of the Egyptian gods Sarapis, Isis and Harpocrates on the coinage of Aspendos. Their abundant presence suggest that they were deeply rooted in the civic pantheon, and some issues representing Sarapis in front of an altar or within a temple might point to the existence of a public cult space for this deity – and possibly his family – in the city. ÜNAL (342) presented a study on the civic bronze coinage from Magydos (Tiberius – Gallienus). The author compiled a type catalogue (including 13 unpublished types), and analysed the coin types, denominations, numerals and circulation. TEK AND KÖKER (332) mentioned an unpublished bronze coin from Side struck in the name of Commodus kept at the Side Archaeological Museum. Another new type from the same city was published by GREIF (250), dating to the reign of Caracalla and showing a galley on its reverse. Furthermore, HOLLSTEIN (266) presented a new *homonoia* coin struck during the reign of Valerian I in name of Attaleia and Side. WATSON (346) discussed an apparent case of die-sharing between the city of Perge and Laranda in Lycaonia for the reign of Philip I, but argued for a so-called phantom-link created by the modern tooling of the reverse legend. For coin finds in the region, WATSON (345) published a hoard from John Mossop's collection which is now in the Fitzwilliam Museum. The hoard consists of 72 civic bronzes dating from the reign of Caracalla until the reign of Aurelian, including coins from Perge (36), Aspendos (2), Attaleia (1), Magydos (2), Sillyon (1) and Selge (1). TEK (330) presented a preliminary analysis of the coin finds from Side found during the excavations between 1947-2015, including 281 Roman provincial coins.

The **province of Galatia** was a popular area of study during the last years. Regarding the region of Phrygia, MAIRAT (288) studied the coins struck by the Roman colony of Apamea from Septimius Severus until Elagabalus, including a full catalogue. He discussed the first appearance of the famous reverse showing the arch of Noah, and showed how a number of coins probably represent Elagabalus instead of Caracalla. NOLLÉ (296) presented a case-study on two coins from Kadoi to show how the designs of local coins can help us to understand the mythical traditions of a city. MISSERE FONTANA (292) resumed a 18th century discussion on the authenticity of a medallion with the portrait of Annia Faustina struck in occasion of games held in her honour in Laodiceia. KERSCHBAUM (279) studied the cult of Apollo in his different forms in Hierapolis, combining numismatic and epigraphic data. Also for this city, CAMILLERI (218) discussed some aspects on the coin circulation, based on the more than 3,000 coin finds dating from the Hellenistic to the Seljuq Era. TRAVAGLINI AND CAMILLERI presented a general overview of the monetary finds (337) and gave an analysis of the coins found in funerary contexts in the same city, including Roman provincial ones (338). The coinage of Iconium in the region of Lycaonia was the subject of the article by VON MOSCH (295), who studied the coin designs of Perseus and Andromeda on the reverses in comparison to statuary examples.

Turning to the mountains of **Pisidia**, KÖKER (283) gave an overview of the civic coins struck by the Roman colonies of Antiochia, Komama, Kremna, Olbasa and Parlais. ASHTON (200) listed the Roman provincial coins from various cities in the region kept at the Archaeological Museums of Afyon Karahisar and Fethiye, with respectively 154 and 66 specimens. NOLLÉ (294) studied a common image on the civic coinage of Selge, showing the main sanctuary of the city, and reflects on the possible identification of the two pictured 'rods'. STROOBANTS (321) presented a regional analysis of coin production in 3rd century Pisidia and Pamphylia and proposed some possible explanations for coin production based on a number of case-studies. TALLOEN, STROOBANTS AND DEGRYSE (324) combined archaeological, geological and numismatic data from the cities of Seleukeia, Selge and Sagalassos to illustrate the popularity of Hephaistos in Pisidia, and showed how his presence on the civic coinage can probably be linked to production of arms to supply the army. For the city of Sagalassos, POBLOME, TALLOEN AND VANDAM (304) used two coin types with an image of Demeter on the reverse as a starting point for a discussion of the agricultural evolutions and polis-chora integration in the region during the 2nd and 3rd century AD. STROOBANTS (322) reflected on everyday coin use at that same city and its territory during the Roman period, based on historical and archaeological data and a contextual analysis of the coin finds. DÖNMEZ-ÖZTURK (241) presented a series of coins struck in name of Termessos and kept in the Istanbul Archaeological Museum, dating to the Hellenistic and Roman imperial period. KÖKER (281) analysed the Roman provincial coinage from the city of Komama struck between the reigns of Antoninus Pius and Trajan Decius, discussing its reverse designs and legends, denominational system, volume of production and countermarks. Regarding coin circulation, TÜTÜNCÜ (338) used the coin finds from several Pisidian sites, hoards, and relevant museum collections to

study the communication between cities. SANCAKTAR (313) presented the material found at Pisidian Antioch during the 2008-12 campaigns, including Greek and Roman civic coins, Roman imperial coins and Byzantine coins, and confronted the material with the data from Sagalassos. KÖKER (281) provided an overview of the coin finds from Seleukeia Sidera, including 14 provincial coins.

Regarding **Cappadocia**, GANSCHOW (248 & 249) published a re-examination of the coinage of the Cappadocian Kingdom and the cities of Caesarea, Tyana and Hierapolis am Samos, based on recent publications and new material from the private collection of Detlev Henseler.

For the **province of Cilicia**, HAYMANN (259) presented a full catalogue of the civic coinage of Aegae, and used this material for a historical study of the city, with special attention to the construction of identity. An update and some corrections to this contribution was published in HAYMANN (260), adding 4 new coin types. AMANDRY (188) identified two unpublished coins from Zephyrium struck during the reign of Marcus Aurelius, and reattributed a third one to Commodus. AMANDRY AND VILLEMUR (197) discussed two coins in the collection of the Bibliothèque municipale de Versailles, respectively struck in Tarsus during the reign of Commodus and at Anazarbus under Alexander Severus. Also for Tarsus, PERA (306) discussed a type representing Tyche and the river god Knidos, and ÖZDEMİR (304) analysed the coin designs of deities and personifications on the civic coinage. GÜNEY (253) investigated a coin from the collection of the Istanbul Archaeological Museum, and suggested an attribution to Anchiale instead of Soloi-Pompeiopolis. TAHERER (326) argued for the attribution of a series of bronze coins struck under Claudius in the name of Caesarea to Mopsuestia, based on clear similarities of the coin types with the other coinage of that city. Regarding coin circulation, POLOSA (308, 309 & 310) presented short overviews of the coins found at Elaiussa Sebaste, including Roman provincial coins. ARSLAN AND POLOSA (199) discussed a hoard probably uncovered in the area of that same city, which contains some Roman provincial coins from Cilician cities next to late-Hellenistic issues.

Turning to the **province of Armenia**, KOVACS (283) discussed a small series of bronze coins struck in name of Artaxias III – client-king in the reign of Tiberius – and identifies a number of hitherto unidentifiable coins as imitations of these types. TAMEANKO (328) discussed the coin series issues under the Herodian kings of Armenia, i.e. from Tigranes V until Tigranes VI.#

Syria and the East

Regarding general studies for this area, NURPETLIAN (400) gave an overview of the pseudo-autonomous coinage struck in the Levant, which was rather rare but showed a great diversity in appearance and size. The article by OLIVIER AND AUMAÎTRE (402) described monetary development in the Levant during the reign of Mark Antony and Cleopatra, arguing that the monetary production of the cities in this region seems to point to a politic of reorganization and order.

For the precious metal coin production in the province of **Syria**, NURPETLIAN delivered full studies of the tetradrachms struck at both the mint of Damascus (398) and Emesa (401) during the reign of Caracalla. SANCINITO (404) presented a die-study of 150 tetradrachms struck at Antioch during the reign of Trajan Decius, and argued that this coinage was struck pay the Syrian troops. AWIANOWICZ (356) explored some peculiarities in the legends of *aurei* and *denarii* struck in Syria during the reigns of Vespasian and Titus, such as untypical letter shapes, omissions, interchanging or fragmentary etchings of characters. Regarding the civic coinages, BUTCHER (364) offered an analysis of 31 small bronze coins probably struck in Laodicea during the reign of Domitian in 84/85 AD, and studied the representations of temples and sanctuaries on the civic coinage of Heliopolis (366). LICHTENBERGER (393) analyzed the rare orientation of Elagabalus facing left on the coinage of Abila and some other Syrian cities, probably linked to the identification of the emperor with the sun god. HENDIN AND BACHAR (387) reattributed a bronze coin showing a temple on the reverse to Gaba, which was previously thought to be issued by Herod Agrippa I. FARHI AND BACHAR (381) presented two unknown bronze coins from Iamneia dating to the early Roman period, and suggested assigning a third type – traditionally attributed to Gaza - to this same city.

For **Phoenicia**, several studies have been published on the coinage of Roman Tyre. HIRT (388) provided a survey of the reverse designs of Tyrian civic bronzes from the 1st until the mid 3rd century AD, and more specifically focused on the presentation of foundation myths and their intended audience. BIIOVSKY (361) discussed some rare coin types dating to the 2nd and 3rd century AD, depicting a building façade, Europa and the bull, and Cadmus and clasped hands. BUTCHER (367) studied a type dating to the reign of Philip I and argues that the reverse type refers to a nearby water source. Two contributions focus on Demetrias (by the Sea): FARHI AND BESSARABOV (383) presented some unpublished

types and reviewed the entire civic bronze coinage of the city. BESSARABOV AND FARHI (358) focused on an unknown countermark and suggested a link to Mark Antony. The Greek and Roman provincial coinage from Dora is the subject of the work by MOTTA (397). This monograph mainly focused on the designs and epigraphy of the coins, and used this material to study the political and socio-cultural evolution of the city. KROPP (391) studied the coin designs of Tyche on the civic bronzes of Berytus, which helps us to understand the cultural and religious life of Roman Phoenicia. SHAICK (407) analysed the presence of the figures of Heracles and Perseus on the Roman provincial coinage of 'Akko-Ptolemais.

Regarding **Roman Palestine**, FARHI (370) analyzed die sharing and other links between different mints in the south of this region during the 2nd and 3rd centuries AD, mainly between Gaza and Raphia. LICHTENBERGER (394) focuses on architectural depictions of temples on the civic coins from Palestine, with examples from Antipatris, Caesarea Maritima, Caesarea Philippi, Dora, Hippos, Neapolis, Nysa-Scythopolis, Samaria-Sebaste and Sepphoris. FARHI (371) described an unpublished coin type of Gaza dated 52/51 BC which apparently bears the portrait of Cleopatra VII, alongside with two other coin types struck during this year. He also discussed the presence of Io and Minos on the Roman provincial coinage of this city (374), and showed how civic coins from Gaza were used as flans for Bar Kokhba overstrikes (372). The same author published an overview of the coinage of Diospolis during the Roman period (375). BAR-NATHAN AND BIJOVSKY (357) discussed a coin struck in the name of Hadrian depicting the foundation of Colonia Aelia Capitolina, linking it to the emperor's visit to the city and the outbreak of the Bar Kokhba revolt. FARHI (376) proposed the reattribution of a series 40 types of provincial tetradrachms with Dionysian motifs from Aelia Capitolina to Nysa-Scythopolis. SANDBERG (405) gave some thoughts on the pseudo-autonomous coins of Flavia Neapolis and presented a new view on the coinage of the same city struck under Philip I, linking it to a civic festival (406). BIJOVSKY (359) attributed an unknown coin type showing a nursing woman, found during excavations in Sepphoris, to Caesarea Paneas. MANSFIELD (396) discussed the coin types of the coins struck in name of Antipatris during the reign of Elagabalus, which shows a clear connection to the worship of the Yarkon River. LE BLANC (362) reconsidered the presence of mythological founders on the coinage of Ascalon during the late Hellenistic and Roman period, focusing on the Lydian generals Moxos and Ascalus and the local goddess Derceto. PORTO (403) studied the provincial coinages at the western and eastern margins of the empire, i.e. from Iberia and Palestine, with a focus on two coins from Caesarea respectively struck by Herod Agrippa II and during the reign of Hadrian.

For **Mesopotamia**, LE BLANC (363) analysed the designs of some 3rd century AD coin series from Edessa, Carrhae and Rhessaena, depicting Marsyas, Aquarius or a local deity. For Edessa, DANDROW (369) examined the typology, dies and coin types of a series of small bronze coins issued during the reign of Caracalla, bearing Latin legends. He also added persuasive arguments to firmly assign the coinage to this city instead of Carrhae. CALOMINO (368) studied a series of gold and silver coins from the early reign of Elagabalus, most probably also struck in Edessa, with special attention of the historical framework in which they were produced. Regarding Arabia, WOYTEK AND BUTCHER (409) analysed a series of provincial silver coins struck during the reign of Trajan for circulation in the region, showing one or two camels on the reverse. The article offers a catalogue of the series, followed by an analysis of weights and die-axis, the chronology, typology, style, and possible mint. LICHTENBERGER (395) introduced a new coin type from the city of Dion in the Decapolis, struck in name of Septimius Severus and showing a river god on its reverse. For the city of Gerasa, KAPLUN (390) assigned a coin to Crispina instead of Faustina II, and presented a new example of a rare coin type with Artemis on its reverse struck during the reign of Elagabalus (389). The same author (390) was also able to reattribute some civic coins from the region to the cities of Bostra, Petra and Epidaurus in Achaea.

Some important studies on hoards and site finds of Roman provincial material were published for Syria and the East. The publications listed here represent only a selection. SYON (408) mapped the distribution and circulation of small change throughout the region of Galilee during the Hellenistic and Roman periods (300 BC – AD 260) based on coin material from c. 250 sites, including civic and provincial coinage, Nabatean coins and coins from the First Jewish Revolt. GOLDMAN (385) discussed the patterns in silver hoards in Roman Palestine between AD 73 and 300, with both imperial and provincial origins. BIJOVSKY (360) presented the finds from the Roman village of Wadi Hammam, two kilometers west of the Sea of Galilee, including isolated coins and three hoards with a large share of provincial coinage. FARHI (373) listed and analyzed more than 600 numismatic finds from Khirbet Qeiyafa, including local coins from several centres. Also new coin finds from Tel Hebron were published (377, 378 & 382) including a number of

civic issues. ARIEL AND BLOVSKY (354) presented and discussed the almost 1,000 coin finds from the excavations at Sepphoris. A heterogeneous hoard excavated at the Nesher-Ramla quarry in Central Israel with material dating from the Hellenistic period until the 2nd century AD is presented by FARHI AND MELAMED (384) and FARHI (379). Isolated finds from this site can be found in 379 & 380. ARIEL AND SOKOLOV (355) offered the catalogue and analysis of a hoard found at Kafr Bara in central-Israel deposited during the 3rd century AD, composed of 78 Roman provincial tetrachms, 15 *denarii* and a possible *antoninianus*. NURPETLIAN (399) discussed a hoard of 42 tetrachms with unknown findspot, circulating on the Beirut market. The hoard consists of 42 silver coins from the reign of Nero until the reign of Trajan, struck in Antioch, Tyre and Arabia. Two contributions focus on the coin finds from Assur in Mesopotamia. HEIDEMANN AND BUTCHER (386) presented the complete overview of the coins found during the excavations at the city dating from Achaemenids to the Nineteenth Century, with a separate catalogue and discussion of the Roman provincial specimens. A shorter overview of these finds is given by BUTCHER (365). For Petra in Arabia, LAUWERS (392) discussed the monetary circulation based on the coin finds, including a small number of civic issues dating to the 2nd and 3rd century AD.

Egypt

Several publications were dedicated to the coinage of Alexandria. SAVIO AND CAVAGNA (416) offered detailed remarks on the work by PICARD *et al.* (415) on the bronze coins of the city, with some pages (pp. 301-308) dedicated to the Roman provincial issues. TRAVAGLINI (423) presented an overview of the 294 Alexandrian coins at the Archaeological Museum of Bari (Italy), dating to the reign of Augustus until Constantius Caesar. STAFFIERI studied several specific series of Alexandrian coinage. A first article (419) focused on the presence of Livia on a small number of bronze coins, referring to her as partner of Augustus rather than empress. Furthermore, he analysed a type depicting the temple of Horus at Edfu struck during the reign of Trajan (420), and discussed the coin type of the fountain of Trajan on the coinage struck during the reigns of Domitian and Marcus Aurelius (418). Two more of his publications were devoted to specific features of the Alexandrian coinage (421 & 422). HUBER (116) analysed some new coin types that can be linked to Nero's visit in the years 66/67 AD, struck by different cities in Greece and Alexandria. MARTIN (414) studied the coin design of an altar – probably for Agathos Daimon – on drachms issued during the reign of Hadrian and the Antonines, and links its presence on the coinage to the cult of Antinous. VANEERDEWEGH (424) presented a study of the series of Alexandrian coins from the reign of Antoninus Pius showing Zodiac imagery, and analysed their context of ancient astrological practice and the possible connection with the Sothic cycle. The link between this same Sothic cycle and the presence of the scorpion on the Alexandrian coinage during the Antonine period, was the subject of the contribution by ZANOVELLO (425). For the Nomes coinage, LUCHELLI (413) discussed a type from Ombitos struck in name of Hadrian, which was mentioned and drawn in a 19th century letter.

Regarding coin circulation and use, LEROUXEL (412) offered an insight into the use of coinage on the countryside Roman Egypt during the 1st – 3rd centuries AD, using two private archives of papyri from the village of Tebtynis is the Arsinoite nome. SAVIO AND CAVAGNA (417) used evidence from hoards and isolated finds to evaluate the role of imperial gold coinage within the monetary system of Roman Egypt. ASOLATI (410) presented a preliminary report of the coin finds from the Kom al-Ahmer/Kom Wasit Archaeological Project near Alexandria. This overview comprises *c.* 600 coins found during the 2012-15 campaigns, including Ptolemaic, Roman provincial, Roman imperial and Byzantine pieces. CASTRIZIO (411) studied a hoard of bronze coins struck during the reign of Hadrian and Antoninus Pius, found in a funerary context during the excavations at Antinoöpolis.

VOLUME II

4. MEDIEVAL AND MODERN COINAGES

INTRODUCTION

Mateusz Bogucki and Jérôme Jambu

This section covers medieval and modern coinages of Europe, America, Africa, and Oceania. It is divided into 27 chapters written by 37 authors. Unfortunately, three colleagues, who agreed to participate in compiling the *Survey* did not submit their texts. So, Hungary, the Low Countries and Spanish America are missing. We nearly could not find an author for the ‘Merovingian Kingdom’ as well. It is much to our regret that these important countries are not covered by this *Survey*. The main difference of the current *Survey* from the previous ones is the authors’ selections regarding the number of numismatic publications. To be sure, Internet access to library holdings and specialist databases makes the creation of a complete list not only impossible, but also pointless. Therefore, the main task of the authors was to select the most important publications in their opinion and to make a critical presentation. However, this task was sometimes very difficult because of the general COVID-19 situation between 2020 and 2021, which restricted mobility and made physical access to libraries difficult. Despite these difficulties and thanks to the efforts of the contributing authors, the *Survey* texts are of very good quality. We would like to underscore that in each contribution the journal abbreviations used are specified only if they do not occur in the abbreviations list offered by the ANS’s library homepage (See online: <http://numismatics.org/Library/Abbreviations>).

There are a number of publications for Northern and the Eastern Europe that in our opinion deserve special attention. For Denmark (MOESGAARD’s Part) HORSNÆS, MOESGAARD and MÄRCHER (48) provide an excellent overview of the functioning of money from the earliest times to the present day. For Norway, a comparative study of *Commercialisation and urbanisation c. 986–1448* between Denmark and Norway by GUNDERSEN (31) and a collective volume on *Money and the Church in Medieval Europe, 1000-1200* edited by GASPER and GULLBEKK (13) are worth mentioning. For Sweden *Divina Moneta – Coins in Religion and Ritual* examines coins as part of ritual and religious practices (BURSTRÖM MYRBERG et al. 16). For the Baltic Countries (LEIMUS’s Part), a very impressive volume was published by GRIMALAUSKAITĖ and REMECAS (20, 21) on Lithuania, but the book by LEIMUS, KIUDSOO and HALJAK (52) on Estonia is also worth mentioning. For Poland (BOGUCKI and ŚNIEŻKO’s part), a critical five volumes were published in the series *Frühmittelalterliche Münzfunde aus Polen*, edited by BOGUCKI, ILISCH and SUCHODOLSKI, where all the finds from all over Poland from around 650–1150 were gathered (47–51). For Czechia and Slovakia (ZAORAL, MILITKÝ, HRADIL’s Part) there were several important monographs published, but we would like to point out those by GROSSMANNOVÁ devoted to Moravia (53, 257). For the regions of Romania and the Balkans, the collective work *Moneda în Republica Moldova* (7), presents the monetary situation in the region between the rivers of Dniester and Prut.

For Western Europe we welcome a new author for the French part. After years of Marc BOMPAIRE’s good and loyal service for his contributions and to whom we want to express our deepest thanks, we decided to divide the French section into two periods and to assign them to new researchers: the Medieval period to Thibault CARDON (Université de Caen) and the Modern period to Jérôme JAMBU (Université de Lille). If the former tried to present the most exhaustive inventory of publications, the latter concentrated himself on a representative selection. It is difficult to present here the list of the mains titles, but CARDON concentrated on defining and illustrating three mains’ axes of study in the renewal of medieval numismatic: mines, monetary discoveries and the question of the coins’ classification. For his part, JAMBU highlighted the slow but ever-increasing interest in the study of modern French numismatics particularly with the contributions on monetary and metallographic studies of recent periods, the recurring question of counterfeit coins, and the increasing place of bill notes. To round out these two surveys, Guillaume SARAH shines light on the research on Carolingian coinage, of which obviously the geographical influence goes far beyond the Francks’ kingdom.

For Great Britain (NAISMITH, ALLEN's Part), NAISMITH (148) builds an analysis of all major segments of the period around a catalogue of the Fitzwilliam Museum's coins, while ALLEN (11) has uses data from coin hoards and single finds to assess the size and composition of the English money supply between *c.* 973 and 1544. It is worth mention that British tokens and other exonomia studies are now so advanced that they have a separate chapter. The important works of HERDICK (176) and WITOWSKI (193) show the use of money in medieval economics of the Holy Roman Empire (HENGSTBACH, MÄKELER's Part). For Switzerland (ZÄCH's Part), the three-volume monograph by FROIDEVAUX (35) deals with the history of coins and money from Neuchâtel (16th–19th centuries) based on all possible sources, and with «histoire économique» of the monetary system in early modern western Switzerland. For the medieval history of coins and money in Austria, the volume edited by HYLLE, TORGGLE, HOFER and PIZZININI - *Geprägte Bilderwelten der Romanik. Münzkunst und Währungsräume zwischen Brixen und Prag* is particularly important, which was published in 2017 for the exhibition of the same name (74, also in Italian 75).

For Southern European and the Mediterranean area, Spain and Italy are also organized in two parts as now is France: for Spain the Visigoth period (RUTH's Part) is then followed by the Medieval and Modern periods (ESTRADA-RIUZ's Part). If the former is relatively short because of the limited number of publications listed, the latter part, thanks to Alberto ESTRADA-RIUZ and the thoroughness of his work, is exhaustive and no territory nor theme has been left unstudied. Italy's High Middle Age has likewise benefited from a rigorous study (ROVELLI's Part), while Lorena PASSERA did similar meticulous work for Spain between the 11th and 21st century. Finally, with her recognized expertise Julian BAKER has selected the most representative articles published during the last six years on coinage in Greece, Cyprus and the Crusaders.

The American continent has also benefited of a revision of its surveys. Although, as already mentioned, the studies for Latin America could not unfortunately be finished, a section on the colonial coinage of the Caribbean and North America was prepared by Jesse C. KRAFT (American Numismatic Society) with Jérôme JAMBU, and the United States and federal Canada of the 19th–20th centuries were explored by David BERGERON (Banque du Canada). Regarding colonial coinage we are pleased to announce the introduction of an already promising new revue, the *Journal of Early American Numismatics* (JEAN). Regarding the studies themselves, the famous "Continental Dollar" still inflames passions, but the first North American coppers remain a favorite topic for US numismatists.

The African continent, not including certain areas and the Islamic periods that are linked to other studies (see *Asian and Islamic Coinages* (pp. 962–1039) and *East and South-East Asia* (pp. 1041–1095) sections in this *Survey*), remains the poorest in publications, perhaps due sadly to a lack of interest on the part of researchers, despite the bibliographic references compiled by Josette RIVALLAIN, who recently undertook study of the occidental regions, and by Vincent WEST for Ethiopia. Finally, for Australia, included in this section because of the nature of its occidental coinage, Walter R. BLOOM explains that it is mainly the collectors that dominate the publications.

EUROPE

BYZANTIUM

Marcin Wołoszyn

Introduction

Similarly to the preceding *Survey* dedicated to Byzantine coinage and prepared by PAPADOPOULOU (29) the present report must open with a eulogy of the Editors of the *Byzantinische Zeitschrift* for publishing with an admirable regularity the critical bibliographies on the progress of Byzantine studies. Traditionally, the contributions on numismatics were brought together by Cécile Morrisson with the participation of Julian Baker and Pagona Papadopoulou (but also Miroslava Dotkova, Andrei Gandila and Stoyan Mihaylov). The data collected in BZ (from volume 98:2005 up to the present day) are available at present also in digital form on the **Byzantinische Bibliographie Online** platform: Byzantinische Bibliographie Online (degruyter.com).

Not to be overlooked here is the literature database for medieval research RI-Opac (Regesta Imperii), also of major help for students of Byzantine numismatics (RI OPAC (regesta-imperii.de)). Every month the Byzantine *News* newsletter edited by Sergei Mariev and Annick Peters-Custot under the patronage of the International Association of Byzantine Studies (Association Internationale des Études Byzantines – AIEB) brings new information about developments important for the progress of Byzantine studies, the field of numismatics included.¹

*

Next to sigillography, Byzantine numismatics is at present the best developed area of studies in the material heritage of the *Basileia tōn Rhōmaiōn*. The development of these two disciplines appears to be similar with a tendency to increasingly evolve into archaeology, which mostly means that the context of discovery² – rather than solely style analysis – have become of a key significance for the study of these artefacts (we note also a steady increase in the importance of technical science analyses). Although the new developments in sigillography are not the subject of our later discussion it may be useful to draw attention to studies which in their analysis go beyond seals found in museum collections to address their finds from individual archaeological sites; on occasion the two categories of object (coins and seals) have been examined by coin specialists see PAPADOPOULOU (28) see also KOUKOUNI (13); VIONIS (46); on the importance of seals and their archaeological context see SEIBT (39, p. 33); for the use of seals in today’s Byzantine studies see SHEPARD (41) or WASSILIOU-SEIBT (48).

Let it be noted that the progress of Byzantine numismatics (and sigillography) is a derivative of the development of Byzantine archaeology, or more broadly, archaeology of the Mediterranean region, an only recently practiced discipline. As noted by the Italian archaeologist FRONZA (5, p. 315, f. 1) “Medieval archaeology [...] is a relatively young discipline in Italy developed [...] more consistently, with the 1990s.” For Greece an important breakthrough came when Antiquity ceased to be regarded as the only valuable element of Greek heritage (on this subject see remarks in GOURGOURIS [9]; HAMILAKIS [11]; MANER and ZELEPOS eds [15]) which perspective not only largely used to be responsible for slowing down the progress of archaeology of periods later than Antiquity; cf. WOŁOSZYN (49) but also hindered identification of Byzantine objects recovered outside the territory of the Empire (cf. ROSLUND [36], p. 241: “the dazzling brilliance of the white marble columns has made it hard to perceive a politically and stylistically more elusive medieval period”).

¹ For helping me access individual publications and prepare this survey I extend my thanks to: Zeliha Demirel Gökalp (Eskişehir, Turkey), Georgios Kardaras (Athens, Greece), Eleni Lianta (Oxford, UK), Monika Maziarczuk (Lublin, Poland), Pagona Papadopoulou (Thessaloniki, Greece), Gözde Yazıcı Cörüt (Leipzig, Germany). All errors and omissions must be my own.

² To cite Burström (1, p. 243) “[...] from an archaeological point of view, coins differ from each other not only in what they are but perhaps even more in how they are *found*”.

Today – although there is still much to do – the progress of Byzantine archaeology in Greece, Turkey and other countries in the Mediterranean region is unmistakable (cf. DECKER [2]; MORRISSON [24]). The growing focus on archaeology within Byzantine studies has made it possible to contextualize coin finds. This is greatly assisted by publication of coins recovered from regularly investigated sites like Butrint in the Balkans, or Amorium, Sagalassos and Hierapolis in Asia Minor (see below). They make it possible to compare the findings about *e.g.*, the chronology of specific settlements, based on the dating of the coin finds with dates obtained basing on other archaeological objects, and even on paleoenvironmental data (see *e.g.*, NIEWÖHNER, DEMIREL, IZDEBSKI, SANCAKTAR, SCHWERDT, and STÜMPEL [26]; on the importance of contextualization of Byzantine coin finds see also MORRISSON [19], p. 71, note 4; MORRISSON [20]; PAPADOPOULOU [30]; ROLAND [34-35]).

As a result, Byzantine numismatics and Byzantine archaeology have been increasingly integrating with historical sciences, and alongside them – as stepsisters – can be used to reconstruct the history of the Byzantine Empire (for archaeology, numismatics and Byzantine studies see GANDILA [7]).

Defining the most outstanding achievements of Byzantine numismatics of recent years is a formidable challenge. Taking a risk let me make the following three points:

1. a major improvement of our understanding of the history of Anatolia, 5th-8th century (also thanks to coin finds);
2. a steadily growing record of Byzantine coins recovered in South and East Asia;
3. thanks to the efforts of J. Baker there has been a vast improvement in our understanding of coin circulation in the Late Byzantine period, particularly on the territory of modern Greece.

Obviously much remains to be done (there is an urgent need *e.g.*, to intensify the study of coin finds from the Byzantine countryside; cf. MORRISSON [18]), and we cannot overlook some negative phenomena affecting Byzantine numismatics.

Byzantine coins have been recovered on a vast territory, and the stage of research of individual regions is by no means even. The best recognized (for the Early Byzantine period) is the region of Dobrudja (Scythia and Moesia Secunda), which “boasts the highest output of published coin finds in the entire Byzantine world. The rich numismatic material from the sixth and seventh centuries, which includes around 5,000 single finds and around 650 coins from hoards, is all the more impressive as Dobrudja was a frontier region and did not enjoy the level of urbanisation and economic development of [...] provinces from the eastern Mediterranean” (Gandila [8], pp. 296–298). The same author goes on to note that “drawing any conclusions about the level of monetization in the northeastern Balkans compared to other parts of the Empire would be premature because the level of publication in different countries still varies by great margins” (Gandila [8], p. 298, note 6).

Wars, like the one in Syria (cf. WARTENBERG KAGAN [47]) cause robbery of heritage objects, coins included. With Russia waging war on Ukraine, developing a corpus of Byzantine coin finds from East Europe, an urgent and long overdue task (cf. below) must be even harder to accomplish (to say the least).

Another question relates to the consequences of different approaches to metal detector use that are observed in different countries. The lack of uniform methodology poses a problem when we wish to make comparisons between different regions (cf. MORRISSON [18], p. 104). Some countries in northern and central Europe have adopted a liberal approach and metal detectorists are invited increasingly often to join in fieldwork alongside qualified archaeologists (within projects of so-called citizen science). On the other hand, in Belarus, Russia, Ukraine, and some Mediterranean countries as well, the approach to metal detectorists has been much less generous (metal detector use by amateurs is illegal, and accessing their finds is very difficult; see *e.g.*, THOMAS and STONE eds [44]; DOBAT, DECKERS, HEEREN, LEWIS, THOMAS, and WESSMAN [4]). We need to remember that, depending on the approach (more liberal or more distrustful), we can expect to see a more rapid (where coins from amateur metal detector finds are included in the record) or slower (where they are left out of the record) increase in the number of coin finds (cf. MORRISSON [18], p. 103; one example of a great hoard we owe to metal detectorists is the find from Beydağ (545 coins, cf. ÜNAL [45]). This is true also of excavation methods used by professional archaeologists in the south and in the north. The result of universal use of metal detectors in mainland Europe and the north has been a huge increase in the number of metal finds (including small coins). In Mediterranean region detectors are used rarely, sometimes replaced by sieving (assisting the recovery of a larger number of objects, as demonstrated *e.g.*, by the case of Corinth – see SANDERS [37–38]).

Yet another major problem worth addressing are museum coin collections. There is a tendency to regard museum collections found in the Mediterranean region as collections amassed locally (thanks to donations of coins found in the area nearest to the museum), and as such, possibly reflecting coin circulation in that region (for Anatolia see *e.g.*, LAFLI, LIGHTFOOT and RITTER [14], pp. 205–206, esp. note 35; but see also MORRISSON [19], p. 72 who stressed that we have to keep in mind “that museums tend to privilege precious metal finds and large copper coins over smaller denominations and that peasants may sell their discoveries to dealers rather than to museums”). Similarly, the museum collections in the Balkans are treated as formed locally (of coins discovered in the area nearest to the museum). However, a problem is posed by collections in Romania, Hungary and in countries found farther north. OBERLÄNDER-TÄRNOVEANU (27) has argued that coin collections in Romanian museums also reflect local coin circulation; similarly, GANDILA ([6], Appendix A, 50 n. 101). Differently, SOMOGYI ([42], p. 70, 72, n. 403, 78) who has been very sceptical. Here this problem was mentioned because we need to bear in mind that when we compare data on the circulation of Byzantine coins on the territory of the Empire and *e.g.*, Poland or in Scandinavia, we are comparing a pool of coins based in part on museum collections (South) with a pool which leaves out museums (North). Without negating the local character of museum collections in Turkey or Greece, I think it is crucial in such cases to make a study of the history of the museum collection (on the model of studies made by Prohászka and Somogyi in the case of Hungary see also below); it is worth invoking at this point the problem of the seals recovered from the site of the Ottoman ministry of war (Seriaskerat) at the Eski Sarai in Istanbul after 1869, cf. HEIDEMANN and SODE (12).

While traditionally the history of Byzantine Empire has been divided into the Early (-843), Middle (843–1204/1261) and Late Byzantine periods (1204/61–1453; cf. SHEPARD [40]), today many alternate divisions are in circulation. Although the triple division is used below it is used here only as approximate. If we were to write the history of the Byzantine Empire basing on coins on coins we could distinguish “two periods of higher monetisation [...]: the 5th and early 6th century before Justinian’s Plague and the 11th to 12th century. Contrary to the earlier historiography, the latter period is now recognised as one of expansion and economic growth, with a population increase, a higher rate of urbanisation and the rise of many cities producing artisanal and manufactured goods for wider ‘mass’ consumption. The 8th century is one of ‘retrenchment’, general crisis and a decline in territory, population, production; a period of de-urbanisation and the localisation of exchanges [...]. Almost complete de-monetisation is observed in all the ancient cities (*e.g.*, Athens, Corinth, Ephesos, Aphrodisias, Priene, Pergamon [...]). The so-called ‘Byzantine revival’ in the 9th century is best approached from the discoveries of the Amorium excavations over the last two decades (fig. 7) where an absolute apex is reached in the period 842–867 when the capital of the theme of Anatolicon was rebuilt following its sacking by the Arabs (838)” MORRISSON ([18], p. 106).

Let me note that I assign to the early Byzantine period issues of Anastasius (491–518) and later, associated with the reform of bronze coinage (498), which is traditionally regarded as a watershed which separates the Late Roman from Byzantine coinage GRIERSON (10).

Thus, essentially left out from my discussion are coins and coin finds from 4th-5th centuries, this is true also of the problem of Arab-Byzantine coinage, and early Germanic coinage, obviously modelled on issues of Late Roman/Early Byzantine emperors.

In recent numismatic publications listed below, coin finds and coins were examined primarily as a historical source. What is important to note in this context is, that next to the written accounts (*e.g.*, MORRISSON and PAPADOPOULOU [25]; see also RITTER [33]), which remain a significant source of data about coins, digital material culture databases (PARANI, PITARAKIS, and SPIESER [31]) have continued to gain importance as a tool of Byzantine coin studies.

The Byzantine Empire had many successors, and this makes it harder to embrace the full body of reports on successive coin finds contributed by researchers from so many countries. This is what makes projects such as FLAME (MORDECHAI [17]; Project FLAME [32]) so promising for Byzantine studies, because they help to bring together coin specialists from every corner of the former Byzantine territory, and through developing digital databases of finds can integrate findings made in the numerous centres of Byzantine studies. By joining forces in this way we can hope to better appreciate the significance of *Basileia tōn Rhōmaiōn* for the making of the medieval world.

Early Byzantine Period

While the main focus of research has been on gold coin, i.e., the solidus and its fraction (FISCHER and LÓPEZ SÁNCHEZ [190]; JARRETT [243]; NAISMITH [359]; PAPADOPOULOU [388]), recently increasingly more attention has been given to bronze denominations. This is a legitimate development given that “bronze coinage was the lifeblood of the Byzantine market economy [...]” (GANDILA [6], p. 111). A separate conference was dedicated to silver coins (CHAMEROY and GUIHARD eds [128], but without addressing the problem of 7th century issues (including the hexagram introduced in 615; for hexagram see WHALIN [609]).

Sixth and seventh centuries are a period still well-illuminated by the written record which inform in detail about e.g., wars (with Vandals and Goths, Avars and Slavs, Persians and Arabs, cf. FENWICK [185]; SARANTIS [426–427]); this naturally leads to the temptation to associate individual finds (especially hoards) with political (military) events. We can hope to improve our understanding of this period by extending our focus to include both gold and bronze coinage. It seems for example, that the increase in the number of finds of coins of Justin II that is observed both in the Balkan region (e.g., Dobrudja; cf. CUSTUREA [139], p. 65) and Anatolia (MORRISSON [19], p. 74) can be interpreted as an echo of wars with the Avars/Slavs which persuaded the Byzantines to increase the volume of this coinage (issued for the use of the army).

*

The first study region addressed in the present review is Africa. Its history between the 5th and 8th century was recently examined using the evidence of coin finds in an excellent essay by MORRISSON [343]). An outstanding find from **northern Africa** are coins excavated at Ain Wassel (Africa Proconsularis, now in Tunisia), a site with a carefully analysed stratigraphy (ABRAM [51]). Another notable deposit is a hoard of late 6th–early 7th century Byzantine gold solidi (last issue: Maurice [582–602]) from Sidi Khalifa (Tunisia) discussed by BEN SLIMÈNE [98].

The coinage of Cyrene and Cyrenaica (6th–7th century, but also 10th–11th century) is discussed by ASOLATI (74), with emphasis on the problem of the widespread distribution range of African issues within the Mediterranean region and barbarian Europe (cf. ASOLATI [74], Fig. 24; see also ASOLATI [73]).

A significant find from **Egypt** is a hoard of 29 gold coins (tremisses of Justin II [565–578] and debased late Roman solidi from St. Paul’s Monastery of Deir el-Bakhît (Thebes-West) – see BECKH and CHAMEROY (94).

One of the more remarkable Egyptian coins are bronze denominations, e.g., dodecanummia. This group was discussed by CHAMEROY (127), with a special focus on the production of cast and irregular struck coins in the 5th–7th century, using the evidence of clay moulds for casting coins.

A notable series of early Byzantine coins came to light at Kom al-Ahmer and Kom Wasit near Alexandria. It is interesting that next to AE of the Alexandrian mint there are coins minted at Carthage and Rome, which “can be explained in the context of the Byzantine reconquista of Vandal Proconsular Africa and Ostrogothic Italy, and the subsequent return of Imperial troops to the East” (ASOLATI [73], p. 455). The absence of coins later than Heraclius is likely to be associated with the Arab invasion, although the continuity of circulation of AE issues of Heraclius cannot be discounted.

Our understanding of the coin finds from Marea is still unsatisfactory (cf. LICHOCKA [289]; for analysis of several thousand bronze coins [!] recovered from this location, see currently JAWORSKI [244]).

Remarkable discoveries made in the **Holy Land** include a hoard of gold coins (last coin: Justinian I [527–565]) from Ashkelon (excavations at the Barnea B–C) in the former province of *Palaestina Prima*. This hoard was presented against a broad comparative background (BIOVSKY, SANDHAUS, and MILEVSKI [107]). The chronological structure of gold coins in this region shows that “[...] Late Roman gold coins [...] were still in circulation during the early sixth century in Palestine” (MILEVSKI, BIOVSKY, SANDHAUS, KROKHMALNIK, and GORIN-ROSEN [329], p. 177). The same site (Ashkelon, excavations at the Barnea B–C) yielded also a series of 14 small coins (5th-mid–7th century; MILEVSKI, BIOVSKY, SANDHAUS, KROKHMALNIK, and GORIN-ROSEN [329]).

The hoard found at Oboda (buried in the reign of Justin II [565–578]) and described as “the most common type of copper hoard from sixth-century Palestine”, is made remarkable by the presence of a coin with the mark of the mint of Theoupolis, furnishing new evidence on the problem of the renaming of Antioch (Antioch on the Orontes; not in 528/529 but 512–518); cf. BIOVSKY and BENOVIITZ [106]).

Undeniably, the most interesting recent discovery from Israel is a hoard from Jerusalem (Givati Parking Lot) of

264 solidi of Heraclius issued in 610–613. Its deposition has been linked to events related to the Persian conquest of Jerusalem in 614 (BIVOVSKY [105]). The hoard is expected to play a major role in the study of *e.g.*, solidus weight and contribute to our understanding of the operation of the Jerusalem mint in the reign of Heraclius.

Also worth invoking is a hoard discovered in 2010 in Jericho (54 Byzantine folles; tpq 592/3). Its burial is thought to be associated with the Persian invasion of Syria and Palestine between 611 and 614 (ABRAMZON [52]).

Excavations in Jerusalem (Western Wall Plaza) yielded a series of 6th and 7th century Byzantine coins, more notably, an issue of Constantine IV (668–685, Syracuse mint) – rare in the region given its occupation by Arabs in the early 640s (BIVOVSKY [104]).

More notable museum collections include the Coin Cabinet of the Israel Museum, with a hoard of 476 Byzantine bronze coins (325–610) and Bronze objects (CALLEGHER [121]). The museum of the Studium Biblicum Franciscanum (Jerusalem) has in its keeping early Byzantine coins, lacking a closer provenance but presumably recovered in Palestine (CALLEGHER [120]). It is legitimate to mention at this point other collections (some of them featuring Early and Middle Byzantine coins), like those formed during the Second World War by Polish soldiers serving in the Levant (cf. MIELCZAREK [323]).

A valuable contribution by ABOU DIWAN (50) addresses coin circulation in Byzantine Beirut in the period 491–641 on the basis of an impressive corpus of 1430 coins from single finds and 280 coins from hoards. An extensive discussion is made of the problem of change of the weight of bronze coins introduced by reforms of 498, 512, 538/539, not unexpectedly using the earlier study on finds from Palestine (BIVOVSKY [103]).

The excavations at Baalbek (Lebanon) produced 2200 medieval coins, of which 47 specimens are early Byzantine issues (incl. 7th century; cf. AL-‘AKRA [58]).

An important discovery was made in Jordania at Jerash – a hoard of not less than twelve Byzantine coins (last issues: Heraclius [610–641]) and two or three Arab-Byzantine coins (post-reform Umayyad coins) excavated from a house probably destroyed by the 749 earthquake (dating supported by C¹⁴ results; cf. LICHTENBERGER and RAJA [288]; see also SCHULZE and SCHULZE [434]).

More outstanding finds from Syria include 336 early Byzantine coins recovered at Apamea (AE, 6th–7th century) and 35 middle Byzantine issues (AE, 975–1098; cf. LAUWERS and MARGOS [277]).

An outstanding hoard of ca. bronze 6000 coins found in 2007 at as-Sanamein presumably was buried in the 7th century (KIWAN and MORRISSON [259]).

The publication of Polish research in Palmyra (1959–2001) reports on a series of early Byzantine (6th century) coins and hoard of 7th-century solidi (cf. KRZYŻANOWSKA and GAWLIKOWSKI [269]).

A promising new project worth highlighting addresses coin finds from Antioch on the Orontes. The materials from archaeological research carried out before World War II were recently re-examined (STAHL [447]; STAHL and GLYNIAS [450]). Observations from Antioch have been compared to the research findings from Cyprus and *e.g.*, Avkat in Anatolia (STAHL [449]). According to the evidence now at hand there is no sharp decline at Antioch in the volume of finds from the 7th–8th century (STAHL [449], Fig. 2).

In a welcome new development quite a few recently published interesting studies have been addressing coin circulation in **Asia Minor**. While it is a given that some contributions must deal with random finds (lacking context) as those from Mount Nif (Olympos) in Ionia (western Turkey) described as “found and collected by Durmuş Sulu who works as forester on Nif Monte” (6th and 12th century; cf. LENGER [281]) the increase in the number of studies which report on discoveries from regular archaeological research is undeniable. Some of them are focused narrowly on numismatics (similarly to the contributions by Morrißon studies by other authors are in the nature of a synthesis cf. *e.g.*, analyses of coins from south-western Anatolia, 6th–7th century, of DEMIREL GÖKALP [154, 158]). A number of publications report in detail of individual sites (*e.g.*, Ephesus: LADSTÄTTER [273]). To be sure, the coastal region of Anatolia continues better recognized than the interior (MORRISSON [19], p. 72) but improvement in this respect is undeniable.

The importance of this region for the Empire is obvious (particularly after the loss of northern Africa). Its economic potential is illustrated well by the coin finds (the value of coins present in Anatolian hoards of gold and bronze coins alike is at least twice as high as in the case of the Balkans; MORRISSON [19], p. 74).

It seems at present that coin finds are linked to the military rather than settlement history. According to Morrißon, “peaks in coin finds appear to be influenced more strongly by military events than by settlement history and should

not be accepted at face value as evidence against urban decline in the later sixth century, if such is suggested by other archaeological finds” (MORRISSON [19], p. 75). At the same time we need to bear in mind the extended life of late Antique coins, “Only hoards or stratified finds like those at Amorium, Sagalassos, or Hierapolis in Phrygia show how long coins remained in circulation and that late Roman coins occurred in sixth- and even in seventh-century contexts” (MORRISSON [19], p. 75). On the other hand, a comparison of coin finds and of other objects (esp. pottery) proves that some sites continued in use longer than suggested by coin finds, “Destructive layers with copper coins from 616, for example at Sardis and at Ephesus, used to be attributed to the Persian offensive, but more recent research has disproven a Persian date of the destruction layers in question; the ceramics found in the same layers date from after the Persian wars and the coins appear to have been in circulation for a longer period of time” (MORRISSON [19], p. 76).

This issue is illustrated by the impressive series of coins recovered in Ephesus: “For the early Byzantine residence to the south of the Church of St. Mary a large amount of finds and more than 3,500 coins provide evidence that the building was destroyed at the earliest in the mid-seventh century, more probably during the third quarter of the seventh century. It is noteworthy that the final phase of usage included numerous earlier coins, among them more than 1,000 *minimi* and a series minted under Emperor Heraclius (610–641) that is particularly strong in issue. The old coins appear to have remained in circulation for a long time, at least until the second half of the seventh century, probably because coins were then in short supply. It follows that many other destruction layers at Ephesus that have so far been dated to the earlier seventh century on the basis of relatively few coins may in fact date from the later seventh century or even thereafter, so those dates will have to be revised. Consequently, a catastrophic destruction of the entire city center in the reign of Heraclius as previously assumed is called into doubt and, in the case of the house south of St. Mary, already disproven. A chronologically differentiated destruction history, spanning a longer period and reflecting a more gradual transformation of the city, seems to be called for” (LADSTÄTTER [272], p. 245).

Another notable discovery made at Ephesus was an impressive group of coins recovered at the Verulanus Hall: over a thousand of bronzes dated to 6th–8th century, still undergoing analysis, and a remarkable series of Vandal *minimi* issued in Carthage. The supply of coins falters in the early reign of Heraclius (*ca.* 616), possibly in connection with the Persian invasion (SCHACHINGER [430], pp. 315–316; many coins of Heraclius were overstruck on earlier issues; cf. SCHACHINGER [431], pp. 251–252). To this impressive list of finds we need to add a hoard of 160 bronze coins (4th–6th century) which next to Byzantine issues (Anastasius I) includes some remarkable bronzes of Carthage (Vandals). The hoard was buried in the 520s (SCHINDEL and LADSTÄTTER [433]).

As expected, Byzantine coins have been recovered during quite a few other excavation projects.

Coin finds recovered from the Yenikapi port of Constantinople have been published comprehensively by ALI POLAT ([60]; see also ÖZTOPBAŞ [380–381]). Another important contribution reported on early and middle Byzantine coins recovered from a well-defined stratigraphic context on the Firuzköy Peninsula in the hinterland of the Byzantine capital was published by STANISLAWSKI and AYDINGUN ([451], pp. 115–133; see also TEKIN [467]).

Very important site of the ancient city of Sardis (Lydia) yielded an impressive series of coins from investigations in 1973–2013. According to a report published in 2018 the series included 595 Byzantine coins (491–mid–13th century [mostly from the early Byzantine issues]; cf. EVANS [184]).

The research carried out 1990–2016 on Sagalassos in south-western Turkey led to the discovery of 4000 coins, including 230 Byzantine issues. Of these 211 are single finds (nearly all of them AE; last coin 652/3–655/6), and 19 belong to a hoard (closing date 574/5). These finds were discussed against a broad comparative background (STROOBANTS [455]).

Less recent publications reporting on the research at Parion in Mysia mention a small series of early Byzantine coins (10 AE, last issue: Justinian I [527–565], cf. KELEŞ, YILMAZ, and OYARÇIN [256]; OYARÇIN [371–372]). More recently, a contribution recapitulating the results of research in the Early Byzantine Period listed 142 Early Byzantine Period coins from excavations conducted at Parion between 2005–2018 at (6th–7th century; cf. OYARÇIN [375]).

A larger series of early Byzantine coins from 6th–7th century (single finds, but also a hoard of bronzes) comes from Tyana in Cappadocia (ASOLATI and CRISAFULLI [75]). A series of 7th-century coins (including an issue of Leontius [695–698]) shed light on the final years of the city of Assos probably destroyed by an earthquake around 700 (BÖHLENDORF-ARSLAN [115]).

The series of coins recovered between 2008 and 2018 on the site of Stratonikeia (Caria) includes 199 Byzantine

coins, of which 117 are early Byzantine issues (6th – 7th century), których ukrycie łączy się z Persian and Arab raids of respectively 616 and 655/6 (TEK, KÖKER, and SARIIZ [465–466]).

Byzantine coins have been recovered during the fieldwork at Kyme near Aliğa (ancient Aeolis) in western Turkey. Out of 52 issues the vast majority were coins from late 5th and 6th century, with some 7th-century issues also in evidence (CARROCCIO [126]). A series of early Byzantine coins was recovered on the site of Metropolis to the north of Ephesus (DELIKAN [151]).

Finds from Hadrianopolis in Paphlagonia have prompted some interesting observations (21 coins; 1 AG, 20 AE, 6th–11th century; LAFLI, LIGHTFOOT, and RITTER [14]). More notable in this series of early Byzantine coins are issues of Heraclius [7 specimens]. It seems that the city was abandoned only in the 8th, rather than in the 7th century (LAFLI, LIGHTFOOT, and RITTER [14], p. 193). Neither the pottery nor the glass finds suggest that the 6th and 7th centuries were a period on the eve of the decline of that community (LAFLI, LIGHTFOOT, and RITTER [14], p. 203; for desurbanization of Paphlagonia see RITTER [421]).

The research made at Aphrodisias (Caria) revealed a reasonably good condition of this city in the 6th century, while a coin of Phocas (found 2016) shows that baths continued to be repaired into the early years of the 7th century. Furthermore, finds of later coins (incl. hoards of Heraclius issues) prove that “the dramatic change came in the seventh century, and seems to have been sudden and nearly total, involving widespread destruction by fire, very probably at the hands of the Persians” (WILSON [492], p. 219).

A perplexing situation is that of the site of Antandros in north-western Turkey (Balıkesir province) which produced no coins from the 6th century despite continued settlement of this city documented by pottery finds (AÇAR [54], esp. p. 4).

The site of Allianoı near Pergamon yielded an impressive series of 126 Byzantine coins dominated by issues from Anastasius to Heraclius (a few coins of Anastasius are Au and Ag specimens, the rest only Ae). There was also a single coin of Constantine IV (668–685; TEKIN and EROL-ÖZDİZBAY [468]).

Next, the investigations conducted in 2005–2010 at Myndos (Caria) brought to light 72 early Byzantine coins (last issue: Constans II [641–668]; cf. ŞAHİN [456]).

A series of 17 early Byzantine coins was recovered in seasons 2017 and 2018 at Pullu near Mersin in southern Turkey (last issues: Justinian II [685–695, 705–711]; cf. OYARÇIN and ŞAHİN [377]). The fieldwork (2011–2014) at Ziyaret Tepe (south-eastern Turkey, Diyarbakır Province) brought in a single follis of Justinian I (MATNEY, GREENFIELD, KÖROĞLU, MACGINNIS, PROCTOR, ROSENZWEIG, and WICKE [301]).

Early Byzantine coins are known from other sites, *e.g.*, Andriake (13 AE coins, latest issue Constans II [641–668] // a single anonymous follis [1030/35–1042]; BULUT and ŞENGÜL [116]); Sillyon (Pamphylia; 9 AE coins; 1 anonymous follis [1042?–1050]; cf. KÖKER [266]); Hadrianopolis in Paphlagonia (13 issues, ending in coins of Justinian II [685–695, 705–711]; cf. LAFLI, LIGHTFOOT, and RITTER [14]; but also from church C in Hadrianopolis [1 AE of Justinian I / several AE of Heraclius]; cf. OYARÇIN [373]). Yet another notable site is Papaz Tarlası, Vezirköprü (ancient Neoklaudiopolis, northern Asia Minor, with 2 early Byzantine AE coins; cf. WINTHER-JACOBSEN and BEKKER-NIELSEN [493]).

Early Byzantine coins (but also some middle and late Byzantine ones) were excavated (2008–2012) in Smyrna (103 issues; ERSOY, ÖNDER, and TURAN [183]).

Finally, not less notable are the findings from Miletus, a city which entered a period of decline in the 6th and 7th century (cf. NIEWÖHNER [362]). Coin finds from Miletus were published in a separate study of 149 late Roman and Byzantine coins deriving from excavations conducted between 1957 and 2003, with additionally 250 further coins from fieldwork continued until 2006 (NIEWÖHNER, DEMIREL, IZDEBSKI, SANCAKTAR, SCHWERDT, and STÜMPPEL [26], pp. 258–270). Nearly all of these coins are bronze issues (6th–7th centuries). The series includes a single middle Byzantine coin (an anonymous follis, class A2 [976 (?)–ca. 1030/35] and a hyperpyron of John II Komnenos (1118–1143). This nearly complete lack of evidence from the Middle Byzantine Period is in agreement with other observations concerning this age (“archaeologically, middle Byzantine Miletus is a blank”; cf. NIEWÖHNER [362], p. 260).

The need to extend research to the Byzantine countryside was mentioned earlier. In this context worth noting is the fieldwork on Kilise Tepe in Isauria described as “one of the first small Byzantine rural settlements in south-central Anatolia to be deliberately excavated” (JACKSON [241], p. 355). It is interesting that the site produced a single

early Byzantine coin (AE of Heraclius), regarded by Jackson as an unreliable chronological marker (“a single coin of Heraclius provides a seventh-century date for [feature – M.W.] 95207, but it should be treated with caution since coins are relatively rare at Kilise Tepe and this one provides only a terminus post quem for the deposit. A more substantial program of radiocarbon samples is planned based on samples of short-lived species from other areas of 95207; JACKSON [241], p. 368).

Other remarkable finds include a hoard of gold coins (incl. some light-weight solidi), buried presumably at the end of the 6th century from Gökler (Phrygia; 59 coins [last issues: Maurice [582–602]; only a part of this hoard is known; cf. DEMIREL GÖKALP and GANDILA [160]).

A hoard buried presumably at a slightly earlier date, in the early stage of the revolt of Heraclius (610), came to light at Bilecik, in Bithynia (81 gold coins; last issues: Phocas [602–610]; cf. GANDILA and DEMIREL GÖKALP [205]). An outstanding hoard came to light in 2019 in Anemurium (Cilicia Region) within the so-called Necropolis Church (located in the Necropolis area). It included 41 bronze coins of Heraclius (minted 610–618), most of them overstruck on coins of Phocas. Very likely, this hoard was buried in connection with Persian invasions in the early 7th century (OYARÇIN and TEKOCAK [378]).

An early find from 1978 is a hoard from Kavaklı (eastern part of the modern city Aydın; Aegean Region) of seventy gold coins of Constans II ([641–668]; ÜNAL [476–477]).

Fieldwork carried out in 2008 on the site of the Gymnasium Complex and the Latrine at Tralles (in the valley of the ancient Meander River, Caria) brought in a hoard of 67 solidi of Leo III (issues from 720–733; cf. ÜNAL [475]).

Information about coin finds from specific sites may be supplemented by data on coins now found in museum collections.

Two notable collections in south-eastern Turkey (near the border with Syria) are found at Adana and Tarsus. The Adana Archaeology Museum has in its keeping 27,965 coins. So far they are known to include 27 bronze early and middle byzantine coins (from Central Adana, Kadirli, Misis and Elbistan settlements; cf. BUYRUK [118]). Gold Byzantine coins were published separately (cf. BUYRUK [117]). The museum in Tarsus has a collection of 16,637 coins which includes 24 gold Byzantine coins (6th to 12th century) published by BUYRUK (119). The Bilecik Museum in north-western Turkey holds a collection of 147 Byzantine coins, including 81 gold issues (ending in coins of Phocas [602–610]) and 65 bronzes (Early and Middle Byzantine Periods; cf. DEMIREL GÖKALP [152]). Worth mentioning is a publication of 895 early and middle Byzantine coins (Anastasius [491–518] to Alexios III [1185–1204] from the collections of the museum in Malatya in eastern Turkey (DEMIREL GÖKALP [153]). The Museum in Kütahya (Phrygia) has in its collection 1415 Byzantine coins (DEMIREL GÖKALP [156]; see also DEMIREL GÖKALP [159]). The Kocaeli Museum (Bithynia) holds 593 Byzantine coins. They are thought to come from local finds and used to recognize the coin circulation in the region during the Early Byzantine Period (DEMIREL GÖKALP and KARANFIL [161]). Coin circulation and hoarding in Phrygia between the 6th and 9th century was discussed by DEMIREL GÖKALP [157], taking as a point of departure an analysis of museum collections in Kütahya and Bolvadin. The Bolu museum has a collection of 394 Byzantine coins (of all ages), out of which a half (184 coins) are anonymous folles discussed by KILIÇ (257). The Samsun Archeology and Ethnography Museum on the Black Sea has in its keeping 20 coins (12 Au / 8 Ag; cf. OYARÇIN and DERVIŞOĞLU [376]). The collection of 123 coins spanning Anastasius I (491-518) and Manuel I Komnenos (1143-1180) now in the Erzurum Museum (on the Upper Euphrates) is recognized as representative for coin circulation in eastern Anatolia (OYARÇIN and PAYVEREN [379]). The rich collections of l'Institut français d'études Byzantines (1175 coins, 20% of them Byzantine issues) are regarded highly relevant for reconstructing coin circulation in Constantinople (RONDE, MORRISON, and D'OTTONE-RAMBACH [422]).

Concluding this part of the review of recently published early Byzantine coins we must note an important find from the modern city of Erbil, ancient Arbela, in Iraqī Kurdistan, Northern Iraq – an incomplete hoard now numbering more than 45 solidi (7th century). Apparently buried around 660 AD, the hoard could be an indication of the final days of Byzantine presence in Northern Mesopotamia prior to its conquest by Muslim armies (LÓPEZ SÁNCHEZ and MARTÍNEZ CHICO [291]).

As expected, there are quite a few recent analyses of coin finds from the territory of Late Roman / Post-Roman **Western Europe**, either general (cf. FISCHER and LÓPEZ SÁNCHEZ [190]; mostly for the period prior to 498); FISCHER [189]; DOYEN [178]; see also FUSCONI [195]), or covering individual regions, thus Spain (MORA SERRANO

[340]; PLIEGO [403–404]; OLMO ENCISO and CASTRO PRIEGO [369]; KURT [271]; for the early Muslim era: IBRAHIM and PLIEGO [231]), Gaul (FRANÇOISE and MORRISSON [193–194]), Benelux and Switzerland (POL [405]; BELIËN and VAN DER SANDEN [95]). However, there is no recent catalogue of coin finds from this region (for a comprehensive overview of contacts between the Merovingian environment and the Eastern Mediterranean, *e.g.*, using the evidence of coin finds see DRAUSCHKE [179]; for the western part of Austria see SCHACHINGER [429, 432]).

Arguably the most notable piece of numismatic writing concerned with Italy was an overview of past studies of Byzantine coins found in this area prepared by CALLEGHER (124).

Coin circulation in central and northern Italy between the 6th and 9th century was discussed by ROVELLI (423) and OSTINELLI (370). Three hoards of gold coins (5th–6th century) from Alpine passes were analysed by FISCHER and WOOD (191).

Capital results were furnished by excavations at Loppio - S. Andrea (Trentino / Northern Italy) where the archaeological record confirmed continuity of settlement in 6th–8th century, and included *ca.* 90 coins, some of them Byzantine issues. It is notable that stratigraphic analyses support the *longue durée* of late Roman coins and the “integration of old 4th–5th centuries issues in the three-metallic 6th century monetary system, as well of their re-use within the Lombard society” (CALOMINO and MAURINA [125], p. 169; on the re-use of Roman coins in medieval Italy cf. also MARANI [297]).

Coin finds from Classe, the ancient port of Ravenna, have been addressed in several publications (cf. BALDI [89–90]; and esp. BALDI [91: the series includes also coins from the 8th century!]). The mint of Ravenna and circulation of its coins have been studied extensively by PRIGENT ([409–411]; see also MORRISSON and CALLEGHER [345]). Also worth mentioning in this context are the results of the analysis of coin from the collection of the library in Ravenna cf. GARIBOLDI (206).

Another important publication reported on single finds *e.g.*, from Brescia by ARSLAN (69), and especially from Genoa (5th- and 6th-century Byzantine coins, no issues from the period 642–924; ARSLAN [68]).

A separate monograph was dedicated to the coin circulation in Latium, Late Antiquity through to 7th century (MARANI [299]; see also MARANI [298]). Coin finds from Rome (Santa Maria Antiqua, issues of Justin I [518–527]) have been discussed by PARIBENI [389]).

An outstanding collective find from St. Januarius in Capodimonte (Lazio) included early Byzantine coins was presented by EBANISTA and SANTORO (180–181).

An altogether exceptional find is the Forum Hoard of Anglo-Saxon coins discovered in 1883. Found among more than 800 coins was also a single Byzantine specimen (a solidus of Theophilus, 829–842) presented by NAISMITH and TINTI (360). For byzantine coins from Rome see NOESKE (365).

A hoard of 6th century bronzes (from the period of Gothic wars), the first of its kind to have been recorded in Campania, was published by MAMMATO (295).

Before we leave Italy let me note a study of Lombardian imitations of Byzantine coins made by ARSLAN (71–72). The mint in Sardinia and local coin circulation have been examined in depth in two contributions from MURESU ([352–353]; for Corsica and Sardinia see also remarks of BALDASSARI [88]).

An important contribution to Early Byzantine Period studies brought together data about coin finds from Campania (10th–15th century; cf. MAMMATO [294]).

In a separate study CALLEGHER (122) discussed at some length finds of Byzantine coins from **Dalmatia**, not only 6th–8th century issues but also from the Middle Byzantine Period (see also ILKIĆ and FILIPČIĆ [233] and esp. studies of ŠEPAROVIĆ [457–460]).

Already in the introduction to this *Survey* we noted the high level of recognition of coin finds from **Dobrudja**, partly thanks to studies undertaken recently by researchers from Bulgaria and Romania in recent years. Much interest had been taken not only by coins from this region (cf. general study addressing the Byzantine Empire and the region on the lower Danube between the 7th and 10th century: DAMIAN [147]).

The situation in the Lower Danube region in Late Antiquity was the point of departure for the research of Gandila, more notably, his studies of coins from Capidava (199–200) and the activity of the mint of Thessalonica (201). His transregional studies addressed early Byzantine coins of western mints (198), and more recently, the coinage of the Balkans in the context of the collapse of the antique world discussed in a book (202) and articles (203–204).

A significant study discussing past discoveries (13th to 19th century) contributed by CUSTUREA and VELTER (142) included 391 coins from Dobrudja.

A more notable research synthesis concerned with the Early Byzantine Period, the problem of coin finds and the collapse of the limes in the early 7th century was published by CUSTUREA and TALMAȚCHI (141). Custurea's more recent achievement was his extensive study of Byzantine coin finds from Dobrudja, 5th–8th centuries, which came out in 2019 (139).

Not less significant in studies addressing Dobrudja was a publication of coins held by the museum in Tulcea provenanced to the ancient Noviodunum. This collection of more than a thousand coins includes Early Byzantine issues (Anastasius [491–518] up to Heraclius [610–641]) was presented by POPESCU and IACOB (407). Also relevant in this context are the holdings of the Brukenthal National Museum which include coins from Dobrudja (cf. TALMAȚCHI and MUNTEANU [463]).

Next to many coin finds which derive from regular excavations some were found in hoards (tentatively provenanced to Dobrudja) confiscated by the Border Police, as *e.g.*, a group of 24 AE coins buried around 614–619; cf. CUSTUREA (137).

Research in Histria (Romania) brought in a hoard of 11 AE coins buried in late 6th century (cf. CUSTUREA and NASTASI [140]; on the subject of single finds from Histria, incl. coins of Justinian I and Maurice, see ISVORANU and DABÎCA [234]). Early Byzantine coins were also recorded in ancient Durostorum (cf. GANČEVA [197]).

In his vital contributions OBERLÄNDER-TÄRNOVEANU (366–367) has published hoards now preserved in Bucharest, early Byzantine hoards in volume I, middle Byzantine hoards in volume II.

Possibly the most outstanding of Bulgarian discoveries are two hoards from the Monastery in Slavnata Kanara. Preliminary results of analysis of these hoards were published by TOTEV, DOBREV, MIHAYLOV, and LAVYSH (470–471). The first one consists of 1,220 coins (mostly, Justinian I [527–565]), buried in an amphora, the second much smaller hoard includes 18 bronze coins from the 4th–6th century (found by amateur metal detectorists, known only from a fragment). The hoards had been buried during the second half of the 6th century.

Individual early Byzantine coins have been excavated on many sites, *e.g.*, Sexaginta Prista (a few 6th-century issues, and some middle Byzantine coins as well; cf. RUSEV, DRAGOEV, VARBANOV, and PACHEV [424]).

A series of early Byzantine coins is known also from the area near Varna (Shumen Province). A list of more than 60 coins (last issue: Heraclius [610–641]) from the collection of Alexander Russev of Varna was published by MITEV [336])

Let us note that the pool of coin finds from Bulgaria from the 6th century includes a handful of western issues, such as coins of Carthage (issues of Thrasamund, king of the Vandals [496–523]; cf. VASSILEV [486]).

A fascinating hoard came to light at Hvoyna (39 AE coins, 4th–7th century; cf. BOJADŽIEV [112]), another, of 7th and 8th century coins (ending in issues of Justinian II [685–695, 705–711]) was unearthed at Aquae Calidae (Burgas mineral bath) and was presented by KLASNAKOV (260). Imitations of gold coins of emperor Justinian II (685–695, 705–711) from north-eastern Bulgaria have been discussed by LAZARENKO (278).

Coin finds from northern Bulgaria (former province of Moesia Secunda), 5th–7th, and even 8th century issues, have been addressed in several studies published by MICHAJLOV (316–322); see also contributions of ZHEKOVA (515).

A larger series of coins deriving from the study of the centre at Stara Zagora (Beroe / Augusta Traiana) in central Bulgaria includes Byzantine coins from the 6th and 10th–13th centuries was presented by MINKOVA (331).

Quite a few early Byzantine coins were recovered from *e.g.*, the fortress at Golemo Gradishte near the village of Kladnitsa (6th century; cf. PENČEVA [399]).

Byzantine coins in the collections of the museum in Pazardzhik have been included in a new volume published within the *Coin Collections and Coin Hoards from Bulgaria* series (cf. IGNATOVA, FILIPOVA, TENCHOVA, and PROKOPOV [232]). Gold coins (5th–9th century) from the Regional Museum of History in Burgas were presented by KLASNAKOV (261).

Early Byzantine coins have also come to light in Sandanski (North Macedonia): issues of Justinian I were published by FILIPOVA ([187–188]; coins from the collections of the museum in Kyustendil [Bulgaria]).

In North Macedonia outstanding discoveries were made on the site of the Late Antique and early Byzantine settlement and fortress at Gradishte Taor (Taurisium) which yielded 345 sixth-century coins (last issue: Maurice

[582–602], as well as a series of middle Byzantine (11th–12th century) coins. These finds have been discussed by RISTOV (419–420). Early Byzantine Coins from Stobi (16 AE, Justinian - Heraclius) now in the National Museum in Belgrad were published by IVANIŠEVIĆ and RADIĆ (238).

Important insights were furnished by the research on the site at Caričin Grad in southern **Serbia** (identified with Justiniana Prima) both thanks to its long-term excavation and the fact that this settlement came into being *ex nihilo* during the fourth decade of the 6th century. Coins deriving from the study of the Lower Town have been presented by IVANIŠEVIĆ and STAMENKOVIĆ (240); see also IVANIŠEVIĆ (236); IVANIŠEVIĆ and STAMENKOVIĆ (239). A coin of Justinian I was recovered in Serbia from the site Gradac-Grbave in the vicinity of Svrljig (RADIŠIĆ [416]). Coins have turned up at other sites as well, typically forming a series containing coins from the 6th century, followed by issues from the Middle Byzantine Period, *e.g.*, anonymous folles, class A or B from the 10th–11th century, as for instance, from the site Vrčenovac in south-eastern Serbia (cf. MILOJEVIĆ and MILOJEVIĆ [330]).

Sixth-century coin finds from **Albania** have been discussed by META (313). One of the most important sites which has furnished invaluable insights into the history of Epirus is Butrint. Highly relevant for the study of the 6th-century history, the site is crucial for understanding subsequent centuries. Early Byzantine coins discussed by Moorhead include those from the Vrina Plain (excavation season 2002-2009; MOORHEAD [337]) and the Triconch Palace at Butrint (season 1994–2003; MOORHEAD [338]). Vrina Plain yielded just eight early Byzantine coins (6th century; the latest coin 548–549; MOORHEAD [337], p. 15). The group excavated from the Triconch Palace includes 33 coins (AE; 6th century) (“from the start of the 7th century Butrint was no longer being supplied with coinage”; MOORHEAD [338], p. 93).

It is fit to start the review of research in **Greece** by mentioning the study *The circulation of Byzantine coinage in mainland Greece and the Balkans. The hoard evidence: 5th–15th centuries* prepared by NIKOLAU and TURATSOGLU (364). It contains an impressive list of 728 hoards with a brief discussion. However, the section on the Early Byzantine Period evidently bases on data included in a catalogue published back in 2006 (cf. MORRISSON, POPOVIĆ, and IVANIŠEVIĆ 346a).

CURTA (132–134) included coin finds (6th-7th century, and some 8th century as well) from Greece in his research syntheses (see esp. CURTA [133]).

Worth recalling at this point are contributions dedicated to coin finds from the Peloponnese, some of them cover all ages (GALANE-KRIKU [196]), while focus only on the second half of the first millennium AD (see GIANNOPULOS [208]).

Needless to say, one of the most important Byzantine sites in Greece is Corinth. The study of coin finds from this centre have demonstrated conclusively the survival of Late Antiquity coins (4th century) into the 5th-6th century, which situation suggests that “large parts of any “Dark Age” is a problem of perception rather than reality“ (SANDERS [38], p. 375; see also SANDERS [37]).

Many Byzantine coins turned up during archaeological excavations. More notably, the site at Halai (Pthiotis) produced two hoards of bronze coins (41 and 24 coins respectively), buried in the 6th century but containing earlier coins as well (KAKAVAS [250], p. 125). This interesting phenomenon is known from other areas of Byzantium (KAKAVAS [250], p. 126) but also from *e.g.*, Bohemia. A small series of early Byzantine coins (AE of Justinian, Justin II, Phocas) is known also from the region of Corinth (Koutsongila Ridge [Kenchreai harbour]; KORKA and LAGOS [262], on the subject of outstanding Kenchreai hoards *ibidem*, p. 160, note 82]). Investigations at Messene furnished coin evidence for contacts in the 6th century with Vandal and later Byzantine Carthage and Gothic Rome (TSVIKIS [472]). Several late antique / early Byzantine coins (the latest of them an issue of Phocas [602–610]) are known also from Delphi (DESTROOPER [163]), and from excavations in Argos, Kefalari and Tiryns (13 coins, Early – Middle Byzantine Period; BASILEIU [93]; see also MALADAKES [292]).

Quite a few authors have reported on research made on the islands between the 5th and 8th century, more notably, on Naxos (VIONIS [489]; see also PENNA [400]). The site at Agioi Pente of Yeroskopou near Paphos on the island of Cyprus yielded a remarkable number of Late Roman and early Byzantine coins from 4th to 7th century, discussed by MARCELLESI (300). They included some isolated finds (114 AE coins, including a larger series of issues of Justinian I and Heraclius, the latest issue being a Constans II), and a hoard of 21 coins (AE of Heraclius, mostly from 624–633). However, by far the most significant are coins from “ossuaries” (it is unclear whether these were “veritable ossuaries

[...] or collective sepulchres that are the result of a catastrophe” (MARCELLESI [300], p. 429). They yielded a truly impressive quantity of coins ranging from the 4th until the 5th/7th century: “ossuary” 1–281 coins (ending in Justinian I or Justin II) // ossuary 2–722 coins (up to Constans II) // ossuary 3–12 coins (Anastasius – Heraclius) // ossuary 4–344 coins (up to Justinian I). This fascinating site (described as a religious centre) was abandoned in consequence of Arab raids in the 7th century (for Early Byzantine Period coins from Cyprus see also BODZEK [108] and ZAVAGNO [502–505]).

Excavations of the fishing community in ancient Halasarna on the island of Kos brought in a few bronze coins of Heraclius (610–641), an interesting insight into the economy of common people (MURELATOS [351]).

Very relevant insights have been furnished by studies concerning Rhodes and published by KASDAGLE (252–254). The publication of early Byzantine coin finds from the Dodecanese islands (252); including those from Rhodes (sanctuary of Apollo Erethimios, 10 coins, early and middle Byzantine, [253]) was followed by an exhaustive study of coins from Rhodes. This publication (254) covering the period from 498 to the Ottoman conquest in 1522 includes a catalogue of an impressive series of 3354 coins. The sheer volume of coins alone listed by this author (e.g., 850 for the Early Byzantine Period [498–668]!) must cause the material from Rhodes to be quoted often in studies concerned with Byzantine coins (for Crete see RANDAZZO [417]).

*

A group of fifty or so early Byzantine coins known from the British Isles has attracted considerable interest of many researchers as e.g., MCINTOSH (312); MORRISON [342]; WEST (491) and MOORHEAD (339), accompanied by an ongoing discussion about the authenticity of these finds (BURSTRÖM [1], p. 244). The growing record of non-monetary Byzantine finds has encouraged recognition of these coins as authentic. Obviously, this problem applies to many regions of Europe, as e.g., Austria and Poland (see discussion below; cf. also the reference to early Byzantine coins from Gnezdovo in Russia).

For eastern Germany the primary task is publication of new coins from the Biesenbrow hoard. These coins were discovered in the mid-19th century. A metal detector survey made by BIERMANN in 2011 yielded ten more coins from the hoard ([101], p. 116): “The coins were struck, among others, in Constantinople, Ravenna and Rome for different East Roman emperors — from Theodosius II (401–450) to Justinian the Great (527–565). There were also golden coins of Germanic kings, from the Ostrogothic ruler Theoderich the Great (†526) and the Merovingian king Theudebert I (†547/48)” (for finds of Byzantine coins from East Germany see also BIERMANN [102]).

A study crucial for eastern parts of Europe in the 6th and 7th century is GANDILA’s book *Byzantium’s Northern Frontier* published in 2018. It includes a catalogue of finds “[...] from the Ore Mountains (separating Saxony from Bohemia) to the Caucasus [...] from eighteen modern countries” ([202], Appendix A, p. 1). Included in the Catalogue are finds from the 6th–7th century, the coins ranging from Anastasius (491–518) to Justinian II (685–695 / 705–711). GANDILA distinguished his study area into at least three zones, defining them as *the Land of Gold* (= Carpathian Basin), *the Land of Bronze* (= Lower Danube region), and *the Land of Silver* (= Transcaucasia). In my view he underestimated the number of bronze coins in the Carpathian Basin and in Transcaucasia (but this definitely does not reduce lessen the value of GANDILA’s contribution; see my detailed review: WOŁOSZYN [496]).

Finds of early Byzantine coins from the Carpathian Basin, especially those dating to the time of the Avar Khaganate (568–822) belong among the best investigated in Europe. They are discussed in the excellent study published in 2014 by SOMOGYI ([42]; in the first place, 6th and 7th century issues; the supply of gold coins stops for the most part in 626 in consequence of the Avar defeat at Constantinople). The 2014 study was subsequently supplemented by observations about the value of coins for dating (SOMOGYI [444]). SOMOGYI published also an extensive study of the hoard from Firtuşu (Firtosváralja), demonstrating that the latest coins in the hoard are issues of Justinian I rather than of Heraclius (443, 445). In a separate article the same researcher examined coins recorded in Gepidic burials (446; see also VIDA, GENNARI, and FARKAS [488]). Further finds of early Byzantine coins from Avar territory were published by PROHÁSZKA (415).

Not to be overlooked is the major contribution made by these two researchers by putting into scholarly circulation coins deriving from eighteenth century and early nineteenth century discoveries recovered through an at times very painstaking study of archival records of Austria-Hungary.

In a study of Avar relations with Rome and Constantinople published in 2019 by BÁLINT (92) coins play an

important role (especially Italian issues known from East Central Europe; cf. [92], esp. pp. 189–192, 200–203).

In my view the most urgent task at present when it comes to the Carpathian Basin is the publication of a corpus of coins of Anastasius, Justin I and Justinian I recovered in that region. This task is at present carried out by PROHÁSZKA (414).

For imitations of Early Byzantine coins by Avars (presented against a broad European background see CURTA [135]).

In the introduction to the present survey we mentioned the problem of unprovenanced coins found in museum collections. Some researchers whose area of study is the Carpathian Basin in 6th–8th century consistently regard these coins as local finds (*e.g.*, GANDILA) while others (*e.g.*, SOMOGYI) are very sceptical (cf. WOŁOSZYN [496]). Another problem also worth noting are coins recovered at Carnuntum. This site has yielded a substantial volume of early Byzantine coins (30 Byzantine and five Ostrogothic). None of them – despite many decades of archaeological activity – had been discovered during regular excavations, and information about them was obtained from private collectors only (NEDELIK and LERNER [363]). By many researchers these coins are not recognized as authentic finds, this is something worth bearing in mind (cf. Wołoszyn [496]).

Early Byzantine coins found in Eastern Carpathians were analysed by MUSTEAȚĂ (355–357).

The list of finds from Poland was later augmented by two coins by BODZEK, TUNIA, and WOŁOSZYN (109) and GORLIŃSKA, SUCHODOLSKI, BOGUCKI, ILISCH, MALARCZYK, and NOWAKIEWICZ ([209], Cat. Nos. 78–79, 102, 121, 126, 166).

A highly intriguing find is a solidus of Heraclius from Sambia Peninsula – the first coin of this type to surface on Balt territory put into scholarly circulation by ZAPOLSKA (501).

Coin finds from Eastern Europe will be addressed in the discussion of the Middle Byzantine Period. At this point let us move to Asia.

Recent years have seen an increase in the volume of early Byzantine coins (but most of all, Sasanian ones) and their imitations recovered in Central Asia (*e.g.*, on the territory of Sogdian culture; LIM [290]; XINJIANG [497]).

Single finds of early and middle Byzantine coins from Kyrgyzstan have been collected by MURATA (350).

Moving on, some of the bronze imitative coins recovered in Chāch (region around present-day Tashkent) were apparently inspired by issues of Justinian I (STARK [452], esp. Fig. 19).

A more outstanding discovery recorded in Mongolia in 2011 is the Shoroon Bumbagar Tomb dated to 7th century and identified with one of the Turkic ethnic groups. Its grave goods included “40 gold coins and gold pieces [...], among which four double-sided pieces could be identified as coins, while the others are single-sided bracteates copied from Byzantine gold coins and Sasanian silver coins” (GUO and CHEN [215], p. 1). According to the most recent analyses just one out of the four specimens turned out to be a true coin (AU, Heraclius, 610–623) the other three are imitations possibly “produced by Sogdians or other ethnic groups in Central Asia” (GUO and CHEN [215], p. 8; STARK [453]; see also SHULGA, GIRCHENKO, and FILATOVA [441]; ERDENEBOLD [182]; GUO [214]).

Bracteates with early (6th–7th century) Byzantine coin patterns have been recorded in People’s Republic of China: at Turfan twenty-five specimens were discovered “in funerary contexts, in the mouths of corpses”, at from Guyun a handful turned up in “Shi’s Cemetery where Sogdian descendants were buried” (GUO [212], esp. 342).

Byzantine coin finds recorded in China, India and Southeast Asia were discussed at the conference *From Constantinople to Chang’an. Byzantine Gold Coins in the World of Late Antiquity* held in 2017 in Changchun, China. An overview of research in Byzantine coins in China was presented by LI (282), the coins themselves by GUO ([213]; see also ŠULGA [461]). Apparently, the volume of early Byzantine coin finds is fairly small (100, possibly 200 specimens). Sixth-century issues may be seen to prevail, in contrast to coins of Heraclius, so abundant within the Byzantine Empire and *e.g.*, in the Carpathian Basin but rare in China.

A small number of coins is known from India (mostly issues of Justinian I; cf. DARLEY [150]) and Southeast Asia (AE of Anastasius found near Óc Eo in Vietnam; BORELL [113–114]).

In her convincing study DARLEY (149) was highly critical in her assessment of the authenticity of early Byzantine coin finds from Sri Lanka arguing *e.g.*, that specimens in the Leslie de Saram collection cannot be recognized as local (proving contacts of medieval Lanka with the western world). Instead, they attest the activity of early modern collectors.

Middle Byzantine Period

Before passing to discuss finds from respective regions I wish to note two research syntheses from PAPAPOPOULOU: a very relevant insight into the 12th century was furnished by studies of coins of John II Komnenos (1118–1143) – based on an analysis of iconography and coin finds themselves (384), and a comprehensive study of 12th-century mints (383)

Obviously, the Byzantine Empire which regained its influence in the ninth century was a formation than the empire of Justinian I, with a territory basically limited to Anatolia and the Balkans.

The economic revival of the Empire in Asia Minor is heralded by issues of Leo VI (886–912), thus somewhat later than in the Balkans where this process is observed since the early years of the 11th century (this is evidenced by *e.g.*, coin finds from Corinth). Economic recovery becomes obvious in the second half of the 10th and early 11th century, indicated by the great number of anonymous folles, type A2 minted at this time (LAFLI, LIGHTFOOT, and RITTER [14], p. 206; MORRISSON [19], p. 81), although obviously not every site has yielded coins from this period (*e.g.*, a single 10th century coin was recovered from Allianoī near Pergamon [an issue of Constantine VII (913–959)] and just a few from the 12th century (TEKIN and EROL-ÖZDIZBAY [468]).

The site at Amorium has an exceptional significance for the study of the Middle Byzantine Period. The archaeological record (incl. coins, but other finds too) confirm the existence of this city in the 8th–9th century (MORRISSON [19], pp. 78–79) which is highly unusual for Byzantium. Two hoards found at Amorium have been attributed to the Turkish expansion of the 1070s (MORRISSON [19], p. 81).

Ephesus remains an important centre continuing to be a recipient of coins (anonymous folles) until the end of the 10th century. “The Byzantine coin curve in Ephesus itself comes to an end with coins from the end of the 11th century. In the area around the Artemision it reaches into the 13th century. [...] In the first half of the 14th century the circulation volume must have changed completely; from that time on Islamic coins became predominant” (SCHACHINGER [428], p. 538).

A series of 53 anonymous folles dated to periods between 970/976 AD and 1075/1080 AD (in the first place, types A, B, C, D, E, F, G, I) was furnished by fieldwork on Parion, ancient Mysia (2006–2018). These coins were presented by KELEŞ and OYARÇIN (255) in the context of finds of anonymous folles from other regions of Turkey. The same site produced other middle Byzantine coins (Leo III [717–741] to Isaac II Angelus [1185–1195]) and one late Byzantine issue of Manuel II (1391–1425); cf. OYARÇIN (374).

The fieldwork at Komana (near Tokat) brought in 63 coins, including a handful of early Byzantine issues (Justin I, Phocas, Constans II). Most of them date from 10th and 11th century (in the first place, anonymous folles, classes A2, B, C, D, G, I, J). The latest coin is a bronze of Roman IV Diogenes (1068–1071) and an anonymous follis, type J, attributed to the early reign of Alexios I Komnenos (1081–1118). The absence of later Byzantine coins must be due to Turkish expansion (ÜNAL [482]).

Middle Byzantine coins recovered at Kyme near Aliağa (ancient Aeolis) in western Turkey include a single late 8th century milaresion issued by Leo IV and Constantine VI (CARROCCIO [126]). The site of Hadrianopolis in Paphlagonia produced a coin of Leo III (717–741), some anonymous folles and a bronze coin of Roman IV (1068–1071) “which fits perfectly to the date of battle of Manzikert in A.D. 1071 and the lasting entry of the Seljuk Turks in Asia Minor” (LAFLI, LIGHTFOOT, and RITTER [14], p. 194). The studies carried out in 1954 at Daskyleion in Mysia brought in three middle Byzantine coins (10th–12th century; cf. KÖKER [265]).

The turbulent times of the Fourth Crusade are what prompted the deposition of the hoard at Uluköy in Sandikli, Afyonkarahisar in ancient Phrygia buried most probably after 1204 (DEMIREL GÖKALP [155]).

Finally, we need to note a remarkable series of 107 anonymous folles now in the Kayseri Archaeological Museum (central Turkey; cf. YUKA [499]).

In this overview of finds from the Balkans I leave out information about the changing political situation in respective regions (obviously, in late 9th, and in 12th century, Bulgaria was an independent state, while in early 11th century it was a part of the Byzantine Empire (for Bulgaria and Byzantium in the time of Basil II from a numismatic point of view see ZHEKOVA [508]).

The highly relevant series initiated in 2010 by MĂNUCU-ADAMEȘTEANU – *Byzantine coins discovered in Dobruđa* was followed by a new series of studies by this author collected in volumes II–VI:1–4 (MĂNUCU-ADAMEȘTEANU

[303–306, 308–311]. Some of the coins were additionally subjected to a physico-chemical analysis (POLL [406]).

The numismatic history of Dobruđja in the 10th and 11th centuries has been presented in detail (period 896–1001: 78 points with single finds and 13 coin hoards / 1001–1092: 155 points with single finds and 48 coin hoards; cf. CUSTUREA [138]; bronze coins from 10th–11th century see MĂNUCU-ADAMEȘTEANU [302]).

We owe a research synthesis on coin circulation in the lower Danube region in 10th and 11th century, i.e., the time of the Byzantine reconquista to JORDANOV and ZHEKOVA (249).

An extraordinary nomad burial containing a hoard of 13 coins (Electrum scyphati of Manuel I Komnenos [1143–1180], Andronicus Komnenos [1183–1185], and Isaac Angelos [1185–1195]) was excavated on Lake Kalabukh on the left bank of the Lower Danube; cf. RUSSEV and REDINA [425]; DOBROLIUBSKII and SMYRNOV [165]).

Among more notable finds from Bulgaria is a hoard of gold coins from the Markela fortress near the Bulgarian town Karnobat (37 issues, including Nicephorus III Botaniates [1078–1081], Alexios I Komnenos [1092–1018] and John II Komnenos [1118–1143]; cf. ALADŽOV [55–56]). The fieldwork in Veliki Preslav yielded a series of Byzantine and Bulgarian coins from 10th–14th century; cf. ALADŽOV (57). A find recently published from Pliska was an anonymous follis of the Emperor Nicephorus (802–811; cf. DIMITROV and INKOVA [164]), but also, a series of 47 Byzantine bronze coins from 10th–11th (additionally, also a coin of Leo VI [886–912]; cf. GRIGOROV [210]).

Plenty data on minting activity of the Middle Byzantine Period was furnished by the fortress at Silistra in north-eastern Bulgaria (Alexios I Komnenos; cf. PENČEV [393]; see also information about 11th-century hoard containing gold Byzantine coins [Romanos III Argyros; 1028–1034] from Professor Iširkovo village, Silistra region; cf. PENČEV [397]).

An impressive group of 1028 coins (early, but mostly middle and late Byzantine issues) came to light during the investigation of the fortress Ryahovets (Rachovets) in north-eastern Bulgaria, near Veliko Tarnovo (summary review: PETRAKIEV [401]).

The collection of A. Russev was found to include 49 bronze coins (9th–12th century) from the vicinity of Varna (Shumen Region) in Bulgaria (MITEV [335], for more about this region in the Middle Byzantine Period see MITEV [333–334]).

