Image Scanner

Operator's Guide

Thank you for purchasing our image scanner.
 This manual explains about the basic operations and handling of the scanner.
 For information on scanner installation, connection and software installation,
 refer to "Getting Started".

TOP

Contents

Index

Introduction

Explains the names and functions of parts and basic scanner operation.

Scanner Overview

Explains how to load documents on the scanner.

How to Load Documents

Explains about the setting items in the scanner drivers.

Configuring the Scan Settings

Explains how to use the Operator Panel.

How to Use the Operator Panel

Explains about various ways of scanning.

Various Ways to Scan

Explains how to clean the scanner.

Daily Care

Explains how to replace the consumables.

Replacing the Consumables

Explains about troubleshooting.

Troubleshooting

Explains how to configure settings in the Software Operation Panel.

How to Use This Manual

The following shows the tips for using this manual.

- To display or print this manual, either Adobe® Acrobat® (7.0 or later) or Adobe® Reader® (7.0 or later) is required.
- In this manual, you can use the Search tool of Adobe® Acrobat® or Adobe® Reader®.
- For details, refer to the Adobe® Acrobat® or Adobe® Reader® Help.
- Use the [Page Up] key to return to the previous page, and the [Page Down] key to go to the next page.
- Click a blue character string, tab or contents/index title (where the mouse cursor changes into a shape such as ) to jump to the link.

- Common for all pages

Jumps to the first page of each chapter.
This tab is on every page.

TOP: Jumps to the cover page.
 Contents: Jumps to the contents page.
 Index: Jumps to the index page.
 This tab is on every page.

Introduction

Thank you for purchasing our Color Image Scanner fi Series.

About This Product

"This product" refers to four scanner models, which are fi-7160, fi-7260, fi-7180, and fi-7280.

Each scanner is equipped with an Automatic Document Feeder (ADF) that allows duplex (double-sided) scanning, and supports USB interface.

The following table shows the differences between each model.

| Model | Scanner type | | Interface | Scanning speed (*2) |
|---------|--------------|--------------|-----------|---------------------|
| | ADF | Flatbed (*1) | USB | |
| fi-7160 | Yes | - | Yes | 60 ppm/120 ipm |
| fi-7260 | Yes | Yes | Yes | 60 ppm/120 ipm |
| fi-7180 | Yes | - | Yes | 80 ppm/160 ipm |
| fi-7280 | Yes | Yes | Yes | 80 ppm/160 ipm |

Yes: Available

- : Not available

*1 : Flatbed allows you to scan thin paper and thick documents such as a book.

*2 : When scanning A4 size documents at 200/300 dpi with JPEG compression.

Manuals

The following manuals are included for this product. Read them as needed.

| Manual | Description |
|---|--|
| Safety Precautions (paper, PDF) | Contains important information about the safe use of this product. Make sure to read this manual before using the scanner. The PDF version is included in the Setup DVD-ROM. |
| Getting Started (PDF) | Outlines the procedures from installation to operation of the scanner. The PDF version is included in the Setup DVD-ROM. |
| Operator's Guide (this manual) (PDF) | Provides detailed information on how to operate and maintain the scanner daily, how to replace the consumables, and how to troubleshoot problems. Included in the Setup DVD-ROM. |
| fi-718PR Imprinter Operator's Guide (PDF) | Provides detailed information on how to operate and maintain the option fi-718PR imprinter daily, how to replace the consumables, and how to troubleshoot problems. Included in the Setup DVD-ROM. |
| PaperStream Capture User's Guide (PDF) | Provides an overview of PaperStream Capture, and detailed information on installation, how to scan documents, activation, and multistation operation. Included in the Setup DVD-ROM. |

| Manual | Description |
|--|--|
| Scanner Central Admin User's Guide (PDF) | Explains about the overview, installation, operation and maintenance of Scanner Central Admin. Included in the Setup DVD-ROM. |
| Error Recovery Guide (HTML Help) | Details the status of the scanner and explains how to resolve problems encountered. Contains movie segments that explain operation procedures such as cleaning this product and replacing the consumables. Included in the Setup DVD-ROM. |
| Help (scanner driver) | Explains how to use and configure the settings for the scanner drivers. Can be referenced from each scanner driver. |
| Help (application) | Explains how to use and configure the settings for the application software. Can be referenced from each application. |

Safety Information

The attached "Safety Precautions" manual contains important information about the safe and correct use of this product. Make sure that you read and understand it before using the scanner.

Symbols Used in This Manual

The following indications are used in this manual to obviate any chance of accident or damage to you, people near you, and your property. Warning labels consist of a symbol indicating the severity and a warning statement. The symbols and their meanings are as follows.

WARNING

This indication alerts operators of an operation that, if not strictly observed, may result in severe injury or death.

CAUTION

This indication alerts operators of an operation that, if not strictly observed, may result in safety hazards to personnel or damage to the product.

Abbreviations Used in This Manual

The operating systems and products in this manual are indicated as follows.

| Name | Indication |
|---|-----------------------------|
| Windows Server® 2008 R2 Standard (64-bit) | Windows Server 2008 R2 (*1) |
| Windows® 7 Professional (32-bit/64-bit) | Windows 7 (*1) |
| Windows® 7 Enterprise (32-bit/64-bit) | |
| Windows Server® 2012 Standard (64-bit) | Windows Server 2012 (*1) |
| Windows Server® 2012 R2 Standard (64-bit) | Windows Server 2012 R2 (*1) |
| Windows® 8.1 (32-bit/64-bit) | Windows 8.1 (*1) |
| Windows® 8.1 Pro (32-bit/64-bit) | |
| Windows® 8.1 Enterprise (32-bit/64-bit) | |
| Windows® 10 Home (32-bit/64-bit) | Windows 10 (*1) |
| Windows® 10 Pro (32-bit/64-bit) | |
| Windows® 10 Enterprise (32-bit/64-bit) | |
| Windows® 10 Education (32-bit/64-bit) | |

| Name | Indication |
|--|--------------------------|
| Windows Server® 2016 Standard (64-bit) | Windows Server 2016 (*1) |
| Windows Server® 2019 Standard (64-bit) | Windows Server 2019 (*1) |
| Windows Server® 2022 Standard (64-bit) | Windows Server 2022 (*1) |
| Windows® 11 Home (64-bit) | Windows 11 (*1) |
| Windows® 11 Pro (64-bit) | |
| Windows® 11 Enterprise (64-bit) | |
| Windows® 11 Education (64-bit) | |
| PaperStream IP (TWAIN) | PaperStream IP driver |
| PaperStream IP (TWAIN x64) | |
| PaperStream IP (ISIS) for fi-71xx/72xx | |

*1: Where there is no distinction between the different versions of the above operating system, the general term "Windows" is used.

Arrow Symbols in This Manual

Right-arrow symbols (→) are used to separate icons or menu options you should select in succession.

Example: Click [Start] menu → [Control Panel].

Screen Examples in This Manual

Microsoft product screenshots are reprinted with permission from Microsoft Corporation.

The screen examples in this manual are subject to change without notice in the interest of product development.

If the actual displayed screen differs from the screen examples in this manual, operate by following the actual displayed screen while referring to the user's manual of the scanner application that you are using.

The screenshots used in this manual are of Windows 7. The actual windows and operations may differ depending on the operating system. Also note that with some scanner models, the screens and operations may differ from this manual when you update the software. In that case, refer to the manual provided upon updating the software.

Chapter 1 Scanner Overview

This chapter explains about the names and functions of the scanner components, as well as the methods for basic operations.

| | |
|---|----|
| 1.1 Main Features..... | 15 |
| 1.2 Parts and Functions..... | 16 |
| 1.3 Turning the Power ON/OFF | 24 |
| 1.4 Opening/Closing the ADF | 26 |
| 1.5 Opening/Closing the Document Cover (fi-7260/fi-7280)..... | 27 |
| 1.6 Setting Up the ADF Paper Chute (Feeder)..... | 28 |
| 1.7 Setting Up the Stacker..... | 29 |
| 1.8 Power Saving Mode | 35 |
| 1.9 Basic Flow of Scanning Operation | 36 |
| 1.10 Image Scanning Application | 38 |
| 1.11 Centralized Management of Scanners | 39 |

1.1 Main Features

This section explains about the main features of this product. The scanner is equipped with the following features:

High speed scanning

Realizes a scanning speed of 60 ppm/120 ipm (fi-7160/fi-7260) (*1), or 80 ppm/160 ipm (fi-7180/fi-7280) (*1). Furthermore, you can load up to 80 sheets of documents for continuous scanning which allows you to quickly digitize a large volume of documents.

LCD

The scanner mounts the LCD that displays the operational settings for scanning documents, the number of sheets scanned, and error status. It is used to easily check the status of the scanner.

Improved efficiency for pre-scan work

The scanner can perform "batch scanning" which allows you to scan documents with different paper weights and sizes at once, simplifying the process of sorting the documents before scanning.

Reduced work loss caused by multifeeds

The scanner mounts an ultrasonic multifeed sensor that accurately detects "multifeed" errors where two or more sheets are fed through the scanner at once. This multifeed detection is reliable even when scanning a mixed batch of documents with different paper weights and sizes, avoiding potential work loss.

Intelligent Multifeed function

When there is paper of the same size attached to a designated location on the page, the Intelligent Multifeed function enables the scanner to recognize the location of the attachment. This allows you to continue scanning instead of pausing the scan by detecting every paper attachment as multifeed. Furthermore, the "paper protection" function will reduce the risk of damaging your valuable documents.

Paper protection function by detecting paper jam noise

This function reduces the risk of having the documents damaged by stopping the scan when the scanner detects paper jam noise.

Advanced image processing function

The scanner's automatic detection function outputs images in color or monochrome by the document content.

Imprinter option

Imprinter is available as an option, which is often demanded for managing/verifying documents. Having the capability to print on the scanned documents could drastically improve usability.

The imprinter can be installed on fi-7160/fi-7180.

Scanning on black background

Black document pad is available as an option, which allows you to perform scanning on black background when using the flatbed. It can be used to automatically correct skewed images or accurately detect the size of the scanned document.

The black document pad can be used on fi-7260/fi-7280.

Capable of scanning photographs, clippings, and documents larger than A4/Letter size

The Carrier Sheet, which is available as an option, allows you to scan documents that are larger than A4/Letter size, as well as non-standard size documents such as photographs and clippings. You can load multiple Carrier Sheets or mix it with regular documents in the same batch.

Centralized management of multiple scanners

The bundled "Scanner Central Admin Agent" application allows you to manage multiple scanners together. For example, you can update the scanner settings and drivers, as well as monitor the operating status of each scanner.

For details, refer to the Scanner Central Admin User's Guide.

*1: When scanning A4 size documents at 200/300 dpi with JPEG compression.

1.2 Parts and Functions

This section shows the names of the scanner parts.

fi-7160/fi-7180

■ Front

Side guides

Guides the documents in width direction as they are fed into the scanner.

ADF (Automatic Document Feeder)

Pulls and feeds the documents one sheet at a time from the ADF paper chute (feeder).

Open to replace consumables or clean the inside of the scanner.

Stacker

Stacks up the ejected documents.

Stopper

Lift up to adjust to the document length.

Stacker extension 2

Slide out to adjust to the document length.

Stacker extension 1

Slide out to adjust to the document length.

Chute extension 2

Pull out to adjust to the document length.

Chute extension 1

Pull out to adjust to the document length.

ADF paper chute (feeder)

Holds the documents to be scanned.

ADF release tab

Pull this tab to open the ADF.

