TITLE RSRA SIXTH SCALE WIND TUNNEL TEST  
TABULATED BALANCE DATA - FINAL REPORT VOLUME II

DOCUMENT NUMBER SER-72011

PREPARED UNDER CONTRACT NAS1-13000

DOCUMENT DATE DECEMBER 4, 1974

PERIOD COVERED MARCH, 1974 - NOVEMBER, 1974

This document is applicable to the following aircraft model(s) and contract(s)

|             |            |
|-------------|------------|
| MODEL       | CONTRACT   |

The contract research effort which has lead to the results in this report was financially supported by USAAMRDL (Langley Directorate)

### TABULATED BALANCE DATA

This volume contains summaries of all the force and moment data acquired during Phase I and Phase II of the RSRA Sixth Scale Wind Tunnel Test. This data includes and supplements the data presented in curve form in Volume I of this report.

Included in each summary are the model configuration (see Volume I for nomenclature), wing and empennage incidences and deflections, and recorded balance data. The first group of data in each summary presents the force and moment data in full scale parametric form, the dynamic pressure and velocity in the test section, and the powered nacelle fan speed.

The second and third groups of data are the balance data in non-dimensional coefficient form. The wind axis coefficient data corresponds to the parametric data divided by the wing area for forces and divided by the product of the wing area and wing span or mean aerodynamic chord for moments. The stability axis data resolves the wind axis data with respect to the angle of yaw (see Volume I for data reduction equations.)