Some remarkable coins from Gradnitsa, Sevlievo municipality in central Bulgaria were published less than a decade ago (13th century; PENČEV [394]).

Likely to be associated with the Norman threat of the 1080s is a hoard of six pre-reform Thessaloniki nomismata histamena of Alexios Komnenos (from archaeological excavations in the medieval fortress of Balāk dere near Ivaylovgrad; cf. PENČEV [395]).

Another fascinating subject next to that of Byzantine coin finds is early coinage activity in the Balkans. The first known Bulgarian cast replicas of Byzantine coins were anonymous folles, class A-2 (976–1035), in the vicinity of Preslav evidence was found for the copying of earlier coins (from the 10th century; cf. DONCHEVA [177]; on the subject of Bulgarian coinage activity see also JORDANOV [248]).

A more recent find from Bulgaria are coins from the medieval village of Zlatna Livada (10th/11th–13th century) cf. MINKOVA (332).

Finds of 10th–11th century anonymous folles from the Strandzha massif (south-eastern Bulgaria / north-western Turkey) have been discussed by MILANOVA and VALERIEV (328).

Serbian finds include a series of Byzantine coins from 9th–12th century from the collections of the National Museum in Kruševac which reflect well the Byzantine revival of the 9th century, but also the importance of this region in the 11th and 12th century (cf. RAŠKOVIĆ [418]). For Middle Byzantine coin and seals from Mladenovac see IVANIŠEVIĆ (237).

As was noted earlier, among finds from the Balkans a truly exceptional site is Butrint (see HODGES [227]). The finds from the Middle and Late Byzantine Period were discussed by PAPADOPOULOU (387), who concluded (referring to the earlier contribution from Richard Hodges) that this site may be recognised “as ‘a microcosm of Mediterranean history’” ([387], p. 104). The site of the Triconch Palace produced no less than 61 single finds of Byzantine coins (9th–13th) and a hoard. The group of coins from single finds is evidently dominated by AE issues, most of them from the second half of the 10th and the 11th century (ending in issues of Nicephorus III [1078–1081]), the only exception being a gold tetarteron of Basil II (976–1025), and two silver miliaresia (Basil I [867–886] and John I [969–976]).

More notable later coins include 13th century issues (of the Despotate of Epirus, and the Empire of Thessalonica). The latest Byzantine coin among single finds is a stamenon of Michael VIII (1259–1282). To these finds we need to add a coin hoard recovered in 2002 (three stamena of Manuel I [1143–1180] and 91 stamena of Isaac II [1185–1195]), possibly buried at the time when the armies of the Fourth Crusade were on the move through this region in 1203 ([387], p. 101).

The excavations on the Vrina Plain – also discussed by PAPADOPOULOU – brought in 56 middle and late Byzantine coins ([385], p. 41). Eleventh century coinage is documented by four coins of the Amorian dynasty (9th century), minted on the island of Sicily. A mass influx of coinage started in the reign of Leo VI (886–912) and lasted for the duration of the 10th century until the early years of the 11th century. Byzantine coins from the Vrina Plain with the latest dating are issues of Manuel I (1143–1180) and John III Vatatzes (1246–1254).

It is significant that the coins from the 9th century (especially those uncirculated) and seals (9th–10th century; PAPADOPOULOU [28]) prove that “the middle Byzantine building from which these finds derived was the oikos of the local archon” ([385], p. 46, note 16).

Recent finds of Middle Byzantine coins from Greece include several specimens (Leo VI (886–912) and Nicephorus II (963–969) found among the grave goods in a cemetery “Rachi Mpompora” in Agios Thomas (Mesolongi; cf. CHULIARAS, CHAMILAKE, KATSIKA, and GEORGIU [131]). At Halai (Pthiotis) the Middle Byzantine Period is represented by a coin of Leo VI the Wise (886–912), but also by tetartera and half-tetartera of the Komnenoi from the 12th century (KAKAVAS [250]). Five middle Byzantine coins are known from Kenchreai, the latest of which, a tetarteron of John II (1118–1143) corresponds well with the destruction in 1147 of Corinth by Roger II of Sicily, marking the end of this centre (KORKA and LAGOS [262], p. 161). The excavation near the port of Naupaktos yielded a follis of Leo VI and an anonymous follis, Class A (KOSTI [264]).

The Peloponnese and its economy in the 9th–11th centuries have been discussed using evidence from the written sources by GEROLYMATU (207).

Middle Byzantine coins were also recorded in **Europe beyond the Empire**. Their finds in the British Isles have been analysed comprehensively by MORRISSON ([344]: 40 AE issues, Michael I Rhangabe [811–813] to Andronicus II and Michael IX [1294–1320]; for Albion and Byzantium see also HOBBS [226]).

The corpus of new finds of middle Byzantine coins from Poland is very modest. An anonymous Byzantine follis from Gródek upon the Bug River was presented by BODZEK, DEL HOYO-MELÉNDEZ, and WOŁOSZYN (110). Byzantine coins have been mentioned in a Corpus of coin finds from early medieval Polish contexts GORLIŃSKA, SUCHODOLSKI, BOGUCKI, ILISCH, MALARCZYK, and NOWAKIEWICZ (209), Cat. Nos. 16, 18, 30, 84–85, 117, 127–128, 153, 166, 174, 181; cf. also BOGUCKI, DYMOWSKI, and ŚNIEŻKO (111), Cat. Nos. 9, 21, 32, 34–36, 41, U.11). A more outstanding recent find is a bronze coin (1 AE Nikephoros II Phokas [963–969]) discovered in Poznań – Śródka during regular excavations (presumably in a burial context) – preliminary report by PAWLAK and PAWLAK ([391], p. 68 and Fig. 70).

Hungarian finds of 10th century Byzantine coins were brought together and analysed by PROHÁSZKA (412–413).

Byzantine coins from **Scandinavian** finds have been the subject of numerous analyses for some time now. The most commonly encountered denomination are silver miliaresia from the 10th and 11th century. More recently circumstances of their influx were addressed by ANDROSHCHUK (65–66), GRUSZCZYŃSKI (211), HORSNÆS (228–229), JANKOWIAK (242), JONSSON (246) and FÖLLER (192); their use (as pendants) was discussed by AUDY (76–77). The new edition of *Corpus nummorum saeculorum IX–XI* presumably will be expected to organise these finds further (cf. JONSSON ed. [247]).

Single finds of bronze coins recorded in Scandinavia (cf. HORSNÆS [229], p. 191, 196) help to improve our understanding of the appearance of similar specimens in Estonia (cf. KIUDSOO [258]).

A separate problem are Byzantine coins as a source of inspiration for the local Scandinavian minting activity – e.g., ANDROSHCHUK (64).

The study of the relations of the Byzantine Empire with other regions of medieval Europe continues to suffer from the lack of an updated corpus of coin finds from Eastern Europe while the most recent comprehensive catalogue continues to be the work of V. Kropotkin published more than six decades ago; see remarks in GURULEVA and MUSIN (224). Needless to say “Eastern Europe“ is a vast territory with several identifiable culture zones.

Crimea and the northern coast of the Black and Azov seas were the outlying territories of Byzantine civilization

and their immediate periphery. We owe a synthetic review of the history of the Byzantine Taurica and its coins to CHOREF ([129]; see also CHOREF [130]; GURULEVA [220]; for Crimea see also remarks in chapter Periphery without Dark Ages in CURTA [136], pp. 81–93). Byzantine coins of Tauric Chersonese with monograms of «Basil» and «despot» were addressed by ČAPAĖV (143). Coin circulation in Byzantine Chersonese were discussed recently also by ALEKSEENKO (59). Syracusan folles of Leo V (813–820) found in Chersonese (200 specimens!!) were presented by GURULEVA (219). Late 8th century Byzantine coins are represented by five solidi recovered at Phanagoria during the research seasons 2016 and 2018 (2 solidi of Tiberius III Apsimarus [698–705], a solidus of Leo III the Isaurian [717–741] and a solidus of Constantine V with Leo IV Khazar [741–775]; cf. ABRAMZON and OSTAPENKO [53]).

To my knowledge there are no comprehensive studies of Byzantine coin finds from the Caucasus. Let us note however, the regular study of finds from Armenia made by HOVHANNISYAN; so far one volume dedicated to anonymous folles, Class A has been published ([230]; see also PHILLIPS [402]).

Moving away from the south, an important location is the region of the Dnieper Rapids with a site which in 1812 yielded a hoard of Byzantine coins. The record of this find was revisited and pushed forward the date of the hoard's deposition from late 10th to the second half of the 11th century (the latest coins are anonymous folles, class H, from the reign of VII [1071–1078; cf. GURULEVA and GAJDUKOV [222]).

A brief report on nomad burials in the delta of the river Don River containing Byzantine coins (gold issues of Nicephorus III [1078–1081] and Manuel I [1143–1180]) was presented by ČCHAIÐZE (144).

Particularly depressing is the lack of a corpus of coins deriving from early Rus contexts. The routes of influx of Byzantine coins to the region between the 9th and 11th centuries were addressed by SHEVTSOV in his research synthesis ([436]; see also MUSIN [354]; PAPADOPOULOU [386]). Several contributions by GURULEVA are dedicated to Byzantine coins in the Hermitage Museum (216–218). More outstanding among them is a study of miliaresia (429 specimens; Leo III [717–741] to Alexios I Komnenus [1081–1118]), most of them (97 coins) with evidence of reuse (holes, loops; cf. GURULEVA [221]). Some of these coins may derive from local discoveries and presumably formed part of the wave of silver Byzantine coins observed in Eastern Europe and Scandinavia (cf. below).

A notable regional study has discussed coin finds from the 9th–11th century recovered in the upper reaches of the Desna River (Bryansk oblast): four gold coins, two gold imitations, more than 20 silver coins and 30 bronzes SHINAKOV, ZAYTSEV, and PISKUNOV (439); see also SHINAKOV, ZAYTSEV, and SOBOLEV (440). Belarusian finds of Byzantine coins of Tauric Chersonese were published in up-to-date contribution (cf. SIDOROVICH and SHEVTSOV [442]).

Worth special note is a study of Byzantine coins recovered at Gnezdovo and Kyiv by SHEVTSOV (438) discussing fifty coins from the former and 126 from the latter locality (a comprehensive catalogue of coins from Gnezdovo is now in the works). The corpus of coin finds from Gnezdovo includes early Byzantine issues (of Justin I [518–527] from the Chersonese mint; Heraclius [610–641] AE; Constantine VI [780–797] Ag). Not unexpectedly, the largest number are coins from 9th and 10th century (up to Basil II [976–1025]), but there are some individual 6th and 7th century issues (this is important in the context of the discussion on the authenticity of finds of early Byzantine coins *e.g.*, from Great Britain).

An outstanding series of coins from Gnezdovo are ten bronzes of Theophilos (829–842), possibly introduced to the upper Dnieper region with the first stream of Byzantine coins (SHEVTSOV [437]).

A truly remarkable hoard apparently came to light in the 1980s at the rural settlement of Ochovo in Belarus (outside Pinsk). It comprised a single *zlatnik* of Vladimir the Great, eight Byzantine solidi from 10th–11th century (ending in a coin of Basil II [976–1025]), and a gold earring (ZAJTSEV and MITJAEVA [500]). This assemblage of coins is important both for the study of the influx of Byzantine coins and the chronology of early Rus coinage.

Byzantine coins recorded in the north of Rus are mostly silver, which makes the gold coin of Roman III (1028–1034) recovered at Novgorod an even more remarkable find (GURULEVA, GAJDUKOV, and OLEJNIKOV [223]).

Several early Byzantine silver coins are mentioned by Myzgin in his discussion of ancient coins found in Eastern Europe (MYZGIN [358], Cat. Nos. 7, 19, 24, 26).

It is important to note a thought-provoking miliaresion of Basil II and Constantine VIII (976–1025) found with two other coins in a cremation burial in a cemetery on Cape Ristiniemi (North-Western Ladoga Lake Area; cf. BELSKIY, GORLOV, and LEMBERG [96]; KULESHOV and JONSSON [270]).

Recent years have seen an increase in the volume of finds of later Byzantine coins (*i.e.*, from the 12th–13th century). There is strong evidence that these issues (of the Komnenos dynasty, but also Latin and “Bulgarian” imitations) entered the region, the Dniester basin in particular, Volhynia, and Kyiv; this is suggested by finds published by GURULEVA, MUSIN, and OSTAPYUK (225).

Late Byzantine Period

Quite a few studies have been concerned with the period 13th–15th century, and in particular to the presence on Byzantine territory of Latin Christians. Of these more notable is an English-language edition of earlier works as *e.g.*, *Coins of the Frankish occupation of Greece 1184–1566* of TZAMALIS (473). 2015 brought the research synthesis of the coinage of the Empire of Trebizond by BENDALL (100).

A crucial contribution to understanding this age has been made by Baker and his regular publication of the most important coin finds, more notably his studies of the material (hoards included) from medieval Thrace and Constantinople (BAKER [79]; 82–27 hoards), Peloponnese (Argolid – see BAKER and TSEKES [87]) and the Cistercian Monastery of Zaraka (see BAKER [81]). The significance of Ephesos as a trade centre in the Late Byzantine Period, including a hoard of coins (“Aretemis Hoard 1871” / “İsa Bey Hamamı Hoard 1999” / “Ayasuluk Hoard 1979”) was addressed by DALANAY (146), but also by BAKER (83). Other notable publications include a study of the Miletus hoard (BAKER and KLUGE [86]), and another, addressing silver currency in late 14th century using the evidence of hoards from Belgrade (BAKER, DOMPIERI, and GÖKYILDIRIM [85]).

Baker has also contributed a number of research syntheses (BAKER [80]). The most accomplished of these would be his monumental work *Coinage and Money in Medieval Greece 1200–1430* (84). It covers the territory of modern Greece (leaving out Greek Macedonia, Thrace and the island of Crete). Next to an extensive catalogue of finds (Appendix I: Coin Finds, pp. 647–1196) this groundbreaking contribution includes a broad discussion of relevant types of coins (cf. Appendix II–III, pp. 1197–1597).

To continue our list of significant and exciting finds

A remarkable study addressed 12th/13th century hoards from Turkey: the Beydağ hoard (545 billion trachea of Manuel I Comnenus, and Aronicus I Comnenus, Isaac II Angelus, Alexius III Angelus; cf. ÜNAL [479]), the Ağacık hoard (ÜNAL [478]) and hoards excavated in 2011 and 2012 at Uzunuyava near Muğla (Mylasa). The latter, numbering “about six thousand pieces of silver coins minted by Seljuks of Anatolia, Menteşeoğlu, Ilkhanlı, Italian states, France, Armenian and Cypriot Lusignan provinces, and by the Pope, are significant not only for their artistic value, but also for the history of the region during the 13/14th centuries“ (PEKTAŞ [392], p. 435).

A fascinating group of three hoards which came to light during the research at Kadıkalesi (ancient Anaia) are a capital source to the history of the Nicene Empire and Late Byzantine Empire. The large number of coins from this research (cf. ÜNAL [480]) includes two very interesting hoards: ‘Kadıkalesi/ Anaia Hoard A’: 17 golden hyperpyra, John III Doukas Vatatzes (1221–1254); cf. ÜNAL [481] // ‘Kadıkalesi/ Anaia Hoard B’ (24 billion trachea; Theodore I Lascaris [1208–2221]; cf. ÜNAL and TOY [484] // and ‘Kadıkalesi/ Anaia Hoard C’ (33 copper trachea and stamena, from Michael VIII Palaiologos [1261–1282] until the joint reign of John V and John VI Palaiologos [1347–1352]; cf. ÜNAL and TOY [483]).

A more notable group are finds of coins of the Palaiologoi from the vicinity of the medieval Tarnovo (Veliko Tarnovo), addressed in a series of studies by DOČEV (166–176) and LAZARENKO (279–280).

A hoard from the early 15th century (with *e.g.*, half-stavraton coins of John VII and Manuel II Palaiologos, struck between 1399 and 1403) from Lăka village, Pomorie municipality in Bulgaria was presented by KRĀSTEV (267).

An important hoard of 194 coins of Isaac II Angelos (1185–1195), dropped in late 1240s or early 1250s, held by the National Museum of History in Sofia has been discussed by PENČEV (398).

A coin of Manuel Komnenos Doukas, Despot of Thessalonica (1230–1237) was found during the archaeological excavations on the medieval fortress of Balák Dere near Ivaylovgrad (cf. PENČEV [396]; for Bulgaria see also ZHEKOVA [510–511]).

Worth noting among finds from Greece are two hoards from the Frankish period (2130 and 233 coins) discovered in 2005 at Argos (KOSSYBA [263]). Two other exceptional deposits are the ‘Thessalonica/2007’ hoards (comprising respectively 79 and 215 coins) from late 12th – early 13th century (esp. LIANTA [287]). A gold hyperpyron of John III Vatatzes (1222–1254) came to light during excavations of a Byzantine church of Saint George in Evenochori

(Mesolongi; STAUROKOS [454]). Also worth noting are 13th and 14th century Venetian coins (Giovanni Dandolo [1280–1289] to Andrea Dandolo [1350–1354]) identified in the hoard from Naxos (KARDASE [251]).

Last but not least, worth noting are two important excavation projects. Their results are very relevant for all the periods of Byzantine history, including the Late Byzantine Period.

A notable group of Byzantine coins came to light during archaeological excavations conducted in connection with the construction of the Venizelou metro station in Thessalonica (2008–2015). Out of 16,277 single coins recovered from this site at present undergoing conservation treatment and determination 3227 specimens belong to the period between the 4th and 14th century, which corresponds to Late Antiquity and Byzantine age (coins from all periods of the Empire are represented: cf. LIANTA [283]).

A substantial coin series came to light during the Kadikalesi/Anaia excavation of a major centre on the western coast of Anatolia. Running since 2001 the fieldwork produced more than 1000 coins (from all periods of Byzantine history). To date, the part of the assemblage dating to 13th-14th century was published (cf. ÜNAL [480]).

Last but definitely not least to be mentioned in this survey is a series of coins (30 billon and copper coins of Andronicus II (1282–1328) and Andronicus III (1328–1341) found outside the territory of the crumbling Empire, between the rivers Prut and the Dniester in contexts dated to the period of the Golden Horde (KRIVENKO and BUTYRSKIJ [268]).

VISIGOTHS

Ruth Pliego

The period 2014-2019 witnessed the publication of two works on Visigothic coinage. In one of them, STEINBACH (32) synthesizes in German the advances made in the field over the previous decade. KURT (8), for his part, examines Visigothic coinage comprehensively, beginning with issuing authorities, mints, and techniques, and tries to establish the uses of coinage over time, although, in my opinion, he lays excessive emphasis on the military function. Two hoards were published during this period; one, dated to Tulga's reign, has been in the possession of a family from Cordoba from at least the mid-20th century [PLIEGO (22)]; the other one is the Calle Cuna Hoard (Seville) [PLIEGO (20)]. This is one of the earliest known Visigothic hoards (mid-6th century); although it was found in 1972, it had until recently been inaccessible to scholars. BARLETT, YOON and PLIEGO (1) have examined their weight and composition, comparing it with the Reccopolis hoard, which is obviously later in date (c. 579). Finds in Reccopolis have been reported by CASTRO PRIEGO (3) who examines, based on the analysis of the distorted panorama presented by Visigothic hoards and finds, the absence of coinage in the central regions of the Iberian Peninsula [CASTRO PRIEGO (4); OLMO ENCISO and CASTRO PRIEGO (15)]. MARTÍN VISO (9) has addressed monetary finds in the center-east of the Iberian Peninsula from an archaeological perspective and has examined their possible fiscal function. The same region, more or less, has also been examined by MARTÍN-ESQUIVEL and BLÁZQUEZ-CERRATO (10), although these authors, perhaps prompted by the scarcity of Visigothic coins of known provenance, not only consider assemblages of different periods, the composition of some of which is uneven, doubtful and suspicious but analyze them in combination with isolated finds, against the grain of the numismatic method. Some methodological transgressions are also found in the confusingly entitled works by GONZÁLEZ GARCÍA and MARTÍNEZ CHICO (7, 11, 12), which address pieces of little or no interest currently in private collections or auctioned as if they were well-provenanced finds. For a review of numismatics novelties prior to 2014 see PLIEGO (21), with a report of Visigothic hoards in museums and institutions.

This period has also witnessed a renovation of the study of the so-called Visigothic bronzes [PLIEGO (19, 23, 27)], although these late pieces are still subject to a wide variety of interpretations [MORA SERRANO (13, 14)]. The novelties yielded by the site of València la Vella (Riba-Roja de Túria) were synthesised by CALDÉS (2). An examination of possible Visigothic silver issues was published by CRUSAFONT and others (5, 6).

Other aspects of Visigothic coinage have also been addressed during this period, for instance, their typological analysis and the relationship between typology and political power [PLIEGO (26)], the end of the Visigothic kingdom [PLIEGO (17)], and the transition between the Visigothic and Ummayyad periods [PLIEGO and IBRAHIM (30)]. Several works have added new items to the Visigothic monetary corpus [PLIEGO (18, 25, 29); RUEDA (31)] and the Visigothic coins in the large Roman hoard of Sovana have been examined [PLIEGO (16)]. Similarly, the foundations have been laid for the analysis of the Suevi coinage [PLIEGO (24)].

A historiographical review and update of the data, besides a commentary on most of these works, can be found in PLIEGO (28).

CAROLINGIENS

Guillaume Sarah

Les travaux relatifs aux monnaies carolingiennes se répartissent en deux groupes principaux : le premier rassemble des catalogues ou des études portant sur des monnaies de collections ; le second, est constitué des publications de trouvailles isolées ou de trésors, dont le degré de connaissance va de la zone supposée de découverte au contexte archéologique.

Une publication notable est celle de KLUGE (41) qui présente la collection des monnaies des premiers souverains carolingiens (751-814) conservées au Cabinet des Médailles de Berlin. Les volumes d'actes de deux colloques importants centrés sur la période carolingienne sont également parus au cours de la période de référence. Le premier chronologiquement est celui dirigé par BOMPAIRE et SARAH (12), dont les contributions pluridisciplinaires traitent de la production et de la circulation de l'argent autour du cas de la mine de Melle. Le second, édité par GIANAZZA et ROSSINI (38) a trait à la circulation des monnaies entre l'Italie et la Suisse pendant le haut Moyen Âge. Outre des études nombreuses centrées sur un type inédit ou une nouvelle variante, trois publications traitant de l'économie à l'époque carolingienne dans une approche faisant un usage conjoint de la monnaie et des textes méritent d'être mentionnées : il s'agit des articles de COUPLAND (19) et de DEVROEY (33), et de l'ouvrage de KUCHENBUCH (43).

Pour ce qui concerne les trésors et les découvertes isolées, plusieurs ensembles importants ont fait l'objet de publications détaillées : Hermenches (78), Pilligerheck (87), Auzeville (90) et « Loiret » (67). On peut souligner la pratique croissante de l'étude systématique des liaisons de coins et l'apport des analyses de composition. La parution du volume XVII de la série *Trésors Monétaires* de la Bibliothèque nationale de France [DUYRAT (83)], même si les monnayages strictement carolingiens n'en constituent qu'une partie minoritaire, mérite d'être relevée ici. Toujours au sujet des trésors, COUPLAND (72) a proposé une mise à jour de sa *Checklist* des trésors carolingiens, ainsi que plusieurs notes ou publications relatives à des découvertes de nouveaux ensembles monétaires (71, 73, 76, 79 et 81). Bien qu'il s'agisse d'un ouvrage traitant des découvertes de trésors faite en Normandie pour une large période médiévale (754-1514), nous pouvons mentionner ici l'ouvrage de MOESGAARD (85) qui liste 16 trésors datés de la période carolingienne. L'étude de BIELLMANN *et al.* (69) centrée sur les découvertes isolées faites sur le site d'Oedenburg (Haut-Rhin), et celle de BALDASSARI (68) pour la zone haute-tyrrhénienne présentent des résultats importants sur la circulation des monnaies à l'époque carolingienne. Les découvertes monétaires en lien avec les raids hongrois ont fait l'objet de plusieurs publications, qu'elles aient été faites sur le territoire de la France actuelle [SARAH (88)] ou en Europe centrale [COUPLAND (75), COUPLAND et GIANAZZA (80)]. Enfin, on peut noter les publications de SARAH et ses collègues visant à faire connaître des découvertes de monnaies carolingiennes en contexte archéologique (91, 92).

PENÍNSULA IBÉRICA

Alberto Estrada-Rius

Congresos y encuentros científicos

En los siete años sujetos a comentario debe destacarse, en primer lugar, la celebración de dos ediciones del *Congreso Nacional de Numismática*. El primero, organizado por el Museo Arqueológico Nacional (Madrid, 2014), se convocó, con ocasión de la reinauguración del Museo anfitrión, bajo el tema monográfico de *colecciones y museos* y sus actas recogen, como era de esperar, notables aportaciones sobre museografía y colecciones (10). El segundo, celebrado bajo los auspicios del Museu Nacional d'Art de Catalunya (Barcelona, 2018), se convocó con el tema general de *tesoros y hallazgos monetarios* (6, 7 y 8) y se está a la espera de la publicación de sus actas. En un sentido similar cabe señalar la celebración del *XV Congreso Internacional de Numismática* (Taormina 2015), en el cual se hicieron aportaciones sobre la numismática hispánica recogidas, también, en sus actas (1).

En cuanto a otros encuentros científicos de carácter monográfico con formato de curso cabe señalar los que se comentan a continuación. El Gabinet Numismàtic de Catalunya (Museu Nacional d'Art de Catalunya) ha publicado, en 2017, una monografía con los estudios resultantes de la jornada internacional de trabajo celebrada en su sede con el tema bifaz de fabricación de moneda oficial *versus* falsificación de moneda en la Cataluña del siglo XIX (5). También ha publicado las actas de las sucesivas celebraciones del *Curso de historia monetaria hispánica* que organiza cada año con temas monográficos diversos. Esto es, desde manifestaciones paramonetales como los tantos de coro eclesiásticos (2) u otras formas de dinero (3), al repaso transversal de los sistemas y uniones monetarias desde una perspectiva del Occidente de Europa (4) pasando por asuntos de numismática contemporánea como la situación monetaria de España durante la guerra civil española (9). Este tipo de publicación suele convertirse en una síntesis o puesta al día de los asuntos tratados. Finalmente, cabe señalar la celebración de los tradicionales *Encuentros de la Semana Numismática* organizados, con carácter anual, por la Asociación Numismática Española y publicados en su revista corporativa *Gaceta Numismática*. Las distintas contribuciones presentadas en estas tribunas serán desglosadas en los apartados temáticos correspondientes.

Exposiciones

El Museo Arqueológico Nacional ha reabierto su sede en 2014, tras una profunda remodelación, y, con ella, la instalación permanente de sus colecciones numismáticas en una larga sala monográfica, así como su complementaria integración en el discurso general cronológico y temático de las colecciones del Museo (18 y 19). También ha acogido una exposición temporal coorganizada con el Museo Naval y dedicada a la mediática recuperación de la carga monetaria de la fragata de guerra *Mercedes* (16).

El Gabinet Numismàtic de Catalunya ha presentado en este período un conjunto de pequeñas intervenciones y propuestas monográficas dedicadas, sucesivamente, a la conmemoración colectiva de los centenarios de diversos numismáticos ilustres vinculados a la colección o a la numismática local catalana como Antonio Agustín, Joaquim Botet i Sisó o Josep Amorós (12); *Barcelona, fàbrica de balanzas* (15) a propósito del ingreso de un interesante donativo de documentación procedente de un taller de balanzas barcelonés de nombre primero Farriols y después Tarradell. Sobre esta última muestra véanse los comentarios complementarios en el bloc del Museo (151 y 152). La conjunción de los costes elevados de las producciones y la voluntad de llegar a un público cada vez más conectado a la red ha llevado a la propuesta de itinerarios consultables en su página web. Son un buen ejemplo los que, preparados con ocasión de la celebración del XVI Congreso Nacional de Numismática, ofrecen un itinerario dedicado a los tesoros monetarios y a hallazgos de conjuntos que puede verse en versión digital en su página web (13) o sobre las representaciones numismáticas en las obras de arte de la colección general del Museo (14).

El Museo de Artes Gráficas de Valencia ha dedicado la exposición *El poder en la butxaca. Imatges dels governants en les monedes d'Espanya* a la imagen del poder en la moneda con un documentado y extenso catálogo (11).

Igualmente, el Museu de Prehistòria de Valencia ha organizado una exposición en la que ha presentado al público sus últimas adquisiciones en monedas antiguas con el título *Històries en miniatura. Les nostres primeres monedes* (17 y 64). Finalmente, en varias exposiciones de temática diversa se han expuesto algunas monedas relacionadas con los temas generales de las mismas y, correlativamente, se han publicado fichas comentadas de las mismas en los correspondientes catálogos. Valgan, solo de ejemplo, la dedicada por el Museu Episcopal de Vic al célebre abad y obispo Oliba de Vic [ESTRADA-RIUS (235-237)] o las fichas redactadas por GRAÑEDA (347, 348) sobre billetes de tema cervantino.

Obras generales y catálogos

En relación a los catálogos generales cabe reseñarse la última edición actualizada del clásico CALICÓ (21) dedicado, de manera general, a la moneda española. En cuanto a catalogaciones sectoriales se ha desarrollado la sistematización de la moneda castellana moderna en el catálogo dedicado a los reales de los Reyes Católicos de LÓPEZ DE LA FUENTE (27) y, especialmente, de las monedas de vellón de los Austrias con los catálogos del mismo autor (26) y, siguiendo trabajos anteriores, de JARABO, SANAHUJA (25). El progreso del desarrollo del estudio de la numismática galaica, ya evidenciada desde hace algunos años, sigue creciendo con la publicación de un catálogo comentado sobre las emisiones medievales a cargo de NÚÑEZ (29).

En el ámbito de estudio de las emisiones de cecas concretas cabe destacar el catálogo sobre las de Segovia por MURRAY (28) y de Jubia por CASAL, NÚÑEZ (22). También debe señalarse la publicación de un manual universitario para la enseñanza de la numismática [VICO, FRANCISCO (30)], así como de un útil diccionario numismático español-inglés (20) y de un glosario catalán de numismática [CRUSAFONT (23)]. Este último, al tratarse de una obra escrita desde la más pura subjetividad, debe consultarse después de leer las observaciones sobre el mismo reseñadas por FRANCISCO (24).

Coleccionismo, museografía e historiografía

Un campo de estudio que en las últimas décadas se ha desarrollado con fuerza y que ocupa un lugar destacado en los estudios numismáticos es el que podemos calificar de historia del coleccionismo-colecciones y coleccionistas- y de la historiografía, generada esta última, a partir del estudio de las colecciones y de la vida y obra de los numismáticos desde el Renacimiento hasta nuestros días. En íntima relación con los anteriores conceptos también la museografía y la museología en cuanto operan sobre colecciones y sobre el estudio numismático.

La convocatoria del XV Congreso Nacional de Numismática con el tema general de patrimonio numismático y museos ha sido un aliciente para incentivar y agrupar esta materia en sus actas (10). Así, se han publicado diversos trabajos destinados a ofrecer visiones generales de los monetarios que albergan instituciones como el Banco de España en su cámara del oro (33), el Museo Provincial de Lugo (32), el Museo Arqueológico de Ibiza (57), el Museo de Mataró (72), el Museo Arqueológico-Municipal de Alcoy-Alicante (88), el Museo de la ciudad de Alicante (59), el Museo Arqueológico de la Vall d'Uixó (56), el museo Bíblico Tarraconense (90) y, de manera global, los museos provinciales de Extremadura (63).

En clara complementariedad a las citadas visiones de conjunto se han publicado aproximaciones a series concretas de algunas colecciones o monetarios como, por ejemplo, el caso de la moneda romana en el Museo de Historia y Arqueología de Silla, en Valencia (68); la moneda de Judea (31), las númidas y mauritanas (74), las monedas chinas procedentes de la colección Toda (62), las emisiones medievales de Florencia (38), las monedas de la ceca latina de Segovia (71) y las acuñaciones de los emperadores bizantinos Anastasio I, Justino I y Justiniano I (78) del Museo Arqueológico Nacional; también las emisiones de Jubia en el Museo Arqueológico e Histórico de A Coruña (37) y las medallas de devoción (48), los billetes locales de la guerra civil española (50), las emisiones griegas (49) y la colección Bosch Alsina (44) en el Gabinet Numismàtic de Catalunya o la colección Turró de billetes de la guerra civil española (45) en el Museu d'Història de Catalunya. Con idéntico planteamiento, se han publicado estudios sobre los denarios del Museo Cerralbo (80), las monedas ibéricas de la colección Llobregat en el Museo Arqueológico de Alicante (92), los tesoros monetarios del Museo Provincial de Lugo (42), los fondos numismáticos en la sección romano-imperial de la colección del Seminario Metropolitano de San Atón (51), la colección numismática Lorenzo del Prestamero del siglo XVIII de la Diputación de Álava (89), un pliego y una moneda de proclamación del legado del Marqués del Saltillo en la Real Academia de la Historia (58), las monedas romanas del yacimiento de Tiermes en el museo Numantino de Soria (69), un conjunto de monedas del monetario de la Universidad de Sevilla (46), la moneda

castellana y leonesa en la colección de la Art Gallery de la Universidad de Yale (82) o las emisiones españolas iniciales en América del Museo Soumaya de México (53).

Otro aspecto fundamental tratado en el citado congreso nacional es el relacionado con la museografía y la museología y, en definitiva, la gestión de las colecciones numismáticas. Esto es, la vida, en el sentido más amplio y genérico, del museo alrededor de la colección de moneda desde su ingreso y catalogación a su exposición y divulgación. También en cuanto a la fijación de conceptos y estándares a modo de diccionario [MOLINA (73)]. Numerosos trabajos se han acercado desde puntos de vista diferentes, pero convergentes, sobre el tema. Así, una visión general, a cargo de BELTRÁN (37) y CAMPO (39) o ejemplos particulares como el supuesto práctico del ingreso de un tesoro monetario [CLUA (47)] o una carga como la de la fragata *Mercedes* [OTERO, GRAÑEDA, CRUZ (76)]. También ha habido reflexiones sobre la difusión de uno de los tesoros [RAMÓN (140)] o el reto de la publicación digital de una colección determinada [RIPOLLÈS *et al.* (81)], así como propuestas de ordenación de un monetario legado (86) y un repaso del posicionamiento científico de las revistas numismáticas españolas (93). También los análisis de la composición metálica de las monedas (67), la fotogrametría digital (43), la conservación preventiva y la restauración curativa (77) y aspectos educativos y pedagógicos (99) que forman parte de la vida cotidiana de una colección. En otras ocasiones, se ha tratado de trabajos desde la moneda como fuente documental [BALSEIRO (34)] a la museografía en el ejemplo concreto del remodelado Museo Arqueológico Nacional [GRAÑEDA (65) y OTERO (75)], la gestión de la colección del Museo Casa de la Moneda de Madrid [TEODORO (91)] o los planteamientos de actividades en el Gabinet Numismàtic de Catalunya [ESTRADA-RIUS (54)].

En estas perspectivas, sectoriales y especializadas, también ha encontrado su lugar la profundización, en aspectos más personales o humanos de la historia de la museología y la museografía, de la mano de la aproximación a autores y su relación con distintos museos. Así, por ejemplo, Fernando Gimeno y el Museo de la Fábrica Nacional de Moneda y Timbre [GIMENO (60, 61)], el personal técnico histórico del Museo Arqueológico Nacional [GRAÑEDA, CASTROBEZA (66)] o, de manera más genérica, sobre el desarrollo de la numismática española e iberoamericana a través de sus protagonistas [ROMA (83)]. Como correlación de lo expuesto crece el interés en el conocimiento de los coleccionistas y los numismáticos antiguos y el tema ha continuado estando presente en la actual historiografía. Así, han sido objeto de estudio aspectos diversos de la vida y la obra de numismáticos tales como Antonio Agustín (41), Gabriel Flor (40), el padre Liciniano Sáez (95), la familia Salvador (55), Josep Salat (70), Joaquim Botet i Sisó (52), Joan Vilaret (85 y 94) y María Ruiz Trapero (87). En este apartado debe reseñarse el proyecto de publicación *on line* de las biografías de coleccionistas y colecciones catalanes que el Institut d'Estudis Catalans ampara bajo la dirección de los académicos Bonaventura BASSEGODA y Francesc FONTBONA (35) y en la que ya han aparecido en este período las de algunos coleccionistas del ámbito numismático catalán tales como Josep Salat, Artur Pedrals, Manuel Vidal-Quadras y otros más que lo serán en el futuro inmediato puesto que se trata de un proyecto en construcción. En este punto tampoco puede olvidarse el *Diccionario biográfico español* publicado en línea por la Real Academia de la Historia.

Teoría y política monetaria

El pensamiento y la política monetarias, sin ser aspectos estrictamente numismáticos, son importantes para una mejor contextualización y comprensión de las emisiones monetarias. En este apartado debemos reseñar una reedición del clásico del padre Mariana (100) sobre las alteraciones del vellón castellano. En contraposición al arbitristo castellano tenemos una exposición general sobre el pactismo monetario vigente en la Corona de Aragón como expresión del pacto político hacia una estabilidad monetaria en ESTRADA-RIUS (96 y 183), así como el ensayo sobre la moneda bajomedieval de EVANGELISTI (98). En un sentido similar se ha trabajado, desde una perspectiva comparativa, sobre las estrategias monetarias durante la gran crisis de la plata de la segunda mitad del siglo XIV (97). Finalmente, tenemos una visión sobre el tema para la España del siglo XVII (101).

Hallazgos y tesoros

La publicación de hallazgos monetarios de piezas y tesoros a lo largo y ancho de la Península ha sido una constante sostenida en el tiempo que permite profundizar en el estudio de la circulación monetaria bien, individualizada a partir de un hallazgo concreto, bien por el de la suma de muchos en un territorio más o menos amplio.

En cuanto a tesoros debe señalarse el de vellones medievales de Fernando IV y Alfonso IX (133), el de la calle Santos de Alzira (146) o el de Santo Domingo de la Calzada (142) y, ya en época moderna, el de maravedís de Murcia (102), el de maravedís de Medina Sidonia (131), el de ardites de Barcelona (112), el de un lugar no concretado de la

provincia de Girona (139), los de moneda española encontrados en Francia que recoge JAMBU (126), el de Sant Joan d'Alacant (140), el de Figueres (47), además de la carga de la fragata *Mercedes* (127, 128) ya citada al mencionar su exposición.

En cuanto a hallazgos monetarios, ya sea aislados y fuera de contexto o bien como fruto de intervenciones arqueológicas, y, en consecuencia, en su registro original, debe destacarse una larga lista. Entre los primeros debe señalarse como fuente principal su publicación en un apartado específico de *Acta Numismática* en relación a Cataluña a cargo, en general, de CRUSAFONT (117, 119-125) y de Mallorca de BOADA (104-106) y, finalmente, en relación a los de Galicia, a cargo de NÚÑEZ (134-136). Entre los hallazgos monetarios en contexto arqueológico cabe mencionar los de San Martín de Dulantzi (Álava) (144), de la necrópolis de Górliz (Vizcaya) (129, 130), de la cueva pintada (Gran Canaria) (189), del castillo de Ponferrada (León) (141) o los catalanes de la plaza mayor de Sabadell (138), del castillo de Rocabrúna (111), de l'Esquerda a Roda de Ter (113), del palacio condal en Castelló d'Empúries (110), del Castell Formós de Balaguer (109), del Hospitalet de l'Infant (108), de la judería de Tàrrrega (107) y un depósito de almacenaje en Linyola (132).

Metrología y metalografía

Los estudios de metrología han continuado teniendo una presencia significativa en este período de la mano de PELLICER (153) en la línea de extracción de información documental escrita (154, 155). En cuanto al estudio y catalogación de piezas concretas hay que señalar los estudios de BRAÑA (148, 149) y de ROMA (156, 157), en algunos casos, conjuntos sobre la metrología y los ponderales castellanos, a los que hay que sumar las recientes aportaciones de RUEDA (159, 160). Se señala una primera aproximación al taller de balanzas Tarradells y Farriols de Barcelona a cargo de ESTRADA-RIUS (15 y 152, 153). En relación al siglo XIX y a la introducción del sistema métrico decimal, con implicaciones también monetarias, señalamos por su interés general de contextualización los tres volúmenes de la obra de AZNAR (147).

Fabricación y falsificación

Una de las líneas de investigación más ricas en trabajos durante el período comentado ha sido, sin duda, la vinculada a la fabricación de moneda a ambos lados de la ley. Esto es, tanto en relación a la fabricación oficial en las casas de moneda como a la falsa en los talleres de falsarios. Ello se debe, en parte, a la celebración de un encuentro científico sobre la doble vertiente del tema (5) y, por supuesto, al atractivo innegable del tema.

Los estudios sobre las cecas oficiales y sus métodos de trabajo han sido muy variados. Se ha continuado profundizando en la organización y funcionamiento de las casas de moneda medievales en los territorios ibéricos. Así, ROMA (203, 204) en los talleres de la Corona de Castilla y del reino de Portugal (200) y ESTRADA-RIUS (180, 183) en los de la Corona de Aragón, así como BOMPAIRE (164) sobre la casa de moneda de Perpignan. En ese contexto se ha prestado especial atención al cuerpo de monederos, a su itinerancia inicial [ROMA (201)] y a sus asentamientos, acceso al oficio [ROMA (203)] y organización [ESTRADA-RIUS (180, 182, 183)]. En contraposición al mundo oficial de la fabricación de moneda medieval también se ha puesto el acento en la falsificación monetaria coetánea. Así, PERFETTO (197) en Nápoles, ROMA (205) en Castilla-León y SÁNCHEZ y ORTEGA (208) en relación a piezas del tesoro de Otaza.

Cabe destacar este interés por las épocas moderna y contemporánea en las que se ha transitado desde el propio aprovisionamiento de las cecas y los métodos de contabilidad utilizados [CANO (168)], hasta el estudio de cuños conservados (175) la introducción de nueva maquinaria como las prensas de volante en Barcelona (179), en Jubia (171) o en Segovia seguida a partir de las excavaciones arqueológicas (188), o de las máquinas automáticas por el mismo procedimiento en Barcelona (165, 177 y 178) y por algunos de los oficios y oficiales activos en los trabajos de acuñación como grabadores (169), abridores de cuños (195-196) y ensayadores (184, 198 y 199). Un caso particular es la atención en la introducción del celuloide durante la guerra civil española como nuevo material del numerario de emergencia de Reus (207).

Diversas casas de moneda han recibido, también, una especial atención. Así, BELINCHÓN (163) ha publicado una monografía sobre la casa de moneda de Linares y CANO (167) ha trabajado sobre las de Lima y Potosí. Albert Estrada-Rius ha seguido con trabajos generales sobre la casa de moneda de Barcelona previa a la guerra de sucesión (176 y 182) y sobre la ceca reabierto con la guerra de la Independencia y operante, de manera sincopada, a lo largo del siglo XIX (181). La casa de moneda de Madrid también ha recibido atención, en general, con el estudio de sus emisiones por parte de MURRAY (193) y respecto su renovación isabelina en los estudios de TORRES (209, 210) para finalizar, en

sus peripecias durante la guerra civil española por parte de FERIA (185). En especial, deben destacarse los resultados de las ya citadas intervenciones arqueológicas en las casas de Barcelona (165) y de Segovia (186 y 188). Un apartado muy interesante son las aproximaciones a los fraudes, autorizados o no, protagonizados dentro de las casas de moneda y, en este sentido, los ensayos monetarios de Felipe II en Segovia han merecido la detallada atención de MURRAY (194).

La falsificación de moneda ha despertado un interés paralelo al de la fabricación oficial. Se ha estudiado la falsificación de emisiones concretas tales como las de “sous” mallorquines (161) o los cuartos coetáneos napoleónicos de Barcelona (162). CLUA (173) se ha centrado en las emisiones de Isabel II mientras que el escándalo de los duros sevillanos ha sido abordado desde distintos puntos de vista. Así, MARTORELL (191) se ha ocupado del asunto de manera histórica y CADENA (166) lo ha documentado desde el tratamiento del asunto en las viñetas satíricas de la prensa coetánea. Especialmente interesantes son los focos puestos por JIMÉNEZ (190) en los fabricantes de botones como personas que tenían a mano el instrumental y los conocimientos precisados en una empresa de falsificación, así como por SALVADÓ (206) en las partidas carlistas operativas en Solsona durante la llamada guerra *dels matiners*. También se ha estudiado la represión policial de la falsificación en el siglo XIX [GONZÁLEZ FRAILE (187)] y la utilización del platino en las falsificaciones españolas [VIDAL (212)], mientras que MASSÓ (192) ha inventariado la singular colección de cuños de falsario depositados en el Museo de Reus. Finalmente, no debemos olvidar los supuestos de falsificación destinados al mercado anticuario, que han sido estudiados desde la perspectiva de la numismática malagueña [COMPAÑA, CARO (174)].

Edad Media y Moderna

Corona de Aragón

La Corona de Aragón, como es bien sabido, constituyó hasta la conclusión de la Guerra de Sucesión, una comunidad de reinos y territorios que compartían un mismo soberano y una diversidad de monedas entre otras instituciones privativas y particulares. En este apartado cabe reseñar un abundante estudio numismático de piezas individuales – conocidas o inéditas – o series propias de los diversos reinos y territorios cismarinos de la Corona de Aragón – esto es, Aragón, Cataluña, Mallorca y Valencia – en época medieval y moderna.

En el Principado de Cataluña destacan tanto los estudios de las monedas condales y reales, de curso general, como el de las monedas municipales, de curso local. En cuanto a las primeras se pueden reseñar, de manera cronológica, un interés por las emisiones locales carolingias a la luz de la aparición de nuevos ejemplares. Así, VALL-LLOSERA (255) sobre piezas de las cecas de Barcelona, Girona y Roses de Carlomagno y Luis el Piadoso. También CRUSAFONT, GELIS (232) sobre un nuevo tipo de dinero de Girona de Luis el Piadoso. Finalmente, SANAHUJA (246) sobre un óbolo de Barcelona a nombre de Carlomán II. Las emisiones condales siguientes también han sido objeto de investigación como la de Urgell (225) y Cardona (227) por Miquel Crusafont. En relación a las emisiones reales destacan el croat de Tarragona de Joan II (223), un florín de Perpinyà con la marca S (226) y las emisiones de Carlos V para la expedición de Túnez [SANAHUJA (245)] y de escudos de Felipe III [SIMÓ (252)] en la misma ciudad. Una mención especial merece, por su singularidad dentro del principado de Catalunya, la aportación de BRUNA (222) sobre el particular sistema monetario vigente en el Valle de Aran.

En cuanto a las emisiones locales ha seguido el goteo de publicación de piezas inéditas y variantes como las presentadas por SANAHUJA (248) y de referencias documentales nuevas para Girona (249) o Puigcerdà (247), que publica el mismo autor, o de nuevas cecas como la de Tivissa (250).

En relación a la moneda del reino de Aragón deben verse los estudios de CRUSAFONT (230). En cuanto al reino de Valencia, son notables las aportaciones de FORTEA (238-241), MACÍAS (242, 243) y SENDRA (251). En relación a los estudios de la moneda en el reino insular de Mallorca cabe destacar las aportaciones de AGUILÓ (213-218) y de BOADA (219-221). También en relación a los reinos italianos vinculados a la misma corona como los de DESSI (233) sobre Cerdeña, de PERFETTO (244) y de VALL-LLOSERA (256) sobre Nápoles, de VALL-LLOSERA (254) y de VILÀ (257) sobre Sicilia y de BOADA (219) sobre los territorios de la Acaya griega.

El estudio documental de la moneda también ha tenido su espacio tradicional. En este sentido debe destacarse, por su carácter recopilatorio, la obra de CRUSAFONT (224) y las monedas catalano-aragonesas presentes en un libro de ábaco italiano estudiado por TRAVAINI (253).

Corona de Castilla

El estudio de la moneda en la Corona de Castilla medieval presenta un gran número de trabajos. Así, se han analizado diversas emisiones vinculadas al ámbito episcopal en general (266) o abacial, como las de Sahagún (271), y, evidentemente, la serie real castellanoleonesa. Cronológicamente, las labras de Alfonso VI (295), doña Urraca (293, 298 y 308), Alfonso I el Batallador (292) y Sancho III (294), la catalogación de los morabetinos llamados alfonsíes (291, 301, 288 y 306), la reordenación de las emisiones de Fernando III y Alfonso X (277) y, en particular de este último (296, 298), las acuñaciones de vellón de Alfonso XI (281), el cruzado de vellón de Enrique II (282), el real de vellón del tercer cuarto del siglo XIV (279) y las meajas bajomedievales (280) pero, también, las grandes monedas de representación acuñadas por Juan II y Enrique IV (290).

Más allá de las emisiones concretas también se han planteado modelos teóricos generales sobre la inflación producida por cambios monetarios en la Asturias del año mil [NÚÑEZ (303)] o el uso y la circulación de la moneda sobre la Galicia altomedieval [NÚÑEZ (302)]. En esa misma dirección, trabajos de comparación de modelos monetarios de frontera como el de ROMA (311) sobre Castilla y los reinos cruzados latinos de Tierra Santa en el siglo XII. Este mismo autor ha presentado estudios generales sobre la moneda altomedieval castellanoleonesa (313), en particular, y, peninsular, en general (312).

Cabe destacar un especial interés en los aspectos que podríamos englobar, de manera muy amplia, dentro del estudio de los tipos monetales, tanto en cuanto a las imágenes, las inscripciones como a las marcas. Así, los estudios de José María de Francisco sobre las titulaciones (267), los emblemas (268), tipos de corona (278), las soluciones de representación de la soberanía compartida en la moneda de los Reyes Católicos y su influencia en los reinados posteriores (275 y 276), los de MOZO, GARCÍA (300) sobre la imagen real entronizada o las de ROMA (309, 310) sobre las marcas y contramarcas medievales.

También debe destacarse un incremento, más que notable, del interés por la numismática moderna con especial atención por las emisiones de vellón de los Austrias [SANTIAGO (317, 318)] y algunos nominales de plata (314). Finalmente, cabe felicitar por la emergencia de estudios sobre la moneda en las islas Canarias. Así, diversos estudios ya locales para algunas de las islas como Tenerife (260 y 283) y trabajos generales sobre el archipiélago en el siglo XVIII (264).

Reino de Navarra

El estudio de la numismática navarra no ha sido particularmente intenso, pero sí que variado en cuanto a los numismáticos que se han dedicado a ella. Desde un punto de vista cronológico han interesado, especialmente, las emisiones del período de vinculación de Navarra con Aragón. Así, las primeras emisiones de Aragón y Pamplona con el tipo del árbol crucífero [IBÁÑEZ (320)], los mancusos de Sancho V Ramírez [MOZO (321)] o las marcas de control de las emisiones de ambos reinos con anterioridad a 1134 [ROMA (322)].

En relación a etapas posteriores debe señalarse, por ejemplo, la publicación de un medio real de Fernando el Católico inédito [VALL-LLOSERA (323)] y una visión general de la moneda navarra en el siglo XVIII [CANO (319)].

Reino de Portugal

La historiografía sobre Portugal no ha sido muy prolífica, si bien hay que destacar el estudio del reinado de Joao II en relación a sus emisiones de Lisboa [CENTENO (325)] y de Porto [CANTO, RODRÍGUEZ (324)], o sobre las amonedaciones en cobre para sus posesiones en la India [VIEIRA (326)], además del ya citado de ROMA (200) sobre la organización de las cecas medievales.

Edad Contemporánea

España

Los estudios sobre el siglo XIX empiezan con el período de la Guerra de la Independencia para el que se han estudiado algunas piezas como los 2 maravedís de Jubia (337) o, de manera general, las emisiones del período en Mallorca (328). La etapa de la peseta como nueva unidad monetaria nacional, decretada al inicio del Sexenio Revolucionario, también ha sido objeto de estudio y desde la perspectiva iconográfica de las representaciones femeninas (341) y, de manera general, como símbolo del Estado por FERIA (334). Tampoco se ha evitado la relación entre la nueva unidad y la Unión Monetaria Latina [MARTORELL (336)]. Pedro Damián Cano ha trabajado la circulación de la moneda española más allá de sus fronteras en los siglos XVIII y XIX. Así, especialmente, en las trece colonias americanas y los EEUU (330), en Canadá (329), en el África subsahariana y en el Índico (331) o, simplemente, el papel de la plata española en

la economía de Europa en la misma época (333).

En cuanto a las emisiones de la guerra civil española debemos remitirnos a lo ya recogido en el apartado de fabricación, además de trabajos puntuales como el de las emisiones de Ibi [GARCÍA (335)] y los supuestos 10 céntimos de 1938 [BLANCO, DEMUCHO (327)].

Finalmente, desde una perspectiva de tasación de valor de algunas piezas en el mercado se ha estudiado el caso de las monedas de 25 pesetas de Alfonso XII (338) y de los determinantes de la prima de valor de los écus españoles (339).

Papel moneda

España y Portugal

En relación a los billetes del Banco de España buena parte del interés principal radica en su análisis iconográfico [ALONSO, MARTÍN (342), GRAÑEDA (347, 348)]. Por su parte, PÉREZ (350) se ha centrado en la emisión de estos billetes durante la Guerra Civil. El papel-moneda y los vales emitidos durante la Guerra Civil Española por los ayuntamientos de Cataluña, continúan ocupando un espacio significativo en los últimos años. Especialmente, aportaciones centradas en emisiones locales tales como las de Barcelona [ESTRADA-RIUS (346)] o Sant Sadurní d'Anoia [CRUSAFONT (345)] o en perspectivas comarcales como el Anoia [JORBA (349)] o el Montsià [BERTRAN, ALLEPUZ (344)]. En cuanto a su diseño y producción deben tenerse en cuenta las aportaciones de VÉLEZ (351) sobre el artista Josep Obiols y de BARJAU (343) sobre las imprentas comisionadas.

Paramonetal

Los estudios sobre las manifestaciones paramonetales han continuado teniendo un desarrollo más que notable en este sexenio en cuanto se refiere, especialmente, a dos grandes campos. A saber, tantos de coro – *pellofes*, en catalán – y jetones. La celebración de sendos cursos monográficos (2 y 3) en el Gabinet Numismàtic de Catalunya ha contribuido a esta producción.

En el ámbito catalano-balear se ha publicado numeroso material inédito relativo a las *pellofes* eclesiásticas catalanas y a los *ploms* eclesiásticos mallorquines. En cuanto a las primeras destacan aportaciones al catálogo existente tales como las de Sant Pere de Les Preses [JORBA (365)] y Sant Cugat del Vallès [RODRÍGUEZ (374)], entre otras inéditas [JORBA (368)] y localizadas en el registro arqueológico [CLUA (358)]. También, se ha hecho inventario de las tradicionales bolsas conservadas en las que se guardaban [JORBA (366)], los instrumentos de fabricación –especialmente cuños – [JORBA (366, 367), LLOBET (371)] y otra documentación de archivo [LLOBET (370), SACASAS (375)] que ayudan a complementar y a conocer de manera más completa este ámbito particular de la numismática. Todo ello sin excluir sus relaciones con la circulación monetaria [SANAHUJA (376)]. Otros aspectos que se han estudiado son en relación a su conservación y restauración (352) y su sentido patrimonial (362). En cuanto a los plomos mallorquines debe remarcarse la continuidad del trabajo de Jaume Boada en esta materia tanto con interpretaciones de conjunto (356) con estudios de piezas concretas (354).

En cuanto a los jetones debe señalarse el estudio de las piezas medievales vinculadas a Navarra, a cargo de IBÁÑEZ (364), como continuación a sus exhaustivos trabajos previos. En relación a vales, fichas y jetones contemporáneos cabe destacar el catálogo de SANAHUJA (378) centrado en los jetones publicitarios catalanes que culmina líneas de trabajos de conjunto anteriores del mismo autor (377). Otros ámbitos que han merecido la atención son el de los jetones de cooperativas y colonias catalanas [SERRA, CASTELLÀ (380)] y los generados durante la Guerra Civil Española en Mallorca [BOADA (355)] y en Cataluña [ESTRADA-RIUS (363)]. Finalmente, las nuevas formas de dinero desde las criptomonedas [SAYERAS (379) a la moneda social, OLIVELLA (373) y MARTÍN (372)] y los bancos del tiempo también han tenido sus estudios en el ámbito local barcelonés [ALTÉS (353)] y en el contexto de un curso dedicado a las otras formas del dinero en el Gabinet Numismàtic de Catalunya (3).

ITALIA ALTOMEDIEVALE

Alessia Rovelli

Nota introduttiva

Gli anni 2014-2020 hanno visto maturare alcune importanti linee di ricerca, la pubblicazione o il rinnovato studio di collezioni numismatiche di rilievo, l'edizione di significativi contesti numismatici e archeologici. Nel breve testo che segue si cercherà di indicare i principali percorsi, ben sapendo che si tratta di un quadro incompleto non solo – parafrasando Andrea Giardina – per quella che potremmo definire una “esplosione” della bibliografia, ma anche per le attuali difficoltà di accesso alla medesima. Si è dovuto inoltre tenere conto dello spazio editoriale previsto per le singole voci. Per i contributi nelle riviste si è dunque scelto di citare solo quelle dotate di numerazione ISSN (ma si veda, per un orizzonte più ampio, con indicazioni che possono essere valide anche per l'arco cronologico di nostro interesse, la voce curata dal collega Lorenzo Passera – *Italia: XI-XXI secolo* – al quale va la mia gratitudine per avermi anticipato il testo). Per i dati relativi alle emissioni bizantine, verranno menzionati solo alcuni contributi, utili per seguire l'evolversi dei fenomeni monetari nell'Esarcato e nelle aree contigue, rinviando, per un quadro più completo, sia alla specifica voce sia alla recente sintesi delle principali linee di ricerca curata da CALLEGHER (52). Anche per le emissioni caroline è opportuno consultare la relativa sezione.

Non solo per problemi di spazio, ma soprattutto in considerazione della rilevanza dell'opera, per i dati sui rinvenimenti, sia singoli che associati, si rimanda soprattutto al *Saggio di Repertorio dei ritrovamenti di moneta altomedievale, bizantina e islamica in Italia, con la moneta dei Vandali e dei Visigoti*, ideato e curato da E. A. Arslan. Il Saggio (già *Repertorio dei ritrovamenti di moneta altomedievale in Italia (489-1002)*, Spoleto, 2005), introdotto da una importante e meticolosa nota sui metodi e le finalità del lavoro, si conferma essere uno strumento fondamentale per la ricchezza del materiale, reso a tutti fruibile sul sito www.museobiassono.it. Periodicamente aggiornato, è consultabile (e scaricabile) in PDF. Più recente, e con diversi ambiti spaziali e temporali, è la parallela iniziativa di Luigi Gianazza (*Repertorio dei ritrovamenti monetari – Bibliografia*, a sua volta reperibile in rete: <https://www.sibrium.org/CoinFinds/>).

Considerando l'importanza dei contesti, vale comunque la pena di portare l'attenzione sui materiali di alcuni scavi urbani, in particolare: Aquileia (STELLA (167): in massima parte reperti di età romana, ma utile punto di partenza per un'analisi della presenza di moneta in età ostrogota), Pavia [INVERNIZZI e VISMARA (97)], Ravenna [BALDI (41): puntuale analisi e commento dei 2564 esemplari rinvenuti negli scavi di Classe e dei 224 dalla Basilica di San Severo], Roma [MARANI (111); MOLINARI (116)], Trento [PAVONI (132): significativa attestazione di nummi di V-VI secolo], Verona [ARZONE (23): gli scavi dell'anfiteatro propongono dati sulla circolazione monetaria tra la fine del V secolo e l'età teodoriana].

Cataloghi e repertori

Una corretta catalogazione rappresenta, è superfluo ricordarlo, il punto di partenza obbligato per ogni ricerca di storia monetaria. Ciononostante, è senz'altro riduttivo limitare a questo aspetto l'importanza del dodicesimo volume della Collana progettata da Philip Grierson, *Medieval European Coinage*, curato da DAY, MATZKE e SACCOCCI (72), dedicato alle emissioni delle zecche dell'Italia settentrionale tra il X e il XV secolo e al catalogo degli esemplari conservati al Fitzwilliam Museum. Per quanto riguarda l'arco cronologico di nostro interesse, il volume colma la lacuna relativa alle emissioni di età ottoniana rimaste escluse nel primo volume della Collana, innovando profondamente le precedenti attribuzioni, sulla scorta, per quanto riguarda la zecca di Pavia di precedenti studi di Andrea Saccocci.

Rilevante, anche per la scelta di consentirne l'accesso online, è il proseguimento della revisione del *Corpus Nummorum Italicorum* con i volumi dedicati a Piacenza [FUSCONI (86)], alle prime emissioni pontificie e alla serie dei denari *antiquiores* della zecca di Roma [FUSCONI (85)] e a Verona [SACCOCCI (156)]. Altrettanto rilevante è l'edizione del catalogo delle monete arabe della Collezione di Vittorio Emanuele III [D'OTTONE RAMBACH (79)].

Si segnala inoltre la pubblicazione degli esemplari ostrogoti del British Museum [BALDI (40, 42)] e del museo de La Cour d'Or – Metz Métropole [MARANI (112)], degli esemplari tardo-antichi e bizantini della raccolta numismatica Maruffi [LANCHI (101)] e degli esemplari della zecca di Milano conservati presso la Veneranda Biblioteca Ambrosiana [ALTERI (2)]. Tra i repertori spicca quello dedicato alle monete di Milano dal 757 al 1329 [CRIPPA e CRIPPA (70) recensione a cura di E. A. Arslan, *RIN* 118 (2017), pp. 415-418]. Il volume conclude la tetralogia dedicata alle emissioni milanesi da Desiderio al 1892 fornendo, nel giudizio di E. A. Arslan 'la più solida base catalogica oggi disponibile'.

Aspetti di metodo

Le ricerche dedicate all'interpretazione del dato archeologico e dei contesti numismatici costituiscono ormai (e non poteva essere diversamente) un tema centrale della ricerca numismatica. Diversi casi studio, che si aggiungono ai contesti urbani citati poco sopra, sono stati al centro del *Workshop Internazionale di Numismatica, Numismatica e Archeologia. Monete, stratigrafie e contesti. Dati a confronto* [PARDINI, PARISE e MARANI (129); CANTILENA, ROVELLI e SAGUI (57)]. Per l'ambito di nostro interesse sono discussi i casi di Pavia [INVERNIZZI e VISMARA (97): rinvenimento di un bronzo di Atalarico e di un decanummo di Giustiniano che rappresenta oggi il primo esemplare di questa serie rinvenuto nell'antica *Ticinum*], di Pisa e della Lunigiana [ALBERTI e BALDASSARRI (1); BALDASSARRI (35) e BALDASSARRI e PARODI (39)], di Verona [ARZONE (22)], di Ravenna [BALDI (43)], del *castrum* di Loppio [CALOMINO e MAURINA (56)].

Largamente improntato sulla lettura parallela dei dati archeologici e numismatici è stato anche il Convegno *Les trouvailles de monnaies romaines en contexte médiéval. Actes du colloque (Paris, 27-28 février 2015)* dedicato alla eventuale funzione della moneta di bronzo romana in età medievale [BOMPAIRE, CARDON, GENEVIÈVE e MARANI (49); MARANI (109); ROVELLI (146); SACCOCCI (157)]. Le tematiche affrontate sono a loro volta centrali per la comprensione delle modalità dello scambio in età alto-medievale quando i sistemi monetari appaiono semplificarsi notevolmente, riducendosi ad un solo nominale, fosse esso aureo, come è il caso della tarda età longobarda, o argenteo, a seguito dell'introduzione del denaro carolingio [ROVELLI (151, 148)].

Una ulteriore forma di 'riutilizzo' è stata individuata da ASOLATI (25) nella ripresa dei tipi di età romana-imperiale nelle monetazioni altomedievali, fenomeno particolarmente diffuso in ambito ostrogoto, ma non solo. Questo tema ci porta nuovamente verso il problema, tuttora controverso, della attribuzione delle contromarche incise da XLII e LXXXIII nummi ad ambito bizantino [SACCOCCI (155)] o ostrogoto [ASOLATI (30)] e delle emissioni anonime da 40 e 20 nummi della serie ostrogota [ROVELLI (141)].

Nel vasto e multiforme tema della lettura del dato archeologico-numismatico rientrano anche le ricerche dedicate all'interpretazione dei rinvenimenti monetali in contesti funerari che hanno permesso di precisare sia aspetti rituali, individuabili attraverso forme di selezione del numerario deposto nelle sepolture, sia dati riconducibili all'uso e funzionalità della moneta nei diversi ambiti socio-economici [ARSLAN (3); BARELLO (44); CANTINI, VIVA e MARANI (58); DE PASCA (73); EBANISTA e SANTORO (80) e (81); MANZELLI e PINAR GIL (108); MARANI (113); MOLINARI (116); SACCOCCI (159); SACCOCCI e TOMASSONI (161); SPAGNOLI (166)]. BALDASSARRI analizza i rinvenimenti monetali nelle chiese (36, riproposto in italiano in 37).

Tesori

Due tesori aurei di diversa consistenza, ma notevole interesse, mettono a fuoco alcuni aspetti della circolazione della moneta aurea a cavallo tra la fine del V e gli inizi del VI secolo. ARSLAN (5) e FACCHINETTI (82) presentano il ripostiglio di Braone (BS), attualmente composto da nove esemplari, da cui è sembrato possibile dedurre l'egemonia della zecca di Costantinopoli nel circolante aureo della Penisola. A cura di ARSLAN e TURCHETTI (21) è lo studio a più mani del ripostiglio di San Mamiliano (Sovana, GR), composto da 498 solidi, che si caratterizza per la presenza di alcuni esemplari con graffiti o particolarità iconografiche e, soprattutto, per la presenza di solidi di imitazione, presumibilmente della zecca di Tolosa, ritenuti un possibile indizio di percorsi economici tra la Provenza e la *Tuscia* – recensione a cura di ROVELLI (147). HOLLARD e CHARLET (96) riportano l'attenzione sul tesoro di oreficerie gotiche di Domagnano.

Aspetti della circolazione e funzione del bronzo minuto nelle fasi finali dello scontro tra Goti e Bizantini nell'Italia centro-meridionale sono analizzati da ASOLATI (32), attraverso lo studio del ripostiglio di Arpaia; da MAMMATO (106), tesoretto di Taurasi; e da MARANI (110) che torna su quello di Sessa Aurunca. Rinvenuto nel 1916, rappresenta un non frequente caso di tesaurizzazione 'mista' dato che attualmente risulta composto da due esemplari aurei e 1917

minimi di bronzo.

Tre celebri tesori di età carolingia, 'Ilanz', 'fiume Reno (BO)', 'Hermenches' hanno, a giusto titolo, nuovamente attirato l'attenzione. SARAH (164) presenta un quadro generale del tesoro di Ilanz (pur senza proporre il catalogo) che risulta ora composto da 138 monete, 2 orecchini aurei, 2 frammenti di gioielli in oro e due gocce auree. Tra le monete si contano 83 tremissi (43 longobardi e 40 di Carlomagno) e 55 esemplari d'argento (50 denari carolingi, 3 anglosassoni, 2 dirhem). PINAR GIL (135) propone una nuova interpretazione dei diversi rinvenimenti, avvenuti tra il 1758 e il 1910, nelle adiacenze del fiume Reno, di monete (solidi costantinopolitani, un solido e un tremisse beneventani, diversi dinari) e oggetti aurei di notevole fattura. Considerando la coerenza dei materiali e l'altissima qualità delle oreficerie, l'autore ritiene che siano riconducibili non tanto a 'mercanti, naufraghi o viaggiatori anglo-sassoni' quanto ad un'unica deposizione, plausibilmente di carattere funerario, relativa ad un membro di alto rango dell'élite imperiale carolingia. COUPLAND (65) riconsidera i 264 denari che rimangono del tesoro di Hermenches (cantone di Vaud), inizialmente composto di circa 320 esemplari. La descrizione del tesoro permette all'autore di riesaminare il problema delle attribuzioni dei denari del tipo *Christiana religio* e il ruolo delle zecche italiane (in particolare Milano e Venezia) nella circolazione dell'impero carolingio.

SARAH (163) ricostruisce le circostanze del rinvenimento di un nucleo originariamente costituito da nove denari (ora ridotti a sei), forati, alcuni a nome di Berengario I, altri di Ugo di Arles rinvenuti nella sepoltura di un cavaliere ungaro ad Aspres-lès Corps (Hautes-Alpes), fornendo i risultati delle analisi metrologiche e una riconsiderazione dei rinvenimenti monetali legati alle razzie di guerrieri ungaro. Su questo tema sono intervenuti anche COUPLAND e GIANAZZA (68). A NAISMITH e TINTI (127) si deve l'esemplare pubblicazione, con una storia degli studi e del contesto storico, del tesoro rinvenuto nel 1883 nel corso degli scavi dell'*Atrium Vestae* al Foro Romano. Il ripostiglio, chiuso verosimilmente tra il 942 e il 946, risulta composto da almeno 830 esemplari, in massima parte dei re anglosassoni, a cui si aggiungono un paio di fermagli ad uncino con l'iscrizione +DOMNO MA/RINO PAPA+ unici nel loro genere. Lo studio del tesoro dell'*Atrium Vestae* affianca l'organica sintesi condotta da NAISMITH (124) sui rinvenimenti di denari anglo-sassoni, compresi i rinvenimenti isolati, non solo a Roma ma più in generale in Italia. Il ripostiglio di Alife [ARSLAN *et al.* (20)], nel Casertano, aggiunge dati e conferma il fenomeno della tesaurizzazione dei denari *ottoni* nel corso dell'avanzato XII secolo.

Analisi metallografiche

NAISMITH, NORTHOVER e TINTI (126) hanno analizzato 24 denari *antiquiores* del Fitzwilliam Museum di Cambridge. Le indagini metallografiche hanno rilevato l'alta qualità della lega (93-95% di argento) nei denari di Adriano I (772-795) e Leone III (795-816) e la limitata quantità di bismuto e zinco. Quest'ultimo dato avvicina i denari *antiquiores* alle coeve emissioni anglo-sassoni e caroline. A partire da Leone IV/Lotario (847-55), le analisi evidenziano un netto calo di fino (valori medi intorno al 70%, a partire da un campione che presenta una variabilità compresa tra 50-80%), riscontrabile anche nelle emissioni successive. Nonostante ciò, gli autori ritengono che si possa parlare di una relativa stabilità. Le analisi suggeriscono inoltre che l'argento proveniente dalle più diverse fonti venisse indirizzato non tanto verso la zecca quanto verso la produzione di suppellettili di diversa natura. Al tema delle fluttuazioni del contenuto di fino nelle emissioni medievali e delle relative implicazioni etiche è dedicato un saggio di NAISMITH (125) che, per quanto riguarda l'Italia, sintetizza alcuni dati relativi a Roma.

Il progetto ERC nEU-Med (grant agreement n. 670792), premesse archeologiche e numismatiche in BIANCHI e ROVELLI (48), coordinato da R. Hodges e G. Bianchi ha consentito di analizzare un consistente nucleo di denari, principalmente di età ottoniana, provenienti sia da scavi toscani, in particolare dal sito di Vetricella, sia da alcune collezioni museali. Le analisi isotopiche hanno evidenziato la notevole compatibilità dei denari conati sia a Pavia che a Lucca con l'argento delle miniere dello Hartz in Sassonia. Sembra invece possibile escludere per il X-XI secolo, ad eccezione di alcuni apporti del tutto minoritari, il ricorso all'argento eventualmente estratto nelle locali Colline Metallifere [BENVENUTI *et al.* (46)].

Aspetti iconografici e tipologici

ARSLAN (6 e, inoltre, 17) propone un'ampia sintesi delle tematiche che ruotano intorno alle scelte tipologiche e ai presupposti giuridici e politici delle diverse monetazioni altomedievali.

Il monogramma, come strumento di legittimazione di un potere non di rado usurpato o di recente conquista è l'indiscusso protagonista di molte emissioni altomedievali. OPPEDISANO (128) analizza le premesse di questo fenomeno

nelle emissioni in bronzo con il monogramma di Recimero. ASOLATI (28), GENNARI, CECCHINATO e ORTU (91), ROVELLI (141) si soffermano sulle emissioni di Odoacre e della serie ostrogota, evidenziando, con accenti diversi, possibili nuove attribuzioni. ARSLAN (4, 9), in due contributi dedicati alle frazioni d'argento longobarde e alla loro presenza nel circolante, anche oltralpe, torna a discutere le attribuzioni di alcuni monogrammi. ROVELLI (150) analizza le premesse politiche e culturali riflesse nelle frazioni d'argento con monogrammi regi o ducali di ambito longobardo. Le emissioni ravennate di Astolfo sono state le protagoniste di diversi contributi che ne hanno indagato le peculiarità iconografiche [GENNARI (90); GENNARI e ROSSINI (92); IULA (99)]. GENNARI (90) porta l'attenzione su un esemplare in bronzo, attribuibile ad Astolfo sulla base del ritratto del diritto. Per quanto riguarda il monogramma nel campo del rovescio, composto dalle lettere AS, l'autore suggerisce di attribuire la S al pontefice Stefano: l'emissione potrebbe dunque indicare un tentativo di avvicinamento al papato da parte del re longobardo.

In relazione a Benevento, ARSLAN (13), ne analizza le scelte tipologiche e i richiami alle emissioni bizantine, con particolare attenzione ad alcuni segni del potere, ad esempio l'*Akasia*, IULA (100) illustra le vicende politiche del ducato attraverso uno studio dei tipi monetali. COUPLAND (66) si sofferma su due denari di Carlo Magno con monogramma greco probabilmente conati ad Aachen e non in una zecca italiana. GIANAZZA e VAN HERWIJNEN (94) mettono in luce le caratteristiche di conio e della singolare legenda di due denari di Ugo di Arles "imperatore".

Aspetti giuridici e amministrativi, zecche

CARLÀ (59) approfondisce diverse questioni relative alla falsificazione monetale nel diritto imperiale e alla trasmissione (o meno) delle norme romane nel diritto postclassico. L'attività della zecca di *Sirmium* (oggi Sremska Mitrovica, in Serbia) nel cosiddetto periodo delle Migrazioni è nota sin dagli inizi del secolo scorso ma solo recentemente la critica è tornata ad approfondire questo tema dalle molte sfaccettature. DEMO (74, 75, 76) e FALTIN (83) delineano le diverse fasi della presenza di Ostrogoti e Gepidi attraverso una aggiornata classificazione delle frazioni d'argento che compongono quello che Metlich ha denominato 'Sirmium group'. ASOLATI (33) evidenzia una serie di emissioni caratterizzate dalla precoce adozione del tipo del San Michele, per le quali è proposta l'attribuzione ai Gepidi.

In occasione della LXVII settimana di Studio della Fondazione Centro italiano studi sull'alto Medioevo, BARELLO (45) e ARSLAN (19) fanno luce sulle implicazioni giuridico-istituzionali e, dove possibile, 'finanziarie' delle emissioni franche e longobarde. Su queste ultime si vedano anche le annotazioni di ARSLAN (10) intorno al rinvenimento di un tremisse pseudo-imperiale riconiato su esemplare di Anastasio. Per quanto riguarda Benevento, ARSLAN (13) nel già menzionato lavoro sulle emissioni beneventane propone un aggiornamento delle ricerche pubblicate nel 1987 relative al calcolo del numero dei conii utilizzati.

MANSFIELD (107) porta l'attenzione su alcuni esemplari a nome di Giustino II con i marchi di zecca di Ravenna e Cyzico. Richiamando e discutendo un'ipotesi di W. Hahn, l'autore ritiene che possano essere il prodotto di una zecca militare itinerante. MORRISSON (118) mette in luce le emissioni bizantine in Sardegna negli anni di Giustiniano II e della caduta di Cartagine.

Una riconsiderazione ad ampio raggio della produzione ravennate in età bizantina è proposta da MORRISSON e CALLEGHER (120); tema su cui torna anche PRIGENT (137, 139). A latere si segnala, del medesimo autore, uno studio sulle strutture dell'amministrazione civile e sugli sviluppi della funzione ducale nell'Esarcato analizzati attraverso due sigilli (138). Su questo tema, si veda anche ASOLATI (27): lo studio di un sigillo probabilmente attribuibile al duca Orso I Particiaco è l'occasione per un'ampia analisi sull'utilizzo dei sigilli plumbei in ambito veneziano altomedievale.

Muovendoci verso le regioni longobarde, FUSCONI (87) considera la possibile esistenza di zecche periferiche nella Rezia, localizzabili nelle diocesi di Novara, Como, Costanza, Passavia ai cui vescovi sarebbe possibile ricondurre alcuni nomi in precedenza attribuiti a monetieri. In relazione alle emissioni di Berengario I, PIGOZZO (133) argomenta, con dati interessanti, sull'ipotesi di una rinnovata attività della zecca di Treviso; le produzioni pavesi sono riconsiderate da ROVELLI (153) sulla base di alcuni esemplari rinvenuti nel sito di Vetricella. PIGOZZO e VERONESI (134) attribuiscono a Mantova una inedita frazione a nome Ugo di Provenza e Lotario II, riaprendo dunque la questione sull'esistenza o meno di una zecca mantovana nel X secolo; RIZZOLLI e PIGOZZO (140) si soffermano sulle emissioni veronesi.

Riguardo a Roma, la sequenza delle emissioni nell'ultima fase bizantina è studiata da HAHN (95), mentre i problemi inerenti alla localizzazione della zecca in età tardo-antica e medievale sono affrontati da SERLORENZI *et al.*

(165) grazie ai dati dagli scavi dell'*Athenaeum di Adriano*, e da ROVELLI (145) a partire da quelli desunti da Federico Guidobaldi sugli scavi nella Basilica di San Clemente al Celio. Le produzioni della zecca di Capua, rimaste spesso ai margini, sono messe in luce da ARSLAN (14).

Mancuso

Tra i tanti temi aperti, quello del mancuso è tra i più longevi, intrecciandosi con quello delle relazioni commerciali tra Oriente e Occidente in età altomedievale. PRIGENT (136) confuta, con argomenti convincenti, l'ipotesi che dietro al termine *mancus* si celasse la moneta aurea musulmana e propone invece di attribuirlo alle emissioni auree siracusane riformate da Leone III nel 731. Assolutamente originale è l'ipotesi formulata da SACCOCCI (158), che animerà certamente il dibattito, secondo il quale il termine *mancus* non sarebbe altro che un espediente adottato per conteggiare, nell'ambito del sistema argenteo carolingio, le emissioni auree citate nella documentazione notarile dell'Italia centro-settentrionale.

Funzione ed uso della moneta, circolazione monetaria

Il bronzo, monetato e non, è il protagonista di due significative monografie scaturite da tesi dottorali. PASSERA (131) – recensione di Rovelli in *RIN* 120 (2019) – fornisce dati importanti e originali grazie al recupero capillare della documentazione archeologica e numismatica in Italia. L'attenzione è posta non solo al dato monetario, ma a tutti gli oggetti metallici recensiti nello spoglio dei dati relativi a 1566 siti. MARANI (114) concentra l'attenzione sul dato monetale e su un contesto regionale (il Lazio meridionale) restituendo visibilità ai depositi di molti musei di rilevanza sia nazionale che locale. A questa indagine si affiancano il parallelo riesame del materiale edito (34 monete d'oro, 69 d'argento, 8000 di bronzo) e un rigoroso studio metrologico delle emissioni enee. Entrambi i lavori mettono in luce l'importanza delle produzioni di bronzo per lo studio dei fenomeni economici e sociali altomedievali.

Quadri generali o analisi di casi-studio sulla circolazione monetaria sono proposti da ASOLATI (26), CALLEGHER (51, 53) e GANDILA (88) per l'ambito bizantino; da ARSLAN (7, 8, 16, 18), CALOMINO (55) con particolare attenzione alla fase ostrogota e longobarda; da ROVELLI (143, 144, 148, 149, 151, 154) in alcuni contributi relativi all'evoluzione dei sistemi monetari altomedievali e all'adozione del sistema argenteo carolingio. Su quest'ultimo aspetto, per un diverso punto di vista, che sottolinea il ruolo dell'Italia nella circolazione dell'impero franco si vedano i contributi di COUPLAND (63, 64) e di COUPLAND e EMMERIG (67). Gli atti del *Convegno Swiss and Italian Monetary Relations. The Early Middle Ages (VI-XI centuries)* [GIANAZZA e ROSSINI (93); MATZKE (115); BALDASSARRI (38)] offrono un'interessante discussione su molti aspetti della circolazione monetale in età altomedievale, andando anche oltre il quadro geografico enunciato nel titolo.

Volgendo lo sguardo verso le regioni meridionali e insulari, MAMMATO (104) fornisce notizie sulla circolazione monetaria nel X secolo in Campania e sulla circolazione dei tari [MAMMATO (105)]; ZECCHINO (170) analizza i rinvenimenti in Irpinia. La circolazione monetaria nella Sardegna bizantina è la protagonista dei contributi di MURESU (122), in particolare il volume, a sua volta frutto di una tesi dottorale, dedicato alla ricostruzione dell'insediamento e delle principali vie di comunicazione attraverso lo studio delle presenze monetali (123).

Per concludere, si segnalano alcune ricerche di taglio storico-economico, che dedicano ampio spazio all'ambito monetario: l'analisi di TEDESCO (168) sull'economia monetaria e la fiscalità tardoantica, lo studio di DI MURO (78) sull'economia longobarda di VIII secolo; quello di DEVROEY (77) per l'età carolingia, l'indagine di FELLER (84) sui metodi di pagamento in età medievale.

Nel 2020 è prematuramente mancato Michael Matzke. Le sue ricerche hanno inciso profondamente su aspetti importanti della storia monetaria dell'Italia medievale, basti pensare agli studi sulle emissioni di Lucca e alla sua partecipazione al progetto concepito da P. Grierson sulle emissioni dell'Europa medievale concretizzatosi nella serie *Medieval European Coinage*. Per il suo valore di studioso e per la sua amabilità lo ricorderemo tutti con stima e affetto.

ITALIA, XI–XXI SECOLO

Lorenzo Passera

Considerazioni generali

Il periodo dal 2014 al 2020 annovera un'annata ulteriore rispetto al quinquennio considerato tradizionalmente dal *Survey*: questo aspetto ha reso ancora più arduo il lavoro di censimento per indicare i contributi significativi sulla monetazione medievale e moderna di area italiana. Si ringrazia qui tutti i colleghi che, inviando i loro materiali in formato digitale, hanno contribuito a facilitare il lavoro allo scrivente.

Nella redazione si è tentato di considerare tutti gli aspetti della ricerca numismatica in qualsiasi forma essi siano stati prodotti ed è forse utile osservare che, nel lasso di tempo considerato, lo sviluppo delle tecnologie informatiche hanno consentito un'apprezzabile diffusione della bibliografia soprattutto su piattaforme dedicate. Va sottolineato anche che diversi autori sottostimano l'utilità di questi nuovi strumenti informatici tralasciando, forse, che è proprio la condivisione del proprio lavoro a renderlo noto e a rappresentare una pratica vetrina che fornisce di fatto pubblicità alle idee, fermo restando – naturalmente – il rispetto dei diritti editoriali d'autore. In realtà, come in gran parte si sta già facendo su riviste specialistiche come la *RIN*, sarebbe sempre opportuno rendere disponibili perlomeno dei riassunti tematici dei propri lavori: si otterrebbe così l'effetto desiderato di attrarre lettori presso la fonte originaria.

In aggiunta alle osservazioni poco sopra espresse, sembra comunque che il sempre maggior libero accesso alle informazioni consenta una sorta di riavvicinamento tra quanti compiono ricerca pura (tradizionalmente “gli accademici”) e gli appassionati della materia (tradizionalmente “i collezionisti”) grazie ad alcune realtà oggi ormai consolidate; il riferimento è ad alcuni siti internet e a gruppi di studio che propongono riviste in cui editano le loro ricerche.

Tra i portali del web merita certo una menzione il sito *Lamoneta.it* che propone discussioni tematiche su serie monetali, singole emissioni e novità bibliografiche e vede ormai abitualmente studiosi e collezionisti (o semplici interessati) impegnati in approfondite e preziose discussioni. A ridurre questo divario tra mondo accademico e collezionistico contribuiscono con continuità anche le riviste *Panorama Numismatico*, *Cronaca Numismatica* e *Il Giornale della numismatica* (questi ultimi due solo on-line): i periodici, oltre a presentare curiosità e soprattutto considerazioni su singole emissioni, propongono a volte veri e propri spunti davvero originali su storia monetaria e intere serie monetali, e offrono anche interventi di rinomati studiosi. Non è secondario, inoltre, il fatto che queste testate forniscano informazioni riguardo ad incontri, mostre, conferenze, nuove pubblicazioni e convegni così da veicolare in maniera diretta ed efficace molte informazioni che non sono sempre facilmente raggiungibili per i non addetti ai lavori. Questi apporti sono oggi fondamentali a mantenere vivo l'interesse verso la disciplina numismatica e a incentivare la ricerca e il collezionismo, soprattutto nei confronti delle nuove generazioni.

Un altro periodico on-line di notevole successo, nato in seno al Portale Numismatico dello Stato, ha proseguito la lodevole iniziativa di revisionare e aggiornare la catalogazione del *Corpus Nummorum Italicorum* e, a partire dal 2014, ha editato in forma monografica ben 44 lavori: i materiali sono liberamente accessibili e scaricabili. Gli ultimi 14 numeri, ed alcuni precedenti, sono inoltre acquistabili in forma cartacea.

Una realtà di recentissima costituzione è la rivista *Dialoghi di Numismatica. Protagonisti, prospettive, ricerche* che ha edito ad oggi 2 numeri a partire dal 2019 (liberamente consultabili anche sul web) e che mette a disposizione studi e analisi numismatiche di qualità su tutti gli argomenti monetari; la rivista ha raccolto anche informazioni sugli studi che vengono affrontati in ambito universitario suggerendo quali siano le direzioni di ricerca attualmente in corso.

Nel periodo qui considerato sono proseguite le attività, anche editoriali, dei circoli numismatici che hanno avviato la pubblicazione di Bollettini e Notiziari contenenti lavori da tenere in considerazione benché non prevedano un sistema scientifico di revisione critica anonima. Alcuni di questi circoli, spesso di ispirazione collezionistica, sono di nuova nascita (o anche di rifondazione), e nel futuro potrebbero rappresentare delle sedi editoriali molto interessanti. Tra questi ricordiamo il rifondato *Bollettino del Circolo Numismatico Partenopeo*, il *Quaderno del Circolo*

Numismatico Romano Laziale. Appunti di Numismatica, il Gazzettino di Quelli del Cordusio. Un apprezzamento speciale crediamo debba esser attribuito al proseguo delle attività dell'Accademia Italiana di Studi Numismatici e all'Associazione Culturale Italia Numismatica con le loro pubblicazioni.

L'unico censimento delle pubblicazioni recenti, per quanto parziale, è ad opera di MIRRA (283), che ha raccolto parte di quanto edito dal 2009 al 2015 aggiornando la precedente raccolta.

L'attività molteplice di un ricercatore, Luca Gianazza, sta contribuendo a raccogliere e rendere disponibili informazioni per la ricerca numismatica attraverso raccolte bibliografiche di lavori editi e all'impostazione dell'originale database *Eligius*, ospitati all'interno del sito www.sibrium.org: per quanto riguarda *Eligius*, si tratta di una peculiare banca dati (nata in verità quasi vent'anni fa) che tenta di colmare la lacuna pertinente alla ricerca prosopografica del personale coinvolto nelle officine monetarie. Anche questo contributo appare oggi indispensabile per intrecciare i dati e valutare sempre più opportunamente il ruolo da riconoscere alle maestranze e alle autorità di zecca.

Il lavoro di certo più significativo, per estensione territoriale considerata, per numero di zecche analizzate e per la complessità dei temi analizzati, è senza dubbio il dodicesimo volume della collana *MEC*, edito dalla Cambridge University Press e curato da DAY, MATZKE e SACCOCCI (179). Il ponderoso volume è dedicato alle regioni dell'Italia del nord per il periodo che va dal X al XV secolo; le regioni considerate sono Piemonte, Liguria, Lombardia e Veneto (comprendente anche Trentino Alto-Adige e Friuli Venezia-Giulia).

L'opera, nello spirito della collana *MEC*, offre un'approfondita analisi delle emissioni su scala regionale ma presenta un'impostazione decisamente innovativa rispetto al panorama editoriale noto che, secondo schemi consueti e purtroppo consolidati, abitualmente propone lavori circoscritti a zecche emittenti o al massimo a regioni con una certa individualità politica. *MEC 12* affronta invece lo studio numismatico valutando anche le interazioni e le relazioni tra autorità e zecche emittenti delle regioni considerate concedendo uno sguardo d'insieme sull'intero contesto monetale dell'Italia medievale settentrionale per rappresentarne l'evoluzione e giustificarne le trasformazioni. Si tratta, di fatto, di una novità metodologica e speculativa rispetto ad altre opere tematiche che spesso non esaminano l'intero contesto geopolitico. Quest'aspetto, in verità non sempre rilevato con adeguata opportunità dai vari recensori, molto concentrati a verificare le nuove attribuzioni rispetto al passato, rappresenta una novità poiché non valuta solo la produzione e la circolazione monetarie dei territori in esame, ma le considera anche nel loro insieme proponendo risposte a molti dubbi e razionalizzando in forma consecutiva connessioni, imitazioni, influenze. In *MEC 12* non sono inoltre rare le nuove letture proposte, alcune decisamente inedite rispetto al quadro precedente. Com'è forse ovvio, un lavoro così complesso di revisione ha implicato, da parte degli autori, una serie di scelte attributive che hanno alimentato un dibattito molto vivace.