Operator panel

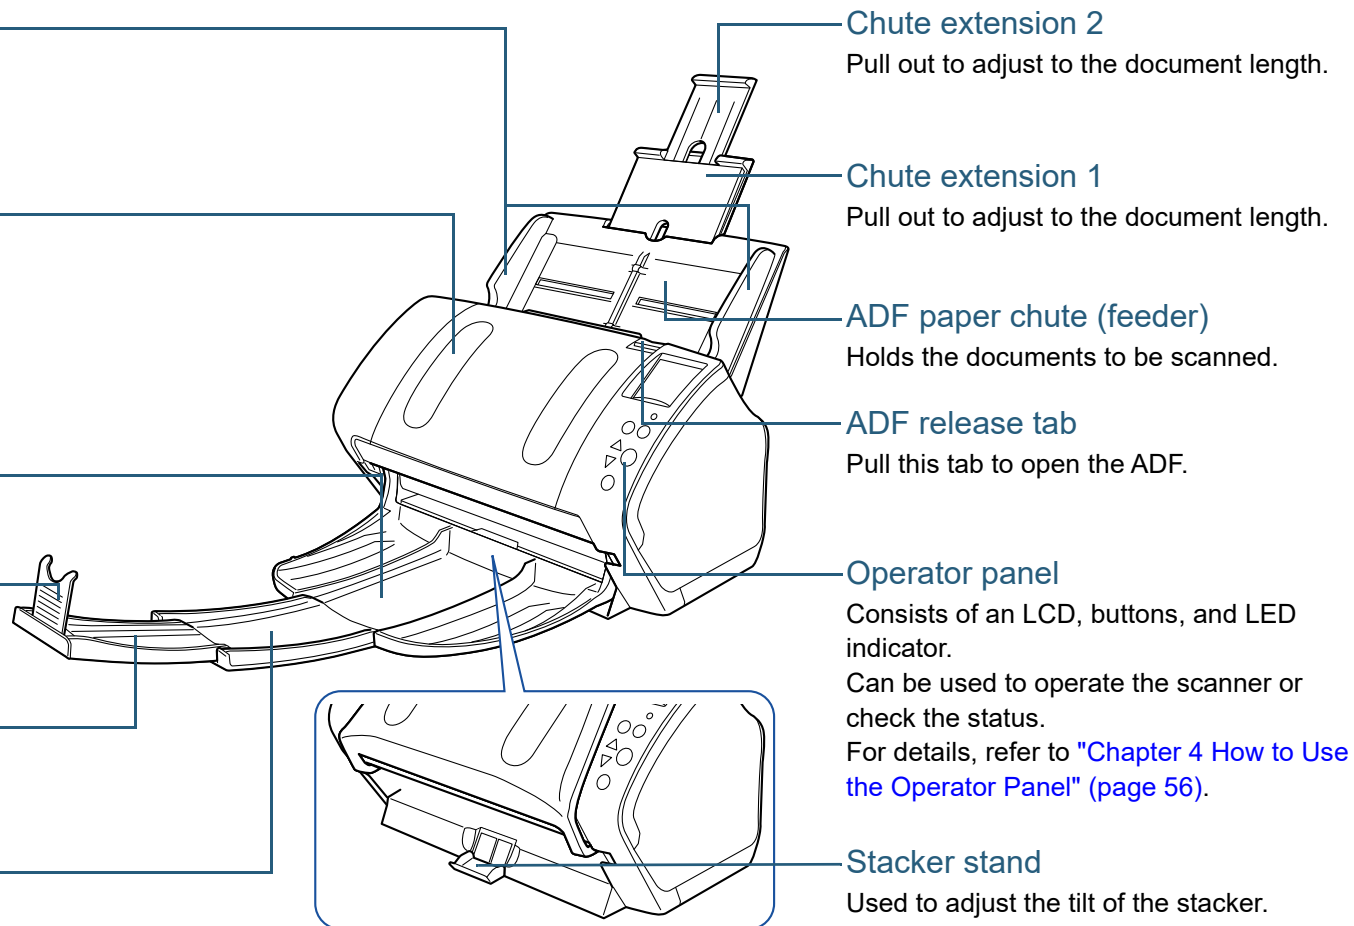

Consists of an LCD, buttons, and LED indicator.

Can be used to operate the scanner or check the status.

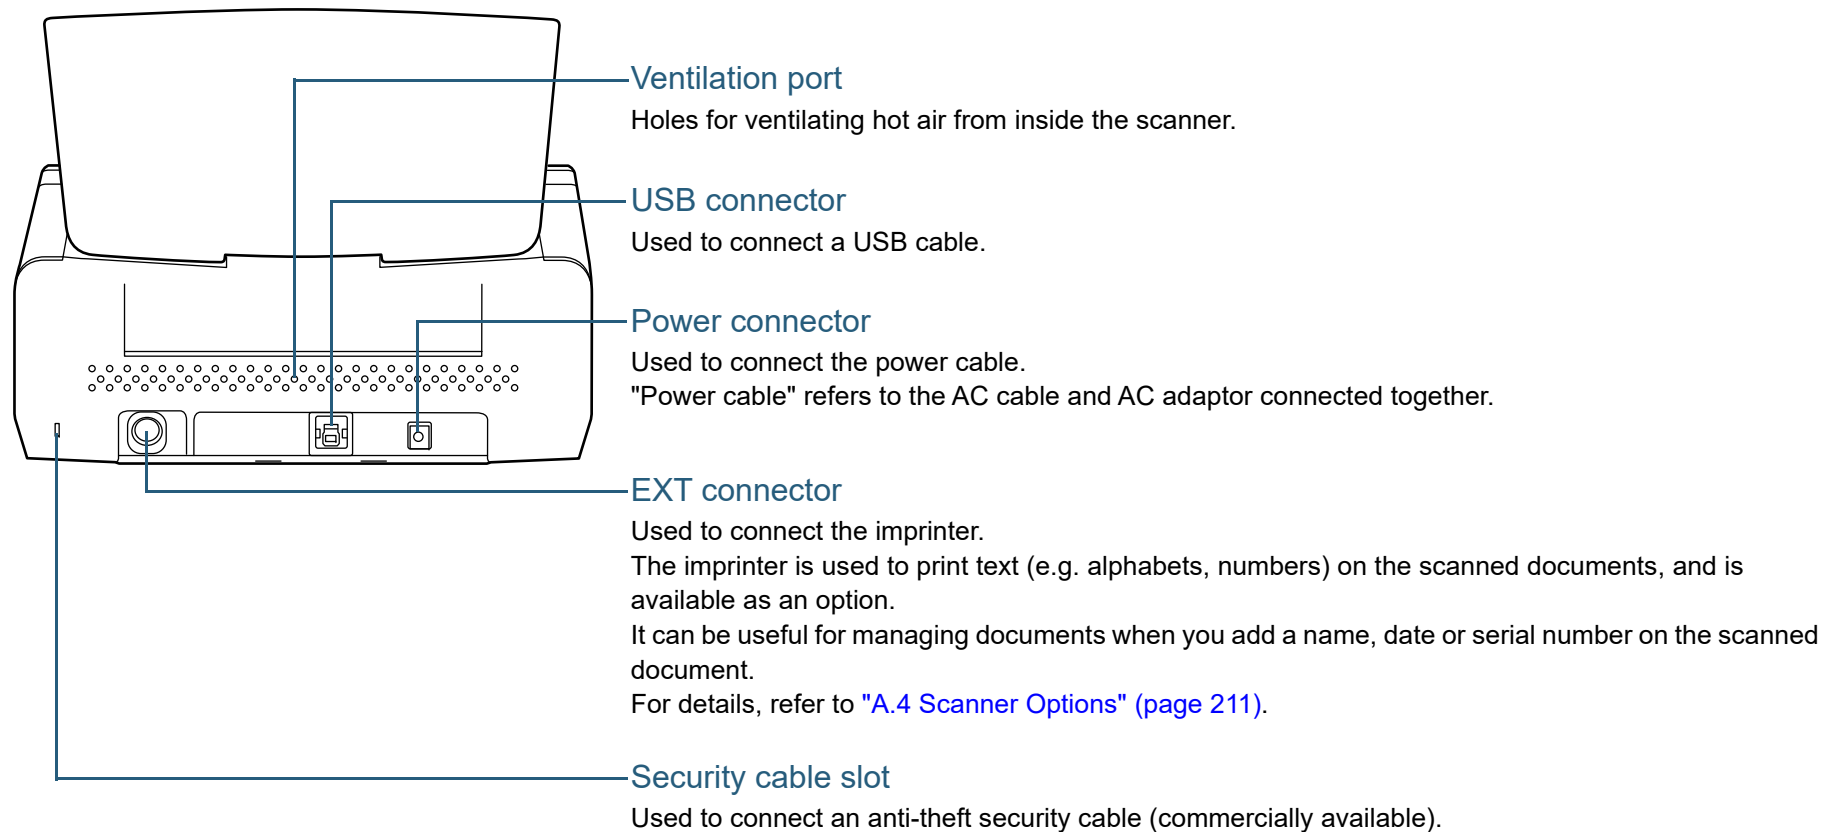

For details, refer to "[Chapter 4 How to Use the Operator Panel](#)" (page 56).

Stacker stand

Used to adjust the tilt of the stacker.

■ Front

Side guides

Guides the documents in width direction as they are fed into the scanner.

ADF (Automatic Document Feeder)

Pulls and feeds the documents one sheet at a time from the ADF paper chute (feeder). Open to replace consumables or clean the inside of the scanner.

Stopper

Lift up to adjust to the document length.

Stacker

Stacks up the ejected documents.

Transport lock switch

Locks the carrier unit (which is inside the flatbed) to prevent damage during transportation.

Flatbed

For scanning documents (e.g. thin paper, books) that cannot be scanned with the ADF.

Chute extension 2

Pull out to adjust to the document length.

Chute extension 1

Pull out to adjust to the document length.

ADF paper chute (feeder)

Holds the documents to be scanned.

ADF release tab

Pull this tab to open the ADF.

Operator panel

Consists of an LCD, buttons, and LED indicator.

Can be used to operate the scanner or check the status.

For details, refer to "[Chapter 4 How to Use the Operator Panel](#)" (page 56).

1.3 Turning the Power ON/OFF

This section explains how to power on/off the scanner.

HINT

The method by which the scanner is powered on/off can be specified from one of the following:

- Press the [Power] button on the operator panel
 - Unplug the power cable then plug it back in
 - Have the scanner turn on/off in sync with the computer's power
- For details, refer to "[Method of Turning the Scanner ON/OFF \[Power Switch Control\]](#)" (page 200).

How to Turn the Power ON

- 1 Press the [Power] button on the operator panel.

- ⇒ The scanner is turned on, and the [Power] button lights in green. During initialization, the following image is displayed on the LCD of the operator panel.

The scanner is ready to scan when [Ready] is displayed.

How to Turn the Power OFF

- 1 Press the [Power] button on the operator panel for more than 2 seconds.

⇒ The scanner is turned off, and the [Power] button switches off.

1.4 Opening/Closing the ADF

This section describes how to open and close the ADF.

How to Open the ADF

- 1 Remove all documents from the ADF paper chute (feeder).
- 2 Pull the ADF release tab towards you to open the ADF.

CAUTION

When opening, the ADF might close accidentally. Be careful not to have your fingers caught when the ADF closes.

How to Close the ADF

- 1 Close the ADF.
Push the center of the ADF until it locks in place.

CAUTION

Be careful not to have your fingers caught when closing the ADF.

ATTENTION

Make sure that there is no foreign matter caught inside the ADF.

1.5 Opening/Closing the Document Cover (fi-7260/fi-7280)

This section describes how to open and close the document cover.

How to Open the Document Cover

- 1 Open the document cover.

How to Close the Document Cover

- 1 Gently close the document cover.

1.6 Setting Up the ADF Paper Chute (Feeder)

Documents loaded in the ADF paper chute (feeder) are fed into the ADF one by one.

Using the chute extensions will keep the documents straight and feed them smoothly.

- 1 Pull out chute extension 1.

**HINT**

Make sure to hold the scanner while you pull out the chute extension.

- 2 Pull out chute extension 2.

**HINT**

Make sure to hold the scanner while you pull out the chute extension.

[TOP](#)[Contents](#)[Index](#)[Introduction](#)[Scanner Overview](#)[How to Load Documents](#)[Configuring the Scan Settings](#)[How to Use the Operator Panel](#)[Various Ways to Scan](#)[Daily Care](#)[Replacing the Consumables](#)[Troubleshooting](#)[Operational Settings](#)[Appendix](#)[Glossary](#)

1.7 Setting Up the Stacker

Documents loaded in the ADF paper chute (feeder) are ejected onto the stacker one by one.

Using the stacker, stacker extension 1, stacker extension 2, and stopper will keep the documents straight and stack them neatly.

fi-7160/fi-7180

■ A6 (landscape) or larger

- 1 Bring down the stacker from the top towards you.