Per l'Italia del Sud, è stata presentata la ristampa anastatica del lavoro di Lucia TRAVAINI sulle monete dell'Italia Normanna (426) del 1995, corredata da un'introduzione aggiuntiva e da una nuova appendice dei ritrovamenti avvenuti dal 1995 al 2014 ed esposti per regioni coordinata da Giuseppe SARCINELLI (393, si veda anche 394; Abruzzo: DI PIETRO (330); Molise: DE BENEDITTIS (89); Campania: SANTORO (391); Puglia: SARCINELLI e DINOI (395); Basilicata: SOGLIANI (401); Calabria: RUGA (365); Sicilia: TRAVAINI (427)).

Storia degli studi

Un interessante lavoro di SAVIO (396) ha ricordato efficacemente la storia degli studi italiani di numismatica (pertinenti anche al periodo medievale), gli impegni delle riviste storiche e la nascita delle nuove iniziative editoriali, dipanando la matassa dei principali filoni di ricerca che sono stati condotti nel secondo dopoguerra fino agli anni Ottanta del secolo scorso.

L'importante ruolo di Giovanni Brunacci per gli studi numismatici nel Settecento, con particolare attenzione alla zecca padovana, è stato ricordato da ASOLATI (28) e quello di Cornelio Desimoni, in relazione alla zecca di Genova, da BALDASSARRI (37). La storia degli studi dedicati alla "numismatica pontificia" è stata oggetto di un intervento di ALTERI (11) che in sintesi ne ha definito i contorni.

Gli studi numismatici tra Cinque e Seicento (anche in Europa) sono stati oggetto di un contributo di CAVALLARO (142) che ha schematizzato i principali filoni della trattatistica. Sugli studi nel XVIII secolo è intervenuto SACCOCCI (376) evidenziando il ruolo svolto dal Muratori nell'incentivare l'interesse anche per la numismatica medievale. Sugli studi numismatici vedi anche BALDASSARRI (52) relativamente alla Toscana e per l'area veneta CALLEGARI (118).

Alla corrispondenza tra Zanetti e Antonioli, che non completò mai una storia della zecca di Correggio, è dedicato

un contributo di FABBRICI (189). Una ricognizione archivistica ha consentito a MOSCA (290) di recuperare informazioni sull'evoluzione degli studi sulla Val di Sole (Trentino) corredandola ai ritrovamenti sin dall'età antica.

Collezionismo, cataloghi di collezione e repertoria

Il collezionismo numismatico è stato celebrato in occasione del ventennio dell'Associazione Numismatici Italiani Professionisti con un volume (163) in cui trovano posto numerosi interventi che hanno ricordato figure rilevanti di collezionisti moderni e contemporanei, tra cui Baldanza (114), Bellucci Ragnotti (211), Borgia (424), Bottacin (117), Brambilla (261), de Falco (248), Grierson (424), Magnaguti (103), Papadopoli (143), Spano (1), Verri (166), Vittorio Emanuele III (424); nel volume sono presentate anche le collezioni medievali e moderne nei Musei di Strada Nuova a Genova (346) e in quello di Como (299), vi si tratta inoltre del collezionismo dei Medici e delle collezioni a Firenze (140) e si ricorda l'istituzione del Circolo Numismatico Napoletano (349). Carteggi inediti tratti dall'Archivio storico dei Musei Civici di Bologna hanno permesso a ZECCHINO (473) di documentare lo scambio di informazioni e idee tra diversi numismatici del XIX e XX secolo (Frati, Bignami, Morchio, Vitalini, Sambon), comprese notizie di inediti ritrovamenti. In alcuni capitoli di uno studio dedicato all'epistolario di Cristoforo Madruzzo, SIRACUSANO ha offerto un quadro del nascente collezionismo numismatico del Cinquecento del nord-est italiano (398, spec. Capp. I e II). APPARUTI (18) ha coniato il termine *petrarchismo* per indicare la stretta relazione tra lo sviluppo di questa passione e la figura di Petrarca umanista. Da segnalare anche il contributo di MORUZZI (289) che ha sottolineato l'importanza del collezionismo e l'impegno dei collezionisti per la disciplina nel rispetto del contesto giuridico nazionale italiano (cfr. al riguardo il Convegno di Studi a cura di MORACE PINELLI (286)). BALDASSARRI ha esaminato e contestualizzato la raccolta numismatica e sfragistica di Moisè Supino (41) e CASAROTTO ha illustrato la figura di un grande collezionista padovano del XVII secolo: Giovanni de Lazara (131).

A partire dal IV numero del *Notiziario del Portale Numismatico dello Stato* (314) è stata avviata un'iniziativa che si propone di raccogliere ed editare informazioni sui medaglieri italiani. Per quanto riguarda il periodo considerato nel presente contributo si segnala nel volume il lavoro di RINALDI (348) sul progetto di studio e digitalizzazione della collezione napoletana Scacchi, composta da monete dall'alto medioevo alla costituzione del Regno d'Italia. Lo studioso ha recentemente edito il risultato delle sue approfondite ricerche in tre volumi corredati di catalogo che segue le più recenti cronologie (350, 351, 352).

In un convegno dedicato in particolare ai beni di interesse archeologico, edito su altro numero del *Notiziario* citato (196), sono stati presentati contributi anche sul collezionismo tra cui un inquadramento generale di ROSSINI (360) e un intervento di PERASSI sulle collezioni della Cattolica di Milano (317). In numeri successivi del periodico sono presentate altre collezioni: LIBERO MANGIERI (260) ha trattato del medagliere di Taranto con riassunto dei tesori medievali e moderni raccolti in Puglia. Si ricorda poi un lavoro di MUSCOLINO (393) su Biagio De Spuches e sul patrimonio collezionistico siciliano del XVIII secolo e i contributi di GANDOLFO (208, 209, 210) sulla collezione del Museo Salinas di Palermo e sulla figura del collezionista. Due volumi monografici del periodico, a cura di GARGANO e PENNESTRÌ (213) restituiscono storia e consistenza del Medagliere di Reggio Calabria che conserva anche monete medievali, medaglie, pesi e beni para-numismatici; per questa sezione sono state raccolte le notizie di rinvenimento a partire dall'inizio del XX secolo tra Calabria e Basilicata e vi si trovano elencati ripostigli e relative consistenze, compresi dati inediti (162, 212).

La collezione di Parma presso il complesso della Pilotta è stata oggetto di un altro numero monografico del *Notiziario* (315) in cui si segnalano, per la storia della collezione e l'elenco dei pezzi, i contributi di BURANI (112, 113), CATARSI (141) e il corposo contributo, non catalografico, in cui BAZZINI (66) ha elencato la consistenza dei materiali medievali e moderni (con anche beni para-numismatici). Alla formazione delle collezioni del Museo di Torino, ad opera di Domenico C. Promis (che ne fu curatore per quarant'anni), è dedicato un più recente numero monografico del *Notiziario* (61).

GARIBOLDI ha documentato la storia delle collezioni del Museo di Classe, recuperando informazioni archivistiche e sottolineando in particolare l'importante ruolo svolto dai monaci Camaldolesi nella composizione delle raccolte (215).

Nell'edizione degli atti relativi al Congresso Internazionale di Taormina (115) sono compresi interessanti contributi pertinenti soprattutto alla storia delle collezioni e al loro studio e riordino, con riferimento ad indagini territoriali di rinvenimenti (62, 138, 168, 388).

La riedizione a cura di LOMBARDI (116) di un volume di Memmo CAGIATI, edito nel 1925, ha consentito il recupero di notizie riguardo a raccolte pubbliche e private presenti in Italia e ha tracciato un quadro dello scenario della ricerca e del collezionismo numismatico dei primi decenni del Novecento. Lo stesso curatore ha proposto anche la riedizione di un lavoro inedito di SAMBON (386) dedicato alle provincie meridionali d'Italia dal XII al XV (da Ruggero II a Giovanna d'Angiò). L'opera appare interessante grazie all'analisi critica delle emissioni sulla scorta di documentazione oggi non più reperibile.

Il nuovo medagliere della Veneranda Biblioteca Ambrosiana è stato presentato, in più contributi, da ALTERI (8, 9, 10).

CANORO ha raccolto le informazioni sulle emissioni di Salerno nel Museo Bottacin di Padova e nell'Archeologico di Bologna (121), mentre delle collezioni pisane ha scritto BALDASSARRI (40). VALCI ha edito i denari provisini presso la Biblioteca Apostolica Vaticana (448), mentre DE BENETTI ha redatto un catalogo dei fiorini (*ante* 1533) conservati al Museo Archeologico Nazionale di Madrid (92). IULA (249) ha dedicato una monografia tematica alla zecca di Salerno basandola sulla collezione a lungo inedita del Museo Diocesano locale (in particolare si vedano i capitoli successivi al III: da Roberto il Guiscardo al 1194).

Un'opera impegnativa è stata la recente edizione del I voluminoso tomo sulle monete medievali italiane conservate al British Museum; il lavoro è dedicato all'Italia meridionale, con Sicilia e Sardegna: si tratta della pubblicazione ragionata dei pezzi compresi tra il periodo longobardo e l'Unità d'Italia (165). Il lavoro è corredato da introduzione sulle collezioni e presentazioni delle singole serie.

Il Portale Numismatico dello Stato, nella sezione *Materiali*, ha proseguito la riedizione critica delle serie monetali nella Collezione Reale edite nel *Corpus* con monografie dedicate alle zecche medievali e moderne. L'incremento riguarda le emissioni di Aquileia (PASSERA, ZUB (312, 313)), Bologna (CHIMIENTI e VIGNA (156); DI VIRGILIO (458-463)), Bozzolo (BELLESIA (79, 80); si veda dello stesso autore anche (72)), Camerino (BELLESIA (81, 83)), Casale Monferrato (GIANAZZA (221, 222)), Castro (BELLESIA (84)), Firenze (PUCCI (339-341, 343)), Gorizia (PASSERA (309)), Massa di Lunigiana (ESPOSITO (185, 186)), Milano (BAZZINI (63); BAZZINI e TOFFANIN (70, 71); GIANAZZA e TOFFANIN (226, 227); ROSSINI e TOFFANIN (362); TOFFANIN (414, 415)), Mirandola (BELLESIA (76, 77, 78)), Piacenza (FUSCONI (203, 205, 206)), Piombino (PUCCI (342); si veda anche GIANNONI (228)), Pomponesco (BELLESIA (75) ma si veda anche (72)), Regno di Napoli/zecche minori (FABRIZI e GIULIANI (192)), Roma/emissioni pontificie (FUSCONI (204)), Roma/denari provisini (VALCI (447)), Sulmona (GIULIANI (232), ma si veda anche GIULIANI e MATTIOCCO (240) sulla collezione del Museo Civico), Verona (SACCOCCI (375)).

Per quanto riguarda i repertori generali, scollegati a collezioni, ROVERA (con CAMPANA e GRELLA (364)), ha presentato un' "enciclopedia ragionata" delle emissioni sabaude dal 1051 (Oddone) al 1440 (Amedeo VIII duca). La voluminosa opera considera l'analisi di ogni moneta fornendone una scheda corredata da informazioni sul contesto politico e dati tecnici. Il lavoro, almeno a livello catalogico, rappresenta al momento un valido compendio di confronto fino all'uscita di un volume della serie *MEC* che comprenda anche questa serie monetale. CAPPELLARI (127) ha proposto invece uno studio complessivo sulla monetazione sabauda circoscritta alla Sardegna.

Carlo e Silvana CRIPPA (167) hanno curato il primo volume (ma quarto in ordine di edizione) della monumentale opera iniziata da Carlo Crippa nel 1986 con la parte dai Visconti agli Sforza. In questo volume il tema è relativo ai primi periodi della zecca milanese, dall'apertura nel periodo longobardo al consolidamento del potere con Azzo Visconti nel 1329.

RIZZOLLI e PIGOZZO (354), in un ampio studio (disponibile anche in lingua tedesca, 362), hanno inserito un corpus catalografico delle monete prodotte nella sezione atesina della Marca veronese, proponendo novità di attribuzioni e cronologie che hanno stimolato il dibattito tra gli studiosi (vedi SACCOCCI (375)).

BELLESIA (73) ha ripreso l'analisi delle monete di Rimini dalla metà del Duecento agli inizi del Quattrocento con particolare attenzione all'agontano d'argento, di cui propone un'analisi e una seriazione su base tipologica. Dello stesso autore si ricordano poi due monografie dedicate a Sabbioneta (74) e Solferino (88) che fondano lo studio anche su una consistente parte documentaria. La monetazione estense di Modena, posta al confronto con quella di Ferrara e Reggio, è stata oggetto delle indagini di Claudio e Guglielmo CASSANELLI con CHIMIENTI (135) che in un lavoro monografico evidenziano le connessioni numismatiche (anche dal punto di vista tipologico e tecnico) tra le tre zecche.

Per la serie M.I.R. sono stati editi i volumi relativi allo Stato Pontificio (I volume dal 651 al 1521, II volume dal

1521 al 1621) a cura di TOFFANIN (416, 417) e al Triveneto (e zecche minori comprensive della costa balcanica) a cura di KEBER (257). Un progetto che mira a proporre il corpus delle monete delle Marche ha prodotto, a cura di VILLORESI (457), il primo volume dedicato all'intera produzione della zecca di Ancona (compreso il legato pontificio che operò nella Marca ed una parte finale riservata alle falsificazioni). NASSAR (296, 298) si è occupato della zecca di Arezzo e della successione delle sue emissioni.

Alla piastra papale (13), introdotta da Sisto V, 1585-1590, è dedicato un volume a più mani che prende in considerazione anche altre emissioni di largo modulo precedenti; su questa moneta si veda anche il contributo di GIAMPICCOLO (219).

Le emissioni della zecca di Modena di XVII secolo sono state argomento di una serie di contributi tipologici di VERONESI (455).

Alle monete prodotte (e relative zecche attive) in Italia meridionale sono stati riservati diversi lavori: GIULIANI e FABRIZI hanno curato due volumi sull'intera monetazione angioina nel sud Italia (I volume, 237: introduzione storico-critica alle emissioni, II volume, 238: catalogo) al proposito si veda anche un altro contributo degli stessi autori (239).

D'ANDREA e CONTRERAS (15) hanno proseguito l'edizione delle monete coniate nelle zone corrispondenti all'attuale Campania fino alla conquista normanna. D'ANDREA, BONANNO e SANTONE (14) hanno approntato un manuale sulle emissioni aragonesi nel meridione d'Italia dal 1282 (Vespri siciliani) al 1412 (Compromesso di Caspe). Alla monetazione moderna e contemporanea della zecca di Napoli MAGLIOCCA (268, 269, 270) ha dedicato tre volumi di stampo collezionistico in cui sono comprese anche informazioni archivistiche, si presenta il panorama storico e soprattutto si individuano varianti ed incisori. RUOTOLO (368) ha illustrato le monete di Messina dal periodo magno greco alla chiusura della zecca nel 1676.

LUPPINO (266, 267) ha proseguito l'opera di raccolta delle monete di prova, delle rarità numismatiche e dei progetti per la monetazione di area italiana, dal V secolo all'introduzione dell'Euro, pubblicando l'VIII (con San Marino, Città del Vaticano, Repubblica Italiana e A.F.I.S.) e il IX volume (monete napoleoniche) dell'opera prevista in 12 tomi di cui era stato edito finora soltanto il primo.

OLIVARES ABAD (303) ha pubblicato un volume, dedicato soprattutto ai collezionisti, in cui si presentano le emissioni spagnole coniate in Italia (Milano, Napoli, Sicilia e Sardegna), naturalmente pertinenti all'età moderna.

Produzione: attribuzioni e cronologie, attività di zecca, aspetti tecnico-giuridici, falsificazioni

Sono stati prodotti diversi studi su singole serie, o pertinenti a emissioni di singole autorità, spesso con proposte di aggiornamento dei repertori: si tratta in molti casi di approfondimenti basati su considerazioni tipologiche, studio di documentazione, analisi di materiali già noti che andranno certo consultati in occasione di revisioni catalografiche.

Per l'area settentrionale JONIAUX (253) ha identificato nel medagliere della Bibliothèque Nationale de France un mezzo testone inedito e al momento unico emesso da Luigi XII (1507-1512) a Genova. JAMBU (252) ha attribuito per la prima volta ad Andrea II Doria (1606-1622), principe di Loano, un ducato argenteo del 1606 riscoperto nella collezione della stessa Bibliothèque Nationale, mentre PROKISCH (338) ha individuato un ongaro di XVII secolo di Tassarolo emesso a nome di Filippo Spinola nelle collezioni dell'Abbazia di Kremsmünster: questi due ultimi ritrovamenti hanno stimolato gli autori ad analizzare e descrivere in maniera articolata le due emissioni. TOFFANIN (421) si è concentrato sulle coniazioni di Gian Galeazzo Visconti (1371-1402) e PIGOZZO (333) ha discusso l'origine del termine *pegione*, confermando ipotesi già consolidate (cfr. 179, *MEC* 12, pp. 743-744). TOFFANIN ha studiato la pratica della riconiazione verificandola dall'osservazione di un ducato di Galeazzo Maria Sforza impresso su un ducato mantovano di Ludovico III (418). Sull'argomento si è espressa anche BALDASSARRI (45) che ha considerato il fenomeno della riconiazione in età medievale, tentando di inquadrarlo in una seriazione cronologica generale.

RIPAMONTI (353) ha proseguito e aggiornato lo spoglio bibliografico dei documenti sulla zecca di Milano nel Quattrocento già indagata da Motta e Bernareggi.

PANAZZA (307), sulla scorta della documentazione, ha tracciato una storia della moneta di Brescia dalla riattivazione della zecca ad opera di Pandolfo Malatesta (nel 1406), appaltata alla famiglia locale dei Porcellaga, discutendone criticamente e cronologicamente tutte le emissioni e firmando un catalogo con Rizzonelli. BAZZINI (68) ha dedicato un contributo ai grossi emessi a Tortona, discutendo le nuove attribuzioni proposte in *MEC* 12 (179, cfr. tavola 23 e pp. 234-240).

VIDALE (456) ha analizzato le mutazioni stilistiche del grosso carrarino di Padova per proporre una seriazione

cronologica; FERUGLIO (199) ha dedicato attenzione ai bisanti approntati dagli uomini della Serenissima in luogo di fortuna (e non in Patria) durante l'assedio di Famagosta di Cipro: ne ha ricostruito le attestazioni documentarie, le tipologie e i dati metrologici, le ricorrenze in un lavoro pressoché completo. Al grosso matapan dei conti di San Martino, moneta originalissima e poco studiata, è dedicato un intervento di LONGO (265).

CHIMIENTI e MORETTI (154), all'interno di uno studio su contraffazioni e imitazioni, si sono concentrati sulle emissioni argentee comunque denominate "bolognino", considerando tutte le zecche che hanno coniato questo nominale, definendone l'evoluzione e la presenza nel territorio dell'Italia centrale anche attraverso l'esame dei rinvenimenti.

Per l'area centrale BALDASSARRI (52) ha presentato i risultati delle sue precedenti ricerche sulle zecche toscane nel basso medioevo; la studiosa ha inoltre proposto interventi sulle emissioni di singole zecche, con proposte di aggiornamento cronologico: ricordiamo i contributi su Genova (42; con RICCI (58); con LOCATELLI (56)) e Pisa (46, 47).

Alle indagini archeologiche della zecca di Firenze sono stati dedicati due lavori (159, 160) mentre GIACCARDI (217) ha dedicato uno studio alla localizzazione della zecca di Napoli.

La zecca di Massa di Maremma, grazie ad un recente incontro di studio (51) a cui è seguita una mostra, è stata oggetto di specifici contributi tra cui ricordiamo quello a firma di SOZZI (402) che ne ha proposto un compendio presentando le emissioni e i coni superstiti (vedi anche 55, pp. 160–163). Nello stesso contesto, grazie a indagini archeologiche, è stata riproposta da BIANCHI e CICALI (99) la lettura del sito di zecca e del suo ciclo produttivo presso il castello minerario di Montieri, località presso cui si batteva moneta per i vescovi di Volterra sin dal XII secolo. Nel catalogo della citata mostra sono stati presentati commenti e spunti critici sulle emissioni di Pisa (55, pp. 151–153), Lucca (55, pp. 154–155), Firenze (55, pp. 156–157), Siena (55, pp. 158–159).

L'opera di revisione complessiva sulla monetazione fiorentina, ad opera soprattutto di DAY e DE BENETTI, ha proposto diverse novità scientifiche: DAY, in un articolato lavoro diviso in due contributi, ha studiato la presenza nella circolazione e la produzione della moneta spicciola fiorentina (fiorino piccolo) fino agli inizi del Trecento, quando inizia il Fiorinaio (172, 175). DE BENETTI ha analizzato il tema in due ricerche che correlano le prime emissioni d'argento fiorentine con quelle d'oro e di mistura fornendo osservazioni soprattutto epigrafiche e tipologiche e ricorrendo alle fonti (93, 95).

Approfondimenti e precisazioni sulla zecca di Correggio sono stati forniti da BRUNI con BELLESIA (109).

Nuove conoscenze sulla zecca dei vescovi di Volterra sono offerte dagli studi di PAGANELLI (304); al riguardo NASSAR (295) ha proposto di assegnare all'officina impiantata al castello di Casole (e non Berignone) le emissioni di Ranuccio. BALDASSARRI (43) ha richiamato l'attenzione sull'identificazione del *miliarense* nel panorama della circolazione pertinente alle zecche italiane tirreniche. CIABATTI ha rivisto la seriazione delle monete di Ferdinando de' Medici (157). La revisione delle notizie sull'apertura della zecca di Roma nel XII secolo, in base alle opinioni avanzate dagli studiosi, è stata curata da SISSIA (399), mentre BELLESIA ha dedicato diversi contributi alla serie degli zecchini papali del Settecento (82); CASSANELLI, con CHIMIENTI e VIGNA (137), ha studiato le emissioni di Pio VII a Bologna; SISSIA e RIMOLDI (400) hanno proposto uno studio sui quattrini romani (detti cinque) proponendone una seriazione. DAY (174) ha analizzato le caratteristiche stilistiche del ducato romano indicando seriazioni cronologiche inedite basate su varianti tipologiche, fonti documentarie e ripostigli.

Alla storia della zecca de L'Aquila, nei suoi trascorsi storici tardo medievali e della prima età moderna (spesso in riferimento alla storia monetaria aragonese), ha contribuito GIULIANI (231, 234–236) sulla scorta della documentazione archivistica che attesta i rapporti tra autorità conianti e appaltatori di zecca.

Venendo all'area meridionale, PERFETTO ha dedicato diversi contributi di approfondimento alla monetazione del Regno di Napoli, alla sua zecca e ad alcune emissioni di carlini, gigliati, robertini e tornesi (320, 321, 322, 324), in particolare, riguardo ai gigliati napoletani, ne dimostra la probabile coniazione postuma nel corso del XV secolo.

CANORO (120) ha riconsiderato le serie monetali di Guglielmo d'Altavilla e ha in particolare discusso delle sue ramesine. CASTELLACCIO (139) ha dedicato alla serie sardo-aragonese un documentato contributo ricco di spunti speculativi. BONANNO ha pubblicato alcune serie monetali messinesi (quasi tutte inedite) emesse per la città dal Maestro Portulano nel XV secolo (105).

D'ANDREA e MORETTI (16) hanno indagato le emissioni di bassa qualità prodotte durante la guerra di successione ad Alfonso I tra aragonesi e angioini nel Regno di Napoli, nelle zecche di Alvignano, Atri, Barletta, Campobasso, Capua, Chieti, Cosenza, Gaeta, Isernia, Lecce, Limosano, Lucera, Oratino, Ortona, San Severo, Sora, Sulmona,

Taranto, Termoli. Gli stessi autori (287) hanno poi chiarito l'esistenza effettiva della zecca di Lucera, documentata da un atto di Ferdinando I d'Aragona, probabilmente attiva nella II metà del XV secolo durante la guerra fra gli Angioini e gli Aragonesi.

ARICÒ (20) ha proposto l'attribuzione a Reggio di un'emissione simile al follis bizantino di classe C datandola al 1038 e, in altro contributo (19), ha classificato le kharrûbe siciliane attribuibili a Ruggero I e II delineando lo sviluppo che questa monetazione ha avuto tra gli ultimi due decenni dell'XI secolo ed i primi quattro del XII. In un volume curato da CASTRIZIO (132) a corredo di una mostra sulla zecca di Reggio Calabria (dal VI secolo a.C. al XV d.C.), Aricò ha anche presentato e discusso la circolazione e i tipi della monetazione sveva, normanna e aragonese nel Sud Italia (pp. 54–68). SANTORO (392), riprendendo un'opinione già di Grierson, ha chiarito la cronologia dei tari di Amalfi (dal 1057).

Riguardo alle tecniche di coniazione e alle strumentazioni impiegate in zecca, sono apparsi nel periodo considerato diversi contributi, alcuni particolarmente apprezzabili per mole di materiale analizzato e per completezza. VANNI (451) ha proposto un catalogo dei coni e dei punzoni (dal 1564 al XVIII) conservati presso l'Archivio di Stato di Lucca spiegandone l'uso fino all'età della produzione meccanica di moneta e portando in luce le note di spesa della zecca; grazie alla documentazione presso il medesimo archivio a Lucca, l'autrice ha potuto anche delineare lavoro e personalità dell'incisore G. B. Tonelli (452). CHIMIANTI e CASSANELLI (150) hanno esaminato circa duemila reperti, tra coni e punzoni, pertinenti alla zecca di Bologna (1191-1805) fornendo osservazioni artistiche e stilistiche e considerando le maestranze che hanno lavorato nella zecca.

TRAVAINI (431, 436) nel ricordare quali oneri e impegni prevedesse l'attività di zecca ha affrontato anche aspetti tecnici trattando ad esempio del termine 'bolgano'. DAY (177), sulla scorta di documentazione, ha illustrato la preparazione delle leghe e delle monete di Firenze dal punto di vista metallurgico e tecnico, procedura che rimase invariata fino all'età moderna. In altri lavori, lo studioso ha ricostruito l'identikit degli apprezzati monetieri italiani (per lo più toscani) nel ruolo di appaltatori in zecche straniere: ad esempio il ruolo dei Benzi presso la zecca di Massa Marittima a partire dalla sua apertura nel 1317 (176), o del lucchese Percivalle dal Portico nel nord Europa e in Inghilterra (173).

Ricordiamo poi gli aspetti tecnici trattati nei contributi di GIANAZZA e FORNACCA (225) per Masserano (alias Messerano) e quello di SOZZI per Massa (403).

CUCINI TIZZONI (170) ha trattato della zecca dei Trivulzio in Valle Mesolcina grazie a documenti inediti e ha fornito informazioni sui possedimenti di miniere e forni metallurgici di Gian Giacomo Trivulzio ricostruendone l'attività imprenditoriale nel ramo siderurgico.

Degli aspetti tecnici e meccanici per produrre i coni nel Rinascimento ha scritto CHIMIANTI (148), mentre VANNI (453) ha studiato l'evoluzione delle tecniche di realizzazione della moneta milanese fino all'età moderna. La storia della zecca di Roma, da un punto di vista tecnico, è stata proposta da BALBI DE CARO (36).

VOREL (464) ha dedicato attenzione all'introduzione della coniazione meccanica presso la zecca papale con Urbano VIII (1623-1644) nel 1634: lavorando soprattutto sul materiale superstite, nel lavoro si delinea la ricostruzione degli innovativi processi produttivi e della qualità in purezza delle emissioni.

Un volume, a cura dell'Accademia Italiana di Studi Numismatici, ha raccolto gli atti di un convegno dedicato allo studio delle figure di incisori italiani rinascimentali e delle tecniche adottate (202). Nel lavoro trovano spazio interessanti contributi sia di carattere generale (148, 385) che di interesse regionale o locale (85, 151, 12, 280).

PIGOZZO (331), sulla scorta di documenti già discussi, ha cercato di perfezionare la successione cronologica degli incisori operanti nella zecca padovana.

MOSCA (291), identificando sul mercato un grosso meranese inedito, ha richiamato l'attenzione sul ruolo degli zecchieri e cambiavalute toscani nella regione trentina e tirolese nel XIV secolo.

PERFETTO (323, 325, 326) ha studiato la documentazione relativa alla zecca di Napoli in età moderna e al suo personale.

Venendo alle contraffazioni e falsificazioni, in un ricco volume curato da MEZZAROBÀ (281) sono pubblicati gli atti di un incontro sulle contraffazioni monetarie organizzato dall'Accademia Italiana di Studi Numismatici: BELLESIA (87) e TRAVAINI (439) hanno posto l'accento sulla terminologia per indicare imitazioni, contraffazioni e falsificazioni. IULA (251) ha ricordato le motivazioni della nascita delle imitazioni dei tari da parte di Salerno e Amalfi per il commercio mediterraneo (si veda anche 250, in cui l'autore sottolinea il ruolo propagandistico dei tari come rappresentazione

del potere di Enrico VI). FERRO (198) ha prodotto una ricerca sulle contraffazioni del ducato di Venezia anche sulla scorta dell'importante lavoro di MAZARAKIS (278), edito nel 2012 in lingua greca ma oggi disponibile in versione italiana curata da Monica Baldassarri: un utile repertorio delle imitazioni/falsi/contraffazioni del ducato veneziano organizzandolo per aree: Egeo orientale, Asia minore controllata dai Selgiuchidi, colonie genovesi dell'Oriente Latino fino alla Moldavia. Sempre sulle contraffazioni di monete della Serenissima, ma stavolta sul grosso d'argento, imitato in Italia e in oriente, si è concentrato il contributo di PETTAZZONI (328). Alle emissioni contraffatte dalla zecca di Correggio tra XVI e XVII secolo è dedicato un ampio contributo di BRUNI e CHIMIENTI (111), mentre delle contraffazioni milanesi corrispondenti alla dominazione spagnola di XVI-XVII secolo ha scritto LIMIDO (262); sulla storia del tallero e le sue imitazioni si ricorda il contributo di MINERVINI (282). Le imitazioni di moneta medievale del Triveneto (soprattutto Venezia ed Aquileia) sono state oggetto del contributo di FABIANEC (190), che ha esaminato le caratteristiche tipologiche dei falsi circolanti nella zona dell'Adriatico settentrionale e in terra balcanica.

Un contributo di ODDONE, pertinente alla zecca di Asti (300, si veda anche 301) mira a fornire precisazioni su quanto appurato nel recente *MEC* 12 (179, alle pp. 111–132) e ha illustrato quattro monete le cui caratteristiche fanno pensare a dei falsi, forse del Cigoì. ODDONE e LAMANNA (302) hanno analizzato un falso astigiano realizzato con la tecnica della “cera persa”. Nella stessa area geografica, GIANAZZA e FERRO (224) hanno ricordato l'attività della zecca di Cortemilia per conto dei Signori del Carretto, con contraffazioni di Asti, Genova e Firenze destinate al Piemonte meridionale e Liguria e fortemente contrastate da editti di Enrico VII di Lussemburgo.

BAZZINI (65) ha discusso di contraffazioni del grosso aquilino di Parma e del denaro imperiale di Piacenza, forse non ascrivibili ad un solo falsario: se alcuni esemplari potrebbero, verosimilmente, essere ricondotti all'ambito del famoso Cigoì, altre sono certamente più recenti. Lo stesso studioso ha fornito poi chiarimenti sulla falsificazione moderna di un grosso di Tortona nella Collezione Reale (68).

Di zecche clandestine più o meno strutturate hanno trattato diversi autori. ASOLATI (33) ha presentato un catalogo di falsi sesini veneziani (esemplari e conio, parte della collezione Papadopoli) conservati presso il Museo Correr (VE). Gli esemplari rientrano nell'ampio fenomeno della falsificazione di questo nominale veneziano che indusse la Serenissima a dismetterlo nel 1603. BALDASSARRI e CARLI (53) hanno scritto sulle officine illegali in Toscana. PIGOZZO (332) ha raccolto le informazioni su una banda di falsari che nel 1336-8 operò tra Marche ed Umbria per riprodurre “cortonesi” di Perugia e soldini veneziani. GIULIANI e SISSIA (241, 242), analizzando un'ottantina di reperti monetali (databili dal XII al XVIII secolo) dagli scavi archeologici presso la chiesa di Sant'Egidio a Campo Imperatore (L'Aquila), hanno rilevato la presenza di falsi d'epoca per cui si ipotizza l'esistenza di zecche clandestine. Di una zecca clandestina attiva tra XV e XVI situata nel castello di Godano (SP), indagato archeologicamente, si parla in un lavoro che presenta monete, tondelli, scorie, lingottini e codoli di fusione: nel maniero venivano verosimilmente realizzate contraffazioni di monete genovesi, piemontesi e forse milanesi e toscane (BALDASSARRI *et al.* (54)).

SACCOCCI (380) ha proposto una sintesi dell'argomento sulla scorta della documentazione archeologica e ha osservato una crescita notevole delle officine clandestine celate in castelli di confine proprio nei momenti in cui si verifica carenza di circolante.

PEZZI (329), trattando in catalogo i falsi contemporanei del Regno d'Italia moderno, ha ricordato anche il loro utilizzo abituale nella circolazione.

Tipologia

Molto percorso è ancora il filone di ricerca sulle relazioni tra immagine monetale e i suoi possibili significati, anche se in molti casi, tranne quando si tratti studi che offrono considerazioni generali (TRAVAINI (433)), le minuziose analisi tipologiche sono volte solo ad individuare varianti monetali inedite.

Alla comparsa, tra XI e XIII secolo, di coniazioni recanti non solo motivi epigrafici ma immagini in stile romanico è rivolto un lavoro collegiale di taglio pressoché artistico che dedica attenzione alla varietà dei tipi prodotti soprattutto in Europa centrale con appendici nel Tirolo (25, 356).

TOFFANIN (419) ha considerato le rappresentazioni del “morso” su esemplari viscontei e ha valutato e contestualizzato le emissioni milanesi (parpagliola, soldino e terlina/quattrino) coniate nel 1593-5 per celebrare la fine di una carestia e come augurio di prosperità per Isabella Clara d'Asburgo (413); lo studioso ha anche esaminato le emissioni dei re francesi in Milano (422). BAZZINI (67) ha ricordato la duina di Luigi XII per Milano, e CARONNI (130) ha riconosciuto varianti inedite in emissioni di Bernabò Visconti. GIANAZZA e FERRO (223) hanno individuato presso

collezione privata un denaro mezzano dei marchesi Aleramici di Monferrato (con tondello piano e non scodellato come l'inedito proposto da Michael Matzke, cfr. 179, *MEC* 12, p. 167) che trova rassomiglianze tipologiche con emissioni astigiane presenti nel ripostiglio di Garlasco e che potrebbe esser stato coniato a Moncalvo. CASSANELLI *et al.* (136) hanno proposto la seriazione cronologica della muraiola modenese di Ercole III d'Este e presentato altri studi su alcune emissioni estensi (133, 134, 135).

MONTAGANO e SOZZI (285) hanno esaminato un'emissione pisana inedita (mezzo giulio 1555-1559) della zecca di Montalcino ad opera del monetiere Agnolo Fraschini.

DE BENETTI (94), in occasione delle ricerche sul fiorino, ha identificato un esemplare con segno di zecca sconosciuto presso il Museo Archeologico di Madrid; lo stesso autore (91), presso le collezioni bolognesi, ha riconosciuto un fiorino coniato "per dispetto", secondo l'accezione di Grierson, battuto alle porte di Pisa nel 1363.

Ricordiamo poi lo studio citato sulle monete bolognesi del periodo di Restaurazione ad opera di Pio VII (137) e i contributi di FABRIZI e VAGLIVIELLO (193) su un denaro inedito di Napoli datato 1555 con firma dello zecchiere e FABRIZI (191) su due tornesi napoletani del 1622 inediti.

ALCAMO (2, 3) ha analizzato l'adozione di immagini cristiane (o con significato cristiano) sui folles di Guglielmo II di Sicilia nei confronti della tradizione bizantina e greco-bizantina; BALDASSARRI (48, 49) ha dedicato attenzione, in diversi contributi, alla scelta iconografica dell'immagine del Volto santo sulle monete di Lucca. PASSERA (310) ha cercato di individuare quali criteri politico-araldici siano stati alla base delle scelte dei Patriarchi di Aquileia per le loro coniazioni; sulla serie aquileiese si ricordano anche le osservazioni di KEBER (256) in merito al soggetto del Santo Sepolcro sulla prima moneta patriarcale di Poppo e soprattutto gli interventi di ŠTEKAR (406-412) che ha seguito la sua analisi tipologica di motivi simbolico-religiosi sulla monetazione medievale slovena con consistenti e significativi riferimenti anche alle coniazioni di Aquileia, Trieste e Gorizia. SACCOCCI (374) ha individuato nella monetazione di Padova (nel periodo 1337-1385) un programma iconografico molto complesso, teso alla celebrazione del carattere regale della dinastia carrarese nelle monete, nei sigilli, nelle tessere prodotte sotto questa Signoria che lo ha portato a riproporre una nuova interpretazione anche degli affreschi dell'Oratorio patavino di San Michele.

GIACCARDI (216) ha raccolto e descritto le legende ricorrenti sulla monetazione dei Borboni (da Carlo a Francesco II) emesse a Napoli, mentre la storia monetale è stata ricostruita da RUOTOLO (367).

ROSSINI (361) e NASSAR (297) si sono occupati della cronologia dei primi ritratti monetari rinascimentali, mentre SACCOCCI (382), ha individuato l'origine del cosiddetto "ritratto all'antica" nella medaglia coniatata dai Carraresi per la riconquista di Padova (del 1390) in cui sono stati letteralmente copiati i ritratti dell'imperatore Vitellio e di suo padre per rappresentare i Signori della città.

In diversi contributi è stata dedicata attenzione ai segni distintivi delle emissioni, i così chiamati "punti segreti": CAPPELLARI (128) sulle monete millesimate del Regno di Sardegna; BELLESIA (86) sui grossi agontani, TRAVAINI e PIGOZZO (444) sui ducati veneziani del tesoro di Montella, LOCATELLI (264) sui ducati da Siracusa, KEBER (254) sui grossi veneziani e sulle monete del futuro Patriarca Aquileiese Gregorio (263), RIMOLDI (347) sulle emissioni milanesi di Filippo II, TOFFANIN (420) su monete grosse dei Visconti.

Le relazioni tra l'iconografia dei santi che reggono un modellino di città sulle monete e altri media sono state indagate da SACCOCCI (377) e TRAVAINI e LOCATELLI (443): emergono osservazioni sulla scelta del santo da rappresentare in ciascuna città considerata, come legittimazione del diritto di conio, del potere o come simbolo della religiosità.

Circolazione: fonti scritte e rinvenimenti

Sono stati editi alcuni importanti ripostigli, come quello del 2012 da Colle Iano (5; catalogo di ALTAMURA (4)) in cui erano nascoste 58 monete d'oro e d'argento medievali di zecche italiane ed europee databili al XIII-XIV secolo (con reperti romani, moderni e contemporanei). I materiali medievali (tra cui grossi romanini del Senato Romano) sono stati studiati da TRAVAINI (430) che ne ha proposto un inquadramento nella circolazione monetaria contemporanea, con particolare attenzione ai grossi romanini del Senato Romano e ai gigliati/carlini napoletani. Altro importante studio su un tesoretto è stato quello sul gruzzolo casertano di Alife, edito a più mani da ARSLAN, BOMPAIRE, MIELE e TRAVAINI (24, con Baldassarri e Bazzini): il consistente ripostiglio di 635 monete da una necropoli (interrato nel 1189-1195 ca.) è composto da monete italiane e francesi. Il ripostiglio appare coerente con la ricostruzione degli studi precedenti secondo cui nell'Italia Normanna, nell'ultimo quarto del XII secolo, fosse pervasa da argento straniero.

BAZZINI, GUIDOZZI e MARCHI (69) hanno edito un tesoretto di monete medievali di XIII-XIV secolo rinvenuto

a Parma dentro una brocca e che, sulla base di un fiorino grosso da 2 soldi (popolino), venne interrato attorno alla metà del 1312: la composizione del tesoretto ha suggerito agli autori di metterlo in relazione con altri peculi dell'Italia settentrionale.

TRAVAINI e BROGGINI (442), hanno presentato il ricco tesoro di Montella (del 1354 ca.), composto da 210 monete d'oro (89 fiorini, 1 fiorino falso, 59 imitazioni di fiorini di zecche europee e 61 ducati veneziani). Si tratta di un tesoro unico per data e varietà con importanti dati su diverse zecche, inclusi legami di conio tra le monete per Firenze, Venezia e le emissioni ungheresi.

LOCATELLI (264) ha pubblicato un ripostiglio medievale conservato al Museo Archeologico Regionale 'Paolo Orsi' di Siracusa, scoperto nel 1938 e composto da 91 monete d'oro (83 fiorini, 8 ducati veneziani di cui 1 d'imitazione) databili dal 1313 al 1369 ca. Lo studio ha rivelato le connessioni di conio con il ripostiglio di Montella (vedi 442). L'autore ha fornito notizie anche su due ripostigli di età moderna ritrovati sull'isola di Lipari nelle Eolie (datazione proposta: 1548 ca. e 1587 ca.) che evidenziano come le monete straniere al Regno (soprattutto di zecche spagnole collegabili alla residenza di truppe militari) supplirono alla carestia di nominali d'argento (263).

DAY e DE BENETTI (178) hanno studiato i 57 esemplari sopravvissuti di un ripostiglio composto da 163 monete d'oro (forse tutti fiorini) e acquistato nel 1853 dal Staatliche Münzsammlung München. Ne hanno tratto un lavoro complesso e completo di riscontro con i documenti dell'epoca e identificazione stilistica dei pezzi e delle varianti fornendo nuove proposte di cronologia e di riconoscimento di alcune emissioni. Il peculio (1325 ca.) è stato messo in connessione con l'attività delle truppe mercenarie provenienti dal nord delle Alpi che combatterono in Italia tra gli anni '20 e '30 del Trecento.

DE BENETTI (90) ha curato l'edizione di un tesoro rinvenuto nel 1932 (int. ante 1303) vicino a Grosseto (Alberese) durante una bonifica e conservato a Firenze: 76 fiorini d'oro i cui segni di zecca sono stati datati grazie al confronto con altri ripostigli e posti in successione cronologica. In appendice viene presentato altro ripostiglio di 36 denari lucchesi (già segnalato in passato da Giulio Ciampoltrini) rinvenuto l'anno successivo (nel 1933) nello stesso contesto di cui sopravvivono solo 18 denari databili alla II metà del XII secolo.

Il già noto ripostiglio di Offanengo (CR) è stato riesaminato da RIZZONELLI (358) che ha proposto i risultati delle analisi metallografiche sugli esemplari conservati presso le Civiche Raccolte Archeologiche e Numismatiche di Milano.

Per l'area piemontese BONA (103) ha riassunto i ritrovamenti in Val Camonica, Val di Sole e Valtellina e ha offerto una sintesi della circolazione medievale nelle Valli confermando l'ipotesi già formulata da Saccocci per la Val di Sole (292, Introduzione: p. 15): nelle zone montane lo stock monetario poteva risultare alterato rispetto alla pianura. A Palazzo Centoris di Vercelli gli scavi hanno recuperato 6 monete di dubbia lettura ma assegnabili a zecche dell'Italia settentrionale dal XII al XVI secolo (PANERO e PISTAN (308)). Da scavi al castello di Ponzone (AL) si segnalano 4 monete moderne (XVI-XVII secolo: CROSETTO e COMBA (169)). PISTAN (336) ha pubblicato le monete (anche medievali: XII-XV secolo, zecche Pavia e Milano) da scavi a Vercelli (Via Duomo).

L'area lombarda è stata oggetto dei lavori di PERASSI (318) e BONA (104) che hanno analizzato e contestualizzato, in un contributo coordinato, i rinvenimenti e i ripostigli provenienti in particolare dall'area milanese e hanno prodotto una sintesi aggiornata delle problematiche inerenti considerando anche le più recenti pubblicazioni. RIZZONELLI (357) grazie alla discussione su alcuni ripostigli dei secc. XII-XIII contenenti monete di Brescia, ha documentato l'attività di questa zecca affrontando diverse tematiche, comprese quelle inerenti al diritto monetario e l'ubicazione dell'officina anticipando un riordino della cronologia che prelude ad un lavoro generale più completo. Sono state pubblicate monete italiane medievali dagli scavi a Piuro (CANTATORE (122): 7 monete di X-XV secolo, zecche di Milano e Pavia), mentre alle valli montane lombarde (Valtellina: 146; Valchiavenna: 147) CHIARAVALLE ha dedicato due corposi contributi riassumendo tutti i ritrovamenti noti sin dall'età romana ed elencandoli in tabelle: l'autrice li ha presentati attraverso le varie fasi storiche contestualizzandoli nella circolazione.

L'area della foce del Mincio, nel Mantovano, è stata oggetto delle ricerche di GALEAZZI (207) che ha censito e studiato i ritrovamenti monetari decontestualizzati compresi tra i secoli X e XIX: la lettura ha evidenziato una vivacità di circolazione grazie anche alle monete provenienti da fuori l'area che potrebbero esser giunte nella zona in seguito all'influenza veneziana (Mantova passò all'area monetale veneta nel 1257). Gli scavi a Cairate, presso il monastero di S. Maria Assunta, hanno recuperato una trentina di monete, per la maggior parte di età medievale e moderna di zecche

locali e straniere databili dal XV al XX secolo (CHIARAVALLE (145)). Le 20 monete ritrovate nel quartiere milanese di Nosedo, di cui 12 in tomba, hanno suggerito a FACCHINETTI (196) di vederle come deposito rituale. La stessa autrice (195) ha pubblicato i reperti anche medievali dalla chiesa di San Giacomo (CO), tra cui 2 denari milanesi di XIV secolo.

Nel Triveneto ASOLATI (26) ha riconosciuto come pertinente alla zecca di Correggio (1569-1580) un'esemplare inedito recuperato dagli scavi di Sanzenone di Tassullo, in Trentino, e ha richiamato il problema delle imitazioni di tardo XVI secolo (e periodi successivi) ad opera di zecche dell'Italia centro settentrionale per raggiungere i mercati bavaresi. Lo studioso ha inoltre analizzato le monete dalla chiesa di San Giovanni Battista a Flavon in Val di Non (32): 63 monete dal XII al XV (Gorizia, Mantova, Merano, Mesocco, Milano, Padova, Trento, Venezia, Verona) che si inseriscono coerentemente nel quadro noto della circolazione trentina strettamente legata alla storia monetaria del Triveneto, il flusso di monete nella zona si interrompe nel XVI secolo a seguito del mutamento del quadro economico e di conseguenza monetario.

Un lavoro complessivo sulla circolazione monetaria in Val di Sole (292), ha editato i ritrovamenti medievali dalle chiese di Dimaro (Asolati alle pp. 64-71 e 73-75), Ossana (Asolati alle pp. 77-79), Piano di Commezzadura (Marcinik alle pp. 88-94), Ortisé e Menas (Marcinik a p. 95). ASOLATI (30) ne ha ricostruito il quadro della circolazione sulla scorta dei ritrovamenti e di precedenti contributi.

Le 5 monete medievali veneziane dagli scavi presso il battistero del Duomo a Padova (XV secolo) sono state oggetto di un ulteriore contributo di ASOLATI (31).

SACCOCCI e FASANO (383) hanno pubblicato un ripostiglio da Serravalle (TV), interrato tra 1414 e 1423 che rappresenta coerentemente, per le sue caratteristiche di ripostiglio in parte di emergenza, la circolazione monetaria in Veneto nel periodo 1271-1420. PASSERA (311) ha presentato un altro ripostiglio, scoperto in un'inumazione nella chiesa di Monselice (PD) e databile al X-XI secolo, con 12 denari d'argento svalutati assegnabili all'ultimo periodo di Ottone III.

Dall'Emilia si segnalano i rinvenimenti da Monte Lucio (MARCHESI e BALDI (277); CANTATORE e MARCHESI (125): 68 monete di XII-XVI, zecche di Ancona, Bergamo, Bologna, Como, Cremona, Ferrara, Lucca, Mantova, Merano, Milano, Parma, Reggio, Tortona, Verona; presenti anche monete romane considerate residuali), Nonantola (CANTATORE e CHIMIENTI (123): monete di IX-XVIII secolo delle zecche di Bologna, Ferrara, Gubbio, Lucca, Merano, Modena, Piacenza, Siena, Trento, Venezia, Verona; per le monete romane rinvenute in scavo medievale gli autori ne discutono l'eventuale residualità, senza particolare approfondimento), Novi di Modena (CHIMIENTI e PETTAZZONI (155): le numerose monete medievali sono denari lucchesi e grossi di zecche emiliane, soprattutto di Modena e Bologna, sono presenti anche monete lombarde), Castelnovo ne' Monti (MARCHESI (276): con esemplari databili dall'XI al XIII secolo per le zecche di Modena, Lucca, Parma).

Si ricordano poi i rinvenimenti monetali dalla necropoli presso Borzano (Reggio Emilia), con reperti dal XII al XIV (zecche di Milano, Ferrara, Cremona, Parma: BAZZINI (64)). Da Toano, in località Castel Pizigolo (124), scavi organizzati hanno raccolto 106 monete sporadiche (Bologna, Ferrara, Lucca e Mantova) di XII-XIV secolo e 1 ripostiglio di XIII-XIV secolo (zecche di Ancona, Bologna e Modena). ASOLATI (34) ha studiato le monete dagli scavi presso la rocca di Monte Copiolo nel Montefeltrino: si tratta di 57 monete di età medievale e moderna e 2 contemporanee di zecche dell'Italia centrale e 1 del Ducato di Atene. Nel contributo si richiama il rapporto tra il denaro lucchese e le aree orientali e l'importanza della stessa valuta lucchese nella zona anche in età più tarda (ipotesi già proposta in passato da Andrea Saccocci). La presenza di monete papali ha suggerito all'autore di metterle in relazione con il passaggio di pellegrini.

Un riordino dei rinvenimenti (anche medievali) dagli scavi di Classe (Ravenna) è in corso da parte di BALDI (59). Gli scavi dal cimitero ebraico a Bologna (288) hanno restituito 3 monete medievali (Ancona e Bologna), 1 moderna e 1 tessera plumbea.

Sono stati diversi i contributi di SACCOCCI (370, 371, 372, 373) allo studio della circolazione monetale in Toscana letta attraverso i ritrovamenti: un tesoretto di 9 monete in vaso nascosto sotto il piano di calpestio della "Casa degli Aranci" a Lucca (8 denari di XIV secolo, 1 bronzo coevo forse bizantino) ha suggerito di non considerarlo un deposito di fondazione ma un ripostiglio di accumulo e di fornire osservazioni sulla circolazione monetaria; le 9 monete dagli scavi del Castelvecchio di Piazza al Serchio (XII-XIII secolo: 9 denari di Bologna, Lucca, Pisa e Parma) sembrano

attestare una circolazione più ricca e varia in zone montuose rispetto alla pianura. Lo stesso autore (381) ha studiato le monete dallo scavo di Piazza San Giusto e Piazza della Posta a Lucca (X-XII secolo: 10 enriciani di Verona e Lucca, 1 ottolino di Milano e 1 denaro normanno).

La circolazione monetaria di Pisa e del suo contado, tra XI e XIV secolo, è stata oggetto di analisi di BALDASSARRI (47) che ne ha identificato le fasi monetarie e i rapporti tra la moneta cittadina e quella straniera: si conferma il quadro della circolazione già noto per l'area tirrenica, il Valdarno inferiore e per il contesto urbano. BALDASSARRI e PARODI (57) hanno proposto un'analisi della circolazione nella Lunigiana tra X e XIV secolo esponendo osservazioni sul confronto tra uso e funzione della moneta lunense con quella di zecche circostanti ed anche esterne alla regione.

Le monete recuperate dalle indagini archeologiche 2014-2015 presso Cittavecchia di Massa Marittima hanno suggerito a CICALI di puntualizzare meglio la circolazione di moneta minuta nella Toscana meridionale in età basso-medievale (161; vedi anche 55, pp. 169-170). Dagli scavi di Vetricella (GR) sono emerse monete antiche e medievali (ROVELLI (363); MARASCO e CICALI (275)): gli esemplari posteriori al 1000 sono 4 denari di Corrado emessi a Lucca. Dal Castello di Scopetulo presso San Miniato, Pisa proviene un enriciano di Lucca (CANTINI *et al.* (126)). Grazie allo studio dei rinvenimenti, CHIMIENTI e MORETTI (153) hanno registrato la diffusione del bolognino nell'Italia meridionale.

DEGASPERI (181) ha proposto un'indagine originale: cercando di identificare le monete su sette biccherne senesi sulla scorta dei ritrovamenti archeologici, ha proposto una sintetica analisi della circolazione monetaria della Toscana centro-meridionale nella seconda metà del Duecento.

Per l'area centrale italiana, le oltre 200 monete rinvenute a Santa Maria di Pistia sono state oggetto di un sintetico contributo per il Museo di Colfiorito di Foligno da parte di RANUCCI (344): si tratta di esemplari delle zecche di Ancona, Arezzo, Ascoli, Bologna, Castro, Camerino, Firenze, Lucca, Macerata, Napoli, Roma, Verona (XII-XX secolo); si registra anche la presenza di emissioni ungheresi e francesi. Le monete dagli scavi di Pietrarossa (Trevi) sono stati editi da CONTRAFATTO e DE LEONE (164): gli esemplari medievali e moderni sono ascritti alle zecche di Ancona, Bologna, Castro e Roma. LA SALVIA e MANCINI (259) hanno proposto una sintesi della circolazione anche di età medievale in Abruzzo in particolare per il territorio di Corfinio (AQ).

Venendo al territorio del Lazio, segnaliamo i rinvenimenti da Colleferro (Castello di Piombinara): 24 monete di cui 22 medievali, alcune in tomba (MARANI (273): XII-XVII, zecche di Siena, Roma, Ravenna, forse Ancona). Probabilmente dal territorio proviene un consistente ripostiglio di denari provisini (con 2 anconetani) conservato ai Musei Capitolini e studiato da VALCI (445, 446). Dagli scavi 1998 presso il foro di Traiano (Monastero di Sant'Urbano), si è recuperato un ripostiglio di 34 monete argentee di XVI secolo, probabilmente la rimanenza di un più ampio peculio (MENEGHINI e VALCI (279)). RANUCCI (345) ha edito i rinvenimenti monetali da Cittareale (RI) in cui sono presenti anche 156 monete medievali e moderne ed 1 tessera mercantile: oltre a ricostruire il quadro della circolazione e motivare i ritrovamenti nella Rocca, legati alla presenza di milizie, chiarisce l'inesistenza delle zecche di Cascia e Norcia. MARANI (274) ha studiato un butto dal Castello Baglioni di Graffignano (VT) che ha restituito 4 monete medievali di XIV-XV secolo (tra cui un ducato papale di Callisto III 1455-1458 forse celato in un sacchetto poi disfattosi) e 3 tondelli in mistura. In altro butto nel centro storico di Marino (ALTAMURA e RASCAGLIA (7)) erano presenti anche 3 monete medievali (XIII-XV sec. di zecca romana) e 6 emissioni moderne (XVII-XVIII secolo) con varie contemporanee.

Da fonti d'archivio si è appreso il ritrovamento nella I metà del XX secolo presso Largo Argentina (Roma) di un ripostiglio di 36 monete moderne (XVI secolo, zecche marchigiane, laziali e di Venezia): segnalati anche 1 denaro di Siena e 1 quattrino del Senato Romano (BARBATO e VALCI (60)). Da Allumiere (VALLELONGA (449)) due tombe hanno restituito monete tardo-medievali d'argento (XV secolo, zecche di Firenze e Roma) e d'oro (XVI secolo: zecche spagnole, Rodi, Napoli, Roma e Venezia).

L'Italia meridionale ha potuto contare sulla riedizione del già citato volume di TRAVAINI (426) con aggiornamenti sui rinvenimenti, ma corpose sono state comunque le ricerche. MAMMATO (271) ha censito tutti i dati da rinvenimento medievali noti in un compendio che presenta riassunti sulla circolazione organizzati per periodi. Sono stati resi noti rinvenimenti archeologici dalla rocca *Montis Dragonis* (CE) da cui si sono raccolte anche monete medievali (scavi 2001-2014): si tratta soprattutto di monete del Regno di Napoli anche da necropoli che sono interpretate come deposizioni rituali che reimpiegavano anche moneta romana. Presenti anche monete che attestano un uso economico

(GARGIULO (214)).

I rinvenimenti dagli scavi presso il Castello di Lecce (7 bronzi bizantini, 3 denari svevi, 1 piccolo ripostiglio di tari del periodo di Ruggero II e Guglielmo II) hanno permesso ad ARTHUR e SARCINELLI (26) di documentare le fasi costruttive del maniero. Altri ritrovamenti nel sito, in riempimento di una fossa scavata nella roccia presso la Torre Mozza (125 monete per lo più del regno di Napoli, 23 di Venezia, 9 quattrini di Siena) attestano la vivacità della circolazione nel XVI secolo; dal sito proviene anche 1 raro Rechenpfennig di Norimberga attinente all'uso dell'abaco (terzo esemplare noto in Italia meridionale).

Dal castello di Ariano Irpino (AV) sono state recuperate 19 monete medievali e moderne delle zecche di Napoli, L'Aquila, Ducato di Atene (ZECCHINO (472)).

Passando alle isole, per la Sardegna BALDASSARRI (44) ha proposto una sintesi su produzione e circolazione monetaria in età bassomedievale, soprattutto in confronto con l'area Tosco-Tirrenica e quella francese e aragonese.

SANTANGELO (387), presso l'Archivio di Stato di Roma, ha recuperato informazioni su un ripostiglio di tari normanni scoperto nel 1902 presso le campagne di Castiglione di Sicilia (Catania) e oggi sopravvissuto in tredici esemplari presso il Museo Archeologico di Siracusa. Lo stesso autore (389) ha presentato un lotto di 20 monete squadrate conservate presso il Museo Orsi di Siracusa acquistate nel 1926 e presumibilmente scoperto a Marsala (Trapani): si tratta di dirhams argentei degli Almohadi (1147-1269), e imitazioni (per lo più spagnole, francesi e italiane).

WEISS (466) ha raccolto le informazioni monetali (e paramonetali) raccolte negli scavi 1971-2008 presso Monte Iato, componendo un catalogo di oltre mille pezzi che coprono il periodo 638-1953. Lo studioso (465) ha edito anche un ripostiglio di 5 tari di XII secolo delle zecche di Messina e Palermo rinvenuto negli scavi presso la necropoli musulmana ad Entella.

Da San Vincenzo presso l'isola di Stromboli sono state scavate 20 monete di XII-XIV secolo (Regno di Sicilia, Principato di Acaia, Contea di Barcellona: YOON *et al.* (467)).

GUZZETTA (244, 245) ha pubblicato materiali medievali e moderni dal teatro antico e dalla rotonda di Catania e quanto sopravvive di un tesoretto in parte già noto ritrovato a Siracusa a fine 1800 (246): 19 denari di Enrico e Costanza (1194-1196, zecca di Messina o Palermo).

Per le informazioni su ripostigli e ritrovamenti al di fuori dal territorio italiano, APOLITO (17) ha evidenziato, a proposito di scavi a Cuma eolica (Kyme), che la quasi assenza di moneta veneziana nella città portuale a vocazione mercantile (è stato rinvenuto solo un soldino di Francesco Dandolo, 1329-1339), pare confermare la tesi (avanzata in passato già da Lucia Travaini), secondo cui le emissioni della Serenissima sono lacunose prima della riconquista di Costantinopoli nel 1261 e la restaurazione dell'Impero Bizantino.

DEMIREL GÖKALP e STAHL (183) hanno presentato e discusso un ripostiglio di 48 grossi veneziani forati (con 1 falso) che costituiscono il complessivo valore di 2 ducati: il gruzzolo, conservato al Museo di Kütahya (Turchia occidentale) è stato acquistato sul mercato come proveniente dal distretto di Emet e forse appartenne ad un mercante turco che commerciava con Venezia.

Per l'inventario dei ritrovamenti monetali svizzeri (IRMS), DIAZ TABERNERO e GIANAZZA (184) hanno scritto del rinvenimento presso il ghiacciaio del Valico del Teodulo (tra Val d'Aosta e il Canton Vallese) di 184 monete per lo più della II metà del Cinquecento ritrovate addosso ad un uomo deceduto tra XVI e XVII secolo (ducatoni di Milano, spiccioli di area piemontese-savoiarda, Messerano, Monferrato con rilevante presenza di falsi milanesi e di Savoia, poche le emissioni dall'Oltralpe).

GUSAR e ŠUĆUR (243) hanno edito i rinvenimenti dagli scavi 2006-2014 della chiesa di Santa Maria in Pakoštane (loc. Crkvina, in Croazia), da cui provengono anche monete medievali di Venezia, Padova, Aquileia, Brescia, Verona, Pisa. Nel sito sono presenti anche diverse contraffazioni.

Di una certa rilevanza documentaria è il ripostiglio di 127 gliati identificato da BAKER e KLUGE (35) nel registro dei Musei Reali di Berlino: le monete furono rinvenute agli inizi del 1900 in un vaso nascosto nel teatro di Mileto. Si tratta di monete emesse da più zecche, compresa Napoli e tra qualche esemplare è stata osservata anche identità di conio. Nel lavoro si propone un confronto tra il rinvenimento e ripostigli simili.

Storia monetaria ed economica, documenti di mercatura

Ricordando la recentissima riedizione critica del *Tractatus* di Oresme sulla moneta a firma BROLLO e EVANGELISTI (106), e un saggio di EVANGELISTI (188, in part. i paragrafi 4.8, 5.8. e 6.1) sul pensiero economico medievale, si sono

segnalati diversi contributi scientifici che hanno trattato di storia e natura della moneta anche dal punto di vista giuridico, etico, religioso soprattutto in occasione di convegni e incontri di studio (27, 119, 171, 258, 305).

STAHL (404) ha affrontato il tema della carenza, dalla fine del Trecento, di metallo monetabile in una crisi di approvvigionamento che colpì tutte le zecche in Europa. I dati lacunosi per Venezia possono essere però recuperati grazie al libro di conti del mercante veneziano Guglielmo Condulmer. Lo studio della documentazione ha consentito all'autore di spiegare ancor meglio la sopravvivenza della Serenissima, che trasse profitto grazie alle monete vili prodotte per le colonie. STAHL (405) ha ripreso l'argomento in altro contributo, ponendo l'attenzione sull'impiego dei lingotti argentei nel commercio a lunga distanza e sottolineando come la medesima fonte documentaria privata ne attesti un utilizzo che va ben oltre il Trecento e che non fu totalmente soppiantato dall'adozione della moneta d'oro. Le implicazioni dell'analisi coinvolgono anche il riconsiderare l'attività di zecca delle città del Tardo medioevo, poiché appare evidente che non tutto l'argento disponibile venisse monetato.

Un tema che è stato affrontato da più autori riguarda le vicende che condussero l'Occidente europeo a determinare la fine del monometallismo argenteo introducendo nominali aurei a metà XIII secolo. TRAVAINI (428), tra i molti argomenti trattati pertinenti anche a Firenze, Venezia, Roma, sinteticamente ha ripreso il tema della successione tra fiorino e genovino dopo il 1252. BALDASSARRI e LOCATELLI (56) hanno proposto il loro punto di vista sulle motivazioni e caratteristiche della nascita della moneta aurea nella metà del Duecento in Occidente. Una seconda parte del lavoro ha considerato il fiorino in una dimensione mediterranea.

MIRRA ha contribuito all'argomento con un lavoro pertinente alle zecche italiane (284). Accanto ad un riassunto della monetazione di zecca romana, TRAVAINI (434) ha proposto una breve sintesi dello sviluppo della storia monetaria in Europa (1150-1305). Un riassunto sull'attività di zecca delle officine medievali è offerta ancora in TRAVAINI (431), mentre BALDASSARRI (39) ha proposto un confronto nel periodo XI-XIV secolo tra le città del sud della Francia con quelle che si affacciano sul Tirreno, in particolare Pisa e Genova (con riferimenti a Lucca) cercando di individuare quanto e come la moneta concorresse alla costituzione dell'identità delle città.

La zecca di Brescello, aperta contemporaneamente a quella di Guastalla dal 1570, nell'ambito della rivalità tra Estensi e Gonzaga, è stata al centro del lavoro di SANTELLI e CAMPANA (390) che ne hanno riproposto la storia e la tipologia delle emissioni sulla scorta di documentazione.

SACCOCCI (378) ha studiato e identificato i nominali presenti in un gruzzolo rinvenuto nelle fasi di cantiere della rocca di Castiglione di Garfagnana (LU) sulla base di un documento del 1390 che registra opere e spese per quella fortificazione.

La monetazione del Duecento di Lucca è stata oggetto di studio di BALDASSARRI (49, vedi anche 38 in cui riesamina il ripostiglio di denari enriciani dalla chiesa dei SS. Giovanni e Reparata di Lucca già oggetto in passato di uno studio di Michael Matzke) che approfondisce la seriazione di quei denari (soprattutto in confronto a Pisa) e dei grossi argentei; DEL PUNTA (182) ha tracciato un quadro della situazione monetaria nella regione lucchese considerandone anche gli aspetti economici.

SACCOCCI (377), analizzando i materiali padovani, ha proposto una ricostruzione della storia monetaria della città collegandola all'importante ruolo che dovettero svolgere i vescovi che detenevano il diritto di conio. Per il Veneto TORGGLER (423) ha ricordato, sulla scorta di documentazione notarile, l'importante ruolo dei cambiavalute di Verona presso le aree settentrionali nel secolo XIII (soprattutto la zona bolzanina) inerenti alla fornitura di moneta veronese ai mercanti del nord che approvvigionavano la zecca con argento anche non monetato.

PERFETTO (319) ha proposto una monografia in lingua spagnola sulla storia monetaria del Regno delle due Sicilie e ARPAIA (22) ha tracciato una sintesi monetaria della Repubblica Napoletana. ZECCHINO (471) ha ricordato l'importanza del *Quaternus ex cadenciarum Capitinate*, registro delle entrate di metà XIII secolo della cancelleria sveva che acquisiva le rendite tramite monete di conto (soprattutto il *tari*).

CHIMIENTI e MORETTI (con RAPOSSELLI e RINALDI (152)), hanno avviato la pubblicazione dei bandi monetari della zecca di Bologna (il volume 1 comprende il periodo dal XIV al XVI secolo) fornendo agli studiosi un ampio ventaglio di informazioni specifiche sui documenti stessi, ma di conseguenza anche sui nominali.

GIROLA (229, 230) ha dedicato due corposi contributi alla storia delle emissioni coloniali italiane in Somalia e Libia.

La storia economica, trattata soprattutto in testi e riviste non strettamente numismatici ma piuttosto dedicati ai

risvolti storico-economici, ha raccolto diversi contributi: HOCQUET (247) ha ricostruito la storia del mercante veneziano Badoer nei suoi trascorsi commerciali nel Levante nella prima metà del XV secolo e l'uso degli strumenti bancari e finanziari contemporanei. BETTARINI (98) ha ricordato il declino dei commerci italiani nel Regno di Ungheria dopo la morte di Filippo Buondelmonti degli Scolari (alias Pippo Spano) e i tentativi della Signoria fiorentina di raccomandare i suoi mercanti a Cracovia e in Polonia. Nel libro di spese del pittore Lorenzo Lotto le molte citazioni monetarie per l'età moderna hanno consentito di condurre un'indagine sull'economia materiale in zona veneziana (a cura di DE CAROLIS (129)): non si tratta di ricordanze mercantili ma di una registrazione contabile d'affari riconducibile alla forma della partita doppia.

Riguardo ai documenti di mercatura, TRAVAINI (440) ha curato la riedizione del suo testo aggiungendo un'ampia introduzione, consistenti spunti critici, aggiornamento del glossario e l'indicazione di liste non edite a cura di PIGOZZO (335). BOCCHI *et al.* (101) hanno pubblicato l'analisi, anche numismatica, di un originale rotolo pergameneo conservato presso l'Archivio di Stato di Pisa che attesta l'uso commerciale e i cambi di diverse valute tra il Mediterraneo e l'Europa tirrenica e continentale attorno al 1350 ca. Altri documenti di mercatura sono considerati in BOCCHI (100).

SCHERMAN (397) ha edito un manuale di conti di inizio XVI secolo dall'Archivio di Stato di Treviso relativo ad un mercante veneziano e rivolto ai commercianti veneziani del vino.

Pesi monetali, exonomia, gettoni, medagliette votive, tessere

TRAVAINI e BAZZINI (441) hanno condotto uno studio su un documento del 1409 in cui vengono elencate e accuratamente descritte una trentina di monete, sia italiane che straniere, che fungevano da lasciapassare per accedere a fortezze e città emiliane.

CIAMPOLTRINI e SACCOCCI (158) hanno presentato una tessera mercantile dalla Piazzetta della Posta a Lucca e DE BENETTI (95) ha studiato 4 tessere mercantili tipo "Androclo/Leone" dalla cattedrale di San Lorenzo a Grosseto. FILIPPINI (200) ha pubblicato uno studio su un gruzzolo di oltre 150 Rechenpfennige di XVI secolo da Imola.

I *ferlini*, tessere emesse dallo Stato Pontificio in Bologna (XVI secolo) in occasione delle principali feste religiose e destinate ai meno abbienti per l'acquisto della farina, sono stati al centro di un lavoro di studio sistematico firmato da CHIMIENTI e BRUNI (149).

ROLLANDI e ROMANI (359) hanno considerato l'uso economico di beni alternativi alla moneta in carenza di circolante e valutati piuttosto per lo status sociale o il pregio. Le autrici, attraverso il confronto tra le funzioni di beni non monetari presso le classi sociali eminenti mantovane e genovesi nei secoli XV-XVIII, ne hanno analizzato diversi aspetti, tra cui le transazioni, l'opportunità di smobilizzo, gli investimenti, le difficoltà di valutazione.

L'ampio tema delle pseudo-monete utilizzate in periodo di guerra nel contesto dei campi di prigionia, costituite da materiale e valore differente, è trattato da PODDI (337) ed è sviluppato da PAMPANIN (306) in merito alle monete ritrovate nelle trincee della I Guerra Mondiale.

GIACOSA (218) ha presentato un catalogo in cui esamina dal punto di vista economico, sociale ed anche artistico i gettoni circolanti in Valle d'Aosta dagli anni Venti del Novecento fino alla fine della II Guerra Mondiale: essi portavano il segno di valore ed erano prodotti da attività commerciali private ed erano accettati per pagamenti locali in carenza di denaro disponibile nella circolazione.

Similmente VANNI (454) ha analizzato contesto, origine, funzione delle pseudo-monete fiduciarie emesse da enti privati successivamente all'unità d'Italia per sopperire soprattutto alla mancanza di circolante. ALTAMURA e PANCOTTI (6) hanno proposto un'indagine sulle medagliette devozionali basata sui ritrovamenti dai Colli Albani fornendo una sintesi delle tipologie iconografiche e del loro inquadramento cronologico tra XVII e XIX secolo. Sempre all'analisi di questa tipologia di materiali, spesso presenti in scavi, è dedicato uno studio condotto da PENNESTRÌ e TEKLEMARIAM BACHE (316) pertinente alle creazioni di una bottega romana specializzata ed il catalogo del Museo Francese di Roma.

Uno studio a più mani, condotto su monete pontificie montate a pendaglio di XVIII secolo e basato su sofisticate tecniche di analisi, ha rivelato che la lavorazione era reversibile per salvaguardare l'integrità della moneta (197).

ZAVATTONI ha proseguito le ricerche sui pesi monetari, dedicando diversi contributi a carattere generale (468), tipologico (470) o circostanziandoli al contesto politico territoriale (469). Riguardo alla cartamoneta, ricordiamo l'efficace attività dell'Associazione Italiana Cartamoneta che ha recentemente edito gli atti di un convegno (144) e alcuni contributi di RUSSO e ARDIMENTO (368, 369), ARDIMENTO e COLELLA (19): si tratta sia di monografie specialistiche che

di contributi su riviste che ampliano le conoscenze sulla tematica dal punto di vista sia storico che tecnico.

In alcuni contributi BRUNI ha studiato gli strumenti dedicati alla verifica delle monete per pesatura: in un lavoro monografico dedicato al Ducato di Modena (BRUNI (108)) l'autore ha raccolto e documentato le testimonianze tecniche (bilance, pesi) e quelle giuridiche ("gride") utili a mercanti, banchieri e chiunque se ne trovasse nella necessità, di controllare le monete in circolazione; in altro contributo presenta una rara scatola per pesare monete databile alla seconda metà Settecento di probabile origine bolognese (BRUNI (107)). Lo stesso autore, in collaborazione con CHIMIENTI (110), ha presentato sulla *RIN* una serie di inediti pesi monetali bolognesi di XVI secolo posti in relazione con i bandi che determinavano il peso legale delle monete.

DI FRANCESCO ha curato la riedizione della parte napoletana del Manuale di MARTINI (201).

Aspetti non economici: ritualità della moneta, depositi di fondazione

Uno scavo archeologico presso la rocca di *Tusculum* ha consentito a MANDATORI (97, 272) di identificare un rito di fondazione (probabilmente il primo attestato nell'Italia medievale) databile forse al 1183: in recipiente di terracotta un enriciano lucchese (1105-1125) e un sigillo plumbeo di papa Alessandro III (1159-1181) in eccezionale stato di conservazione vennero deposti per scongiurare l'assedio romano dell'insediamento. Il citato rinvenimento ha stimolato l'organizzazione di una giornata di studio, tenutasi nel 2018, presso la *Escuela Española de Historia y Arqueología en Roma* (EEHAR) dal titolo Un'economia verticale: i riti di fondazione dall'antichità all'età moderna: Mediterraneo e Europa, di cui si attendono gli Atti. GIAMPICCOLO (220) ha presentato un dossier in cui ricostruisce in breve la storia dei depositi di fondazione, dalle prime testimonianze a Siena (presso il duomo, 1284 e alla Torre del Mangia 1325) ne sottolinea la continuità fino all'età moderna e, attraverso l'adozione della medaglia o altre forme, all'età contemporanea. L'argomento è riproposto anche da MUNZI (294) riguardo al ben documentato deposito di fondazione scoperto presso il monumento dedicato a Camillo Cavour a Roma del 1885 e costituito da tubo plumbeo corredato da pergamena e 3 monete del Regno d'Italia. Il tema, in relazione al periodo medievale, è ricordato anche da PERASSI (318) in un contributo di stampo più generale sull'area del *Septimium*. GIULIANI e SISSIA (242), in merito agli scavi presso Campo Imperatore (AQ) hanno ricordato un denaro piccolo anonimo del Senato posto nella malta di costruzione (II metà del Trecento).

Sugli aspetti rituali e religiosi da riconoscere alla moneta, sulla loro interpretazione in diversi contesti e in genere sulla sacralità della moneta (e delle officine monetali), sono numerosi gli interventi di TRAVAINI che riprendono ed approfondiscono ipotesi e temi già ampiamente sviluppati dall'autrice in passato, tra questi anche la presenza di moneta in tombe di santi (425, 428, 432, 435, 437, 438). VANNI (450) ha sottolineato la volontà dei fedeli di riporre monete e medagliette presso il busto reliquiario di San Donato ad Arezzo, realizzato nel 1346 e restaurato nel 2008, come un gesto di pietà religiosa. Interpretazione rituale della moneta medievale in tomba è stata proposta da FACCHINETTI (196) per Nosedo (MI).

Sul tema è ritornato ARSLAN (23) che ha rielaborato un precedente contributo sulla tomba di San Pietro. Un censimento e una sintesi delle posizioni degli studiosi sulla tematica sono presenti in un contributo di BALDASSARRI (50) che ha sottolineato la difficoltà di individuare un'interpretazione condivisa.

Dal punto di vista dell'interpretazione dei rinvenimenti archeologici di moneta in tomba, SACCOCCI (379), tuttavia, ha confutato nella sostanza molte delle ipotesi sopra ricordate, richiamando la necessità di considerare sempre ineludibili ragioni di tipo economico o pratico in fatto di monete ed eventualmente di escluderle per poter procedere a letture rituali o connesse a vocazione magica. Riguardo alle monete nelle tombe di santi (e beati), lo studioso ha giustificato comunque tale usanza come recupero medievale della tradizione dell'ex-voto (SACCOCCI e TOMASSONI (384)). Analogamente, i riti di fondazione che impiegavano moneta, sarebbero da interpretarsi come un recupero colto di pratiche proprie della classicità romana.

Al proposito DEGASPERI (180) ha ripreso in esame il tesoretto bassomedievale ritrovato presso il convento di Taranto dei Celestini (già edito da Julian Baker) in cui, oltre a denari di età medievale, erano presenti anche due monete romane prima considerate intrusive: nel contributo si valuta se la loro presenza sia da riconoscere non tanto ad una permanenza in circolazione quanto ad un sentimento devozionale dovuto ad un fraintendimento dei motivi iconografici.

FRANCE MÉDIÉVALE (X^E–XV^E SIÈCLE)

Thibault Cardon

Les enjeux du tournant numérique

Les études numismatiques des années 2014-2020 portant la France du Moyen Âge central et du bas Moyen Âge se traduisent par un nombre important de contributions (au moins 347), tant dans des bulletins régionaux que dans des revues d'audience internationale. Les publications locales, parfois difficiles d'accès, sont heureusement souvent disponibles en ligne, partiellement ou totalement (*Annales de la Société bretonne de numismatique et d'histoire*, *Bulletin de la Société numismatique du Limousin...*), accompagnant en cela la numérisation toujours croissante des revues nationales (*Revue numismatique*, *Bulletin de la Société française de numismatique*, *Cahiers numismatiques*, *OMNI...*). Le tournant numérique se confirme aussi par le développement de publications exclusivement numériques. Plusieurs associations numismatiques locales ou régionales tiennent également à jour des sites internet qui deviennent parfois le seul canal de diffusion de découvertes ou d'études numismatiques. Si ces initiatives facilitent la publication rapide, le tout numérique pose néanmoins la question de la pérennité des données, notamment lorsque les sites n'ont pas d'hébergeur institutionnel. Une autre question, qui prend déjà l'allure d'un problème, est celle du signalement des trouvailles monétaires. Celles effectuées dans un cadre légal, notamment celui de l'archéologie préventive, bénéficient aujourd'hui de bons inventaires à défaut d'une base de données nationales. En revanche, le durcissement de la législation sur les détecteurs de métaux n'a pas entraîné une baisse du nombre de trouvailles, mais repousse toujours les possibilités d'étude et de publication de ces dernières. Très nombreuses, elles sont au mieux simplement signalées et identifiées sur des forums et réseaux sociaux dont il est impossible de rendre compte dans une telle chronique, et pour lesquels il n'existe aucun enregistrement systématique ni archivage.

Enseignements et mémoires universitaires

Les travaux universitaires se poursuivent à un rythme soutenu, presque exclusivement autour du séminaire de numismatique médiévale animé par Marc Bompaire à l'École pratique des hautes études. Le résumé annuel des séances publié dans l'*Annuaire* de l'école permet de suivre l'actualité de la discipline en France ainsi que les travaux en cours des autres chercheurs et étudiants [BOMPAIRE (34, 38-39, 46-47, 49)]. Deux thèses de doctorat ont été soutenues, l'une sur la production et la circulation des monnaies dans l'espace du royaume de Bourgogne-Provence [BORREL (71)], l'autre sur les usages des monnaies médiévales d'après les sources archéologiques [CARDON (83, 92)]. Trois mémoires de master ont été soutenus, dont un sur le monnayage du comté de Nevers qui a bénéficié d'une publication partielle [PEIGNEY (291), PEIGNEY et SARAH (295-296)] et deux autres restés inédits consacrés pour l'un aux trouvailles monétaires de Saint-Denis [SIPOS (321)], pour l'autre au médailler du musée de Caen [MESNIL (261)].

Collections publiques, expositions

L'obligation faite aux musées français de procéder tous les 10 ans, depuis 2015, à un récolement des collections a incité plusieurs institutions à retrouver dans leurs fonds des collections numismatiques parfois fort riches, qui ont occasionnellement donné lieu à des expositions thématiques [JANÉ (236), JANÉ et KAZEK (237-238), JANÉ et STEF (239), VACHERET et RENARD (341), SALAÜN (303)], des publications [ADAM (9, 13), BOMPAIRE (48), BOMPAIRE et FRANÇOISE (55), CHARLET (131), DOSTERT et GIULIATO (173), HOLLARD et MÉZIANE (231)], un mémoire de master [MESNIL (261)], voire la mise en ligne de ces collections. À ce titre, signalons la poursuite de la mise en ligne des collections médiévales de la BnF, sur le portail www.gallica.bnf.fr, les monnaies royales d'or et d'argent étant plus aisément accessibles via www.archivesmonetaires.org. Cette dynamique, encore en cours, est l'occasion de publier des trouvailles locales faites anciennement [JANÉ et STEF (240), SALAÜN (303)], mais aussi de produire de nouvelles synthèses sur des monnayages locaux mal connus [BOMPAIRE (48), BOMPAIRE et FRANÇOISE (55), VACHERET et RENARD (341)]. La BnF publie régulièrement son « Bulletin des acquisitions » [KIND (244-246)]. Dans le cas de la Lorraine, les travaux ainsi initiés ont débouché sur la constitution d'un Projet collectif de recherche (PCR MoneLor) associant

archéologues, historiens, numismates et conservateurs autour du monnayage lorrain.

Mines, productions, techniques et savoir-faire

Les techniques et savoir-faire, allant de l'extraction minière jusqu'à la frappe, ont bénéficié d'avancées notables pour le bas Moyen Âge. Les mines d'argent ont principalement retenu l'attention, notamment à l'occasion d'un colloque dédié [MINVIELLE-LAROUSSE, BAILLY-MAÎTRE et BIANCHI (268), notamment BONNAMOUR (61), FLAMENT, TEREYGOL et SARAH (190), GAUTIER et VERNA (214), MÉAUDRE et TEREYGOL (260), MINVIELLE-LAROUSSE (267) et SARAH (304)] de deux thèses de doctorat portant sur Castel-Minier [FLAMENT (188)] et le Dauphiné [OURY (287)].

La production et la politique monétaire ont été moins abordées, mais il faut signaler plusieurs contributions sur la technique de la frappe au marteau [BOMPAIRE (44)], sur les prétendus « piéforts » médiévaux et leur fonction [BOMPAIRE (39-40), BOMPAIRE et MATHIEU (58), CARDON et KIND (100), COATIVY et VILLEMARD (142), SÉROT (318)], la politique monétaire de Philippe le Bel [BOMPAIRE (51)] ou encore les pratiques du change [BOMPAIRE (50)]. S'agissant du fonctionnement des ateliers monétaires, la publication numérique des sentences criminelles à l'égard des officiers monétaires royaux donne accès à une documentation souvent négligée [CLAIRAND et KIND (138)].

Enfin, les comptabilités ont notamment fait l'objet d'un colloque [BECK et JÉHANNO (22)] dans lequel plusieurs contributions s'attachent à faire une analyse des monnaies de compte ou réelles employées, ainsi que de leur conversion [BÉPOIX (28), BERNARDI (29), BOMPAIRE (33), JÉHANNO (241), LEGUIL (252)]. D'autres contributions s'attachent, dans la même veine, à mettre évidence les techniques de comptabilité et leur lien avec la circulation monétaire ou avec les usages monétaires [BOMPAIRE (49), BOMPAIRE et LEBAILLY (57), CARDON (92), DUMAS et MESTAYER (181)].

Trouvailles monétaires

La publication des trouvailles monétaires, dépôts et monnaies de sites archéologiques, conserve un rythme soutenu avec la publication. On pourra en trouver un aperçu, très régulièrement mis à jour, sur une base de données italienne [GIANAZZA (219)]. S'agissant des dépôts monétaires, on compte 32 notices individuelles présentant des dépôts inédits ou mal connus [ACHACHE (2), ACHACHE, BOMPAIRE et CASTELLAS (3), ALIX, LISTRAT et WIDEHEN (14), ARSLAN, MIELE, TRAVAINI et BOMPAIRE (15), BAUD, BORREL et FLAMMIN (19-21), BOMPAIRE et BLET-LEMARQUAND (53), FOUCRAY et BOMPAIRE (196), BOMPAIRE et FRANÇOISE (55), BORREL (62, 63, 70), BORREL et BOIS-DELATTE (72), CARDON (85, 88), CARDON et DARÉ (95), CARDON, MOITREL et LECLER-HUBY (104), CLAIRAND (136), CLAIRAND et MOESGAARD (139), COLLIN (143), DENGIS (157-160, 162, 163), DHÉNIN (165), DHÉNIN, MARQUETTE et REGALDO-SAINTE BLANCARD (167), DHÉNIN et POINSIGNON (168), FOUCRAY (193, 194), JANÉ et STEF (240), MOESGAARD (269, 276), PITTE, MOESGAARD et BELL (297), PARVÉRIE (289), TESTA (338)], auxquelles il faut ajouter 4 autres incluses dans un travail plus large [CARDON (92)]. Les inventaires régionaux de trésors apportent une fois de plus une documentation abondante et souvent inédite. C'est le cas de l'ex Haute-Normandie, pour laquelle a été publié un inventaire très détaillé (169 notices, dont inédits) pour les dépôts des années 754-1514 [MOESGAARD (273)]. En Loire-Atlantique, c'est une exposition au musée Dobrée qui s'accompagne de la publication de 8 dépôts monétaires médiévaux [SALAÜN (303)]. Malgré cela, nombre de dépôts monétaires découverts à l'occasion de fouille n'ont pour le moment fait l'objet que de rapport d'étude, non publiés, et il est extrêmement difficile d'estimer la quantité des trouvailles « fortuites », qui échappent presque toujours au recensement. Les XIV^e et XV^e s. sont les mieux représentés, mais il faut signaler l'avancée majeure pour notre connaissance de la numismatique des X^e et XI^e siècles apportée par la publication conjointe de 6 dépôts monétaires de Francie mineure, dans un volume coordonné par Marc Bompaire et Bruno Foucray [DUYRAT (182)]. Cette publication, presque quarante ans après celle du trésor de Fécamp par Françoise Dumas, renouvelle en profondeur notre compréhension de la transition entre les derniers carolingiens et les premiers capétiens. Signalons aussi la prise en compte plus régulière de la dimension archéologique des dépôts monétaires, à laquelle un article méthodologique a été consacré [BAUD, BORREL et FLAMMIN (19-21), BOMPAIRE (49), FOUCRAY et BOMPAIRE (196), GENEVIÈVE et CARDON (217)].

S'agissant des monnaies en contexte archéologique, un colloque a été dédié à la question des monnaies romaines découvertes dans des contextes médiévaux, incluant dans plusieurs cas des contextes du Moyen Âge central voire du bas Moyen Âge [CARDON (82, 86), CLÉMENT (140), GENEVIÈVE (215), MOESGAARD (274)]. Une thèse, publiée en 2021, s'est appuyée sur les trouvailles pour questionner les usages monétaires médiévaux [CARDON (92)]. La plupart des monnaies isolées et des dépôts monétaires issus de fouilles archéologiques sont inventoriés mais peu sont publiées [CATALO, GENEVIÈVE et PORTET (127), SIPOS (321)], la plupart restant au stade du rapport de fouille. Il serait trop

long et sans doute vain de les lister ici, et c'est un problème en soi de compiler cette documentation, difficile d'accès. Signalons le travail remarquable de la « Chronique numismatique » annuelle de la *Revue du Nord*, qui couvre aujourd'hui les départements situés au nord de la Seine [DOYEN, DUCHEMIN et SEVERS (174-180)]. Pour le quart Sud-Est du pays, une thèse récente a procédé à l'inventaire des trouvailles VIII^e-XIV^e s., rejoignant quelques efforts régionaux faits ces dernières années. Mais cette documentation, pléthorique, reste aujourd'hui inégale et très dispersée. Le défi est désormais de la rendre aisément référençable et consultable. Le passage à une base de données numérique n'a pas encore été effectué pour les données de la France médiévale.

Classification

Les travaux de classification ont également été prolifiques. Les fouilles archéologiques, dépôts monétaires, inventaires de collections muséales et dispersion d'anciennes collections privées ont livré un nombre très important de monnaies inédites. Si l'on retient une définition stricte d'espèce monétaire comme la combinaison unique d'une autorité, d'une valeur nominale et d'un type, ce ne sont pas moins de 80 nouvelles espèces monétaires qui ont été publiées ces dernières années pour la France médiévale des X^e-XV^e s. Et c'est sans compter l'identification de nouveaux ateliers, de nouvelles émissions, ou la publication d'exemplaires uniques jusqu'alors très mal documentés voire tombés dans l'oubli [BEDEL et ORTIZ (26), CARDON (90), CARDON, PROT et CREUSY (106), DECROLY (151), DIRY (169-170), MÉZIANE et ROCHER (263), RENARD (302)]. Trois tendances peuvent être dégagées pour ces espèces inédites :

- Les monnayages des X^e-XI^e s. ont bénéficié des travaux sur les ateliers de basse Lotharingie [ILISCH (232)] et surtout de la publication conjointe, sous la direction de Marc Bompaire et Bruno Foucray, de 6 dépôts monétaires majeurs de Francie [DUYRAT (182)] qui apporte 25 espèces monétaires nouvelles. Les productions attribuables au faussaire Farigault ont été étudiées en détail et certaines réhabilitées [FOUCRAY, KIND et SARAH (198), KIND et SARAH (247)] ;
- La découverte de nouvelles valeurs nominales pour un monnayage déjà attesté, typiquement d'une obole dont le denier est connu [CARDON, GALOIS et BROUILLARD (99), GRANDIS (222), MÉZIANE et VANDENBOSSCHE (264), RENARD (301)] ;
- Une attention plus grande portée aux monnaies noires, rarement présentes dans les dépôts mais bien documentées par l'archéologie et les trouvailles fortuites, a permis la découverte de nombreuses imitations des XIII^e-XIV^e s., frappées notamment dans l'Est [BENDERS (27), BOMPAIRE et MATHIEU (58-59), BORREL et SUBLET (73), CARDON (80), CARDON, CLAIRAND et PROT (94), CARDON, DIEULAFAIT, GENEVIÈVE, PROT, SUBLET et VANDENBOSSCHE (96), EUVRARD (184-185), EUVRARD et CUINET (186)] et le Sud du pays [BEDEL (23), BOMPAIRE (48), BORREL (64), CHAREYRON (128), CHARLET (132), CHARVET (135), CRUSAFONT I SABATER (149), DELAYGUES (154), GANNE (207-210), GRANDIS (221, 222, 228), SUBLET (325-331, 333-335)].

Cette documentation nouvelle, couplée à l'étude des contextes de découverte, a permis des avancées sensibles pour plusieurs monnayages, voire la publication de synthèses régionales ou périodiques, parfois portées par des associations locales. La Francie des X^e-XI^e s. a déjà été citée et il faut notamment se reporter à BOMPAIRE (45) et FOUCRAY (195), COUPLAND (145), KIND et SARAH (247)], mais il faut aussi mentionner la basse Lotharingie [ILISCH (232), MOESGAARD (270), TROSTYANSKIY et VAN LAERE (340)], la Lorraine [CARDON (90), DOSTERT et GIULIATO (173), JANÉ et STEF (239), VACHERET et RENARD (341)], l'Aquitaine [WITHERS, WITHERS et FORD (347)], la Normandie ducale [MOESGAARD (269, 272, 280-281)], le nivernais [PEIGNEY (291, 292), PEIGNEY et PROT (294), PEIGNEY et SARAH (295, 296)], l'Alsace [DIVO et HAMM (171)], la Champagne [ADAM (4-5, 8-13)], la Savoie [GRANDIS (222, 228)], Orange [SUBLET (324, 326, 327, 332-335)], la Provence [BOUVRY (74), CHARLET (130, 133), CHARLET et CHARLET (134); GANNE (207-210), TESTA (337)] et plus généralement l'ancien royaume de Bourgogne-Provence [BORREL (71)], les monnayages royaux [CARDON (85, 89), CARDON et KIND (101-103), CLAIRAND et KIND (137), CRÉPIN (146), DECROLY (151), DONNÉ et DÉAUX (172), GARNIER (211-213)], ou encore les très nombreuses contributions, allant parfois jusqu'à la micro-typologie, sur les monnayages bretons [CARDON et BEUCHET (93), CARDON et DARÉ (95), CARDON et KIND (100), CARIOU (107-126), COATIVY (141), MICHEL (265), MOULLEC (284-285), SÉROT (306-319)].

L'étude des méreaux monétaires en plomb-étain a fait l'objet de plusieurs contributions, l'une typologique [LUSTIÈRE (256)], d'autres proposant d'y voir de véritables monnaies imposées sur des chantiers de construction [CARDON (87, 92)], et une dernière revenant sur l'historiographie et l'usage des méreaux à l'iconographie sexuelle [CARDON (84)].

Circulation monétaire

Plusieurs travaux, parfois de grande ampleur, ont apporté des contributions significatives à notre connaissance de la circulation monétaire. La publication dédiée aux trésors des X^e-XI^e s., déjà citée, est l'occasion de présenter l'hypothèse de zones monétaires séparées se déployant alors à l'échelle de principautés [BOMPAIRE (45)]. Pour la même période, la dynamique de diffusion de certains monnayages du nord-est du pays vers l'Europe de l'Est, la Scandinavie et jusqu'en Russie gagne en clarté [BOGUCKI, ILISCH et SUCHODOLSKI (31), ILISCH (232-233), TROSTYANSKIY et VAN LAERE (340)]. La circulation monétaire dans le quart Sud-Est de la France a fait l'objet d'un examen détaillé sur le temps long, combinant données archéologiques et textuelles dans une thèse, dont certains passages ont été publiés [BORREL (67, 68, 71)]. La diffusion du monnayage des comtes de Nevers a été étudiée [PEIGNEY (291, 293)] d'après les trouvailles, et quelques aspects de la circulation monétaire des *Low Countries*, incluant le nord de la France, ont été étudiés pour le XV^e s. [SPUFFORD (322-323)]. Les publications de comptabilités, citées plus haut, sont souvent l'occasion de discussions sur les systèmes monétaires en usage.

FRANCE MODERNE ET CONTEMPORAINE (XVI^e–XX^e S.)

Jérôme Jambu

La numismatique française des époques moderne (XVI^e-XVIII^e S.) et contemporaine (XIX^e-XX^e S.) pour les historiens – dite « numismatique royale » (XVI^e-XVIII^e S.) et « numismatique moderne » (XIX^e-XX^e S.) par les collectionneurs et marchands de pièces de monnaie – a connu un certain renouveau amorcé aux environs du dernier congrès de l'INC (Taormine, 2015). Jusqu'au début des années 2010, la numismatique des Temps modernes n'intéressait essentiellement, en France, que le monde de la collection ; depuis, elle est peu à peu entrée dans une phase de scientification. C'est la création de cours et de séances de séminaires à l'Université, la multiplication de journées d'études consacrées ou étendues à la période, et l'intérêt qu'a bien voulu y porter une nouvelle génération de chercheurs et d'étudiants, qui ont permis de la sortir peu à peu de sa torpeur. La tâche reste immense à accomplir avant d'atteindre le niveau et le nombre des publications de nos collègues espagnols (voir l'enquête d'A. Estrada-Riuz) et italiens (voir l'enquête de L. Passera). D'autant qu'à la différence de l'Espagne ou de l'Italie, la très grande majorité des universitaires français qui pratiquent la numismatique ne sont que très peu médiévistes, et plus rarement encore, modernistes, ou contemporanéistes. La numismatique scientifique, en France – et c'est l'affaire d'une longue tradition – relève des antiquisants.

Cependant, afin de souligner la perceptibilité de ce frémissement, il a été décidé, avec les éditeurs de cette nouvelle édition des *Surveys*, de séparer la période médiévale des périodes moderne et contemporaine. Ainsi cette contribution prend-elle la suite de celle réalisée par Thibault Cardon. Respectant la tradition de l'enseignement universitaire de l'histoire de France, nous proposons de regarder le pays dans ses frontières actuelles. Cela signifie que nous incluons ce qui prend le nom, selon les auteurs, de monnayages féodaux, seigneuriaux ou princiers, fussent-ils issus d'États alors indépendants ou d'enclaves étrangères. Seules les publications qui nous ont paru les plus significatives ont été retenues, formant un échantillon délibérément limité à 150 titres pour faire sens. Si cette liste ne constitue donc en aucun cas celle exhaustive de toutes les publications réalisées entre 2014 et 2020 sur la numismatique française du XVI^e au XX^e siècle, elle en présente les principaux thèmes étudiés et les nouvelles directions prises, comme certaines pesanteurs.

Cours, institutions de conservation et de recherche, associations et événements scientifiques

Il ne faut pas chercher d'« école de numismatique des Temps modernes » en France, sous une forme institutionnelle ; elle demeure de l'ordre du réseau mais est incontestablement en gestation. Titulaire du « séminaire de numismatique médiévale et moderne » de l'École pratique des hautes études (EPHE), spécialiste reconnu du Moyen Âge, Marc Bompain n'en a pas moins toujours ouvert sa porte aux modernistes. Depuis 2010, un cours de sciences auxiliaires de l'histoire moderne créé par Jérôme Jambu, devenu depuis 2020 cours de « numismatique et d'histoire monétaire de l'Europe moderne », est délivré aux étudiants de la dernière année de Licence à l'Université de Lille. Par ailleurs, plusieurs universitaires abordent régulièrement le fait monétaire moderne et/ou contemporain au sein de leurs enseignements (Anne Conchon à Paris 1-Panthéon-Sorbonne, Patrice Baubeau à Paris-Nanterre, Jérôme Blanc à Sciences-Pô-Lyon, etc.). Cela a permis la réalisation, ces dernières années, de plusieurs mémoires de recherche de Master de qualité [dont CARLIER (18), CLAIRAND (19), DELCAMP (20), FRANÇOISE (21), JONIAUX (22), LECONTE (23), PONS (24, 25), PRUVOST (26), etc.], mais aucune thèse n'a encore été soutenue. Enfin, des relations nouées entre enseignants-chercheurs ont permis la réalisation de projets collectifs, comme celui remarqué de JAMBU et DE OLIVEIRA (11) sur la monnaie en Flandre et dans le Nord du XVII^e au XIX^e siècle, sérieuse mise à jour de la connaissance de la circulation monétaire – et de l'argent en général – dans un espace frontalier [voir notamment JAMBU (82), DE OLIVEIRA (106) et MASTIN (101)].

Les rares chercheurs et étudiants en numismatique moderne et contemporaine peuvent compter sur des institutions qui leur permettent de développer leur spécialité. Le Cabinet des médailles (CdM) de la BnF a, ces dernières

années, redonné sa place aux monnayages français – et étrangers – des XVI^e-XIX^e siècles grâce, notamment, à l'élargissement des champs géographiques et chronologiques pour laquelle milite sa directrice Frédérique Duyrat. Ce fut l'occasion, pour le responsable des monnaies françaises Jean-Yves Kind, d'acquérir des objets d'exception désormais diffusés dans la « Bulletin des acquisitions » de la *Revue Numismatique* édité par Julien Olivier. Le CDM a par ailleurs procédé, à l'occasion des travaux du Site Richelieu dont on attend l'achèvement imminent, à des récolements et inventaires ayant pour objectif la numérisation de milliers de pièces de monnaie, dont des centaines de monnaies « royales » et « féodales » françaises, aujourd'hui en ligne sur le site Internet Gallica.fr. On en profite pour livrer ici un astuce : pour les retrouver plus facilement, utilisez plutôt le moteur de recherche du « Catalogue général de la BnF » que celui de « Gallica »... C'est aussi dans un laboratoire du CDM qu'a été restauré, entre 2016 et 2018, le premier « trésor » maritime moderne jamais découvert dans des eaux territoriales françaises [JAMBU (133)].

L'IRAMAT-CEB, laboratoire du CNRS spécialisé dans l'étude des archéomatériaux, a lui aussi accueilli de nombreux projets – et en accueillera encore sans doute encore beaucoup ! – sur les époques tardives. L'or et l'argent des XVI^e-XVIII^e siècles y sont toujours analysés, pour des résultats parfois surprenants : titre des pièces de monnaie d'un petit dépôt du XVI^e siècle [BOMPAIRE, BLET-LEMARQUAND et FOURNIER (121)], origine de l'or espagnol circulant en France au XVII^e siècle [JAMBU, SAUVAGE et BLET-LEMARQUAND (132)], qualité des pièces d'argent destinées au commerce français au XVIII^e siècle [JAMBU (132)], etc.

La Société française de numismatique (SFN) est un acteur majeur de la numismatique qui nous intéresse. L'organisation annuelle des Journées numismatiques et régulière de journées thématiques, ainsi que la résurrection du « prix Babut » décerné tous les deux ans au meilleur ouvrage de numismatique française, permettent aux modernistes et contemporanéistes de trouver leur place. La SFN est une vieille dame qui a fêté ses 150 ans en 2015. Cela ne l'a pas empêchée de prendre un tournant numérique majeur à l'occasion de la pandémie mondiale : réunions mensuelles organisées en distanciel puis en hybride, création d'une *newsletter*, mise en ligne du *Bulletin de la Société Française de Numismatique (BSFN)*, etc. Les Journées numismatiques qui se sont par exemple tenues à Colmar en 2016, à Perpignan en 2017, à Orléans en 2018, ou bien encore à Nîmes en 2019, ont souvent permis la présentation de nombreuses communications consacrées aux XVI^e-XX^e siècles, en fonction de l'histoire et de la tradition numismatique des lieux (6 sur 10 à Colmar, 5 sur 11 à Perpignan, mais 2 seulement à Orléans et 3 à Nîmes). Certes majoritairement produites par des collectionneurs de la société [CHARLET et CHARLET (55), WACK (117,118), etc.], elles l'ont également été par des amateurs locaux auxquels il était rendu visite [par exemple HAMM (81)]. Ce fut aussi l'occasion de réaliser des publications de qualité avec des associations partenaires, comme la belle mise à jour sur la Monnaie de Perpignan de BELLUTEAU et MELMOUX (3). Les colloques de la Société d'études numismatiques et archéologiques (SENA) ont eux-aussi fait leur place aux Temps modernes, particulièrement celui tenu à Monaco en 2018.

Des journées thématiques, organisées au sein de la SFN en partenariat avec d'autres institutions (BnF, Banque de France et Monnaie de Paris), ont augmenté la place et la visibilité des époques moderne et contemporaine. 2015, année du tricentenaire de la mort de Louis XIV, fut l'occasion pour Jérôme Jambu d'organiser une journée d'étude consacrée à ses monnayages (« Un règne gravée dans le métal », musée Carnavalet, octobre 2015). Il doubla l'événement par l'édition d'un cahier thématique dans la *RN* de la même année, composé de 7 articles dont 4 relatifs à la monnaie [CLAIRAND, JAMBU et KIND (125), CHARLET (49), CHARLET et CLAIRAND (140), JAMBU (83)] et 3 aux médailles et à leurs graveurs. En 2017, une journée était dédiée au genre dans la numismatique [CARDON et JAMBU (5)] et, en 2020, une autre aux papiers-monnaies [BAUBEAU et JAMBU (2)] (voir plus loin). Si toutes deux furent nourries de succès, la seconde, au contraire de la première, n'attira pas en amont des dix-huitiémistes.

Plusieurs expositions et catalogues ont par ailleurs particulièrement marqué les esprits au cours de ces dernières années, malgré l'interruption de ce type d'événements provoquée par la pandémie. En 2015, une présentation éphémère de monnaies exceptionnelles eut lieu à Monaco afin de célébrer le tricentenaire évoqué [CHARLET et ENZA (28)]. À l'occasion du dépôt dans les fonds du musée de Saint-Lô des pistoles espagnoles découvertes sur la plage de Donville-les-Bains, ses vitrines numismatiques furent rénovées et sa collection publiée [BLAIZEAU et JAMBU (27)]. Deux volumes de la série *L'or de Metz* étaient quant à eux consacrés en grande partie à notre période [(JANÉ, KAZEK et DIDOT (30) et JANÉ, KAZEK, CHARLET et BLANCHARD (31)]. Désormais en effet, même courantes ou semblant présenter peu d'intérêt, les pièces de monnaie modernes des collections publiques trouvent une place dans leurs catalogues [DESJARDINS *et al.* (29)].

Le césur traditionnel des publications

La *RN*, le *BSFN* et les *Cahiers Numismatiques* – dont la qualité a hélas décliné ces derniers temps en raison d’une politique éditoriale relâchée et par trop agressive – sont les principaux supports des publications. La *RN* est cependant la seule revue de numismatique qui soit classée de rang-A (internationale). 2015 fut une année particulièrement riche pour elle, puisqu’en sus du « Cahier Louis XIV », elle publiait trois autres articles particulièrement originaux par leurs thématiques et leurs approches [PICHARD-RIVALAN (109), DELCAMP (77) et MANAS (100)]. Les années ne se ressemblent cependant puisque dans le volume 2017 figurait seulement CLAIRAND et KIND (73), qui présentait une mise au point attendue sur la genèse des testons de Louis XII.

C’est dans le *BSFN* que modernistes et contemporanéistes ont le plus publié. La thématique la plus riche est celle des monnaies inédites, retrouvées et/ou expliquées [GARNIER (80), JAMBU (88), JONIAUX (97), etc.]. Particulièrement les pièces de monnaie frappées dans des ateliers ou à des millésimes jusqu’alors inconnus [CHARLET et CLAIRAND (56), CHARLET et PASTRONE (63), MIKOLAJCZAK et VIGOUROUX (105), WACK (119), etc.] et celles qui présentent des types monétaires particuliers [ARBEZ *et al.* (43), CHARLET, KIND et SOMBART (62), CLAIRAND, CRÉPIN et KIND (70), MICHEL (104), FOURNIER (79), etc.]. Des débats ont aussi eu lieu sur des questions iconographiques majeures, CHARLET et HENRY (59) ayant indéniablement été renouvelés par JONIAUX (98).

La confusion entre monnaie inédite et monnaie rare a cependant conduit à une surenchère de publications du moindre exemplaire retrouvé [par exemple CHARLET et CLAIRAND (57)], jusqu’à faire des « redécouvertes » de certains d’entre eux le sujet de travaux dont les faiblesses argumentaires sont parfois criantes [par exemple CHARLET et KIND (60)]. Le découpage de thèmes réduits en une multitude d’articles qui provoque l’éparpillement des données et mène à des répétitions n’en est pas moins lassant [par exemple CHARLET (51, 54)].

La production monétaire et la vie des ateliers ont fourni nombre d’articles intéressants. Les différents d’atelier, de directeurs, de graveurs et d’essayeurs ont continué d’être compilés et révélés, notamment par ARBEZ *et al.* (36-42, 44) – ; on déplore d’ailleurs la disparition de l’initiateur de cette grande série († 2017). L’histoire des Monnaies a aussi avancé grâce à la découverte de documents nouveaux : CHARLET (50) publiait une ordonnance inédite de la Grande Mademoiselle ; CLAIRAND, GANNE et SCHIESSER (71) présentaient la réouverture de la Monnaie d’Aix dans les années 1630 ; CLAIRAND et KIND (72) portaient à notre connaissance le registre de fabrication de la Monnaie de Compiègne sous la Ligue ; JAMBU (81) revenait sur la fin de la Monnaie de Saint-Lô grâce à l’exhumation d’une visite de l’établissement ; MICHEL (103) révélait comment un atelier monétaire a failli être créé à Saint Malo ; etc. Les personnels des Monnaies ont en outre profité d’un éclairage nouveau, tant sur leur statut que sur leurs pratiques [CLAIRAND (65), DELCAMP (77), DELCAMP et JAMBU (78)]. On nous permettra d’accorder ici une mention spéciale à Arnaud Clairand qui, réalisant une somme sur la numismatique royale de Louis XIII à Louis XVI dont on attend impatiemment la sortie, a fourni en *teasing* de cet ouvrage maintes explications sur ces monnayages [CLAIRAND (66-69)].

Le faux monnayage est resté à la mode [WACK (144)], comme les infractions commises au sein des ateliers monétaires. De fausses réformations, typiques des années 1690-1720, ont été publiées par CHARLET, CLAIRAND et FROIDEVEAUX (138) et JAMBU (141). Ce sont à de véritables entreprises privées de faux monnayeurs que se sont attaqués, sur la base d’archives, CHARLET, CLAIRAND et DELCAMP (137), CLAIRAND et DELCAMP (139), et JAMBU (142) suite à la découverte de matériel, tandis que BAUBEAU (136) posait les jalons du lien entre ce crime et d’autres. KIND et SARAH (143), de leur côté, ont mené une passionnante enquête sur Louis Farigault, peut-être l’un des plus grands faussaires français « pour collectionneurs » de la première moitié du XX^e siècle.

Les publications de trouvailles monétaires et de monnaies isolées sont traditionnellement peu nombreuses pour notre période. Non que les découvertes soient rares, mais celles-ci subissent trois effets : celui de paraître trop récentes, et donc peu dignes d’intérêt, au regard de certaines institutions ; celui d’être très/trop facilement négociables sur le marché, et donc d’être dispersées avant étude ; celui, enfin, des lois édictées en matière de protection du patrimoine archéologique (loi CAP, interdiction des détecteurs de métaux, etc.) qui, pour paraître sévères et n’être pas assez expliquées, provoquent des dissimulations au lieu des déclarations attendues. Malgré ces limites, plusieurs dépôts anciens ont pu être publiés, comme le célèbre trésor de Montrichard par CLAIRAND, JAMBU et KIND (127) ou un étonnant ensemble de pièces polonaises et lituanienes par CARDON (123). Enfin, les dépôts des XIX^e et XX^e siècles semblent intéresser davantage qu’ils ne le furent [JAMBU (128)], notamment ceux liés aux deux derniers conflits mondiaux [LECONTE (23) et BEUCHET et CARDON (120)].

Il est en effet remarquable que la numismatique des XIX^e et XX^e siècles ait pris davantage d'ampleur. Au-delà des dépôts mentionnés et des monnaies de fouille sur lesquelles nous reviendrons, de petits articles ponctuels et riches ont fait de la monnaie contemporaine un véritable sujet de réflexion, chose nouvelle en France [comme BAUBEAU (45), JAMBU (85) et THÉRET (114)]. C'est à l'équipe constituée autour de Philippe Théret, cheville ouvrière de l'association les « Amis du Franc », que THÉRET *et al.* (17) est récemment paru pour proposer aux amateurs, collectionneurs, passionnés et spécialistes, un ouvrage consacré au(x) franc(s) qui présente enfin de larges pans de sa riche histoire numismatique à l'aide d'archives officielles.

Nouvelles thématiques et nouveaux angles d'approche

La circulation des monnaies étrangères dans le royaume de France a particulièrement été à l'honneur. C'est en tant que conservateur responsable des monnaies étrangères à la BnF entre 2015-2020 que nous en avons profité pour traiter cet épais dossier, en partenariat avec le DRASSM et l'IRAMAT-CEB. Le résultat de l'étude de la présence des espèces espagnoles révélée par les dépôts a permis la publication de JAMBU (10), contenant celle du fameux « trésor » de la *Jeanne-Elisabeth* [JAMBU 132], ainsi qu'une synthèse historique sur la pistole qui fut un temps la première monnaie de France [JAMBU (92)]. La question du changement des espèces en zone de conquête a également été abordée, particulièrement dans l'espace septentrional puisque c'est là que la France a annexé le plus de territoires sur l'Espagne [JAMBU (82, 86, 87)]. Ce thème de recherche, que l'on pressent riche, n'a pas encore fait ses émules alors qu'il est central pour la période précédente (voir la contribution de Thibault Cardon) mais saura certainement, au regard de quelques signes encourageants, se développer dans les années à venir [voir par exemple PARVÉRIE (107)].

Une thématique, chère cette fois-ci aux antiquisants, a été saisie à l'occasion des fouilles de sites militaires : celle de la monnaie des soldats, ouvrant un débat sur la nature de la « monnaie de solde ». Tandis que JAMBU (90) abordait celle des troupes de Louis XIV, CARDON (122) s'attardait sur celle des armées napoléoniennes. L'état de la question est encore embryonnaire mais le sujet est déjà nourri de projets pour les années à venir.

Sensibles à l'évolution des domaines de la recherche en sciences sociales, des chercheurs ont abordé de nouvelles questions. La journée d'étude « Sensualité et sexualité en numismatique » fut l'occasion de tenter des approches originales de la monnaie, liées aux *Gender Studies*, avec une dimension comparatiste et de mise en perspective [CARDON et JAMBU (5)]. Non réservé aux seuls modernistes et contemporanéistes, ce moment a permis d'ouvrir de nouveaux champs de réflexion sur la perception des monnaies [JAMBU (89)]. La numismatique s'est d'ailleurs ouverte, par différents biais, à ces nouvelles préoccupations puisque DELCAMP (77), par exemple, s'est intéressée aux femmes ouvrières des ateliers monétaires, jusqu'alors pratiquement inconnues.

Dans cette mouvance de l'histoire culturelle, les noms et surnoms des monnaies ont continué d'intriguer. Des recherches croisant lecture numismatique, archives officielles et témoignages populaires ont permis de révéler le sens d'appellations aussi communes qu'obscures : JAMBU et KIND (95) montraient que le nom de « mirliton » donné à un louis était sexué – voir sexuel –, tandis que PETIT (108) revenait avec succès sur le « carambole » de Flandre. La question de la classification des monnaies a, en conséquence, été réactualisée, et c'est par l'ouverture d'un débat pour mener une réflexion globale – richement initié par CARDON et MORIN (47) – que des numismates des Temps modernes voudraient parvenir, dans les prochaines années, à proposer des solutions pérennes pour se détacher de classements vieux de parfois plus d'un siècle.

Enfin, grâce à ce que l'on pourrait qualifier d'« école de la Banque de France », la numismatique du billet n'a pas été en reste. L'établissement mène en effet une politique active de soutien à des doctorants, d'aide à l'édition et de participation à l'organisation d'événements. C'est elle qui a permis, par exemple, l'organisation de la journée d'étude « Histoire et numismatique billet » [BAUBEAU et JAMBU (2)]. De la pénétration des billets dans la circulation monétaire étudiée par BAUBEAU (145, 146) aux projets abandonnés pour des raisons conjoncturelles de CAMUS (148), en passant par la question de la sécurité de cette monnaie fiduciaire chère à BIDEAUX (147), l'éventail des sujets ne manque ni de créativité, ni de ressources. Le papier-monnaie de l'époque révolutionnaire a lui aussi trouvé son renouveau, avec le très bel ouvrage de SPANG (15) et les travaux prometteurs de PONS (24 et 150), comme le Système de Law traité de façon originale par MAGNO-OGILVY (13).

DEUTSCHLAND

Ute Hengstbach und Hendrik Mäkelar

Einleitung

Im vorigen Survey of Numismatic Research konnte ein aufgrund der Finanzkrise stark angestiegenes Interesse an der Geldgeschichte konstatiert werden. Nunmehr hat die Corona-Pandemie das Erscheinen dieses Literaturberichts um ein Jahr verzögert, wodurch das vorzustellende Oeuvre der deutschen Numismatik sich um eine publizistische Jahresproduktion auf den Zeitraum von 2014 bis 2020 erweitert hat. Während die Pandemie sich einerseits massiv auf das numismatische Vereinsleben und die Durchführung von Fachtagungen auswirkte, führte sie andererseits offenkundig zu einer verstärkten Beschäftigung mit der Regionalgeschichte. Der Numismatik kann schließlich auch als Hobby in kleinem Kreis oder alleine nachgegangen werden. Insgesamt hatte das eine beeindruckend umfangreiche numismatische Publikationstätigkeit zur Folge. Sie erlaubt erneut nur die Veröffentlichung einer stark gekürzten Literaturübersicht. Die Aufnahme oder das Fehlen von Publikationen stellt daher keine Aussage zu deren wissenschaftlichem Wert dar. Thematisch zusammenpassende oder sich ergänzende Beiträge derselben Autoren wurden möglichst unter jeweils einer Nummer zusammengefasst.

Ein möglichst vollständiges Verzeichnis wird in digitaler Form durch die Numismatische Fachbibliothek der Deutschen Bundesbank im Internet bereitgestellt. Deren Bibliothekskatalog ist der Großteil der angeführten Literaturangaben entnommen, die dort mit weiteren Metadaten angereichert durchsuchbar sind: <http://www.libit.de/bbkwo/WebOpac.cls> und www.bundesbank.de/numismatik (18.03.2022)

Mithin konnte für diesen Literaturbericht (im Gegensatz zum vorigen Survey) der Bestand einer deutschen Bibliothek zugrunde gelegt werden, die auf numismatische Publikationen spezialisiert ist. Die inhaltliche Ausrichtung der Numismatischen Fachbibliothek der Deutschen Bundesbank erlaubte zudem eine im Umfang allerdings selektive Berücksichtigung auch von Beiträgen zu zeitgeschichtlichen Geldphänomenen ebenso wie zu Marken, Papier- und Notgeld.

Aufgrund schwerer Krankheit konnte Michael Matzke an dieser Literaturübersicht nicht mehr mitarbeiten. Sein allzu früher Tod hat nicht nur die deutsche Numismatik eines bedeutenden Wissenschaftlers und hochgeschätzten Kollegen beraubt, dessen Veröffentlichungen das Fachgebiet sehr bereichert haben (203, 333).

ACKERMANN, R. C., PETER, M. und WEISS, C., In memoriam Michael Matzke (28. Oktober 1966 bis 20. Mai 2020), *SM* 70/279 (2020), S. 121–122; EMMERIG, H., Michael Matzke [gest.], *GN* 55/310 (2020) S. 125. Es gab jedoch auch Anlässe zum Feiern, etwa Jubiläen und aufwendige numismatische Ausstellungen der Staatlichen Museen zu Berlin (102), in der Bundeskunsthalle in Bonn (28, 29), im Staatlichen Museum für Archäologie Chemnitz (21), im Münzkabinett der Staatlichen Kunstsammlungen Dresden (13, 83, 84, 85, 86, 131, 361), in der Wartburg bei Eisenach (291), im Geldmuseum der Deutschen Bundesbank (17, 45, 46, 47, 147, 148, 150) und im Historischen Museum in Frankfurt am Main (16, 18), im Vonderau-Museum Fulda (67), im Schlesischen Museum zu Görlitz (38), im Münzkabinett der Universitätsbibliothek (108, 109) und im Museum für Druckkunst Leipzig (116), im Stapferhaus Lenzburg (66), im Europäischen Hansemuseum in Lübeck (355), in Schloss Nymphenburg in München (3), im LWL-Landesmuseum Münster (98, 99) sowie im Landesmuseum Württemberg in Stuttgart (119). Zu verschiedenen weiteren Ausstellungen sind umfangreichere numismatische Beiträge erschienen (103, 120, 121, 183, 182, 256, 322, 323, 558, 581, 593, 597).

Um die Numismatik für ein breiteres Publikum sichtbar zu machen und sie in einen allgemeineren Rahmen zu stellen, wird mithin bundesweit viel Mühe verwandt. Dies spiegelt sich auch in neuen einführenden Veröffentlichungen, die KLUGE (97) und zahlreiche deutsche Numismatiker unter der Redaktion von HAYMANN, KÖTZ und MÜSELER (89) herausgebracht haben. Interessante Besuchsorte für Numismatiker in Frankfurt am Main hat BERGER zusammengestellt (14, 15). STEINBACH stellt Fallbeispiele aus dem Bereich der Münzprägung für Methoden vormoderner

Wirtschaftsgeschichte vor (139) und ordnet die Funktion der Münzen als Massenmedium ein (191). Brückenschläge zur Literaturwissenschaft bieten BERGER (19), BERS (20), BRODBECK (26), KNORTZ und LAUDENBERG (321) und MAUÉ (454).

Der Sichtbarkeit der Numismatik dient in besonderem Maße aber auch die Digitalisierung und Vernetzung der Sammlungen, etwa im NUMiD-Verbund (39). Diese Arbeiten erleichtern beispielsweise die Provenienzforschung, der ebenso wie der Sammlungsgeschichte vermehrte Aufmerksamkeit gewidmet wurde (118, 129, 136, 135, 146, 339, 468).

Für das Mittelalter stammen zahlreiche Beiträge zu einem breiten Themenfeld von STEINBACH (204–208, 265). RUSS hat die Würzburger Münzprägung monographisch vorgelegt (188). Die wichtigen Arbeiten von HERDICK (176) und WITOWSKI (193) zeigen die Nutzung von Geld in der mittelalterlichen Ökonomie. REITZ (232) und STEINBACH (236) befassen sich ebenso wie HYLLA (310) mit den Münzmeistern der Brakteaten, wobei HYLLA erstmals die Verwendung derselben Werkzeuge sowohl für die Brakteatenprägung als auch für liturgische Objekte nachweisen kann. Die Dissertation von ROTH (258) dokumentiert mit dessen weiteren Beiträgen (186) die spätmittelalterliche Münz- und Geldgeschichte des Herzogtums Braunschweig-Lüneburg in vorbildlich umfassender Weise.

In der Neuzeit beginnt Papiergeld, neben Münzen eine immer bedeutendere Rolle als Zahlungsmittel zu spielen. Grundlegende Monographien dazu haben BÜHN für Sachsen (282) und SIGLE für Württemberg (506) vorgelegt. VOLCKART ist die verdienstvolle Edition der Akten zu den Münztagen von Speyer in den Jahren 1549 und 1557 zu verdanken (357). JUNGHANS untersucht das komplexe Thema der Kleinmünzen und der Nominalkonvergenzen im 19. Jahrhundert (314). Neue Monographien zu Einzelterritorien haben IHL und SCHWEDE für Lippe vorgelegt (419, 420), während MEHL Naumburg-Zeitz und Sachsen-Zeitz sowie Merseburg bearbeitet hat (458, 457). OLDING sind neue Katalogwerke zum Herzogtum Pommern und zu Preußen in der Zeit von 1786 bis 1873 zu verdanken. SCHWEDE legt zudem die neuzeitlichen Marsberger Münzen vor (504). PICK befasst sich monographisch mit den Mainzer Münzmeistern (475).

Zahlreiche Einzelbeiträge stammen von KLÜSSENDORF, der sich insbesondere mit der Rolle des Geldes für Bettelei, Steuern und Auszeichnungen befasst (428–439), und von SCHNEIDER, der sich von Alchemisten über Geldhandel und Kasseninventare bis hin zu Waagen und Wardeinen einem breiten Themenkreis widmet (486–501).

Unter den Publikationen der deutschen Münzfunde sticht vor allem das Projekt „Münzfunde und Münzfundpflege in Rheinland-Pfalz (MFRP)“ mit zahlreichen Einzelbeiträgen hervor (545–547, 549–555, 576, 610, 613, 618). Darüber hinaus haben KÖTZ für Westfalen (574–582) und OHM für Württemberg (593–599) den numismatischen Bereich der Bodendenkmalpflege durch eine umfangreiche Publikationstätigkeit geprägt.

SCHWEIZ

Benedikt Zäch

Der Literaturbericht umfasst das Gebiet der heutigen Schweiz sowie das Fürstentum Liechtenstein. Die inhaltliche Vorgabe erzwang eine Auswahl, die Kommentare sind kurz gehalten.

Bibliographie, Museen

Das jährliche Schrifttum wird mit grösstmöglicher Vollständigkeit jährlich in der «Bibliographie zur Schweizer und Liechtensteiner Numismatik» (86, im Berichtszeitraum: 2013–2017) und, mit Schwerpunkt auf der archäologischen Numismatik, im «Bulletin IFS / ITMS / IRMS» (16, im Berichtszeitraum: 2014–2019) veröffentlicht. 2015 fasste der letzte «Survey of Numismatic Research» die wichtigen Veröffentlichungen von 2008–2013 zusammen (91).

Unter den etwa 10 professionell betreuten Münzsammlungen in der Schweiz waren besonders die Museen von Winterthur (62, 76, 87, 88, 95, 96), Lausanne (38, 68) und Basel (57) auch mit eigenen numismatischen Sonderausstellungen präsent, während die anderen Münzkabinette mit ihren Sammlungen in der Regel in Sonderausstellungen des Hauses vertreten waren. Das bisher selbstständige Musée monétaire cantonal in Lausanne fusionierte 2018 mit dem Musée cantonal d'archéologie et d'histoire (39); damit ist das Münzkabinett Winterthur nun das einzige Münzkabinett in der Schweiz, das als eigener Museumsbetrieb auftritt. MATZKE (53) behandelte die Geschichte des Basler Münzkabinetts. Die Sturzenegger-Stiftung als wichtigster Mäzen des Allerheiligen-Museums in Schaffhausen war sehr aktiv beim Erwerb von Münzen, worüber regelmässig Bericht (85) erstattet wurde.

Wissenschaftsgeschichte: Menschen und Jubiläen

Mit Jean-Paul DIVO verstarb 2014 eine prägende, auch internationale bekannte Persönlichkeit (63, 73; Schriftenverzeichnis: 90). Ein weiteres Schriftenverzeichnis wurde im Rahmen einer Festschrift veröffentlicht (78). Die «Freie Vereinigung Zürcher Numismatiker» in Zürich feierte ihr hundertjähriges Bestehen (72), die «Schweizerische Arbeitsgemeinschaft für Fundmünzen» (SAF) wurde 30 Jahre alt (93; ein Beitrag zum 20-Jahr-Jubiläum erschien fast gleichzeitig im Rahmen sehr verspäteter Tagungsakten: 33). Der «Circolo Numismatico Ticinese», die wichtigste numismatische Vereinigung in der Südschweiz, fand ein festes Domizil (49).

Zu zwei wichtigen Pionieren der wissenschaftlichen Numismatik in der Schweiz aus dem 19. Jahrhundert, Charles-François Trachsel und Friedrich Imhoof-Blumer erschienen Studien von MÜHLEMANN (61) und SCHINZEL (77) auf der Basis von unpublizierten Quellen. Einen anderen wissenschaftsgeschichtlichen Zugang zur typischerweise stark personalisierten Numismatik versuchte ZÄCH (98) zu öffnen, und zwar über die Berufswege und Netzwerke der letzten drei Generationen von Wissenschaftlerinnen und Wissenschaftlern des 20. und 21. Jahrhunderts.

Münz- und Geldgeschichte

Drei gewichtige monographische Arbeiten behandelten wichtige Münzorte und Quellen der Geldgeschichte. GEIGER (37) legte eine neue, auf allen greifbaren Quellen beruhende Münz- und Geldgeschichte von Bern im Mittelalter vor, die weit über Bern hinaus den aktuellen Forschungsstand für die mittelalterliche Münzgeschichte setzt. Ähnliches gilt für die dreibändige Monographie von FROIDEVAUX (35; die letzte der vielen Vorarbeiten: 34), die nicht nur die Münz- und Geldgeschichte von Neuchâtel (16.–19. Jh.) unter Grundlegung sämtlicher Quellen behandelt, sondern eine «histoire économique» des Geldwesens in der frühneuzeitlichen Westschweiz bietet. KUNZMANN und WEISENSTEIN (47) bearbeiteten (leider ohne Berücksichtigung weiterer Quellen und editorisch eigenwillig) eine sehr wichtige Schriftquelle zur Geldgeschichte des 16./17. Jahrhunderts, das ab 1549 mit Ausläufern bis 1680 geführte Zürcher Probierebuch von Jakob Stampfer und seinen Söhnen. Das von RUTISHAUSER (74) herausgegebene, gut ausgestattete Werk «Die Münzen vom Bodensee» kann den Anspruch, ein «vollständiger Katalog der Prägungen bis 1800» zu sein, nicht einlösen, obschon es aus der wohl besten Privatsammlung dieses Gebiets schöpft.

An ein archäologisches Handbuch zur Schweiz steuerte ZÄCH (89) den Beitrag «Münzprägung und Geldumlauf 800–1350» bei. FURRER (36) machte sich anhand von Schweizer Quellen grundlegende Gedanken zum Objekt «Münze

zwischen Sache und Sprache». Der 2014 erschienene Abschlussband des Historischen Lexikons der Schweiz (HLS) enthielt die beiden letzten von rund 80 numismatischen Artikeln in den dreizehn Bänden des HLS (30, 44), das nun in drei Landessprachen online weitergeführt wird (www.hls.ch).

Die einzelnen Epochen der mittelalterlich-neuzeitlichen Münzgeschichte wurden ganz unterschiedlich bearbeitet. Das Frühmittelalter verzeichnete keine neuen Forschungen, während verschiedene Arbeiten sich mit dem 11.–13. Jahrhundert befassten: WEISS untersuchte eine Darstellung auf den Zürcher Münzen von Konrad II. (83), MATZKE (58, 59) befasste sich mit der zähringischen Münzprägung (auch in Zürich) und ZÄCH (92) verortete die kyburgischen Münzprägung in der Münzlandschaft des 12./13. Jahrhunderts. MATZKE (54, 56) präsentierte für das 12./13. Jahrhundert zudem zwei Zwischenhalte aus einem grösseren Projekt zur Aufarbeitung der mittelalterlichen Basler Prägung und RAEMY TOURNELLE (67) verfolgte den Weg der mittelalterlichen Lausanner Münzprägung von den anonymen Prägungen zur «Signatur» des Münzherrn. DERSCHKA (19) warf einen neuen Blick auf die Konstanzer Münzprägung des 12./13. Jahrhundert und relativierte sachte deren wirtschaftliche Bedeutung. Einen wichtigen quellenkritischen Beitrag zur Aussagekraft von Abgabeverzeichnissen des 13./14. Jahrhunderts zum Geldumlauf lieferte NUSSBAUM (64) am Beispiel des «Liber Decimationis» des Bistums Konstanz und des sog. Habsburger Urbars.

Das Spätmittelalter und die frühe Neuzeit waren unter verschiedenen Aspekten ein Thema. AMBÜHL (11, 12) setzte eine Serie von kleinen Untersuchungen zur mittelalterlichen Münzgeschichte der Westschweiz fort. SCHACHER (75) situierte die kurzlebige Münzprägung der Grafen von Greyerz zwischen Freiburg, Savoyen und Bern und KUNZMANN (45) hob Neues zur Laufenburger Münzgeschichte des 17. Jahrhunderts ans Licht. ZÄCH (97) beschäftigte sich mit der selten behandelten Ikonographie der Münzen als einer «Rhetorik der Macht» und MÜHLEMANN (60) vermittelte Einblicke in die frühneuzeitliche Bündner Münz- und Geldgeschichte. ZÄCH (100) gab einen Überblick über Währung und Geldumlauf in Liechtenstein im 18. Jahrhundert und LURASCHI (50) charakterisierte den Umlauf der Kantonsmünzen auf dem Gebiet des Tessins.

Für die neueste Zeit stellte CONSIGLIO (17) die im Lausanner Münzkabinett verwahrten Münzstempel der Waadtländer Prägungen des 19. Jahrhunderts vor. RICHTER (69, 70) legte einen Katalog der «Proben und Materialvarianten» von Schweizer Münzen vor; der zweite Begriff ist irreführend, umfasst er doch auch irreguläre Abschläge mit Originalstempeln, die nicht als Proben gelten können. Das Buch von RICHTER über Schützentaler und -medaillen (71) erfuhr eine zweite, erweiterte Auflage. KOCH (43) verfolgte den Weg der Helvetia-Darstellung auf den Münzstempeln der Schweizer Frankenstücke, dessen letzte Etappe er selbst als Mitarbeiter der Eidgenössischen Münzstätte aktiv begleitet hat. TENHOFEN (80) versuchte das Phänomen zu erklären, warum heute besonders viele Schweizer Tausendernoten im Umlauf sind und offensichtlich in gewaltigen Mengen gehortet werden.

Münzstätten und Münztechnik

Es ist auffällig, wie intensiv im Berichtszeitraum die Beschäftigung mit der Münzproduktion war. ACKERMANN und MATT (6) stellten Münzstätten im archäologischen Befund vor und die wenigen Befunde aus der Schweiz wurden von ANTONINI und MORET (13) mit einer Grabung in der Lausanner Münzstätte des 19. Jahrhunderts ergänzt. MATT (51, 52) untersuchte in zwei Studien, die keine Wünsche offenlassen, die Basler Münzstätten. ACKERMANN (1, 2) veröffentlichte zwei weitere Studien zu Münzstempeln im Zusammenhang mit einem Forschungsprojekt zur Münzstätte Haldenstein und deren Prägetechnik. CUCCINI TIZZONI (18) präsentierte Inventare der Münzstätte des 16. Jahrhunderts der Trivulzio in der Mesolcina und KUNZMANN (46) identifizierte die bisher älteste Randschrift auf einer Berner Medaille. LORY (48) schliesslich stellte unpublizierte Berner Münzgewichte vor.

Jetons, Marken, Rechenpfennige, Plomben und Devotionalien

Die Nicht-Münzen der Numismatik sind definitiv auch in der Forschung angekommen. Zum einen machen sie einen immer grösseren Anteil im archäologischen Fundmaterial aus (siehe nächster Abschnitt), zum anderen ist ihre Bedeutung als Objekte des täglichen Gebrauchs mittlerweile anerkannt. ACKERMANN und ZÄCH (7) verfassten den ersten Forschungsbericht zu Marken und Plomben in der Schweiz und machten auch Archäologinnen und Archäologen auf diese Fundgruppe aufmerksam (8). Die Fundpublikationen haben sich in den letzten Jahren enorm vermehrt (5, 9, 21, 23, 27, 41, 82). DOSWALD (26, 29) legte zwei der wichtigsten archäologischen Ensembles von Devotionalien vor; dasjenige aus Rheinau (29) ist das bisher grösste in der Schweiz. SCHMUTZ (79) stellte Jetons, Marken und Rechenpfennige in ihrem Gebrauchskontext vor.

Archäologische Numismatik

Nach wie vor die grösste «Forschungsdynamik» (so die Feststellung im letzten Schweizer Survey) weist die archäologische Numismatik auf. Neben wichtigen Grabungsplätzen mit zum Teil stratifiziertem oder zeitlich gut eingrenzbarem Material (vgl. z.B. Court BE: 26, 32 oder Oberbüren: 84) werden grossflächige Prospektionen, auch im Hochgebirge (Theodulpass: 22) immer wichtiger (4, 9, 21, 24, 28, 29), auch solche, mit denen sich mediale Hoffnungen auf historische «Sensationsfunde» verbinden (Schlachtgelände von Morgarten: 42). Die «Pionierzeit» in einer Grauzone des «Schatzgräbers» (10) wird dabei durch nüchterne Professionalisierung (und konsequente Strafverfolgung illegaler Suche) ersetzt, denn die juristische Regelung ist in der Schweiz recht einfach und klar (3). Bei Prospektionen wird längst auch eine eigene Kategorie kleiner Hortfunde entdeckt, die nicht einfach zu interpretieren ist (20, 24, 25, 55).

Die Auswertung «traditioneller» Hortfunde bleibt aber die Basis typologischer und chronologischer Arbeit, ob es sich nun um Verwahrfunde (Pruntrut: 31) oder mögliche Handwerker-Ensembles (Fribourg, St-Nicolas: 14) handelt. ZÄCH ET AL. (94) untersuchten einen speziellen Fall einer Grabbörse mit naturwissenschaftlichen Methoden, was Chancen – und auch Grenzen – von Hightech-Untersuchungen aufzeigte. Zu den, archäologisch gesehen, «geschlossenen» Ensembles gehören auch Turmknopffunde: HÜRLIMANN (40) stellte sie für den Kanton Zürich zusammen.

Ein besonderes Gewicht erhielten in der Berichtsperiode Kirchenfunde (AUBERSON und RAEMY TOURNELLE: 15, UNTERMANN: 81). Vor allem war eine internationale Tagung zu diesem Thema dafür verantwortlich, die 2017 in der Schweiz stattfand (101) und zu Forschungen im Vorfeld führte (RAEMY TOURNELLE: 65, 66); eine Bibliographie (102) verwies auf die umfangreiche bestehende Literatur zu Kirchenfunden. ZÄCH (99) griff bei der Vorbereitungstagung zu einem archäologischen Handbuch der Schweizer Archäologie der Zeit von 1350–1850 den Quellenwert der numismatischen Kirchenfunde für «Konjunkturen und Kleingeldwanderung» auf.

ÖSTERREICH

Johannes Hartner, Anna Lörnitzo (ehm. Fabiankowitsch)

Kommentar

Der vorliegende Bericht (2014–2020) schließt an die Bibliografien zur Österreichischen Münz- und Geldgeschichte in Mittelalter und Neuzeit aus dem Zeitraum 2008 bis 2013 an, die von EMMERIG verfasst worden sind (3, 4).

Für den Berichtszeitraum sind als regelmäßig erscheinende Zeitschriften vor allem jene beiden der Österreichischen Numismatischen Gesellschaft zu nennen – die *Numismatische Zeitschrift* (Bd. 120–126) sowie die *Mitteilungen der Österreichischen Numismatischen Gesellschaft* (Jg. 54–60, in der Regel mit zwei Heften pro Jahr, ab Jg. 59 nur noch in digitaler Form). Hinzu kommen das *Mitteilungsblatt des Instituts für Numismatik und Geldgeschichte* (Nr. 48–61 sowie Sonderhefte 49a, 50 Beiheft, 50a, 59a) und die *Haller Münzblätter* (Bd. 8; Bd. 9, Nr. 1–4). Die Tagungsbände der Österreichischen Numismatikertage 2012 (1), 2014 (8), 2016 (5) und 2018 (12) enthalten u. a. Beiträge zur Österreichischen Münz- und Geldgeschichte.

Schriftenverzeichnisse liegen von Bernhard Prokisch (45) und Wolfgang Hahn (46) vor, die sich in ihrer Forschung u. a. der Numismatik der Neuzeit widmen. Darüber hinaus wurden die Publikationen von Michael Alram (49), zu dessen Forschungsinteressen die Münz- und Geldgeschichte des österreichischen Mittelalters zählt, und jene von Wolfgang Szaivert (47) bibliografisch dokumentiert. Diese Numismatiker widmen sich nicht nur der österreichischen Münz- und Geldgeschichte, sondern sind maßgeblich an der universitären, numismatischen Lehre in Österreich beteiligt.

„Numismatik lehren in Europa“ lautete das Thema einer anlässlich des 50jährigen Bestehens des Instituts für Numismatik und Geldgeschichte der Universität Wien 2015 veranstalteten Tagung, deren Tagungsband erstmals eine umfassende Bestandsaufnahme zur Situation der numismatischen Lehre in Europa liefert (15). Der emeritierte Institutsvorstand Wolfgang Hahn und sein Kollege, Universitätsprofessor Wolfgang Szaivert, wurden jeweils mit einer Festschrift geehrt, die deren breites Forschungsinteresse spiegelt (48, 44). Die Sammlung des Instituts für Numismatik und Geldgeschichte wurde von EMMERIG und HARTNER vorgestellt (24, 25), ebenso auch die Datenbank der österreichischen Münzfunde des Mittelalters und der Neuzeit am Institut für Numismatik und Geldgeschichte (FK/ING) (51, 55).

Im Untersuchungszeitraum erschienen weitere Publikationen zur Geschichte numismatischer Sammlungen in Österreich. Richtungsweisend ist eine auf schriftlichen Quellen basierende Monografie von HASSMANN und WINTER zur Geschichte des Wiener Münzkabinetts im 18. Jahrhundert, das heute zur Sammlung des Kunsthistorischen Museums Wien gehört (27). Der Schriftverkehr der frühneuzeitlichen Münzkabinettsdirektors Valentin Jamerey-Duval (1695–1775) wurde in zwei Bänden publiziert (20). Darüber hinaus beschäftigten sich WILLIAMS und WOYTEK in einem groß angelegten Forschungsprojekt mit den Korrespondenzen des Wiener Numismatikers und Kurators der antiken Münzen im kaiserlichen Münzkabinett Joseph Hilarius Eckhel (1737–1798) (14). Weiters sind Beiträge zu den Münzsammlungen des Oberösterreichischen Landesmuseums (17, 34, 36), des Salzburg Museums (29, 30), des Wien Museums (18), des Universal museums Joanneum (33) sowie der Stifte Göttweig (31) und Heiligenkreuz (32) erschienen. PROKISCH publizierte darüber hinaus die verschollen geglaubte Sammlung von Bergbaugeprägten des Karl Ritter von Ernst (1833–1911) im Technischen Museum Wien, die zu den bedeutendsten dieser Art in Europa zählt (35). Mit der Gründung einer numismatischen Sammlung und zugehöriger Bibliothek für ein geplantes sogenanntes „Führermuseum“ beschäftigten sich DÜREN und SBARDELLA (23, 38). Die 2018 neu eröffnete Ausstellung des Geldmuseum der Österreichischen Nationalbank und der dazu gehörige Ausstellungskatalog dokumentieren die Entwicklung des Geldwesens von den Anfängen bis heute (22).

Für die mittelalterliche Münz- und Geldgeschichte im österreichischen Raum ist vor allem der wissenschaftliche

Begleitband *Geprägte Bilderwelten der Romanik. Münzkunst und Währungsräume zwischen Brixen und Prag* zu nennen, der 2017 zur gleichnamigen Ausstellung in Bozen erschien (76, auch auf Italienisch 77); darin präsentieren besonders die Beiträge von HYLLE und WINTER (74, 78, 79) den aktuellen Wissensstand zur österreichischen Mittelalternumismatik des 12. Jahrhunderts und zeigen neue Forschungsansätze auf. Weitere Beiträge die sich mit Themen rund um Monetarisierung, Motivwanderungen sowie Netzwerken von Münzstätten und Stempelschneidern befassen, liegen von EMMERIG, HARTNER und HYLLE vor (62, 69, 72, 73, 111). Umfassende Forschungen sind auch für die Zeit des „klassischen Wiener Pfennigs“ (13./14. Jh.) sowohl von WAGNER zu verzeichnen (94, 96–100), als auch von BOROS, die im Rahmen einer Masterarbeit neue Untersuchungen zu den Wiener Münzmeistern lieferte (59); für den steirischen Raum legte SAUER eine Monographie vor, in der sie den Grazer Pfennig grundlegend neu aufarbeitete (91). BAN und WAGNER befassten sich mit dem Kärntner Münzwesen, insbesondere mit den ERIACENSIS-Geprägten (58, 95, 101). WINTERS Beiträge zu den Salzburger Münzreihen des 12. Jhs. stellen den aktuellen Forschungsstand zu diesem Thema dar (102, 103). Für den Tiroler Raum ist von RIZZOLLI und PIGOZZO mit *Der Veroneser Währungsraum. Verona und Tirol vom Beginn des 10. Jahrhunderts bis 1516* ebenfalls ein neues Grundlagen- sowie Corpuswerk geschaffen worden (88); auch die Beiträge zu den mittelalterlichen Münzstätten Lienz, Brixen und Innsbruck sind zu erwähnen (87, 89).

Wichtige Publikationen finden sich indes auch im Bereich der Münzfunde, die als Grundlage für aktuelle Untersuchungen dienen. COUPLAND und EMMERIG lieferten einen aktuellen Überblick zu den Funden karolingischer Münzen im österreichischen Raum (104). Für die Erforschung des frühen österreichischen Münzwesens nimmt der Fund von Frauenhofen (NÖ) [verborgen um 1140] einen entscheidenden Stellenwert ein (106, 107, 109). Besonders sei auf die Masterarbeit von MERZ zu den mittelalterlichen als auch neuzeitlichen Münzfunden in österreichischen Kirchen aufmerksam gemacht, die diesen bisher vernachlässigten Materialbestand erschloss (56).

Hinsichtlich der neuzeitlichen Münz- und Geldgeschichte konnten für den behandelten Zeitraum darüber hinaus folgende Forschungsschwerpunkte erkannt werden. WINTER befasste nach seiner Arbeit über die Medaillen Kaiser Maximilian I. (r. 1508–1519) auch mit dessen Münzprägung (42). Auf breites Forschungsinteresse stieß die Münzprägung Kaiser Leopolds I. (r. 1658–1705) (122, 129, 132, 133, 158). Die Geldgeschichte Maria Theresias (r. 1740–1780) (130, 135, 137, 150, 165, 198) und die späteren Nachprägungen des Maria Theresien-Talers (174, 175, 177) wurden ebenfalls in zahlreichen Publikationen behandelt. HAHN publizierte mehrfach Aufsätze zu frühneuzeitlichen Münzgeschichte Österreichs im Fachmagazin *Money Trend* (134–138). HELMWEIN beschäftigte sich intensiv mit den österreichischen Kleinmünzen (140–145). VON LENTHE (ehemals KARASCH) setzte mit ihrer abgeschlossenen Masterarbeit zur Münzprägung der Familie Trautson sowie mit ihrem aktuell laufenden Dissertationsprojekt einen Schwerpunkt in der Erforschung der Münzproduktion Österreichischer Neufürsten (148, 149). Das Österreichische Notgeld wurde von KODNAR und KÜNSTNER publiziert (238–239), jenes Niederösterreichs von BYSTRICKÝ regional bearbeitet (211–231).

BRITAIN AND IRELAND: MEDIEVAL

Martin Allen and Rory Naismith

The Early Middle Ages (c. 400–1066)

Rory Naismith

A number of survey works have touched on this period as well as part of wider discussions of numismatics and monetary history. DESAN (77) begins her study of the institutional background of money in the early Middle Ages, and ANDREWS's (47) investigation of the archaeological dimensions of coin hoards starts in the late tenth century. There are also several surveys that focus on the early medieval period as a unit in itself. NAISMITH (148) builds an analysis of all major segments of the period around a catalogue of the Fitzwilliam Museum's coins; similarly, LYON (115) takes his own collection as the basis for an important survey, with the focus being on the collection's areas of particular strength. Other works of broader chronological significance have looked at the on-going relationship between Britain and mainland Europe (e.g. 132, 133, 137 and 158), or at the significance of philology and the texts carried on coins (89, 150, 156 and 204).

The most productive chronological portion of this period in scholarship on England has been the seventh and eighth centuries. ABRAMSON continues to be a driving force, as editor of a major collection of papers (1) and as author of three other key volumes surveying the typology and historical significance of the relevant coinages, cataloguing his own very large collection and studying the monetary economy of early medieval Northumbria (2, 4 and 5). The circulation and economic dimensions of the coins of this period have attracted strong interest from several scholars: METCALF (128 and 129) assessed the macro-level significance of coins as a window onto the contemporary monetary economy, while THEUWS (188) has challenged prevailing logic on the attribution and economic significance of 'Frisian' coins, and NAISMITH (134) has examined the link between money and the church at this time. New finds of specific types or groups have prompted a number of other publications. Several concern the 'York Group' of early gold coins from Northumbria (6 and 161), and WILLIAMS (192) considers why the huge Staffordshire hoard of gold and silver objects did *not* contain coins. A further assessment of finds from a more archaeological perspective is NAYLOR and SCULL's assessment of coins in burials (180). Studies on iconographic aspects of the period include work by GANNON (87) and WOODS (203). Finally, the metallic properties of coins of this period have been examined by BUDE (64), who has also studied aspects of early Northumbrian coinage (62 and 63).

The later eighth and ninth centuries have been the object of a smaller amount of research, most of it aimed at bringing together existing work or addressing new finds (which are fewer than for the preceding period). MACKAY has written two important surveys of coinages from the mid- and late ninth century (120 and 122), as well as a short discussion of a hoard (121). Probably the most important development for this period was the discovery in 2015 of two new hoards deposited around 880. Substantive publications of both are still in preparation, but WILLIAMS and NAYLOR have produced a short book about one of them (196). NAISMITH has written about significant finds of individual coins of the late eighth and early ninth centuries (135 and 151), and also a discussion of iconography (145).

The tenth century has had a similar profile in recent years, with a relatively small amount of new research, albeit filling some important gaps. In particular, NAISMITH and TINTI (159) have published a full catalogue of one of the key hoards, known since 1883 but not previously published in an illustrated and accessible form. PAGAN has brought to light a previously forgotten tenth-century hoard from Glasgow (163). Individual coins of significance have also been published (146 and 170), along with one that reveals a new mint-place for the period (155). A longer discussion of the administrative and political context of tenth-century English coinage has been published by NAISMITH (138).

After the seventh and early eighth centuries, the late Anglo-Saxon coinage that begins with the reform of the early 970s and runs to the Norman Conquest in 1066 has been the most productive area for research. A major collection of

relevant material in Norwegian museums has been published by SCREEN (179), while larger questions of political (143 and 147) and economic significance (83) have also been addressed. PAGAN has supplemented his previously published catalogue of all *Pax* pennies of Edward the Confessor (162). Mints and moneyers, now known in abundance, remain a subject of interest: ALLEN has provided a survey of the development of mint-places (16), AMBROSE reports a new moneyer for Aylesbury (39), NAISMITH has reviewed and challenged the identification of a problematic mint-place (154), AMBROSE and NAISMITH have published a coin featuring a street-name (40) and PIERCY has written an extensive and ambitious analysis of moneyers in England (171 and 172, but should be read alongside the review by PAGAN, 169). As in earlier periods, fresh hoards have also given rise to new publications, including those from Abergavenny and Lenborough: publications on these finds have been written by BESLY and DAVIS (58) and WILLIAMS (193). These need to be seen alongside old hoards newly identified from antiquarian and commercial records, assessed by PAGAN (164 and 167).

The coinages made by the vikings in various parts of Britain and the Irish-Sea region represent an important parallel area of research. The years 2014–20 witnessed the publication of several important surveys of the subject: BORNHOLDT COLLINS on the Isle of Man (59), WILLIAMS on viking currency in England (191), GOOCH on a specific segment of the coinage of viking York (88), NAISMITH and WOODS on Ireland (160), and LEIGHTON and WOODS on a group of imitative coins made in the eleventh-century Irish Sea area (114). The economic aspects of these coinages and their circulation have also attracted strong interest (194, 197 and 201); this research is closely allied to work on the ‘bullion economy’ of the vikings, which is beyond the scope of the present survey. For Ireland, the political context of the earliest coinage has been elucidated by WOODS (200). Viking hoards and productive sites have also stimulated work on the coinage of this period, as in the case of the Glenfaba hoard from Man (60), the Aldwark site in Yorkshire (195) and two hoards of English material from Dublin (198).

The Later Middle Ages to the Great Debasement (1066–1544)

Martin Allen

ALLEN (8) has surveyed the monetary history of England in the reigns of William I (1066–87) and William II (1087–1100), estimated the size of the *Pax*s type in the late 1080s (14), and published the first known coin of a Welsh mint (Cardiff) imitating William II’s type 1 (26). In the coinage of Henry I (1100–35), Cricklade has been added to the list of mints in type 14, the last coinage before Henry I’s Assize of Moneyers (ALLEN and BLISS (29)). Surveys of the coinage of Stephen (1135–54) in its historical context have been provided by FAIRBAIRN (82) and by CREIGHTON and WRIGHT (75). ALLEN (17) has published a classification and die study of the iconographically diverse York coinage of Stephen, and PORTER (173) has published a previously unrecognised type of Stephen’s chief opponent in the civil war of his reign, the Empress Matilda. ALLEN (16) has updated his lists of the mints of mints and moneyers between 1066 and 1158, which have been used by BROWN (61) in a mathematical model of the lengths of English coinage types.

Henry II’s Cross and Crosslets coinage of 1158–80 has been the subject of three publications. CRAFTER (73) has discussed the Cross and Crosslets coins in the Royal Mint Museum, and two nineteenth-century hoards from the period of this coinage have received attention: Outchester (CRAFTER (74)) and Fornham (THOMPSON and ALLEN (189)). In the Short Cross coinage of 1180–1247, a piece of gold with impressions from dies of class 5b1 (dated to 1205) has been the subject of scientific investigation (ALLEN and HOOK (35)).

The second volume of the survey of the Bury St Edmunds mint by EAGLEN (81) covers its final issues in the period of the Edwardian coinage of 1279–1351, and MARTIN (124) has reexamined the much debated chronology of the class 15d pence of the Durham mint in the 1320s or 1330s. ALLEN and ODDIE (37) have used data from hoards of the Edwardian coinage period to produce revised estimates of the size of the English coinage between 1282 and 1351. FREDERICKSON (84–86) has published three notes on English gold coins of Edward III (1327–77) after 1351 and Henry VI (1422–61). In the reign of Henry VII (1485–1509), the ‘Sovereign’ type groat and the ‘Perkin Warbeck’ jetton or ‘groat’ have received attention (DYKES (80); ARCHIBALD and DYKES (56)).

Coin hoards have been a very active field of research, as usual. The comprehensive study of English and Welsh hoards by ANDREWS (47) covers the period from *c.* 973 to 1544, and ALLEN (12) has analysed the geographical distribution and values of hoards in this period. ANDREWS (54) has also discussed hoards of 1250–1550 from settlement

sites, extending his geographical coverage to the whole of Britain and Ireland, and published studies of many inadequately recorded late medieval English hoards (42, 44, 46, 48, 50 and 53). SAVAGE has surveyed medieval hoards from Cumbria (176) and published an Edwardian period hoard from York (177). There have also been notes on fourteenth-century hoards by MAYHEW (126) and SYMONS (185).

ALLEN (11) has used data from coin hoards and single finds to assess the size and composition of the English money supply between *c.* 973 and 1544, and KELLEHER (108) has analysed single finds as evidence of the monetisation of England and Wales in the twelfth and thirteenth centuries. English single finds of foreign gold coins of the eleventh to thirteenth centuries have been reviewed by ARCHIBALD (55), and ANDREWS (43) has surveyed single finds of late medieval English gold coins from England and Wales. KELLEHER (111) has investigated single finds of folded coins as evidence of religious practice, and ALLEN (23) has discussed the use of coins as religious offerings and the interpretation of coin finds at pilgrimage sites in England. RENNICKS (174) has examined the use of English medieval tokens at Holme Cultrum Abbey. KELLEHER (110) has surveyed the uses of coin finds in later medieval archaeology.

ALLEN (15) has investigated the connections between medieval merchants and the English mints, as customers and officials, and the role of the wool trade in the supply of bullion to the English mint at Calais in the fourteenth and fifteenth centuries (18). Percivalle dal Portico of Lucca, a fourteenth-century merchant and mint-master, has received attention from DAY (76). In the fifteenth century, the English government's administration of the coinage has been examined by ALLEN (9), and KLEINEKE (113) has investigated the documentary evidence for the prosecution of counterfeiters in England.

ALLEN (19) has analysed the development and eventual disintegration of a common currency based upon the English coinage in Britain and Ireland between the twelfth and fifteenth centuries. The Scottish coinage began when David I of Scotland (1124–53) invaded northern England in 1136 and took over the Carlisle mint and its supply of silver from local mines. Three notes have published coins of David I (HOLMES (93–94); SAVAGE and ALLEN (178)), and ALLEN (22) has discussed a previously unrecognised coinage of David's son Henry, earl of Northumberland (d. 1152), from the Newcastle mint. ALLEN and HOLMES (34) have investigated a coinage (Intermediate Issue A) from the early years of the reign of William the Lion (1165–1214). The Short Cross and Stars coinage in the names of Alexander II (1214–49) and Alexander III (1249–86) has been the subject of a die study and revised classification by ALLEN, HIGGINSON and PENRICE (32). HOLMES (91) has published a die study of the minor mints in the Long Voided Cross coinage of Alexander III, which began in 1250. Three notes have provided significant additions to the coinages of Alexander III, John Baliol (1292–96), and Robert Bruce (1306–29) (HOLMES and PENRICE (103); ALLEN and HOLMES (33); HOLMES (100)). HOLMES (101) also has published a die link between the Edinburgh and Dundee mints in the reign of Robert II (1371–90), as well as reports on many recent Scottish hoards of various periods from the Short Cross and Stars coinage of 1195–1250 to the fifteenth century (90, 92, 95–99, 102). Three notes have investigated the circulation and imitation of late medieval Scottish billon coins in the Low Countries (HOLMES and VAN CAELENBERGHE (104); SPUFFORD (182); VAN CAELENBERGHE (190)).

In Ireland the Anglo-Norman invasions of the late 1160s and early 1170s ended the Hiberno-Scandinavian coinage and led to the issue of Anglo-Irish coinages. A hoard of English and Scottish coins from Inis Cealtra has filled a gap in our knowledge of the Irish currency in the 1170s (ALLEN and WOODS (38)). ALLEN (24) has published a die study of the local coinage issued by John de Courcy in Ulster between the 1180s and 1205, and DYKES (78) has discussed the iconography of King John's REX coinage of *c.* 1208–10. The documentary evidence for the Irish mints and exchanges in Henry III's Long Cross recoinage of 1251–54 and the reign of Edward I (1272–1307) has been thoroughly investigated by CASSIDY (67–68). BYRNE (66) has published an updated list of coins in Edward I's first Irish coinage of 1275–79. A hoard from Malew has shown that Irish coins were used alongside English and Scottish coins on the Isle of Man in the 1280s (ALLEN (20)). In the fifteenth century, DYKES (79) has examined the historical background of Henry VI's Irish coinage of 1425, and SYMONS (186) has discussed documentary evidence from the first reign of Edward IV (1461–70), in 1469. MAC CONAMHNA (118–119) has published two notes on the Irish pennies of Edward IV, Edward V and Richard III between 1465 and 1483.

BRITAIN AND IRELAND: TOKENS AND PARANUMISMATICA

Gary Oddie

Publication on subjects relating to private issues of tokens, tickets, passes, etc. has been extensive in the period reviewed, with in most areas discoveries of new material along with detailed background research and cataloguing. The following discussion is in approximately chronological order, with topics and publications that span broader periods grouped at the end.

For the first half of the seventeenth century, brief biographies and genealogies of the holders of the farthing patents of 1613–1644 are provided by EVERSON (47), and ODDIE (102) presented some early tickets probably used for entry into the Royal Touching Ceremony. ROGERS (149) describes the later history of the touching ceremony and the gold touch pieces. Coin weights have also been extensively published, with BIGGS (13) on weights for the silver coins during the English Civil War, and WITHERS and WITHERS (167) on the Irish series.

The main token issues of the seventeenth century continue to be published, with many new discoveries and reattributions appearing in the pages of the *Token Corresponding Society Bulletin (TCS Bulletin)*. The signed products of one of the main manufacturers, David Ramage, were discussed by THOMPSON (156), and Ramage's Will was published by PAGAN (116). A major activity, the Norfolk Token Project, was introduced by MARSDEN (84), who followed this with a catalogue of the tokens in Norwich Castle Museum (85), and detailed research into the contemporary records and wills of the issuers from Great Yarmouth (86) and of several individual issuers (87–97). In excess of 1,000 tokens issued in Surrey and Southwark are described and almost all illustrated by EVERSON (36), followed by several subsequent notes on additions and corrections (37–46). Two issuers of pattern Commonwealth farthings have been identified from their initials: ODDIE (103) identified ER as Edmund Rowland, and WHITTELL (162) identified TK as Tobias Knowles. The supply and demand for seventeenth-century tokens is considered by THOMPSON (155); MARSDEN (98) introduces the sorts of people placing orders for tokens; BURNETT (18) discusses the motivations for issuing tokens, and ODDIE (104) investigates the mechanics and practicalities of manufacture. Specific imagery shown on tokens has been reviewed, with THOMPSON (154) on the frying pan as a token design and EVERSON (49, 50) on the images of saints as found on seventeenth-century tokens. A possible manufacturer of seventeenth-century leather tokens has been identified by THOMPSON (153).

Major new publications on the emergency Gunmoney coinage of James II have appeared, with TIMMINS (157, 158) producing two editions of a book listing the main varieties, while WITHERS and WITHERS (168) produced a comprehensive die study of the series, and BIRD (14) described the use of broken cannons for their manufacture.

Eighteenth-century token and ticket publications include an update of their catalogue of Imitation Spade Guineas by NEILSON and WARBURTON (101). FLETCHER (62) and PATERSON (117) each added a new type to this series, and WARBURTON (159, 160) clarified and added to the Dalton and Hamer listings of the imitation spade guineas. XRF analysis of Sentimental magazine medals was carried out by ODDIE (110) to identify genuine and false plating, along with spurious issues. The series of twenty-four whist counters issued by Mathews c.1825 has been reviewed by NEILSON (100). A new comprehensive listing of To Hanover and Prince of Wales counters was produced by WARBURTON and NEILSON (161). Extensive contemporary records for the issuers of the lead tokens of the late eighteenth and early nineteenth centuries in Scotland are provided by POWELL (131–134).

The silver issues of the early nineteenth century have received attention, with HODGE (77, 78) reviewing the countermarked dollar series, and ODDIE (105) presenting an original punch used for the octagonal countermarks of 1804. The nineteenth-century silver tokens issued in Frome are reviewed by THOMPSON (152), with BENTLEY (12) and ODDIE (109) looking at the tokens issued by Thomas Venables of Shrewsbury. Several new die varieties and countermarked silver tokens were recorded by ODDIE (107, 108).

The classic catalogues of both Davis and Waters and Montague Guest have been revisited by WITHERS and

WITHERS (165) to produce a fully illustrated and priced catalogue of tickets and passes, including brief background research on many pieces. YOUNG (171, 175–176) presented more detailed research on the London tickets, passes and medallions, with LYALL (83) and BARRETT (6, 7) taking on Lancashire. The unofficial farthing series has been explored further, with POWELL (125–130), adding much background research to many of the issuers, BROOK (16) taking on Thomas Blackshaw of Burslem, and EVERSON (35) providing a detailed history of the farthing issuer George Carter. A new issuer for this series was added by COPE (22), and KNIGHT (80) identified several unrecorded die varieties of Norwich's unofficial farthings.

Tokens used in pubs and taverns continue to be studied, with ODDIE and CUNNINGHAM (112) producing an updated 'Mystery List' originally published by the Pub Check Study Group, now including the many pieces solved in the past twenty years. The likely manufacturer of the ubiquitous 'circle in wreath' reverse design was identified by CUNNINGHAM (24). Several new issuers were added to the Irish tavern token catalogue by CUNNINGHAM and HEANEY (26) and HEANEY (75). A new usage for a pub check, charabanc rides, was identified by CUNNINGHAM (25). WITHERS and WITHERS (166) presented an unusual hoard of Birmingham pub checks. For non-alcoholic beverages, OWENS (114) produced an illustrated and fully researched catalogue of coffee and cocoa taverns. OWENS (115) then added a new issuer, and KNIGHT (82) provided further background notes on the Hampshire issues.

Two previously unnoticed medallists and coin and token manufacturers have been identified by ADAMS (1, 2), and ANDISON (5) identified two Scottish token manufacturers. The third edition of the standard catalogue of co-op checks by RAINS (135) now lists over 8,500 pieces from 1,350 societies. A series of supplements by RAINS (136–146) suggests that much remains to be done, with KNIGHT (79) adding another Cornish society and YOUNG (169) relocating Shaftesbury Park Co-op from Dorset to London. A first listing of Bristol traders' checks and tickets mainly from the late nineteenth century was provided by DURNELL (27, 28), and YOUNG (170) updated the Somerset County listing of tickets, checks and passes, along with a new survey for the county of Dorset (172). More industrial uses are covered by a serialised catalogue of railway time, tool and pay checks by HAYES (65–71), and PETCHEY (118–123) produced listings for specific railway companies. More recent ephemeral issues have been considered by ADAMS and ODDIE (3, 4), who began a series of articles recording advertising stickers attached to circulating coins, and additional groups of pieces were reported by COPE (21), KNIGHT (82) and YOUNG (174).

Work on the topics of historical medals and medallions continues to be refined, with WHITTLESTONE and EWING (163) producing a second, updated edition of their *Royal Commemorative Medals*, vol. 3, for Victoria's Diamond Jubilee, and CUMBERS and WHITTLESTONE (23) the second edition of vol. 4, for the issues of Edward VII. In more localised studies, THEOBALD (151) describes the school attendance medals issued by the Surrey Education Committee and EVEREST-PHILLIPS published articles on medals celebrating the 25th anniversary of the Eurotunnel (32), tug-of-war competitions (33), and 'Blandings' Medals in praise of pigs (34).

Publications regarding the history of the subject and personalities involved have also appeared, with the outstanding and comprehensive history of numismatics and numismatists in Britain from the Renaissance to the Enlightenment written by BURNETT (17). Three early collectors and authors were presented by DYKES: J. Harrison (29), J. Barkham (30) and J. Evelyn (31). Briefer biographies of more recent well-known names have been provided by FAREY, including: R. Yeo (51), B. Pistrucci (52, 53), J.D. Cuff (54), H.L. Farquhar (55), H.M. Lingford (56), R. Huth (57, 58), King Farouk (59), J. Croker (60), and J.S. Tanner (61). HEANEY discussed: F.J. Bigger (72), F.E. Dixon (73) and E.J. French (74). RAY (147) added Dr. J. Lee and the founding of the Royal Numismatic Society. Further personalities were covered by BENNETT, including: G.K. Gray (8), T.H. Paget (9), P. Metcalfe (10) and R. Johnson (11). A biography of P. Metcalf was also published by COLGAN (19, 20). Following a visit to Dave Greenhalgh, HANSCOM (64) described the processes used by 'Grunal the Moneyer' to manufacture medieval hammered coins.

A first classification for engraved coins and love tokens is presented by ODDIE (108), and MILLMORE (99) shows the potential for research into a singular piece whilst attributing an engraved love token to the Spithead mutiny of 1797. To emphasise that not all mutilated coins are unique, ODDIE (121) presents a series of five engraved and enamelled shillings named to the Bank of England Guards during the first World War. Early twentieth-century political countermarks relating to the suffragette movement are described by HOCKENHULL (76), with TAYLOR and BULL (150) attributing a countermark to the Dorset fossil collector Mary Anning. The countermarked Irish slap tokens of c. 1795–1805 are briefly described by BIRD (15). The countermarking of Victorian copper and bronze coins is addressed by

more generally by ROBINSON (148), and PICKUP (124) looks at the Pear's Soap countermark issues.

Publishing details of contemporary counterfeiting can be problematic, but the demonetization of the round pound coins allowed ONIONS (113) to present a detailed die study of one group of counterfeit pound coins, and GRANTHAM (63) looked at the many different varieties of the counterfeits.

The preservation and conservation of numismatic items has received little coverage, but WILLIAMSON (164) presented important observations on the long-term storage issues with tokens made from plastics and the potential for some plastics tokens to self-destruct, years or even decades after manufacture.

DENMARK AND ICELAND

Jens Christian Moesgaard

In former times Denmark also comprised the three southern Swedish provinces of Scania, Halland and Blekinge (until 1645/58) (e.g. 6, 10, 13, 18, 22–26, 32–34, 50, 59, 85, 96, 105) and southern Schleswig (in periods linked to Holstein) (until 1864, now Germany) (e.g. 1, 8, 30, 66, 73, 97, 106). Beside Denmark properly speaking, the Faroe Islands (20, 91), Greenland (27) and Iceland (37) are also covered by this survey. Other coins struck by Danish kings abroad (parts of Germany, Estonia, Gotland, American and Asian colonies, as king of England, Norway and Sweden) are not included. The focus will be on three aspects of coins: the national coinage (coin production, typology, dating etc.), the role of coins in society (monetary history, foreign and domestic coins, economic and non-economic coin use) and coin finds (publications of finds, finds as evidence for the coinage and the role of coins).

The editorial principle of this Survey is to highlight new perspectives beside the predominant research trends as well as the width and variation of the work. In accordance, the bibliography below presents only a selection of the literature on Danish coins from the medieval and modern periods. Consequently, the omission of any particular article should not be taken as a judgement on its quality.

General

In commemoration of its 200 years in 2018, the National Bank of Denmark published a comprehensive survey written by HORSNÆS, MOESGAARD and MÄRCHER (47) of the monetary history of Denmark from the first Roman coins appeared in the Iron Age until the early Renaissance. The focus is on the role of coins – foreign as well as domestic – in society at large. The impressive increase in the number of coin finds in Denmark due to intensive metal detecting during the last decades have generated many new insights that allowed the authors to rewrite large portions of the story. One can also welcome that three doctoral dissertations by AUDY, GUNDERSEN and INGVARSDON (7, 21, 54), largely based on detector finds, have been successfully defended 2018–2020. Not only numismatists write on the finds, but also archaeologists, providing complementary perspectives (e.g. 31, 60, 63, 100). The inventory dressed by HEIJNE (34) of the finds from the old Kristianstad county in Scania in the Swedish *Landskapsinventeringen* series is a landmark.

The 2018 issue of was to be the last of the yearly collector catalogue initiated by SIEG in 1968 (106). Thus, an institution of Danish numismatics has ended. Over the years, the periods and areas covered have largely expanded. The last issue comprised all Danish coins from 1241 to date as well as the various ducal coinages of Schleswig-Holstein. Meanwhile, Danish Numismatic Society has launched an on-line collector's catalogue, which is gradually being built up.

It is to be welcomed that MÄRCHER (75) has founded a new publishing house *Numismatik og Pengehistorie* aimed at publishing numismatic sources in the broadest sense (finds, corpora, written sources). Indeed, the need is there, as the traditional publishing channels often refuse to print catalogues or find lists, independently or as annex to articles. The privately run web-site *Dansk Mønt* by N. J. JENSEN and M. SKJOLDAGER is constantly growing and is a very important resource. MORTENSEN (e.g. 98) has published a series of handbooks and commented bibliographies, that are only distributed by himself on restrictive conditions. The comments are sometimes made on a subjective basis.

Methodologically, several authors have discussed the results of die studies (e.g. 77) and how to interpret metal detector finds (e.g. 5, 44, 36, 46, 63, 89, 94). Indeed, metal detecting is legal in Denmark and has led to a huge increase of the number of finds. Until 2002, annual find lists were published by the National Museum, but regrettably, no further lists are planned. The detector finds largely derive from single finds, rather than hoards, which allows for new insights (e.g. 44, 89, 94). Elementary analysis of the coins has also been applied and discussed (15, 35, 56, 83). Secondary treatment of coins has been scrutinized thoroughly in several studies (e.g. 7, 14, 42, 68, 79, 83, 95, 99).

Late Germanic Iron Age

The late Germanic Iron Age (7th–8th centuries) is marked by a scarcity of coins in Denmark. The existence of a monetary enclave of Ribe using coins at tale in the 8th century is already well-established. Søvsø (108) takes the argument a step forward in suggesting that the relevant issue, the Wodan/Monster sceatta, was the royal Danish currency not only meant for Ribe, but also for the king's other emporia Åhus (Scania) and Gross Strömkendorf (Mecklenburg). The background for this inspiring proposal is the multiplication of finds at the latter site. Hitherto sceatta finds outside Ribe were rare, but thanks to the metal detector, their number has risen. FEVEILE (16) gives a survey of this new material, demonstrating a circulation outside Ribe before the introduction of the well-managed Wodan/Monster currency in Ribe.

Viking Age

In a Danish numismatic context, the Viking Age covers the period *c.* 800–*c.* 1060. It is characterized by a currency of predominantly foreign origin and used by weight. But the Viking Age also witnessed a nascent domestic coinage. As for the domestic coinage, e.g. BENGSSON (8), BIZOEV (100), GUNNARSSON (22–26), HORSNÆS (43), ILISCH (48) and MOESGAARD (63), have contributed with hitherto unknown types or renewed interpretations of dating and mint attributions of already known types. These studies are often based on die-studies of all recorded specimens, that are catalogued for the benefit of future research. Some results are controversial, as EMSØY's suggestion about reattributing coins from Denmark to Norway on the basis of a few die observations (13). Knowledge on die transport between mints is being refined, such as BOGUCKI and MAGIERA's (10) and GUNNARSSON's (24) demonstration of die export from Denmark to Poland, as well as GUNNARSSON's (25) fundamental new hypothesis on which York dies were used in York and which ones were exported to Lund. FEVEILE's preliminary study of the Damhus hoard (17) is a fine example of how the discovery of a hoard can change our vision of a coinage overnight, in *casu* the coinage of Ribe in the 9th century. The standard reference on Danish 11th century coins is still the over 100 years old work of Hauberg. As a help to use it properly, MOESGAARD has outlined the research history from the 18th century till today (96).

The import and use of Roman, Byzantine, Carolingian and early Anglo-Saxon coins in Viking Age Denmark have been treated by HORSNÆS (38, 40) and MOESGAARD (84). The role of coins in society in the Viking Age has been in focus in several major studies. The authors employ several methods: analysis of the nature of the find spots, the find distribution, the archaeological context, the secondary treatment of the coins and the connection with other artefacts as well as the composition of the finds. Detailed catalogues are provided. MOESGAARD (83) has treated the coinage and currency during the reign of Harold Bluetooth (*c.* 958–*c.* 987) in a monograph, which contains important contributions by INGWARDSON and GUERRA on secondary treatment of the coins and metal analyses. It is to be warmly welcomed that the thesis of INGWARDSON (54, *cf.* 53, 55) finally makes the exceptionally rich and archaeologically well-documented hoard material from the island of Bornholm available. She successfully includes archaeological evidence and non-monetary material. The thesis of AUDY (7) studies coin pendants from Scandinavia, of which a substantial part is from Denmark.

Several finds have been published, some in a preliminary way, others in detail (4, 17, 22, 31, 49, 54, 60, 63, 79, 83, 100). A rare Anglo-Saxon coin found on the Faroes is presented (91). Old finds, such as Iceland's largest hoard at Gaulverjabær (37) and the strange rolled English coin from Syvsig (68) have also benefitted from republications according to the present state of research.

The mechanisms behind the transition from the Viking bullion economy to the medieval managed currency in the third quarter of the 11th century has been debated between INGWARDSON (52) and MOESGAARD (87). In particular, the role of the king in this process and the importance of coins in the society and the economy were in focus. Several recent hoards from the second half of the 11th century provide new evidence for this discussion (63, 79, 90, 100).

The Middle Ages

The interest in the Middle Ages has increased considerably compared to the meagre harvest during the last survey period. First and foremost, POULSEN (103) has reviewed the coins 1074–1134 in detail. Retaining Hauberg's more than 100 years old typology, his main contribution is to scrutinize dates and mint attributions in the light of a comprehensive find catalogue. His arrangement of the series according to monetary regions rather than to reigns probably gives a more real picture of the organisation of the coinage. As it often happens, just when the article was published, a new type appeared (88). The use of metal detector in the urban excavation at Hafengang 11 in Schleswig brought about

an exceptionally rich find material that enabled MOESGAARD, HILBERG and SCHIMMER to identify the hitherto unrecognized coinage and managed currency of Schleswig during the late 11th and early 12th centuries (97), confirmed by the publication by LEIMUS and KUIDSOO of intelligible specimens of yet another Schleswig coin found in Estonia and formerly attributed to Utrecht (66). The full-scale excavation of the church of Hedensted brought to light a hitherto unknown issue of 12th century bracteates which enabled INGWARDSON to reevaluate the Jutlandic coinage of the period (51). HORSNÆS (39, 41, 45), MÄRCHER (45, 76), MOESGAARD (81, 88) and BONDESSON and BONDESON (11) have dealt in details with various coin types, often based on a full catalogue of known specimens. The possibility of issues in Odense in the 13th century is discussed based on find distribution (38). Several attempts to date and mint-attribute the anonymous base pennies of the late 13th–early 14th century have been published during the last decades with divergent results. They have recently been assessed critically in a study of the finds from an excavation of a castle (80).

Several studies deal with metrology and metal alloys. KRÆMMER has gathered all available information in the field on Danish coins 11th–14th c. (62). The Stockholm collection of late medieval Danish coins has been analysed by XRF (15, 35). Pieforts (18, 92) and minting tools (82, 85) have been systematically catalogued and new finds published. Finds from Aalborg have tentatively been interpreted as the 11th c. mint, but the silver content of the planchets and the hammered ingots seems to low (56). At the other end of the Middle Ages, RISVAAG has located the nobility letter of the mint master Jørgen Kock (105).

The circulation pattern and ways of using coins have attracted much attention. Several studies draw on excavation and metal detector finds. LINAA presents a regional study of Aarhus and its hinterland (67). ANDERSSON looks at the topography of the find spots of coin in Falsterbo, the seat of the famous Scanian markets (6). MOESGAARD has scrutinized both qualitative (86) and quantitative (94) find information to demonstrate wide-spread coin use at the countryside. Full-scale excavations of churches are rare, and INGWARDSON has exploited that of Hedensted to investigate coin use in churches (51). The fortunate find of an intact 13th century hoard in situ at Bjæverskov allowed a detailed examination of how the coins were sorted into bags according to age and origin. This illustrates how people handled wealth when old and non-local coins were made obsolete in a *renovatio monetæ* system (93). Other finds show the complete exclusion of old and foreign coins in the second half of the 12th c. (81).

Finally, a certain number of finds have been published (e.g. 6, 11, 32, 51, 58, 71, 75, 76, 80, 81, 86, 88–90, 93, 103, 109). Among the more unusual ones, we find early 12th c. forgeries at Bornholm (76), a Spanish late 12th c. gold coin (99), a rare Swedish örtug (12) and a hoard of Danish coins in Estonia (65). Thanks to renewed archival studies, MÄRCHER reinterprets a series of old hoards (e.g. 70).

The post-reformation period

Early modern and modern numismatics has benefited from die-studies or renewed detailed typologies by a group of amateur numismatists, including AAGAARD (e.g. 1–3), PEDERSEN (e.g. 101–102) and HARCK (e.g. 2–30). Compared to their earlier works, they now frequently include written documents and put their results into a general historical-economic context. The monograph by PEDERSEN on the coins of Christian VII (1766–1808) is an achievement (102). The monograph on the engraver Meybusch (c. 1645–1702) by KOLD (61) also deserves to be mentioned. It is first and foremost on medals, but the author also treats coins.

LEIMUS proposes a social and economic biography of the mint master Paul Gulden (64). MÄRCHER uses the rich archival material to evaluate the coin production (73). Moreover, he has conducted a series of studies on minting tools and technical innovations based on written documents, preserved machinery and observations on the coins themselves (69, 72, 74, 78). BJÖRK has found archival evidence for plans for Danish iron coin production 1952 (9).

HEIJNE uses her newly published find inventory of NE Scania (33) to describe the monetary transition from Danish to Swedish rule in the 17th century (34). JONSSON attempts to determine social status based on the composition of the hoards (59). ANDERSEN and HORSNÆS looks at the growing number of finds of coin weights as evidence for use of renaissance gold coins, albeit their rarity among the finds (5). JENSEN analyses a 19th century painting of a money transport to the Stock Exchange (57). GRINDER-HANSEN uses literature and ethnographic sources to describe coins given to street musicians in the early 20th century (19). GULKLETT describes how a rare double thaler has been inherited in a Faroese family during 8 generations (20) and MOESGAARD publishes coins used as jewellery for the wedding dress (95). ERIKSEN describes the uses of coins for propaganda during WW2 (14).