2 Slide out the stacker extension 1 towards you.

3 Slide out the stacker extension 2 towards you.

HINT

For A4 size documents, slide out the stacker extension 2 towards you to click in place.
For legal size documents, slide out the stacker extension 2 towards you all the way.

4 Lift up the stopper.

ATTENTION

Do not lift up the stopper more than 90 degrees, because it may break.

A7 (landscape) or smaller

1 Bring down the stacker from the top towards you.

2 Lift up the stopper.

ATTENTION

Do not lift up the stopper more than 90 degrees, because it may break.

HINT

The stopper can be slid to adjust to the length of the document. If the ejected documents are not stacked neatly, adjust the position of the stopper so that the space for the ejected documents can be longer than the document length.

Documents with Different Sizes

- 1 Hold both sides of the stacker stand and bring it down from the top towards you.

- 2 Adjust the stacker to fit the longest document.
 - If the longest document is A6 (landscape) or larger, refer to "[A6 \(landscape\) or larger](#)" (page 29).
 - If the longest document is A7 (landscape) or smaller, refer to "[A7 \(landscape\) or smaller](#)" (page 31).

fi-7260/fi-7280

A5 (portrait) or larger

- 1 Lift up the stacker towards you.

2 Lift up the stopper towards you.

ATTENTION

Do not lift up the stopper more than 90 degrees, because it may break.

■ A6 (portrait)/A5 (landscape) or smaller

1 Lift up the stopper.

ATTENTION

Do not lift up the stopper more than 90 degrees, because it may break.

1.8 Power Saving Mode

Power saving mode keeps the power consumption low when the scanner has not been used for a certain period of time.

If the scanner is left powered on for 15 minutes without being used, it automatically enters power saving mode.

When the scanner enters power saving mode, the LCD on the operator panel switches off. The [Power] button remains lit in green.

To resume from power saving mode, perform one of the following:

- Load a document in the ADF paper chute (feeder)
- Press any button on the operator panel
Note that pressing the [Power] button for more than 2 seconds will turn the power off.
- Perform scanning from an application

The scanner is turned off automatically if it is left on for a certain period of time without being used, reducing the power consumption until the next scan.

To prevent the scanner from being turned off automatically, clear the [Power off after a certain period of time] check box in [Device Setting] on the Software Operation Panel. For details, refer to ["Waiting Time to Enter Power Saving Mode \[Power saving\]" \(page 199\)](#).

To turn the power back on after turning the power off automatically, press the [Power] button on the operator panel. For details, refer to ["1.3 Turning the Power ON/OFF" \(page 24\)](#).

ATTENTION

- The scanner may not enter power saving mode if there was a document remaining on the paper path. In that case, remove the document.
For details, refer to ["8.1 Paper Jam" \(page 123\)](#).
- For some applications, the scanner may not be turned off even if the [Power off after a certain period of time] check box is selected.
- If the scanner is automatically turned off while you are using the image scanning application, exit the application before turning the power on.

HINT

By using one of the following, the waiting time for entering power saving mode can be changed.

- Use the Operation Panel ([17: Power saving] in the [Settings Menu] screen).
For details, refer to ["4.2 Settings Menu" \(page 61\)](#)
- Use the Software Operation Panel.
For details, refer to ["Waiting Time to Enter Power Saving Mode \[Power saving\]" \(page 199\)](#).

1.9 Basic Flow of Scanning Operation

This section explains about the basic flow of performing a scan.

In order to perform a scan, you need a scanner driver and an image scanning application that supports the scanner driver. The following scanner drivers and image scanning applications are bundled with the scanner:

- Scanner driver
 - PaperStream IP driver

The PaperStream IP driver is a scanner driver that conforms to the TWAIN/ISIS standard.

There are three types of PaperStream IP drivers.
 - PaperStream IP (TWAIN)

Conforms to the TWAIN standard. Used when you operate the scanner using TWAIN-compliant 32-bit applications.
 - PaperStream IP (TWAIN x64)

Conforms to the TWAIN standard. Used when you operate the scanner using TWAIN-compliant 64-bit applications.
 - PaperStream IP (ISIS) for fi-71xx/72xx
Conforms to the ISIS standard. Used when you operate the scanner using ISIS-compliant applications.
- Image Scanning Application
 - PaperStream ClickScan

A 32-bit image scanning application which supports PaperStream IP (TWAIN).
 - PaperStream Capture

A 32-bit image scanning application which supports both PaperStream IP (TWAIN) and PaperStream IP (ISIS) for fi-71xx/72xx.

HINT

- For details about the scanner driver, refer to the PaperStream IP driver Help.
- For details about the image scanning application, refer to "[1.10 Image Scanning Application](#)" (page 38).

Scanning procedures and operations slightly vary depending on the image scanning application.

For details, refer to the image scanning application manual.

The following describes the normal procedure for scanning.

- 1 Turn on the scanner.
For details, refer to "[1.3 Turning the Power ON/OFF](#)" (page 24).
- 2 Load a document face-down in the ADF paper chute (feeder).

For details, refer to "[Chapter 2 How to Load Documents](#)" (page 40).

- 3 Start an image scanning application.

- 4** Select a scanner driver.
For some image scanning applications, selection of a scanner driver may not be needed.
- 5** Select a scanner.
Make sure to select the scanner model that is connected to the computer.
For some image scanning applications, selection of a scanner may not be needed.
- 6** In the scanner driver's setup dialog box, configure the scan settings.
For some image scanning applications, the scanner driver's setup dialog box may not appear.

- 7** Scan the document with the image scanning application.

ATTENTION

When the scanner and the computer are communicating, for instance, during scanning, do not perform an operation that causes disconnection of their communication, such as unplugging the USB cable or logging off the user account.

1.10 Image Scanning Application

This section explains the image scanning applications.

The following applications are bundled with the scanner:

- PaperStream ClickScan
A 32-bit image scanning application which supports PaperStream IP (TWAIN).
Scanning can be performed via simple settings and operations.
This program starts automatically when you log in to your computer and resides in the notification area located at the far right of the task bar.
For details, refer to the PaperStream ClickScan Help.
- PaperStream Capture
A 32-bit image scanning application which supports both PaperStream IP (TWAIN) and PaperStream IP (ISIS) for fi-71xx/72xx.
By defining scan settings as document profiles, you can customize the settings according to your preference.
For details, refer to the PaperStream Capture Help.

["Chapter 5 Various Ways to Scan" \(page 80\)](#) explains how to configure the scanner settings and scan different types of documents with the image scanning application.

1.11 Centralized Management of Scanners

This section explains about managing a large number of scanners in a unified manner by providing the following capabilities.

- Simultaneously update settings for multiple scanners and their drivers.
Because there is no need to update each scanner one by one, a significant reduction is achieved in the time required to update a large number of scanners.
- Monitor scanners to keep track of consumable parts that need replacing, errors that have occurred, and maintenance that is needed.
The operating status of scanners can be checked easily.

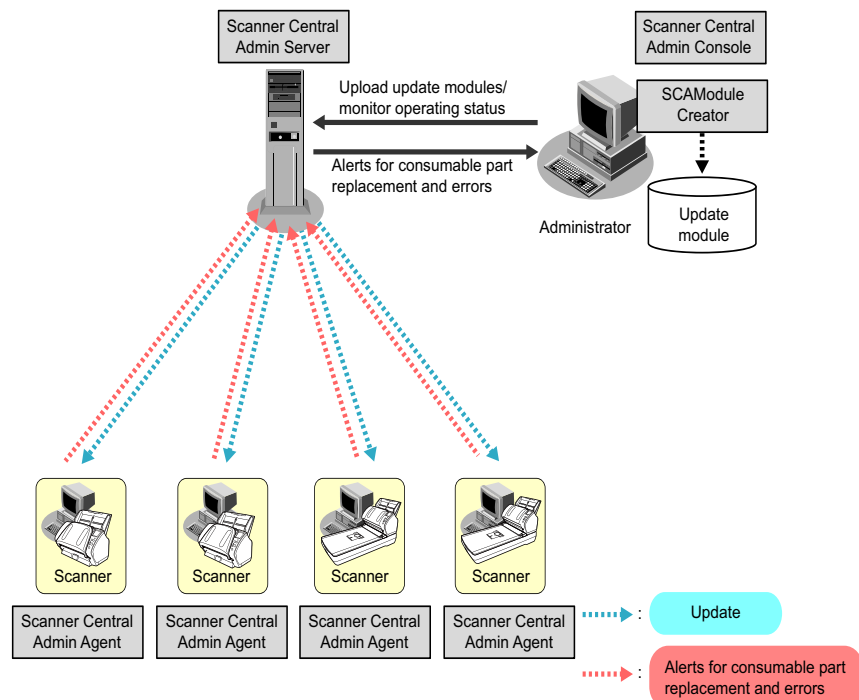

To enable the above functions, "Scanner Central Admin" is required which consists of four applications bundled with this product:

- **Scanner Central Admin Server**
Install this application in the main computer that is used for the centralized management of scanners.
By registering scanners on the Scanner Central Admin Server, you can build a system to run a unified management for all scanners.
- **Scanner Central Admin Console**
Install this application in a computer to upload update modules and to monitor the operating status of the scanners.
The administrators can perform these tasks from the Scanner Central Admin Console window, where they can also check the alerts for consumable replacement and errors sent from the scanners.
- **Scanner Central Admin Agent**
Install this application in a computer connected to a scanner.
It allows scanners to link with the Scanner Central Admin Server.
Linking with the Scanner Central Admin Server will enable you to apply updates on scanner settings, and the scanner can also send alerts on consumable replacement and errors.

- **SCAModuleCreator**

Use this application to create update modules to upload onto the Scanner Central Admin Server.

It is only required for creating update modules.

For more details about the centralized management of scanners, refer to the Scanner Central Admin User's Guide.

Chapter 2 How to Load Documents

2.1 Loading Documents in the ADF

This section explains how to load documents in the ADF.

Preparation

HINT

For details about the paper size and quality required for normal operations, refer to ["2.3 Documents for Scanning \(ADF\)" \(page 44\)](#).

1 If you are loading multiple sheets, check the documents.

- 1 Check if the documents to be loaded are of the same width or different widths.

Ways to load documents differ depending on whether they are the same width or not.

If the document width varies, refer to ["Conditions for Mixed Batch Scanning" \(page 50\)](#) or ["Documents with Different Widths" \(page 82\)](#).

- 2 Check the number of sheets.

Up to 80 sheets can be loaded (with paper weight of 80 g/m² [20 lb] and thickness of the document stack under 8 mm).

For details, refer to ["Loading Capacity" \(page 47\)](#).

2 Fan the documents.

- 1 Grab a stack of documents, which should be 8 mm or less.
- 2 Hold both ends of the documents and fan them a few times.

- 3 Rotate the documents by 90 degrees and fan them in the same manner.
- 4 Perform steps 1 to 3 for all documents.
- 5 Align the edges of the documents.

HINT

For more details about how to fan documents, refer to the Error Recovery Guide.

The Error Recovery Guide is included in the Setup DVD-ROM. For details about installation, refer to ["Installing the Software" in Getting Started](#).

How to Load Documents

- 1** Pull out the chute extensions according to the length of the document.
For details, refer to "1.6 Setting Up the ADF Paper Chute (Feeder)" (page 28).
- 2** Bring down the stacker, slide out the stacker extension 1 and stacker extension 2 towards you, and lift up the stopper according to the length of the document.
For details, refer to "1.7 Setting Up the Stacker" (page 29).
- 3** Load a document face-down in the ADF paper chute (feeder).

ATTENTION

Remove all paper clips and staples. Reduce the number of sheets if a multifeed or pick error occurs.

- 4** Adjust the side guides to the width of the document.
Do not leave space between the side guides and the document.
Otherwise, the document may be fed skewed.

- 5** Scan the document with the image scanning application.
For details, refer to the image scanning application manual.

2.2 Loading Documents on the Flatbed (fi-7260/fi-7280)

- 1** Open the document cover.
For details, refer to "1.5 Opening/Closing the Document Cover (fi-7260/fi-7280)" (page 27).
- 2** Load a document on the document bed.
Place the document face-down to align its top left-hand corner with the reference point.
- 3** Close the document cover.
For details, refer to "1.5 Opening/Closing the Document Cover (fi-7260/fi-7280)" (page 27).
- 4** Scan the document with the image scanning application.
For details, refer to the image scanning application manual.