VEDSTED attempts to identify the owner of the impressive 17th century Balle hoard (110). Several finds have been

published (e.g. 50, 71, 75, 104). The hoard publications by the publisher *Numismatik og Pengehistorie* deserve to be mentioned as they offer a full photographic coverage of the coins (75).

In a series of short notes, SKOVLY (e.g. 107) and HANSEN (28) have described various issues of tokens and the like. On the contrary, banknotes have not attracted much attention during the survey period (27).

SWEDEN

Cecilia von Heijne

The intention of this survey is to present a broad overview of Swedish numismatics during the period 2014–2020 and a selection of publications in the bibliography. Some major fields of interest can be discerned that are common between the Nordic countries, and will be in focus (also see *Denmark and Iceland*, Jens Christian Moesgaard):

The role of coins in society. Including monetary history, foreign and domestic coins, economic and non-economic coin use, contextualization through archaeological and historical research.

The national coinage. Involving coin production, typology, dating etc.

Coin finds. Such as publications of finds, finds as evidence for the coinage and the role of coins.

The research and the publications included in this survey concern Sweden and the period from about 600 AD until today. Earlier periods and Medals are described in other parts of the Survey.

Sweden's borders have changed over the centuries and the monetary history is related between several Nordic and Baltic countries. In broad strokes, this means that the provinces of Scania, Halland and Blekinge became Swedish 1645/58 and were before that Danish. Swedish coins also appear in Danish finds and vice versa (e.g., 11, 39, 80 105, 106, 110, 175, 159, 160, 163). Finland and Sweden were joined together as one country until 1809 (e.g., 30, 32, 31, 118, 114, 112, 141, 170, 193). Norway and Sweden formed a union between the two separate kingdoms for a time in the Middle Ages and between 1814–1905 (e.g., 57). Extensive contacts took place between the Swedish island Gotland and Estonia in the Middle Ages (71, 72, 123, 135, 145, 151). Some of the publications will therefore be listed under several countries in the bibliographies of the Survey.

General

Periodicals

The periodical *Nordisk Numismatisk Unionsmedlemsblad* (NNUM) is published regularly four times a year. On a more irregular basis, the *Nordisk Numismatisk Årskift* is published (NNÅ, Nordic Numismatic Journal). They are common between the Nordic countries.

In Sweden, the *Svensk Numismatisk Tidskrift* (SNT) is published regularly with eight issues per year by the Swedish Numismatic Society. The Numismatic Institute at Stockholm University publishes a digital periodical named *Myntstudier* since 2003. The number of issues per year varies.

Comprehensive studies

Among the comprehensive studies that span over wide periods, an overview by DELZANNO (28) should especially be mentioned. He has collected information and images of objects from Sweden's monetary history from 995–2022. His work is divided into two catalogues that cover Sweden's coins from c. 995 until today, banknotes and a selection of Swedish medals. The work has a rich visual material and is adapted for collectors by stating valuation prices. DELZANNO (27) has also released a volume on gold coins from Sweden 1512–2020, following the same concept.

LAGERQVIST (147) has for decades shared his great knowledge and experience regarding the Swedish coin system, prices, and wages from the medieval period until today. A new edition of his best-selling book on the topic has been released.

The project *Sveriges Mynthistoria Landskapsinventeringen* was initiated in the 1980's and has since then delivered catalogues of finds from Swedish provinces. The ambition is to present all finds from each province on a general level. So far inventories of finds have been published for 20 Swedish provinces in 14 volumes. The latest additions cover the provinces Skåne, Kristianstad län (VON HEIJNE (77)), Västmanland (WISÉHN (209)), Gästrikland and Hälsingland (GOLABIEWSKI LANNBY (51)). In Finland the first volume in a related series has also been published (EHRNSTEN and KUNNAS-PUSA (32)).

Divina Moneta – Coins in Religion and Ritual examines coins as part of ritual and religious practices from a wide

period and territory, stretching from Roman to the Post-Reformation period, but with focus on the Middle Ages, and links to several countries in large parts of Europe (BURSTRÖM MYRBERG et al. (21)). This is the second publication in the series *Religion and Money in the Middle Ages*.

The Coin Cabinets

The national numismatic collection, i.e., the Royal Coin Cabinet in Stockholm, holds vast collections. Other major numismatic collections and learning centers are the coin cabinets in Uppsala and in Lund.

The Royal Coin Cabinet has faced major challenges during the period. The museum has been involved in three separate legal processes. Two of the lawsuits were closed before 2020, and the third is likely to be ended in 2022. One lawsuit concerning theft is described in a documentary by Swedish Television. Another major task has the move of the museum been, caused by increased rent (CARLSSON et al. (24), RAMBERG (173)). The museum is now being re-established in the same building as the Swedish History Museum with the name *Economy Museum – Royal Coin Cabinet*. The collections contain c. 650.000 objects. Major inventory processes have been conducted during the last decade. The digital publication of the objects has gradually increased (e.g., AUDY (8)) and a major project is at hand.

The Uppsala University Coin Cabinet issues two publication series. In *Studia Numismatica Upsaliensia* two volumes have been published on the minting in Akragas (WESTERMARK et al. (199, 200)) and one a theme of music and numismatics (WISÉHN et al. (210)). The other series is *Uppsala University Coin Cabinet Working Papers*, present reports and studies on various topics (in selection HAIDENTHALLER (69), MÄKELER (153, 156)). The collection of the coin cabinet in Uppsala contain c. 40.000 objects and large parts has successfully been digitized in the system Alvin and are now accessible through the coin cabinets website (HAIDENTHALLER (70), HEDLUND (74), MÄKELER (155–158)).

The Coin Cabinet at the Historical Museum at Lund University has a collection containing c. 54.000 objects. It contributes to research and education in various ways, for example by managing coin finds from the region Scania. The keeper of the coin cabinet is also involved in several research projects parallel to her curatorial position at the museum (INGVARDSON (103–106)).

The Numismatic institute at Stockholm University

The holder of the chair of the Numismatic Institute (Numismatiska Forskningsgruppen) at Stockholm University was Professor K. JONSSON until 2020 (JONSSON (119–131)). After his retirement J. C. MOESGAARD was appointed professor (MOESGAARD (160–165)). The chair is financed by the *Gunnar Ekström foundation for numismatic research*.

The latest book in the series *Corpus Nummorum Saeculorum IX–XI qui in Suecia reperti sunt, Catalogue of Coins from the Viking Age found in Sweden* (the CNS Series), was printed in 2010. Instead, coin find are digitally published at the website of the Numismatic Institute. So far 13 articles on coin finds, following the CNS format, are available at the website.

A series of metal studies on coins have been carried out in collaboration with the Archaeological Research Laboratory. Reports are published online in the series *Metallanalyser av mynt / Metal analyses of coins* (ERIKSSON (39–40), HELJEBACK (80), JONSSON (115), LINDBLAD (152)).

The Numismatic Institute issues the digital periodical *Myntstudier*.

Doctoral dissertations

Two doctoral dissertations have been presented at the Department of Archaeology and Classical Studies at Stockholm University. F. AUDY's thesis deals with coins from the Viking Age as pendants (AUDY (7)) and L. EIKJE RAMBERG's thesis is based on Norwegian coins from the 12th century (EIKJE RAMBERG (33)).

The dissertation of M. TUNEFALK, the Department of History at Stockholm University, analyses medals and conceptions of social status from 1650 to 1900 (TUNEFALK (197)).

From the University of Copenhagen in Denmark, G. T. INGVARDSON's dissertation on Viking-Age coin finds from Bornholm is closely related to other Scandinavian finds from the same period, and especially from Gotland and Scania (INGVARDSON (106)). From Finland and the University of Helsinki, F. EHRNSTEN's thesis on finds of medieval coins in Finnish churches is also an important contribution to Sweden's monetary history (EHRNSTEN (31)).

The Numismatic associations

The Swedish Numismatic Society has published four monographs. The volume *Myntstudier* was issued in honor of Professor K. JONSSON and contains articles on various topics (TALVIO et al. (194)). The numismatic collection of

Elias Brenner, sometimes called “the father of Swedish numismatics”, was sold in 1721 to a Russian nobleman and after that ended up at the Pushkin Museum in Moscow. The Brenner collection, together with Pavel Grigorievich Demidov’s collection, is published in the series of the Swedish Numismatic Society (KRASNOBAEVA (144)). In two separate volumes the medieval Swedish monetary history is dealt with from different perspectives. In *Acta Monetaria Sueciae* Sweden’s documents on coins, prices, and precious metals 1164–1318 are accounted for (FRANZÉN et al. (42)). The other book presents a remarkable find that was made during an archaeological excavation of a grave at a monastery. The coins show the organization of the Swedish monetary system around year 1200 (GOLABIEWSKI LANNBY (52)).

The Numismatic Club of Uppsala has published a new anthology that contains a wide range of subjects to commemorate the 50-year anniversary (EKSTRÖM et al. (35)).

Tokens is a subject that has been increasingly noticed by the numismatic associations. A comprehensive catalogue of tokens from Gothenburg is published (GUSTAVSSON (68)) and a corresponding book has been presented for tokens from Scania (THELIN et al. (196)).

The Viking Age

Coin finds that date to the Late Germanic Iron Age (7th–8th centuries) are extremely scarce in Sweden and is therefore a rare research topic. However, the following period, the Viking Age, attract extensive interest. The Viking Age dates from a Swedish numismatic perspective from c. 800 to c. 1140. The coin finds were initially dominated by Islamic coins, but from c. 985 mainly German and Anglo-Saxon coins are imported. The domestic coinage is introduced c. 995. The coins usually contain a high silver percentage which is supported by metal analyses of coins dating from the 7th to 12th centuries (JONSSON (115)). The high silver content is an important basis for the Viking-Age bullion economy.

Several books and papers have been published with a broad approach to the Viking-Age hoards and with the ambition to analyse societal aspects related to them. They have a stated ambition to place the material in an archaeological or historical context and strive to investigate the deeper meaning and connection of the coin finds to the people of that time. The Eastern contacts involving slave trade and the import of Islamic coins is examined, and especially in the *Dirham for Slaves* project (JANKOWIAK (108) but also (125, 134, 143, 146)). Among the earliest imported Islamic coins Sasanian silver coins occur. KARLSSON has published a catalogue to help identify Sasanian types, mainly from the period 224–651 (KARLSSON (134)).

Regarding Byzantine influences and how Byzantine coins were used in Scandinavia, especially two publications should be mentioned: *Images of power. Byzantium and Nordic Coinage c. 995–1035* (ANDROSHCHUK (2)) and *Byzantium and the Viking world* (ANDROSHCHUK et al. (4), including AUDY (6)).

Studies of the Western coins in the Viking-Age finds are often based on analyzes of specific finds (e.g., 113, 122, 119), but there are also wider discussions (e.g., JONSSON (120), MÄKELER (154)).

The first domestic coinage in Sweden started in the town Sigtuna c. 995. About the same year a new royal coinage was also introduced in Lund (then Denmark) and in Norway. They all initially imitated Anglo-Saxon coins and after some years Byzantine influences are also visible. Through die-studies contacts has been proved between moneyers in e.g., Sigtuna, Denmark, Pomerania, Ireland, and England (GUNNARSSON (58–64)).

About 70% of the Swedish Viking-Age coins finds are found on Gotland, and they are usually paid particular interest (e.g., 22, 55, 56, 54, 105, 113, 118, 119, 122, 136, 137, 138, 146, 172). Viking-Age finds from other regions have also been published, e.g., from the provinces Närke (AUDY et al. (9)), and Uppland (JONSSON (125)). The laws and regulation regarding metal detecting is restrictive in Sweden and even though the number of recorded finds increases, the quantity has not been as dramatic as in many other countries.

The Middle Ages

From a Swedish numismatic perspective, the Middle Ages is usually dated from c. 1140 to 1523, when Gustav I became king. During the Middle Ages, the proportion of foreign coins in circulation declined and domestic coins became increasingly dominant. A few large studies have been published with focus on medieval numismatics, but most of the publications are short articles.

One of the more extensive publications is *Acta Monetaria Sueciae* in which Sweden’s documents on coins, prices, and precious metals during the period 1164–1318 are published (FRANZÉN et al. (42)). Another important study

is EKRE's posthumously published book about the medieval town Lödöse as a mint. Archaeological excavations have generated material from medieval coin production that is unique for Sweden (EKRE (34), also JONSSON (129)). As mentioned above, an archaeological excavation of a grave in a monastery in Skänninge revealed a find of great importance. The grave contained two separate coin depots that represents the different coin systems existing in Sweden around the year 1200 (GOLABIEWSKI LANNBY (48, 52), JONSSON (130)). Coin finds from the Middle Ages related to churches and religious practices on a more general level, and not specifically for Sweden, are discussed in *Divina Moneta* (BURSTRÖM MYRBERG et al. (21)).

The development of the domestic coinage has been published in a series of twelve short papers in *Svensk Numismatisk Tidskrift* by HOLMBERG. It starts with the first the coinage c. 995 and continues chronologically to the 16th century. Together they constitute a good overview of the Swedish medieval coinage (HOLMBERG (88–100)).

In a series of papers SVENSSON has dealt with the minting of bracteates, monetary policies, and periodical recoinages. He makes comparisons between Swedish, European, and especially German bracteates (SVENSSON (180–191)).

Medieval coin finds found in Sweden have been documented by several authors (e.g., 43, 48, 52, 53, 75, 79, 111, 112, 116, 130, 131, 132, 148, 174), and also finds of medieval Swedish coins in other countries (e.g., 11, 30, 57, 110, 141, 145, 162, 163, 193). In the latter category, EHRNSTEN's doctoral dissertation should be emphasized. It deals with coins found in the churches of Finland and how the use of money developed during the Middle Ages (EHRNSTEN (31)). The typology and presence of Gotlandic Örtugs in Estonia has been reported by HALJAK (71, 72).

The Post-Reformation period

The Post-Reformation period here refers the time after 1523. In several comprehensive studies of the period, coins from more recent times constitute a large part of the material. This is for example the case in DELZANNO's overview of Sweden's coins (DELZANNO (27, 28)).

Various forms of analyzes and regulations for the domestic coinage, such as coinage techniques, coinage rights, typologies, have mainly been carried out in several articles. One of the more recurring authors within this field is HEMMINGSSON (81–86). In addition to the domestic coins, tokens have been treated by several writers (47, 50, 68, 179, 195, 196). Banknotes has constituted a relatively limited area of research, but Sweden's banknote history during the 20th century has been presented in a series of articles in the Swedish Numismatic Journal (WIDELL (205–208)).

A large part of the material in the series *Sveriges Mynthistoria Landskapsinventeringen* are coins from the Post-Reformation period (51, 77, 209). Finds that are recurrently attract interest are dated to the 17th century and come from northern Scania and southern Småland. The hoards have a connection with the war between Denmark and Sweden (VON HEIJNE (76), INGVARSDON (103)). Finds containing coins from the time of Gustav I in the 16th century have been analyzed by E. and K. JONSSON (117, 128). Other coin finds from the period have also been studied and documented (e.g., 126, 175, 159).

NORWAY

Svein H Gullbekk, Jon Anders Risvaag, Anette Sættem, Linn Eikje Ramberg, Håkon Roland

This has been an active period of publication on the monetary history of the Norway since these Surveys began. Again the emphasis is on Viking Age and medieval periods. Several monographs and phd dissertations of importance have been published including studies of Norwegian coinage by JOSEFSEN (41, 42, 43), coin finds and monetary history 1050-1319 by GULLBEKK and SÆTTEM (35), and two phd-theses respectively on coinage and use of money in the twelfth century by RAMBERG (47) and a comparative study of *Commercialisation and urbanisation c. 986–1448* between Denmark and Norway by GUNDERSEN (37). A multidisciplinary study of the practice behind the minting in the Archbishop's Palace in Trondheim investigates the technical aspects and the range and incentive of the Archbishop's coin production in the beginning of the 16th century are studied in detail by ULSETH ET AL (59).

The second and final volume of SCBI Norwegian Collections Part II. Anglo-Saxon and Later British Coins, 1016-1279, *Sylloge of Coins of the British Isles 66* by SCREEN (53) concludes this project. A multidisciplinary project on *Religion and Money: Economy of Salvation in the Middle Ages* funded by the Norwegian Research Council has provided a platform for international collaborations and several publications such as a collected volume on *Money and the Church in Medieval Europe, 1000-1200* edited by GASPER and GULLBEKK (14) and a special issue of the *Schweizerische Numismatische Rundschau on Coins in European Churches: Religious Practice and Devotional Use of Money*, edited by ZÄCH and GULLBEKK (60) with a number of articles on subjects related to religion and money (16, 19, 23, 26, 38, 39, 54, 61).

The question of monetization and different aspects of money and its use have been discussed in several articles (10, 15, 17, 21, 35, 37, 47, 52, 55, 56, 57) together with studies of coinage as means of communication (8, 24), coinage and literacy (20), and the administration of coinage (40).

While few new hoards have appeared in recent years, the excavation Project on Heimdalsjordet (nearby the famous Gokstad ship-burial mound) provides new evidence for a proto-urban settlement some 20 kilometers east of the Viking town Kaupang including c.200 single finds from the period that still awaits publication, but with a survey and discussion (28). As in many countries metal detecting has produced significant numbers of finds with a methodological and ethical discussion on the phenomenon (36). The famous find of a Norse penny on the East Coast of America is revisited (22).

Early modern and modern numismatics has benefited from die-studies and renewed detailed typologies by AAGAARD (1, 2, 3, 4, 5) and a catalogue of Norwegian coins 1449-1814 by THESEN (58). Norwegian Central Bank bi-centenary in 2016 has resulted in a number of monographs and studies of which two have particular interest for modern numismatic research, AUSTNES (7) and EITRHEIM ET AL (10).

FINLAND

Frida Ehrnsten

There are very few active numismatic scholars in Finland, and no regular academic teaching. The Coin Cabinet of the National Museum of Finland, which is nowadays part of the Collections and Research Department, only has one single keeper for the numismatic collections. As it is not possible to study numismatics at university level, the number of academic publications remains modest. There has, however, been a small increase in the number of publications concerning coin finds, as well as articles aimed at a general audience. Most of them have been published either in Finnish or Swedish by a few authors writing about various periods.

The number of numismatic books published in Finland is small. In 2019 EHRNSTEN (11) published her dissertation on medieval coin use in Finland, this being only the 6th doctoral thesis in Finland in the field of numismatics. In 2014 the Numismatic Society of Finland published a Festschrift on the occasion of its centenary, edited by TALVIO (47), with contributions from both scholars and amateurs. TALVIO also published an illustrated book on the treasures of the Finnish Coin Cabinet (51), including a history of the collection from the middle of the 18th century to the 2010s. ORAVISJÄRVI (34) has written a popular book, the first of its kind in Finnish, on the origins of the coinage in the antique world.

The other publications deal mostly with coin finds. A guide to Finnish coin finds aimed especially at metal detectorists was published by ORAVISJÄRVI (35). Inventories of coin finds from the provinces of Uusimaa and Karelia have been published by EHRNSTEN and KUNNAS-PUSA (15, 16), the Karelian finds also including those from the former Finnish Karelia now belonging to Russia. These are the first two parts of an inventory intended to cover the whole country. In 2019, the Swedish web journal *Myntstudier* devoted a whole issue to Finnish coin finds (17, 29, 33, 39, 44, 52).

In 2014 TALVIO (50) published an article on the numismatic aspects of the Viking Age, in a multidisciplinary publication dealing with the period. The coin finds from the Viking Age (ca 800–1050) have since increased significantly due to the activity of metal detectorists, but most of the new material is still unpublished. Some short summaries of the new finds have been published by EHRNSTEN (7, 9, 14). Some of the Sigtuna imitations found in Finland have been published by GUNNARSSON (17) and ORAVISJÄRVI (38) has presented Finnish Late Iron Age coin imitations in a catalogue for coin collectors. JONSSON (26, 30) has published new interpretations on a Viking Age chain with coin pendants as well as an article on the import of German coins to the former Finnish Karelia. The largest of the new Viking-Age hoards has been published by EHRNSTEN (13) in a paper aimed at a wider audience. TUOMENOJA (53) has written about the find locations of Viking Age hoards, while ORAVISJÄRVI (37, 39, 41, 45) has published short presentations of a number of finds.

Medieval coins have been the subject of many studies during the last years, although both the written sources as well as the find material are very limited. Apart from her doctoral thesis EHRNSTEN (2, 3, 5, 6, 8, 12) has covered the medieval period (ca 1100–1560) in several articles, both on a general level and dealing with coin finds from specific sites. JONSSON (24, 25, 27, 28, 29) has published new research on the medieval find material from the church in Jomala, the minting during Karl Knutsson Bonde and Scandinavian finds of coins minted in Turku. TALVIO (48, 52) has written about a 14th century coin hoard from Turku as well as the örtugs bearing the name of Saint Henry, minted in Turku in the 1520's.

The coin material from the earliest known church site of Finland, Ristimäki in Ravattula parish, has been briefly discussed by RUOHONEN (43, 44), but we still wait for a more thorough study of this very important material. LEIMUS (32) has published a rare örtug minted in Turku in the 1520s found in Estonia. The coin finds from the episcopal site of Kuusisto have been published by KIVISTÖ (31). In an article on the minting in Turku and Kuusisto in the 1520's, HEMMINGSSON (22) was able to show that one of the Danish schilling types of Sören Norby was actually minted in

Kuusisto castle. SCREEN (46) has discussed medieval coin use in Finland on the basis of the written source material.

Coins from the modern period (ca 1560–) have not been studied much, except by EHRNSTEN (1, 4, 10) in her articles on finds from churches and in a few other texts, such as the one concerning finds of gold coins in the centennial publication of the Finnish Numismatic Society (49). According to the Finnish legislation, all coin finds older than 100 years must be reported to the authorities, but this does not, of course, always happen, as is shown by the case of a dispersed 16th century hoard discussed by ORAVISJÄRVI (42). He has also written on finds of plate money from the Oulu region in north Ostrobothnia (40). HYÖTYNIEMI (23) has presented some speculations on the possibility of minting in Viipuri (Vyborg) in the 1620s.

Research on modern numismatics has concerned mostly paper money and tokens. The history of Finnish banknotes has been covered by HEINONEN (18, 19, 20, 21) in his four books published by the Bank of Finland and in articles in the journal of the Finnish Numismatic Society. ORAVISJÄRVI (36) has written on the local war-time notes issued in Finland in 1790. The research on tokens has been furthered by VUORI (54–59) in several articles, of which a selection is mentioned in this bibliography.

BALTIC STATES

Ivar Leimus

Numismatic research in the Baltic States from 2014–2020 was mainly conducted by the same scholars as during the previous period. First and foremost, general works summarising the current stage of the research should be highlighted. A very impressive volume was published by GRIMALAUSKAITĖ and REMECAS (19, 20) in Lithuania, but the book by LEIMUS, KIUDSOO and HALJAK (50) in Estonia is also worth mentioning. A new numismatic periodical covering the three Baltic States was launched by the Association of Baltic Numismatists: two volumes have been issued to date, edited by EHRNSTEN (15) and LEIMUS (37). In addition, a volume of papers given at the international numismatic conference in Vilnius in 2012 was compiled by REMECAS (54). A special volume of numismatic and archaeological contributions was dedicated to Tatjana Berga on her 75th birthday, edited by VASKS and VILCĀNE (65).

In neighbouring Belarus, SINCHUK (SINCZUK) (61) compiled a book of his reviews of numismatics, archaeology and sphragistics.

However, as usual, the majority of writings dealt with new numismatic discoveries. These have become particularly numerous due to metal-detecting, but have also resulted from archaeological excavations and random finds. In Lithuania and Belarus, GRIMALAUSKAITĖ (18) analysed a hoard of Roman denarii, while she and SINCHUK (21) unveiled a mid-18th c. hoard of copper solidi. In Latvia, BERGA (1) uncovered a remarkable hoard of mid-13th c. as well as medieval and early modern-era counters found in Riga (4). Also in Latvia, DUCMANE (14) and VĀVERIS (66) provided an overview of a 16th c. deposit of coins and silver artefacts, and MUIŽNIEKS (52) studied the custom of placing coins in graves. In Estonia, KOOVIT and KIUDSOO (33) analysed a significant Roman-era deposit of coins and artefacts. However, finds from the Viking era are particularly numerous in Estonia, as made public by KIUDSOO (27–29), LEIMUS (41, 45), LEIMUS and KIUDSOO (49), LEIMUS, KIUDSOO and TAMLA (51), KONSA, LEIMUS, KANGERT and MÄESALU (31), ORAS, LEIMUS and JOOSU (53) and KONSA, LEIMUS, SMIRNOVA and KALDRE (32). KIUDSOO (30) also examined rare medieval Livonian coins found at local chapel sites, while TVAURI (63, 64) analysed a number of medieval and early modern coin hoards from Southern Estonia.

Another traditional field of numismatics is the compilation of catalogues and the investigation of coins and coin groups. In Lithuania, IVANAUSKAS (24) compiled a catalogue of Lithuanian counters and RUZAS (56) published the collection of Lithuanian coins of the Money Museum of the Bank of Lithuania. In Estonia, HALJAK (22, 23) compiled a catalogue of classical Gotland örtugs and discussed enigmatic pseudo-Russian kopeks dating from the turn of the 16–17th c. In Latvia, BERGA (2) examined an anonymous Riga pfennig dating from the 15th c. In Estonia, LEIMUS alone (38) and jointly with KIUDSOO (48) unveiled a couple of new denier types from the 11th c. LEIMUS (47) also discussed the chronology of Byzantine miliaresia of Basil II and Constantine VIII and the Danish coins found in Estonia until the era of the Crusades (42) and penned a study on Livonian medieval gold coins (35). Finnish numismatist SARKKINEN (57, 58) studied some Tallinn and Riga coin types from the 16th c. and Swedish numismatist JONSSON (26) discussed the probable Baltic origin of certain imitations of Anglo-Saxon pennies.

The history of minting earned quite a lot of attention during the period under discussion, in particular in Latvia, where DĀBOLIŅŠ (6–9, 11–13) extensively studied mint masters and the mint of Riga in the early modern era. BERGA (2) provided a broader overview of mints in Latvia from the 13th to 18th c. In Estonia, LEIMUS (37, 44, 46) investigated the lives and careers of mint masters from the 16th c. in Tallinn and Courland.

KÜNG (34) and LEIMUS (43) in Estonia and SINCHUK (60, 61) in Belarus (albeit with regard to Lithuania) observed the use of money and its different counting systems. LEIMUS (39, 40) also discussed broader problems in numismatics, e.g. the history of monetary unions and the problem of silver supply in the Middle Ages.

Furthermore, the history of numismatics and coin collections attracted the attention of researchers during this period. BERGA and DĀBOLIŅŠ (5) investigated the role of Riga numismatist and archaeologist Anton Buchholz in

organising a congress on archaeology in 1896. DĀBOLIŅŠ (10) also studied the very origins of numismatics in Latvia. In Lithuania, GRIMALAUSKAITĒ (16, 17) discussed the activities of well-known Polish-Lithuanian numismatist and historian Eustachy Tyszkiewicz as well as certain events in the history of the coin collection in the Vilnius Museum of Antiquities. VĀVERIS (67) investigated the fate of the coin collection of the Cabinet of Art of the University of Latvia. Finally, SINCHUK (59) compiled a Belarusian-Lithuanian numismatic bibliography for the years 1950–2000.

POLAND, UKRAINE AND BELARUS

Mateusz Bogucki and Grzegorz Śnieżko

Numismatic publications from Poland, Ukraine and Belarus are listed here together. This is a result of the common monetary history of these states. From the late Middle Ages to 1795, Poland and the Grand Duchy of Lithuania were connected in a union, from 1385 a personal one, and from 1569 a real one, when one state was established – the Polish-Lithuanian Commonwealth. It also influenced the unification of monetary relations with the reform of King Stephen Báthory from the year 1580 that introduced the same coin, as the culmination point. Splitting of numismatic works devoted to the same issues according to contemporary borders has no historical justification. However, publications on, for example, the coinage of the Grand Duchy of Lithuania, published in Lithuania, are listed in this volume by Ivar Leimus.

Since the lack of space, the articles published in Journals, some conference proceedings and collective publications, that are easily available on the Internet won't be listed separately. We are convinced, that editors of given publications guarantee the high scientific quality of published articles. It is worth noting that SINCCHUK published a bibliography of the numismatics of Belarus and Lithuania for the years 1950–2000 (10), while KOTSUR presented the historiography of Ukrainian research on hoards with extensive literature (28).

Journals, conference proceedings and collective monographs

Wiadomości Numizmatyczne (5) by the Polish Academy of Sciences and *Notae Numismaticae - Zapiski Numizmatyczne* (2) by the National Museum in Cracow, both published annually, remain the main Polish academic journals on numismatics. *Biuletyn Numizmatyczny* (1) and *Warszawski Pamiętnik Numizmatyczny* (4) are intended for collectors but often contain articles with high scientific importance.

The history of Polish numismatic journals was summarized by PIŃIŃSKI (11). In Ukraine the most important periodicals are: *Львівські Нумізматичні Записки* [Lviv Numismatic Notes] (7), *Нумізматика і фалеристика* [Numismatics and Phaleristics] (8) and *Український нумізматичний щорічник* [The Ukrainian Numismatic Annual] (9) published since 2017. Among the journals from Belarus, two titles can be mentioned: *Rus', Lithuania, Horde: Journal of Numismatics and Sigillography* (3) and *Банкаўскі Веснік* [Bank Bulletin] published since 1992 (6). Materials from the conferences are regularly published. In Poland, volumes with papers from the conference series „Money and Banks” (16–17) and the 15th Numismatic Session in Nowa Sól (20) were published. Three volumes with articles presented during the Numismatic Forum (13–15) are also available. In Ukraine, materials from three subsequent international conferences from the series „Actual problems of numismatics in the system of special branches of historical science” (12, 18–19) were presented, while in Belarus abstracts of papers were presented during the 3rd Scientific readings in memory of prof. Valiancin Navumavich Rabceovich (21).

General works

The volume on the Piasts in the 10th–13th centuries (22), as well as the book dedicated to professor Stanisław Suchodolski (24) were published. Moreover, in Poland the results of a project devoted to the use of ancient coins found in medieval and modern contexts (23), a catalogue on Polish medieval coinage (26), an overview of the Polish coinage from its beginnings to the present day (27) and a study of the mint production of Wschowa (29) were published. In Ukraine, the monograph by BOIKO-GAGARIN on counterfeiting the coins was released (25).

Collections

Works on the numismatic collections can be divided into two main categories. The first are articles of a small volume published in journals or conference volumes (31–32, 36–39, 43). The second are extensive, richly illustrated catalogs with descriptions of objects that form the entire collections of coins, banknotes, plaques, medals and jetons (33–35, 40, 42). A conference devoted to the numismatic collections lost during the wars was also held in Poland (41).

Coin finds

Coin finds are introduced into the scientific literature regularly and they represent the most numerous group of publications (44–113). In Poland, it was crucial to publish five volumes of the series “Frühmittelalterliche Münzfunde aus Polen”, where all the finds from all over Poland from around 650–1150 were gathered (49–53). In this country, studies of individual treasures are also published in the form of separate monographs (78, 80, 88, 102, 104) and articles (54, 61, 79, 81, 112). Whereas in Belarus and Ukraine monographs concern hoards found in particular regions (44–46, 56, 69, 84–85, 92, 108). In Poland, cumulative and single finds from archaeological sites of various character are also published, e.g. towns (59, 64–65, 77, 86, 89, 104–105) or sepulchral (48, 57, 87, 97, 106, 99, 113). In Belarus and Ukraine, on the other hand, much attention is paid to the problem of monetary circulation reconstructed on the basis of registered finds (46, 66, 82). The vast majority of the hoards from the territory of Ukraine was published by MIKHELSON and TROST’YANSKIY (76). Preliminary information on hoards and single finds from Ukraine and Belarus can be found in the „The Viking Era in Eastern Europe in Numismatic Objects of the 8th–11th Centuries” series (55–56, 60, 71–74, 91–94, 95, 108)

Early Middle Ages

Works on early medieval numismatics in Poland focused on the circulation and function of foreign (114–118, 125, 121–123, 131) and domestic (132, 135, 157, 148) coins, among which two ADAMCZYK’s monographs should be distinguished (114, 117). An important subject of the research was the coinage of the Piast dynasty (124, 143, 161–165) - the GORLIŃSKA’s monograph on the participation of Jews in the organization of the coinage of Mieszko III (136) was published. Coins of new types have been discovered (127, 126, 138, 156). Much work was devoted to the study of the chemical composition of coins and the origin of silver (128, 133–134) - in this context, the works of ROZMUS on silver and lead mining draws attention (61, 104, 130, 159). BEKTINEEV summarized the problem of the monetary circulation in Belarus (120). Several works were devoted to the oldest Rus’ Coinage in Kiev (36, 119, 140) and later local coinage (129, 137, 139)

Late Middle Ages

There are few publications on the numismatics of the late Middle Ages. Coin catalogs (137, 158) and problem papers in the form of articles can be distinguished here. Among them, two thematic blocks stand out, namely the Pomeranian (138, 141, 156, 152, 144) and the Silesian coinages (148–149, 147, 151).

Modern Times

Works devoted to modern period are also few, especially compared to the publications concerning the early Middle Ages. The problem publications include a book on the monetary policy of King John Casimir in the parliamentary discourse (166) and publications on the mints production (167–168, 170, 172, 176, 186). The remaining works are catalogs covering the entire minting activity of the rulers (169, 182–183) or detailed studies on coins of single denominations (171, 177, 179, 180–181, 184, 187).

Exonumia

Non-monetary finds, related to numismatics, include seals, coin weights, tokens and jetons. It is worth paying attention to the two-volume book of MUSIN and WOŁOSZYN, which is a summary of the knowledge about the so-called small lead seals of the Drohiczyn type (197). In addition, single specimens and summaries on commodity money were also published, including the characteristic ingots (199, 201). Findings of seals, tokens and jetons are also prepared (190–194, 196, 200). The numismatic artifacts of the last category are covered by two catalogs published in Poland (188–189).

CZECH REPUBLIC – SLOVAK REPUBLIC

Roman Zaoral, Jiří Militký and Filip Hradil

Results of the numismatic research, realized in the years 2014–2020, were mostly published in three Czech numismatic periodicals, issued by the National Museum in Prague (*Numismatické listy (NListy)*, vols. 69–75, ed. Polanský, four numbers a year), by the Centre for Medieval Studies in Prague (*Numismatický sborník (NSb)*, vols. 28–34, ed. Militký, two numbers a year), and by the Moravian Land Museum in Brno (*Folia numismatica (FN)*, vols. 28–34, ed. Kašparová, two numbers a year). Besides that, shorter contributions came out in the popular education journal of the Czech numismatic society (*Numismatický časopis*, ed. Mašek, four numbers a year). In Slovakia, a new number of the periodical *Slovenská numizmatika (SN)* appeared in 2015 (vol. 20, ed. Hunka) and the journal *Denarius* continued in its publishing activity (vols. 4–10, eds. Budaj, Hunka).

The rich numismatic production consists of studies, monographs, catalogues, museum collection inventories, and reports on new coin finds and hoards. In the first place, it is worth highlighting the edition series of the National Museum in Prague called Bohemian, Moravian, and Silesian coins of the tenth to twentieth centuries, making Karel Chaura's coin collection available to the professional and lay public. Three volumes of the series were published from 2014 to 2017: coins of the House of Habsburg-Lorraine 1740–1918 (BOUBLÍK (255)), government and private numerical tokens (SMÍŠEK (334)) and special purpose tokens (CAJTHAML and SMÍŠEK (329)).

The Middle Ages is, among others, represented by the monographs concerning the 13th-century Moravian deniers and bracteates (GROSSMANNOVÁ (53)), Prague groschen (CIHLÁŘ (41)), Hungarian florins and ducats (BUDAJ et al. (36)), the hoards from Chýště (LUKAS (201)), Levínská Olešnice (SCHNEIDER et al. (233)), Mojmírovce (BUDAJ (138)), Vamberk (BRÁDLE (128)), Rybné (BRÁDLE (130)), Radíkovice (BRÁDLE et al. (133)), and Kojetín (NOVÁK et al. (222)) as well as by the inventory of early medieval coins from the collection of the West Bohemian Museum in Pilsen published in three parts (LUKAS and HUS (80–82)). Monographs and studies in monetary history analyze late medieval accounts (SUCHÝ (283)), taxes, the money of pilgrims, papal collections, as well as prices and wages (ZAORAL (110–122)).

The modern period is represented by the monographs concerning currency policy in Moravia from 1657 to 1740 (GROSSMANNOVÁ (257)), the hoards of Uničov (HRADIL (312)), Horní Rápotice (MILITKÝ, HRADIL et al. (321)), Frýdlant (TIŠEROVÁ et al. (327)), Bošilec (CHVOJKA et al. (314)) and Týn nad Vltavou (JOHN et al. (317)) and as well as by two inventories which record Polish coins, medals and banknotes from the collections of the Moravian Land Museum in Brno and the Silesian Land Museum in Opava (GROSSMANNOVÁ et al. (2)), and porcelain and stoneware coins and medals from the collection of the West Bohemian Museum in Pilsen (HUS (264)). Studies in monetary history examine, among others, the fiscal and currency strategy of Bohemian estates, silver trade in the 16th century, and the government bankruptcy of 1615 (VOREL (286–299)).

On the occasion of the 100th anniversary of the Czech Numismatic Society, a collective monograph called Stories of old coins appeared (MAŠEK, PETRÁŇ and LUTOVSKÝ (11)). The fifth volume of the inventory of coin hoards from Slovakia (BUDAJ and HUNKA (23)) and the synthesis Money in Slovakia published by the National Bank of Slovakia (TKÁČ et al. (68, 69, 253, 254, 285)) belong to fundamental works of Slovakian numismatics.

ROMANIA AND THE WESTERN BALKANS

Lilia Dergaciovă

Writing a text on the topic of Balkan Numismatics was complicated because of several reasons. On the one hand this was due to the negligence of social sciences and humanities in Romania, exemplified by the absence of specialized literature or its very late entry into state libraries. On the other hand, the general COVID-19 situation from winter 2020 till spring 2021 restricted mobility and made documentation difficult. These circumstances are reflected in our comment, which appear more limited for the Western Balkan countries. Furthermore, the absence of the previous report on the same topic (missing in the Survey 2008–2013) posed another difficulty. The page limitations did not allow us to mention all noteworthy works published between 2008–2013. Thus, we will only include a few of them.

Romania and Republic of Moldova

The list of the numismatic periodicals *SCN* (46), *CN* (48) and *MCSEE* (37) was completed by *RCAN* (50), which was established in Bucharest in 2015.

Speaking about general works, *Moneda în Republica Moldova*, published by a group of authors, presents the monetary situation in the region between the rivers of Dniester and Prut, which is currently the Republic of Moldova, with an emphasis on the medieval period and local issues (7). PÎRVULESCU discusses the Wallachian coin emissions by Radu I, which are kept in The Maria and Dr. George Severeanu Collection in Bucharest (54). CIULAVU investigates the activity of the Alba Iulia mint in Transylvania from the 17th–19th century (11). TOMA analyzes Transylvanian hoards from the late medieval to the premodern period (72). VÎLCU presents the Ottoman currency, which can be attested in the Romanian lands between 1687 and 1807 (78). BUTNARIU coordinates a synoptic publication on the numismatic collections of the museums of Botoșani (8), Bacău (9) and Chișinău (1). A selection of hoards from the historical region of the Principality of Moldova was published by BUTNARIU (10), another one concerning the Danubiano-Pontic province by CUSTUREA and TALMAȚCHI (12).

ȘEPTILICI discusses Angevin small silver coins struck with defects and mint-made errors (62). TĂTARU (63), PÎRVULESCU (51, 52, 53) and ȘEPTILICI (61) published Wallachian coins, highlighting their mint marks and making significant observations on the issues. TĂTARU and ILIE systematize Moldovan and Wallachian coins from the old collection of the Galați Museum (66). TOMA points out some hybrid Hungarian denars of Sigismund I (69) and re-studies the Hungarian denars of king Ladislaus I focusing on privy marks (71). TĂTARU and MUNTEANU zero in on the style of Hungarian denars from the Baia Mare mint, which is helpful for future chronological investigations (67). Eagle denars and the activities of the Transylvanian mints are the topic of the DUMITRACHE'S and MIREA'S article (25).

MUNTEANU, HONCU and APARASCHIVEI focused on the religious iconography of the Habsburg denars of the “Madonna with Child” type (41). DERGACIOVA and DJESMEDJAN published Genoese aspers of Licostomo for the first time, which had been known so far only on the basis of written sources (22). DERGACIOVA creates a classification of Moldovan divisional coins of unknown types (19), discusses lesser known issues from the late 14th (20) and early 15th centuries (18) and notices some schematic/geometric symbols in the shape of a tamga on divisional coins, which belong to the so called “cross with bars of equal length” type (17). Furthermore, she investigates Moldovan groats from the 16th century, which used the Lithuanian half groats as blanks (14). OBERLÄNDER-TÂRNOVEANU briefly describes the typology of the first Moldovan issues (49).

An important discussion of the metrological aspects of Despot Vodă Moldovan orts and so-called “Tatarian zlots” mentioned in written sources was produced by NICOLAE (47). DERGACIOVA speaks about metallurgic standards used for the coining of Moldovan copper coins by Alexander the Good (13).

Various technical investigations (X-ray diffraction and SEM microscopy) have been conducted by MUNTEANU *et al.* (44) for the Polish poltura type monetary counterfeits. The percentages of the main metals used in the making of Wallachian ducats are listed by PÎRVULESCU (52, 54). DERGACIOVA and BOJKO-GAGARIN portray the silvering method

used for the production of the 16th-century Moldovan groats, based on X-ray analyses (21).

The overwhelming majority of the studies deals with hoards and monetary circulation, namely hoards of Friesach denars (34) and of Wallachian issues (65), mixed hoards of Balkan origin with Hungarian, Serbian (26), Genoese and Ottoman coins (22), coins of Moldovan origin (13, 15, 16), and Hungarian coin emissions (70, 76, 73). TĂȚARU presents the composition of a huge depot of over 47 thousand Ottoman *akçes*, which were hidden close to the trade road between Sibiu and Wallachia (64) during a crisis situation in the 15th century. Late medieval and modern numismatics have benefited from the publication of mixed hoards (27, 28, 42) and of large size, European silver coins, which circulated in Transylvania (74, 75, 77) and Wallachia (3, 4, 23, 24, 56) and were hidden due to the military events in Wallachia at the end of Michael the Brave's reign (2, 80) and in the context of troop movements during the war between Poland and the Ottoman Empire (45, 57). Hoards comprised of Ottoman (79) and Austrian coins (58) were hidden during the Russo-Turkish War (1768–1774); those consisting of Ottoman and Ragusan specimens most likely date back to Osman Pazvantoglu's raiding expeditions into Wallachia around the year 1800 (55). Depots of counterfeit Ottoman coins struck in the first half of the 18th century have been also attested in Wallachia (59).

On the basis of single finds of Arpad coins identified in graves, GĂLL discusses the development of the Dăbâca castle (29). He and HARHOIU investigate the necropolis of the settlement of Sighișoara – *Dealul Viilor*, which started to be used in the first decades of the 12th century (33). TOMA investigates a monetary finds-based method used to establish the chronology of the church and cemetery in the medieval village of Rădvani (68).

PURECE and CRÎNGĂCI ȚIPLIC systematize the coin discoveries made during the archaeological excavations on the medieval churchyards situated in Transylvania, pointing out some regional differences and chronological limits (60). MUNTEANU *et al.* publish monetary finds of Moldovan, European and Islamic origin, which were discovered in the cemeteries and churchyards located in the historical region of Moldova, in the Piatra Neamț – Dărmănești quarter (40, 38), in the Brad cemetery (39) and in the Iași – “Talpani” church (41).

The monetary situation of the medieval settlements placed in the historical part of Moldova is discussed by MUNTEANU *et al.*, namely for those in Borniș (43), in Roman – *La Piață* (32) and in Târgul Romanului – *La Bibliotecă* (30, 31). DERGĂCIOVA, BOLDUREANU *et al.* give an overview on Moldovan and Ottoman coins attested in the settlements of Oprișeni (6) and Bărlinți (5), which are situated in northern Bucovina.

LÁSZLÓ and GYÖRFI notice counterfeit coins of the Sigismund of Luxembourg-era in the 14th and 15th century (35), LÁSZLÓ and SZÁNCSUJ study the Polish groats and silver sheet strip residues found during the excavations at the Beldi-Mikes castle in Ozun (36).

Bulgaria

The journals specializing on numismatics are *NumSfraEpi* (82), *Ревверс / Revers* (Хасково / Haskovo).

As general works two monographic studies by KRÁSTEV can be mentioned, which focus on the monetary circulation of Dutch (98) and Ottoman coins (92), pointing out political and economic processes in the Ottoman Empire during the 16th and 17th centuries (92). A catalogue of a private collection was published by BEKOV and MITEV (81).

LAZARENKO presents a discussion of lesser-known types of Michael Asen's coins (102) and OVCHAROV focuses on rare issues by Ioan Sracimir (117). OVCHAROV (116), PARUSHEV (123) and DOCHEV (84) discuss rare Bulgarian copper coins from the end of the 14th – early 15th century. OVCHAROV debates on groats produced by the Terter's Dynasty (121) and in the Despotate of Dobruzha (120), and PETRUNOV pays attention to Bulgarian copper coins (129).

OVCHAROV systematizes countermarked coins in the Dobruzha circulation (118) and attends to copper coins of an imitative type from the middle of the 14th century (119). HARITONOV publishes modern coins of the token type, struck by the Bulgarian Christian Church of St. Nicholas in the Danube town of Lom between 1856–1868 for the local use (85).

Studies on monetary circulation are numerous. MITEV sorts Wallachian coin discoveries on the territory of contemporary Bulgaria (111), discusses the money circulation in Ovech (105) and other medieval cities up to the Ottoman conquest at the end of the 14th century (107), in the Fortress Ovech during the Ottoman period (106). He also arranges and discusses the Polish issues struck by Sigismund I and Vladislav Varnenchik (114). LAZARENKO makes precise observations on the coin circulation along the coast between Lake Varna and Cape Kaliakra (103), KRÁSTEV discusses different coins used in the monetary flow between the Bulgarian lands (97) and Kaza Ahiolu (90, 91). Hoards and/or fragments of them, including Bulgarian coins from the 13th, 14th centuries or early 15th century were published by

MITEV (110, 113, 109), ZHEKOVA (134, 135, 137) and KRASTEV (89). The hoards comprised of Ottoman coins were described by MITEV and GEORGIEV (115), KRASTEV (94), PENCHEV (125, 124) and DIMOV (83). Late medieval mixed hoards were introduced to a scientific audience by KRASTEV, MITEV *et al.* (99, 100, 95), PENCHEV (127), TOMOVA (131) and KLASNAKOV (88), those with large European silver coins by PENCHEV (126). PENCHEV also discusses a hoard of modern gold coins, mentioning their exchange rates (128).

Monetary finds, which were made during archaeological investigations, were published by ZHEKOVA for the “Palace Centar” site in Veliki Preslav (136), by PETRUNOVA for the „Sv. Bogoroditsa” Church of the Kaliakra Fortress (130), by IVANOV for the city of Plovdiv (87), by KUZOV and MITEV for the medieval fortress of the Dolni Chiflik municipality (101), as well as by UZUNOV for the village of Tetovo (132). HUBENOV and MITEV catalogued the archaeological and numismatic artefacts found in the Varna graves, which were left behind after the Russo-Turkish War (86). Among the single finds, Sasanian, Kufic and Far Eastern coins can be mentioned (133), as well as those minted by the British East India Company (96) and the 14th-century specimens of local origin (112, 108).

OVCHAROV performed metallographic analyses for Ioan Shishman’s groats (122).

KRASTEV (93) and MARKOV (104) discuss fake Polish and French coins of the late medieval period, which were in the Bulgarian monetary circulation, as well as the process of their counterfeiting.

Croatia, Serbia, and Macedonia

The numismatic periodicals in Serbia and Macedonia are *Нумизматичар / Numizmatičar* (140), respectively *Македонски нумизматички гласник / Macedonian Numismatic Journal* (Скопје / Skopje).

MIRNIK and KAPETANIĆ present a coin collection created in the years of the discoveries made in Sokol Castle (147). MIRNIK publishes coins found during the subterranean excavations of the actual Dubrovnik Cathedral (145). IVANIŠEVIĆ introduces an assortment of coins from the Mladenovac Museum and private collections to professional circles (142). Based on a formula proposed by Warren Esty, IVANIŠEVIĆ analyses the volume of the Serbian coinage, as well as the mutual ratios between the issues of the Serbian kings (141).

ZAFIROVSKI focuses on a unique imitation of the king Milutin dinar (151). MIRNIK’s paper analyses the Zagreb and “banovac” dinars from the 13th and 14th century, which are mentioned in written sources (146). The “banovac” dinars are also discussed by ŠTEFAN on the basis of the Mekiš-Zgruti hoard (150).

NAĐ lists new coin hoards, which update the Croatian part of Mirnik’s Coin Hoards in Yugoslavia (*CHY*) (148). MARIĆ JERINIĆ publishes a hoard of Ragusan, Ottoman, Spanish and Austrian coins from the Sokolica Monastery, which were hidden in the late 18th century (144).

The numismatic and archaeological artefacts discovered during the investigations of the Church of St. George in Mateško Selo and of the St. Panteleimon Church in the Municipality of Medveđa, as well as the churches’ phases of existence, are the subjects of discussions by PERKIĆ (149), respectively JOVIĆ *et al.* (143). Single coin finds from the site of Stari Tar (Tar – Stanza Blek, Istria county), which indicate a medieval phase of the site’s existence, were published by BENČIĆ *et al.* (139), those attested in the Church of St. Luke the Evangelist of the town of Novske by BELAJ and STINGL (138).

RUS' AND RUSSIA

Vasilii V. Zaitsev and Alexander V. Khramenkov

The number of publications on Russian coins of the Middle Ages and the Modern Age, outlined by the end of the 20th century, has rapidly increased during the recent years. The following list of works that includes titles of over 700 books and articles, makes up even less than half of the publications on this subject that appeared during the period from 2014 to 2020. In the bibliographic lists all works are combined into 8 sections ordered chronologically and according to the subject of the research.

The growth of interest in Russian numismatics is caused by a number of reasons. One of the most important of them is the active growth of collecting observed in Russia in the recent decades, as well as the increase of the numbers of findings of coins and money hoards. These trends are reflected in the subjects of the newest publications. Particularly this is notable in the researches on medieval numismatics, where many articles are dedicated to the studies and descriptions of recently discovered hoards (150, 176, 200–202, 304–306, 476–478, etc.), publications of new types and varieties of Russian coins of the 10–17th centuries (264, 326, 353–356, 393 etc.), clarification of the dating or attribution of groups of coins belonging a certain type (267, 280–287, 291, 293–295, 298–300, 404–406, etc.). Numismatic materials originating in archaeological excavations of ancient Russian cities and other settlements are also published (82, 107, 112–115, 376, etc.), although we have to admit that this work is not yet being carried out actively enough.

The accumulation of new sources allows us to continue the studies of the role of Byzantine, European and other foreign coins (124, 176–229), as well as payment ingots (230–260) in the money circulation of the Kievan Rus'. The number of finds of the most ancient Russian coins (*srebrenik*) of 10–11th centuries is growing rapidly, and it allows us to clarify the area of their circulation. It is important to note that the new finds are represented not only by individual coins, but also by hoards, which included various types of silver *srebreniks* (133, 147, 152–164, 167, 168, 171–173). The information about the find of one of the oldest Russian gold coin minted in the late 10th century, shortly after the adoption of Christianity by Rus', is also published (174). Studies that deepen and generalize the available knowledge on the coinage of various Russian principalities of the 14–15th centuries are being held (297, 317, 363, 394 etc.). We should particularly note the publication of several monographs containing studies on coinage and monetary circulation of various periods (83–85, 90, 111, 118).

Over the last decade, research has also intensified in such areas of Russian numismatics, which had hardly developed before due to the scarcity of the source base. First of all, this covers the studies of imitative coin minting, carried out in Eastern Europe at different times. Because of the research of hoards originating from the territory of the Kievan Rus', "Slavic" imitations of Kufic dirhams are currently identified and successfully being studied (134–142, 149, 150, 166, 170). The minting of such imitations was held in the 10th century by some tribal unions of the Eastern Slavs, or possibly by Russian princes until the appearance of coins with Cyrillic inscriptions after 988. Work is underway to improve the systematization of "Taman" imitations of the Byzantine miliarences, as well as other coins minted in the 11th century on the Taman Peninsula, on the territory of the Tmutarakan Principality (125, 128–131, 134, 151, 165). The dating and affiliation to particular minting centres of various imitations of the Golden Horde dangs, which were made in some Russian principalities in the second half of the 14th and beginning of the 15th centuries (322, 323, 336, 346, etc.), are established. Attention is paid to the studies of the monetary systems of the Kievan Rus', regional peculiarity of currencies (87–89, 91–99, 277, 338, etc.), the "fur money" (101, 110, 145, 175) and the lead seals of 11–14th centuries (143–146). The latter, as is commonly believed, could be used for sealing up bundles of worn-out skins of small fur animals used as cash surrogates.

The main publishers of the works on Russian numismatics of the Middle Ages and Early Modern times were the following scientific collections' series: 1) "The Medieval Numismatics of Eastern Europe" ("Srednevekovaya

numizmatika Vostochnoi Evropy”, hereinafter - SNVE); 2) “Rus’, Lithuania, Horde in Artefacts of Numismatics and Sigillography” (“Rus’, Litva, Orda v pamyatnikakh numizmatiki i sfragistiki”, hereinafter - RLO); 3) Materials of the International Numismatic Conference “The Viking Era in Eastern Europe and Numismatic Objects of the 8th–11th Centuries” (“Epokha vikingov v Vostochnoi Evrope v pamyatnikakh numizmatiki VIII–XI vv.”, hereinafter - VEEE). A significant number of articles devoted to various problems of medieval numismatics was published in the collection entitled “Russian Money Circulation of the 10th–17th Centuries” published in 2015 and dedicated to the 60th anniversary of the renowned Russian numismatist P.G. Gaidukov (“Russkoe denezhnoe obrashchenie v X–XVII vv.: Numizmaticheskii sbornik k 60-letiyu Petra Grigor’evicha Gaidukova”, hereinafter - “Russkoe denezhnoe obrashchenie v X–XVII vv.”).

The growing interest among collectors in the Russian coins of the Medieval period and the early modern period led to a significant number of publications of various numismatic catalogues, reference books and identifiers during the recent years. The bibliographic review lists only those of a good level which cover the results of the latest numismatic studies (327, 328, 331, 472, 473).

The studies of Russian coins of the imperial period (18th – early 20th century) is also experiencing a significant upsurge. The classification of the imperial coins was fulfilled earlier by V. V. Uzdenikov, therefore the efforts of the current scholars are aimed at identifying new varieties and cataloguing all varieties of coins. The development of IT caused an increase of information and its availability. As a result, catalogues written by nonacademic authors on the basis of open sources (publications, auction sales databases, etc.) have become possible, while museum collections are either involved or even not even taken into account (589, 605, 708, 711, 737, 755, 764). The abundance of numismatic material online has led to the fact that in a number of catalogues coins can be published without being studied *de visu* (553, 761). The neglect of criticism of sources in an increasing number of publications may become a serious problem in the future.

The tradition of publishing the largest private collections is continued after an interruption that lasted a century. These collections are as rich as the museum collections (594, 595, 678, 703, 704). Catalogues are published in low circulation, usually 50 copies, and are not designed for wide distribution. Nevertheless, these publications play a significant role, marking the range of modern collections and showing the principles and features of their formation.

In addition to the published catalogs, previously unknown types of coins are introduced into the scientific circulation both from private collections (579–581, 739) and from museum collections (659, 771). Despite the seeming knowledge of coins of the imperial period, important and significant coins are found (619, 746). A separate study is devoted to the problem of forecasting coin finds (733).

A significant number of publications is still based on archival materials; the comprehensive analysis of material and written sources is becoming the norm in many researches. A growing number of articles is accompanied by full-text publication of archival documents (592, 631, 661, 666, 667, 670, 672, 709, 744). For the first time, a set of materials was published on the history of the re-minting of copper coins in Nizhny Novgorod in 1796–1797 (752). A complex and important topic – the monetary reform of Peter I – is actively developed with the help of documents (647, 650, 660, 665, 672, 740, 778–780, etc.). The analysis of written sources on the production and circulation of coins in Russia in the 18th century (565, 566) is carried out. The scientific circulation is gradually enriched by manuscripts, numismatic correspondence, catalogues, and rare editions from the collections of libraries and museums (73, 584, 663, 705).

The number of studies that involve the die archive (649, 652, 662, 666, etc.) has increased. The instruments themselves start being published - the dies and hubs from Barnaul (722) and Saint Petersburg (644). The complete incorporation of the die archive to the scientific research is yet expected in the future. An important source of numismatic knowledge have become the die impressions from the collection of the State Hermitage Museum (610, 612, 613, 616) and Goznak (567).

The gold coins of the reign of Nicholas II have become subject for much research (586–588, 596–600, 754–758). The types of obverse and reverse are identified for all denominations of coins, as well as their main varieties, and the catalogue is published (755). Based on this systematization, it became possible to extract among the array of gold portrait coins of Nicholas II those that were minted eventually by the Soviet government with old dies.

The study of the production and circulation of counterfeit coins continues. There one can mark the work with

written sources (620, 628, 629, 634, 673, 685, 686, 721, 774), publication of the coins themselves (552, 570, 622, 626, 632, 643) and the tools (569, 590, 609, 626), as well as the comprehensive analysis of sources (592, 630, 775). The research of counterfeiting coins at the mints was profoundly developed: among them are the roubles of Catherine II of the so-called “rough mint” supposedly produced abroad (735), the Russian-Polish coins from Koenigsberg (749) and the Dutch ducats secretly issued by the Russian government (657, 666–668, 750, 751, 760).

Recently the topic of counterfeiting coins to fraud the collectors has become urgent. A number of works are discussing the methods of detecting the forgery and identifying the coins (562, 593, 641, 683, 748). Despite of the increased number of high quality counterfeit coins and the danger they pose to numismatics, the number of studies on this subject is moderate. More attention was paid to a huge number of low-quality counterfeits, mainly roubles of the 18–19th centuries, that appeared in recent years (583, 624, 716). They are easily detected by experts, but mislead novice collectors.

The development of amateur treasure hunting led to a significant increase in finds both of single coins and coin hoards. However, a small number of finds by individuals is being recorded and published (766). The introduction of hoards and single finds from museum collections (572, 585, 687–689, 718, 765, 767) or from archaeological excavations (112, 561, 591, 677, 776) to the scientific circulation is continued. Some treasure complexes found on the territory of Russia include foreign coins, for example those of the Polish-Lithuanian Commonwealth (560). In some cases, numismatic materials allow to determine the time of origin of archaeological objects (602, 603, 762).

Among numerous works on money circulation, only those containing actual numismatics material were selected for this review (691, 728, etc.). Of particular note are studies on the regional features of money circulation (557, 571, 604, 702, 706, 768, 770). Also some studies are devoted to the infiltration of foreign coins into Russia (582, 728, 730) and the circulation of Russian coins abroad (576, 601, 623, 717).

The topic of the secondary use of coins was comprehensively examined: in jewellery and in applied arts (676, 720, 763), in gambling (573, 633, 674), in rites and mythology (753), and in costumes and jewellery of various peoples (625, 635, 729).

After many years of work, a three-volume encyclopedia of Russian numismatics (732) and a dictionary of numismatic jargon (734) were released. The dictionary of the collector of Russian coins (555) was published in the form of journal articles. Work has begun on the historical dictionary of Russian coin production of the 18th century (694). However, there remains an urgent need for an academic numismatic dictionary (encyclopedia), created by a team of specialists.

A large number of publications on the imperial period in 2019 are associated with two events of this year: the 100th anniversary of V. V. Uzdenikov and the 100th anniversary of the death of Grand Duke George Mikhailovich of Russia. In particular, for the first time in 40 years, a compendium entirely devoted to Russian coins of the 18th–early 20th centuries was published. (“Monety Rossii XVIII– nachala XX veka: Sbornik vospominanii i statei: K 100-letiyu V.V.Uzdenikova”, hereinafter - “Monety Rossii XVIII– nachala XX veka”). As part of the project of the International Numismatic Club “August Numismatist” a set of publications are made: the conference materials (“Avgusteishii numizmat. Velikii knyaz’ Georgii Mikhailovich. Sud’ba i nasledie. Materialy i issledovaniya”, hereinafter - “Avgusteishii numizmat”), the exhibition catalogue (2) and the biography of the Grand Duke (1).

All-Russian Numismatic Conference, held once every two years, remains the main forum for numismatists in Russia. The reports read on the conferences are published as brief abstracts (“Vserossiiskaya numizmaticheskaya konferentsiya. Tezisy dokladov i soobshchenii”, hereinafter - VNK). Numismatic readings are held annually by the State Historical Museum, materials of which are also published (“Numizmaticheskie chteniya Gosudarstvennogo Istoricheskogo Muzeya. Materialy dokladov i soobshchenii”, hereinafter - NCh GIM). Since 2018, the Museum of the History of Money of Goznak JSC began to hold international scientific conferences “Money in Russian History: Questions of Production, Circulation, and Usage” and publish collections of articles (“Den’gi v rossiiskoi istorii: Voprosy proizvodstva, obrashcheniya, bytovaniya. Sbornik materialov”, hereinafter - “Den’gi v rossiiskoi istorii”). In 2017, in Veliky Novgorod, the international conference “Russian Rouble. 700 Years of History” was held and a collection devoted entirely to coining and money circulation was released (“Rossiiskii rubl’. 700 let istorii. Materialy Mezhdunarodnoi nauchnoi konferentsii”, hereinafter - “Rossiiskii rubl’”).

Articles on various issues of Russian numismatics are occasionally published in collections of other scientific

conferences organized by museums and scientific institutions of Russia. For example, in the materials of the seminar “Archaeology of the Russian City” (“Arkheologiya russkogo goroda. Materialy nauchno-prakticheskogo seminarara” - hereinafter ARG).

Some articles on Russian numismatics are published in the ongoing collection “Numismatics and Epigraphy” (“Numizmatika i epigrafika”, hereinafter - NE), as well as in the numismatics collections of the State Historical Museum (Gosudarstvennyi istoricheskii muzei, hereinafter - GIM), State Hermitage Museum (Gosudarstvennyi Ermitazh, hereinafter - GE) and the Moscow Society of Numismatists (Moskovskoe numizmaticheskoe obshchestvo, hereinafter - MNO). Articles on a wide variety of numismatic topics are regularly published in magazines “Numismatics” (“Numizmatika”, issued twice per year in Moscow), “Petersburg Collector” (“Peterburgskii kollektzioner”, hereinafter - PK, issued 4–5 times per year in Saint Petersburg), and “Gold Chervonets” (“Zolotoi chervonets”, issued 4 times per year in Saint Petersburg).

**CRUSADER COINAGE
(WITH MEDIEVAL GREECE & CYPRUS)**

Julian Baker

1. Monographs and scholars

The period 2014-2020 has seen the publications of two major books dealing in crusader coinages, one focusing principally on mainland Greece, the other on the eastern Aegean, though both touching also on wider areas of the Latin East [BAKER (4) and KASDAGLI (7)]. BAKER (2) covers some of the same ground as BAKER (4). A few interesting translations/reprints have appeared: MAZARAKIS (10) deals with ducats in different areas of the eastern Mediterranean: see an earlier note in BAKER (1), n° 178. METCALF (11) and TZAMALIS (19) touch variously on the coinages of Cyprus, Constantinople, Greece and the eastern Aegean. MORRISSON (12), NIKOLAOU and TOURATSOGLU (13), and SAVVIDIS and LIANTA (16), consider the period of the Latin Empire (1204-1261) in the context of wider Byzantine coin circulation. Three slighter monographs deal with hoards from the Aegean, Bulgaria, and Anatolia, respectively, which are particularly important for the profile of the coinages of Latin Constantinople: PENNA (15), which is reviewed in PAPADOPOULOU (14), WOLKOW (21), and ÜNAL (20). By contrast, DAY, MATZKE and SACCOCCI (5) is a monumental work, which surveys all the medieval coins of northern Italy. Given the prominence in the Latin East, first of Lucchese, and then of Venetian coins (and to a much lesser degree the coins of Verona, Aquileia, Genoa, Florence, etc.), this is a very important contribution. A significant monographic discussion of medieval coins in Italian manuscripts, which features amongst other denomination crusader bezants, received a second edition [TRAVAINI (18)].

This discussion makes us painfully aware of the many losses which medieval and crusader numismatics suffered during the covered period (2014-2020). While Anastasios Tzamalīs had passed away slightly earlier, in 2012, the spring and autumn of 2018 saw the losses, respectively, of Vassiliki Penna [STOYAS (17)] and of her teacher Michael Metcalf. Metcalf was the most significant scholar of crusader numismatics of the twentieth century: BAKER (3), IVANIŠEVIĆ (6), LIANTA (8), MAYHEW (9). Michael Matzke left us in May 2020 [ZÄCH (22)], Ioannis Touratsoglou beyond the period considered here (September 2021).

2. The first crusades and the journeys between west and east

The first and subsequent crusades brought western coins to the eastern Mediterranean in significant numbers. Of the previously cited bibliography, BAKER (2, 4), DAY and MATZKE, SACCOCCI (5), KASDAGLI (7), METCALF (11), TZAMALIS (19), are relevant for the present discussion. Some of the early movements of monetary specie are re-visited for Thrace and Istanbul [BAKER (23)], and very extensively for the kingdom of Jerusalem [KOOL (25)]. Lucchese coinage, so important in the early crusader period, is re-assessed in BALDASSARI (24). There are relevant site finds at Jaffa [KOOL (25A)].

3. Antioch and Edessa: coppers

Schindel has made contributions to the early copper crusader coinages of Syria, exploring variously locally cast imitations of Antiochene type [SCHINDEL (26)] and adding to the canon of official(?) Edessene issues in the light of new specimens [SCHINDEL (27, 28, 29)]. Resulting from this, he re-opens the debate on the Trapezuntine attribution of some related copper coins. Some finds in early crusader copper coins are also discussed in BAKER (4): see also BAKER (2) and KASDAGLI (7). WILLIAMS, SCHINDEL and KOOL (30) offers an early history of crusader numismatics, in which Edessene and Antiochene types play leading roles, as much as discussing the specimens which are now in Vienna.

4. Bezants and dirhems

Of the previously cited bibliography, TRAVAINI (18) and WILLIAMS, SCHINDEL and KOOL (30) are relevant for the present discussion, BAKER (4) occasionally. TRAVAINI (36) treats the phenomenon of imitation and adaptation more broadly. Another contribution considers gold issues of crusader Palestine within the wider panorama of 13th century gold minting in the Mediterranean [BALDASSARRI and LOCATELLI (32)]. Finds are presented in ALBACHKAMI (31),

KOOL, GALILI and SHARVIT (33), KOOL, SCHINDEL and BAIDOUN (34), respectively a thirteenth-century silver hoard from Aleppo which combined pieces of Ayyubid, Urtuqid, and crusader origin (the latter bearing AD1253), and two earlier assemblages of cut Islamic and crusader gold (one from the market, the other a shipwreck). In parenthesis, the crusader gold and silver coins of Islamic style formerly in the collection of the king of Italy were not treated in the Arab section of the *BdN online* [D'OTTONE RAMBACH (35)]. This material will await the publication of the relevant crusader sections dealing with the same collection.

5. Jerusalem

In the previously cited bibliography, BAKER (4) mentions such coins on occasion in the Greek context; KASDAGLI (7) lists a single find from Rhodes, KOOL (25A) a substantial number of archaeological finds from Jaffa, WILLIAMS, SCHINDEL and KOOL (30) Jerusalem deniers in the Vienna collection. On privately produced cash in the kingdom, see KOOL and TAL (37) and (38), on a modern forgery of a Turrus Davit issue, SCHINDEL (39).

6. Antioch: deniers

BAKER (4) mentions such coins occasionally: see also BAKER (2). WILLIAMS, SCHINDEL and KOOL (30) lists the relevant deniers in the Vienna collection.

7. Tripoli

WILLIAMS, SCHINDEL and KOOL (30) features Tripoli gros and deniers in Vienna.

8. Cyprus

BAKER (4) mentions such coins on occasion: see also BAKER (2). TZAMALIS (19) has a chapter devoted to Cyprus. There are numerous Cypriot coins finds at Rhodes [KASDAGLI (7)], and one at Ephesos [SCHACHINGER and SCHINDEL (43)]. Cypriot coin finds in Palestine are mentioned in KOOL (25A). For a particularly early Anatolian hoard containing Cypriot large silver issues, see PEKTAŞ (40) and (41). RICCI (42) discusses the metrology of the large silver coinage of Cyprus around the turn of the fourteenth century with reference to an unusually heavy specimen.

9. Cilician Armenia

The Anatolian hoard mentioned in last discussion also contained Armenian issues: PEKTAŞ (40) and (41). Another hoard is presented in PAVLOU (50). BAKER (4) mentions Armenian coins on occasion: see also BAKER (2). There are numerous finds at Rhodes: KASDAGLI (7). Excavation coins from within the kingdom were published in NERCESSIAN (46). Individual studies (and a corpus) concern the issues of Kings Levon I, [KOUYMJIAN (45), NERCESSIAN (47), VARDANYAN (55)]; Levon II, [NERCESSIAN (48)]; Gosdatin I, [BEDOUKIAN (44), NERCESSIAN (49), SARYAN (51), SIBILIAN (52), TARGAÇ (53), VARDANYAN (54)]. The apparent discontinuation of the *Armenian Numismatic Journal* (here: *ANJ*) has impacted negatively on the overall volume of works which have appeared in the years 2014-2020: compare BAKER (1), nos 71-95.

10. Latin Constantinople

With respect to the coinages of the Latin Empire (1204-1261) and possible related issues (e.g. Latin Thessalonica), there are long discussions in BAKER (4) built on ample data and offering new interpretations: see also BAKER (2). Some other output that has already been cited, either reprints of older works [METCALF (11) and TZAMALIS (19)], or general studies of Byzantine coinage [MORRISSON (12), NIKOLAOU and TOURATSOGLU (13), SAVVIDIS and LIANTA (16)], provide coverage. BAKER and GALANI-KRIKOU (58) deals specifically with the Latin Peloponnese. The remainder of the bibliography, some already cited [KASDAGLI (7), PENNA (15), ÜNAL (20), WOLKOW (21), SCHACHINGER and SCHINDEL (43)] discusses hoards and excavation coins, mostly billon trachea, although in one case gold hyperpyra partially of Latin mintage from Anatolia [ÜNAL (64)].

11. Greece

Medieval coinages were minted in mainland Greece and the adjacent islands in prolific numbers. While two re-prints deal extensively with these coinages [METCALF (11) and TZAMALIS (19)], BAKER (4) offers the most up-to-date holistic treatment: see also BAKER (2). BAKER and GALANI-KRIKOU (58) looks specifically at the situation in the Peloponnese. BAKER *et al.* (67) investigates an intensive period of coin issuance in the light of archaeometry. MAZARAKIS (73, 74), SAINT-GUILLAIN (76), looks at smaller issues/mints. A treatment of gold usage in the 13th and 14th centuries also touches on the Greek evidence [LOCATELLI (72)]. The remainder of the bibliography deals with finds of Frankish Greek coins, principally deniers tournois, from southern Greece itself [BAKER (57), KONDYLI *et al.* (61), BAKER and TSEKES (59), GALANI-KRIKOU (60), KOSSYVA (70, 71)], from the remainder of the southern Balkans [BAKER

(23), LIANTA (62), BAKER (65, 66)], from the eastern Aegean and western Anatolia [KASDAGLI (7), SCHACHINGER (63), CARROCCIO (68), SCHACHINGER (79)], from the Levant [KOOL (25A)], and from southern Italy [DEGASPERI (69), RANUCCI (75), SARCINELLI and PANZARINO (77), SARCINELLI, PANZARINO and TUNZI (78), YOON, LEVI, OLLÀ and TIGANO (80)].

12. The Eastern Aegean

KASDAGLI (7) represents by far the most significant contribution to the crusader coinages of the eastern Aegean, especially Rhodes and the issues of the Knights of St. John. The earliest phase of minting at Rhodes is illuminated in significant hoards from Milas and Ayasuluk [PEKTAŞ (40, 41), BAKER and PANCAR (83)]. The later *gigliati* of Rhodes, Chios, and the Anatolian beyliks are documented in two hoards [BAKER (81), BAKER and KLUGE (82)]. FOSS (84) considers the latter issues in their context. Beylik gold has been found in Sicily [LOCATELLI (72)] and one significant beylik issue is analysed in STAHL (86). Different eastern Aegean mints are extensively treated in MAZARAKIS (10) for gold, and TZAMALIS (19). The mint of Chios has been considered separately in KOUKOUNI (85). Coins of Lesbos, Chios, and Rhodes, also circulated in the southern Balkans and the Greek Mainland [BAKER (2, 4, 23), KONDYLI *et al.* (61), BAKER (65)].

13. Later European coins in the East, Venetian colonial coins, the Levant trade

From the turn of the thirteenth century onwards great quantities of European silver, and eventually gold, moved eastwards. This phenomenon features extensively in some of the broader analyses [BAKER (2, 4), METCALF (11), TZAMALIS (19)]. KASDAGLI (7) offers invaluable evidence for the presence of such coins in a particularly thriving Aegean location. DAY, MATZKE and SACCOCCI (5) provides coverage for some of the key domestic and colonial northern Italian coins involved in this process. STAHL (90) sheds light on a neglected phenomenon, the transfer of unminted silver to the east. The literature, some of which cited previously [BAKER (23), KOOL (25A), BALDASSARRI and LOCATELLI (32), PEKTAŞ (40, 41), KONDYLI *et al.* (61), BAKER and GALANI-KRIKOU (58), GALANI-KRIKOU (60), LIANTA (62), BAKER (65), BAKER, DOMPIERI and GÖKYILDIRIM (66), CARROCCIO (68), KOSSYVA (70, 71), LOCATELLI (72), BAKER (81), BAKER and KLUGE (82), BAKER and PANCAR (83)] documents variously early Venetian *grossi*, Venetian *grossi* of the second type onwards, Venetian coins of lesser metals (*soldini*, *torneselli*), Italian gold issues in crusader contexts, silver and billon issues of Sicily, Naples, Provence, France, and England.

AFRICA, THE NEW WORLD AND OCEANIA

EAST AFRICAN (NON ISLAMIC)

Vincent West

Ancient Ethiopia (Aksum)

HAHN (11) provides a useful introduction to Aksumite coinage for the non-specialist or non-numismatist. Though the paper was prepared for a conference in 2006, with the publication of proceedings much delayed, it remains largely up to date.

DARLEY (2) considers Aksumite and Mediterranean trade with India, critiquing the accepted view that the weight of the Aksumite gold coinage follows the Roman model.

HARROWER *et al.* (17) publish five coins found in the excavation of an Aksumite town Beta Samati. PHILLIPS (21) describes two fragments of clay moulds found in 1906 which may be for coin flans.

In a welcome addition to the small number of recorded Aksumite hoards, MARTÍNEZ CHICO and GONZÁLEZ GARCÍA (20) publish a group of sixteen Roman solidi (Constantius II to Valentinian I) and seven Aksumite gold coins (three Ebana, one Ousanas II and three Kaleb) found in Yemen in 2018, presumed part of a larger hoard.

DOWLER (3) describes the relationship between Aksumite and Roman gold coins, including a useful illustrated catalogue of the 31 Aksumite and four Roman gold coins acquired by D. H. Müller in Yemen in 1898/99 and sold to the Kunsthistorisches Museum, Vienna in 1904 (the descriptions of coins 8 and 20 do not match the illustrations). She suggests that the unique Aksumite gold of MHDYS is a Yemeni or Indian imitation, though its weight and fineness would argue otherwise.

The chronology, metrology and typology from the first coin-striking king Endybis up to the sixth century king Kaleb are discussed in an important series of papers in German, with English translations following, by HAHN (6-10), the later kings having been discussed by him in 2010 – no. 8 in WEST (23).

HAHN and KECK (15) provide an important study of the whole Aksumite coinage in German, superseding all previous studies. A new numbering system for the types is introduced. Corpuses, with die studies, of the 1466 gold and 2176 silver coins known to the authors in collections (public and private) and trade are included. It will be desirable to find a way of issuing addenda and corrigenda to these valuable corpuses, possibly adding the rarer copper types. It is to be hoped that an English translation will be produced.

KOWALEWSKI (19) discusses the symbols and regalia on Aksumite coins and GIROLA (5) the architectural types on later Aksumite silver coins. SCHINDEL (22) argues that the multiple rims on some Aksumite coins derive from their use on Sasanian coins. HAHN (13) discusses the Christian slogans on Aksumite coins. KECK and HAHN (18) suggest that the symbols on early Aksumite gold and silver coins indicate consecutive issues, and that those on later silver and copper coins indicate parallel workshops.

The collection of the Ashmolean Museum, Oxford, one of the largest public collections in the world, unrivalled in its representation of gold coins, is published in Sylloge format by HAHN and WEST (16). The majority of the 600 coins are from the cabinet of Bent Juel-Jensen (1922-2006). For reviews see BAUSI (1) and GIROLA (4).

WEST (24) provides a more detailed Aksumite numismatic bibliography.

Modern Ethiopia

HAHN (12) describes the circumstances of the first minting of Ethiopian coins in modern times for emperor Menelik II.

HAHN and GIROLA (14) publish a plaquette, badge and pin in memory of the Duke of Aosta, the last Italian viceroy of Ethiopia (1937-1941).

MONNAIES AFRICANES

Josette Rivallain

Les publications autour de la monnaie africaine abordent principalement leur existence sous quatre angles : esthétique, économique, social et rituel et peu d'études lui sont consacrées ces années-ci. Cela peut paraître étonnant au moment où, dans le milieu bancaire francophone, sont à l'étude des projets pour battre et instaurer une nouvelle monnaie.

La monnaie est vue à travers l'observation de ses formes, les récits de voyages, les enquêtes de terrain. Le numéraire actuel donne lieu à peu d'études à caractère numismatique, relève de l'ordre de la finance et de l'économie. Les archives restent peu sollicitées, tant celles des anciennes compagnies commerciales traitant avec la côte africaines, que celles des pays africains et tout particulièrement celles des anciens pays colonisateurs. Les monnaies en usage actuellement, pièces et billets, apparaissent encore juxtaposées à des monnaies de l'époque précoloniale, n'entrant pas obligatoirement dans la même gamme de transactions car, si les monnaies sont indispensables dans les opérations commerciales, beaucoup sont associées au fonctionnement social, rituel de la société, n'exprimant pas par elles-mêmes obligatoirement la même forme de richesse. Les publications émanent d'universitaires, anglophones et francophones, mais également de la Banque de France, consécutif au don de l'un de nos collègues numismates, Jacques Schoonheydt, disparu depuis, de marchands d'art et de jeunes chercheurs africains, dont les travaux sont ou non publiés.

Ce sont des étrangers au continent qui ont introduit leur numéraire, accompagné de leur dénomination et de leurs modes de comptage, essentiellement grâce au commerce. Tout ceci reste encore peu étudié, mais il en reste des traces ; dinar, dirham, par exemple pour le monde arabe depuis un millénaire. Les pièces occidentales sont parvenues à l'ouest du continent depuis environ un demi-millénaire, certaines refondues pour les transformer en bijoux, ou utilisées directement comme tel, le thaler de Marie-Thérèse en étant un bon exemple au XIX^e siècle. Ce thaler, pièce d'argent à l'effigie de l'impératrice d'Autriche, a été à nouveau frappé après la disparition de la souveraine pour répondre à des besoins commerciaux, notamment vers l'Afrique. Depuis se poursuit une frappe clandestine sur le continent même. D'autres pièces, espagnoles, mexicaines, allemandes, anglaises, françaises, etc., ont circulé sur la zone côtière atlantique, et peu à l'intérieur, et leur usage proscrit à l'arrivée de la colonisation. Les monnaies occidentales, imposées par la colonisation, suivent un peu l'antique démarche provoquée par celles du grand commerce à grande distance depuis très longtemps. Le souvenir de ces interventions extérieures peut parfois se retrouver sur les marchés quand un vendeur en présente sur son étal et les vend à titre d'antiquité.

En Occident, les préoccupations autour de l'étude des monnaies africaines sont toutes autres. Bien souvent les numismates transposent leur regard et leurs préoccupations sur ces formes exotiques qui les intriguent. Nombre de numismates, collectionneurs de monnaies dites primitives, à travers leur contemplation, tentent d'aborder la variété des cultures et des savoirs qui paraissent s'exprimer à travers elles, de comprendre leur fonctionnement et leurs dénominateurs communs. Parfois ces approches s'appuient sur des documents de qualité, d'autres fois, moins. Des collectionneurs, professionnels ou non, publient également des ouvrages. Dans ce cas, la monnaie est assimilée à un objet d'art, hors contexte culturel solide.

Récemment la Banque de France a livré une superbe publication provoquée par le don de l'intégralité de la collection du numismate Jacques SCHOONHEYDT, disparu depuis, respectant l'esprit dans lequel elle a été constituée (5). La mise en forme et la rédaction ont été assurées par Marie-Hélène de Bazelaire ; l'ouvrage est abondamment illustré, accompagné d'un index des noms vernaculaires et d'une bibliographie de qualité. La publication de l'ouvrage de Jacques Schoonheydt permet de participer au mode d'approche qui a été le sien. Passionné par la diversité des systèmes de paiement, il a collecté des objets monétaires dans de nombreuses régions du monde, les classant, les ordonnant, imaginant un ordre précis dans cette diversité, ou arbre de décision constitué de 24 catégories. Une large place est faite à l'Afrique centrale. L'ouvrage que la Banque de France a publié est une invitation au voyage enrichie d'enquêtes et

de lectures de nombreux récits de voyages, des réflexions d'un homme cultivé qui avait étudié de nombreuses collections monétaires placées dans des musées publics ou privés. La publication est un tableau vivant des regards que des occidentaux éclairés ont pu avoir sur des modes complexes de paiement à travers le monde, de la variété des objets monétaires imaginés par les humains, quelque peu déconnecté des aspects historiques de la question.

Nombre de marchands, de fondations, s'intéressant à l'art primitif, ont dans leur fonds d'antiques monnaies africaines souvent dénommées monnaies primitives, en publiant à l'occasion un catalogue. Celui de l'institution genevoise, œuvre de Anne VANDERSTRAETE, richement illustré, présente une sélection d'objets d'Afrique et d'ailleurs considérés comme monnaie, établie sur des critères considérés comme esthétiques auxquels le monde occidental est sensible (8). Ils sont classés et étudiés par qualité de matériaux, ceux en métal étant privilégiés. L'auteur se contente de citer des passages de travaux d'auteurs reconnus, juxtaposant et mêlant des réalités très variées, hors du contexte culturel d'origine, insistant avant tout sur leur rôle dans le commerce, ignorant l'abondance du cuivre, l'ancienneté de ses usages et de leur histoire. Cet ouvrage du Musée Barbier Mueller est à consulter avec prudence, car ignorant les contextes culturels locaux, il mélange bien des réalités sous un abord sérieux, renforcé par des notes et une bibliographie.

Dans un tout autre esprit est conçu le livre collectif présenté sous l'étiquette 'FARINET', nom d'un prestigieux faussaire, réalisé en hommage à Jean-Michel Servet, professeur d'économie engagée, par ses collègues et amis (1). Ce livre a été publié une première fois en 2018, puis réédité en poche en 2021 chez Classique Garnier. Les différents auteurs, en majorité financiers et économistes, mais aussi sociologues et ethnologues, considèrent la monnaie tant comme un objet physique que comme un élément de conception économique complexe, chacun en fonction de son approche propre. Jean-Pierre Warnier et Josette Rivallain y ont insisté sur la diversité des formes monétaires de l'Afrique sur leur essence, leurs usages, leur forme comme garant de l'ordre de la société. La monnaie constitue un lien social avec des variantes dans le temps, l'espace, les cultures. Elle n'est pas seulement commerciale. Et la notion de faux y est toute relative, en Afrique comme ailleurs. A travers les pages, les auteurs envisagent également la monnaie comme un outil de la construction de l'Etat, reconnu en tant qu'élément de protection et de solidarité.

Un regard bien différent est apporté par les chercheurs étudiant archives, livres de compte, récits des compagnies liées au commerce côtier des XVII^e, XVIII^e et XIX^e siècles, et surtout par ceux qui mènent des enquêtes de terrain. Ainsi Collen E. KRIGER rappelle les modes de règlement du commerce dans le Golfe de Guinée au cours de la période moderne quand les Compagnies commerciales faisaient la loi le long de la côte (3), et dans le reste du monde, introduisant numéraires et souvent étalons de troc qui, après coup, devinrent progressivement référents de monnaies sociale et familiale.

Un secteur de la côte atlantique, au cours de la période moderne, est particulièrement étudié celui de l'ancienne Côte de l'Or. Il correspond en partie au sud du Ghana actuel. Klas Rönnback, audacieusement, à partir de sources historiques variées, peu connues, examine le mode de fonctionnement du commerce transatlantique de l'esclave et son impact sur différentes demandes émanant de la zone côtière, comme celle de la nourriture, en lien avec les migrations de populations et les pressions exercées par la RAC (Royal African Company), les spéculations qui en découlent, les variations des salaires, le tout avec, en toile de fond, l'or et l'esclave comme garants des paiements (4). Judith SPICKSLEY se focalise sur un point précis du fonctionnement de la monnaie : l'étape de la dette. Au XVII^e siècle, c'est l'or qui était reconnu comme garant des emprunts, aux yeux des européens engagés dans le commerce, mais au tournant du siècle suivant le métal précieux est débouté par la valeur représentée par l'esclave, autour duquel les informations restent pudiques (6). Relisant les sources tant arabes qu'européennes, Jarvis L. HARGROVE approfondit la connaissance des routes commerciales d'alors, l'impact politique et monétaire qu'elles ont pu avoir sur l'évolution des royaumes akans, et plus particulièrement de l'Ashanti au XIX^e siècle, avant la conquête coloniale (2). Les auteurs complètent les informations écrites par le recours à la tradition orale indispensable pour mieux comprendre le fonctionnement des sociétés des régions situées au-delà de la zone côtière car elles n'étaient pas alors abordées par les étrangers occidentaux.

Lors de l'installation de la colonisation, l'appréciation du terme de monnaie diffère entre les interlocuteurs et l'un des buts du système qui se met en place est d'implanter la monnaie et le système monétaire créé et diffusé par le conquérant. Il s'agit alors d'une étape délicate. Elle est abordée par SOHI Blesson F. (6) qui, dans le cadre du contexte économique du début de la période coloniale, s'interroge sur les modes de circulation des monnaies anciennes en Côte d'Ivoire, de leur tolérance et de leur interdiction. En effet, Les premiers administrateurs coloniaux, chargés d'imposer

un nouvel ordre, ont eu la tâche d'introduire une monnaie nouvelle, mais il leur a fallu, au moins au moment du règlement de l'impôt, constater l'existence de variétés locales, très éloignées des pièces métalliques et des billets de l'Occident. Ils ont du chercher à établir des équivalences entre monnaie locale et monnaie imposée par eux, étape indispensable pour assurer la diffusion du numéraire. Une autre démarche qui a entraîné la diffusion du numéraire a été de prélever dans la population une main d'œuvre, qui, rémunérée, a court-circuité les habitudes locales et introduit un nouvel ordre social. Car la monnaie est bien un des piliers de l'ordre social.

De jeunes chercheurs travaillent à partir des données qu'ils recueillent auprès d'autorités traditionnelles, sources d'informations encore trop peu sollicitées et pourtant très riches. Bien peu de ces travaux sont déjà publiés. Pour information, l'on peut mentionner la thèse en cours de Megang Ariane Justie, centrée sur un royaume du sud Cameroun. A côté du numéraire officiel, la monnaie traditionnelle est thésaurisée par le souverain de la région, le trésor étant sous la protection de gardiens, quelle qu'en soit la matière : sel, métal chèvres, esclaves. Jusque là, toute nouvelle monnaie qui parvenait dans la région devait lui être remise, et c'est le souverain qui en assurait la distribution et la destination. Ce mécanisme permet de comprendre comment, en bien des endroits, les souverains côtiers ont pu s'enrichir au contact des Européens, contrôler le commerce, et de quelle manière ils ont pu barrer la route de l'intérieur aux étrangers.

Selon les régions les monnaies revêtaient des formes variées qui, peu à peu, au contact des commerçants étrangers, ce sont uniformisées. Ces monnaies endogènes offrent des aspects très variés correspondant à des étapes de la vie des différentes sociétés dans le temps : chèvres, sel, fer, esclaves, et, selon les régions, pagnes en raphia, en coton, bijoux, coquilles de mollusques (les cauris étant venus par l'intermédiaire des étrangers). Au fur et à mesure que le temps passait, que le numéraire supplantait les autres habitudes de paiement, les anciennes monnaies glissèrent vers la participation au culte des ancêtres toujours garants de l'équilibre de la société. Elles sont sorties lors de cérémonies précises et très contrôlées.

La monnaie est à comprendre en grande part en lien avec l'organisation des sociétés traditionnelles et relève des sphères sociales et religieuses fondements de la vie de la société. Il y a eu de nombreuses sociétés et beaucoup de formes de monnaies. Les mécanismes qui les animent sont moindres, mais pas plus simples à étudier pour autant. A travers les études en cours, dont on espère de prochaines publications, il ressort que les influences extérieures au continent ont joué un rôle déterminant : introduites par le commerce, elles ont été intégrées dans les mécanismes sociaux et rituels par de nouveaux venus, au point d'apparaître comme monnaie traditionnelle après coup. Bien sûr, de nombreuses variantes existent et, actuellement, l'étude sur le terrain est indispensable pour, de l'intérieur, en analyser les nuances.

Les récentes études publiées ou en cours autour de la monnaie africaine explorent l'histoire des cultures de ce continent, leur fonctionnement, l'impact exercé par les mondes extérieurs, la stratigraphie des usages monétaires. Il faut alors faire appel à des approches politiques, religieuses, sociales et économiques complexes pour expliciter le choix des matières, des formes, des fonctionnements de la monnaie ainsi que de ses originalités. Le champ du travail de recherche sur ces questions reste largement ouvert, l'approche des traditions s'annonce prometteur, bien que difficile à explorer, d'autant qu'il met partiellement en lumière des interdits que nul n'aime à voir exposés. Sans ces connaissances du passé, la compréhension des numéraires africains d'autrefois et en devenir est difficile à appréhender.

NORTH AMERICAN AND WEST INDIES COLONIAL COINS

Jérôme Jambu and Jesse C. Kraft

The study of American colonial coins is unequal for a number of reasons. First, coins from francophone areas have not yet benefited from the same rich study of those from the anglophone regions. Another reason is that, in the study of anglophonic numismatics, certain themes remain prominent (such as copper coins and their falsification) while others are just starting to emerge (the circulation of foreign coins, for example). Furthermore, current studies point out that we should not compartmentalize these areas, but should study them through the global viewpoint of the empires that made them. It is important to go through the large areas under French and English dominion, from the Windward Islands to Canada, in order to be able to understand a variety of complex mechanisms. This is why, for the first time since the creation of the Surveys, we decided to have a common chapter dedicated to the entire northern American colonial area, which spreads from the previously named West Indies Islands to the doors of the Arctic Ocean. One could object that the territories under Hispanic domination, behind those empires on the eastern coast of the continent, were very much linked to this background as they seized and exploited the precious metal mines. But it is because France and Britain did not have direct access to these resources that they had set specific monetary policies, whether similar or discordant from one another. Let us bank that this approach will reveal all its meaning in the next years as this comparative perspective will progress; therefore, we opted to go on that path until mid-2021.

It is necessary to start by studying what has been done in the French colonies to reveal the first coin production that was exclusively dedicated to American Colonies. For that, we start by citing one of the latest works published by our beloved Sydney F. Martin, former president of the American Numismatic Society who left us in 2020: *French Coinage Specifically for Colonial America* [MARTIN (20)]. In this brilliant book, realized in the pure American tradition (notably including a die study), Martin revealed to us all the specimens of coins produced in France for the American Colonies between Colbert and The Regency. Thanks to his personal connections with passionate researchers, he added, unpublished documents (translated into English) found in the National Archives in Paris. Due to his impressive precision and high numismatic value, just a few minor historical inaccuracies could have completed Martin's work. Clearly, neither France nor Canada yet dispose of such works. This may be because many collectors are not as attentive and likely to repeat the same stories rather than to question them [CHARLET (3), SAINT-ARNAUD (27)]. However, thanks to the mobilisation of a huge number of unpublished archives, a great step was recently made in the identification of the first coins minted in France for America: indeed, 5- and 10-sol coins, long attributed to Canada or New France in its entirety, were proven to be only authorized for the "French West Indies Islands" [JAMBU (14)]. For sure, many other rectifications of this type are still to be made on the attribution of Franco-American colonial coins.

Perhaps the most active area in the United States colonial and pre-Federal period continues to be copper coinage and, in particular, counterfeit pieces. These have long-been favorites among American numismatists, who cannot seem to write enough about the topic. In 2015, Christopher McDowell offered his take on Abel Buell and the History of the Connecticut and Fugio Coinages [MCDOWELL (23)]. This book wonderfully converges upon, not only the numismatic battles that took place between the state and the pre-Federal national governments throughout the 1780s, but also upon the problems of counterfeit coinage that was so pervasive throughout the period. As McDowell so brilliantly interweaves, sometimes the distinction between an official coin and a counterfeit were easy to blur in the Confederation period – especially when the same person was making both types of coin! Abel Buell – coiner/counterfeiter, inventor, mechanic, cartographer, etc. – has long served as one of the most colorful characters in numismatic literature on the late colonial and pre-Federal periods, and McDowell's monograph of him serves as the ultimate reference on the man, the coins, and the history that weaves them all together. The last full-scale treatment of Buell was last published in the late 1950s, and I would expect another 60 years to elapse before anyone could offer as compelling of a volume of the topic as McDowell.

Interestingly, in 2020, Jack Howes, James Rosen, and Gary Trudgen wrote *The History & Coinage of Machin's Mills* – what could be considered a companion publication to McDowell's book on Buell [HOWES, ROSEN and TRUDGEN (10)]. Much like the Buell, Thomas Machin was a bit of a rogue coiner who skirted the lines of official and counterfeit – largely known for his work in the latter. While holding a sub-contract to strike a variety of official state copper coins of the 1780s, Machin also used the opportunity to strike counterfeit British halfpennies. Although located in New York, Machin's Mills was responsible for at least some of the copper coinages struck for Vermont and Connecticut. The authors were able to elevate this book (not that it necessarily needed it) by situating Machin's Mills within the larger framework of post-colonial, pre-Federal numismatics. This positively places Machin's Mills as an important supplier of money during the period, rather than a group of rogue counterfeiters, as the establishment had been viewed by numismatists for decades beforehand.

A third text which also furthers the field dramatically is *Contemporary Counterfeit Halfpenny and Farthing Families* by Roger Moore, John Howes, and Bob Bowser [MOORE et al. (24)]. While, yes, this book also includes coins issued by both Buell and Machin's Mills, the authors expand beyond that and offer the first attempt to classify the many, many other counterfeit British copper coins that are known to have only circulated in the North American colonies. By classifying the different coins into "families," based on the likelihood that they were made by the same individual or group of individuals, a better understanding emerges as to the extent that some of these seemingly-lowly counterfeiters operated. The authors formed these families by linking counterfeit coins that share one or more of the following: dies, die punches, or striking similarities in design that would be too coincidental to have not been made by the same operation.

Here again, the French colonial copper coins did not meet with the interest of collectors and researchers. Maybe because of the lack of archives. Maybe because, for reasons that recently started to appear, copper was very rarely used or accepted in the islands of the Antilles notably in Guadeloupe and Martinique. Copper coins were mainly "crisis coins" in French West Indian Islands [JAMBU (11, 12)]. Again, despite numerous old myths still difficult to forget [BAZOGÉ (2), COMPAROT (4)], we begin to have a better comprehension for Santo-Domingo Island: copper coins from the beginning of the 19th century were clearly imitations of Revolutionary French coins, minted after the conquest of the entire island in 1801 by the former slave, General Toussaint Louverture in the Spanish mint in Santo-Domingo City. The symbol of this "military Mint" has since been identified as "a key" [JAMBU (15)].

After pre-Federal copper coinage, another topic that has become popular in American numismatics is the circulation of foreign coinage. While this phenomenon was already well-known, it appears as if both researchers and collectors of the material are beginning to fully recognize the importance that these pieces played in the economies of early America and are accepting them into their collections. A good introduction to the topic can be found in *Thalers and Pence: Foreign Coins in America 1607-1857*, by GOSSARD (9). Through the various coins that Gossard lists and describes, a better understanding of the monetary circumstances that consumers and merchants faced in the early centuries of European settlement – and, quite frankly, an appreciation for the simplicity that is the modern-day decimal monetary system. The book, however, does have a few shortcomings. For instance, the dates that bookend the period of research are too convenient; situated between the founding of Jamestown in 1607 and the Coinage Act of 1857, which legally ended the circulation of foreign coinage in the United States. The earlier date ignores the historical, but failed settlement on Roanoke Island, while the latter ignores the fact that foreign coinage circulated well past 1857 for a variety of reasons – whether economic downturn or the remote nature of certain places out West. Furthermore, the book also ignores archaeological evidence. With this tool, Gossard would find that, while Roanoke Island had failed, there was a numismatic presence on the island. The use of archaeology not only helps push the understanding of time and dates, but also helps broaden the understanding of the various types that circulated. Gossard, for instance, does not mention the circulation of Nuremberg jetons whatsoever, but archaeological evidence suggests that these were an important component of small change in late-16th and early-17th centuries British America.

In a way, the study of foreign coinage circulation in North America is still in its infancy. Studies that include catalogues, like GOSSARD (9), generally hit the key coins—Dutch Lyon dollars, English/British copper and silver, and, of course, Latin American silver—but a true understanding of how and why certain types of coins circulated. A virtuous attempt at this understanding is found in "The Curious Persistence of the New York Shilling," by John M. Kleeberg, as found in the May 2016 issue of *The Numismatist* [KLEEBERG (17)]. The New York shilling (also called simply the

York shilling) was a ghost currency, or unit of account that was never actually represented in a struck coin of its own. The denomination was based on the Spanish-American real, worth one-eighth of a dollar. Thus, a York shilling was equal to 12½ cents. While the article is good for understanding that the York shilling directly corresponded to the real, it does not quite explain why (or how) people continued to use the York shilling long after those coins ceased to circulate in the country. Furthermore, the article does not mention the Pennsylvania shilling, the New England shilling, or any of the other state/regional units of account that existed at the time. These other ghost currencies did not have a corresponding coin but was in use for just as long as the York shilling.

The foreign coins in the English and French West Indian Islands were Spanish-American and Portuguese-Brazilian. Anglophonic researchers have already published a great amount on this topic. More recently, researchers have embraced two new subjects: the cutting of Spanish coins into mocos – a French denomination on which an article will soon be published to explain its origin and the use of false and countermarked Portuguese gold coins that can be attributed to England and English American colonies with certainty. The mocos still intrigue British and Americans that made progress on this topic: ECKARDT (6B) in St-Kitts, ECKARDT (6A) between Dominica and Trinidad, WOLFER (31) for Martinique, etc. The second ones were well put in perspective by SMOAK (28), and without being a purely numismatic analysis, offers a contextualisation and a precious understanding of the phenomenon. Finally, one can notice that, despite the little number of publications or major articles in the recent years on the modified coins from the French and English Caribbean islands, the sale of some famous collections. Thanks to the participation of specialists such as Ken Eckardt, we have very good quality catalogues. For example, “The Atteck Family Collection of West Indies Holy Dollars” (VE Stack’s Bowers Gallery, New York, August 2015) and “The Lyall Collection of Cut and Countermarked Coins” (VE DNW 149, London, September 2018).

Regarding a specific coin, no topic has been more controversial in American numismatics over the past half-dozen years than the time and place of origin over the Continental Currency coins dated 1776. For most of the historiography of this coin, it reigned supreme as the first coin to be struck for the fledgling United States. To most numismatists, although there was never any concrete evidence to support it, the most obvious answer to its origins was on the coin itself – that it was struck in 1776 by the Continental Congress, presumably in Philadelphia. However, in 2014, Catherine Eagleton found some damning evidence against this supposed truth, as reported in “Collecting America: Sarah Sophia Banks and the ‘Continental Dollar’ of 1776,” in the *Numismatic Chronicle* [EAGLETON (5)]. Deep in the collection of Sarah Sophia Banks, held by the British Museum, was a 1776 Continental dollar along with a note that mentioned that the coin was “never current, struck on speculation in Europe, for sale in America.” Furthermore, an advertisement for the coin at six pence each (far below a dollar) suggested that these pieces were nothing more than medals, tokens, or, at best, fantasy coins. Eagleton’s theories were then expounded on by Erik Goldstein and David McCarthy in “The Myth of the Continental Dollar,” as found in the January 2018 issue of *The Numismatist* [GOLDSTEIN and MCCARTHY (8A, 8B)]. Retorts to this saga can be found in John M. Kleeberg’s, “The Continental Dollar: British Medals or American Coins,” in the December 2018 issue of the *Journal of Early American Numismatics* [KLEEGERG (16)] and in “The Continental Dollar, Coin or Medal?” by Robert L. Rodriguez and Tony J. Lopez in *The MCA Advisory* of June 2021 [RODRIGUEZ and LOPEZ (26)].

A major recent boost to the overall academic study of early American numismatics has been the publication of the *Journal of Early American Numismatics* (JEAN) by the American Numismatic Society. Since its inception in June 2018, JEAN has quickly proven itself to be the leader in the publication of early American numismatics. Formerly the *Colonial Newsletter*, the new format of JEAN has allowed for the journal to be marketed to libraries and universities. Before, the lower quality kept this important publication (and, yes, it was still very important prior to the transformation) as a collector’s newsletter and not necessarily the first location that a non-member of the Colonial Coin Collectors Club (who published the *Colonial Newsletter*) would look for valid, well-researched information on the topic. While that was the case, it did not come off as such. JEAN, on the other hand, is a publication that looks and sounds like it contains the highest-quality information on the topic. Furthermore, the journal has expanded a bit beyond the scope of the earlier format by including several pieces on Latin American coinage. Look forward to years of quality research within the pages of JEAN.

Some of the most magnificent research conducted in early American numismatics, however, has not been found in a book. For several years, Robert L. Rodriguez and Tony Lopez have been conducting the very first scientific

numismatic analyses utilizing the Advanced Photon Source (APS) synchrotron technology offered by the Argonne National Laboratory in Lemont, Illinois. This is one of the premiere particle accelerators in the world. Rodriguez and Lopez have used x-ray micro-diffraction to recover lost surface information from the subsurface metal lattice at depths of 20-25 microns. Information that was thought to forever lost (and, for all intents and purposes, was forever lost) can now be recovered due to the ingenuity of Rodriguez, Lopez, and the scientists at the Argonne National Laboratory.

David Bergeron

Since the last edition of the Survey of Numismatic Research in 2013, there has been a push in Internet-based and crowd-sourced research. The most notable digital repository of original numismatic documents is the Newman Numismatic Portal (NNP) from Washington University in St Louis. Currently, the website counts over 3.5 million pages of numismatic documents, and with hundreds of institutional and individual contributors adding content, the site continues to grow exponentially. While the NNP is not in itself original research, it gives researchers access to resources that otherwise could be difficult to access. The quandary with including Internet-based research through websites, forums and listservs is the problem of the permanence of the record. More work and insight are needed on the ability to make information on the Internet permanently searchable and the sources verifiable. Perhaps experts in Internet-based sourcing can speak on this matter. And maybe by the next edition of this survey there will be a definite decision on the inclusion of Internet-based resources in the survey. For now, the survey will continue to examine research produced in print, but widely available on the Internet.

Research into modern American, Canadian and Mexican numismatics covers an array of topics from the macro, such as a country's economic history, to the micro, a die variety of a specific coin. In Canadian numismatics, the Charlton Standard Catalogues are still the main references for collectors. New editions continue to add and hone the information. For specific collections, research into colonial tokens – see BAKER (8), BERRY (9) and FAULKNER (44-47) – and chartered bank notes [see GRAHAM (62-64), NIENHUIS (111), WILDE (154, 155) and ZIGLER (160, 161)] continue to gain traction. The so-called “blacksmith coppers” originally catalogued by Howland Wood is also an area of great interest for its American component, see BIANCAROSA (11), CASEY (29), HOOVER (70-72) and MOORE (108). Canadian decimal coinage received little coverage, with only the efforts of TURNER (151) pursuing his research of large cent varieties, and RICHER (118, 119) on Newfoundland gold coins to recognize. New research into discount coupons is presented in articles written by ROEBUCK (121, 122).

For the American component, as in previous numismatic surveys, the bulk of the research output covered in this period focuses on very specific topics, primarily centered on modern American coinage. And according to certain book titles (see FLYNN (54, 55) and WEXLER and FLYNN (153) for example) these works are official, comprehensive or authoritative. I am not an expert on American numismatics, but I'm sure the next installment of this publication will contain newer works on the same topics. For the ever-popular U.S. silver dollars, Eagleton, Goldstein and McCarthy, and Kleeberg have contributed articles about the Continental dollar (cf. Jambu & Kraft's *Survey*); FERGUSON (49), JULIAN (88) and HILL (67) on the 1804 dollar; JULIAN (87) and SHOLLEY (140) on Gobrecht dollars; BROTHERS (17), BURDETTE (27), FRANKLIN (57), STANDISH (146) and CRUM *et al.* (32) on Morgan dollars; and DANNREUTHER (33) on Peace dollars. BURDETTE (26), LENEVE (98) and DANNREUTHER (34) furthered the knowledge on U.S. proof coins. While many researchers, like Amato, Borckardt and Jacobson, Bowers, Bugert, Doughty, Eckberg, Fuhrman, Izydore, Parsley, Rogers, Wiles, and most contributors to the *John Reich Journal* (see the Bibliography) have delved deeply into examining die varieties and other specific details on U.S. decimals. On U.S. gold see BAIR (7), FERGUSON (48), HYHOLM (77), and KAGIN (90).

For research into American institutions, the U.S. Mint's expense records are published by R. W. Julian in a series of articles in *The Numismatist*. A history of the U.S. Mint is offered in SMITH *et al.* (145)'s book, while works by TRUDGEN (150), MCMORROW-HERNANDEZ (105) and SCHWAGER (131) examine other private mints. Little has been written on U.S. banking history, although SULLIVAN (147) published an annotated bibliography of U.S. bank histories. Issues of gender and social classes in U.S. institutions are covered in articles by BURDETTE (25), and ERNST (42), KABELAC (89)'s book on women presidents of the U.S. Mint.

On paper money and financial documents, see FRANK and SEELYE (56) for their works on military scrip and

tokens. For material related to the War of 1812, see KAGIN (91), on the Civil War, including Confederate currency, see BERTRAM (10), BOWERS (16), FANNING (43), and on modern wars, see O'DONNELL (112), RILEY (120), and SCHWANN (133). Bowers's encyclopedia of obsolete paper money is an important update to the Haxby volumes of the late 1980s. The first part of Illka Makitie's series of articles on circular letters of credit in the *International Bank Note Society Journal* covers America.

Finally, for tokens and medals, articles on specific U.S. private tokens and scrip are provided by Brothers, Sciore, Schenkman, Gunther, Moore, Shafer and Sheehan, and Kraft (see the Bibliography). Look for works on U.S. medals by Alexander, Anderson, Gomez, Hyder and Shelvin, Johnson, Lipson, Margolis, McDowell, Miller and Gianotti, Musante, Sholley, Hyder and Wehner (see the bibliography). For articles on engraving and design of U.S. coins and notes, see BROTHERS (20), HENGEVELD (66), TOMASKO (149), HILL (68), REZAK (116), and HURLE (74).

Some novel areas of research found in recent publications are the coin holders produced over the years either for specific coins, see HUFNAGEL (73), or for entire sets, see LANGE (95, 96), as well as a book cataloguing coin slabs, see SCHWAGER (131), and continued work on savings banks by HOLZ (69). AKIN, BAIRD and AKIN (2) is the first book to provide an archaeological overview of the coins and tokens found in a wide range of North American archaeological sites. It is an important tool for archaeologists working with coins, and for numismatists and collectors to understand the importance of archaeological context. This theme of numismatics and archaeology is exemplified in LEE (97) on the coins of Fort Atkinson.

OCEANIA

Walter R. Bloom

A principal source of published information on Australian numismatics has been the *Journal of the Numismatic Association of Australia* published by the Association, while that for New Zealand is the *New Zealand Numismatic Journal* published by the Royal Numismatic Society of New Zealand. These two journals contain some meritorious articles on subjects outside the scope of this Survey, in particular papers on ancient numismatics and other topics. In addition, there are various State numismatic society publications, the more important of which are the *Victorian Numismatic Journal*, which replaced the *Australian Numismatist* and is a joint publication of the Numismatic Association of Victoria, the Geelong Numismatic Society, the Melbourne Numismatic Society and the Morwell Numismatic Society, the *Journal (and Report) of the Australian Numismatic Society* (Sydney), the *Australian Numismatic Society Queensland Branch News Bulletin* and the *Queensland Numismatic Society Monthly Magazine*. Another source, but for general articles, is the *Australasian Coin & Banknote Magazine*.

While most references are given to the usual printed copy, there is a trend to publish on-line. With the growing expense of producing hard copy, coupled with a change in world order due to COVID-19, the move to virtual conferences and on-line publication can only accelerate.

In the listings below we start with General articles, followed by Biographies and Obituaries. Then come the relatively small sections on coins of Australia, and New Zealand and Oceania respectively, and Merchant tokens of Australia and New Zealand (it would be artificial to split these as the tokens of each country were used in both). There follow sections on Varieties, Bonistics (banknotes and related items), Commercial Chits, Value-Added Check Pieces and Passes, and Food tokens.

Under General is the book by Peter LANE on the numismatic collection in the Art Gallery of South Australia (12), and the recent publication by Walter R BLOOM and Alf CAMPBELL on the dog registration discs of Western Australia (2). Both represent cultural histories in their respective Australian States seen through the numismatic lens. Then there is the most recent volume 30 of the *Journal of the Numismatic Association of Australia*, which is devoted to the teaching of numismatics in various contexts; many of the individual articles are included even though the context is ancients.

The Obituaries section is unfortunately expanding as the hobbyists age.

The sections on coins and merchant tokens are small in comparison with the preceding Surveys, but it does include some important articles, including (52) and (53).

Varieties continue to be popular in Australia; in addition to the listed articles, there are regular features in the *Australasian Coin & Banknote Magazine*.

Banknotes are well studied in Australia and New Zealand, and this is reflected in the large number of articles and books in this area. Mick VORT-RONALD has been particularly prolific and his publications (80-125) form the main source of information on Australian banknotes.

There has also been on-going interest in commercial chits, value-added check pieces, and passes, with a wide-ranging contribution by Bernie BEGLEY (134-145) and George SHEA (153-201) to the study of the medal-like objects badges and fobs.

ASIAN AND ISLAMIC COINAGES

INTRODUCTION – PRE-ISLAMIC AND ISLAMIC COINS

Arianna D'Ottone Rambach

This rich section of the *Survey of Numismatic Research* includes Kushan, Sasanian, Guptas and (Iranian) Huns as well as Pre-Islamic and Islamic coins from Central Asia, the Near East and North Africa. Unfortunately the usual section devoted to al-Andalus is missing from this *Survey*.

The somewhat exceptional – due to pandemic circumstances – range of seven years encompassed by the *Survey* (2014-2020) reveals an ever-growing scholarly interest for the Oriental issues. Databases offering high-resolution images, publications of volumes of sylloge series and publications of public and private collections, as well as studies devoted to coin finds, new coin type identifications and attributions are just some of the fruits achieved in the various areas documented by the studies, articles and online initiatives critically selected and commented in the following pages.

Sadly, during the span of time considered by this *Survey*, important specialists passed away. Hopefully new generations of researchers will continue and renew the work in each of these fields.

THE SASANIAN EMPIRE

Nikolaus Schindel

A main focus in this field of research still is the publication of museum collections to broaden the material basis, which is essential for any type of further numismatic or historical analysis. No volume of the main series of *Sylloge Nummorum Sasanidarum* (Paris–Berlin–Vienna) has appeared in the period covered here (even if volume 4, covering Khusro I, is currently being printed); several additional volumes have. 34 presents the rich holdings of the former Schaaf collection, now housed in Princeton, as well as some general discussion of select topics in Sasanian numismatics. In 2, a large hoard from the 7th century is published, containing 1268 drachms from Khusro I to the Arab-Sasanian period. This volume also contains a detailed study of monetary circulation in Late Sasanian Iran as mirrored by coin hoards, in a fashion very similar to 65. After SNS Uzbekistan, 12 publishes Sasanian and Sasanian-type coins from another Central Asian country, viz. Tajikistan. Two general treatments of Sasanian coinage have appeared (7, 27), neither of which is particularly satisfying (cp. 48).

Several coin hoards have been published (3, 8, 22, 25, 26, 31, 66, 68), the most important ones being the “Shiraz” (65; cp. 53) and Orumiye hoards (2; cp. also 1). Both do not limit themselves merely to cataloguing the respective hoards, but also discuss the Late Sasanian monetary system in some detail. 65 also contains a die analysis of the drachms of the usurper Wistahm, from a methodological point of view the most detailed treatment so far.

Apart from minor studies on individual mint signatures (13, 33, 43, 47, 49; for a general discussion 52; for a new overview on administrative geography 15), also entire regions of the Sasanian realm have been discussed based mainly or at least to a relevant extent on numismatic data (Fars: 16; Sakastan: 17, 51; Caucasus Region: 54, 56). Mirroring the increasing number of Sasanian base metal coins that have turned up in the coin trade in recent years, copper (6, 18, 21) and lead (37, 19, 20) coins have been discussed more intensively than before. Also imitations, mainly of Khusro II, have received attention (67, 69, 70). A coin type of Ardashir showing two busts on the obverse has been treated in several contributions (62, 63 versus 44); from a methodological and a paleographic point of view, the latter has achieved more acceptance.

KUSHAN NUMISMATICS

Emilia Smagur

Since the last Survey one important Kushan coins catalogue appeared. This most important and very welcome volume by JONGEWARD AND CRIBB with DONOVAN (28) covers all of the Kushan, Kushano-Sasanian, and Kidarite coins at the collection of the American Numismatic Society, plus a small group of issues from the collection of Dr. Larry Adams. The total number of catalogued examples is 2638. They were put into context through an overview of previous studies, as well as the chapters on the Kushan coinage tradition, monetary system and mints, portrait types in the coinage of Huvishka, deities on Kushan coins and Kushan tamgas. The catalogue presents many aspects of the new understandings of examined coinages, reorganized on the basis of the results of the die studies conducted in the British Museum. The work also incorporates new chronology and attributions that emerged after Göbl publication of coins at Bern. The useful concordance of the catalogue's listing to the numbers used by Göbl is also provided. The entire ANS collection of Kushan coins can be accessed online at www.numismatics.org. The small collection of the Kushan coins of the National Museum in Warsaw was published by SMAGUR (61).

A general survey of Kushan coinage was published by BRACEY (6) as a chapter of the online edition of the *Encyclopædia Iranica*. In the same *Encyclopædia* the overview of Kushano-Sasanian coinage was published by SCHINDEL (51), who is also the author of another paper on the same subject (49). The section on Kushan coinage, rewritten by BORDEAUX (3), is included in the updated edition of the book *The Archaeology of Afghanistan: From Earliest Times to the Timurid Period*. The issues concerning the Kushan gold standard as well as the export of Kushan coins were examined in FALK's paper (19) on the use of gold in India and in the Indian Ocean trade. The structure of the coinage of Great Kushans was studied by MAC DOWALL (39). The publication of selected works of BOPEARACHCHI (4) includes papers on Kushan numismatics. While his observations on the chronology of the Early Kushans as well as on the origin of Kushan gold were published previously in English, the paper on the dating of the Begram Bazaar originally appeared in French and is here translated into English for the first time. The results of the multi-spectroscopic analysis of Kushan coins were published by MAMANIA AND SINGH (40).

A couple of papers take up the question concerning the role of Kushan coins in establishing the Date of Kanishka. BRACEY (7) offered an overview of the controversy around this subject and discussed new evidences and arguments developed post-1960, it is after the 1960 London Conference. He also traced the advances in evidence that led to the solution of AD 127 explaining the complexity of this process. CRIBB (10) showed that this very date reached by Falk from the astrological text can be confirmed with the use of numismatic and inscriptional evidences. He also discussed the Falk's proposal in the light of its important implications for research on Gandharan chronology and art. SCHINDEL (47) is of the opinion that the year AD 127 cannot be established without doubt and employed numismatic and epigraphic evidences while considering the year AD 227 as a starting point of Kanishka Era.

The discussion on the coinage of Early Kushans is still open. Over a thousand examples of the Soter Megas coins of Kajula Kadphises and Wima Takto were examined by CRIBB (9) who convincingly argued that they issue probably began in the final years of the reign of Kajula Kadphises (ca. AD 50–90) and continued through the reign of Wima Takto (ca. AD 90–110). The same scholar (11) in another study discussed the use of the title *yavuga/xihou* applied to Kajula Kadphises in Chinese textual sources as well as in coin and stone inscriptions in order to illustrate the function of this title for him. GAWLIK (21) studied variations in uninscribed coins of Oesho/Ardochsho type of Wima Takto. TAASOB (63) reconsidered the language and legends of the Early Kushan coinage.

Numerous publications deal with Kushan coin iconography – both with regard to depictions of deities as well as of the rulers. In his comprehensive and important book SHENKAR (53) explored in detail the divine iconography in pre-Islamic Iran and Central Asia, including the Kushan Empire, analysing the origins and evolution of images, as well as their meaning and significance. The representations of Miuro and his relationships with the emperor and with

other gods in the Kushan pantheon was discussed by BRACEY (8) in the publication on how Mithra was conceptualized in the ancient world. The depictions of the god Iamsho with a bird on Huvishka coins were analysed by DARYAEE AND MALEKZADEH (12) who believes that they were connected with the idea of the paradisaical state. Skanda-Kumāra and Viśākha representations on the coins of the same ruler were examined by MANN (41) who argued that they demonstrate imperial agenda aimed to solidify Skanda's identity as the Mahāsenāpati of the gods, since his martial identity was of more use to Huvishka's royal persona. SINISI (59) offered a panorama about the representations and identity of Manaobago, the Bactrian version of Vohu Manah. The same author (58) discussed the sealing found in Kafir Qala, near Samarkand, with a scene of investiture with Mitra in the light of divine imagery in Kushan coinage, transmitting visually the notion of the divine origin of Kushan kingship. The new reading of the iconography and role of goddess Nana was proposed by FALK (18) according to whom the deity was shown with the crescent of the planet Venus instead of the moon while the representations of Nana sitting on a lion were based on depictions of Venus meeting Leo. The Vaishnavite imagery on Kushan coins was studied by SMAGUR (60). This author in another paper (61) used the same topic as a case study to answer the question: which of the elements of the official iconography of Kushan pantheon were not just symbolic elements, but semantic markers that characterized the nature of these images in the Kushan cultural context. She also discussed the application of applying the 'kingly reading' versus 'artefactual reading' approach for analysing the relationship between the official royal religion and the beliefs of Kushan subjects. Hellenistic elements in the Kushan coinage were briefly discussed by KUMAR (37), while PIEPER (45) mentioned Kushan coins when dealing with the earliest Shaivite images in the Indian coinages.

The depictions of arms and armour on Kushan coins were examined by MIELCZAREK (42). The royal attributes of power and authority which appear in the representations of Kushan and Sogdian rulers were studied by SHENKAR (54), providing an important insight into perceptions and representations of kingship in the pre-Islamic Central Asia. The Kushan royal imagery in the light of numismatic sources was discussed by SINISI (56) who highlighted the role of the local numismatic tradition and of the Parthian influences in its development. The same author (57) explored the Kushan and Parthian influences in the development of Chorosmian coin imagery. He (55) also presented and interpreted the iconography of the pantheon appearing on Kushano-Sasanian coins which, according to him, is fully Zoroastrian, and absorbed features of Sasanian and Kushan derivation. Kushan coins iconography was put together with other categories of data by GRENET (25, 26) who linked it to Zoroastrianism. FALK (20) proposed a new model of Kushan religion, developing an understanding of a royal cult as regarding the royal lineage being a part of the world of the gods. The issues of propaganda and identity of Sasanian, Kushan and Kushano-Sasanian rulers in the light of their coinages were studied by SCHINDEL (50).

New finds

Uzbekistan

The detailed numismatic reports (13, 14, 23, 24) from the Russian-Uzbek excavations of Hellenistic fortress Uzundara (Surkhandarya Region) located on the northern border of Bactria included finds of Kushan coins attributed to two early Kushan rulers, Soter Megas and Wima Kadphises. Finds of Kushan coins from Bukhara oasis were summarized by GORIN (22). A supplement to the list of coins discovered in Kampyr-Tepe (Surkhandarya Region) was published by MIELCZAREK AND NIKONOROV (43) who presented eight Kushan copper issues excavated between 1988 and 1991 in the north-western part of the fortress.

Pakistan

KHAN, DURRANI AND SAMAD (33) mentioned the coins excavated from a small mound located in Hayatabad (Peshawar) during the first field season in 2017. The site is dated from the 2nd century BC to the 2nd century AD and the most fascinating discoveries constitutes smith workshops systematically established in sequence and recorded at different levels of occupation. The site chronology is reflected in coin finds the earliest of which belonged to the first half of the 2nd century. Coins of Kujula Kadphises, Soter Megas, Kanishka and Huvishka were also discovered during excavations. Finds of Kushan coins from the monastic complex of Bādālpur in Taxila Valley (Haripur District) unearthed during the field season 2005 were illustrated in the KHAN's paper (36). Late Kushan, 'sub-Kushan and Kushano-Sasanian coin finds unearthed during excavations in 2018 at the urban site of Barikot (Swat) were mentioned by IORI AND OLIVIERI (27). 123 copper coins of the Soter Megas series discovered at various sites at Taxila were analysed by KHAN (30).

KHAN, ARIF AND KHAN (31) presented a hoard of copper coins found in 2015 during excavations at Badalpur at Taxila Valley (Haripur District). The find consisting of 31 coins, most of which is dated to the Late Kushan Period, was unearthed scattered on a floor level in a corner cell of a small monastery. A small copper hoard or a combination of two hoards containing 18 coins particularly of the Kushan period was discussed by KHAN AND NAEEM QAZI (35). Those coins were discovered by a local person from a Buddhist site Jamrud (Khayber Agency) located to the west of Peshawar. The presence of two Buddha coins in the parcel raised questions about the nature of this hoard (sacred or donative) which was discussed by the authors. Another Kushan coin hoard containing gold and copper issues of the same period and found by a landowner in his fields at Ray Dheri in the village of Abazai (Charsadda district) was presented by KHAN AND DURRANI (32). The authors had the opportunity to examine a small portion of the hoard, i.e. 14 gold coins and an equal number of copper issues. They dated available material to the same period, it is late in the reign of Kanishka II. KHAN AND HASAN (34) published a new interesting hoard from Tibba Pīr Abdul Rehman, an archaeological site in District Jhang in Punjab, which was found by a resident of the village. It consisted of 180 gold and 65 silver coins as well as two gold ornaments and represented issues of five dynasties of different origin (Late Kushans, Kidarites, Guptas, Alchon Huns, and Sasanians).

Afghanistan

Hellenistic and Kushan coins found during the Afghan-French excavations at the ancient city of Bactra (Balkh) were catalogued, discussed and partially illustrated by BORDEAUX, BESEVAL, MARQUIS AND RASSOLI (5). 98 of them can be identified as Kushan copper issues dated between the reigns of Soter Megas and Shaka. Information about finds of Kushan coins from the territory of Afghanistan with a relevant bibliography can be found in BALL'S (2) revised edition of his *Archaeological Gazetteer of Afghanistan*.

Information about Kushan coins collected by Charles Masson from various archaeological sites, as well as on those which belonged to his own collection were published by ERRINGTON (15, 16) in the books resulting from the Masson Project. She (17) also discussed Kushan coins from relic deposits discovered by Masson, comparing burial practices, contents of reliquaries and architectural data, and proposing a late 1st century date for many of them. Kushan coins and associated objects from stupa deposits in Dharmarājikā (Pakistan) and eastern Afghanistan were studied by RIENJANG (46) in her paper on the chronology of stupa relic practice.

India

KANSAL (29) presented a copper coin which was procured from Kot Kapoora, a Tehsil in Faridkot District of Punjab (India). He attributed it to Kujula Kadphises. Kushan coins collected by Sir Aurel Stein during his early years in India, currently in the Heberden Coin Room of the Ashmolean Museum, were discussed by MAC DOWALL (38).

Bangladesh

Finds of Kushan coins and their imitations from Bangladesh were briefly presented by AHMED AND AL HASAN (1).

Europe

The catalogue of coins minted on the territories stretching from Tigris to Northern India (including Kushan issues) found in Europe was published by DE MÛELENAERE (44) who believes that majority of them arrived between the 2nd and 3rd centuries AD, as well as that they preferred to travel along the Danube/Rhine corridor when entering the Europe.

Two small bronze coins were published by SCHINDEL (48) who believes that most probably they represent a new Kushano-Sasanian governor. A local, unofficial issue from the time of Huvishka that appeared on the marked was published by SENIOR (52). TANDON (64) documented two new types of modern Kushan forgeries.

GUPTAS AND (IRANIAN) HUNS

Pankaj Tandon

The last seven years have been highly fruitful for research on the Guptas and Iranian Huns. New advances have been made in identifying new coin types and varieties, much progress has been made in properly attributing coins, and new interpretations of both the coins and the history have been put forth. In addition, there has been new information on hoard finds. In what follows we will first consider the Guptas and then the Huns. The first few pages will provide an overall summary of the most important research findings, to be followed by detailed accounts and reviews of individual publications.

Research on the Guptas

Perhaps the most widely followed and discussed event in Gupta numismatics in this period was the publication of the first new catalogue of Gupta coins since 1957 (KUMAR (34)). This book brought to notice many new varieties of Gupta coins. Some of its suggestions have been challenged and remain controversial (TANDON (60)); nevertheless, this was an important addition to the literature. It gathered together data on a very large number of Gupta coins, surveyed the literature, and performed XRF analysis on a reasonably large sample of gold coins. TANDON (50, 60) identified new types of gold dinars of the king who has come to be called Candragupta III. A remarkable new coin type published within the last seven years was the silver drachm of the madhyadeśa type of the Gupta prince Ghaṭotkaca (SINGH (49)).

In terms of proper reattributions of coins, undoubtedly the most important was the discovery that the king known as Prakāśāditya and almost uniformly thought to be a Gupta king was in fact the Hun king Toramāṇa (TANDON (55)). This conclusion had been speculated by Göbl but had never been proven and had not gained wide acceptance. The question, however, can now be laid to rest. The discovery allows for the reattribution of a number of other coins to Toramāṇa (TANDON (59)) and his Hun successors. We now know that the Huns issued far more Gupta style coins than we had previously thought.

BAKKER (13) made the case that the repoussé coins in the name of Mahendraditya were not issues of the Gupta king Kumāragupta I, as has become a popular belief recently (KUMAR (34)) but of a Sarabhapuriya king. He also provided a fresh interpretation of the Apratigha type coin of Kumāragupta, arguing that it was issued early in his reign and depicts him with his parents as a sort of “pedigree” type. Bakker argues that Kumāragupta displaced the “rightful” heir Govindagupta and therefore needed to proclaim that he had his parents’ blessing. RAVEN (40) also argues that this type was issued early in the king’s reign.

KUMAR (34) also made some bold re attributions of coins previously thought to be issued by Candragupta II to Candragupta I. However, many scholars believe that Candragupta I never issued any gold coins, and this view was taken up strongly by TANDON (60). Indeed, this latter paper made a case to reattribute some more coins of Candragupta II to Candragupta III, making that king far more important than previously realized. In a series of papers, TANDON (50, 53, 56) fleshed out the coinage of this king and argued that his true identity is Purugupta, the only known legitimate son of Kumāragupta I.

Of course, these reattributions involve reinterpretation of the coins. In the vein of reinterpretation, KUMAR (33) argued that the so-called “standard” or “sceptre” type of Samudragupta has been labeled incorrectly. Instead, most of these coins should be called the javelin type although this conclusion can be challenged (see review below). RAVEN (40, 41, 42) published a series of papers providing further details of her “mint idiomatic” approach to the organization of Gupta coins. This approach remains difficult for most non- art historians to implement but nevertheless is the most promising idea for understanding the structure of the coinage.

SINGH (48) and BANIK (19, 20) report on a new hoard of Gupta gold coins found in Murshidabad. MAJUMDAR (35) published a remarkable piece of detective work: an attempted reconstitution of the first known hoard of Gupta

coins, the Kalighat hoard, originally found in 1783 and dispersed shortly thereafter.

Finally, important new work on the details of Gupta history, particularly in their interaction with the Huns, appeared during this period. BAKKER (10, 16) brought together inscriptional and archaeological evidence to provide a detailed account of the various wars fought by the Guptas and Huns. TANDON (52, 59) attempted to incorporate numismatic evidence into this new historical account.

Research on the Huns

Perhaps the most important piece of work produced on the Huns in the last seven years is the source book edited by BALOGH (18). This remarkable book, an output of the Beyond Borders research project funded by the European Research Council, has gathered together all the primary sources in all languages available to study the Huns. While the classical sources and even the Chinese sources have been relatively well known and well studied, the bringing in of material in other languages such as Armenian, Bactrian, Sogdian, and others is a game changer in this research area. Scholars will be able to draw from this remarkable source for years to come.

Several important new catalogues of Hun coins were also published during these past seven years. The catalogue by JONGEWARD AND CRIBB (30) of the Kushan coins in the collection of the American Numismatic Society also included the coins of the Kidarite Huns, thereby becoming the first major catalogue of the coins of the Iranian Huns since the seminal work of Göbl. The works of PFISTERER (38) and VONDROVEC (62) were also published during this time. These catalogues not only record examples of new and newly discovered coin types but also push forward our understanding of the Hun coinages. TANDON (51) proposed a different approach to the reorganization of Hunnic coins based on the Schøyen inscription, but so far this approach has not been brought to fruition.

It is worth mentioning also the catalogue by FISHMAN AND TODD (27) of the small silver coins of western India called *dammas*. Many of these coins have been thought to be Hunnic, but Fishman and Todd argue against this attribution. They think that the coins thought to be Hunnic were in fact issues of the Rai dynasty and the rulers of Chach.

The new catalogues naturally also present new surveys of Hun coins and history. Several other such surveys have been published in addition, the most notable one being the exhibition catalogue ALRAM (6). This catalogue, which is also available online in English, accompanied an important exhibition of Hun coins held in Vienna from late 2012 to early 2014. Other surveys include ALRAM (2, 3), ALRAM ET AL. (9) and REZAKHANI (45).

Coming to more detailed studies attributing coins and publishing new types, perhaps the most significant piece of research was the discovery, already mentioned in the context of the Guptas, that the supposedly Gupta king known as Prakāśāditya was in fact the Hun king Toramāṇa (TANDON (55)). This discovery opened up the reattribution of other coins to Toramāṇa, such as the Archer type coin in the name of Prakāśa in the Lucknow Museum, which directly led to the reattribution of the so called Nameless coins of the Archer type to the Huns (TANDON (57)). A review of some of these discoveries is in TANDON (59).

Another very significant piece of research was that of DEYELL (25, 26), who argued convincingly that the coins in the name of *Pratāpa* and thought to be Kidarite coins, were in fact issued by the well known Indian king Harṣavardhana and his father Prabhākarvardhana. The reorganization and renewed understanding of the so called Kidarite coins of Kashmir, highlighted by Deyell's work, was also pushed forward by CRIBB (22) and CRIBB AND SINGH (23). One of the potential consequences of this research is the possibility that the Kidarites and Alchon may have been the same people.

A few new hoards of Hun Coins were published. These include a hoard of Kidarite style coins found in northern India published by CRIBB (22), a hoard of 145 copper coins, mostly of Khiṅgila, found in Pushkalavati and published by TANDON (58), a hoard of 17 coins of Mihirakula found in the salt range region and published by ALRAM (7), and a hoard of Hephthalite coins studied by HEIDEMANN (29). These coins were all versions of Göbl type 287 and Heidemann argues that they are all from the mint of Balkh.

Perhaps the most important research concerning the Iranian Huns from the past few years is not directly about the coins but about their history, for which coins provide some material evidence. Of these, the most compelling work is that of BAKKER (10, 16), who combines new readings and interpretations of inscriptions with coins and other material evidence to argue that the Huns waged a succession of wars in India during the late 5th and early 6th centuries. One series of wars was probably associated with the invasion of India by Toramāṇa sometime in the last decade of the 5th century. A remarkable suggestion made by BAKKER (16), which this author finds very convincing, is that the capital

from where he launched his invasion was in the area of the modern town of Akhnur, on the banks of the River Chenab. Starting from here, Toramāṇa moved through northern India, through Haryana and Kauśāmbī, to take possession of Mālwa and probably parts of modern Gujarat. These wars ended with a Hun defeat at the hands of Prakāśadharman in the early 6th century. The second set of wars are associated with Toramāṇa's son Mihirakula, who presumably had re-conquered parts of his father's lost kingdom but then suffered defeat at the hands of Yaśodharman. TANDON (52, 59) has elaborated on this reconstructed history, arguing on the basis of Indian sources that Toramāṇa left Mālwa to invade the Gupta heartland in eastern Uttar Pradesh, defeated the Guptas, and subsequently died there, most likely of natural causes.

BAKKER (11) also further buttresses an argument made earlier by de la Vaissière that the place called Tālagān in the Schøyen inscription as the place where the scroll was created was not Tālaqān near Kunduz, as Melzer had suggested, but Tālagang in the Salt Range. Bakker does so by identifying other places that pertain to the inscription and that are in the vicinity of the Salt Range. Given that de la Vaissière's argument was already persuasive, Bakker's evidence renders the suggestion virtually certain.

**NUMISMATICS OF PRE-ISLAMIC CENTRAL ASIA
(Bactria-Tokharistan, Soghd, Chach, Ferghana, Jety-Su or Semirech'e, and Khorezm)**

Aleksandr Naymark

During the years under consideration, the scarcely populated field of pre-Islamic Central Asian numismatics suffered from sad human losses: Larissa Baratova (1959–2017), Michail Fedorov (1937–2020), Andrei Kubatin (1984–2020), and Edward Rtveladze (1942–2022) passed away.

On the positive side, one can notice that the study of pre-Islamic Central Asian coins entered a new era at least in the format of the publications: while the earlier surveys could report two-three monographs at most, the present list record the appearance of multiple books and catalogues.

General works devoted to coin finds within the borders of modern Central Asian republics are two: a book by KAMYSHEV (55) that covers the entire numismatic history of Kyrgyzstan including the early stages (knives of Zhou period; Kushan; Roman; Byzantine; Sasanian; and Sogdian; as well as the coins of pre-Islamic Chach, Ferghana and Semirech'e); and the first volume of the complete catalogue of all coin finds in the oases of South Kazakhstan authored by PETROV with BAITANAEV AND BRAGIN (16). A collection of articles on pre-Islamic numismatics of Central Asia by FEDOROV (34) also needs to be considered among general works because it contains studies devoted to the coinages of different ancient countries of Central Asia during a broad time span. To the category of general surveys one can also add the broad selections of coins from the collection of the State Hermitage published by KRAVTSOV in exhibition catalogues and popular albums (58, 59) and NAYMARK's recent article surveying finds of late Roman bronzes coins across the entire territory of Central Asia (100).

Bactria-Tokharistan. DOVUDI published a monograph on the finds of Ancient and Mediaeval coins in Dangara (23). Hellenistic coinage of Bactria became the subject of several new books by KRITT (60, 61), GORIN AND DVURECHENSKAIA (49), GLENN (43), and GAVLIK (39), as well as of multiple articles by DEYELL (22), GLENN (40, 41, 42), DVURECHENSKAIA AND GORIN (28), DVURECHENSKAIA GORIN AND SHEIKO (29, 30) RTVELADZE AND GORIN (104), LERNER (64, 66, 68) and other scholars. The catalogue of the holdings of the American Numismatic Society by JONGEWARD AND CRIBB WITH DONOVAN (54) serves now as the standard reference on Kushan coinage. Two other studies published by CRIBB (20, 21) significantly advanced our understanding of the early Kushan coinage in general. GORIN produced an important article on the finds post-Hellenistic coins of Tokharistan (45). Books by DOVUDI (26) and GARIBOLDI (37) covered silver coinage of Tokharistan in the 5th to the 8th century and the finds of Sasanian drachms in Tajikistan. HEIDEMANN attributed a large series of silver drachms to Balkh (51).

Soghd and Chach. ATAKHODJAEV published a new type of coppers with name of Antiochus (2, 3) which according to NAYMARK (87) and GORIN (44, 46) were minted in Samarqand. ATAKHODJAEV also greatly expanded the list of Hellenistic coins found of Soghd (2, 3) and some more new finds were presented by NAYMARK (96). A book by MUSAKAEVA (72) discusses the coinage and coin finds of Bukhara from the Hellenistic period to the Early Middle Ages. Numismatic history of the South Sogdian principality of Nakhshab in the 1st–8th centuries CE became the point of investigation in a series of articles by NAYMARK (88, 93, 94, 95, 97, 99). Finds of Sasanian coins, of their imitations, and Bukhar Khuda coins on the territory of Tadzhikistan were covered in two new monographs by DOVUDI (26) and GARIBOLDI (37). New hoard of Peroz coins with countermarks from Sazagan was published by MUSAKAEVA jointly with BERDIMURADOV (85, 86). Multiple series of Early Mediaeval Sogdian coins were discussed in rather numerous articles by BABAYAROV (6, 7), MUSAKAEVA (74, 75, 76, 77, 78, 79, 80, 81, 82, 84), LURJE (69), and NAYMARK (90, 91, 99). HIRANO (52, 53), FEDOROV jointly with KUZNETSOV (33, 35, 36) introduced new types of Sogdian coins. An important hoard of copper from Paykand was investigated by KULISH in collaboration with MIRZAAKHMEDOV AND TORGOMEV (109). GORIN AND OMEL'CHENKO published coins of Kushano-Sasanian epoch from the town-site of Paykand in the Bukharan oasis (47, 50, 103). An article by NAYMARK deals with the finds of Sogdian and Khorezmian coins in Eastern

Europe (92).

Ferghana remains the least explored numismatic province of pre-Islamic Central Asia. BARATOVA summarized all available information on the subject, including the results of her own investigations (17). Three more recent studies devoted to particular series of Early Mediaeval Ferghanian coins were produced by BABAYAROV AND ASANOV (10, 11, 12).

Khorezmian numismatics is represented here by single work: KUZNETSOV'S solid monograph on the coinage of 8th century Khorezmshah Sawshafan (62).

The history of Central Asian numismatic research became the theme of NAYMARK'S article on the coin collecting in colonial Turkestan (97).

**ISLAMIC NUMISMATICS:
NORTHERN AFRICA, NEAR EAST AND CENTRAL ASIA**

*Aram Vardanyan and Alexander Akopyan
in collaboration with Abdelhamid Fenina*

Introduction *Aram Vardanyan*³

In recent years, significant advances have been recorded in the field of Islamic numismatics due to a constant stream of new finds that have been made readily accessible to scholars from a variety of online resources. The traditional method of studying numismatic finds from archeological excavations has been supplanted and superceded by a sizable volume of high quality scans and photographs published by a growing number of coin dealers and numismatic auction houses. Additionally, museums have begun embracing the creation of online databases with high quality images and metric data of their numismatic collections whose contents were once only available through limited print catalogs or in-person visits. Finally, non-institutional individuals have been increasingly sharing images of their own holdings through personal websites, forums and non-institutional databases that rely on user contributions to grow.

In this regard, the importance of the Zeno Oriental Coins Database cannot be overestimated. With more than 270,000 images of coins struck in gold, silver and copper, it is the largest online database in the world that continues to grow in strength every year. Another important source for Islamic coins is the Rasmir discussion forum - an excellent tool for monitoring the spread of Islamic coinage through various historical periods in Eastern Eurasia with an emphasis on the Volga/Don/Dnieper river basins, Central Asia and the Caucasus. Moreover, under the auspices of the Rasmir forum at least five scientific round tables were organized in the city of Odessa in Ukraine between 2012 and 2017 with the aim of facilitating collaboration and exchange of information between collectors and amateur numismatists coming largely from different parts of Russia as well as Ukraine and Belarus.

In parallel with initiatives by smaller groups of collectors and numismatists a few welcome notes should be made to highlight current projects from larger institutional partners in the field of Islamic numismatics. Trent Jonson is currently working on the digitalization of the collection of Islamic coins in the Ashmolean Museum (Oxford, UK), with a similar project being undertaken by Sebastian Hanstein for the collection in the FINT (University of Tübingen, Germany). Finally, the American Numismatic Society (New York, USA) has continued expanding the initiative to digitize their holdings.

The increased accesability of the source materials to scholars has led to a steady stream of scholarly publications in Islamic numismatics over the past few years that have greatly helped to develop our understanding of the history of this period. In the classical and traditionally accepted peer-reviewed academic journals such as *Numismatic Chronicle* (London), *Revue Numismatique* (Paris) and *American Journal of Numismatics* (New York) that are published annually, one can find a wide range of publications on either various issues of Islamic coinage or hoards containing coins struck by different Islamic dynasties (*Coin Hoards* series in the *Numismatic Chronicle*). Similar articles touching various aspects of Islamic numismatics have also been published in the biannual *Der Islam* (University of Hamburg). Sadly, Stan Goron's withdrawal from the position of the editor-in-chief of the *Journal of the Oriental Numismatic Society* which had begun in the early 1970s marked the end of a brilliant era for a specialized publication dedicated solely to Islamic and Oriental numismatics. Fortunately, its publication continued for some time thanks to the efforts of Robert Bracey from the British Museum, who succeeded in elevating its standing and balancing the content between pre-Islamic, Islamic and non-Islamic publications appearing in alternating volumes, as well as submission guidelines to the *JONS* until his own departure.

On a final note, the COVID-19 pandemic has left its negative impact on numismatic research as well. There has been a significant decline in the volume of publications and many projects remain incomplete and delayed indefinitely.

3 We are thankful to Levon Vrtanesyan (New York) for the language editing.

Even the completion of this *Survey* ran into difficulties, and was delayed for an additional year. It now includes the results of the scientific research in the last seven years (2014–2020). In this regard, we would like to thank our colleagues and friends for their help and persistence.

General Works *Aram Vardanyan*

The emphasis during these seven years lay on the mapping of the numismatic material in the form of *Sylloges*. The *SNAT* series was extended by two additional volumes devoted to the Islamic coinage representing early medieval Syria (the mint of Damascus only) and some Egyptian mints with a particular attention to al-Iskandariya and al-Qāhira. At present, the forthcoming volume comprising the coinage of the mint of Aleppo is under way. We hope that the long-awaited SICA volumes covering the coins struck by the dynasties that ruled in the Near East in the pre-Mongol era will be soon available to public.

Over the past few years the number of publications devoted to the study of historical numismatic collections in Europe has increased. HEIDEMANN (20) outlined the main developments and trends in building the collection of Islamic coins in the Jena Münzkabinett from the 18th century to the present day, while ILISCH (22–24) surveyed and highlighted the collection of the German orientalist and one of the founders of Islamic numismatics Oluf Gerhard Tychsen (*d.* 1815) as well as the Imperial coin collection held in the 18th century Leipzig. HANSTEIN (19) highlighted the importance of the collections of Islamic coins by Otto Blau and Wilhelm Müller and their connection to the University of Leipzig. TALVIO (40) emphasized Frähn's role for the origin of Islamic numismatics in Finland. In 2018 D'OTTONE RAMBACH received the honorable Samir Shamma Prize for Islamic Numismatics for her book including the collection of Arabic coins that belonged to the Italian King Victor Emmanuel III (1900–1946). The subsequent publications on various Italian collections including Islamic coins, seals and stamps based on her talks was presented at the 4th and 5th *Simone Assemani Symposium on Islamic Coins* held in Trieste and XV International Numismatic Congress organized in Taormina (D'OTTONE RAMBACH alone or in collaboration with CALLEGHER AND TRAVAINI (11–12, 14–16)).

Some publications on the methodology used in modern numismatics are worth mentioning in this section. ALCHOMARI (2) discussed the main scientific approaches for studying coin hoards, while NAROZHNYI (30) shared his thoughts on the semiotic evaluations of the Mongol period coins from burials. NASTICH (31–32) underlined the importance of coin forgeries as a historical source while BACHARACH (5) emphasized the main tools for teaching and studying Islamic numismatics. The enormous work on the creation of an online data-base with references to hundreds of abstracts, articles, books, catalogues and dissertations written in Arabic on Islamic numismatics and neighboring disciplines by BACHARACH'S (6–10) deserves deep appreciation by both academicians and students working and studying in the field. PHILLIPS (37) expressed his opinion on the role and significance of the meetings in frames of the *Seventh Century Syria Numismatic Round Table (1992–2011)* to the study of early Islamic numismatics. FAGHFOURY (17) facilitated the publication of a jubilee issue in honor of Stephen Album who began his numismatic activities back in 1960. The book entitled *Iranian Numismatic Studies. A Volume in Honor of Stephen Album* included the articles and short notes by scholars and amateur numismatists devoted to the coinage of medieval Iran.

KRAVTSOV (26) and KULESHOV (27), by then both representing the State Hermitage Museum (St. Petersburg), paid considerable attention to the scientific experience of Richard Vasmer and Aleksey Bykov as well as their joint efforts for making the Bezlyudovo hoard available for public. Finally, series of obituaries was published in memory of various renowned numismatists such as Elena Davidovich, Azgar Mukhamadiev, Otto Retovsky, German Fedorov-Davydov (NASTICH (33)), NEDASHKOVSKY (34–35), NEPOMNYASHCHY (36), REVA AND MOISEENKO (38), ZELENEEV (42)).

Pre-Reform Coinage *Aram Vardanyan*

An impressive two-volume set by MALEK (82), which is based on a large amount of Arab-Sasanian silver and copper coinage deriving from the extensive Johnson collection comprised back in the 1840s, is perhaps the most valuable publication in the field. This enormous study offers both a through discussion on the coinage and catalogue with some 1600 black and white illustrations. By its importance the volumes thoroughly cover the field for the next several decades. Our knowledge on the *Standing Caliph Coinage* of Jerusalem was extended by SCHULZE (93) who gathered in her work not only all *Filasīn-Īliyā* type coins known to her, but also conducted a scrupulous and extremely important die study. While continuing the topic of the *Standing Caliph Coinage* one must mention the publication by GOODWIN (72) which remains the most up-to-date study in the field.

The publications within the series entitled *Coinage and History in the Seventh Century Near East* 4 and 5 have

considerably expanded our knowledge on various issues of the pre-reform coinage. Particularly, articles by GOODWIN (69–71), JONSON (78), ODDY (83–85) and ODDY AND PRIGENT (87), PHILLIPS (88), SCHULZE I. (92, 94–95), SCHULZE W. (98–99) and SCHULZE AND ODDY (100), TREADWELL (101), WOODS (108) discussing various aspects of the coinage that circulated in the Near East prior to the reform of the Umayyad Caliph ‘Abd al-Malik (685–705 CE) are worth mentioning here.

The PhD thesis by JONSON (77) is an important contribution into the study of the pre-reform precious and non-precious metal coinage of North Africa and Iberian Peninsula. In addition, JONSON, BLET-LEMARQUAND AND MORRISON (79) offered an interesting discussion on the Byzantine mint of Carthago and its connection to the early Islamic mints that functioned in North Africa.

The publication of hoards with pre-reform coins was continued in this period too. A hoard with Hephthalite drachms struck in Balkh was published by HEIDEMANN (76). Almost simultaneously GOODWIN AND GYSELEN (74) published the Irbid Hoard which included several hundreds of copper Arab-Byzantine coins found in the northern corner of Jordan. This publication also includes an important discussion of the Pseudo-Damascus mint. A mixed hoard with Byzantine and Arab-Byzantine coins was published by LICHTENBERGER AND RAJA (80). A short note by TSOTSELIA (102) provided the numismatists with access to the Arab-Sasanian hoards kept in the National Museum of Georgia.

Finally the joint article by AMITAI-PREISS AND BACHAR (58) is dedicated to the enigmatic Yubnā coinage.

The Umayyad and Abbasid Caliphate, and Its Regional Successors *Aram Vardanyan*

Since the forthcoming and long-awaited SICA volumes are still in press and thus cannot be included into this survey, we must admit that only a couple of books have been published in the field in the recent years. Particularly, ALCHOMARI’s PhD dissertation (113) dealing with a description of a large hoard from Busayra which contained several thousands ‘Abbāsīd period silver *dirhams* seems to be the only monographic study published in the field. DARLEY-DORAN’S (118) two-volume set with unknown binding and containing some 1956 black-and-white illustrations is so far the most up-to-date catalogue of Umayyad and ‘Abbāsīd copper (bronze) coins (*fulūs*).

A hoard with Umayyad and ‘Abbāsīd coins from Sepphoris is described in the article by WASSERSTEIN (155). The publication of the coin hoard of Bortchalo (Georgia) ALCHOMARI (111) opened a scientific discussion on the main coin groups that circulated in the Jazīra in the 10th century CE. Otherwise, Umayyad and ‘Abbāsīd coins with new and hitherto unknown mints or dates and struck in precious metals can be found in the contributions by AL-NABARAWY (114), GHODHBANE (122), ILYASOV, IMAMBERDYEV AND KORN (130), LEMBERG (133), NAUE (138) and RAMADAN (141). Based on the evidence of literary sources a new ‘Abbāsīd mint called al-Ma’shūq which produced gold *dīnārs* in the name of the Caliph al-Mu’tamid (870–892 CE) in AH 271 has come to light thanks to RAMADAN (142). Among the most recent publications by BATES (115) one must emphasize an article in which the author makes an attempt to pay more attention to the regional coinage as well as the local administration standing behind it. VARDANYAN (153) reverted to the reflection in the coinage of Armīniya of the rivalry between the Caliph Hārūn ar-Rashīd (786–809 CE) and his brother ‘Ubaydallāh that occurred in the 780s CE.

Very few publications on the coinage by Islamic dynasties that emerged on the ruins of the ‘Abbāsīd Caliphate in the 10th century CE are worth mentioning here. ILISCH AND KULESHOV (129) published the ‘Uqaylid and Marwānid coins from the Vas’kovskiy hoard found in Pskov region of Russia in 1923 and acquired by the State Hermitage Museum in 1924. BUGARCHEV (116) offers a brief overview on the monetary history of the Simjurid state. The article by TREADWELL (150) might be useful for those who is interested in Shī’a and other non-Qur’ānic references appearing in the Islamic coinage struck in the pre-Seljūqid era.

In contrast, the majority of publications that has come to light during the last six years had its focus on the Umayyad and ‘Abbāsīd copper coinage. ALCHOMARI (112) discussed the circumstances under which copper coins of al-Baṣra dated AH 136 penetrated the coin circulation of the early ‘Abbāsīd Syria. The focus of GHODHBANE’S (123) research was the Umayyad copper coinage of Atrāblus/Tripoli. ILISCH (127) considers the marks and isolated words found on the copper coins minted at Khizānat Ḥalab (*Treasury of Aleppo*) in AH 146–148. NASTICH (137), in the light of new discoveries, speaks about the main coin types, mints and dates which are characteristic for the ‘Abbāsīd copper coinage in Māwarānnahr (Marwanshahr?). PARVÉRIE (140) published a short note on a small hoard with Umayyad copper coins found near Ruscino in Southern France; unusual because such copper coins rarely left the area in which they were struck. Contributions by SCHINDEL (143–149) are mainly devoted to the study of the Umayyad copper

coinage that originated from the mints located in Wāsiṭ, Ghazza and Ephesos. As a continuation to his *Islamic Coins Struck in Historic Armenia*, vol. 1 (Yerevan, 2011), VARDANYAN (152) offers an up-to-date catalogue of the ‘Abbāsīd period copper coins attested for the mints of Armīniya, Arrān, Barda‘a, al-Bāb, Dabīl, al-Hārūniya and al-Yazīdiya, all located in the northern province of the Caliphate. ZARAZIR (156) drew attention to the copper coinage that was struck in Shīrāz in AH 137.

Finally, thanks to the articles by KRAVTSOV (131), OTHMAN (139) and D’OTTONE RAMBACH (117) we know more about the Umayyad and then ‘Abbāsīd period glass weights, jetons and wessel stamps. IBRAHIM’S (126) study extends our knowledge on the lead seals prepared in the Umayyad Palestine.

North Africa and Sicily *Aram Vardanyan and Abdelhamid Fenina*

Only a few books were published in this field. Particularly, D’ANDREA (159) focused on the Arab coins struck in Southern Sicily, while ZANCHI (178) published a collection of Sicilian *kharrūbahs*. At the same time, HOHERTZ (169) authored a catalogue of square *dirhams* struck in Spain, Portugal and North Africa between 1130 and 1816 CE. In her article SANTANGELO (177) tells about the Italian archaeologist Paolo Orsi’s experience with Islamic coins found on Sicily.

As for publications in periodicals or in form of book chapters, FENINA (164–166, 168) made sufficient progress in his studies of the ‘Abbāsīd and then Aghlabid period coinage of Ifrīqiya and al-‘Abbāsiya. In each of his short, but rather important notes LIÉTARD (172–174) discussed full and fractional denominations struck by Ziyānids and Marīnids. Some unpublished Ziyānid coins of Tilimsān as well as Idrīsīd coinage, particularly from the mints of Walīla (Volubilis) and Tāhirt (or Tiaret in central Algeria) are covered in articles by BENCHEKROUN (157–158). LIÉTARD AND BENCHEKROUN (175) referred to the copper coinage by Rāshīd ibn Qādim. A local Rustamid dynasty of Ibadī imams with Persian origin is represented by copper coinage that originated at the mints of Tīharat and Tilimsān (LIÉTARD (171)). A much more detailed discussion on this obscure coinage is offered by ILISCH (170).

In one of his articles published in the field of Ḥusaynid numismatics several years ago FENINA (167) reconsidered the role of the central mint of Tūnis.

Egypt, Bilād al-Shām and Arabian Peninsula *Aram Vardanyan*

In recent years the number of publications on the Islamic numismatics of Egypt, Bilād al-Shām and Arabian Peninsula was considerably reduced. Among the books written in the Arabic language one should mention the publication by ‘AQL (185) dealing with the Islamic coinage of Filasṭīn and a much more general one by RAMADAN (208). There are not so many publications of this kind in European languages either. The SNAT (*Sylloge Nummorum Arabicorum Tübingen*, 1993–...) series, at present the only ongoing series in Islamic numismatics, was enriched by two volumes. In 2015 ILISCH (196) published the volume devoted to the mint of Damascus from the earliest Islamic era and until 1260. It included some 948 gold, silver and copper coins struck by various dynasties that controlled Syria during the first six centuries of Islam. The second publication in the field appeared in 2017 and was authored by YOUNIS (217) who gathered in one volume nearly 1200 coins struck in al-Iskandariya and al-Qāhira as well as the mints of minor importance such as Ahnās, al-Fuṣṭāṭ, al-Fayyūm, Qūs from the advent of Islam until the Ottoman period. Finally, many years of diligent research in the field of Iḥṣīdīd numismatics bore fruit in the the online publication of the 2nd and revised edition of the *Islamic History Through Coins. An Analysis and Catalogue of Tenth Century Ikhshidid Coinage* BACHARACH (186).

The article by HEIDEMANN AND KOOL (195) mapping the earliest Numayrid coin found in Ṭabariya (Tiberias) extends our knowledge on the coinage of this obscure dynasty. Simultaneously, AL-NABARAWY (182) and TREADWELL (215) discussed the reign of the founder of the Tūlūnid state Aḥmad ibn Tūlūn (868–884 CE) from both historical and numismatic points of view. As AL-NABARAWY discusses a sole rare Miṣr *dirham* dated AH 265, TREADWELL, uses both literary sources and available coins to help understand the reasons for the appearance of the Tūlūnid state. In his short note, BACHARACH (187), in turn, explains the Middle Asian roots of the Iḥṣīdīd rulers of Egypt. Some fifty years after the publication by N. Lowick, DESOUKY (192) tries to summarize the Tūlūnid coinage at the mint of Bālis. Fāṭimid coinage of Tunisia is discussed in the articles by FENINA (193–194). RAMADAN (209) made available for scientific research the rare and hitherto unpublished Fāṭimid *dīnār* struck in Zawīla in AH 404. SCHINDEL (211) speaks on a small hoard with Fāṭimid gold *dīnārs* struck under the Caliphs al-Mu‘izz (953–975 CE) and al-‘Azīz (975–996 CE) in Cairo and buried after AH 377. The research of the Fāṭimid and Mamlūk period glass weights was continued

by BACHARACH AND SHERIF (188) as well as KOLBAS (198). The dynamics of Mamluk copper coinage of Damascus as well as hoards with silver *dirhams* found in Jordan is the scope of research in the publications by SCHULTZ (212–214).

As far as the numismatic studie of the Arabian Peninsula is concerned, as before, the amount of publications in the field remains quite small. A short discussion on the mints of ‘Athar (‘Aththar) and Makka on coins struck by Yemenite dynasties in the early Islamic period is offered in AL-TUMAIHI (183). Among the very recent publications in the Yemenite numismatics an article by D’OTTONE RAMBACH (189) discussing the Rasūlid coinage from the mints Ta’izz and Tha’bāt is noteworthy.

Seljuq/Mongol Period Anatolia and Ottoman Empire *Aram Vardanyan*

In the field of the pre-Ottoman Anatolia only a few articles deserve special attention. Particularly, HEIDEMANN AND SODE (235) published a rare lead seal (AH 588/1192) issued in the name of a certain Ihtiyār al-dīn al-Ḥasan ibn Ghafra who in accordance with the so-called *Law of the Turks* tried to assume the power in the Rūm Seljūqid state after the death of the Sultan Qilij Arslān II (1156–1192 CE). This artefact is an important historical source shedding more light on the history of the Rūm Seljūqid in the late 12th century CE. SCHINDEL (253) speaks about a coin overstruck by Anatolian Mengujakids. Various aspects of the Beylik coinage were discussed by TEOMAN (266–267, 269), ÖZTÜRK AND PERK (245–248), ERON (225–226) and KİREÇ (242–243). YOUNIS (273) emphasized the importance of inter-dynastic marriages between the Rūm Seljūqs and the Ayyūbids, as well as its reflection seen in the contemporary coinage.

The mapping of the coinage of the late Ottoman Empire has essentially moved forward through the publications by DAMALI (222–223) who in 2014 brought to an end the monumental series entitled *History of Ottoman Coins*. The volumes 8 and 9 span the period from Maḥmūd II (1808–1839 CE) to the last Sultan Muḥammad VI (1909–1918 CE). In his articles SCHINDEL (253–258) discusses various Ottoman denominations struck at the mints located in Asia Minor, Iraq and Egypt. His publication on the hoard with coins of Sulaymān I Qānūnī (1520–1566 CE) found in the Austrian market municipality called Pitten (SCHINDEL (255)) permits the allocation of a new place on the map of Europe where a hoard with Ottoman coins was revealed. At the same time, SCHINDEL (252) makes an attempt to find out the earliest Ottoman copper coins (*mangyrs*) that could have witnessed the rule by Orkhan (1324–1360 CE). SREĆKOVIĆ (261) attracted attention to the lack of die engravers in the late Ottoman Belgrade mint. At the same time, the political realities of the 18th century can be seen in the publication by KRAVTSOV AND STEPANOVA (244) which discusses an Ottoman coin bearing a countermark with a portrait of the Swedish King Carl XII (1697–1718 CE). A brief discussion on the calligraphic peculiarities used while striking Ottoman coins in the 18th–20th centuries can be found in HEIDEMANN (234).

Not so much has been done in the field of the late and post-Mongol period of Anatolian numismatics during the last few years. Only the contribution by BİNBAŞ (221) on the Āq Qoyūnlū period hoard from Arzinjān as well as TARGAÇ’S note (262) on a rare Jalāyirid coin are the only noteworthy publications

Caucasus *Aram Vardanyan and Alexander Akopyan*

During the last few years the number of scientific publications in the field of Islamic numismatics related to the Caucasus region has greatly increased. These are mainly the works dealing with the monetary history and coin circulation of medieval Armenia, Georgia and present-day Azerbaijan. In his PhD thesis VARDANYAN (355) gathered the all known to him Sājid, Sallārid, Daysamite and Rawwādid gold and silver coins that participated in the circulation of Armenia and the adjacent territories in the 10th century CE. At the same time, his catalogue of early Islamic copper coins supported by both historical and numismatic discussion might shed more light on the administrative system that existed in the ‘Abbāsīd North (152). Several rare and hitherto unpublished Islamic coins struck in historic Armenia during the Islamic rule (from ‘Abbāsīds to Qājārs) can be found in the pages of a special publication presented by the Central Bank of Armenia and devoted to the 25th anniversary of the national currency, the Armenian *Dram* (VARDANYAN et AL. (357)).

As before PAGHAVA et AL. (344, 349) has continued studying the ‘Abbāsīd period coinage in Georgia. The Georgian imitations of ‘Abbāsīd *dirhams* and their probable connection to David III Kuropalates’ (978–1000/1 CE) coinage is the main scope of research in the studies by KULESHOV (314–315, 317, 318). The latest has also succeeded in mapping the Khazar imitations of the ‘Abbāsīd *dīnārs* (316). The rich coinage of the Shīrwānshāhs was covered in great detail in recent books by RAJABLI (353) and ZLOBIN (362).

Significant progress has been achieved in the study of the coinage of Kakheti-Hereti (11th century CE). After the publication of the earliest billon *dirham* issued in the name of the King of Kakheti Kwirike III the Great (1010–1037 CE) by AKOPYAN AND VARDANYAN (295) in 2012, a series of publications devoted to the numismatics of this period appeared in recent years. Particularly, coins struck by representatives of this obscure dynasty were further discussed by AKOPYAN (291), ALEXANYAN AND PAGHAVA (298). An interesting specimen citing Kwirike III was found in a large coin hoard from the Republic of Azerbaijan in 2013 (VARDANYAN AND ZLOBIN (359)). Since then, the subject of Kakhetian numismatics has been the topic of additional articles by AKOPYAN AND ALEXANYAN (292), ALEXANYAN AND CHANISHVILI (297, 303), as well as by PAGHAVA in cooperation with his colleagues and friends (307, 337, 340).

As far as the numismatics of the core lands of Georgia is concerned, a milestone monograph in the field was prepared by BENNETT (299), whose work was kindly edited and supported by Stephen Album (Santa Rosa). With more than a thousand coin types and sub-types characterizing the coinage of Georgia from ancient times until the late medieval era, this catalogue is a significant contribution to the regions publications. It replaces both Pakhomov's *Monety Gruzii* of 1910 and Kapanadze's *Gruzinskaya Numismatika* issued in 1955. Simultaneously, various types and sub-types of coins struck in different periods of Georgian history were discussed or re-evaluated in the articles by PAGHAVA and his co-authors (306, 324, 330, 333, 343). The studies of AKOPYAN (275, 285, 286) offer a preliminary discussion on the coinage of Dvin during largely unknown period spanning the 11th–12th centuries CE, as well as his thoughts about the Georgian-type coins ascribed to the 14th century Avarian ruler Bayar ibn Suraqa (284, 293). In addition, the coinage and monetary circulation of the Ganja, Qarābākh (Qarābāgh), Īrawān (Chukhūr Sa'd) and Nakhjawān Khanates are among the main focus of his more recent studies (288, 290).

Finally, a series of publications by AKOPYAN et AL. (278, 282, 289, 294, 296, 307), PAGHAVA (327) and VARDANYAN (356) focused on identifying some mint-names and their localization within the Caucasus region. At the same time, coin hoards unearthed in the different parts within the Caucasus region have been registered by AKOPYAN et AL. (279, 292), BERIKASHVILI AND PATARIDZE (300), KULESHOV AND ORLOV (319), PAGHAVA et AL. (323, 335, 336, 342, 351), VARDANYAN AND ZLOBIN (359). Based on the evidence of literary sources and coins VARDANYAN AND MARGARYAN (358) made an attempt to introduce the history of medieval Qarābākh, the nature of its toponym as well as to introduce the main coin types that circulated in the region in the Mongol and post-Mongol periods (13th–15th centuries CE). The localisation of the mysterious mint-name Qarā Āghāj within the Qarabakh province is also included in this study.

Eastern Europe (Viking Age and Later) *Alexander Akopyan*

The circulation of coins in Eastern Europe during the Viking period remains one of the fastest developing areas of numismatics which continues to attract the attention of historians, archaeologists. The growing interest resulted in an increasing number of published works in this area during the few last years. Works have focused particularly on dealing with the typology of locally struck coins and their attribution. Thus, the research by KOVALEV (400), KULESHOV (404), LEIMUS (428–429) and RISPLING (439) offered a serious discussion on the earliest coins minted in the Rus'. At the same time, several aspects related to the chronology of the circulation in Eastern Europe of Islamic coins were analyzed in the publications by KULESHOV (405, 411), which then found their reflection in his PhD thesis (409). Studies by SHCHAVELEV AND FETISOV (440–441) are devoted to the mapping of the Viking era coin finds and their possible connection with trade routes. The composition of available coin hoards helped KOVALEV (401) to come to a conclusion that the circulation of Islamic coins struck in the Eastern Mediterranean and Upper Mesopotamia to Eastern Europe occurred as early as in the mid-10th century CE. On the cases of Severia and Suzdal Opolye, an attempt has been made to find out more on the regional currency zones (LEBEDEV (415)), MAKAROV, GAYDUKOV AND GOMZIN (432)). Articles by ZHUKOVSKY (450–452) are devoted to the weight units used in Eastern Europe. BEGOVATOV, LEBEDEV, KHRAMCHENKOVA (44) and SHAYKHUTDINOVA AND KHRAMCHENKOVA et AL. (52, 54) made significant progress in the metal analysis of Islamic coins that circulated in Eastern Europe.

The number of publications dealing with the Viking period coin hoards is also traditionally high. Hoards from Novgorod were described by GAYDUKOV, GOMZIN et AL. (374–375, 384–388, 454), while those revealed in other parts of the Rus' was published by FEDOROV et AL. (371–372), GOMZIN et AL. (380–381, 389), LEBEDEV et AL. (392, 393, 416–420, 422, 424–426, 446), KULESHOV et AL. (408, 410), LEMBERG AND SERGEEV (430, 431), REVA (438), VARDANYAN (444). Karelia is represented through the hoards discussed by KULESHOV (412), while the treasuries of Mordovia are in the articles by GOMZIN (382–383) and LEBEDEV (423). Coin hoards unearthed in the Perm region were

registered by GOMZIN (390), while those found in the Baltic Sea area are mentioned by MALARCZYK et AL. (366, 448), DOBROVOLSKY (369), ILISCH et AL. (395–396), LEIMUS (429, 436). Volga Bulgarian hoards can be found in the works by late BEGOVATOV et AL. (364, 365), TROSTYANSKY AND KALININ (443), while the topographic data on hoards from Crimea was amended thanks to publications by KULESHOV et AL. (407, 414). As before a special attention is paid to the hoards from the Slavic-Khazarian border. The huge Bezlyudovsky hoard was analyzed by BYKOV (368) and VASMER (445), while the importance of the “Gorokhov’s hoard” was highlighted by DOBROVOLSKY (370). Finally, the hoards from Greater Poland were published by MALARCZYK et AL. (433–435). Subsequently, they have been summarized in the monographic study by SZCZUREK, PASZKIEWICZ, TABAKA et AL. (442).

Golden Horde and Its Successors *Alexander Akopyan*

The study of Golden Horde coinage has progressed significantly due to inexhaustible effort of Russian numismatists deserving of special recognition and gratitude for their contributions to the field. Coins and the monetary circulation in the Golden Horde is one of the most active fields in Islamic numismatics. The majority of the studies selected for this survey is in Russian, although limited material has been published in English. For instance, HULETSKI AND FARR (506) published a catalogue showing the earliest coins of the Golden Horde, while SAVOSTA (585–588) in his book reverted to the coins struck in the Western parts of the Golden Horde as well as Azāq and Ḥājjī-Tarkhān. In addition, the coins of Azāq are in the catalogue of DOBROMYSLOV (478). An exhaustive monograph by PETROV, BAYPAKOV AND VOYAKIN (544) includes a comprehensive study on the monetary circulation of what is now Kazakhstan during the rule of Chingizids, Juchids and Chagatayids. An attempt to decipher the main peculiarities of the Bulghār monetary system in the 13th – early 14th centuries CE was made by BUGARCHEV AND PETROV (472). Through the efforts made by ALIMBAY, PETROV AND BELTENOV it was possible to publish coins kept in the Central State Museum of Kazakhstan (456).

Continuously, intensive scientific research is being conducted to reconstruct the main features of the regional coinages. For instance, the main aspects of the coin circulation in Bulghār are discussed in the studies by BUGARCHEV (464–465), Sarāy (PETROV, KRAVTSOV AND GUMAYUNOV (548), ERMOLOV AND DOBROMYSLOV (489), Azāq (DOBROMYSLOV (478)), Mājar (DOBROMYSLOV AND ERMOLOV (481–482)), Khwārizm (KHROMOV (511), REVA AND BRAGIN (573–574)), Syghnāq (GONCHAROV (501), REVA AND BRAGIN (570–575)), Crimea (GONCHAROV (501), MOROZOV (524), YAKUSHECHKIN (599)), Lower Dnieper (KHROMOV (508, 510, 512)), Western Black Sea region (DRUZHININ AND PETROV (484), GONCHAROV AND CRIVENCO (504), ZAYONCHKOVSKIY et AL. (603, 605)).

Concerning the political history of the Golden Horde, especially during the time of political instability when various *khāns* were aspiring to assume power in the state for themselves, some important suggestions based on the numismatic data were proposed by REVA (560–563). The same author (REVA (568) tried to pay more attention to the history of Golden Horde during the most difficult period coinciding with the early 15th century. REVA (567) covered rare coins struck by the secondary branch of the Juchids, the Shibānids (Shaybānids), while REVA AND BRAGIN (571) succeeded in identifying coins that can be ascribed to the Juchid ruler Künche Khān. REVA AND TISHIN (580) published the earliest coins of the Tyumen *khān* Maḥmūd Khūjā, while REVA, KAZAROV AND ZAYONCHKOVSKIY (577) identified the coins by the *khān* Ibrāhīm who ruled in Southern Siberia. Particular attention was also paid to the names of non-Chingizid rulers indicated on coins. For instance, Idigū-bek, Maḥmūd-bek, Waqqās-Bek were identified by REVA et AL. (576, 578–580), while ZAYONCHKOVSKIY et AL. (602, 607) has achieved some success in the identification of Tin-Ṣuffi and Ḥaydar-Bek.

A large amount of work has been done for the publication of coin hoards as well as the reconstruction of the monetary circulation in the Golden Horde. The majority of these studies are in the Russian language and deal with the Middle and Lower Volga – BUGARCHEV et AL. (464, 467, 469, 474–475, 519–520, 581), PETROV AND KUBANKIN (549–550), GOLUBEV AND LEBEDEV (493), MUKHAMETSHIN (526–529), NEDASHKOVSKIY (532–533). Various aspects of the monetary circulation in Crimea as well as hoards discovered in this region have been discussed by SIDORENKO, ALEKSEENKO AND TSEPKOV (595), YAKUSHECHKIN (600). Coin hoards unearthed in the present-day Kazakhstan and Kyrgyzstan are described by GONCHAROV (499), PETROV et AL. (463, 545–547, 552), REVA AND BRAGIN (572–575). Those registered for Western Siberia were described and analyzed by REVA (569), the Russian principalities by GOMZIN (494–495), PETROV (542), the Grand Duchy of Lithuania by GORLOV AND KAZAROV (505), the Northern Caucasus by NAROZHNY AND NAROZHNYAYA (530), the Western Black Sea region by CRIVENCO AND GONCHAROV (476), Ukraine by

KHROMOV AND SANZHAROV (515).

The external economic and political relations of the Golden Horde reflected in numismatics have been studied by GONCHAROV (497–498). The specific nature of Juchid coinage requires a thorough and many-sided research based on a die study that is starting to be fulfilled by a series of publications thanks to DOBROMYSLOV AND ERMOLOV ET AL. (477, 479–480, 486–488), SAVOSTA (585–589). More research has been conducted in recent years on the chemical analysis of Juchid coins with the use of various methods (XRF, SEM, OES, CT) (SHAYKHUTDINOVA AND KHRAMCHENKOVA with co-authors (43, 45–47, 50–51, 53–54) and MOROZOV (48–49).

Iran, Iraq and Afghanistan *Aram Vardanyan and Alexander Akopyan*

In recent years more publications dealing with numismatics of the Persian lands have appeared in Iran. Such contributions are welcomed as they offer a huge number of interesting, sometimes new and previously unrecorded numismatic materials which for many years had long been unavailable for scientific study, especially to those in the West. The most remarkable publications written in Persian language in this latest period are perhaps the monographs by ALAEDINI (618–620) devoted to the Mongol, post-Mongol and Tīmūrid numismatics of Iran. With several hundreds of nicely illustrated specimens, mostly kept in private collection(s), his catalogues shed more light on the coinage of Iran under Islamic rule. The catalogue by SOLEIMANI (664) devoted to coins struck by various dynasties that ruled in Iran during or after the collapse of the ‘Abbāsīd Caliphate follows the same style in regard to the presentation of the numismatic material. EFTEKHARI (630) concentrated himself on the coinage by the Afsharid dynasty, while HAGHSHEFAT (635) compiled a catalogue of Qājār machine-struck (milled) coinage.

As for publications in Western languages, the book by DAUWE (626) with some 323 entries offering a wide range of gold, silver and copper coins struck in the Iranian city of Qumm (from Umayyads to Qājārs with particular attention to the ‘Abbāsīd period dynasties and Tīmūrīds) is a fruit of his years long labor of collecting and studies in the field. His other studies related to the coinage of Fumān and Simnān in Northern Iran are important contributions to Tīmūrid numismatics (DAUWE (624–625)). Among studies dealing with the early Islamic coinage of Iran, one must mention the catalogue by WILKES (666) devoted to the Tāhirid coinage, as well as the series of articles by LLOYD (645–649) whose contribution published in parts in the *JONS* volumes is extremely important and so far the most comprehensive research conducted in the field of the Ṣaffārid numismatics after the publication by Richard Vasmer back in 1930. At the same time, the coinage by Dulafīds, another dynasty that ruled in Jibāl province in the second half of the 9th century CE, is discussed in the article by VARDANYAN (665) who for the first time brought together both gold and silver Dulafīd coins struck in the cities of Arrajān, Iṣbahān, Hamadhān and Nihāwand (Māh al-Baṣra). The chronology of governors that ruled in Ṭabaristān province of Iran in the early ‘Abbāsīd period was revised by KULESHOV (643). A thorough analysis of the coin hoard of Āmul found in 1973 with some 209 silver Ziyārid, Bāwandid and Būyid (Buwayhid) *dirhams* permitted ILISCH (638) to conclude that certain isolated letters frequently appearing on some Būyid coins had not only been mint-master’s initials, but also served some kind of signatures for the control of fineness. A few publications on the coinage of the Great Seljūqīd sultans in Iran itself as well as their dependencies in different provinces within the Iranian world are mainly connected with the name of the Egyptian numismatist DESOUKY (627–629).

AKOPYAN AND MOSANEF described the coins from the time of the fall of the Īlkhānid state (late 1330s–1350s CE) including the issues inscribed with the names of the Chūbānid (Chopanid) ruler Ashraf (*d.* 1357 CE) and his former follower, a Turco-Mongol officer named Akhījūq (*d.* 1359 CE) in the context of the Juchid campaign of 1357 CE into the Southern Caucasus and Western Iran (616). The same authors published a study on the coinage by Musha‘sha‘ who ruled in Iraq and Khuzistān in the 15th century CE (617). AKOPYAN also reviewed the typology, denominations and weight standards of the Iranian copper coinage dated 16th–18th centuries (613). A group of special marks seen on coins struck during the last decade of the reign by Sultan Ḥusayn (1694–1722 CE) was analyzed in another publication by AKOPYAN (612). A general overview on the late Iranian coinage as well as the current state of numismatic research in the area was carried out by HEIDEMANN (636).

A comparably modest number of publications in Western languages dealing with Islamic coinage of Afghanistan can mostly be associated with the names of KHAN (639–641), who discussed the coinage of Northern India (al-Hind) and Afghanistan (Ghazna) under Umayyads and Ghaznawīds, and GORON (632–634), the most recent studies of whom are connected with the Afsharid period in Kābul and coinage under the Durrānī ruler Qayṣar Shāh (1803–1809 CE).

CRIBB's (622) notice refers to some Sāmānid, Ghaznawid, Ghūrid and Khwārizmshāh silver and copper coins struck in the mints of Bamiyān and Farwān located in the Central and North-Eastern Afghanistan. All these coins were found in Bagram (Begram) and originated from the collection of the British traveller Charles Masson (Kabul, 1833–1838 CE).

Central Asia *Aram Vardanyan*

As before the most fruitful output in this section belong to scholars representing the post-Soviet academia. With the publication (vol. 1 – catalogue, vol. 2 – countermarks) of a large hoard with Tīmūrid silver coins (2645 out of 2670 illustrated) discovered in the settlement of Sayram in Southern Kazakhstan in 2011, BAYTANAEV, BRAGIN AND PETROV (673–674) contributed much into the study of Tīmūrid history and numismatics. The composition of the hoard, which mainly consisted of silver *tankas* struck by Shāhrūkh (1409–1447 CE), has shown that its burial may have taken place in or after AH 821/1418 CE. In addition, BRAGIN (675) individually and in cooperation with other colleagues (BRAGIN AND KAMYSHEV (678), BRAGIN AND PETROV (679)) continued the work on the topography of finds of Tīmūrid silver and copper coins in Kyrgyzstan and elsewhere. Moreover, some Tīmūrid copper coins with the denomination *tassūj* are discussed in BRAGIN AND PETROV (680). Articles dealing with an issue of copper coins under Zāhir al-Dīn Muḥammad Bābūr (2nd reign, 1500–1501 CE) in Samarkand in AH 907/1501 CE as well as the silver coinage by the Shaybānid ruler ‘Ubaydallāh Khān (1534–1539 CE) are among a few studies conducted for the period of the 16th century Central Asian numismatics (BRAGIN AND BATRAKOV (676–677)).