2.3 Documents for Scanning (ADF)

Paper Size

The following paper sizes can be scanned:

A: 50.8 to 216.0 mm (2.0 to 8.5 in.)

B: 54.0 to 355.6 mm (2.1 to 14.0 in.) (*1)

*1: Long page scanning supports documents with a length of up to 5,588 mm (220 in.) when the scanning resolution is set to 200 dpi or less.

Conditions

Paper type

The following paper types are recommended:

- Wood-free paper
- Wood-containing paper
- PPC paper (recycled)
- Plastic card

When using paper types other than the above, make sure to test with the same type of paper first to check if the document can be scanned.

Paper weight (thickness)

The following paper weights can be used:

- 27 to 413 g/m² (7.2 to 110 lb)
- 127 to 209 g/m² (34 to 56 lb) for A8 size
- 1.4 mm or less for plastic cards (*1)

*1: Up to 1.25 mm is supported for scanning at 300 dpi or less (80 ppm) in landscape when using the fi-7180/fi-7280.

This setting can be changed in the Software Operation Panel to scan plastic cards with a thickness up to 1.4 mm.

For details, refer to "[Scanning Thick Plastic Cards \[Feed Mode\] \(fi-7180/fi-7280\)](#)" (page 190).

Appendix

Glossary

Precautions

The following types of documents may not be scanned successfully:

- Documents of non-uniform thickness (e.g. envelopes, documents with attachments)
- Wrinkled or curled documents
- Folded or torn documents
- Tracing paper
- Coated paper
- Carbon paper
- Photosensitive paper
- Perforated documents
- Documents that are not square or rectangular
- Thin paper (less than 41 g/m²)
- Photographs (photographic paper)

The following types of documents must not be scanned:

- Paper-clipped or stapled documents
- Documents on which the ink is still wet
- Documents smaller than A8 size (portrait)
- Documents wider than 216 mm (8.5 in.)
- Documents other than paper/plastic card such as fabric, metal foil and OHP film
- Important documents that must not be damaged or smeared

ATTENTION

- Since carbonless papers contain chemical substances that may harm the rollers (e.g. pick roller), take note of the following.

Cleaning : If paper jams occur frequently, clean the brake roller and pick roller.
For details, refer to "[Chapter 6 Daily Care](#)" (page 103).

Consumable replacement : The life of the brake roller and pick roller may end sooner compared to scanning wood-containing papers.

- When scanning wood containing papers, the life of the brake roller and pick roller may end sooner compared to scanning wood-free papers.
- Brake roller and pick roller may be damaged when a photo/sticky note on the document contacts these parts during scanning.
- The surface of the document may be damaged when scanning gloss papers such as photographs.
- The light of the LED reflects brightly when scanning gloss papers.

ATTENTION

- When you scan plastic cards, take note of the following.
 - Up to three plastic cards can be loaded in the ADF paper chute (feeder).
Note that you can only load one card at a time if the plastic card is embossed.

- It is recommended to place the card face-down in the ADF paper chute.
- Cards should be within the following specifications:
 - ISO7810 ID-1 type compliant
 - Size : 85.6 × 53.98 mm
 - Thickness : 1.4 mm or less (*1)
 - Material : PVC (polyvinyl chloride) or PVCA (polyvinyl chloride acetate)
- Make sure to check if the card can be scanned first.

*1: Up to 1.25 mm is supported for scanning at 300 dpi or less (80 ppm) in landscape when using the fi-7180/fi-7280.

This setting can be changed in the Software Operation Panel to scan plastic cards with a thickness up to 1.4 mm.

For details, refer to "[Scanning Thick Plastic Cards \[Feed Mode\] \(fi-7180/fi-7280\)](#)" (page 190).

- Rigid cards may not be fed properly.
- If the surface of the card is dirty with grease marks (e.g. fingerprints) and such, perform scanning after wiping the dirt off.
- Plastic cards cannot be scanned when the imprinter is connected.
- Scanning thick documents such as plastic cards will be falsely detected as multifeed.

In that case, to scan documents successfully, use the multifeed window display function of the scanner driver, use the Intelligent Multifeed function, or disable the multifeed detection.

HINT

- When scanning semi-transparent documents, increase the brightness for scanning to avoid bleed-through.
- When you scan documents written in lead pencil, make sure to clean the rollers frequently. Otherwise, the rollers will be contaminated which may leave black traces on the document or cause feeding errors.
For details, refer to "[Chapter 6 Daily Care](#)" (page 103).
- If multifeeds, pick errors or paper jams occur frequently, refer to "[8.3 Troubleshooting](#)" (page 132).
- When you scan documents with the ADF, all documents must be flat on the leading edge. Make sure that curls on the leading edge of the documents are kept within the following range.

Loading Capacity

The number of sheets that can be loaded in the ADF paper chute (feeder) is determined by the paper size and paper weight. See the graph below.

| Unit | Conversion | | | | | | | | | | | | |
|------|------------|----|----|----|----|----|----|-----|-----|-----|-----|-----|-----|
| | 27 | 41 | 52 | 64 | 75 | 80 | 90 | 104 | 127 | 157 | 209 | 256 | 413 |
| g/m² | 27 | 41 | 52 | 64 | 75 | 80 | 90 | 104 | 127 | 157 | 209 | 256 | 413 |
| lb | 7.2 | 11 | 14 | 17 | 20 | 21 | 24 | 28 | 34 | 42 | 56 | 68 | 110 |
| kg | 23 | 35 | 45 | 55 | 65 | 69 | 77 | 90 | 110 | 135 | 180 | 220 | 355 |

Area Not to be Perforated

An error may occur when there are punched holes in the area shaded in light blue in the following figure. Such documents can be scanned by using the flatbed (fi-7260/fi-7280).

ATTENTION

The above condition applies when the document is set to the center of the pick roller width.

HINT

If there are any holes in the 35 mm-wide central column, you can move the document to the left or right to avoid an error.

Conditions for Multifeed Detection

Multifeed is an error where two or more sheets are fed through the ADF at once. It is also called a multifeed when a different document length is detected.

Multifeed detection is performed by either checking the overlapping of documents, length of the documents, or the combination of both. The following conditions are required for an accurate detection.

Detection by overlapping

- Load documents of the same paper weight in the ADF paper chute (feeder).
- Paper weight: 27 to 413 g/m² (7.2 to 110 lb)
- Do not punch holes within 35 mm (1.38 in.) over the center of the document. See Fig.1.
- Do not attach other documents within 35 mm (1.38 in.) over the center of the document. See Fig.1.

Detection by length

- Load documents of the same length in the ADF paper chute (feeder).
- Variance in document lengths: 1% or less
- Do not punch holes within 35 mm (1.38 in.) over the center of the document. See Fig.1.

Detection by overlapping and length

- Load documents of the same paper weight and length in the ADF paper chute (feeder).
- Paper weight: 27 to 413 g/m² (7.2 to 110 lb)
- Variance in document lengths: 1% or less
- Do not punch holes within 35 mm (1.38 in.) over the center of the document. See Fig.1.
- Do not attach other documents within 35 mm (1.38 in.) over the center of the document. See Fig.1.

Fig. 1

**ATTENTION**

- The above condition applies when the document is set to the center of the pick roller width.
- When you use detection by overlapping, scanning thick documents such as plastic cards will be falsely detected as multifeed. In that case, to scan documents successfully, use the multifeed window display function of the scanner driver, use the Intelligent Multifeed function, or disable the multifeed detection.

HINT

- Accuracy of multifeed detection may drop with some documents. Multifeed cannot be detected for the top 30 mm of a document.
- For the shaded area in Fig. 1, you can also specify a length not to detect multifeeds in the Software Operation Panel. For details, refer to "[9.6 Settings Related to Multifeed Detection](#)" (page 192).

Conditions for Mixed Batch Scanning

The following conditions apply when scanning a mixed batch of documents with different paper weights/friction coefficients/sizes.

Make sure to test a few sheets first to check if the documents can be scanned.

For details, refer to ["Documents with Different Widths" \(page 82\)](#).

Paper direction

Align the direction of the paper fiber with the feed direction.

Paper weight

The following paper weights can be used:

27 to 413 g/m² (7.2 to 110 lb)

Friction coefficient

It is recommended to use the same type of paper from the same manufacturer.

When papers of different manufacturers/brands are mixed, it affects the feeding performance as the difference in the friction coefficient increases.

The following friction coefficients are recommended:

0.35 to 0.60 (reference value for paper friction coefficient)

Document position

Use paper sizes that fit the 39 mm width of the pick roller in the center.

Paper size

When you scan a mixed batch with different sizes, not feeding the documents straight may cause troubles such as paper jams or part of the image to appear missing.

It is recommended to check the documents thoroughly before scanning and also check the image if the document was skewed.

ATTENTION

- When scanning a mixed batch with different sizes, documents are more likely to skew because the side guides do not contact every sheet.
- When using multifeed detection, select [Check Overlapping(Ultrasonic)], not [Check Length] or [Check Overlapping and Length].

Documents that cannot be scanned in a mixed batch

The following types of documents cannot be mixed in the same batch:

- Carbonless paper
- Bond paper
- Perforated documents
- Thermal paper
- Carbon-backed paper
- OHP film
- Tracing paper

Combinations of standard paper sizes in a mixed batch

Refer to the table below for a guideline of the range available for mixed batch scanning.

However, note that not feeding the documents straight may cause troubles such as paper jams or part of the image to appear missing.

It is recommended to check the documents thoroughly before scanning and also check the image if the document was skewed.

| Maximum size | | LTR (P) Carrier Sheet | A4 (P) A5 (L) | B5 (P) B6 (L) | A5 (P) A6 (L) | B6 (P) B7 (L) | A6 (P) A7 (L) | B7 (P) B8 (L) | A7 (P) | B8 (P) | A8 (P) |

*1: The following picture shows how to set the widest and the narrowest documents of the batch between the side guides.

ATTENTION

B8 (portrait) and A8 (portrait) cannot be scanned with other paper sizes.

Conditions for Automatic Page Size Detection

[Automatic Page Size Detection] does not work with the following types of documents:

- Non-rectangular documents
- Documents with black background/edges

[Automatic Page Size Detection] may not work with the following types of documents:

- Documents with dark background/edges

Conditions for Using the Carrier Sheet

Paper size

The following paper sizes can be scanned:

- Carrier Sheet (216 × 297 mm)
- A3 (297 × 420 mm) (*1)
- A4 (210 × 297 mm)
- A5 (148 × 210 mm)
- A6 (105 × 148 mm)
- B4 (257 × 364 mm) (*1)
- B5 (182 × 257 mm)
- B6 (128 × 182 mm)
- Post card (100 × 148 mm) (*2)
- Business card (91 × 55 mm, 55 × 91 mm) (*2)
- Letter (8.5 × 11 in./216 × 279.4 mm)
- Double Letter (11 × 17 in./279.4 × 431.8 mm) (*1)
- Custom size
 - Width : 25.4 to 216 mm (1 to 8.5 in.)
 - Length : 25.4 to 297 mm (1 to 11.69 in.)

*1: Fold in half for scanning.

*2: You can scan with PaperStream IP (TWAIN) or PaperStream IP (TWAIN x64).

Conditions

Paper type

The following paper type is recommended:
Standard office paper

Paper weight

The following paper weights can be used:
Up to 209 g/m² (56 lb)
Up to 104 g/m² (28 lb) when folded in half

Precautions

Take note of the following:

- Up to three Carrier Sheets can be loaded at once.

- Depending on the amount of memory used by running applications, there may be insufficient memory to scan a double-page spread document with the Carrier Sheet in high resolution. In that case, specify a lower resolution and try scanning again.
- Do not write on, color, stain, or cut the end with a black and white pattern on the Carrier Sheet.
- Do not place the Carrier Sheet upside down. Otherwise, a paper jam may occur and damage the Carrier Sheet and the document inside.
- Do not leave your document inside the Carrier Sheet for a long time. Otherwise, the ink on the document may be transferred onto the Carrier Sheet.
- To avoid deformation, do not use or leave the Carrier Sheet in high temperature places such as under direct sunlight or near a heating apparatus for a long time.
- Do not fold or pull the Carrier Sheet.
- Do not use a damaged Carrier Sheet because it may damage or cause the scanner to malfunction.
- To avoid deformation, keep the Carrier Sheet on a flat surface without any weight on it.
- Be careful not to cut your finger on the edge of the Carrier Sheet.
- If paper jams occur frequently, feed about 50 sheets of PPC paper (recycled paper) before scanning with the Carrier Sheet. The PPC paper can either be blank or printed.
- Paper jams may occur when you place several small documents (e.g. photos, postcards) in the Carrier Sheet for scanning. It is recommended to place only one document at a time in the Carrier Sheet.