Some progress was also achieved in Sāmānid and Qarakhānid numismatics, though the number of publications in the area has decreased over the last a few years. Thus, SCHINDEL (707–708) published two hoards with Sāmānid coins found in Pepineg in Gallizia and in Central Asia. AL-NABARAWY (670) discusses a rare Sāmānid *dīnār* inscribed in the name of Nūḥ I ibn Naṣr (943–954 CE) and struck in al-Muḥammadiya in AH 341. A short note by CANNITO AND FEDEROV (682) offers some thoughts on an enigmatic copper (bronze) *fals* of Bukhārā minted in AH 348. DOVUDI (687) scope of research was the rare presentation *dirham* struck in the name of the Sāmānid ruler Maṣṣūr I ibn Nūḥ (961–976 CE). KALININ (690) attracted the attention of numismatists to previously unknown *dīnārs* issued by the Sāmānid amir Fā’iq. In cooperation with colleagues from the State Hermitage Museum, the same author published the Bondyuzh hoard of Kufic coins minted in the early 10th century CE (KALININ AND KULESHOV (692)). Some aspects of the coinage in the Qarakhānid state are discussed in KALININ (691) and KOSHEVAR (697).

As far as the numismatics of the late Central Asia is concerned, the articles by NASTICH (701, 704) and SCHUSTER (709) must be mentioned. NAYMARK (705) emphasized the main directions and trends of coin collecting in Turkestan before and after the Russian conquest of the region. Finally, the catalogue by NASTICH AND SCHUSTER (703) comprising the gold, silver and copper coins struck by the Khanates of Bukhārā, Khīwa, Khūqand, Jand and other smaller political entities that existed in Central Asia in the late 17th – early 20th centuries, has become an indispensable resource for both numismatists and collectors. It contains several hundred colored illustrations and is so far the most up-to-date study in the field.

EAST AND SOUTH EAST ASIA

INTRODUCTION

Helen Wang

For too long, East and South East Asian currencies were relegated to the back of books, the bottom of lists, and the end of cabinets. It is excellent to see this new Survey split into volumes, affording the currencies of East and South East a more equal status, and, even better, making the sections available online, open access, so that the contents will be easier to consult than the previous hard-copy surveys.

To recap, the first INC Survey, in 1961, covering the period up to 1959, contained nothing for East and South East Asia. For the 1967 Survey, covering 1960–1965, H.F. Bowker contributed two pages on the “Far East”, arranged under five sub-headings: Bibliography, Manuals, Catalogs of Major Collections, China, and Japan (Section 15, pp. 288–289). Under “Bibliography” he noted A.B. Coole’s *A Bibliography on Far Eastern Numismatics* [1940] and Elvira E. Clain-Stefanelli’s *Select Numismatic Bibliography* [1965], adding “no comprehensive bibliography of East Asian numismatics has been published since the writer’s *A Numismatic Bibliography of the Far East* [1943].” Under “Manuals”, he wrote “there is no corpus of East Asian numismatics in any language, for which there is a great need. Heretofore most books have been limited to cataloguing coins in collections of individual collectors, and these all fall far short of being at all comprehensive.” Under “Catalogs of Major Collections”, he listed the collection of Frederik Schjøth (1929, reprinted and expanded 1965), and the Anz collection of East Asian copper coins in a private collection in Hamburg (which Bowker had catalogued and hoped to publish). Under “China”, he included *Zhongguo jindai huobi shi ziliao* 中國近代貨幣史資料 (1964), comprising two volumes covering the period 1840–1911; and Ding Fubao’s 丁福保 *Guqian dacidian* 古錢大辭典 [Encyclopaedia of ancient coins (1938), with two facsimile editions issued in Japan. Under “Japan”, he noted that the Japanese had been very active in numismatics and listed five publications.

Since then, the situation has changed, and this is reflected in the East and South East Asian sections of the Survey, which have grown in size and scope. We have also gradually moved away from the Eurocentric terminology (eg Oriental, Far Eastern) towards more geographical terms (eg East Asia, South East Asia).

The 1973 survey, covering 1966–1971, included an “Oriental Section” edited by Helen W. Mitchell Brown, in which the East Asian sub-section, including South East Asia, covered four pages (Vol. 2, pp. 339–342).

In the 1979 Survey, covering 1972–1977, the “Far East” section, compiled by Joe Cribb, was 12 pages—triple the size of the previous survey—and included China, Japan, Korea, Annam, South East Asia (pp.480–491): eight pages for China, and shorter sections on Japan, Korea, Annam, Coin-shaped charms, and South-East Asia.

In the 1986 Survey, covering 1978–1984, the “Far East” section (Vol. 2, pp. 784–823), again compiled by Joe Cribb, had a two-page introduction, and 34 pages for China—tripling the size of the previous survey again—with sub-sections on Chinese currency through the ages, minting technology, Chinese precious metal currency, Chinese paper money, Chinese coins found outside China, coin-shaped charms, numismatic miscellanea. There were three pages on Japan and a paragraph each on Korea, Vietnam and Mongolia. For the first time, South East Asia had its own section (pp. 824–830), compiled by Robert S. Wicks, and consisting of seven pages with sub-sections on Burma; Thailand, Laos and Cambodia; Indonesia, Malaysia and Brunei; and the Philippines.

For the 1991 Survey, covering 1985–1990, more international help was enlisted. Vol. 2 of the Survey contained surveys of Japan, by Joe Cribb (pp. 698–701); China, by Dai Zhiqiang and Yao Shuomin (pp. 702–738); and South East Asia, by François Thierry (pp. 691–697).

The collaborative nature of the East and South East Asian sections has continued since then. In the 1996 Survey, covering 1991–1995, François Thierry surveyed South East Asia (pp. 785–790); Dai Zhiqiang and Zhou Weirong surveyed China (pp. 791–806) and Takashi Ohkubo surveyed Japan (pp. 807–809).

The 2001 Survey, covering 1996–2001, includes sections on South East Asia, by Michael Robinson (pp. 689–690); China, by Dai Zhiqiang, Helen Wang and François Thierry (pp. 691–734); and Vietnam and Indo-China

(François Thierry), pp. 735–738).

The 2009 Survey, covering 2002–2007, includes sections on South East Asia, by Michael Robinson (p. 527); China, by Helen Wang, Zhou Weirong and François Thierry (pp. 528–573); Vietnam and Indo-Chine, by François Thierry (pp. 574–577); and Japan, by Shin'ichi Sakuraki (pp. 578–581).

The 2015 Survey, covering 2008–2013, includes sections on The 2015 Survey, covering 2008–2013, includes sections on Chinese numismatics by Françoise Thierry (pp. 514–520), Vietnamese and Indochinese numismatics by Françoise Thierry, Nguyễn Thùy Hà and Emmanuel Poisson (pp. 521–524) and Japan by Shin'ichi Sakuraki (pp. 525–528). The sub-section on China which I prepared was not included, the main reason being that it was more of a list than a critical survey of the field. In the end, I published it on my academia.edu page. While I appreciate the motivation behind the rejection, it was already a mammoth task to prepare a list of publications on Chinese numismatics in Chinese, with pinyin, and an English title that was not without interest or use.

In the past 60 years, the fields of East Asian and South East Asian numismatics has grown in quantity, quality and internationally. However, it is not an easy task to compile these surveys, and inevitably we are dependent on experts and their availability. The current Survey includes four sub-sections on China, by Lyce Jankowski and Helen Wang; Japan, by Takagi Hisashi; Cambodia, by Grégory Mikaelian; and Island South East Asia, by Elsa Clavé. We are very grateful to them.

CHINA

*Lyce Jankowski and Helen Wang***Introduction**

Durant les six dernières années, un nombre conséquent de travaux en numismatique chinoise ont été publiés. Il s'agit dans leur très grande majorité de publications en langue chinoise, mais aussi en anglais, français, japonais et russe. Nous remercions d'ailleurs Vladimir A. Belyaev pour son aide pour les références dans cette dernière langue.

L'énorme travail de compilation du *Zhongguo qianbi da cidian* 中国钱币大辞典 [Grand dictionnaire des monnaies chinoises] se poursuit et deux nouveaux tomes portant sur les billets monétaires à l'époque de la République de Chine ont été finalisés (290, 291). La Société de numismatique de Chine (*Zhongguo qianbi xuehui* 中国钱币学会) a publié le sixième volume du *Zhongguo qianbi lunwen ji* 中国钱币论文集 [Recueil d'essais de numismatique chinoise – 6e série], rassemblant des articles sur des périodes et des problématiques diverses (6).

On peut saluer la publication d'un ouvrage majeur de référence en français, celui de François THIERRY, *Monnaies de la Chine ancienne* (8) qui retrace de façon exhaustive l'histoire de la monnaie en Chine depuis les origines jusqu'à la fin de l'empire. Bien qu'il ne s'agisse pas d'un ouvrage de numismatique, on pourra citer, la remarquable histoire économique de la Chine, par Richard VON GLAHN (9).

Un ouvrage impressionnant par son ambition et par sa taille, est la nouvelle édition de *Ch'ing cash*, de Werner BURGER (221) qui propose une étude du monnayage de la dynastie Qing (1644-1911) complétée par des tableaux chronologiques illustrant par des estampages les types émis par année et par atelier. La collection *Monies, Markets, and Finance in East Asia, 1600-1900*, dirigée par Hans Ul. VOGEL s'est enrichie de plusieurs volumes sur l'industrie des mines et la fonte monétaire (228, 253, 452).

Les découvertes en contexte archéologique sur le territoire chinois ont été nombreuses. Elles ont mis au jour des monnayages appartenant à toutes les périodes historiques, depuis les Royaumes Combattants (17, 18, 54) jusqu'aux Qing (227, 235, 236), voire même aux débuts de la République (279). Il s'agit le plus souvent de fouilles de sépultures, datant dans leur très grande majorité des Han (57, 58, 60, 61, 62, 64, 65, 66, 67, 74, 75, 80, 81, 82) mais aussi des Ming (183, 184, 186, 188, 193, 199, 203, 204, 205, 206, 217). Plus rares sont les lieux de culte (126, 182, 428), ou les sites d'architecture civile et militaire (76, 68, 133) ainsi que les ateliers monétaires (71). Quelques épaves ont également été étudiées (137, 227, 235). La découverte en 2011 de la tombe monumentale de Liu He (92–59 av. J.C.), marquis de Haihun, a révélé dix tonnes de sapèques. Mais ce sont surtout ses lingots en or en forme de sabots qui ont interpellé de nombreux chercheurs (56, 59, 83, 87, 89, 93, 97). La spectaculaire découverte en 2017 des vestiges de la flotte de Zhang Xianzhong 张献忠 (1606–1647) à Pengshan au Sichuan et de sa cargaison de lingots d'argent et de monnaies d'or (192) suscitera sans aucun doute de nouvelles questions de recherche. L'étude du monnayage en or et en argent semble être un thème majeur de la recherche actuelle en numismatique chinoise, comme l'a montré la tenue d'un colloque sur cette question en juin 2017 au musée provincial du Zhejiang Provincial Museum. Les actes édités par Li Xiaoping 李小萍 rassemblent vingt-deux articles depuis les Han occidentaux jusqu'à aujourd'hui (453). Les travaux de ZHOU Weirong 周卫荣 sur les lingots d'argent ont fait l'objet de plusieurs articles (122 ; 343 ; 485, 488) et d'un ouvrage (487).

Quelques collections muséales ont rendu leur catalogue disponible (419, 420, 141, 212).

Chaque année, la revue *Zhongguo qianbi* 中国钱币 [China numismatics] publie une sélection des références les plus importantes, livres et articles publiés dans des revues en République populaire de Chine. Nous avons repris cette sélection (中国钱币学货币史研究综述) réalisée de 2014 à 2019 par HUANG Wei 黄维, et d'autres collègues - QIN Huiying 秦慧颖, YANG Jun 杨君 et ZHAO Yunfeng 赵云峰 pour 2014, QIN Huiying 秦慧颖, CHEN Qi 陈祺 et REN Wenbiao 任文彪 pour 2015, SUN Yadi 孙雅頔, CHEN Qi 陈祺, REN Wenbiao 任文彪, TIAN Xianhao 田显豪 et MENG Xiangwei 孟祥伟 pour 2016, QIN Huiying 秦慧颖, CHEN Qi 陈祺 et MENG Xiangwei 孟祥伟 pour 2017, WANG

Keyu 王科宇 et SUN Yadi孙雅頔 pour 2018, et enfin WANG Jinhua 王金华 pour 2019.

Les références sont classées en suivant les catégories suivantes:

- (1) Histoire générale de la monnaie
- (2) Pré-Qin et Qin
- (3) Han occidentaux, Wang Mang et Han orientaux
- (4) Wei, Jin, Dynasties du Sud et du Nord et Sui
- (5) Tang, Cinq Dynasties et Dix Royaumes

JAPAN

Takagi Hisashi

This chapter reviews numismatic studies in Japan between 2014 and 2019. It focuses particularly on excavated coins which are estimated to have been created during the latter half of the medieval period and the transitional period to early-modern Japan (between the 14th and 17th century).

SAKURAKI (40) provides a general introduction to Japanese numismatics by a leader in the field, being a summary of his 2009 introduction (39), updated with more recent finds and research methodology. SAKURAKI (41) is a survey of numismatic archaeological studies in Japan in recent years. TAKAGI (46, 47, 48, 49, 50, 51, 52) offer a general history of currency in Japan and surveys of recent studies in this field, including numismatic and archaeological finds.

1. Coins (*zeni*) – mainly bronze, but also iron and brass

Zeni (Chinese: *qian*), the round coins with a square hole, were the main metal currency in pre-modern Japan. The primary material used in Japanese zeni was bronze, though iron, brass, and silver were also used. The word ‘coin’ in this chapter refers to zeni.

1.1 Re-evaluation of privately manufactured coins in Japan

TAKAGI (49, 50) defines the period between the latter half of the 13th century and 14th century as the beginning of the early-modern age of historical currency in Japan, as determined by the resumption of domestic coin production. During this period, the private sector in Japan imitated China’s bronze coin. Conventional studies have described how the imitation coins disrupted transactions owing to their poor quality. Recent studies, including those by TAKAGI (49, 50), re-evaluate coin production in Japan at that time as a test of how the private sector could provide liquidity through small coin, when the government was not creating metal coins.

A large proportion of imitation coins in Japan is of poor quality. For example, the inscription may not be clear, which KURODA (19) and SAKURAKI (39, 40) attribute to the lack of tin production in Japan. The lack of tin production also relates to the production of the coins with inscriptions that circulated after the 15th century.

TAKAGI (47, 48) describes governmental regulations concerning imitation coins produced in Japan. The laws defining coin discrimination by the governments during the late 15th century and the first half of the 16th century indicate that coins produced in Japan were circulating in society and that people could identify whether a coin was produced in Japan or not.

SAKURAKI (41) describes the continuity of coin production technology in Japan from the late 16th century to the 17th century.

1.2 Re-definition of *bita*

Bit a is a sub-category of zeni. TAKAGI (49) describes the earliest record of bit a dating to 1499.

Conventional numismatic discourses, e.g. OOKAMA (33), defined bit a as the assemblage of privately manufactured poor quality coins and imitations of imported zeni produced after the first half of the 14th century. In other words, bit a were defined as imitation coins produced in medieval Japan.

This definition probably dates to the *Kokon Senka Kagami* (Catalogue of Old and New Coins) of 1789, written by Kutsuki Masatsuna (1750–1802), daimyo, or domain lord, in the mid-Tokugawa period. A well-known researcher of numismatics, his collection can be found at the British Museum and Ashmolean Museum, University of Oxford. In *Kokon Senka Kagami*, he defined bit a as imitation zeni created in Japan by the private sector after the Ashikaga period (late 14th to 16th century) and evaluated the quality of bit a as very poor.

Meanwhile, we can find other definitions of bit a as being imported coins. In his 1711 book *Honcho Hoka Tsuyo Jiryaku* (A Brief History of National Currency Circulation) Arai Hakuseki (1657–1725), a Confucian and policy advisor of the Tokugawa shogun, defined bit a as old coins issued by other dynasties, such as the Chinese dynasties. In 1736, the scholar Aoki Kon’yo, in his *Keizai San’yo* (An Essence of Economy) defined bit a as coins from the ‘west

land', or the subcontinent of China.

These definitions of bita are based on the existence of Kan'ei-tsuho, the official zeni issued by the Tokugawa shogunate from 1636. The above-mentioned 18th-century works defined bita as zeni that were produced by the private sector in Japan or imported to Japan in the medieval age, as opposed to Kan'ei-tsuho.

Since the 18th century, conventional numismatic research has emphasized the low quality of bita and described these coins as despised. Contemporary numismatic studies in Japan share the opinion that bita was a poor quality coin.

However, this image of bita differs from the reality, as observed in 16th-century records, and recent studies evaluate bita as a symbol of the early modernization of currency in Japan.

The basic premise of the modern discourse was presented in YASUKUNI (60), first published in 1999, which showed that edicts of 1608 and 1609 defined the official exchange rate between gold currency, silver currency, and bita. These edicts defined bita as all zeni except for those of the lowest quality (made of lead, damaged, mis-shapen, unfinished, etc), and defined the value of 1 bita as 1 mon (mon being the basic unit of zeni). The Tokugawa shogunate issued the Kan'ei-tsuho in 1636, which defined the value of Kan'ei-tsuho as equal to bita. Therefore, it can be said that the origin of the Kan'ei-tsuho is the bita, and that the adoption of the bita as the standard coin in the edicts of 1608 and 1609 was a trial integration of zeni prior to the issuance of Kan'ei-tsuho. In 1670, bita was suspended as a tradeable currency.

SAKURAI (38) and YASUKUNI (60) describe the continuity of production for both bita and Kan'ei-tsuho. This implies the succession of coin production in medieval Japan. In short, the integration of zeni by Kan'ei-tsuho was an extension of the historical experiences of both value standards and production systems since the 16th century.

Since the first publication of (60) in 1999, successive researchers have tried to demonstrate the process of zeni integration by bita. Their observations have included: (a) the definition and the real contents of bita, (b) the circulation area of bita, (c) the value standard of bita, and (d) the policies regarding bita prior to the policies implemented by the Tokugawa shogunate.

Regarding (a), CHIEDA (1, 2) demonstrated the following two points:

(a-1) according to the early records describing the value standard of bita (1570s), bita was discounted coin. For example, a record in Ise province (now Mie prefecture) written in 1574, evaluated bita as one seventh of Eiraku-tsuho (Chinese: Yongle tongbao), the standard coin in the Kanto area.

(a-2): According to recorded loan transactions in Ise province in 1582, the parties transferred bita in its broadest definition — anything which was not standard zeni. There were exceptions: hatakake (coins with a damaged edge), hirame (coins without inscriptions), koro (Hongwu tongbao that were copied in Kajiki, Osumi province [now Kagoshima prefecture]), and heira (incomplete coins).

(a-1) corresponds to the definition of bita in *Kaikokushi*, a volume that discussed the topography of Kai province (now Yamanashi prefecture), compiled by mandate of the Tokugawa shogunate in 1814. The *Kaikokushi* stated that bita were “zeni that do not pass as one mon.”

(a-2) implies that in practice, only the poorest of bita were excluded, and that the other coins passed as bita. This includes both those produced domestically and those which were imported. This was the earliest record in history to give a definition of bita.

In addition, (a-2) is significant as the record shows the definition of bita prior to the edicts of 1608 and 1609. It also illustrates that zeni copied in Japan (except for Hongwu tongbao) were in circulation.

Regarding (b), CHIEDA (2) and TAKAGI (45, 47, 49) demonstrate the geographical prevalence of bita. The authors found records of bita in 1582, the age of the Oda administration, both inside and outside the administration's domain.

The records of bita outside Oda's domain imply that bita were prevalent in social practice prior to political inducement by the Oda administration. This phenomenon may have been due to the network externality of the zeni system at the time. Kyoto was the economic centre during that period and was also the political centre of the Oda administration. Social practice in Kyoto society was to pass bita as standard zeni. We can assume that society outside Kyoto also followed their social practices.

Regarding (c), as described in (a-1), bita was discounted coin in the first half of the 1570s. After that, bita was appreciated and became the standard coin. CHIEDA (1) and SAKURAI (38) observed that discounted zeni which had been stratified into several classes converged into one class, bita, in the late 16th century. They explain that the convergence

was due to the shortage of zeni.

KAWATO (12) and TAKAGI (47, 49) describe the adoption of bita as standard zeni in the late 16th century in both social practice and policies by the reunified administrations (Oda and Toyotomi). In the meantime, the zeni discrimination was activated and bita was stratified.

The reason for the zeni discrimination and stratification of bita was, as described by HONDA (6), the Toyotomi administration's political reunification of the Japan archipelago. The administration established an infrastructure for the distribution of goods oriented to the national capital region, Kyoto and Osaka. This allowed Osaka castle, the residence of Toyotomi and the central government office, to be constructed. In addition, the infrastructure establishment was intended to mobilize large numbers of troops against, for example, the Chinese subcontinent in the 1590s. As a result, a large amount of zeni flowed towards the national capital region. This region adopted a narrow definition of bita as the standard zeni. However, troubles like coin discrimination occurred in zeni transactions as the definition of bita was not completely agreed upon in society. In addition, people tried to utilize the circulated zeni at a maximum to compensate for the demand for currency during the zeni shortage. At that time, people discounted lower class bita in narrow definition to less than one mon. As a result, value stratification in bita occurred. In other words, the stratification of bita occurred in parallel with the zeni reunification by bita in social practice.

Regarding (d), TAKAGI (45) discovered that the 1580 edict from the Oda administration defined the accommodation fee of soldiers and horses of troops against Tajima province (now Hyogo prefecture) in units of bita. Furthermore, he (47, 49) used this record as evidence to demonstrate that the Oda administration adopted bita as the standard zeni prior to the Tokugawa shogunate. YASUKUNI (60) describes the Tokugawa shogunate adopting bita as the standard zeni in order to facilitate mobilization of troops. He also (45, 47, 49) emphasizes that the objective of the Oda administration's edict was similar to the Tokugawa shogunate's — a traffic policy. The Toyotomi administration also adopted bita as the standard zeni.

CHIEDA (1) and SAKURAI (38) demonstrated that according to the records of rice prices the value of bita increased towards the 1580s. Archaeological studies also observe the appreciation of bita. KAWATO (12) and SAKURAI (39) demonstrate the proportion of imitation zeni in the increasing hoards located in central Honshu, the main island of Japan, during the 16th century. This phenomenon implies that people in central Honshu started using imitation zeni, that is, former non-standard coins and some bita, as a means of value storage. Researchers assume that the background of this phenomenon is the appreciation of imitation coins.

Due to the appreciation, bita emerged as the standard zeni in social practice. SAKURAI (38) and TAKAGI (48, 49, 50, 51, 52) detected early cases of bita circulation in the national capital region, e.g. Nara, Kyoto, Sakai (now Osaka prefecture) in the 1570s. For example, market prices of rice were recorded in bita units.

SAKURAI'S (38) explicit description of bita has not been detected in Nara after the 1590s. This implies that it was no longer necessary to explicitly write bita in price descriptions because the implicit societal consensus was that the standard zeni was bita.

The research in recent years urges us to reconstruct the definition of bita against the conventional numismatic context.

1.3 Main examples of excavated zeni

The recent studies that describe excavated zeni produced in Japan, including imitations and coins without inscriptions, are as follows.

The methodology, including scientific analysis, is described in ISHIGAMI (8), KATO (9), KOBAYASHI AND NAKAMURA (17), MATSUMURA ET AL. (21) and NISHIKAWA ET AL. (29).

Excavated ancient zeni (7th-11th centuries, issued primarily by the imperial court) and re-evaluation of ancient zeni in collections are described by HARA (4), HATACHI (5), KOBAYAKAWA (16), KONDO (18), NAGAI (24, 25), NAKAJIMA (27), NISHIHARA (28), ONOUE (30, 31, 32), SAEKI (35), SAITO AND AOSHIMA (37), SATO AND KANO (42), SHIGETA (43), SUNAMI (44), TSUJIKAWA (55), WATANABE (59), and YATOGE (61, 62, 63). MATSUMURA (20) is significant due to its observation regarding the social practice of bundling zeni into strings, according to the excavated resource.

Excavated medieval zeni (12th-16th centuries, except for imported coins) are described by KATO (11), MORIOKA (23), NAGAI AND FUJISAKI (26), ONOUE (30), SAEKI (36), and TAKAHASHI (53).

Zeni issued by the medieval Ryukyu kingdom (now Okinawa prefecture) and excavated on the Japanese mainland

are described by KATO (10).

Excavated early-modern zeni (17th–19th centuries, both government issues and those imitated by the private sector, including zeni for religious rituals) are described by HATACHI (5), KOBAYAKAWA (14, 15, 16), MORIOKA (22, 23), ONOUE (30, 31, 32), OONISHI (34), TAKEMURA (54), TSUIKAWA (56), and WATANABE (57, 58, 59). ONOUE (31) describes an excavated case of Keicho-tsuho.

2. Gold currency

SAKURAKI (41) describes the refining technology of gold and introduces examples of cut gold ingots as a currency by weight during the 16th and early 17th century Japan.

3. Silver currency

HONDA (6) provides general information of silver currency production during the 16th and 17th century in Japan, mainly at the Iwami silver mine (a world heritage site).

IKEGAMI (7) suggests a re-classification of chogin (silver bars used as currency).

SAKURAKI (41) describes the refining technology (cupellation) of silver and introduces examples of cut silver ingots as a currency by weight in the 16th century.

SAEKI (36) describes *kodama-gin* (small silver currency by weight issued by the Tokugawa shogunate) excavated in mountainous regions.

4. Paper currency

Conventional studies regarding the history of currency in Japan focused primarily on metal currency. Recent studies have shed light on how the society, in the transitional period from medieval to early-modern Japan, utilized credit transactions without metal currency, in particular through paper media and oral contracts. The paper media is relevant to numismatics.

TAKAGI (46, 47, 49, 50) considers bills of exchange in medieval Japan as an origin of paper currency in early-modern Japan and emphasizes the continuity of both.

CHIEDA (3) tries to identify the issuance date of Yamada-hagaki, that is, the private notes issued in Yamada (now Mie prefecture, the town in front of Ise-jinku shrine) in the 17th century, according to the information on the note.

KISHIZOE (13) tries to re-identify the issuance date of the domain note from Amagasaki-han (now Hyogo prefecture) according to the information on the note.

LA NUMISMATIQUE AU CAMBODGE

Grégory Mikaelian

Les publications des années 2013–2021 sont pour beaucoup redevables à une jeune revue, *Numismatique Asiatique (NA)*, éditée par la Société de Numismatique Asiatique. Son équipe compile et met à jour la bibliographie, écume les collections publiques et privées qu'elle inventorie, présente des sources ou des études connues mais devenues difficiles d'accès, publie des pièces d'archives inédites et de nouvelles études. Elle a même organisé le premier colloque de numismatique cambodgienne, à Paris, en 2015 (46). Tout ceci constitue un important et louable effort au service d'une discipline balbutiante. Il convient toutefois, pour mieux en apprécier la dynamique, de situer ce récent élan dans ses contextes politiques : prompt à valoriser ce qui peut favoriser son rayonnement au national comme à l'international, le gouvernement cambodgien multiplie les démarches de représentations et c'est dans ce cadre qu'il a décidé, il y a quelques années déjà, la construction d'un Musée de l'Économie et de la monnaie (32, 47). Les collectionneurs, amateurs et chercheurs ont trouvé dans cette entreprise gouvernementale un terrain propice à la découverte, au financement, à l'achat, et finalement à l'étude de nouvelles pièces dont certaines ont achevé leur trajectoire dans une salle de ce bâtiment inauguré le 8 avril 2019. Nonobstant ces indéniables avancées, beaucoup des auteurs qui se sont dernièrement penchés sur la monnaie cambodgienne restent encore trop souvent déconnectés des études khmères et de la critique historique des sources pour exploiter au mieux les données numismatiques mises en exergue.

Bibliographies

Trois articles (19, 20, 21) réunis en un volume augmenté (23) présentent une bibliographie précise, commentée, avec mention des pages utiles pour le cas des volumes qui ne traitent pas directement de la question. À côté de nouveautés, comme ces ouvrages de numismatique japonaise de la fin du XVIII^e siècle mentionnant des monnaies du Cambodge, on constate quelques oublis, dont les rares articles et ouvrages publiés en cambodgien. Le classement thématique étonne parfois, notamment lorsqu'il mélange les sources primaires, les sources secondaires, et la critique. Un dernier article qui recense les études publiées par la Société de Numismatique Asiatique témoigne du dynamisme qu'elle a su insuffler à ce champ de la discipline (50).

Collections

Un article dresse l'état des rares collections de monnaies constituées durant l'époque coloniale qui nous sont connues : la collection Jules Silvestre (1878), celle d'Adhémard Leclère (1886-1911), de l'École française d'Extrême-Orient (1900–1920), d'Albert Schroeder (1905), de la Monnaie de Paris (1907), de Georges Groslier (1921), d'André Salles (1929), et de Louis Malleret (1944) (40). La collection Jules Silvestre a par ailleurs fait l'objet d'un inventaire détaillé, dans lequel on recense 26 monnaies offertes au collectionneur par le roi Norodom et réapparues à l'occasion d'une vente privée (36), de même que la collection cambodgienne de la Monnaie de Paris (une cinquantaine de pièces) (34), et la collection Adhémard Leclère (une quinzaine de pièces) (30). Un chapitre d'ouvrage traite de la Collection Tranet constituée depuis les années 1990 (106 monnaies), d'un abord délicat puisqu'elle mélange vraies et fausses monnaies (17). Enfin, le nouveau Musée de l'Économie et de la Monnaie récemment aménagé à Phnom Penh dans les locaux de l'ancienne Municipalité coloniale (32) a fait l'acquisition d'un des rares spécimens existants de la pièce d'Ang Duong de 4 ticals de type Ingram, dans une vente à Hong Kong (47).

Les médailles et monnaies du Cambodge ancien (Funan et pré-angkorien)

Un important trésor monétaire a été découvert en 2011 chez un commerçant de Phnom Penh spécialisé dans le recel des monnaies d'Angkor Borei, dont l'origine a pu être localisée au sud de ce site archéologique, à Konlah Lan. D'après les contextes restitués grâce à l'examen des matériaux céramiques, les monnaies qu'on y a retrouvées en nombre, pour l'essentiel des monnaies d'importation au type du Soleil levant, seraient datables d'entre la seconde moitié du VI^e siècle et le tout début du VII^e siècle (13). Un examen postérieur à partir d'une étude des contextes historiques date le dépôt des trois premières décennies du VII^e siècle, du temps de la conquête du Funan par le Chenla (15).

Autre découverte importante remontant à 2012, celle d'une « monnaie » en or du roi pré-angkorien Isānavarman I^{er} (c. 611/616–635/637) (12), retrouvée dans les mêmes conditions mais qui proviendrait cette fois du dépôt de fondation d'un temple situé à l'intérieur même du site d'Angkor Borei. Son dessin, au dire d'une étude qui lui est consacrée, serait emprunté au modèle bengali du roi Śaśānka (590-637) (royaume de Samatata). Comme elle est un hapax et que le Cambodge ancien ne connaît pas de pièce monnaie, l'auteur suggère un usage rituel (donations religieuses) plus qu'une émission monétaire au sens classique du terme (7) ; le confirme par défaut la découverte du trésor de Konlah Lan dans lequel on ne trouve aucune monnaie qui pourrait se réclamer de la royauté khmère (12, 15) ou encore celle d'une amulette (14) : monnaies en circulation émanant d'autres États sans marqueurs reconnaissables clairs, à côté de possibles imitations locales, amulettes prophylactiques, monnaies à usage rituel, mais point de monnaie émanant d'une autorité souveraine. Reste que l'imitation en question n'est pas un simple décalque et qu'il y a là comme en bien d'autres domaines adaptation créative (15). L'émission de ce médaillon correspondrait, plus précisément, à un dépôt rituel lors de la refondation d'un sanctuaire aujourd'hui ruiné (13). De son côté Michel TRANET livre en khmer un ouvrage qui présente pour la première fois au public cambodgien les monnaies du Funan retrouvées à Angkor Borei, et traite de manière systématique le symbolisme de leurs dessins. Il est malheureusement dépourvu d'appareil critique et de référence quant à l'origine des pièces qu'il présente, dont certaines proviennent sans doute de sa collection personnelle (44). D'une manière générale, ces études étonnent par le contraste accusé dont elles font montre entre, d'une part, les conditions de production, aléatoires, des données positives étudiées – découvertes hors contextes, sites d'origine hypothétique, datations relatives obtenues au moyen de raisonnements hypothético-déductifs – et la présentation fortement positiviste de conclusions pour lesquelles le conditionnel disparaît souvent au profit de l'assertion. Le raisonnement historien n'en sort pas toujours indemne, notamment lorsqu'il recourt à de spectaculaires anachronismes (ainsi, par exemple, de « l'absolutisme » du règne d'Isānavarman I^{er} (15).

Les monnaies post-angkoriennes

Trois articles intéressent le système monétaire « traditionnel », constitué de poids de métaux précieux. Un premier article sur l'usage des pénalités numériques dans la codification du Cambodge post-angkorien eut pu faire date. Mais, ignorant l'état de l'art relatif à cette codification, assis sur un appareil critique indigent, il ne fait que répéter ses prédécesseurs, sans d'ailleurs toujours les citer, ou les contredit implicitement, mais sans rien démontrer (1). Deux autres articles traitent à proprement parler de monnaies traditionnelles : un premier décrit la situation monétaire bigarrée des confins du Cambodge à la fin du XIX^e siècle où se côtoient pains de cires, feuilles d'étain, lingots (de fer, de fonte, de cuivre, de bronze ou d'argent), en plus de ticals siamois, de piastres mexicaines et de sapèques vietnamiennes (10). Un second, tiré d'une thèse de 1987 récemment éditée traite spécifiquement de l'usage des barres de fer comme monnaie, et leur production par le peuple Kuoy, de longue date tributaire des rois du Cambodge (11). Tout progrès, dit-on, se paye par un regret. Les études consacrées aux monnaies « modernes » qui circulèrent dans le Cambodge post-angkorien à partir du XVI^e siècle n'échappent pas à la règle. L'attention nouvelle qu'on leur porte est appréciable, mais l'approche retenue, là aussi étroitement positiviste, favorise les erreurs factuelles autant que les raccourcis interprétatifs. Une première étude tente de faire coïncider les données tardives des chroniques royales cambodgiennes (XIX^e–XX^e siècles), celle des sources européennes et japonaises des XVI^e–XVIII^e siècles, et les données métrologiques apportées par l'étude des monnaies elles-mêmes. Ces frappes monétaires de pièces rondes et plates, unifaces, représentant la plupart du temps des animaux qui ne sont pas toujours clairement identifiables, sans aucune mention de date, de souverain, de lieu, constituent une énigme, que divers auteurs ont tenté de résoudre en s'efforçant de faire correspondre le système traditionnel des poids de métaux précieux mentionnés dans les sources khmères (monnaie de compte et/ou monnaies réelles selon les cas) avec les différents spécimens de pièces conservées dans les diverses collections. L'auteur s'y essaye à nouveaux frais, sans emporter l'adhésion faute de toujours bien ordonner sa documentation : en mettant par exemple sur le même pied un témoignage européen du début du XVII^e siècle, et le récit vernaculaire d'une émission monétaire rédigée au XX^e siècle par les équipes du ministre du palais, qui la situe au cours d'un règne légendaire du XVI^e siècle qu'aucune autre source que les *Chroniques* les plus tardives ne mentionne, il s'expose au scepticisme du lecteur. Postuler en outre une erreur dans certaines sources – hollandaises en l'occurrence – pour faire tenir ensemble des correspondances métrologiques non assurées n'est sans doute pas de bonne politique. Parmi d'indéniables avancées (la critique du témoignage de Tavernier, l'apport de la documentation japonaise de la fin du XVIII^e siècle), les hypothèses *ad hoc* s'enchaînent pour tenter de résoudre les contradictions qui saillent dès lors

que l'on confronte des sources à la fois discontinues, et disparates (8). Deux autres études portent sur une monnaie d'argent arborant un quadrupède, répertoriée en une dizaine d'exemplaires, dans laquelle l'auteur croit reconnaître l'effigie d'un *makara*, animal de la mythologie indienne, sans là non plus emporter l'adhésion. Il avance l'hypothèse que ce type de monnaie tout à la fois rare et fondue en métal noble aurait été destinée à une circulation restreinte – ce qui s'entend. Elle aurait, avance-t-il encore, été conçue par des religieux avec l'autorisation du roi, ce qui relève cette fois de la supposition gratuite. C'est que l'auteur la rapproche d'autres monnaies à figures animales ayant eu à son idée une commune référence astrologique : arborant des figures animalières du zodiaque, elles seraient l'œuvre de milieux sacerdotaux dans le cadre de donations, par exemple à l'occasion de crémations. L'effigie en question qui ne ressemble guère aux canons de l'imagerie cambodgienne n'aide pas à soutenir une telle hypothèse. Il en va de même d'autres pièces à figures de quadrupèdes, dans lesquelles l'auteur croit reconnaître un *rājasī* pour l'une (?) ou, avec cette fois plus de vraisemblance, une licorne chinoise pour l'autre, ou encore un improbable loup pour une troisième. L'identification d'un motif sinisé (la licorne chinoise) achève ainsi de démonétiser l'hypothèse d'une référence à l'astrologie cambodgienne. Ces spéculations sur des pièces qu'on ne sait pas dater (XVII^e ou XIX^e siècle ?), malgré des précisions toujours utiles quant à leurs caractéristiques (dimensions, poids, aloi, composition, etc.) viennent finalement renforcer le sentiment du lecteur qu'il ne s'agit pas, là encore, d'une émission monétaire royale (29 [pp. 35–44], 18]. Une autre étude du même auteur porte sur une pièce en argent à motif d'hippogriffe (un cheval ailé), provenant de la collection Sylvestre, et apparue sur le marché numismatique en 2010. Elle aurait fait partie d'un don du roi Norodom à Sylvestre, peut-être issu du trésor personnel de la reine-mère. L'auteur la fait correspondre à une description hollandaise de 1622, puis postule qu'elle serait le fruit d'une émission royale de cette période quand rien n'indique l'origine de la pièce (26). Une dernière étude porte cette fois sur les pièces à effigie de *hamṣa*, dont le voyageur Tavernier a reproduit un dessin en 1648 et pour lequel l'auteur recense une cinquantaine de variantes, dont il propose un classement typologique. Le recours au microscope électronique vient asseoir un scénario de datation relative des différents types, de la fin du XVI^e au XIX^e siècle, dans lequel le poids et le taux d'argent des pièces vont *decrecendo*. Autant ces conclusions intéressent, autant les rapprochements que l'auteur opère entre tel type de pièce et telle ou telle décennie de l'histoire du Cambodge paraissent forcés (31). Ces pièces d'argent à effigie animalières, dont la description a beaucoup gagné en précision grâce à la revue *NA*, restent pour l'heure une énigme : qui les a émises, quand et pour quels usages, tel est le nouveau problème que ces études permettent de formuler, mais pas encore de résoudre. Deux derniers articles du même auteur s'attellent à faire correspondre les sources européennes relatives aux pièces de monnaie qui circulaient dans le Cambodge des XVI^e–XVIII^e siècles avec les pièces réputées anciennes qu'on y a retrouvées à partir de la fin du XIX^e siècle. Sa lecture positiviste des sources – à commencer par celle *Chroniques royales* rédigées au XX^e siècle qu'il prend pour un récit historique énonçant la vérité des événements passés – l'amène à mettre sur le même plan des données vérifiées, d'autres hypothétiques et invérifiables, et donc à commettre des contresens. Ils côtoient cependant des renseignements inédits et des précisions métrologiques toujours utiles (27). Le défaut de cette approche est surtout de ne considérer comme monnaies que ce qui ressemble à des pièces, de parfois les confondre avec des unités de compte, et d'ignorer ou de négliger les autres formes de monnaies ou de faire dire aux sources ce qu'elles ne disent pas : que Tomé Pires ne parle pas des monnaies cambodgiennes en évoquant le Cambodge ne veut évidemment pas dire qu'elles n'y existaient pas ... (28).

Les monnaies de la principauté de Battambang (fin XVIII^e siècle-1907)

Types de monnaies en circulation, frappes traditionnelles, frappes mécaniques, hôtel des monnaies, affirmages et fausses-monnaies ont été l'objet de plusieurs récits de voyages d'Européens ayant visité la principauté du nord-ouest du Cambodge dans le dernier tiers du XIX^e siècle, dont certains textes ont été republiés (5, 48). À partir de ces témoignages et des spécimens eux-mêmes (36), une nouvelle chronologie de la monnaie de Battambang a pu être proposée qui repose, là encore, sur beaucoup de suppositions : le premier monnayage de la principauté (comme on le sait vassale de Bangkok) aurait représenté un garouda debout à l'imitation de la monnaie du roi du Siam Rama III (1854–1851) ; après la mort de ce dernier, le motif du garouda aurait disparu des émissions monétaires au profit d'une pièce à effigie d'oiseau (généralement décrite comme un coq ou un *hamṣa*) proche de celui des anciennes monnaies du Cambodge ; à partir de 1867 un fermier chinois aurait ajouté à cette pièce de cuivre argenté le caractère chinois *ji* ; dès 1878 aurait été conçu le projet de remettre en circulation des pièces à garouda, en commandant pour cela des presses monétaires, probablement par réaction identitaire : ainsi de 1880 à 1884, un fermier indien qui avait fait venir

une presse mécanique de France aurait fait frapper une pièce biface portant un garuda au droit et la mention *brah tampan* au revers (« bâton sacré », renvoyant au nom siamois, prononcé en khmer, de la principauté) (22). La pièce uniface portant au droit l'oiseau passant à gauche et surmonté du caractère chinois « chance » a fait l'objet d'une étude plus précise : le modèle en serait la pièce uniface à l'oiseau dont on trouve plusieurs attestations dans les sources des XVII^e–XVIII^e siècle (cf. (8)) ; l'ajout du caractère chinois serait possiblement lié à la nécessité de distinguer les pièces cambodgiennes traditionnelles de celles ayant cours au sein de la principauté, abandonnée par la France à la royauté siamoise par le traité de 1867, à moins qu'il ne s'agisse, plus probablement selon l'auteur, d'un usage spécifique aux maisons de jeu ou aux paris sur jeux de plein air. C'est en fait ce caractère « chance » qui se trouve souvent sur les jetons sino-siamois de porcelaine fabriqués pour les maisons de jeu du Siam, qui servirent aussi, occasionnellement, comme « monnaie de nécessité ». La principauté était en effet réputée pour sa pratique des jeux de paris (combats de coq, courses de pirogues, etc.). Hypothèse alternative, l'idéogramme ne serait que la contremarque d'un fermier chinois, celle-ci pouvant d'ailleurs se combiner avec l'hypothèse des jetons de jeux, la pièce ayant pu avoir les deux fonctions concomitantes. Pour ce qui est de son émission, l'auteur en tient pour une chronologie resserrée partant du traité franco-siamois (15 juillet 1867) jusqu'à 1880, lorsque l'affermage des monnaies passa aux mains d'un indien, avant que ne reprennent toutefois quelques émissions sporadiques lorsque la ferme revint dans l'escarcelle d'un chinois après 1884. La circulation effective de ces pièces de cuivre argenté, d'une valeur de 1 *at* par rapport au *baht* siamois, excéda cependant de beaucoup leurs émissions puisqu'elles sont encore attestées jusqu'en 1921, après la rétrocession de Battambang en 1907 (38).

Les monnaies du règne d'Ang Duong (1848-1860)

Étudiée dès 2000 par Jacques Népote dans sa dimension régaliennne et symbolique dans un article de la revue *Péninsule* en partie réédité par *NA* (43), la frappe mécanique d'une pièce de facture européenne ordonnée par Ang Duong a fait l'objet d'une attention renouvelée. Contrairement à la période post-angkorienne, les numismates avancent ici en terrain plus assuré, la documentation étant plus abondante (43, 45, 49) et les spécimens bien répertoriés (25, 47). La frappe fut réalisée à partir de 1853 sur une presse à balancier commandée depuis Singapour à l'entreprise anglaise Ingram & Co (43, 24) puis, un des coins ayant été brisé, Ang Duong en fit commander d'autres auprès de la maison Heaton, lesquels furent en activité à partir de 1856, tandis qu'un troisième jeu de coins aurait été commandé auprès de la France en même temps qu'une nouvelle presse (43, 24). Succédant à son père en 1860, Norodom, abandonna au moins une presse à Oudong (49) lorsqu'il fit de Phnom Penh sa capitale, au mi-temps des années 1860, tandis qu'il en installa d'autres dans son nouveau palais. Le tical d'Ang Duong continua de circuler sous le règne de ce dernier qui en fit également frapper de nouveaux (24). On constate alors la présence de contremarques, probablement apposées au revers par des commerçants chinois pour en certifier la teneur en argent, et ainsi lutter contre les contrefaçons. Une dizaine de ces contremarques a pu être identifiée, la plupart du temps en forme de soleil, mais aussi sous la forme de divers idéogrammes chinois. La pratique remonterait au début du règne de Norodom, alors qu'elle était courante en Cochinchine (1860–1863) ; l'auteur fait l'hypothèse que la contremarque solaire serait le fait de l'autorité royale (9, 24). Quelle que soit la valeur de la monnaie ou le type de frappe (Ingram ou Heaton) considéré, la date inscrite à l'avvers de la pièce est toujours la même (3^e jour de la semaine, 3^e jour de la lune croissante du 4^e mois lunaire, 1209 de la petite ère, année de la chèvre neuvième du cycle dénaire) qui correspond au mardi 7 mars 1848 ; ce serait la date qui figurerait dans les *Chroniques royales* pour les cérémonies d'investiture d'Ang Duong. Sauf que la source (Eng Sut, p. 1070) avancée par l'auteur à l'appui de son assertion donne non pas le 3^e jour de la lune croissante, mais le 1^{er} jour, tandis que d'autres versions des chroniques donnent le 4^e jour de la semaine (mercredi), 4^e jour de la lune croissante (comme le notaient Chandler dès 1973, et Népote, à sa suite, en 2000) (2).

Les monnaies du règne de Norodom (1860-1904)

Norodom est le premier souverain qui fit battre une pièce de monnaie de facture européenne portant son effigie et les armoiries de la Couronne, qu'il venait d'inventer. Une étude paléographique des inscriptions khmères frappées sur ces pièces montre qu'elles combinent un archaïsme post-angkorien délibéré, une influence de l'écriture siamoise contemporaine, et une part de stylisation inédite liée au travail de graveurs non khmérophones travaillant sur modèle (4). Plusieurs articles documentent d'ailleurs ce processus de fabrication déléguée à des graveurs et des maisons d'émission monétaires européennes, sans que les renseignements paraissent toujours bien assurés (6, 39). Il semble toutefois qu'une chronologie relativement précise puisse être établie pour certaines pièces : en 1875, le graveur

belge Wurden réalise les premiers essais de monnaies cambodgiennes à l'effigie du roi ; en 1879, la société Oeschger, Mesdach & Compagnie reçoit sa première commande de pièces cambodgiennes de 5 centimes à l'effigie du roi, suivie d'une seconde en 1882, et d'une troisième en 1889. Les frappes en furent sous-traitées à la société Heaton's Mint de Birmingham, qui avait déjà fourni le roi Ang Duong en coins pour sa presse monétaire (39). Un article décrit l'affermage de l'émission de la monnaie de billon octroyée par le roi à deux associés français, Octave Vandelet et Felix Gaspar Faraut. Entre 1888 et 1893, ces « aventuriers » affairistes, tout comme l'étaient leurs prédécesseurs chinois, ont joué le même jeu aventureux consistant à émettre de la monnaie plus que de raison pour s'enrichir sans consentir à racheter les excédents en circulation comme le stipulait le contrat d'affermage. Rien de nouveau sous le soleil si ce n'est qu'avec les fermiers français, la frappe de la pièce de 10 centimes à l'effigie de Norodom fut frappée non plus au Cambodge, mais en France (probablement la frappe de 1889, cf. (39)). Autre nouveauté, ces fermiers avaient dans leurs prérogatives de faire frapper une sapèque cambodgienne d'un centime, qui en resta cependant au stade de l'essai (33, 35), réalisée là encore par la société Oeschger, Mesdach & Compagnie, et gravée par Paul Trotin (39). À côté de ces pièces européennes, on trouve aussi l'usage de barres d'argent fabriquées au Vietnam portant la contremarque de Norodom, un N surmonté d'une couronne à l'imitation de la couronne de Napoléon III (6).

Les médailles et monnaies du règne de Sisowath (1904-1927)

Un article décrit la médaille frappée par la Monnaie de Paris à l'occasion de la visite officielle qu'y effectua le roi Sisowath le 13 juillet 1906, médaille française de part en part qui ne dit rien de la tradition numismatique cambodgienne (3).

Le bilan de ces dernières années est donc mitigé. Les découvertes – parfois sensationnelles – et les données techniques (métrologiques notamment) s'accumulent, et n'ont jamais été aussi nombreuses en matière de numismatique cambodgienne. Mais, nulle part on ne voit poindre ce qui permettrait de les comprendre en profondeur. Une compréhension de l'usage de la monnaie dans le royaume khmer ne pourra faire l'impasse d'une véritable réflexion qui s'inscrive dans le cadre d'une histoire sociale de ses usages sur le temps long.

NUMISMATIQUE INSULINDIENNE

Elsa Clavé

Les précédentes livraisons du *Survey* font une place inégale à la numismatique insulindienne qui reste un domaine d'étude relativement peu développé. Dans la mesure où aucun article n'a été consacré à la région pour la période précédente (2008–2013), et que le dernier point sur les recherches date de 1990–1995, nous nous permettons de remonter au-delà du cadre chronologique de cette livraison. Les publications présentées concernent différents types de monnaies d'or, d'argent, et d'étain en circulation à Sumatra, Java et en péninsule malaise. On note également quelques études, d'intérêt variable, sur l'histoire monétaire des Philippines.

Monnaies d'or et d'argent de la période indianisée

Les monnaies à motif de fleur de santal sont au centre des travaux de LEYTEN (10), GUILLOT ET AL. (4), et apparaissent dans l'étude de PERRET ET SURACHMAN (19). J. Hans LEYTEN (10) propose un essai de classification de ces monnaies pour Java et Sumatra, offrant le plus récent état de la question. Claude GUILLOT et ses collègues comparent quant à eux, dans un ouvrage consacré à l'histoire de Barus (Sumatra ouest), trois monnaies retrouvées sur le site de Lobu Tua avec celles, déjà connues, du même type. Ce faisant, les auteurs reviennent de manière intéressante sur certaines des conclusions de Wicks (1992) concernant l'origine et les usages de ces monnaies. Ils soulignent ainsi la nécessité de distinguer les monnaies d'or de la péninsule de celles de Sumatra, en démontrant qu'il existait différents usages dans cette île. Si l'on se servait bien des monnaies pour commercer à Barus (côte ouest), il en était autrement à Palembang (côtes est), où leur rôle était d'ordre symbolique et rituel. Enfin, Daniel PERRET et Heddy SURACHMAN documentent deux monnaies trouvées sur le site de Padang Lawas (Sumatra nord).

Picis et monnaies d'or de la période islamisée

Les petites monnaies d'étain et de cuivre qui remplacent progressivement l'or et l'argent sont le sujet du second groupe de travaux. À l'exception du catalogue raisonné de Frank ROBINSON (20), qui concernent toutes les monnaies en circulation à Palembang, et liste 291 variétés de *picis*, les études se répartissent en deux catégories : la première, qui est de loin la plus importante, traite des monnaies chinoises ou de leurs imitations (3, 4, 6, 14, 16, 17, 22, 25, 27, 28, 29) ; quant à la seconde, elle livre une description de *picis* portant des inscriptions en malais et en javanais, lesquels circulaient au sein de plusieurs sultanats sumatranais (12, 15, 26). Pour le monnayage chinois, Brigitte BORELL (3) et Claudine SALMON (22) se sont intéressées respectivement aux monnaies mises au jour lors de fouilles à Singapour (14^e) et à Barus (12^e–17^e). BORELL conclut qu'à cette époque les monnaies chinoises étaient déjà utilisées comme moyen d'échange dans le commerce et n'étaient pas seulement considérées pour la valeur du métal. L'usage de ces monnaies est également le thème du travail de Derek Thiam Soon HENG (6) qui, sur la base de sources archéologiques et textuelles chinoises, a cherché à mieux cerner l'utilisation de ces monnaies dans le détroit de Malacca (10^e–14^e). Enfin, Michael MITCHINER (14) et MITCHINER ET Tjong Ding YIH (16, 17), étudient, dans trois articles, les monnaies issues par les sociétés chinoises (*gongsi*) à destination des communautés de mineurs, entre le 18^e et le 19^e siècle, sur l'île de Bangka. Il convient de noter également l'intéressante présentation de MITCHINER (13) sur les usages monétaires et non-monétaires de l'étain à Palembang, une situation mise en perspective avec les données connues de la péninsule malaise et de Java.

Les *picis* produit au sein des sultanats et portant des inscriptions en malais (*jawi*) et en javanais (*aksara*) ont donné lieu à une série d'articles qui mérite une attention particulière en ce qu'ils détaillent le contexte historique dans lequel ces monnaies circulaient dans les deux îles (plus précisément à Palembang, Jambi, Siak, Banten et Cirebon) et permettent une mise à jour des données déjà connues (12, 15, 26, 27). Les études sur les monnaies des sultanats soulignent les liens entre les différents états participant au commerce avec Palembang (Siak, Kampar, Indragiri et Jambi) et mettent en avant les particularités de chaque monnaie, lesquelles révèlent des choix linguistiques et stylistiques différents.

Trois autres études couvrant la période islamisée sont à signaler. L'ouvrage en malais d'Ibrahim Bakar LANGKAWI (7) propose une vision d'ensemble des monnaies de l'aire malaise (monnaies d'or et *picis*). La présente étude apparaît incomplète mais l'ouvrage reste un outil de travail fort bienvenu. La thèse de Mohd Supian SABTU – à laquelle nous n'avons pas eu accès – couvre une période et une zone plus restreinte, les sultanats de la péninsule malaise entre le 15^e au 19^e siècle (21). Enfin, on doit à LEYTEN un ouvrage sur les monnaies d'or des sultanats de Samudra-Pasai et Acheh (8). En plus de donner un catalogue détaillé de ces monnaies, LEYTEN propose un véritable essai d'histoire politique en croisant les informations qu'elles contiennent avec celles des sources épigraphiques et manuscrites connues.

Etudes sur les monnaies philippines

Il convient enfin de mentionner plusieurs travaux sur les monnaies des Philippines (1, 11, 18), en particulier le catalogue d'une collection (23). À cela s'ajoutent deux études qui abordent certains aspects de la numismatique philippine, tel un intéressant travail sur le crédit (30) ou un ouvrage sur la monnaie d'occupation japonaise issue lors de la seconde guerre mondiale (4).

5. MEDALS

INTRODUCTION

Tuukka Talvio

As the following reports will show, medallic art is still thriving, and also actively studied, especially in those parts of Europe where it rooted early. FIDEM, the International Art Medal Federation, has been organizing congresses since 1937, and in the recent decades local medal societies have been founded in several European countries, like Britain and Germany. Outside Europe the American Numismatic Society has promoted this art form since the nineteenth century. Although it seems difficult to discuss medals without mentioning the word ‘art’, they can also be studied from many other standpoints.

Historical museums have traditionally been places where people can learn about medals, but nowadays museums often have financial problems, even in well-to-do Scandinavia. The Swedish Royal Coin Cabinet has been luckier than some others, for although it had to leave its premises next to the Royal Castle, it still has a sufficient number of employees, including a full-time keeper for its medal collection. In Finland, on the other hand, the National Museum in 2015 decided to close the whole of its numismatic exhibition, and soon thereafter the medal specialist of the coin cabinet lost her job. In the Baltic countries, however, the situation seems to be improving, and Estonia, Latvia, and Lithuania now have a joint entry in this publication.

Norway is not included in this *Survey* at all. The recent publications have been few, and in the opinion of a local specialist, not important or interesting enough. There are also other countries that do not have entries of their own, for one reason or another. Often the reason is a lack of research tradition, but language barriers unfortunately also still exist.

Some uncertainty may have been caused by the new guidelines, according to which the *Survey* should provide ‘a critical commentary on the most important recent works’ but ‘it is not intended to be exhaustive’. This was a welcome recommendation, but it may need some time to be fully realized, for the bibliographies still tend to be exhaustive. The most serious problem was, however, that some of the promised contributions were not received at all. The main reason was the pandemic, which at the time of writing is still going on. We must hope that the gaps can be filled by future issues of the *Survey*.

DENMARK

Else Rasmussen

The Danish publications from 2014–2020 include a few articles and one book. Information on new medals and smaller studies are published mainly in *Numismatisk Rapport* and *Nordisk Numismatisk Unions Medlemsblad (NNUM)*. The German-born medallist Anton Meybusch (c. 1645–1702), who worked much of his life in Denmark, is the subject of a substantial work by KOLD (6). The first part is an introduction to his life and work, the second contains a catalogue of Meybusch's coins and medals. LEIMUS (7) has published an article on the mint director Paul Gulden from Tallinn, who moved to Denmark and worked for Frederik II from 1582 to 1584. Leimus also discusses the technique of the medal.

The history of the medal of the Royal Society for Danish History was written by GRINDER-HANSEN AND JENSEN (2). The medal was first issued in 1750 for the king's birthday. MÄRCHER (8) describes the history of a Danish platinum medal from 1830 produced by the Altona mint. He also discusses the making of platinum medals and the difficulties of working with this unusual material on the basis of written sources. HARCK (5) comments on a medal from 1658 with the view of Copenhagen, identifying several buildings shown on the medal. BRABO (1) presents several variations of a royal wedding medal from 1935. The subject of the medal was the marriage of Crown Prince Frederik and Princess Ingrid. HANSEN AND VILLADSEN (4) write about the Niels Bohr medal, which after 30 years has again been awarded to a researcher.

SWEDEN

Martin Tunefalk

Due to relocation, The Royal Coin Cabinet in Stockholm was closed from 2017 to 2021. There were no exhibitions, and no catalogues of medals were published by the museum. A first, temporary, exhibition was, however, opened in the new location in April 2021. The permanent exhibition – which will include medals – is set to open in 2023.

Since the last Survey, Uppsala University Coin Cabinet (UUM) has published a number of ‘working papers’ on medals. HAIDENTHALLER (8) studied the earliest domestic medallic art in Sweden in a paper on the three German medallists Johan Rethe, Johan Georg Breuer and Anton Meybusch. The essay was originally written as a master’s thesis in Art History and examines the lives and works of the three artists, the imagery of their medals, and how medals were studied, collected, and used in royal ceremonies. HAIDENTHALLER (7) has also published an essay on the medals of Queen Christina showing her as the goddess Minerva.

We must also mention an earlier study, published by UUM in 2013 but not included in the previous *Survey*, listing the Latin inscriptions on Swedish royal medals, together with their Swedish translations, and commenting on their sources. First compiled by SVENBERG in the 1980s and revised by SJÖKVIST (18) it is valuable for anyone working with Swedish historical medals.

The intricate layers of one particular Latin inscription were studied by BOHLIN (2): the sentence *Hic transit in via virtus* on a Danish medal commemorating the 1676 capture of Vänersborg during the Scanian War (1675–1679). The article discusses the medal in its historical context, commenting also on the philological aspects of Early Modern Latin.

JONSHULT (10) compiled a catalogue of the medals, tokens etc. issued by the Royal Patriotic Society from 1772 to today. Besides being a comprehensive catalogue, it describes the historical context of the medals and how they were used.

The works of the seventeenth-century medallist Anton Meybusch, who was also active in Sweden, were listed by KOLD (11). Meybusch is seen as one of the most innovative and successful artists in this field in northern Europe. The book is an attempt to present him both as an artist and a person. It includes a biographical section, a catalogue of his works and archival material.

GUSTAVSSON AND DANELL (6) published a book on the terminology of medallic art. It discusses the differences between medals, medallions, plaques etc., how to define the obverse and reverse, how to date a medal, identify the artist etc. Despite the modest title and the shortness of the text the book is very useful to those working with medals.

Monographs dealing with the history of medals also include TUNEFALK (19), a doctoral thesis on Swedish commemorative medals from c. 1600–1850. It is a comprehensive study of commemorative non-royal medals issued in Sweden until the mid-nineteenth century. The practice of commemorating non-royal persons with medals was more common in Sweden than elsewhere during the period. Using both quantitative and qualitative analysis the study examines who was commemorated, how, for what, by whom, and how this changed during the gradual change from early modern to modern era.

There have also been a number of short articles and notes, mostly published in *Svensk Numismatisk Tidskrift* (SNT). They deal with a wide range of subjects, including both new (1, 5, 16) and historical medals and their artists (2, 3, 4, 9, 17). Accounts were also published of the FIDEM congresses in Gent 2016 (22) and Ottawa 2018 (23), as well as the biennial in Sofia 2014 (21).

FINLAND

Tuukka Talvio

The number of publications on Finnish medals in this *Survey* is smaller than in the previous one. One reason is that the selection has been more critical, but there are also other reasons. The production of new medals – both struck and cast – declined markedly in Finland during the economic recession of the 1990s, and the situation has not changed since then. In 2015 the Finnish Art Medal Society (‘Guild of Medal Art’) still celebrated its 50th anniversary in optimistic mood, but soon thereafter three of Finland’s best-known medallists, Kauko Räsänen (1926–2015), Toivo Jaatinen (1926–2017) and Heikki Häiväoja (1929–2019), passed away. The younger medallists are too few to secure the continuous prospering of this art form in Finland.

A further setback was that in 2015 the National Museum of Finland announced that the Coin Cabinet will lose its exhibition rooms, which means that medals will be included in the museum’s exhibitions only occasionally. The museum also no longer has a medal specialist. Recently, however, a medal section has been formed within the Finnish Numismatic Society.

Most of the articles listed below were published in the yearbook of the Finnish Art Medal Society, *Mitalitaiteen vuosikirja (MitV)*. The articles have summaries in Swedish and English at the end of each volume. The Art Medal Society has shown an admirable commitment to keep this periodical in existence, despite the small number of contributors.

ESTONIA, LATVIA AND LITHUANIA

Ivar Leimus

First to be mentioned is the book by T. LEIMUS, covering the history of Estonian medals from 1545 to the beginning of the Soviet period in 1944 (4). The other publications were few. KUODYTĖ compiled a catalogue of agricultural medals of the Russian Empire (including Lithuania, Poland and other areas) in the collection of the National Museum of Lithuania (3). GRĪNBERGA presented the historical medals of Poland and Lithuania in the collections of the National History Museum of Latvia that were purchased from Voldemārs Miesiņš in 1929 (2).

A rare medal of Anna (d. 1602), Duchess of Mecklenburg and consort of Gotthard Kettler, Duke of Courland, was published by TALVIO.

A triennial exhibition of modern medals in Vilnius in 2016–17 was accompanied by a catalogue by ABLĒNIENĒ (1).

GREAT BRITAIN AND IRELAND

Henry Flynn

In keeping with previous periods covered by the *Survey*, the main source of information, articles and research on British medals continued to be *The Medal*, the twice-yearly publication of the British Art Medal Society. Articles on the subject also regularly appeared in journals such as the British Numismatic Society's *British Numismatic Journal* (*BNJ*) amongst others. In a recent development during this period, the newly formed British Historical Medallion Society published articles on British medals from various periods of time in their *Historical Medal Journal*. Medal-related articles also featured in *Money and Medals*, the thrice-yearly newsletter produced by the Money and Medals Network and aimed at those interested in numismatic collections held in UK museums. A major publication during this period was BURNETT's (3) *The hidden treasures of this happy island: a history of numismatics in Britain from the Renaissance to the Enlightenment*. Other notable works included CHEEK's (5) *Monarchy, money and medals: coins, banknotes and medals from the collection of Her Majesty the Queen*, HINDE AND ATTWOOD's (12) *Badges and medals of the Corporation of London and guilds outside London, trade tokens and other medals in the collections of the Worshipful Company of Cutlers of London*, and WITHERS (26) *The token book 3: tickets & passes of Great Britain and Ireland*. The BAMS Student Medal Project continued to build momentum in raising awareness of the importance of medals amongst students and an associated catalogue was produced each year by LEAVITT BOURNE (61, 62, 63, 64, 65, 66, 67). Undeterred by the global pandemic, the Project continued to be held in 2020 and 2021, with the catalogue for the latter, LEAVITT BOURNE (68), being published online.

2014 had the sombre significance of being the centenary of the outbreak of the First World War. An exhibition of medals held at the Bode-Museum in Berlin had an associated publication that incorporated a catalogue featuring multiple British medals, KLUGE AND WEISSER (54). The British Museum also held an exhibition of medals as part of the commemorations and while it did feature a representative sample of British medals, its focus was on those produced by German artists. An article in *The Medal* by HOCKENHULL (53) reflected this emphasis, and examined the British Museum's approach to collecting German medals produced during the conflict. Other publications associated with the First World War included PHAGAN AND VAN ALFEN's (58) *The art of devastation: medals and posters of the Great War*.

When it came to publications on early British medals, the sixteenth century was once again under-served during this period, with just one entry by GOLDRING (27), but the seventeenth century fared much better than previously. A significant development was the completion and publication in 2017 of PLATT's (32) *British historical medals of the 17th century: medallists, books, authors, collectors, book-sellers & antiquaries*, representing the culmination of another important research project conducted by these authors.

There were noticeably fewer publications relating to eighteenth century medals compared to the previous *Survey* period. Notable works included GUTHRIE's (36, 37, 38) volume on Jacobite material culture and research articles for *The Medal*, and WARBURTON's (39) publication on *Sentimental Magazine medals*. By contrast, the nineteenth century was well-represented. Bridging the gap between the two centuries was COMFORT's (35) volume on naval medals by industrialist Matthew Boulton. An important achievement with regard to scholarship of nineteenth century British medals was the publication of ATTWOOD's (41) *Hard at work: the diary of Leonard Wyon 1853-1867*, an invaluable resource providing an insight into the wider Wyon family, a dynasty of medallists and die-engravers. Another notable contribution from ATTWOOD (42) was an article for *The Medal* highlighting the British Museum's acquisition of a medal by Alfred Stevens. Stevens was a talented nineteenth century artist whose foray into designing medals was brief, making this acquisition a significant one. Other noteworthy works included JONES (45) on medals for the Great Exhibitions of 1851 and 1862, and VANDENBROUCK's (46) article for *The Medal* on astronomical prize medals. WHITTLESTONE AND EWING's (48) comprehensive continuing series of volumes on *Royal commemorative medals*

produced two new publications during this period, one being *Queen Victoria Diamond Jubilee 1897* in 2015.

The second volume of *Royal commemorative medals* produced during this period focused on *Edward VII 1901-1910*, CUMBERS AND WHITTLESTONE (50). Other significant twentieth century works not already mentioned include two publications by LEGROVE (55, 56) on the work of sculptor Geoffrey Clarke and an article in *The Medal* about the medals of Captain Scott by LEWIS AND MAY (57). The twentieth century was relatively well-served by publications, but there were fewer that related to the twenty-first century beyond those that have already been mentioned. Works of interest included HARDY's (59) catalogue of commemorative coins and medals made in 2005 to celebrate the bicentenary of the Battle of Trafalgar, and various articles in *The Medal* highlighting the work of modern British medallists. The medals of artist Felicity Powell were highlighted in a tribute to her by JONES (60), celebrating her life and work in issue 67 of *The Medal*.

BAMS and FIDEM once again held conferences celebrating medals during this period, although BAMS events are no longer covered in detail in *The Medal*. ATTWOOD's (1) 2017 article examined the role the UK played in FIDEM during the period 1937-1987, and the FIDEM events of 2014, 2016 and 2018 were covered by the associated publication *Médailles* by PELSDONK (71, 72, 73) as per usual. The 2020 FIDEM Congress, planned for Tokyo, was unavoidably postponed due to the global COVID-19 crisis.

The Money and Medals Network, the UK's subject specialist network for numismatics seeks to promote collections care and in 2016 published a booklet, compiled by FLYNN (10) with contributions from others, which featured an advice section on storage, display and documentation of numismatics generally but with some specific references to medals. Its regular newsletter, *Money and Medals*, featured several mentions of British medals throughout this period, and issue 75, KELLEHER (17), took medals as the subject of its regular Focus section. A British Museum exhibition celebrating the work of the Network was held in 2018. Associated articles focusing on its loan objects, including many important British and Irish medals, appeared in *The British Museum Magazine*, FLYNN (11) and *Money and Medals*, KELLEHER (16). The Network has often worked in partnership with BAMS and other societies that exist to promote the medallic tradition, and it is thanks to initiatives by organisations like these and FIDEM that the subject continues to maintain a high profile in the UK.

BELGIUM, THE NETHERLANDS AND LUXEMBOURG

Huguette Taymans

Belgium has benefited from a fruitful period in the field of medallic art. The XXXIVth FIDEM congress in 2016 was a real boost. It started in Namur under the auspices of the Société Archéologique de Namur and then continued in Ghent under the wings of Ghent University. A commemorative medal was designed by Paul Huybrechts, with each side dedicated to a city. A few exhibitions also took place. The first showed the work of Geo Verbanck, a Ghent sculptor and medallist. A second exhibition was held in the Ghent Museum of Fine Arts which holds a collection of medals from the “Belle Époque”. A selection of this collection, made especially for the congress, was presented to the public for the first time in 75 years.

In 2016, the Royal Numismatic Society of Belgium celebrated its 175th anniversary and organized its second triennial colloquium on “Belgian Numismatics in perspective”⁶. A commemorative medal was designed by Marit Hartman and there was a separate publication, edited by Jan Moens.

The third colloquium of the Society, held in 2019, was entirely devoted to medals. All the contributions were published in 2020 in *Revue Belge de Numismatique*. The *RBN* also publishes an annual bibliography of papers published on Belgian numismatics in Belgium and abroad. With the exception of the publications of the last five years, this bibliography is available on-line on the site of the Society (www.numisbel.be).

The “European Numismatic Society” also regularly publishes articles on medals in its yearbook and in the magazine *De Muntklapper*. The other Belgian associations, “The Promotion of the Medal” with its *Flash Medailles* magazine and “Medec” with its own magazine, are also specifically focused on medallic art and decorations.

In the Netherlands, the medallic art is less classical than in Belgium, and the creations tend to be more sculptural. The boundary between medals and small sculpture is fading. The Dutch entries for the 2016 FIDEM congresses in Belgium and 2018 in Canada also followed this trend.

The Association for Medallic Art remains very active by issuing an annual medal for its members, encouraging new designs by various artists, and visiting studios. All these activities are discussed extensively in the magazine *De Beeldenaar*.

In June 2017, the Dutch Numismatic Society celebrated its 125th anniversary with a congress on the premises of the University of Utrecht. The Society took this opportunity to set up an exhibition of all the medals that it had issued or received over the years. Medallic art and the digitization of numismatics were also discussed in the papers presented.

In June 2018 an exhibition “Amis – Ennemis Mansfeld et le revers de la médaille” was organized in Luxembourg at the Musée Dräi Eechelen. The exhibition presented the work of Jacques Jonghelinck (1530–1606), whose circa 90 medals were shown in an exhibition organized by the National Museum of Art and History of Luxembourg and the Brussels Coin Cabinet. A beautiful catalogue was also produced.

The global pandemic made 2020 a very special year. All numismatic activities were canceled. However, this had little effect on the numismatic publications. The researchers used the free time to publish pending material, supplemented by on-line research as more and more collections and archives are now accessible on the web.

Renaissance and sixteenth-century medals

EKHOUT (27) gave an overview of the medals of the Eighty-year War. JONGELING (52) discussed a lead plaque from 1577 that can be attributed to Jacques Jonghelinck. ARNOULD AND REINERT (1) also brought Jonghelinck’s medals back to life in their catalog without compromising Smolderen’s earlier work. The geuzen medals were extensively discussed by VAN DER POLS (91, 92, 93, 94), while PRIEM (96) dealt with the medals of the Ghent guilds. A silver counting medal from the Masters of the Mint of Flanders (1480–1482) was discussed by DEWULF (18). TAS (104) published a renewed edition of her work on her own collection of counters.

Seventeenth-century medals

The medals struck in memory of the triumphal journey of William in 1691 were placed in context and compared to the French medals of Louis XIV by DENCHER (15). The medals of the city council of Alkmaar and their die variants were extensively highlighted by DE VRIES (126). DEWULF (17, 19, 20, 21) published contributions on counters from Ostend and Bruges and charity medals from Ostend. Liège pieces are dealt with by JACQUEMIN including a medal with the image of Jean Duvivier and other pieces of this engraver and a medal on the bombing in 1691 (40, 41, 44). The great alchemist medallion from the Art History Museum of Vienna was studied by OOSTERVINK (69), who also discussed a wedding medal for Leopold I and Elenore from 1676 (71) and the prize medals in the Dutch Golden Age (73).

Eighteenth-century medals

DE KOOL (58) discussed a remarkable medal of the city council of The Hague, for which a drawing has been preserved in the archives. JACQUEMIN wrote on an English medal from 1702 (45) commemorating the capture of the Citadel of Liège (46) and on a piece by Jean Duvivier with the image of Nicolas de Launay (49). The wanderings of the Van Berckel die collection were once again discussed by LENNAERTS (60). A unique series of election medals was published by SANDERS (99). These were only used in the city of Leewarden for the procedure of electing new members to the magistrate and city council.

Nineteenth-century medals

As before, the trio POELS, VANDAMME AND VANOVERBEEK were active in writing, both separately and together, about the Belgian medallists Bonnetain (123, 124), Braemt (83) and Griet Jonker (121). WILKIN discussed the period of Napoleon's defeat at the Battle of Waterloo (130), the Saint Helena Medal (131) and the Belgian Revolution (133). TAYMANS gave an overview of the prize medals of the Ghent Academy of Fine Arts from 1830 to 1914 (109) and of the Rederijkerskamer De Fontaine (105). She also discussed a unique medal by Tiberghien, purchased by the Ghent city museum STAM, which until now was considered lost (107). The medals at the salons for fine arts between 1850 and 1900 were discussed by BOEL (8). CORNET attempted to classify the Verviers medals (11). A medal of Frederik Willem as sovereign prince was brought to the fore by GROENENDIJK (33).

Twentieth-century medals

Because of the centenary of the Great War, medals related to it were discussed in various publications (119, 120). WIDART also dealt with the medals awarded to the Brabant committee for help (129), while WILSCHUT wrote about a Dutch medal awarded to the members of the Foreign Refugee Commission (137), the signs of the mobilization (124) and a silver medal from the 1915 mobilization hike in The Hague (136). DE SMET wrote about the Belgian medal and badge of honor for the Carnegie Hero Fund (101) and the medals for the centenary of railways (100). CASANOVA highlighted Art Nouveau commemorative medals (9).

POTTIER gave a lecture for the Royal Belgian Society on the medals of his hometown Spa which ended in a publication by POTTIER AND SCHILS (95). In 2020 *De Beeldenaar* gave much attention to the commemoration of the 75th anniversary of the liberation of the Netherlands after the Second World War (57, 82, 141, 142).

Contemporary medals

Contemporary medals were presented in particular in the issues of the Dutch magazine *De Beeldenaar*. During this period, VAN DER MEER MOHR published more than thirty contributions on both the membership medals of the Association for Medallic Art and other new issues (64, 65, 66). POL-TYSZKIEWICZ, on the other hand, mainly dealt with the sculptural medals (86, 87, 88, 89, 90). Also other, mainly Dutch, writers discussed contemporary medals. Most publications were, however, concerned with the FIDEM congresses. The congress held in Namur and Ghent was treated by AUTRIQUE, BROUILLARD AND CARLIER, etc (3), GEBOERS (30), HUYBRECHTS (37, 38) and PELSDONK (76, 77). The latter author also wrote extensively about the next FIDEM congress that took place in Ottawa, Canada (78, 79, 80, 82). One of the exhibitions related to the congress in Ghent was described by TAYMANS (110, 111).

Tokens and pilgrim badges

DE BACKER (4) discussed a lead medal from the Church of Our Lady in Wavre. TEULINGS continued his research on guild medals (113, 114). LABROT wrote about the counting tokens of Tournai (59).

General and thematic

The most voluminous publication of this period was by WAERZEGGERS who provided an overview of all Leuven

medals from the end of the Ancien Régime to the present day, including even medals that are only known from written sources. The work had 3,600 pages and twelve volumes (127). The same author won the Goltzius Prize of the Belgian Society for his contribution on the counting medals of the Brussels city receivers and the shipping intendants (128). POELS, VANDAMME AND VANOVERBEEK continued their work on an encyclopedia of the Medals issued by the Brussels Mint. It gave an overview of the production of this institution from 1947 to 2015 (84, 85). A special contribution on Belgian medal producers from the 19th to the 21st century was published by DE LOMBAERT (62).

The eight contributions to the colloquium “The art of medals in the low countries”, held in Brussels in 2019, were published in the RBN 2020 – a nice kaleidoscope of presentations by ATTWOOD (2), CUPPERI (12), REINERT (97), JONES (51), VAN HEESCH (35), TAYMANS (112), DORCHY (23) and DE LOMBAERT (63).

ESPAÑA

Rosend Casanova

A excepción del amplio y transversal glosario que abarca la numismática en tierras de presencia catalana, donde DE CRUSAFONT (41) hace constantes referencias a la medallística, los estudios siguen centrándose, por lo general, en piezas concretas, algunos sobre su fabricación y en menor grado sobre los grabadores o medallistas. La producción del siglo XX se mantiene como la más estudiada, tanto en lo que concierne a sus artífices como a los motivos que propiciaron las medallas. En este sentido, un buen número de publicaciones las presentan por temas y las de carácter institucional se estudian más. Las medallas de proclamación ganan en su descripción y en abundante documentación inédita que las sitúa en su contexto. La lectura de una tesis doctoral que trata la disciplina medallística española se ha visto acompañada por otras que la documentan en algún capítulo.

Más allá de los estudios publicados, el curso sobre medalla devocional celebrado en el Gabinet Numismàtic de Catalunya (MNAC) ofreció una oportunidad para ahondar en este tema. Dentro del curso, y reflexionando sobre la medalla en general, GIMENO (67) presenta el objeto y sus tipologías visto como un instrumento de comunicación y propaganda; y CASANOVA (28) trata principalmente su aspecto artístico.

De igual modo, la medalla ha dado pasos significativos en lo que concierne a su exposición pública: en 2014 el Gabinet Numismàtic de Catalunya hace una importante contribución con la muestra sobre las historias metálicas, donde ESTRADA-RIUS (51, 52) analiza el lenguaje de la medalla y cómo esta sirvió para crear un relato histórico. Poco después y también en el Museu Nacional d'Art de Catalunya (MNAC) ESTRADA-RIUS (54) expone documentación inédita de la casa de medallas Ausió de Barcelona. En otra muestra, dedicada al retrato en la medalla y celebrada en la Fundació Rafael Masó de Girona, CASANOVA (22, 23) reflexiona sobre el concepto y la plasmación artística de la esencia humana. Otras exposiciones, como la del Museo del Prado sobre el escultor catalán Miquel Blay (7) propician recoger en su catálogo sus principales medallas. Igual ocurre con la muestra dedicada al escultor Julio López Hernández (93) celebrada en la Real Academia de Bellas Artes de San Fernando de Madrid.

Siglos XVI a XVIII

Continúan siendo poco frecuentes los estudios sobre la medalla en la península Ibérica en sus inicios. GIMENO (70) sistematiza la documentación iconográfica y el contexto de la medalla de la abdicación de Carlos V a favor de Felipe II, ROMA (96) estudia otra dedicada al almirante Coligny y DE RAMÓN (95) analiza las medallas de la Historia de España, de Carlos II a Carlos III. JIMÉNEZ (84) documenta varias reseñas de medalla religiosa escritas en el siglo XVIII y BOADA (15) recoge las medallas y los jetones editados durante la disputa por Menorca en dicho siglo.

Tomando como punto de partida las historias metálicas, MÍNGUEZ (91) analiza las alegorías reales como manifestación del poder, TORRES (106) explica la parte tecnológica de la fabricación, CANO (16) trata la producción pontificia, DE TURCKHEIM-PEY (108) la historia metálica de Luis XIV, DARNIS (46) la de Napoleón y Mudie, y GIMENO (61) las impresas referidas a los Países Bajos. MORICEAU (92) expone la guerra metálica entre Luis XIV y Guillermo III de Orange, FONTCUBERTA (58) la de Luis XIV y del archiduque Carlos, mientras EISLER (49) se centra en la dinastía de los Dasser y GIMENO (62) se pregunta sobre la inexistencia de una historia metálica de la monarquía española.

Siglos XIX a XX

En cuanto al siglo XIX, SENDRA (101) recopila la documentación sobre la medalla valenciana a Godoy, SERRERA (102) trata de las medallas realizadas en Cádiz por Félix Sagau, BALAGUER (9) reflexiona sobre la epidemia del cólera mallorquina de 1865 y su medalla, LLOBET (86) aporta nuevos datos sobre la medalla de la defensa de Cervera de 1875, y DORCHY (47) explora la renovación técnica y social de fines del siglo.

Ya en el siglo XX, DE CRUSAFONT (37, 38) y CASANOVA (20, 24, 25) presentan el periodo de esplendor modernista de la medalla en Cataluña en el 1900, BOADA (13) documenta la medalla de la Exposición Balear de 1903, CASANOVA (27) la que Miquel Blay modeló para la revista *Forma*, traza el vínculo medallístico del belga Godefroid Devreese

con la Grand-Place de Bruselas (30), da a conocer una medalla inédita de Eusebi Arnau (32) y documenta la medalla de Dionís Renart para la sociedad deportiva barcelonesa Sportsmen's Club (29). LLOBET (87) documenta la medalla de la Sociedad Económica de Amigos del País de Cervera, y DE CRUSAFONT (39) estudia las editadas para la popular Fiesta del Árbol catalana y las de carácter comercial que acuñó la firma Martini Rossi (40). GIMENO (76) documenta la sola representación española de Mariano Benlliure y Bartolomé Maura en la exposición medallística de 1910 en Nueva York. CASANOVA (33) biografía a Antonio Bagué y su plaqueta uruguaya de 1913. GARCÍA HERRANZ (59) trata a Mariano Benlliure y la Casa de Velázquez, como ya hiciera en su tesis doctoral (60). MARTÍNEZ y DE CRUSAFONT (90) tratan el cambio de símbolos en las medallas colombófilas de la II República. GIMENO (73) también se ocupa de la exposición internacional La mujer en la medalla celebrada por la FNMT en Madrid en 1968, y reflexiona (74, 68) sobre toda una generación de medallistas que, desde dicha fábrica, renovaron la medalla en España. En su tesis doctoral, una de las pocas dedicadas por entero a la medalla en el ámbito español, VICO (110) analiza el periodo de esplendor que vive la medalla entre 1950 y 1980 centrándose en la obra de destacados autores. En otra tesis doctoral, VASALLO (109) dedica un capítulo a documentar las medallas del escultor Juan Luis Vassallo, y SOLER (104) las que coleccionó Manuel Rocamora.

En cuanto a las temáticas, QUEVEDO y ANCA (94) tratan las de tema naval que se han acuñado en los últimos 150 años, y GONZÁLEZ y BARRERA (82) las de la División Azul, siendo el primer libro que las estudia en detalle, tanto las realizadas por alemanes como por españoles. DUELO (48) analiza las medallas específicas de Cartagena como apartado final de su libro, DE CRUSAFONT (43) documenta las de la fábrica textil Gorina de Sabadell y las de la villa de Gràcia de Barcelona (42), CASANOVA (31) expone los motivos que llevaron al Ayuntamiento de Barcelona a promover una primera Medalla de la Ciudad en 1930 y otra en 1940, y lo mismo ocurrido en la ciudad de Girona (35). BALAGUER (11) trata la medalla de la ciudad de Marsella, FORTEA (56), en ocasión del 600 aniversario de la confirmación legal de la Generalitat Valenciana, describe su *Alta Distinció*, y también estudia la medalla presidencial de la Generalitat de Catalunya (57).

Merece la pena reseñar, por originales y sugerentes, los once cuentos novelados de CASANOVA (34), cuya base argumental son las historias y descripciones de las piezas. GIMENO (75) firma el prólogo, donde reflexiona sobre la medalla como tal.

Finalmente, la necrológica dedica al medallista Francisco López Hernández (1932–2017) firmada por DE LA CUADRA (45) y la de Ramon Ferran (1927–2015) escrita por GIMENO (63) aportan datos inéditos sobre sus biografías, al igual que CASANOVA (26) que la acompaña con un texto inédito de este último fallecido (55) sobre sus motivaciones sobre la medalla y su obra.

Medalla actual

La escultora y medallista HERNANDO (84) recoge algunas de sus últimas creaciones. DE LA CUADRA (44) expone el trabajo realizado en el aula-taller de medallas y el gabinete que recoge útiles, maquinaria y colecciones derivados del trabajo docente. ABAD (1) presenta el trabajo de esta última escultora, medallista y profesora en la UCM, y las medallas representativas de la UNED (2). Como en años anteriores, GIMENO (64, 69, 71, 72) trata la participación española en la FIDEM, exposiciones incluidas.

Medalla de proclamación, medalla devocional y objetos afines

Sin lugar a dudas, BOADA (14) hace una gran aportación en el campo de la medalla de proclamación al tratar el ritual oficial por el que, durante los siglos XVIII y XIX y tras la proclamación de un nuevo rey, se lanzaban al público las medallas conmemorativas que lo celebraban. ABASCAL (3) estudia lo relativo al proyecto de las medallas conmemorativas de la proclamación de Carlos IV en Madrid en 1789.

Por lo que se refiere a la medalla devocional, destaca el XX Curso de Historia Monetaria Hispánica celebrado en el Gabinet Numismàtic de Catalunya (MNAC): SALVÀ (99) reflexiona sobre la frontera entre lo religioso y lo ornamental, BALAGUER (10) se centra en la medallística referida a la Virgen de Montserrat, y MARÍN (88) se ocupa del escultor Eusebi Arnau. ESTRADA-RIUS (53) documenta la fábrica de medallas Ausió de Barcelona, MARTÍ (89) plantea el origen enigmático de las medallas devocionales, AYMAMÍ (6) recoge su presencia en la red, y CLUA (36) se refiere al fondo que, de dicha tipología, conserva el gabinete anfitrión. Merecen también destacar los estudios de GÓMEZ (79, 80, 81) sobre varias hermandades de Granada.

Como resultado del XXVI Encuentro de Estudios sobre la Moneda, promovido por la Asociación Numismática

Española de Barcelona, BALAGUER (8) explica la función de la medalla religiosa y propone una clasificación, AYMAMÍ (5) se aproxima a las medallas devocionales Hamerani de los siglos XVII y XVIII, y SALVÀ (98) propone una cronotología de las medallas devocionales catalanas.

BENAGES (12) presenta un original diálogo entre monedas y medallas, estas últimas básicamente religiosas y militares, en una edición de autor de los Bibliófilos de Tarragona.

En lo referido a objetos afines, un tema habitualmente poco tratado es el de la fabricación de botones. Aquí el trabajo de JIMÉNEZ (84) aporta luces sobre la falsificación monetaria en el siglo XIX.

Por su novedad, destaca el estudio sobre jetones que SANAHUJA (100) centra en los publicitarios de productos, establecimientos y espectáculos documentados entre 1850 y 1939 en Cataluña, que cataloga por vez primera.

Colecciones y museografía

En relación a los ricos fondos del Patrimonio Nacional, RUIZ TRAPERO (59) tratan su colección de medallas extranjeras y CARRERAS (17, 18) las españolas de la colección Romero Ortiz conservada en el Museo del Ejército. ASENJO (4) se ocupa de la obra medallística de Pisanello en el Museo Arqueológico Nacional y GRANADOS (78) de las medallas de Alfonso V de Aragón y I de Nápoles en el mismo museo. GIMENO (65) explica la función que tuvo el Museo de la Real Casa de la Moneda en cuanto a ocuparse de la realización de medallas de la FNMT, tema que complementa (66) reproduciendo su documentación. Merece aquí la pena citar el Premio Tomás Francisco Prieto (50), del que TEODORO VIDAL (105) reproduce las medallas de 1990 a 2013, y que forman parte de la colección numismática de dicho museo. Además, con motivo del cincuentenario del edificio que la FNMT-RCM posee en la calle madrileña de Jorge Juan, se recoge brevemente la acuñación de medallas (107). GIMENO y TORRES (77) detallan la colaboración del escultor y medallista Fernando Jesús con la FNMT quien, más allá de sus medallas, también propuso la decoración para la nueva fábrica en 1964, realizada solo en parte.

Sobre la práctica y la técnica de ordenar una colección, SISÓ (103) expone la evolución del coleccionismo de billetes en el mercado.

Finalmente, en cuanto a las exposiciones, CASANOVA (21) reflexiona sobre la museología y la museografía de *Retrats de medalla*, y repasa el proyecto multiexpositivo galo *Au creux de la main* (19) y sus aportaciones, en su mayoría de colecciones públicas.