3.1 Configuring the Settings in the Scanner Driver

Normally, the scanner driver is launched via an image scanning application, and then the scan settings are configured in the setup dialog box of the driver.

For some image scanning applications, the scanner driver's setup dialog box may not appear.

For details about the scanner driver, refer to the scanner driver's Help.

4.1 Operator Panel

The operator panel consists of an LCD, buttons and LED.
Names and Functions

LCD

Indicates the status of the scanner.
Switches off when the scanner enters power saving mode.

LED indicator

Lights in orange when an error occurs.
Flashes when the ADF is open or consumables reach the end of their life cycle.

[Stop/Clear] button

Stops the scan immediately.
Cancels the selected item and returns to the previous screen. Clears the displayed error indication.
Resets the page counter when pressed down for more than three seconds.
Stops the scan when pressed while scanning in manual feed mode.

[△]/[▽] button

Switches the number (No.00 to No.09/SOP) for the application that is launched by pressing the [Scan/Enter] button in the [Ready] screen.
Switches the selected item.

[Scan/Enter] button (*1)

Launches the linked application software.
Confirms the selected item.
Pauses the scan. Resumes the scan.
Ejects the document when a multifeed occurs.

[Menu] button

Configures various types of scanning operations.
Determines whether or not to memorize the pattern if pressed when a multifeed occurs.
Determines whether to enable or disable paper protection if pressed when a scanning operation is stopped due to paper protection.

[Power] button

Turns the power on/off.
Lights in green when the scanner is turned on.

*1: For details about using the [Scan/Enter] button, refer to the scanner driver's Help or "[Using a Button on the Scanner to Start Scanning](#)" (page 95).

Indicator

Information

MENU flashes when there is a message for replacing consumables/cleaning/glass cleaning/regular maintenance. [Consumables], [Cleaning], [Clean glass!], or [maintenance] also flashes on the second line in the [Ready] screen.

For information regarding appropriate actions to take when **MENU** flashes, refer to ["4.2 Settings Menu" \(page 61\)](#).

Prioritize Panel Settings

P appears when the operator panel settings are prioritized.

For details, refer to ["4.2 Settings Menu" \(page 61\)](#).

Application Number

Displays the application number that you want to launch when you press the [Scan/Enter] button in the [Ready] screen.

For details, refer to ["4.3 Function Selection" \(page 78\)](#).

iMFF Setting

Displays the iMFF setting as follows:

| Icon | Mode |
|-------------|-------------|
| M-- | Manual mode |
| A1-0 | Auto mode 1 |
| A2-0 | Auto mode 2 |

In Manual mode, **M--** is displayed at all times.

In Auto mode 1 and Auto mode 2, it displays the number of overlap patterns memorized (max. of 8 patterns).

For details, refer to ["4.2 Settings Menu" \(page 61\)](#).

4.2 Settings Menu

This section explains about the Settings Menu.

When you press the [Menu] button while the [Ready] screen is displayed, the [Settings Menu] screen is displayed.

The Settings Menu can be used to configure various operational settings upon scanning.

There are two menus in the [Settings Menu] screen.

- User menu

You can configure basic settings for operating the scanner and using the operator panel.

- Administrator menu

You can configure advanced settings for operating the scanner and using the operator panel.

To switch between the menus, press down both the [Δ] and [∇] buttons at the same time for more than three seconds in the [Settings Menu] screen.

When the scanner is turned off, the user menu appears.

How to Use Settings Menu

This section explains how to use the Settings Menu of the operator panel by the following categories.

| Operation | Description | Item | User menu | Administrator menu |
|--------------------------------|---|-------------|------------------------------------|--------------------|
| | | | Yes: Available -: Not Available | |
| Checking the guidance contents | You can check the way to reset the page counter. For more details, refer to " Checking the guidance contents " (page 65). | Guidance | Yes | Yes |
| Checking the information | MENU flashes when there is a message for replacing consumables/cleaning/glass cleaning/regular maintenance. Read the message and take measures accordingly. For more details, refer to " Checking the information " (page 66). | Information | Yes | Yes |

■ Checking the guidance contents

- 1 Press the [Power] button on the operator panel.
⇒ The [Ready] screen is displayed on the LCD.
- 2 Press the [Menu] button.
⇒ The [Settings Menu] screen is displayed on the LCD.
- 3 Press the [Δ] or [▽] button and select [Guidance], then press the [Scan/Enter] button to confirm.
⇒ The [Guidance] screen is displayed on the LCD.
- 4 Press the [Δ] or [▽] button and select [1: Clear counter], then press the [Scan/Enter] button to confirm.
⇒ The [Clear counter] screen is displayed on the LCD.
- 5 Press the [Δ] or [▽] button to check the contents of the guidance.
You can check the way to reset the page counter.

■ Checking the information

- 1 Press the [Power] button on the operator panel.
⇒ The [Ready] screen is displayed on the LCD.
- 2 Press the [Menu] button.
⇒ The [Settings Menu] screen is displayed on the LCD.
- 3 Press the [Δ] or [∇] button and select [Information], then press the [Scan/Enter] button to confirm.
⇒ The [Information] screen is displayed on the LCD.

ATTENTION

[Information] can be selected only when there is a message for replacing consumables/cleaning/glass cleaning/regular maintenance.

- 4 Press the [Δ] or [∇] button to check the contents of the information.
You can check the messages for replacing consumables/cleaning/glass cleaning/regular maintenance.
When the message prompts replacing consumables/cleaning, the corresponding counter that requires consumable replacement/cleaning is highlighted. The counter will appear highlighted when:
 - The page count after replacing the consumable reaches 95% of the value configured in "[Replacement Cycle of Consumables \[Life Counter Alarm Setting\]](#)" (page 177) in the Software Operation Panel. (For brake roller/pick roller counters)
 - The page count after cleaning reaches 100% of the value configured in "[Scanner Cleaning Cycle \[Cleaning Cycle\]](#)" (page 177) in the Software Operation Panel. (Cleaning counter)
 - The amount of remaining ink reaches below 33%. This is only displayed when the imprinter is installed. (For ink counter)

5 Take measures according to the contents of [Information].

Follow the instructions in the message if it prompts consumable replacement/cleaning/glass cleaning.

For details about replacing consumables, refer to the following:

- Brake roller
["7.2 Replacing the Brake Roller" \(page 116\)](#)
- Pick roller
["7.3 Replacing the Pick Roller" \(page 118\)](#)

For details about cleaning, refer to ["Chapter 6 Daily Care" \(page 103\)](#).

If the message prompts regular maintenance, please have the scanner checked by a service engineer for regular maintenance/inspection.

For more information, contact your FUJITSU scanner dealer or an authorized FUJITSU scanner service provider.

Operational settings

- 1 Press the [Power] button on the operator panel.
⇒ The [Ready] screen is displayed on the LCD.
- 2 Press the [Menu] button.
⇒ The [Settings Menu] screen is displayed on the LCD.
- 3 Press the [Δ] or [∇] button and select a setting item, then press the [Scan/Enter] button to confirm.
For more details about the setting items, refer to "[Items Configurable in the Settings Menu](#)" (page 71).
⇒ The selected item is displayed on the LCD.
- 4 Press the [Δ] or [∇] button and select a parameter, then press the [Scan/Enter] button to confirm.
For more details about the setting parameters, refer to "[Items Configurable in the Settings Menu](#)" (page 71).

HINT

- "*" is displayed for the factory default setting.
- When you select an item in the screen, the parameter currently selected is highlighted.

- ⇒ If the [Settings Menu] screen is displayed on the LCD, it indicates that the setup has been completed.
If the LCD displays a setting item, repeat step 4 until it shows the [Settings Menu] screen.

■ Checking and resetting the sheet counter

- 1 Press the [Power] button on the operator panel.
⇒ The [Ready] screen is displayed on the LCD.
- 2 Press the [Menu] button.
⇒ The [Settings Menu] screen is displayed on the LCD.
- 3 Press the [Δ] or [∇] button and select [4: Consumable counters], then press the [Scan/Enter] button to confirm.
⇒ The [Consumable counters] screen is displayed on the LCD.
- 4 Press the [Δ] or [∇] button and check the counter.
Counters are highlighted when consumable replacement or cleaning is required. The counter will appear highlighted when:
 - The page count after replacing the consumable reaches 95% of the value configured in "[Replacement Cycle of Consumables \[Life Counter Alarm Setting\]](#)" (page 177) in the Software Operation Panel. (For brake roller/pick roller counters)
 - The page count after cleaning reaches 100% of the value configured in "[Scanner Cleaning Cycle \[Cleaning Cycle\]](#)" (page 177) in the Software Operation Panel. (Cleaning counter)
 - The amount of remaining ink reaches below 33%. This is only displayed when the imprinter is installed. (For ink counter)

HINT

The total number of sheets that have been scanned after purchase is displayed in the total sheets scanned counter. The total sheets scanned counter cannot be cleared.

- 5 After replacing the consumables or cleaning, select the highlighted counter with the [Δ] or [∇] button, and press the [Scan/Enter] button.
⇒ A message appears to confirm that you want to clear the counter.
- 6 Select [1: Yes] by the [Δ] or [∇] button, and press the [Scan/Enter] button to confirm.
⇒ The counter is reset to 0.
For ink counter, the value will be set to 100.

Counting documents

- 1 Press the [Power] button on the operator panel.
⇒ The [Ready] screen is displayed on the LCD.
- 2 Press the [Menu] button.
⇒ The [Settings Menu] screen is displayed on the LCD.
- 3 Press the [Δ] or [∇] button and select [9: Doc Counting Mode], then press the [Scan/Enter] button to confirm.
⇒ The [Doc Counting Mode (More documents)] screen is displayed on the LCD.
- 4 Load a document in the ADF paper chute (feeder), and press the [Scan/Enter] button.
⇒ The number of sheets that are scanned is counted.
The number of counted sheets is displayed in Count.

ATTENTION

Documents may not be counted correctly if a multifeed occurs during scanning.

HINT

- To reset Count, press the [Stop/Clear] button while the [Doc Counting Mode (More documents)] screen is displayed.
- To end Doc Counting Mode, press the [Stop/Clear] button for more than three seconds while the [Doc Counting Mode (More documents)] screen is displayed.

Items Configurable in the Settings Menu

| Item | Description | Parameter (*1)/Value | Factory Default (*2) |
|---------------|--|---|--|
| | | -: No settings/values | |
| Guidance | Displays the way to reset the page counter. | 1: Clear counter | 1: Clear counter |
| Information | [Information] appears as an item in the [Settings Menu] screen only if MENU is flashing on the LCD. | Message for replacing consumables/cleaning/glass cleaning/regular maintenance | Only displayed when there is information |
| 1: Pick Speed | When you experience frequent multifeeds and paper jams, the symptom may be improved by slowing down the speed in which documents are picked (fed). This setting can also be configured from the Software Operation Panel. | 1: Normal 2: Slow | 1: Normal |
| 2: Cleaning | Use this setting when you clean the scanner. For more details, refer to " Chapter 6 Daily Care " (page 103). | 1: Cleaning Sheet 2: Roller Wipe | - |

| Item | Description | Parameter (*1)/Value | Factory Default (*2) |
|--------------------|--|---|----------------------|
| | | -: No settings/values | |
| 17: Power saving | Specify the waiting time before entering power saving mode. This setting can also be configured from the Software Operation Panel. | 5 to 115 (in increments of 5) (minutes) | 15 |
| 18: Power-off time | Specify the period of time for the scanner to be automatically turned off. This setting can also be configured from the Software Operation Panel. | Disable, 1, 2, 4, 8 (hours) | 4 |
| 19: Pre-Pick | Select [1: Yes] to prioritize the processing speed and [2: No] for otherwise. This settings can also be configured from the scanner driver or the Software Operation Panel. Note that priority is given to the scanner driver setting. | 1: Yes 2: No | 1: Yes |

*1: When you select an item in the screen, the parameter currently selected is highlighted.

2: "" is displayed for the factory default setting in the screen.

*3: Although there is no factory default setting, the settings are configured as follows when you turn on the power: [2: Multiple sheets] for [No. of sheets scanned], [1:(L)ABCDEFGHIJKLMNPOQRSTUVWXYZ[¥]^_`00000000] for [Print Pattern], and [1: Yes] for [Test Print]. The settings do not change even when you initialize the operator panel because there is no factory default setting.

*4: Although there is no factory default setting, it is set to [2: No] when you turn on the power. The setting does not change even when you initialize the operator panel because there is no factory default setting.

*5: When you display this screen, the parameter currently selected is not highlighted but the parameter on the top is highlighted.

To check which parameter is currently selected, check whether  is displayed or not on the indicator.

If  is displayed on the indicator, [1: Paper Protection] is currently selected.

If  is not displayed on the indicator, [2: Clear] is currently selected.

For details about the indicator, refer to "[Indicator](#)" (page 60).

4.3 Function Selection

This section explains about the Function Selection.

When you press the [Δ] or [∇] button in the [Ready] screen, [Function Selection] is displayed.

By using Function Selection, you can configure the application you want to launch when you press the [Scan/Enter] button in the [Ready] screen.

The configured applications are applied to the application numbers (F00 to F09/SOP) that are displayed in the indicator.

How to Use Function Selection

- Press the [Power] button on the operator panel.
 - ⇒ The [Ready] screen is displayed on the LCD. The indicator displays [F00] when the power has just been turned on.
- Press the [Δ] or [∇] button.
 - ⇒ [Function Selection] is displayed on the LCD.
- Press the [Δ] or [∇] button and select a parameter, then press the [Scan/Enter] button to confirm.
 - For more details about the setting parameters, refer to "[Item Configurable in Function Selection](#)" (page 79).
 - ⇒ The setup is completed when the LCD displays the [Ready] screen. The configured parameter is shown by the indicator. In this example, the indicator displays "F02" because "No.02" is selected.

HINT

- When "No.00" to "No.09" are selected, the indicator displays "F00" to "F09".
- When "SOP" is selected, "SOP" is displayed on the indicator. SOP indicates the Software Operation Panel.

Item Configurable in Function Selection

| Item | Description | Setting | Factory Default |
|--------------------|--|--|-----------------|
| Function Selection | <p>Configure the application you want to launch when you press the [Scan/Enter] button in the [Ready] screen. It displays the scanner button events configured in the computer ([Scan Button]/[Send to 1] to [Send to 9]).</p> <p>For "No.00", the event for [Scan Button] is displayed.</p> <p>For [No.01] to [No.09], the events for [Send to 1] to [Send to 9] are displayed.</p> <p>For information on how to configure scanner button events, refer to "Using a Button on the Scanner to Start Scanning" (page 95).</p> | No.00 to No.09/SOP (SOP indicates the Software Operation Panel) | (*1) |

*1: Although there is no factory default setting, it is set to [No.00] when you turn on the power. The setting does not change even when you initialize the operator panel because there is no factory default setting.

Chapter 5 Various Ways to Scan

This chapter explains how to configure scanner settings and scan different types of documents with the image scanning application.

| | |
|--|----|
| 5.1 Summary | 81 |
| 5.2 Scanning Documents of Different Types and Sizes..... | 82 |
| 5.3 Advanced Scanning..... | 94 |
| 5.4 Customizing the Scanner Settings | 95 |

5.1 Summary

The following lists the main ways of scanning documents.

Scanning documents of different types and sizes

- ["Documents with Different Widths" \(page 82\)](#)
- ["Documents Larger than A4/Letter Size" \(page 84\)](#)
- ["Scanning Photographs and Clippings" \(page 86\)](#)
- ["Long Page Scanning" \(page 88\)](#)
- ["Scanning a Book \(fi-7260/fi-7280\)" \(page 90\)](#)
- ["Scanning a Large Document on the Flatbed \(fi-7260/fi-7280\)" \(page 92\)](#)

Advanced scanning

- ["Feeding Documents Manually in the ADF" \(page 94\)](#)

Customizing the scanner settings

- ["Using a Button on the Scanner to Start Scanning" \(page 95\)](#)
- ["Ignoring Multifeed for a Set Pattern" \(page 98\)](#)
- ["Disabling Paper Protection for a Single Scan After Paper Protection Is Set Off" \(page 101\)](#)

For information on other ways of scanning, refer to the scanner driver's Help.

5.2 Scanning Documents of Different Types and Sizes

Documents with Different Widths

ATTENTION

When you scan a mixed batch with different widths, some of the narrower documents may be skewed or not fed into the scanner. In that case, you should place the narrower documents at the center of the ADF so that the documents are fed into the scanner by feed rollers without any problems.

HINT

For more details about scanning a mixed batch of documents, refer to "Conditions for Mixed Batch Scanning" (page 50).

- 1 Align the top of the documents.

- 2 Place the documents at the center of the ADF paper chute (feeder), and adjust the side guides to the widest document in the batch.

For details, refer to "Chapter 2 How to Load Documents" (page 40).

ATTENTION

Make sure that all documents are placed underneath the pick roller. Otherwise, some documents may be skewed or not fed into the ADF.

- 3** Adjust the stacker to fit the longest document.
For details, refer to "[Documents with Different Sizes](#)" (page 33).
- 4** In the scanner driver, configure the scan settings to avoid skewed images and to detect the paper size automatically.
For details, refer to the scanner driver's Help.
- 5** Scan the document with the image scanning application.
For details, refer to the image scanning application manual.

Documents Larger than A4/Letter Size

The Carrier Sheet can be used to scan documents larger than A4/Letter size, such as A3 and B4. By folding the document in half and scanning in duplex mode, the two sides are merged into a single image.

ATTENTION

Part of the image around where the document is folded may appear missing. Using the Carrier Sheet is not recommended for obtaining high quality image.

HINT

You can also scan a double-sided document that is smaller than A4 size, and output the image as a double-page spread image. In this case, place the double-sided document that is smaller than A4 size inside the Carrier Sheet in step 2.

- 1 Place the document inside the Carrier Sheet.
 - 1 Fold the document in half so that the sides to be scanned are facing out. Fold it tightly and smooth out any creases. Otherwise, it may cause the document to skew during feeding.

- 2 Place the document inside the Carrier Sheet. Align the fold line with the right edge of the Carrier Sheet so that the document fits in the upper right-hand corner.

HINT

The front side of the Carrier Sheet has a thick vertical line on the right side of the black & white pattern.

- 2 Load the Carrier Sheet face-down in the ADF paper chute (feeder). Secure the Carrier Sheet with the side guides to avoid skewing.

3 In the scanner driver, configure the scan settings for using the Carrier Sheet.

For details, refer to the scanner driver's Help.

4 Scan the document with the image scanning application.
For details, refer to the image scanning application manual.

⇒ The images on the front and back are merged into a single image.

ATTENTION

● There may be a line or a gap appearing between the front and back side images.
Also when you scan thick papers, images on both left and right may skew towards each other from the top.
These symptoms may be improved when you perform the following:

- Fold the document tightly
- Align the edges of the document neatly with the edges of the Carrier Sheet
- Turn over the Carrier Sheet to the other (reverse) side

● When [Automatic detection] is specified for [Paper Size], the closest standard size (A3, B4 or Double Letter) is selected from the same drop-down list. Note that the size of the image may become smaller than the original document depending on the document scanned.

Example: When you scan an A3 size document whose content is printed to fit A4 size in the center
⇒ The image is output in B4 size.

To output the scanned image in the actual size of the document, specify the document size for [Paper size].

- Part of the image around where the document is folded may appear missing. In that case, set the document so its edge is about 1 mm inside from the edge of the Carrier Sheet.
- When [Black & White] is specified for [Image Mode], the edges around the image may appear in black from the shadow of the document.

Scanning Photographs and Clippings

Using the Carrier Sheet allows you to scan documents that can be damaged quite easily such as photographs, or documents that are difficult to load directly such as newspaper clippings.

- 1 Place the document inside the Carrier Sheet.
Place it against the top center of the Carrier Sheet.

- 2 Load the Carrier Sheet face-down in the ADF paper chute (feeder), as shown below.
Secure the Carrier Sheet with the side guides to avoid skewing.

- 3 In the scanner driver, configure the scan settings for using the Carrier Sheet.
For details, refer to the scanner driver's Help.
- 4 Scan the document with the image scanning application.
For details, refer to the image scanning application manual.

ATTENTION

- The image is output at the center of the page in the size specified in [Paper Size].
- When [Automatic detection] is specified for [Paper Size], the closest standard size is selected from the same drop-down list. Note that the size of the image may become smaller than the original document depending on the document scanned, or part of the image may appear missing.
Example: When an A5 size image is printed in the center of an A4 size document
⇒ The image is output in A5 size.
To output the scanned image in the actual size of the document, specify the document size for [Paper size].

Glossary

HINT

In the following cases, place a blank (white) sheet of paper underneath the document when scanning.

- The scanned image is not output in the correct size when [Automatic detection] is selected in the [Paper size] drop-down list
- Shadows appear around the edges of the scanned image
- Black lines appear around the edges of a uniquely shaped cutting
- Colors outside the document appear on the scanned image

Long Page Scanning

Documents with a length up to 5,588 mm (220 in.) can be scanned by long page scanning.

Depending on the resolution setting or the image scanning application, scannable document sizes may differ.

For details, refer to the manual of the image scanning application.

- 1 Load the documents in the ADF paper chute (feeder).
For details, refer to "[Chapter 2 How to Load Documents](#)" (page 40).

ATTENTION

- Long page documents should be loaded one sheet at a time in the ADF paper chute (feeder).
- When you scan long pages, take note of the following.
 - Loading
Hold the document with your hand so it does not fall out of the ADF paper chute (feeder).

- Removing
Secure enough space around the stacker to prevent the ejected sheet from falling off the stacker.

HINT

To scan documents longer than A4/Letter size, perform the following:

- Pull out the chute extensions all the way.
For details, refer to "[1.6 Setting Up the ADF Paper Chute \(Feeder\)](#)" (page 28).
- Bring down the stacker, slide out stacker extension 1 and stacker extension 2 towards you, and lift up the stopper according to the length of the document.
For details, refer to "[1.7 Setting Up the Stacker](#)" (page 29).

2 In the scanner driver, configure the scan settings to scan the paper size of the long page.

For details, refer to the scanner driver's Help.

3 Scan the document with the image scanning application.

For details, refer to the image scanning application manual.

ATTENTION

Depending on the application or scan settings (e.g. paper size), there may be insufficient memory to perform scanning.

Scanning a Book (fi-7260/fi-7280)

- 1** Open the document cover.
For details, refer to "1.5 Opening/Closing the Document Cover (fi-7260/fi-7280)" (page 27).
- 2** Remove the document cover by pulling it out in the direction of the arrow.

- 3** Load the document on the document bed.
Place the document face-down to align its top left-hand corner with the reference point.

- 4** In the scanner driver, configure the scan settings for using the flatbed.
For details, refer to the scanner driver's Help.

- 5** Scan the document with the image scanning application.
For details, refer to the image scanning application manual.

 **CAUTION** Do not look directly into the light source.

ATTENTION
Do not move the document during scanning.

- 6** Attach the document cover.
- 7** Close the document cover.
For details, refer to "[1.5 Opening/Closing the Document Cover \(fi-7260/fi-7280\)](#)" (page 27).

Scanning a Large Document on the Flatbed (fi-7260/fi-7280)

- 1** Open the document cover.
For details, refer to "1.5 Opening/Closing the Document Cover (fi-7260/fi-7280)" (page 27).
- 2** Remove the document cover by pulling it out in the direction of the arrow.

- 3** Load the document on the document bed.
Place the document face-down to align its top left-hand corner with the reference point.

- 4** In the scanner driver, configure the scan settings for using the flatbed.
For details, refer to the scanner driver's Help.

- 5** Scan the document with the image scanning application.
For details, refer to the image scanning application manual.