ITALIA

Eleonora Giampiccolo

Questo contributo si propone di fornire un commento critico sulle principali e più significative pubblicazioni che hanno visto la luce in Italia nel periodo 2014–2020 nel campo della medaglistica, specialmente su quelle che riguardano aspetti della materia poco noti o trascurati. Sicuramente merita di essere presentato il volume curato da PENNESTRI, *Il campionario di medaglie devozionali della bottega Hamerani. Simboli e luoghi del sacro a Roma e in Europa tra Seicento e Ottocento* pubblicato nel 2019 nel Notiziario del *Portale Numismatico dello Stato*. Nato dalla scoperta presso il Museo Francese del Collegio San Lorenzo da Brindisi a Roma del campionario di medaglie prodotte e vendute nella loro bottega dagli Hamerani, la celeberrima famiglia di incisori papali, il volume testimonia il rinnovato interesse nei confronti di medaglie che in passato troppe poche volte sono state oggetto di studi seri e approfonditi e non hanno mai goduto di una grande popolarità fra gli studiosi di numismatica o di medaglistica, essendo state ritenute di scarso valore storico, artistico e soprattutto “troppo popolari”. Il campionario di medaglie devozionali rappresenta una documentazione fondamentale per la storia della bottega Hamerani e getta luce sulla capacità imprenditoriale dei suoi proprietari, i quali seppero sfruttare al meglio le innumerevoli possibilità di business offerte dalla fama procuratasi ben presto al servizio dei Romani Pontefici grazie alla quale giungevano loro committenze private da parte di vari ordini religiosi, confraternite, parrocchie e dal fatto che la loro bottega si trovasse in una delle strade più frequentate dai pellegrini, specialmente durante le canonizzazioni e i giubilei. Il primo tomo dell’opera ospita alcuni contributi interessanti sull’argomento (10, 14, 16, 67, 74). Nel secondo i singoli modelli di medaglie sono descritti e classificati in base ai loro autori.

La medaglistica papale costituisce uno degli argomenti principali delle pubblicazioni a cura del Medagliere Vaticano che nel periodo di riferimento ha pubblicato importanti studi. Degno di nota è il volume *Aurea Roma* di Giancarlo ALTERI pubblicato nel 2014 (1), nel quale si narra la storia di un viaggio lungo più di cinque secoli ed iniziato tra le rovine della Roma dei Cesari, in una città che più nulla ha della grandezza di un tempo, che non è più la splendida città di marmo che Augusto ha lasciato in eredità ai suoi successori. Della città che poteva vantare più di un milione e mezzo di abitanti resta solo un groviglio di vie sconnesse, malsane e deserte, dove le chiese cadono a pezzi e dove gli agglomerati informi di case cadenti sembrano a mala pena sorreggere i vecchi palazzotti fatiscenti. Questa è l’immagine che accoglie nel 1417 Martino V, il pontefice che riportò la Sede del papato nell’Urbe. Da qui il desiderio da parte del pontefice di restituire alla città la sua dignità di sede del Vicario di Cristo. Da quel momento in poi i papi cominciarono a restaurare le vecchie mura e i cadenti acquedotti, a restaurare o costruire *ex novo publicae commoditati* palazzi, ponti, piazze, ma anche per i pellegrini che in occasione delle festività religiose la affollavano. E con ogni sforzo essi si adoperarono affinché Roma fosse restituita al suo antico splendore e per immortalare la nuova *facies* che la Città Eterna andava assumendo, essi affidarono ai più grandi maestri incisori di ogni tempo la realizzazione di medaglie celebrative di ogni singola costruzione. Dopo una breve introduzione di carattere generale sui monumenti raffigurati sulle monete romane, il viaggio prende l’avvio a partire dal pontificato di Paolo II, il papa che inaugurò la tradizione della medaglistica pontificia e in particolare quella della medaglia papale architettonica, e si conclude con il pontificato di Pio IX.

L’articolo di Eleonora GIAMPICCOLO *Intorno a una medaglia di Pio V Ghislieri* del 2016 (40) fornisce una interpretazione della medaglia dalla legenda del rovescio NE DETERIVS VOBIS CONTINGAT più plausibile di quella pubblicata nel terzo volume del *Corpus Numismaticum Omnium Romanorum Pontificum* (n. 588). Per essa, che era stata considerata allusiva del Giubileo Straordinario del 1566, l’autrice, dopo una attenta analisi della medaglia stessa e uno studio del tipo del rovescio, propone un riferimento alla politica adottata dal pontefice volta alla conversione degli ebrei, come del resto avevano suggerito alcuni autori antichi.

Il pontificato di Paolo VI attraverso le medaglie, sia quelle ufficiali emesse dalla Santa Sede sia quelle private,

realizzate da stabilimenti privati principalmente per il mercato dei collezionisti è l'argomento del volume di Eleonora GIAMPICCOLO *Le medaglie di Paolo VI: possesso perenne di un pontificato*, pubblicato nel 2018 (114). Le medaglie illustrate in questo volume scandiscono le tappe del percorso della Chiesa verso quel rinnovamento, secondo i dettami del Concilio Ecumenico Vaticano II, e quell'apertura alla modernità fortemente auspicati da Paolo VI durante i quindici anni del suo pontificato. Esse rappresentano, pure, la testimonianza più evidente di quel dialogo che il pontefice riprende con gli artisti moderni, i quali, anche quando il committente delle proprie creazioni è il Vicario di Cristo, possono tornare ad essere finalmente liberi di esprimere nel tondello metallico la propria personalità, il proprio stile, la propria visione della realtà, la propria ricerca insoddisfatta del nuovo, il proprio bisogno di trovare certezze in un mondo in cui sembra dominare l'incertezza, perché, come spiega il pontefice, in questo consiste il lavoro dell'artista: rendere visibile, nella pienezza e nella spontaneità della sua libertà espressiva, ciò che è trascendente, inesprimibile, ineffabile. In questo senso, le medaglie realizzate durante il pontificato di papa Montini, specialmente quelle ufficiali, sono dei veri e propri capolavori di scultura moderna di cui riflettono le caratteristiche formali ed espressive.

Se nel saggio relativo alle pubblicazioni degli anni 2009–2013 la rivista del Medagliere Vaticano, *Historia Mundi*, era stata presentata come una novità editoriale, oggi è ormai affermata nel panorama editoriale italiano. Nata come rivista di medaglistica, nel corso degli anni ha iniziato ad ospitare alcuni contributi riguardanti pure le monete, anche se gli articoli che hanno per argomento i vari aspetti della medaglistica ne costituiscono la parte principale (4, 9, 28, 48, 68, 79, 96, 103, 104, 105, 106, 112, 116, 119, 120, 123). È apprezzata per i suoi contributi scientifici, molti dei quali riguardano proprio le collezioni del Medagliere Vaticano, ma anche per la qualità delle immagini e gli ingrandimenti di cui possono godere i suoi lettori. Costante nell'articolazione della rivista la presenza di un articolo dedicato a medaglisti pontifici (62, 63, 64, 65, 66) e una monografia dedicata a medaglisti contemporanei (97, 98, 99, 113, 117). L'ultimo numero ad oggi pubblicato, il nono, è uscito nel 2020.

In questo quinquennio hanno visto la luce importanti studi riguardanti artisti la cui produzione medaglistica è poco studiata. *In primis* si segnala il volume dell'Accademia Italiana di Studi Numismatici dedicato a Francesco Raibolini detto il Francia che è stato pubblicato a conclusione del Convegno *In punta di bulino. Francesco Francia e gli incisori italiani del Rinascimento*, organizzato presso il Museo Civico Archeologico di Bologna nell'ottobre 2017 in occasione del cinquecentenario della morte dell'incisore e contiene gli interventi degli studiosi che vi hanno partecipato (29, 36, 39, 47, 50), tra i quali spicca quello di Michele CHIMIENTI e Guglielmo CASSANELLI, *Francesco Francia incisore e i medaglisti bolognesi del periodo* (37), già autori, peraltro, del volume sullo stesso autore *Francesco Raibolini detto il Francia. Orefice e incisore di conii* (35); a seguire si può citare il contributo di Antonella ARZONE sulle medaglie di Giovan Francesco Caroto e di Giulio della Torre, il primo pittore veronese attivo a Milano e a Casale Monferrato, di cui si conosce un'unica medaglia dedicata al marchese del Monferrato Bonifacio II Paleologo, e il secondo, giurista di professione, ma artigiano del bronzo per passione, autore di una medaglia che ritrae Giovanni il fratello di Giovan Francesco Caroto (26).

A proposito di Giulio della Torre, si cita il contributo della ZAMPERINI *Giulio della Torre come pater familias: autocelebrazione e convenzioni di genere nella medaglia di Beatrice Della Torre* in cui l'autrice descrive la medaglia che l'incisore realizzò per la figlia Beatrice in occasione delle sue nozze con Zeno Turchi avvenute nel 1523 analizzandone il contesto di realizzazione e gli spunti che il repertorio antico ha fornito all'artista nella composizione e nell'iconografia (54).

La figura di Sperandio Savelli medaglista è stata approfondita da un contributo di Marco SCANSANI (51); oltre a quest'ultimo, l'autore ha curato la voce *Savelli, Sperandio (Sperandio da Mantova)* nel *Dizionario Biografico degli Italiani* (volume 90 (2017)); mentre quella del vicentino Valerio Belli è argomento dei contributi di Armando BERNARDELLI (31, 32, 33).

Molti contributi e opere a stampa hanno per argomento medaglisti contemporanei: Giancarlo ALTERI, per esempio, ha dedicato su *Historia Mundi* 5 uno studio-intervista al maestro Angelo Grilli, vincitore del premio *Numismatic Art Award for Excellence in medalllic Sculpture* dell'*American Numismatic Association* nel 2015, *Quando il metallo si fa letteratura: la pascoliana poetica del fanciullino e i putti di Angelo Grilli* (98); *Le fusioni di ricerca di Laura Cretara* sono presentate nella monografia di *Historia Mundi* 6 pubblicata nel 2017 (113): il contributo, che nasce da un'intervista della stessa artista, descrive un gruppo di fusioni nelle quali l'artista esprime le proprie emozioni e le tensioni del suo essere donna del suo tempo e al di sopra di ogni tempo come fossero pagine di un diario personale;

Bruno CALLEGHER ha pubblicato nel 2017 un volume dedicato al medaglista Giuseppe Grava (101); in esso, dopo una piacevole introduzione sul medaglista, la sua formazione e la sua produzione, sono descritte e illustrate 120 medaglie realizzate dal 2000 a tutto il 2016, suddivise in tre gruppi: senza distinzione di committenza e temi; commissionate dal “1° Club Frece Tricolori” di Pieve di Soligo; commissionate dall’associazione “Maestri dello Spiedo” di Pieve di Soligo, attiva dal 2006. L’anno successivo, 2018, è stata inaugurata la collana *Artisti Italiani Contemporanei* curata da Girolamo ZAMPIERI. Il primo volume è dedicato a *Roberto Cremesini, scultore e medaglista*; due contributi a firma di Giovanni GORINI (118) e Andrea SACCOCCI (122) delineano la figura di un artista poliedrico in grado di trarre ispirazione dalla tradizione classica pur con un linguaggio contemporaneo, a volte addirittura sperimentale.

Al bujese Pierino Monassi sono stati dedicati due studi nel 2018. Il primo a firma di Giancarlo ALTERI *Piero Monassi e il multiforme mondo delle sue medaglie* pubblicato su *Historia Mundi 7* in occasione della mostra a lui dedicata e organizzata presso la Veneranda Biblioteca Ambrosiana di Milano dal 13 febbraio 2018 all’08 aprile 2018 (99) e il secondo a cura di Ascanio VATTOLO, *Piero Monassi. Medaglista Autore e Incisore* (125). Lo stesso autore l’anno precedente, 2017, aveva pubblicato uno studio su un altro incisore bujese *Sculture e medaglie di Enoe Pezzetta (1918-1995)* (124).

Nel 2018 è uscito il decimo volume della *Collana di Numismatica e Scienze Affini* a cura di Adriano SAVIO e Alessandro CAVAGNA, che sotto il titolo generico di *Saggi di Medaglistica* raccoglie principalmente, ma non solo, studi relativi a medaglie di XV e XVI secolo (5, 7, 13, 27, 32, 43, 45, 46, 49, 53, 59, 69).

Alcune pubblicazioni sono importanti perché portano alla conoscenza di studiosi e del pubblico di appassionati collezioni poco conosciute che possono fornire nuovi ambiti di ricerca; è il caso del volume di Adriano AMENDOLA, *Ritratti di bronzo. Il Medagliere Orsini dei Musei Capitolini di Roma (2017)* (3), di quello di Barbara BACCHELLI, *Collezione Mazzoccolo. Medaglie di Casa Savoia. La “Storia Metallica” e le Cartoline Postali connesse* (2018) (6) e del contributo di Giulia ZACCARIOTTO *La raccolta di medaglie di Gaetano Filangieri: ‘arti industriali’ e testimonianze storiche* (2020) (24). Il primo costituisce non solo il catalogo completo del Medagliere Orsini dei Musei Capitolini di Roma composto di medaglie, placchette e sigilli appartenuto agli Orsini, ma anche uno studio sulla storia di questa famiglia, sulle vicende storiche che l’hanno vista coinvolta e sulla genesi della collezione.

Il secondo presenta un nucleo di 91 medaglie, quello denominato *Storia metallica della Real Casa di Savoia* che fu donato all’Istituto Italiano di Numismatica dal senatore Enrico Mazzoccolo nel 1940. Insieme a questo nucleo viene illustrata anche una raccolta di cartoline postali che replicano, ricalcato in rilievo su una faccia, il ritratto di ciascuno dei personaggi presenti nelle medaglie.

Il terzo descrive la collezione di medaglie una volta appartenute a Gaetano Filangieri, principe di Satriano e duca di Taormina, e che oggi costituiscono parte del patrimonio del Museo Civico Gaetano Filangieri di Napoli. Anche se si tratta di pochi pezzi rimasti rispetto al nucleo originario trafugato dal 1990 (circa un centinaio) il lavoro di presentazione della collezione ha il merito di portare a conoscenza di tutti gli interessati dell’esistenza di questa ennesima raccolta poco nota.

Il volume *Napoleone e la sua famiglia: un’Europa da rivedere* a cura di Franca Maria VANNI raccoglie gli interventi della prima giornata di studio svolta nella Sala Sant’Angelo del Cassero di Castiglion Fiorentino (Arezzo) dedicata all’argomento. L’evento organizzato dal Museo Medagliere dell’Europa Napoleonica con sede a Castiglion Fiorentino e il volume che ne è seguito ha visto la collaborazione dei direttori di alcuni dei più importanti musei italiani, docenti universitari e studiosi della materia. Essi hanno sicuramente contribuito ad attirare l’attenzione nei confronti delle medaglie napoleoniche, che pur essendo troppo spesso trascurate, sono invece documenti importanti per la storia del periodo e per la galleria di personaggi che ci restituiscono. Nel volume sono descritte e illustrate le raccolte di medaglie napoleoniche di alcuni dei più importanti medaglieri italiani: il Museo Correr di Venezia, il Museo Bottacin di Padova, la Veneranda Biblioteca Ambrosiana di Milano, il Museo Civico Archeologico di Bologna. Gli interventi dei partecipanti sono stati raccolti nel volume degli Atti pubblicato su supporto informatico (75, 80, 81, 84, 85, 86, 88, 94, 95).

Nel 2015 e nel 2018 sono usciti il volume V (15) e VI (72) del *Corpus Numismaticum Omnium Romanorum Pontificum* conosciuto dagli esperti del settore come *CNORP*, a cura di Adolfo MODESTI. Il primo, che riprende articoli sulla materia che lo stesso autore ha pubblicato anni addietro, ha per argomento le medaglie papali di restituzione, anche se illustra, alla fine del volume, alcune serie metalliche commemorative moderne che non possono definirsi

stricto sensu medaglie di restituzione, e il secondo le medaglie papali dei pontefici Gregorio XV, Urbano VIII e Innocenzo X. Quest'ultimo segue l'impostazione dei volumi precedenti ed è sicuramente un ottimo repertorio fotografico per le medaglie pontificie, frutto di un intenso lavoro di ricerca dei vari pezzi, per la maggior parte delle quali vi è il riferimento puntuale ai rispettivi documenti d'archivio. Tuttavia, l'impostazione del volume crea non poca confusione tra colori i quali si approciano alla medaglistica pontificia per la prima volta. Sono infatti schedate, insieme alle medaglie papali propriamente dette, medaglie che sono state inserite solo per il fatto di recare nella legenda generalmente del rovescio il nome del pontefice ad indicarne la datazione, ma che non possono essere definite tali. Un esempio tra tutte è costituito da alcune medaglie di fondazione di chiese che al rovescio recano nella legenda un riferimento al papa sotto il cui pontificato la chiesa è stata costruita.

Nel 2021 è uscita l'opera postuma di Arnaldo TURRICCHIA *Le Medaglie dei Borbone. Duchi di Parma, Piacenza e Guastalla dal 1731 al 1801, Duchi di Parma, Piacenza e Stati annessi dal 1847 al 1859*. Anche questo volume è interessante e molto utile per il suo apparato fotografico e notevole è stato lo sforzo del suo autore che ha fornito la localizzazione delle medaglie nelle varie raccolte consultate. Unica nota stonata il fatto che accanto a puntuali riferimenti di fonti archivistiche coesistono riferimenti a materiali pubblicati online che non sono verificati e che non sono riconducibili ad un determinato autore (22).

Sebbene *Cronaca Numismatica* e *Panorama Numismatico* non siano riviste accademiche, non bisogna trascurare alcuni articoli di medaglistica in essi pubblicati, articoli, questi, che offrono spesso importanti notizie per gli studiosi della materia e gli appassionati. Questi articoli mostrano molto spesso uno studio preciso e abbastanza completo degli argomenti trattati, ma hanno anche il merito di presentare tali argomenti in modo discorsivo, con aneddoti e curiosità, e di far riflettere sul fatto che la medaglia è importante non solo in quanto opera d'arte o documento storico di un lontano passato, ma anche quando essa è documento del nostro passato più recente o legata al nostro presente.

DEUTSCHLAND

Rainer Grund und Martin Heidemann

Im deutschen Schrifttum zur Medaillenkunst lassen sich im Berichtszeitraum zwei große thematische Schwerpunkte ausmachen, die zugleich im Fokus einer breiteren öffentlichen Aufmerksamkeit stehen und herausragenden historischen Jubiläen gewidmet sind. Es handelt sich zum einen um das 500-jährige Reformationsjubiläum, das 2017 begangen wurde, zum anderen um das Gedenken an den 100 Jahre zurückliegenden Ersten Weltkrieg (1914–1918). Beide Jubiläen haben einen beachtlichen Niederschlag sowohl in Ausstellungen mit Katalogpublikationen gefunden (5, 10, 24, 33, 53, 56, 73, 197, 200, 237, 239, 241, 276), als auch in Form von Einzelstudien (31, 38, 54, 62, 101, 105, 113, 124, 144, 165, 178, 185, 194, 208, 242, 247, 266, 268, 274), in denen bestimmte Themen oder Aspekte behandelt werden.

Das Reformationsjubiläum bot Anlass zur 2015 erfolgten Herausgabe eines von K.-P. BROZATUS (5) bearbeiteten Bestandskatalogs der reformationsgeschichtlichen Münz- und Medaillensammlung der Stiftung Luthergedenkstätten in Sachsen-Anhalt zu Wittenberg. Der aus zwei Teilbänden bestehende und in die Bereiche Personen- und Ereignismedaillen gegliederte Katalog umfasst über 1700 ausführlich beschriebene und in ihrem reformations- und landesgeschichtlichen Kontext erläuterte Münzen und Medaillen aus einem Zeitraum von fast fünf Jahrhunderten als Ergebnis jahrzehntelanger Forschungen des Bearbeiters.

Noch umfangreicher ist der vier Jahre später von D. HÖLSCHER (33) als Band 2 bearbeitete Katalog der „*Reformatio in nummis*“, der die bedeutende Privatsammlung von Rainer Opitz (†) zur Geschichte der Reformation und des Protestantismus in sechs Teilbänden präsentiert. Mit 4716 Katalognummern wurden über 5000 Münzen und Medaillen ausführlich erfasst und abgebildet. Diese in ihrer ungeheuren Materialfülle wichtige, inzwischen versteigerte Sammlung bleibt durch die Publikation dokumentiert. Beide Bände der „*Reformatio in nummis*“ werden künftig als Standard- und Zitierwerk heranzuziehen sein.

Eine 2014 schon mit Objekten aus der Sammlung Opitz bestückte Sonderausstellung mit dem Titel „*Reformatio in nummis*“ auf der Wartburg bei Eisenach begleitete ein von E. DOERK herausgegebener Katalog (56), der Beiträge von G. DETHLEFS (53), S. RHEIN (113) und U. DRÄGER (185) enthält.

Mit dem Lutherbild über die Jahrhunderte befasste sich die von K. EHLING (10) in der Staatlichen Münzsammlung München kuratierte Ausstellung „*Luther imagines 17*“, zu der ein Begleitbuch erschienen ist. Aufgezeigt wurde hier, wie jedes Zeitalter sein eigenes Lutherbild hervorbringt vom gefeierten „Propheten“ und „Lichtbringer“ im 16. und 17. Jahrhundert bis zum Vorbild für das Bürgertum im 19. Jahrhundert und zur nationalistischen Vereinnahmung im Ersten Weltkrieg. In einer Studie im *Jahrbuch für Numismatik und Geldgeschichte (JNG)* geht G. DETHLEFS (54) auf die Lichtmetaphorik als den nachhaltigsten Beitrag der Numismatik zur Ikonographie der Reformation ein.

Die große mediale Aufmerksamkeit zum Jubiläumsgedenken des Ersten Weltkriegs fand ihren Niederschlag in zahlreichen Ausstellungen, die in ihren Fragestellungen bzw. gezeigten Objekten auch die Gegenwart reflektierten. Hervorzuheben sind zwei große Ausstellungen zum Thema in München und Berlin mit jeweils opulent ausgestatteten Katalogen. Unter dem Titel „*Europas Verderben 1914–1918*“ präsentierte die Staatliche Münzsammlung München deutsche und österreichische Medaillen auf den Ersten Weltkrieg (237). Mit mehr als 430 Exponaten wurden in 24 Themenfeldern verschiedene Aspekte des Krieges und der Propaganda beleuchtet, von siegreichen Schlachten und „Helden“ bis hin zum Grauen des Krieges und der Not der Zivilbevölkerung. Einen einleitenden Essay verfasste M. WESCHE (276).

Unter dem Titel der auf die Befreiungskriege zurückgehenden und im Ersten Weltkrieg wiederbelebten Parole „*Gold gab ich für Eisen*“ zeigte das Münzkabinett der Staatlichen Museen zu Berlin ab März 2014 eine einjährige Ausstellung. Der Katalog (239) enthält Beiträge von E. BANNICKE, A. BERTHOLD, K. DAHMEN, E. HARPER, W. STEGUWEIT und B. WEISSER. Zum Thema werden verschiedene Facetten der Rezeption anhand des eigenen reichen

Medaillenbestandes behandelt und durch eine Medaillenedition Berliner Künstler zum 100-jährigen Jubiläum ergänzt.

Im Kontext mit anderen Bildmedien war die Weltkriegsmedaille Gegenstand von Katalogpublikationen bzw. Begleitbüchern zu Ausstellungen in Ingolstadt (200) und Münster (241).

Einen weiteren Schwerpunkt im Berichtszeitraum bilden Publikationen, die bestimmten Regionen, Landschaften oder Städten gewidmet sind (6, 14, 15, 16, 17, 26, 27, 29, 36, 39, 43, 72, 84, 94, 108, 118, 135, 160, 161, 173, 176, 235, 245, 252, 257). Im Fokus stehen dabei in der Regel die Geschichts- oder Ereignismedaillen. Bei dem von D. FISCHER und H. MAUÉ (15) verfassten Korpus der „*Medaillen und Schaumünzen auf Ereignisse in der Reichsstadt Nürnberg 1521-1806*“ handelt es sich um eine erste systematische Bestandserfassung für diesen Zeitraum, die das Standardwerk von H.-J. ERLANGER zu den „*Nürnberger Medaillen 1806-1981*“ ergänzt. Der chronologisch angelegte Katalog umfasst 341 Objektnummern auf über 150 historische Ereignisse. Neben dynastisch-politischen Ereignissen wie Kaiserbesuchen und Fürstentagen fanden die Jubiläen und Jahrestage von Vereinigungen, Schießwettbewerbe oder die Errichtung von Bauwerken ihren Niederschlag in der „metallinen Chronik“ der Medaille.

Als Gemeinschaftswerk verschiedener Autoren, die herausragende Ereignisse und Medaillen der Stadtgeschichte erörtern und beschreiben, erweist sich die von R. WIECHMANN und J. GROLLE (135) herausgegebene Publikation über die Hamburger Medaillen des 17. und 18. Jahrhunderts.

300 Jahre Geschichte des Landes Baden bis zur Schaffung des Großherzogtums unter Napoleon 1806 ist das Thema von J. ZEITZ (43), der damit das Ergebnis jahrelanger Forschungsarbeit vorlegt. Der alphabetisch nach Ortschaften und Herrschaften geordnete Katalog der Medaillen enthält in einem Anhang auch die Wallfahrts- und Bruderschaftsmedaillen der Region am Oberrhein. In seinem vierbändigen Werk hat der Sammler M. LEIBFRIED (23) deutsche und europäische Fürstenpaare auf Münzen und Medaillen aus einem Zeitraum vom Beginn des Dreißigjährigen Krieges bis 2013 mit 1886 Katalognummern zusammengetragen. Der letzte Band beinhaltet Auktionsergebnisse, Nachträge und Stammtafeln.

15. bis 18. Jahrhundert (Renaissance und Barock)

Die weitere wissenschaftliche Beschäftigung mit der frühneuzeitlichen Renaissancemedaille im Anschluss an die ab 2013 gemeinsam von den Münzkabinetten München, Dresden und Wien organisierte Ausstellung „*Wettstreit in Erz*“ fand ihren Niederschlag in einem von M. HIRSCH, W. CUPPERI und U. PFISTERER 2014 veranstalteten internationalen Kolloquium in München. Der drei Jahre später erschienene Tagungsband „*Die andere Seite. Funktionen und Wissensformen der frühen Medaille*“ (75) unternimmt den Versuch, die Bildgattung in einem größeren Funktions- und Wissenskontext zu beleuchten. Beiträge steuerten u.a. M. HIRSCH (76), S. FITZNER (61), T. FRIED (68), H. MAUÉ (91), M. MÜLLER (97), U. PFISTERER (109) und W. STEGUWEIT (123) bei.

Untersuchungen zu Bedeutung und Einfluss der Antike auf die Medaillen des 15. und 16. Jahrhunderts unternahmen U. NIGGEMANN (98), S. D. VOLZ (130) und M. MATZKE (88). S. D. VOLZ (130) ging in ihrer Dissertation dem höfischen Ursprung der neuen Kunstgattung in Italien nach, indem sie die Porträtmedaillen Francescos II. da Carrara Novello von 1390 als anregende Vorläufer der späteren Medaillen Pisanellos näher analysierte.

Dem mit Fälschung, Nachahmung und Neuschöpfung komplexen Thema der „Paduaner“, in denen sich nicht zuletzt die Antikenbegeisterung des 16. Jahrhunderts spiegelt, widmete das Historische Museum Basel eine von M. MATZKE (88) konzipierte Ausstellung. Die in der Schriftenreihe der Numismatischen Gesellschaft Speyer e.V. erschienene Begleitpublikation enthält Beiträge verschiedener Autoren. Der umfangreiche Katalog mit insgesamt 419 beschriebenen Objekten dokumentiert den auf den historischen Sammlungen von L. D. de Rochefort und B. Amerbach beruhenden Bestand des Baseler Museums.

Den propagandistischen Einsatz der Medaille im Barock unter Ludwig XIV. und den „Kampf der Bilder“ bzw. „Medaillenkrieg“ zwischen dem Sonnenkönig und seinen europäischen Kontrahenten thematisiert H. ZIEGLER (138) in einem Aufsatz. In der *Festschrift für Wolfgang Hahn zum 70. Geburtstag* ist W. SZAIVERT (127) mit einem Beitrag vertreten, in dem anhand zeitgenössischer Literatur dort erwähnte Medaillen zu den 1690 erfolgten Krönungen der Kaisergattin Eleonore von der Pfalz zur Kaiserin und ihres Sohnes Erzherzog Joseph zum römischen Kaiser und einige Aspekte der Medaillenproduktion dieser Zeit untersucht werden. T. FRIED (66) erforschte in der überarbeiteten Fassung seiner 2013 vorgelegten Habilitationsschrift die repräsentative Funktion der Münz- und Medaillenprägung der mecklenburgischen Herzöge, die Rolle von Münzen und Medaillen als Kommunikationsmittel ihrer Herrschaft und zur Vergegenwärtigung ihrer Macht.

Dynastisch und sammlungsgeschichtlich gleichermaßen orientiert sind die Studien von M. OHM (102, 104, 107) und L. GROSS (107) zur Münz- und Medaillensammlung des Württembergischen Landesmuseums in Stuttgart und von U. WALLENSTEIN (131, 132) zu Gnadepfennigen der Sachsen-Ernestinischen Herzöge des 18. Jahrhunderts im Münzkabinett Gotha. W. LESCHHORN (25) legte einen Bestandskatalog der Sammlung des Herzog-Anton Ulrich-Museums in Braunschweig mit ca. 1200 abgebildeten, beschriebenen und kommentierten Medaillen des 15. bis 19. Jahrhunderts vor. A. KLARE (79) beleuchtet in einem Beitrag König Friedrich II. von Preußen im Spiegel zeitgenössischer Medaillen, die als Auftragswerke des Herrschers seine Reformen sowie Wirtschaft, Wissenschaft und Kunst fördernde Maßnahmen dokumentieren. Von G. MUES (†) und M. OLDING (96) erschienen die ersten beiden Bände des mehrbändig angelegten Katalogwerks zu den preußischen Königen des Hauses Hohenzollern 1786 bis 1870 und deren Familien. Die auf Sammler zielenden Kataloge umfassen die Prägungen auf König Friedrich Wilhelm II. (1786–1797) und König Friedrich Wilhelm III. (1797–1840). In seinen neuen Standardwerken erfasste M. MEHL (94, 95) die Münzen und Medaillen von Merseburg von den Anfängen bis 1738 sowie des Bistums Naumburg-Zeitz und des späteren Herzogtums Sachsen-Zeitz. Neben den ausführlichen Objektbeschreibungen sind auch geschichtliche Angaben zu den geistlichen und weltlichen Herrschern enthalten.

Zum Thema Papstmedaillen, ihrer Funktion, Ikonografie und Bedeutung als Quellengattung sei auf die Arbeit von K. EHLING und J. ERNESTI (11, 195) und den von M. BURIONI und M. HIRSCH (6) herausgegebenen Katalog der Staatlichen Münzsammlung München hingewiesen. EHLING und ERNESTI (11) beleuchten die propagandistische Funktion der Medaillen anhand einer Auswahl von 50 Exemplaren zu Ereignissen der Zeit vom frühen 15. Jahrhundert bis zur Gegenwart unter besonderer Berücksichtigung der offiziellen Jahresmedaillen. Die Stadt Rom als Zentrum der päpstlichen Macht, ihre Architektur und die seit der Antike weiterentwickelten Formen der Präsentation nimmt der von BURIONI und HIRSCH (6) herausgegebene Katalog ins Visier. Er ist als begleitende Publikation zu einer Ausstellung der Staatlichen Münzsammlung München erschienen.

Das Thema *Krieg und Frieden* wurde in Studien und Aufsätzen von D. GERSTL (70) zum Geschehen des Dreißigjährigen Krieges in Regensburg bzw. von M. OHM (106) zu den gleichzeitigen Ereignissen im deutschen Südwesten sowie von G. DETHLEFS (55) in Bezug auf den Westfälischen Frieden behandelt. E. HAUSMANN (74) beleuchtete die Friedensschlüsse in der Zeit der Koalitionskriege. R. GRUND (72) befasste sich mit Medaillen und Gedenkmünzen auf die 1620 erfolgte Unterwerfung und Übernahme der Oberlausitz durch Kursachsen.

Dem 2014 mit Ausstellungen begangenen 200-jährigen Jubiläum des Endes des Spanischen Erbfolgekrieges (1700–1714) sind die Bearbeitungen und Ausführungen zu den Friedensschlüssen von Utrecht, Rastatt und Baden von M. OHM (100, 103) und der Katalog einer Privatsammlung von M. SENK (122) zu verdanken. Studien zu bestimmten Medaillen stammen von H. MAUÉ (92) bezüglich Christian Wermuths Medaille auf die verlustreiche Schlacht bei Höchstädt 1704 und von L.-G. SCHIER (115) auf die in der Oberlausitz verorteten Schlachten von Hochkirch im Siebenjährigen Krieg (1758) und Bautzen (1813) zur Zeit der Befreiungskriege. Den zeitgenössischen Medaillen zum Frieden von Oliva (1660) im 2. Nordischen Krieg, der u.a. die Souveränität des Herzogtums Preußen sicherte, widmete M. NORTH (99) einen Beitrag in einem Sammelband.

Einen weiteren Schwerpunkt bilden monographische Untersuchungen zu Leben und Werk einzelner Künstler-Medaillere, Münzmeister und Graveure.

P. M. ARNOLD (44) widmete sich dem spätgotischen, am Übergang zur Renaissance stehenden süddeutschen Bildhauer und Bildschnitzer Hans Leinberger (um 1470/1480–1531) und der Medaillenkunst, wobei die Medaille auf Johannes Stabius, Dichter und Hofhistoriograph Kaiser Maximilians im Mittelpunkt steht. L.-G. SCHIER (114) legte eine Studie zu 85 Familienschaumünzen des Bautzener Zinngießers Edmann vor, die auf den bis 1939 unternommenen Forschungen von W. HAUPT aufbaut und diese fortführt. Dem aus dem Werkstattkreis um Lucas Cranach hervorgegangenen Medailleur, Holzschneider und Kupferstecher Frantz Friderich (ca. 1520–1584/85), der an mehreren deutschen Fürstenhöfen wirkte, widmete M. CIESLICKI (50) einen längeren Aufsatz in den *Beiträgen zur brandenburgisch/preußischen Numismatik*.

Auf einer 2010 abgeschlossenen Dissertation beruht die 2014 erschienene Publikation von U. B. THIEL (129) zum Bildhauer und Medaillenschneider Dietrich Schro und seiner Werkstatt in Mainz (1542/44–1572/73). Neben großformatigen Werken wie Grabdenkmälern, Skulpturen und Wappentafeln beschreibt und analysiert die Autorin auch das Medaillenwerk. Ausgehend von den gesicherten Werken mit der Gruppe der signierten Porträtmedaillen der gräflichen

Familie zu Solms (1544/46) macht sie auch stilkritisch gestützte Zuschreibungen hinsichtlich Medaillen von Kurfürst Ottheinrich von der Pfalz und dessen Umfeld.

Zu den Ergebnissen medaillenkundlicher Forschungen gehört die von M. SCHÖDER (120) in Dresden abgeschlossene Dissertation über den Leipziger Barockmedailleur Albrecht Krieger (1663–1726). Es ist das Verdienst des Autors, diesen meist im Schatten von Heinrich Paul Großkurt und Christian Wermuth stehenden Künstler und sein Werk stärker ins Licht gerückt zu haben. Mit einem umfangreichen *Suvre* von mehr als 230 ihm bisher zugewiesenen Medaillen gehört Krieger zu den produktivsten Medailleuren seiner Zeit. Archivalische Studien von D. BRUHN, D. GROSCH, M. ROLFS und A. SCHMIDT (40) förderten die Namen und Arbeiten einiger bislang wenig bekannter Südhüringer Medailleure zu Tage.

Für den Bereich der Rechenpfennige, die aufgrund ihres Stempelschnitts und ihrer vielfältig gewählten Bildmotive auch Parallelen zur Medaillenkunst aufweisen, ist das in Deutsch und Englisch verfasste Werk von F. GROENENDIJK und R. A. LEVINSON (71) über die Nürnberger Rechenpfennige der Familien Lauffer mit zwei Gruppen verwandter Meister, die die Rechenpfennigherstellung für gut ein Jahrhundert dominierten, anzuzeigen. Es handelt sich dabei um die Fortsetzung des von F. STALZER bearbeiteten und 1989 von der Staatlichen Münzsammlung München veröffentlichten ersten Bandes, der die früheste Periode der Meister dieser Zunft von 1550 bis 1635 berücksichtigt. Der vorliegende Band umfasst nun die etwa von 1554 bis 1712 herausgegebenen Rechenpfennige, die von den beiden Zweigen der Familie Lauffer bekannt sind.

19. Jahrhundert

Einen Schwerpunkt bilden Untersuchungen zu einzelnen Medaillen und Medaillengruppen, bei denen auch Stilphänomene wie Klassizismus oder Historismus und Themen wie z. B. Industrialisierung (153) berührt werden.

Das aktuelle Reformationsjubiläum boten DRÄGER (143) und EHLING (144) Anlass zur Rückschau auf die Medaillen zur 300-jährigen Reformationsfeier von 1817 und die Rolle Goethes.

Preußische Staatsmedaillen, ihre Entstehung und die Verleihungsmodalitäten waren Gegenstand der auf Auswertung archivalischer Quellen beruhenden Studien von L. TEWES und E. BANNICKE (140, 142). In dem Zusammenhang befassten sie sich auch mit dem Bildhauer Max Landsberg (1850–1906) als einem ihrer Schöpfer. W. HANSEN (147) ging in einem Aufsatz der Frage nach dem „Medaillenkünstler“ Adolph Menzel (1815–1905) nach, eine allgemein meist wenig bekannte Facette des bereits zu Lebzeiten durch Medaillen (u.a. von Werner Begas und Gustav Eberlein) geehrten bedeutenden Berliner Malers und Zeichners. Als die Veröffentlichung eines auf dem FIDEM-Kongress in Ottawa 2018 gehaltenen Vortrags erweist sich die Studie von R. GRUND (146) zu Angelica Bellonata Facius (1806–1887). Die Tochter des Stempelschneiders Friedrich Wilhelm Facius (1764–1843), die von Goethe und dem Großherzog Karl August von Sachsen-Weimar-Eisenach protegiert und gefördert wurde, zählt zu den wenigen Künstlerinnen im Medaillenfach aus Weimars klassischer Zeit. Für das auf Schriften von L. FREDE aufbauende Verzeichnis der Werke wurden erstmals auch im Münzkabinett Dresden aufbewahrte Quellen ausgewertet.

Zu den Initiativen im universitären Bereich gehört die von S. KRMNICEK (150, 151) geleitete Bearbeitung der Medaillen und Plaketten auf den bedeutenden Altphilologen und Historiker Theodor Mommsen (1817–1903). Damit liegt der Bestand der Sammlung des Instituts für klassische Archäologie der Universität Tübingen katalogisiert vor.

Einer besonderen Gruppe von Medaillen, den Schulpreismedaillen, die an Schüler und Studierende als Anerkennung für hervorragende Leistungen vergeben wurden, widmeten A. RAFF (155) und L. G. SCHIER (157) ihre Aufmerksamkeit. Ersterer konzentrierte sich dabei auf die Prägungen der Stuttgarter Münze für Stuttgart und den schwäbisch-württembergischen Raum. Neben den Kassenrechnungen der Stuttgarter Münze wurden die erhaltenen Stempel in der Stempelsammlung berücksichtigt. L. G. SCHIER befasste sich im Zuge seiner Studien zur Oberlausitzer Numismatik mit den Prämienmedaillen der Gymnasien zu Bautzen und Görlitz.

20. Jahrhundert bis Gegenwart

Den zahlenmäßig größten Teil der Arbeiten zur Medaillenkunst in Deutschland nehmen Artikel, Studien, Kataloge bzw. katalogartige Zusammenstellungen zu Medaillen des 20. und 21. Jahrhunderts ein. Die thematischen Studien und Untersuchungen reichen von Archäologie (18), Automobil (230), Bergbau- und Montanwesen (9, 221), Buchdruck (166), Luftfahrt (19, 20) bis zu entlegeneren Gebieten wie Radio- und Rundfunk (222), Stenografie (258), Schlaraffia (201) sowie Spott und Krisen (12, 13, 196).

Bezüglich einer der namhaften Hersteller von Gelegenheitsmedaillen, der 1861 gegründeten Stuttgarter

Metallwarenfabrik Wilhelm Mayer & Franz Wilhelm, konnte B. KAISER seine 2011 begonnene Aufarbeitung zu Geschichte und Produktion mit weiteren thematisch gegliederten Bänden fortsetzen (226 bis 233).

Zu den glücklichen Umständen gehören die Publikationen großer Spezial- und Privatsammlungen. Als großzügige Schenkung fand die mehr als 4000 Münzen und Medaillen umfassende Sammlung von Gerd-Henrich STORK (41) zum Thema Geowissenschaften in geschlossener Form Eingang in das Niedersächsische Landesmuseum zu Hannover. Der in der Reihe „*Naturhistorica*“ der Naturhistorischen Gesellschaft Hannover erschienene Katalog geht durch das interdisziplinäre Zusammenwirken der Fachressorts von Numismatik, Geowissenschaften, Paläontologie und Biologie über einen reinen Sammlungskatalog hinaus.

Mehr als 2000 numismatische Objekte zum Thema Luft- und Raumfahrt vom ersten Ballonaufstieg der Brüder Montgolfier 1783 bis zum Ende des Zweiten Weltkriegs hauptsächlich aus dem deutschen Sprachraum und Frankreich zählt die in über 40 Jahren zusammengetragene Sammlung MICHAEL JOOS (20). Seit 2019 wird sie in Teilen im Münzhandel versteigert.

Einen wichtigen Beitrag zu „*Academia in nummis*“ lieferten U. DRÄGER und D. WEBER (187) mit dem Begleitband zur Ausstellung „*Mit besonderem Dank – Hallesche Medaillenkunst für die Leopoldina*“, Nationale Akademie der Wissenschaften zu Halle (Saale). Er enthält Medaillen von bedeutenden Bildhauern der Kunsthochschule Burg Giebichenstein auf verdiente deutsche Wissenschaftler und Mitglieder der Akademie. Den Ehrenmedaillen einer der ältesten noch existierenden (seit 1779) Gelehrtenvereinigungen Europas, der Oberlausitzischen Gesellschaft der Wissenschaften zu Görlitz widmeten S. MENZEL und U. SCHUBERT (152) einen umfassenden Beitrag.

Aus Anlass des 25-jährigen Jubiläums der Deutschen Gesellschaft für Medaillenkunst e.V. erschien 2016 ein von W. STEGUWEIT konzipierter Jubiläumsband (265) mit Beiträgen von M. HIRSCH, A. F. SCHWARZBACH, B. GÖBEL, B. WEISSER, R. GRUND und G. DETHLEFS. Die etablierte Reihe „*Die Kunstmedaille in Deutschland*“ wurde um Band 29 zum Medaillenwerk des süddeutschen Bildhauers Friedrich Brenner (170) erweitert. Zusammen mit der Stadt Suhl organisierte die Medaillengesellschaft die in Publikationen (180 bis 182) dokumentierten Verleihungen des Deutschen Medailleurpreises „Johann Veit Döll“ in den Jahren 2014, 2016 und 2018.

Dem komplexen Spannungsfeld von Kunst, Macht und Geld, dem vor allem der Künstler als Produzent ausgesetzt ist, ging eine 2016 vom Münzkabinett der Staatlichen Museen zu Berlin initiierte Ausstellung nach, zu der ein von A. KÜTER und B. WEISSER (244) bearbeiteter Begleitband herausgegeben wurde. Vorgestellt wurde unter anderem eine neue Medaillenedition zum Ausstellungsthema „*Muse macht Moneten*“, an der sich mehr als 30 Künstler mit ihren Werken beteiligten.

Einen Einblick in das aktuelle zeitgenössische Schaffen deutscher Künstler geben die katalogartig zusammengestellten Länderbeiträge (211, 213, 217) zu den Biennalen der internationalen Medaillengesellschaft FIDEM von Sofia 2014, Gent und Namur 2016 sowie Ottawa 2018. Sie stammen wie die vorab im *Numismatischen Nachrichtenblatt (NNB)* verfassten Artikel (210, 212, 216) vom deutschen FIDEM-Delegierten R. GRUND, einem der Autoren dieser bibliografischen Übersicht.

Für künstlermonographische Arbeiten boten oft hohe Geburtsjubiläen Anlass für Einzelausstellungen mit Begleitkatalogen. Zu erwähnen sind der Bildhauer und Medailleur Friedrich Brenner (geb. 1939) mit Ausstellungen in der Staatlichen Münzsammlung München (170) und im Maximilianmuseum Augsburg (198, 199) oder die für ihre einfühlsamen Tierdarstellungen bekannte Bildhauerin Heide Dobberkau (geb. 1929, gest. 2021), deren 90. Geburtstag durch einen von W. STEGUWEIT und J. EBERHARDT (267) erstellten Katalog und eine Ausstellung im Berliner Bodemuseum gewürdigt wurde. Auch die Kataloge zum Werk der Bildhauerin Sonja SEIBOLD (259) und zu dem 2017 mit dem Hilde-Broër-Preis für Medaillenkunst ausgezeichneten Klaus Kowalski (240, 243) sind in diesem Zusammenhang zu nennen.

Bernd Göbel (geb. 1942), dem renommierten Vertreter der halleschen Bildhauerschule, ist ein Band (206) zu seinem aktuellen Medaillenschaffen der Jahre 2012 bis 2017 gewidmet, der ein früher erschienenes Werkverzeichnis der Medaillen fortführt. In einem einleitenden Essay würdigt U. DRÄGER das Schaffen des Künstlers. Persönliche Erinnerungen und Erfahrungen vor dem Hintergrund des politisch-gesellschaftlichen Wandels und der künstlerischen Auseinandersetzungen enthält Göbels 2017 erschienene Autobiographie (207). Die Untersuchung von D. PÖSCHL (248) greift über das Medaillenschaffen hinaus und geht am Beispiel des Bildhauers Bernd Göbel der Frage nach der Wahrnehmung von individuellen Freiräumen und Gestaltungsmöglichkeiten von Künstlern in der DDR nach.

Auf die Initiative der Sächsischen Numismatischen Gesellschaft e.V. geht die Fortsetzung des 2012 erschienenen Werksverzeichnis des Dresdner Medailleurs Peter-Götz Güttler zurück. Die Publikation (254) dokumentiert neben den 2012 bis 2018 entstandenen Medaillenarbeiten (bearbeitet von M. HEIDEMANN) abrundend zugleich das weniger bekannte architektonische, graphische, malerische und plastische Werk.

Neuere Forschungsergebnisse zum *Suvre* von Friedrich Wilhelm Hörnlein (1873–1945), des letzten Medailleurs der sächsischen Staatsmünze in Muldenhütten, fanden ihren Niederschlag in einem von P. ARNOLD und S. STEIN (164) erstellten Nachtrag zum 1992 erschienenen Werkverzeichnis. Eine umfangreiche monographische Würdigung des Künstlers erfolgte in dem von U. BECKER herausgegebenen Band (218) durch H.-G. HARTMANN (†).

An Zitierwerken sind darüber hinaus die von B. KAISER im Zuge seiner Forschungen zur Stuttgarter Prägefirma Mayer & Wilhelm erstellten Bände (229, 234) zu David Fahrner (zusammen mit H. J. SCHNURR) und Heinrich Zimmermann sowie der von K. THIEME (†) erarbeitete Katalog (270) zum Leipziger Bildhauer und Medailleur Bruno Eyer mann anzuzeigen. Unter weiteren, auf einzelne Bildhauer und Medailleure bezogenen Publikationen sei der Katalog (271) zu Skulpturen, Medaillen und Plastik der Hallenser Künstlerin Heidi Wagner-Kerkhof hervorgehoben.

Rechtzeitig zum Jubiläumsjahr des bedeutenden Komponisten Ludwig van Beethoven (1770–1827), anlässlich des 250. Geburtstags 2020, konnte die Numismatische Gesellschaft seiner Geburtsstadt Bonner Münzfreunde e.V. durch den ehemaligen Leiter des Stadtarchivs M. v. REY (34) eine Zusammenstellung von Medaillen unter Berücksichtigung der Sammlung des Bonner Beethovenhauses vorlegen. Auf 300 Seiten werden insgesamt 217 Medaillen, Münzen und Plaketten zu Person und Werk, von den ersten Medaillen aus Beethovens Todesjahr 1827 bis zur 10-Euro-Münze auf das Jubiläum 2020 beschrieben. Der Katalog ist in der noch jungen Reihe der Vereinigung „Bonner Numismatische Studien“ als Band 3 erschienen.

Im Bereich der Porzellanmedaillen gibt es Veröffentlichungen zu traditionsreichen Herstellerfirmen. Erstmals wurden von C. und CHR. BEYER (4) die Medaillenausgaben der Königlich Preußischen Porzellanmanufaktur (KPM) zu Berlin in einem Katalog erfasst, der 2019 in 2. Auflage herausgegeben wurde. In Zusammenarbeit mit dem Freundeskreis keramischer Münzen und Medaillen konnten K.-H. und S. WEIGELT (273) Band 11 der Medaillen aus Meissener Porzellan aus dem Zeitraum von 2001 bis 2008 vorlegen. Den Medaillen der weniger bekannten aber nicht weniger traditionsreichen, von 1790 bis 2018 bestehenden thüringischen Manufaktur Weimar Porzellan aus Blankenhain ist ein 2016 erschienener Katalog (249) gewidmet. Das keramische Medaillenschaffen des Weimarer Architekten Hubert Schiefelbein (geb. 1930) steht im Mittelpunkt der Arbeit von H. HUSCHKA (224).

Tragbare Medaillen, Ehrenzeichen, Orden

Studien und Untersuchungen zu tragbaren Medaillen, Ehrenzeichen und Orden besitzen in der vierteljährlich erscheinenden Zeitschrift *Orden und Ehrenzeichen* ein nach 20 Jahren etabliertes Fachorgan. Einige Beispiele mit wissenschaftlicher Qualität sind in den bibliografischen Überblick aufgenommen.

Dem Thema Lebensrettungsmedaillen war 2017 eine gemeinsam vom Schloss- und Kulturbetrieb Altenburg und der Deutschen Gesellschaft für Ordenskunde e.V. ausgerichtete Ausstellung im Residenzschloss Altenburg gewidmet, zu der O. WITTENBERG (284) ein Begleitheft verfasst hat. Derselbe Autor befasste sich zudem in einem speziellen Aufsatz (283) mit der preußischen Rettungsmedaille von 1933, die in diesem Jahr als Ehrenzeichen noch in zwei Versionen zur Verleihung kam. Einzelstudien legten ferner L. ADLER (277) zur Rettungsmedaille des Großherzogtums Hessen (1849–1918) und P. LICHTBLAU (281) zu den Rettungsmedaillen des Fürstentums, später Freistaats Schaumburg-Lippe vor.

Der bei Sammlern für seine DDR-Spezialkataloge bekannte F. BARTEL (278) legte drei Bände des Katalogs der Auszeichnungen und Abzeichen der DDR vor, die den Jugendorganisationen FDJ und der Pionierorganisation „Ernst Thälmann“ (2015) sowie den Sportgemeinschaften und -organisationen und ihren Meisterschaften (2016, 2017) gewidmet sind.

SWITZERLAND – SUISSE

Gilles Perret

Malgré un nouveau président entièrement acquis à la cause de la médaille, les organes de la Société suisse de numismatique ne livrent que rarement des publications d'importance sur ce sujet. L'étude de la médaille suisse continue heureusement d'avancer par petites touches grâce aux découvertes et au travail d'une poignée de ses défenseurs qui ont rédigé la moitié des contributions citées ci-après. Cependant, à l'initiative de quelques membres suisses de la FIDEM, les Journées numismatiques suisses (JNS) de 2015 ont été dédiées à ce thème et accompagnées d'un concours d'artistes et d'une courte exposition (84-85). Les présentations du président de la Fédération, invité en Suisse pour l'occasion, et de la déléguée pour la Suisse ainsi que l'atelier de création ont été suivis avec beaucoup d'intérêt par les numismates de notre pays qui ont réalisé tout l'intérêt de ces rencontres entre artistes, chercheurs, fabricants et collectionneurs qui font toute l'originalité de la FIDEM. Plusieurs conférences ont ensuite fait l'objet, par leurs auteurs, de publications détaillées qui abordent des aspects de notre matériel et des champs d'étude très différents : iconographie, politique, économie, olympisme, etc. (7, 9, 42, 63 et 69).

Pour les corpus, ERNI a publié celui des Fêtes fédérales de chant (59). Outre l'étude présentée lors des JNS (63), le Centre d'études olympiques nous livre les descriptions assez complètes des médailles des différents jeux (56-58, disponibles en ligne). L'ouvrage sur les médailles de tir a déjà fait l'objet d'une réédition augmentée de 400 entrées (68) et quelques articles amènent de nouvelles informations sur ce matériel déjà bien publié. Signalons en outre deux travaux réalisés à l'étranger : SERFAS a établi celui des médailles frappées pour nos universités (70) et KAISER poursuit la publication des productions de la firme allemande Mayer & Wilhelm avec un catalogue des médailles consacrées aux hommes célèbres dont quelques Suisses (62). Nous ne pouvons qu'espérer vivement que cette série encourage nos chercheurs à publier systématiquement les frappes de nos grands médailleurs dont la production et certaines archives sont maintenant disponibles (86).

EISLER poursuit l'étude du rôle, à la fois politique et économique, de la médaille sur la construction progressive de l'image de qualité que vont acquérir les productions suisses, en particulier dans le domaine de l'horlogerie (6-8). Parmi les études plus ponctuelles, on peut observer que l'étude des médailles permet la redécouverte de sports oubliés comme les courses entre véhicules terrestres et aériens (19-21). A ce propos, la comparaison des frappes réalisées dans notre pays permet d'appréhender particulièrement bien les différences de style et d'approche artistique entre les trois cultures qui se rencontrent en Suisse : l'allemande, la française et l'italienne. Trois études s'intéressent à l'iconographie des villes (18, 67, 69). Sur le plan technique, Ramseyer détaille le fonctionnement du tour à réduire qui a profondément modifié la pratique des graveurs (39).

Grâce aux contributions de DOSWALD (3-5), les médailles religieuses sont de plus en plus souvent étudiées séparément du matériel numismatique dans les publications archéologiques. Elles peuvent ainsi servir à mieux comprendre certaines pratiques religieuses des époques médiévales et modernes.

Pour ce qui concerne la création contemporaine, les sùvres suisses ne sont plus disponibles sur le site du Musée de Neuchâtel depuis que la FIDEM a mis en ligne sur son propre site une base de données qui contient déjà les sùvres présentées aux congrès depuis 2004 (50). NIEDERMANN établit un premier catalogue des médailles d'un de nos plus importants graveurs du XX^e siècle (49) et remarque un artiste contemporain peu connu (47). Le catalogue des médailles du très populaire Hans Erni est maintenant aussi disponible en ligne (41).

Deux grandes expositions (90, 94) ont rendu hommage aux médailles de la Renaissance, soulignant ainsi l'importance des collections suisses pour l'étude et la mise en valeur de ce matériel des origines. Celles-ci ont du reste fait l'objet de publications détaillées (91, 93). Le décès de Michael MATZKE a malheureusement fait perdre à la médaille l'un de ses meilleurs connaisseurs et plus valeureux défenseur (80, cf. aussi ses écrits dans la section *Italy*).

Enfin, les commémorations de la Première Guerre mondiale ont suscité un certain nombre d'articles sur la

phaléristique et nous en avons donc fait un chapitre spécifique. En Suisse, ce domaine se limite généralement à nos ressortissants qui ont accédés à des ordres étrangers. Il convient donc de souligner les articles consacrés à une médaille allemande qui célèbre la tradition humanitaire de la Suisse (73, 79) ainsi que ces esquisses réalisées pour imaginer la forme que pourrait prendre des ordres civils suisses (77) !

ÖSTERREICH

Heinz Winter

EMMERIG legte eine unkommentierte Bibliographie zur Münz- und Geldgeschichte Österreichs in Mittelalter und Neuzeit für die Jahre von 2008 bis 2013 vor (1). Diese stellt eine wesentliche Erweiterung eines Beitrages dieses Autors im *Survey of Numismatic Research 2008–2013* (Taormina, 2015, S. 328–332) dar. Beide Bibliographien führen auch Beiträge zur Medaille an. Derselbe stellte die Publikationen von Wolfgang Hahn (geboren 1945), zuletzt Vorstand des Instituts für Numismatik (und Geldgeschichte) der Universität Wien, für die Jahre von 1969 bis 2014 zusammen (3). Des Weiteren verfasste er ein Verzeichnis der Schriften des oberösterreichischen Landesnumismatikers Bernhard Prokisch (geboren 1957) für 1979 bis 2014 (2). Besonders Letzterem werden zahlreiche Arbeiten zu Medaillen und verwandten Objekten verdankt.

2019 jährte sich der Todestag Maximilians I. (Kaiser 1508–1519) zum fünfhundertsten Mal. Dieses Ereignis wurde von Ausstellungen, Symposien und Publikationen begleitet. Hall in Tirol als Sitz dessen Hauptmünzstätte war Heimat einer allein der Numismatik gewidmeten Schau. Die von WINTER kuratierte Ausstellung und die von diesem verfasste Begleitpublikation (11) betteten die Prägung Maximilians in die Blütezeit dieser Münzstätte ein. Anzuschließen ist ein Überblick zu den Schaumünzen und Medaillen Maximilians von WINTER (10). Derselbe stellte diese Objektgruppen als Mittel der Propaganda und der Repräsentation heraus (12). RIZZOLLI legte unter anderem die Gründe für die Ausprägung der Haller *Reiterguldiner* von 1508/1509 dar (6). Offenbar nahm Maximilian damit auf seine Feindschaft zu Italien, vor allem zum Dogen von Venedig, Bezug. WINTER beschäftigte sich mit dem Beginn der Medaille in Österreich (13). Dabei hatten die Produkte der Münzstätte Hall in Tirol unter Maximilian einen wesentlichen Anteil an der Akzeptanz dieses Mediums. RIZZOLLI und PIGOZZO gingen auf das Ende des Veroneser Währungsraumes 1516 ein (7). Die Autoren bezogen die Haller Schaumünzen in die Betrachtung mit ein. Mit Bergbau und Wirtschaft – auch in Hinblick auf Münzstätten und Geldumlauf – setzten sich PIZZININI (4), RIZZOLLI (5), RÖSSNER (8) sowie SCHMITZ-VON LEDEBUR und WINTER (9) auseinander. GÖBL und WINTER beschäftigten sich mit der *Dedikationsmedaille* der Stadt Nürnberg für Karl V. aus 1521 (14). Abgesehen von der Prägetechnik ist das Wappenprogramm eines ihrer herausragenden Merkmale. Unter Einbeziehung von zeitgenössischen Quellen gelang den Autoren eine Neuinterpretation für zehn der insgesamt 27 Wappen.

Zu Erzherzögen des 16. und 17. Jahrhunderts sind mehrere Arbeiten von WINTER erschienen. Besonders ist eine Studie zu den Medaillen auf den Tiroler Landesfürsten Ferdinand II. (1529–1595), des Sohnes Kaiser Ferdinands I., und dessen Familie hervorzuheben (17). Diese sind wenig bekannt, selten und kaum einzuordnen, zumal Signaturen fehlen. Als Medailleure werden Joachim Deschler (um 1500/1505 – nach September 1571), Leone Leoni (um 1509–1590), Alexander Colin (1527/1529–1612) und Giovanni Pietro de Pomis (1565–1633) vorgeschlagen. Eine Studie beschäftigte sich mit der Münz- und Medaillenprägung der Tiroler Landesfürsten Leopold V. (1586–1632), Ferdinand Karl (1628–1662) und Sigismund Franz (1630–1665) (18). In weiteren Arbeiten wurden die Medaillen auf Leopold Wilhelm (1614–1662), eines Sohnes Kaiser Ferdinands II., vorgestellt (15, 16).

Für Medaillen um 1690, das Jahr der Krönung Josephs (I.) zum römischen König, ist ein Beitrag von SZAIVERT zu nennen (22). TELESKO beschäftigte sich mit der Ikonographie der Kriege gegen die Osmanen des 17. und des frühen 18. Jahrhunderts aus der Sicht der Numismatik (23). Anzuschließen ist eine Studie von OHM, welche Medaillen auf Friedensschlüsse der Zeit Kaiser Karls VI. (regierte 1711–1740) in das Zentrum der Betrachtung rückte (21). Die ausgewählten Stücke stellen den Frieden *ex negativo* – als Abwesenheit von Krieg und Gewalt – dar. Anhand von *Emigrantenmedaillen* widmete sich ERKER dem Schicksal Salzburger Protestanten in den 1730er-Jahren (19, 20). Ein Beitrag von TELESKO behandelt die Bedeutung der Medaille im Medienkanon der frühen Neuzeit (24). Demnach wirkte die Medaille bis in die Druckgrafik und modifizierte den Charakter von in Kupferstichen und Radierungen wiedergegebenen historischen Ereignissen.

Der Geburtstag Maria Theresias (regierte 1740–1780) jährte sich 2017 zum dreihundertsten Mal. Die Erforschung ihrer Medaille findet einen Schwerpunkt am Kunsthistorischen Museum Wien. Der Herrscherin und ihren Medaillen wurde hier im Jubiläumsjahr unter anderem mit einer Ausstellung und einer Begleitpublikation erinnert. In dieser für das Publikum gedachten Veröffentlichung sind FABIANKOWITSCH, HAMMER, HERTEL, LINSBOTH, TELESKO und WINTER mit Beiträgen vertreten (26, 27; 34; 35; 37; 38; 41, 42). Weitere Arbeiten von FABIANKOWITSCH nahmen auf die Medaillenproduktion in Wien, der Hauptmünzstätte des Reiches, Bezug (28, 31). Ein Artikel setzte die Entwicklung des Münzporträts in das Zentrum der Betrachtung (32). Eine weitere Studie widmete sich dem Medaillenporträt (29). Die auf die Münzen gesetzten Porträts blieben auch für die Medaille nicht ohne Einfluss, durch die größere Zahl der beteiligten Künstler ist bei der Medaille jedoch ein umfangreicheres Spektrum an Portättypen festzustellen.

FABIANKOWITSCH beschäftigte sich auch mit der Vermittlung von politischen Inhalten anhand von Münzen und Medaillen (26, 27, 30, 31). Die Autorin widmete in all ihren Arbeiten zeitgenössischen Akten breiten Raum (dazu vor allem 25). TELESKO ging auf die ungarischen Krönungsmedaillen ein (39). Mit Medien dieser Zeit, darunter Druckgraphik und Medaillen, setzte sich eine Arbeit von TELESKO, HERTEL und LINSBOTH auseinander (40). Eine Studie von WINTER behandelte die habsburgisch-lothringischen Medaillen im Vergleich mit jenen von europäischen Nachbarn (43). Es zeigte sich, dass die Ikonographie – abgesehen von aktuellen Sujets – allgemein der Kunst des 18. Jahrhunderts entnommen wurde. Die zum Teil auffallenden Parallelen waren durch jene Künstler bedingt, welche in verschiedenen Ländern tätig waren. Die Medaillen entsprechen somit nicht immer den Intentionen der Prägeherren. FISKA beschäftigte sich mit Konzeption, inhaltlichen Zielsetzung und philologischen Ausrichtung der 1782 in Wien erschienenen „Schau- und Denkmünzen, welche unter der glorwürdigen Regierung der Kaiserin Königin Maria Theresia geprägt worden sind.“ (33). Bestreben der angeblich von Erzherzogin Maria Anna (1738–1789) in deutscher und französischer Sprache verfassten Publikation war, das Ansehen der Herrscherin für die Nachwelt zu bewahren. Der genannte Beitrag von HAMMER (34) sowie eine Studie von KONEČNÝ (36) stellten schließlich den Bergbau sowie die entsprechenden Medaillen in das Zentrum der Betrachtung. Zeitlich an Maria Theresia anzuschließen ist eine Medaille auf Josef II., die zusammen mit einem zugehörigen Werbeblatt von BECKERS vorgelegt wurde (44). Letzteres ermöglichte die Benennung des Medailleurs – Johann Christian Reich (1740–1814) – sowie eine Neuinterpretation des Prägeanlasses.

Wenig Beachtung fand bislang die Medaille auf Kaiser Ferdinand I. (regierte 1835–1848, gestorben 1875), des Onkels und Vorgängers Franz Josefs auf dem Kaiserthron. Hier hat in den letzten Jahren ein Umdenken stattgefunden. Die Aktenläufe und Produktionsschritte für dessen aus der Wiener Münzstätte stammenden Medaillen wurden am Kunsthistorischen Museum Wien bearbeitet. Für 2021 ist die Publikation der Ergebnisse nebst der Vorlage des Bestandskataloges von MAYR geplant. Grundlage ist die Dissertation derselben, die sich der Medaillenproduktion am Hauptmünzamt in Wien in kunsthistorischem und historischem Kontext widmet (47, 48). Ein Teilaspekt der Dissertation, die offizielle Medaillenproduktion, wird in Auswahl auch gesondert publiziert (49). Die Medaillen und Auswurfprägungen anlässlich dessen Krönung zum jüngeren König von Ungarn im Jahre 1830 stellten SOLTÉSZ und TÓTH in das Zentrum der Betrachtung (50). Eine Publikation von MAYR beleuchtete die Rolle des Wiener Münz- und Antikensabinetts, aus dem das heutige Kunsthistorische Museum hervorging, bei der Konzeption von Medaillen zur Zeit Ferdinands (46). Eine weitere Arbeit dieser Autorin stellte Preismedaillen der Innerösterreichischen Industrie- und Gewerbeausstellungen im Vormärz in das Zentrum des Interesses (45). Diese Leistungsschauen wurden von 1838 bis 1847 abgehalten und von Medaillen als höchste Form der Anerkennung begleitet. RIEDER wird eine Zusammenstellung der Medaillen der „Niederösterreichischen Landesschießen“ verdankt (52). Diese fallen vornehmlich in die Zeit Kaiser Franz Josefs (regierte 1848–1916) und tragen häufig dessen Porträt. Zu den Medaillen des Ersten Weltkrieges (1914–1918) ist – ungeachtet des hundertjährigen Jubiläums des Kriegsendes – lediglich eine Studie von PROKISCH zu nennen (51). Der Schwerpunkt der Forschung lag für dieses Gebiet vornehmlich in den Händen der deutschen Kollegen.

Besonderes Augenmerk wurde im Berichtszeitraum Auswurfprägungen geschenkt. Für die Feierlichkeiten anlässlich der endgültigen Bestattung Kaiser Friedrichs III. (regierte 1452–1493) in der Domkirche St. Stephan in Wien im Jahre 1513 fertigte man auf Anweisung seines Sohnes und Nachfolgers Maximilian I. in Hall in Tirol Auswurfprägungen an. Durch eine kleine Öffnung in der Wandung des Grabes konnten 2013 erstmals Aufnahmen im Inneren des Grabmonumentes angefertigt werden. Diese geben einen Einblick in die einzige

ungestörte Kaiserbestattung des Mittelalters. Es war überraschend, dass die zwar seltenen, aber dennoch gut bekannten Auswurfprägungen bei dieser Untersuchung nachgewiesen werden konnten (57). Im Berichtszeitraum wurde die Forschung an den habsburgisch bzw. habsburgisch-lothringischen Auswurfprägungen und Medaillen für Krönungen vorangetrieben. Diese wurden von PÁLFFY, SOLTÉSZ und TÓTH in einer monographischen Studie (56) und einer Begleitpublikation zu einer Ausstellung (55) behandelt. HOLČÍK, LUKOVÁ und FRANCOVÁ beschäftigten sich mit den Krönungsfeierlichkeiten in Bratislava/Preßburg und gingen auf die anlässlich dieser Feierlichkeiten angefertigten Medaillen und Auswurfprägungen ein (54). Auch die an anderen Stellen genannten Artikel von FABIANKOWITSCH (26), TELESKO (39), SOLTÉSZ und TÓTH (50) sowie PROKISCH (73) und SPECHT (75) (die beiden letzteren für religiöse Anlässe) bezogen entsprechende Prägungen mit ein. FRÜHWALD legte in einer dritten Auflage eines für Sammler konzipierten Buches eine bebilderte Aufstellung der Münzen und Medaillen des Kaisertums Österreich von 1806 bis 1918 sowie deren aktuellen Marktpreise vor (53). Die Auflage wurde um Krönungsmedaillen und -jetone bzw. Prägungen anlässlich von Huldigungen erweitert.

Ein unebildeter, unkommentierter Katalog einer Privatsammlung von HAUSER beschäftigte sich mit dessen eigenen, umfassenden Sammlung von Medaillen, Plaketten und Jetons, die in Österreich ab 1918 ausgegeben wurden (58). Behandelt wurden solche von Staat, Bundesländern und Gemeinden. Fraglich bleibt, wie mit diesem zwar unebildertem jedoch wichtigen Material – zahlreiche Inedita werden angeführt – von Seiten der Forschung umzugehen ist.

Zu nennen sind Arbeiten zu einzelnen Medailleuren, deren Bedeutung auch als Vorstufen zu umfassenderen Arbeiten zu einzelnen Perioden nicht zu überschätzen ist. Hervorzuheben ist eine Studie von MAYR über das Verhältnis des Kunsthistorikers Rudolf Eitelberger von Edelberg (1817–1885) zu Joseph Daniel Böhm (1794–1865) (64). Eine Monographie von BENE stellte die Medaillen von Carl Radnitzky (1818–1901) zusammen (59). Zu bemängeln ist, dass die Mehrzahl der Inventarnummern des Kunsthistorischen Museums nicht korrekt wiedergegeben ist. HORNER legte in einer ungedruckten Masterarbeit eine Studie über den Bildhauer und Medailleur Josef Tautenhayn den Älteren (1837–1911) vor (62). DÜREN ging auf die „Affaire Marschall“ ein (60). Gemeint sind die Vorgänge um die Bestellung Rudolf Marschalls (1873–1967) als Professor für Medailleurkunst an die k. k. Akademie der bildenden Künste in Wien nach dem unfreiwilligen Rücktritt von Tautenhayn dem Älteren. WAGNER verfasste eine Zusammenstellung von Abzeichen und Medaillen, welche der Bildhauer und Medailleur Karl Perl (1876–1965), selbst ein Schlaraffe, für verschiedene Schlaraffenreysche schuf (67). FRÖSCHL beschäftigte sich in einer ungedruckten Diplomarbeit mit dem Bildhauer und Medailleur Edwin Grienuer (1893–1964) (61). Hervorzuheben ist eine Reihe von Artikeln von STREBL über Rudolf Schmidt (1894–1980) (65, 66). Hier sind die biographischen Angaben von Bedeutung, zumal es sich bei der Autorin um die Nichte des Künstlers handelt. Abschließend sei eine Arbeit von MAYR genannt, welche die Rolle des Porträtmedaillons als Form des Gelehrtendenkmals anhand von entsprechenden Arbeiten der Bildhauer Kaspar von Zumbusch (1830–1915) und Arnold Hartig (1878–1972) beleuchtet (63).

EMMERIG ging auf die Sitte der Grundsteinlegungen ein und verzeichnete die Münzen und Medaillen aus Grundstein- und Turmknopffunden aus Österreich (68). Religiöse Medaillen, auch aus Fundkomplexen, wurden von PREISINGER (69, 70), PROKISCH (71, 72) und SPECHT (75) vorgelegt. PROKISCH beschäftigte sich mit den Medaillen und Abzeichen des 23. Internationalen Eucharistischen Kongresses in Wien 1912, der unter dem Protektorat Kaiser Franz Josefs stand (73). Anlässlich dieses kirchlichen Großereignisses wurden zehntausende Medaillen und Abzeichen ausgegeben. Diese Arbeit ist als Beispielgebend für die Vorlage entsprechenden Materials zu bezeichnen. SPECHT stellte eine bislang unbekannt Suite von Miniaturmedaillen aus der Zeit des Wiener Kongresses vor (76). Auf das weite Feld der Ballspenden machte SCHWAB-TRAU aufmerksam (74). Bei den medaillenartigen Arbeiten dieser Gattung trat vor allem der Medailleur Anton Scharff (1845–1903) hervor. STROHMEIER, WÖGENSTEIN und WÖGENSTEIN listeten die österreichischen Gewerkschaftsabzeichen auf (77).

Eine von HASSMANN und WINTER verfasste Monographie zum Wiener Münzkabinett im 18. Jahrhundert stellt die Geschichte dieser Institution vor (79). Die Darstellung basiert auf umfangreichem, bislang unbekanntem oder unbeachteten Quellenmaterial, das für weite Strecken der zweiten Hälfte des 18. Jahrhunderts zudem von HASSMANN monographisch aufgearbeitet wurde (78). Viele kirchliche Einrichtungen haben eine lange Tradition beim Sammeln, Erforschen und Ausstellen von Münzen und Medaillen, nicht zuletzt in ihren Kunst- und Wunderkammern. Sie waren daneben immer wieder Anlaufstelle für die Entdecker von Schatzfunden. Ihrer Bedeutung steht eine nur geringe

Beschäftigung mit der Geschichte dieser Sammlungen gegenüber. Wertvoll ist deshalb ein Beitrag von MAYER, der sich der Münzsammlung des Benediktinerstiftes Göttweig vor allem unter Abt Gottfried Bessel (1672–1749) widmete (80, 81). Der Sammler und Mäzen Karl Adolf Bachofen von Echt (1830–1922), welcher sich unter anderem der Förderung der Medaillenkunst verschrieb, steht im Zentrum einer ungedruckten Dissertation von PACHER (82). Abschließend ist eine Monographie von PROKISCH zu nennen, welche die Sammlung von Bergbaugeprägten des Karl Ritter von Ernst (1833–1911) zum Inhalt hatte (83).

POLAND

Witold Garbaczewski

During the period in question, research on medallic art was conducted very intensively in Poland. The activities of both amateur collectors and researchers as well as employees of scientific institutions should be noted here.

Works on religious medals, scapulars (badges of religious orders), pilgrim and votive plaques are included in the circle of “sacred” numismatics. These are mainly publications of archaeological excavations, sometimes with a broader historical and artistic background (6, 46, 106, 118, 153, 193, 198, 199, 279, 298, 299, 333, 345, 359), but also works describing sacred medals through the prism of their role and significance in the Christian world, as well as history and symbolism (111, 114, 152, 182, 212, 217–219, 234–236, 281, 336, 337, 342, 353, 360).

Research on Renaissance medals (284–290, 343, 346), as well as the influence of ancient and medieval patterns on Polish medallic art in the early modern period, brought valuable results (15, 16, 45). The many works devoted to the iconography of medals related to the reigns of John III Sobieski and the Vasa dynasty in Poland (237–276 and 71–74, monumental catalogs of gold medals and coins) should be particularly emphasized here. Intensive research was also carried out on medals of rulers of Poland from the Wettin dynasty (330–331) and medals from the reign of Stanisław August Poniatowski (325, 328, 329). The research on the modern period also includes studies on the iconography of Gdańsk medals (69, 70, 76).

A significant part of the works of the period in question are the publications of collections (or parts of them) of the most significant public institutions, such as the Royal Castle in Warsaw, the Ossoliński National Institute in Wrocław (22–28, 42), the National Museum in Poznań (99), the National Museum in Szczecin (117), the National Museum in Wrocław (129, 132), the Museum of the Polish Army in Warsaw (232, 233) and the Museum of Sport and Tourism in Warsaw (19, 20). Smaller museums also presented their collections, especially the Museum of the Kujawy and Dobrzyń Region in Włocławek (21), the Historical Museum of the City of Kraków (29), the Museum of Warsaw (294, 295), the Museum in Chorzów (51, 52), the Museum of the Silesian Piasts in Brzeg (86, 332), the Museum of the City of Łódź (104, 105), the Museum of Independence in Warsaw (143–148), the Museum in Tarnowskie Góry (182), the Mazovian Museum in Płock (334) and the Museum of the Polish Sulfur Industry in Tarnobrzeg (349). The publication of the monumental catalog of medals from the collection of the Lviv National Gallery of Art (43) should also be mentioned.

As in the previous period, catalogs of private collections were also published, especially of the numismatic items devoted to John Paul II (3–5, 357).

Another group of publications consists of monographic works or exhibition catalogs devoted to Polish medalists. In particular, a review of the works of Barbara Lis-Romańczuk (33), Jerzy Nowakowski (14), Wojciech Przedwojewski (103), Stanisław Szukalski (115), Józef and Teodor Kawecki (133–136), Rudolf Mękicki (141), Jacek Dworski (151), Piotr Solecki (175), Szymon Wypych (202), Małgorzata Kot (94), Zygmunt Wujek (113), Jerzy Jarnuszkiewicz (121), Janina Stefanowicz-Schmidt (280) and Konstanty Laszczka (341). Worth mentioning is also the monograph devoted to Polish medallists active in the period 1946–2000 (301).

An important group are also the thematic catalogs of medals of cities and communes (41, 125, 184, 194, 278), of secular and ecclesiastic rulers (32, 85, 110, 116), medals with images of prominent figures (177, 178, 207, 216, 306), medals of agricultural and industrial exhibitions (99), philatelic medals (302), medals of numismatic societies (109) and other organizations (124).

During this period took also place the first conference in a series devoted to medallic art. The published materials from the conference contain interesting works with a wide spectrum of chronology (291). The organizers have already announced the next editions.

CZECH REPUBLIC AND SLOVAK REPUBLIC

Martin Foukal

At present, large public collections of medals are being published, including the collections of the National Museum in Prague, the Museum of Art in Olomouc and the Archdiocesan Museum in Kroměříž. The Czech Numismatic Society, celebrating its 100 years of its existence in 2019, also published a catalogue of its medals (1).

In recent years, several well-known Czech medallists have passed away. We may remember Ladislav Kozák (d. 2007), Josef Hvozdenký (d. 2009), Lumír Šindelář (d. 2010), Jiří Harcub (d. 2013) and Oldřich Tlustoš (d. 2019). The most important Czech medallists are now Otakar Dušek, Vladimír Oppl, Michal Vitanovský and Karel Zeman, the younger ones including Jan Hásek, Jakub Orava, Mária Filová or Asamat Baltaev. There are also amateur medallists like Petr Soušek or Jaroslav Jelínek. (Translation by Petr Huňar)

HUNGARY

Pallag Márta

Several Hungarian publications of this period commemorated important historical anniversaries, such as the centenary of the Great War. In October 2014, the Hungarian Numismatic Society in cooperation with the City Archives of Székesfehérvár organized an international numismatic conference with the title “War and Coinage” (1). In 2015, there was the 190th anniversary of the Hungarian Academy of Sciences, and a numismatic conference was held at the headquarters of the Hungarian Numismatic Society (9, 54, 55).

A catalogue presenting numismatic memories of the Hungarian coronations was published on the 100th anniversary of the last Hungarian coronation. The project was led by the “The Holy Crown Research Team” of the Hungarian Academy of Sciences. The publication of the research group presents the coronation medals and jettons? tokens issued for the Hungarian coronations between 1508 and 1916, with nearly a thousand colour illustrations (58, 59). There were also exhibitions with bilingual catalogues (20, 21, 22).

In addition to articles, three monographs were published, on Carl Radnitzky by BENE (8), on Ede Telcs by BARANYAI (2) and on Béni Ferenczy by TÓTH (66).

Most of the articles were published in the journals of the Hungarian Numismatic Society, *Numizmatikai Közlöny (NK)*, and the Hungarian Medal collectors’ Society, *Az Érem*. The sixteenth and seventeenth centuries were represented by two publications of PALLAG dealing with the medals of Ferdinand I (24, 27). Eighteenth-century medals were discussed by ENZSÖL (11). There were numerous articles dealing with the nineteenth and twentieth centuries, several of them discussing the medallic art of Lajos Berán (18, 19, 37, 43, 44, 45, 52).

The traditional Biennial of Medall Art in Sopron was held in 2015, 2017, and 2019. The medallist Sándor Tóth (1933–2019) and the numismatists Imre Enzsöl, György, V. Székely and Pál Török passed away. Török has had an obituary (61).

CROATIA

Ivan Mirnik

Much had been going on in the field of medallic art in Croatia since the last *Survey*, but many projects were brought to a standstill, not only by the pandemic but by the strong earthquake which on March 22, 2020 seriously damaged Zagreb, Sisak and Petrinja and the museums and galleries in these cities.

Let us start with the recent publications of the material found in archaeological contexts, including the beautiful crosses and medals of saints that had been excavated under the Dubrovnik Episcopal Centre in the 1980s (41, 44). Medals connected with the Republic of Dubrovnik and the city of Dubrovnik have also been published (1, 32–33)

Historical medals were discussed by several writers. Giulio Clovio, the Renaissance miniaturist, was portrayed on a contemporary and several more recent medals and on a medallion (44a). Domenico DUCA wrote about the medal made in 1600 for the procurator of the silver sarcophagus containing the relics of St. Simeon in Zadar (8). The 1566 Ottoman siege of Szigeth in Hungary, defended by Nicholas IV of Zrin was also commemorated by a later medal, struck on the 450th anniversary (58). Following medals have also been published: a “Schraubmedaille” containing coloured pictures of Empress Maria Theresia, Emperor Francis I, Baron von der Trenck (60); the 1866 naval battle at Vis (Lissa; 57); August Šenoa (d. 1881), the novelist and numismatist (55); medals commemorating the silver wedding of Count Rudolf Erdödy and Luisa Drasche von Wartinberg, 1906 (59) and the World War One (12, 26, 50–52, 56).

The most active author of our days, dealing with medals, is without any doubt Tatijana Garelić of the recently renamed National Museum of Modern Art in Zagreb (the former Modern Gallery). She is active not only as the FIDEM delegate for Croatia (15, 17, 21), but keeps bringing out of the depositaries hitherto unseen material, once assembled by Dragutin Mandl (9–30). What FIDEM is for the universal world of the medal, the Ivo Kerdić triennial exhibitions (*Memorijal Ive Kerdića. Triennale hrvatskog medaljerstva i male plastike*) are for Croatia (65–66, 75). Their spiritus movens is Daniel Zec of Osijek.

The works of several Croatian medallists and sculptors of the nineteenth and twentieth centuries were presented: in alphabetical order, Ivan Antolčić (43), Kruno Bošnjak (62), Robert Frangeš-Mihanović (13, 15), Karlo Gross (69), Robert Jean Ivanović (22), Želimir Janeš (20), Hinko Juhn (25, 29), Ivo Kerdić (35–37, 39), Maja Landau Nejašmić (34), Damir Mataušić (30, 61), Dalibor Parać (11, 18, 19), Vanja Radauš (40, 63), Rudolf Spiegler (14) and Rudolf Valdec (9).

Damir Mataušić (30, 61), teaching medal-making and small sculpture at the Zagreb Academy of Fine Arts, exhibited many of his works. There was an exhibition at the Zagreb museum for the blind (Typhological Museum) (61) and a retrospective at the Modern Gallery (30), where one could admire his medals, chains and church equipment.

Medals of other countries were also published on several occasions (10), including Italian medals with portraits of the Blessed Pope Paul VI from the collection of the late Cardinal Franjo Šeper (31), and various medals from the Magjer collection (23–24). The Insignia of the University of Zagreb were presented in a new monograph (42)

There were also publications of the orders and decorations of several states, including the Austro-Hungarian Monarchy (49, 50), Bosnia and Herzegovina (4), Estonia, Latvia and Lithuania (48), France (53), Italy (47), Macedonia (3) and Rijeka (Fiume) under Italian rule (52). Badges and medals struck for various societies were published by Branko BEŠTAK (2–5), B. BEŠTAK AND M. ŠARINIĆ (6–7) and Boris PRISTER (47–53).

Editions of the Croatian National Bank, struck at the Zagreb Mint, can be studied in two books (45–46).

Last but not least, let us mention achievement of Lady Aurelia Young in reviving the memory of her father Oscar Nemon, the most famous sculptor and medallist of Croatia, who was born in Osijek and lived his last years in Oxford (64). His career was also studied by Daniel ZEC of Osijek in several books and articles (65, 67, 70–74). Zec is also editing a manuscript dealing with the theory of the medallic art written by Bogdan Mesinger (b. 1930).

UNITED STATES AND CANADA

Peter van Alfen

Considerable debate has emerged in recent years over whether the 1776 Continental Dollars should be considered patterns for currency or medals: GOLDSTEIN AND MCCARTHY (31–32), KLEEGER (43), and ROCK (82). The Comitia Americana series of medals struck from 1776 onwards memorializing pivotal moments in the American Revolutionary War continued to receive serious study by ADAMS (2), FAGALY AND LOPEZ (26), and SHOLLEY (87), including a monograph by JONES (40). The Libertas Americana medal designed by Benjamin Franklin and first struck in 1782 received extensive study by MARGOLIS (53) in his monograph, as well as by LOPEZ (50–51) and SEIGERMAN (85). Other Colonial and early Federal period medals were the focus of studies by ADAMS AND MUSANTE (3), BROTHERS (9, 11), CASEY (15), LOPEZ (50), MARGOLIS (53), MCDOWELL (57), MUSANTE (65, 70), RAAB (74), and WATERSON (101). Several of the “Betts medals”, named after the early catalogue by C. Wyllys Betts covering medals with a sometimes only indirect connection to early North American history, received the attention of LUPA (52) and MCDOWELL (58–60).

Nineteenth century medals, particularly a number of the so-called Peace Medals, those struck under the Federal Government and awarded to Native American tribal leaders, were examined by BROTHERS (12), LIECHTY (45), LOPEZ (49), and MILLER AND GIANOTTI (63). Only ROBINSON’S (81) paper considered US Civil War-period medals. CHEEK (16–20) wrote on various nineteenth-century Canadian medals.

The centennial of the First World War elicited contributions on early twentieth century US medals associated with the war by PHAGAN AND VAN ALFEN (73, 93), and WATERSON (102). The state of late twentieth and early twenty-first century medallic art in the US has been reviewed by DAUB AND MAZZE (24), KROOP (44), MAZZE (54) and STEVENS-SOLLMAN (89). ALEXANDER’S (4) monograph provides a listing and study of the dozens of medals associated with New York University’s controversial early twentieth century Hall of Fame of Great Americans. The American Numismatic Society’s contribution to medallic art in the US was the subject of a number of works including a monograph on the medals commissioned by the Society by MILLER (64), a review of its important J. Sanford Saltus Award for Achievement in Medallic Art by VAN ALFEN (94, 95), and the ANS’s purchase of the archives of the Medallic Art Company, the largest private mint in the US until its demise in 2016, by WARTENBERG (106). WACKS (100) has provided a complete overview to date of the on-going medallic series of the Jewish American Hall of Fame.

Studies of individual artists and engravers and their work included those on Augustin Dupré by BROTHERS (11) and MARGOLIS (53); on Charles Cushing Wright by LIPSON (47), MUSANTE (66–69), and WATERSON (101); on father and son William and Charles Barber by FROST (27) and GALGUERA (28); on Augustus Saint Gaudens by GOLDSTEIN (30); on father and son Adolph and Robert Weinmann by BROTHERS (10, 13); on husband and wife James Earle and Laura Gardin Fraser by OLSZAK (72); on Victor David Brenner by MCMAHON (61) and REZAK (79); on R. Tait McKenzie by BERRY (8) and RUBY (83); on Adam Pietz by HILL (33); on Leonda Finke by MAZZE (55) and REZAK (77); on Joel Iskowitz by GAROFALO (29); and Eugene Daub by ALT (5). JOHNSON’S (39) catalogue provides a concise overview of hundreds of US and Canadian medallic artists and engravers.

OCEANIA

Walter R Bloom

A principal source of published information on Australian numismatics has been the *Journal of the Numismatic Association of Australia (JNAA)* published by the Association, while that for New Zealand is the *New Zealand Numismatic Journal* published by the Royal Numismatic Society of New Zealand. These two journals contain some meritorious articles on subjects outside the scope of this Survey, in particular papers on ancient numismatics and other topics. In addition, there are various State numismatic society publications, the more important of which are the *Victorian Numismatic Journal (VNJ)*, which replaced the *Australian Numismatist* and is a joint publication of the Numismatic Association of Victoria, the Geelong Numismatic Society, the Melbourne Numismatic Society and the Morwell Numismatic Society, the *Journal (and Report) of the Australian Numismatic Society* (Sydney), the *Australian Numismatic Society Queensland Branch News Bulletin* and the *Queensland Numismatic Society Monthly Magazine*. Another source, but for general articles, is the *Australasian Coin & Banknote Magazine (CAB)*.

The interest in medals in Australia and New Zealand continues to be strong, and as might be expected, by and large the writers concentrate on the medals of their own country. In the period of this Survey there has been an intensive study of agricultural medals, which is reflected in the publications listed below. Furthermore, as foreshadowed in the last Survey, a major publication in this area by ARMSTRONG AND CARLISLE (34) has appeared, covering agricultural show medals in Australia up to 1922.

While most references are given to the usual printed copy, there is a trend to publish on-line. With the growing expense of producing hard copy, coupled with a change in world order due to COVID-19, the move to virtual conferences and on-line publication can only accelerate.

The articles on medals have been split into three sections, the first on medallists, then one on medals, medalets and medallions for each of Australia and New Zealand. Across the Tasman, an excellent source of information on New Zealand historical medals which has run into a second edition covering the period 1941 – 2014, by MACMASTER AND PURDY (95), building on the foundation work by Leon Morel.