Do not look directly into the light source.

ATTENTION

Do not move the document during scanning.

- 6** Attach the document cover.
- 7** Close the document cover.
For details, refer to "[1.5 Opening/Closing the Document Cover \(fi-7260/fi-7280\)](#)" (page 27).

5.3 Advanced Scanning

Feeding Documents Manually in the ADF

Documents can also be loaded manually one sheet at a time in the ADF.

Normally, in automatic feeding, the scanner stops scanning once all the documents loaded in the ADF paper chute (feeder) have been scanned. In manual feeding, the scanner waits for the next document to be loaded within a specified time. Scanning will continue as long as another document is loaded within the set time, and stops if no document is loaded. By using this method, you can perform scanning as you check the documents one by one.

Manual feeding is effective in the following cases.

- To scan as you check the contents of each sheet.
- To scan documents that cause multifeed or paper jam when loaded together in the same batch.
- To continue scanning documents such as magazine/newspaper clippings that cannot be loaded together.

1 Enable manual feeding.

To do this, perform one of the following:

- Enable manual feeding by selecting a value for [12: Manual Feed Timeout] in the [Settings Menu] screen of the operator panel. For details, refer to "[4.2 Settings Menu](#)" (page 61).
- Enable manual feeding in the Software Operation Panel. For details, refer to "[Waiting Time in Manual Feed Mode \[Manual-feed timeout\]](#)" (page 198).

2 Load a document in the ADF paper chute (feeder).

For details, refer to "[Chapter 2 How to Load Documents](#)" (page 40).

3 Scan the document with the image scanning application.

For details, refer to the image scanning application manual.

⇒ After the document is scanned, the rollers inside the ADF keep rotating, waiting for the next document to be loaded for the time specified in the operator panel or Software Operation Panel.

4 Load the next document in the ADF paper chute (feeder).

⇒ The document is scanned.

5 Repeat step 4 until all documents are scanned.

⇒ Scanning will stop if no document is loaded within the set time.

HINT

- Pressing the [Stop/Clear] button on the operator panel will stop the scan immediately.
- When [Manual-feed timeout] is enabled, the scanner will wait for the set time even if you start scanning with no document in the ADF paper chute (feeder).
- When you use manual feeding frequently, replacement cycle of the consumables may be shortened.

5.4 Customizing the Scanner Settings

Using a Button on the Scanner to Start Scanning

The [Scan/Enter] button on the operator panel can be configured to perform scanning by pressing the button. To configure this setting, you first need to assign an application to be launched from the [Scan/Enter] button.

HINT

If [No.00] is selected in the [Function Selection] screen, the image scanning application that is started up when the [Scan/Enter] button is pressed differs depending on whether PaperStream ClickScan resides in the taskbar or not.

- When it resides in the taskbar
PaperStream ClickScan will be started up.
- When it does not reside in the taskbar
PaperStream Capture will be started up.

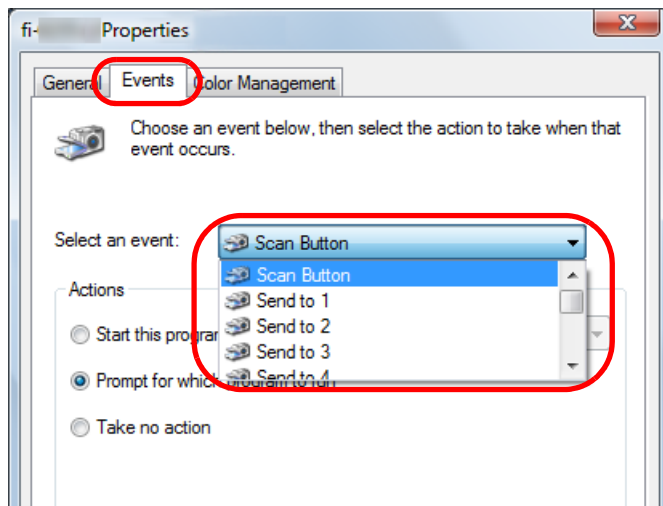

Computer setup

- 1 Confirm that the scanner is connected to the computer, then turn on the scanner.
For details about how to connect the scanner to the computer, refer to "Connecting the Cables" in Getting Started.
For details about how to turn on the scanner, refer to ["1.3 Turning the Power ON/OFF" \(page 24\)](#).
- 2 Display the [Control Panel] dialog box.
 - Windows Server 2008 R2/Windows 7
Click [Start] menu → [Control Panel].
 - Windows Server 2012
Right-click the Start screen, and select [All apps] on the app bar → [Control Panel] under [Windows System].

- Windows Server 2012 R2/Windows 8.1
Click [↓] on the lower left side of the Start screen → [Control Panel] under [Windows System].
To display [↓], move the mouse cursor.
- Windows 10/Windows Server 2016/Windows Server 2019/Windows Server 2022
Click [Start] menu → [Windows System] → [Control Panel].
- Windows 11
Click [Start] menu → [All apps] → [Windows Tools] and double-click [Control Panel].

- 3 Click [View devices and printers].
⇒ The [Devices and Printers] dialog box appears.
- 4 Right-click on the scanner icon, and select [Scan properties] from the displayed menu.
⇒ The properties dialog box of the scanner appears.

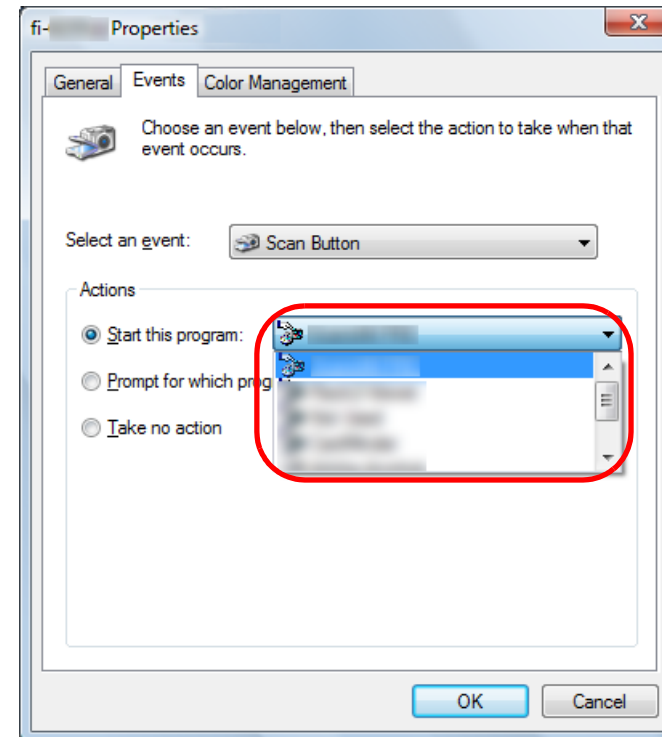

- 5** Click the [Events] tab and select an event.
From the [Select an event] drop-down list, select an event from which you want to launch an application.

In this function, the following events can be specified:

- [Scan Button]
Press the [Scan/Enter] button while the [Ready] screen displays [F00]
- [Send to 1] to [Send to 9]
Press the [Scan/Enter] button while the [Ready] screen displays [F01] to [F09]

- 6** Select an action and an application to be launched by the scanner button event.
Click [Start this program] under [Actions], and select an application from the drop-down list on the right.

- 7** Click the [OK] button.
The setup of the computer is completed. Proceed to configure the scanner settings.

HINT

To configure multiple events, repeat steps 4 to 7.

Scanner setup

- 1 Press the [Δ] or [▽] button in the [Ready] screen of the operator panel.
⇒ The [Function Selection] screen is displayed.
- 2 Press the [Δ] or [▽] button and select a parameter, then press the [Scan/Enter] button to confirm.
Configure the application you want to launch when you press the [Scan/Enter] button in the [Ready] screen.
Parameters in the [Function Selection] screen, application numbers in the indicator, and events configured on the computer correspond one another as follows.

| Parameter in the [Function Selection] screen | Application number in the indicator | Event configured on the computer |
|--|-------------------------------------|----------------------------------|
| No.00 | F00 | [Scan Button] |
| No.01 to No.09 | F01 to F09 | [Send to 1] to [Send to 9] |
| SOP | SOP | N/A |

As an example, the following indicator displays an application number "F02". This number is displayed by selecting [No.02] in the [Function Selection] screen and performs the [Send to 2] event configured on the computer.

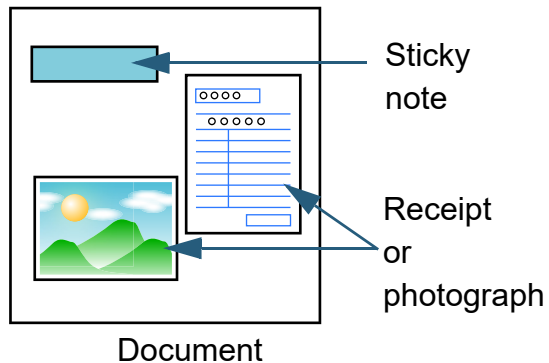

- 3 Press the [Scan/Enter] button.
⇒ The specified application is launched.

Ignoring Multifeed for a Set Pattern

If you attempt to scan a document with an attachment such as sticky note, receipt, or photo while multifeed detection is enabled, the scanner may falsely recognize this as a multifeed error and stop the scan. To scan these types of documents, the "Intelligent Multifeed Function" is available.

There are two modes in this function. In one mode, you can suppress multifeeds forcibly by using the operator panel on the scanner. In the other mode, you can suppress multifeeds automatically by letting the scanner memorize the location and the length of the attachment.

Intelligent Multifeed function

The following three modes are available:

| Mode | Description |
|---|---|
| Manual mode (Bypass by front panel button) | Checks for any paper attached every time a multifeed occurs, and continues scanning. |
| Auto mode 1 (Bypass by combination of length and position) | Used to scan documents with paper of the same size attached in the same location. |
| Auto mode 2 (Bypass by length) | Used to scan documents with paper of different sizes attached in different locations. |

ATTENTION

Irregular images may be output when multifeeds occur.

Select the mode by performing one of the following:

- Select the mode in [10: iMFF Setting] on the [Settings Menu] screen of the operator panel.
For details, refer to ["4.2 Settings Menu" \(page 61\)](#).
- Select the mode in the Software Operation Panel.
For details, refer to ["Specifying an Area Not to Detect Multifeed \[Intelligent Multifeed Function\]" \(page 197\)](#).

Operational procedure

- 1 After a multifeed error occurs, either press the [Scan/Enter] button to eject the document from the paper path or open the ADF to remove the document.
After the document is removed, indication on the LCD of the operator panel changes as follows.

| When a multifeed occurs | When a document is ejected |
|--|---|
| Multifeed detected (Overlap) Press the Scan button to eject the document. After ejecting the document, multifeed detection for the next document can be enabled/disabled from the Menu button. | Specify whether to detect multifeed for the next document. ----- Detect: Scan (Switch:Menu) |

- Appendix
- Glossary

- 2** If you open the ADF to remove the document, close it.
For details, refer to "1.4 Opening/Closing the ADF" (page 26).

Be careful not to have your fingers caught when closing the ADF.

ATTENTION

Confirm that the ADF is closed properly. Otherwise, the document may not be fed into the ADF.

- 3** Load the documents back in the ADF paper chute (feeder).

If a multifeed by difference in length is detected, either press the [Scan/Enter] button or perform a scan from the computer (do not press the [Menu] button).

If there is an attachment which is likely to be the cause of the multifeed error, then proceed to the next step.

- 4** Press the [Menu] button and confirm that the LCD displays [Do not detect] or [Remember], and then either press the [Scan/Enter] button or perform a scan from the computer.

From this point, note that the indication on the LCD switches between [Detect]↔[Do not detect] or [Remember]↔[Do not remember] every time you press the [Menu] button. When [Do not detect] or [Remember] is displayed, the scanner operates in each mode as follows:

- Manual mode (Bypass by front panel button)
Scans the next sheet without multifeed detection, and from the second sheet, multifeeds are detected based on the setting configured in the scanner driver or the Software Operation Panel.
- Auto mode 1 (Bypass by combination of length and position)
Memorizes the length and location of the paper attachment that was detected as multifeed, and continues scanning. When a paper attachment of a similar pattern is detected, multifeed detection is automatically suppressed.(*1)(*2)
- Auto mode 2 (Bypass by length)
Memorizes the length of the longest paper attachment that was detected as multifeed, and continues scanning. When a paper attachment of the same length or shorter is detected, multifeed detection is automatically suppressed.(*1)(*2)

*1: 8 overlap patterns can be memorized in this mode. When it exceeds this limit, the first pattern that was memorized is erased from the memory.

*2: To erase the memorized overlap patterns and the longest overlap length, use [10: iMFF Setting] on the [Settings Menu] screen of the operator panel, or Software Operation Panel. After erasing is completed, the indication on the LCD changes to **A1-0** or **A2-0**. This allows you to erase multifeed patterns and the longest overlap length that were not supposed to be memorized. Be careful with this operation because all memorized patterns will be erased.

Disabling Paper Protection for a Single Scan After Paper Protection Is Set Off

If you attempt to scan a wrinkled document while paper protection is on, the scanner may detect it as a paper jam, which causes paper protection to be set off and forces a scan to be stopped even though paper is fed normally. In this case, you can disable paper protection on the operator panel for a single scan after paper protection is set off.

Operational procedure

- 1 After paper protection is set off, open the ADF and remove the document.
After the document is removed, indication on the LCD of the operator panel changes as follows.

| When paper protection is set off | When a document is ejected |
|--|--|
| Paper Protection Remove and check the document, and then try again carefully. | Disable paper protection. ----- Enable:Scan (Switch:Menu) |

CAUTION

When opening, the ADF might close accidentally. Be careful not to have your fingers caught when the ADF closes.

- 2 If you open the ADF to remove the document, close it.
For details, refer to ["1.4 Opening/Closing the ADF" \(page 26\)](#).

CAUTION

Be careful not to have your fingers caught when closing the ADF.

ATTENTION

Confirm that the ADF is closed properly. Otherwise, the document may not be fed into the ADF.

- 3 Load the documents back in the ADF paper chute (feeder).

- 4 Press the [Menu] button and confirm that the LCD displays [Disable], and then either press the [Scan/Enter] button or perform a scan from the computer.

From this point, note that the indication on the LCD switches between [Enable]↔[Disable] every time you press the [Menu] button. When [Disable] is displayed, the next document is scanned with paper protection disabled. After that, the subsequent documents are scanned according to the paper protection setting of either scanner driver, Software Operation Panel, or operator panel.

HINT

If paper protection is set off frequently, refer to "[Paper protection is set off frequently.](#)" (page 145).

Chapter 6 Daily Care

This chapter describes how to clean the scanner.

WARNING

Do not use aerosol spray or spray that contains alcohol. Paper dust blown up by strong air from the spray may enter inside the scanner which may cause the scanner to fail or malfunction. Also note that sparks generated by static electricity may cause a fire.

CAUTION

The glasses inside the ADF become very hot when the scanner is being used. Before you start cleaning the inside, make sure to turn off the power, unplug the power cable and wait at least 15 minutes for the ADF glass to cool down.

6.1 Cleaning Materials and Locations that Require Cleaning

Cleaning Materials

For more information about the cleaning materials, contact your FUJITSU scanner dealer or an authorized FUJITSU scanner service provider.

| Name | Part No. | Notes |
|---|------------------------|--|
| Cleaner F1  | PA03950-0352 | 100 ml Moisten a cloth or Cleaning Paper with this liquid to wipe the scanner clean. It may take a long time to dry if an excessive amount is used. Use it in small quantity. Wipe off the cleaner completely to leave no residue on the cleaned parts. |
| Cleaning Paper  | CA99501-0012 | 10 sheets Use this non-woven sheet with Cleaner F1. |
| Cleaning Wipe  | PA03950-0419 | 24 packets Pre-moistened with Cleaner F1. It can be used instead of moistening a cloth with Cleaner F1. |
| Cotton swab | Commercially available | |
| Dry cloth | | |

ATTENTION

In order to use the cleaning materials safely and correctly, read the precautions on each product thoroughly.

ATTENTION

Cleaning cycles may vary depending on the condition of the documents. Also, cleaning must be performed more frequently when the following types of documents are scanned:

- Smooth-faced documents such as coated paper
- Documents with printed text/graphics that almost cover the entire surface
- Chemically-treated documents such as carbonless paper
- Documents containing a large amount of calcium carbonate
- Documents written in lead pencil
- Documents on which the toner is not sufficiently fused

6.2 Cleaning the Outside

The outside of the scanner, including the ADF paper chute (feeder) and the stacker, should be cleaned with either a piece of dry cloth, a cloth moistened with Cleaner F1/mild detergent, or a sheet of Cleaning Wipe.

ATTENTION

- To avoid deformation and discoloration, never use paint thinner or any other organic solvents.
- Be careful not to let any moisture or water inside the scanner during cleaning.
- It may take a long time to dry if an excessive amount of Cleaner F1/mild detergent is used. Use it in small quantity. Wipe off the cleaner completely to leave no residue on the cleaned parts.

6.3 Cleaning the Inside

Cleaning the ADF (with Cleaning Paper)

The ADF can be cleaned with a sheet of Cleaning Paper moistened with Cleaner F1.

As the scanner continues to feed the documents, paper dust will accumulate inside the ADF and it may cause scanning errors.

Cleaning should be performed approximately every 5,000 sheets scanned. Note that this guideline varies depending on the types of documents you scan. For instance, it may be necessary to clean the scanner more frequently when you scan documents on which the toner is not sufficiently fused.

ATTENTION

- Do not use water or mild detergent to clean the ADF.
- It may take a long time to dry if an excessive amount of Cleaner F1 is used. Use it in small quantity.

- 1 Turn on the scanner.
For details, refer to ["1.3 Turning the Power ON/OFF" \(page 24\)](#).
⇒ The [Ready] screen is displayed on the LCD.
- 2 Press the [Menu] button.
⇒ The [Settings Menu] screen is displayed on the LCD.
- 3 Press the [Δ] or [∇] button and select [2: Cleaning], then press the [Scan/Enter] button to confirm.
⇒ The [Cleaning] screen is displayed on the LCD.

- 4 Select [1: Cleaning Sheet] by the [Δ] or [∇] button, and press the [Scan/Enter] button to confirm.

⇒ A message is displayed on the LCD.

ATTENTION

Do not perform scanning from the scanner driver during cleaning.

- 5 Spray the Cleaning Paper with Cleaner F1.
- 6 Pull out the chute extensions according to the length of the Cleaning Paper.
For details, refer to ["1.6 Setting Up the ADF Paper Chute \(Feeder\)" \(page 28\)](#).
- 7 Bring down the stacker, slide out stacker extension 1 and stacker extension 2 towards you, and lift up the stopper according to the length of the document.
For details, refer to ["1.7 Setting Up the Stacker" \(page 29\)](#).
- 8 Load the Cleaning Paper in the ADF paper chute (feeder).

- 9** Adjust the side guides to the width of the Cleaning Paper. Do not leave space between the side guides and the Cleaning Paper. Otherwise, the Cleaning Paper may be fed skewed.

- 10** Press the [Scan/Enter] button.
⇒ The Cleaning Paper is fed and ejected onto the stacker.

11 Reset the cleaning counter.

Reset the counter by performing one of the following actions:

- Reset the counter in [4: Consumable counters] on the [Settings Menu] screen of the operator panel. For details, refer to ["4.2 Settings Menu" \(page 61\)](#).
- Reset the counter in the Software Operation Panel. For details, refer to ["Resetting the sheet counters" \(page 175\)](#).

Cleaning the ADF (with cloth)

The ADF can be cleaned with a piece of cloth moistened with Cleaner F1, or a sheet of Cleaning Wipe.

As the scanner continues to feed the documents, paper dust will accumulate inside the ADF and it may cause scanning errors.

Cleaning should be performed approximately every 5,000 sheets scanned. Note that this guideline varies depending on the types of documents you scan. For instance, it may be necessary to clean the scanner more frequently when you scan documents on which the toner is not sufficiently fused.

The glasses inside the ADF become very hot when the scanner is being used.

Before you start cleaning the inside, make sure to turn off the power, unplug the power cable and wait at least 15 minutes for the ADF glass to cool down.

ATTENTION

- Do not use water or mild detergent to clean the ADF.
- It may take a long time to dry if an excessive amount of Cleaner F1 is used. Use it in small quantity. Wipe off the cleaner completely to leave no residue on the cleaned parts.

- 1** Turn off the scanner and wait for at least 15 minutes. For details, refer to ["1.3 Turning the Power ON/OFF" \(page 24\)](#).
- 2** Open the ADF. For details, refer to ["1.4 Opening/Closing the ADF" \(page 26\)](#).

When opening, the ADF might close accidentally. Be careful not to have your fingers caught when the ADF closes.

- 3** Clean the following locations with a cloth moistened with Cleaner F1 or a sheet of Cleaning Wipe.

Glass (× 2)

Brake roller (× 2)

Remove the roller from the scanner.

For details about removing the brake roller, refer to "[7.2 Replacing the Brake Roller](#)" (page 116).

Gently wipe off any dirt or dust along the grooves, taking care not to damage the roller surface.

Pick roller (× 2)

Gently wipe off any dirt or dust along the grooves as you rotate the roller manually, taking care not to damage the roller surface. Make sure that it is wiped properly because black residue on the roller will affect the feeding performance.

Plastic idler roller (× 2)

Gently wipe off any dirt or dust on the surface of the rollers. Make sure that it is wiped properly because black residue on the roller will affect the feeding performance.

Rubber idler roller (× 2)

Gently wipe off any dirt or dust on the surface of the rollers. Make sure that it is wiped properly because black residue on the roller will affect the feeding performance. When wiping, be careful not to damage the sponge that is attached to the middle of the rubber idler roller.

Glass (× 2)

Gently wipe the dirt and dust off the surface of the glass sections.

ATTENTION

Vertical streaks may appear on the scanned image when the glass is dirty.

Ultrasonic sensor (× 2)/Document sensor (× 8)

Gently wipe the dirt and dust off the surface of the ultrasonic/document sensors.

HINT

If it is difficult to clean, use a cotton swab.

Feed roller (× 2)/Eject roller (× 2)

The power must be turned on to rotate the feed/eject rollers.

- 1 Turn on the scanner.
For details, refer to "1.3 Turning the Power ON/OFF" (page 24).
⇒ The [Ready] screen is displayed on the LCD.
- 2 Press the [Menu] button.
⇒ The [Settings Menu] screen is displayed on the LCD.
- 3 Press the [△] or [▽] button and select [2: Cleaning], then press the [Scan/Enter] button to confirm.
⇒ The [Cleaning] screen is displayed on the LCD.
- 4 Press the [△] or [▽] button and select [2: Roller Wipe], then press the [Scan/Enter] button to confirm.
⇒ A message is displayed on the LCD.

ATTENTION

Do not perform scanning from the scanner driver during cleaning.

- 5 Open the ADF.
For details, refer to "1.4 Opening/Closing the ADF" (page 26).

CAUTION

When opening, the ADF might close accidentally. Be careful not to have your fingers caught when the ADF closes.

- 6 When you press the [Scan/Enter] button, the feed/eject rollers rotate a certain amount.

When you press the [Scan/Enter] button, the feed/eject rollers rotate at the same time. Be careful not to touch the rollers with your hand while they are rotating.

- 7 Put a piece of cloth moistened with Cleaner F1 or a sheet of Cleaning Wipe against the roller surface, and wipe horizontally. Wipe off any dirt or dust on the surface by pressing the [Scan/Enter] button to rotate the rollers. Make sure that it is wiped properly because black residue on the roller will affect the feeding performance. As a guideline, pressing the [Scan/Enter] button seven times will rotate the feed/eject rollers one revolution.

4 Close the ADF.

For details, refer to ["1.4 Opening/Closing the ADF" \(page 26\)](#).

CAUTION

Be careful not to have your fingers caught when closing the ADF.

ATTENTION

Confirm that the ADF is closed properly. Otherwise, the document may not be fed into the ADF.

5 Reset the cleaning counter.

Reset the counter by performing one of the following actions:

- Reset the counter in [4: Consumable counters] on the [Settings Menu] screen of the operator panel. For details, refer to ["4.2 Settings Menu" \(page 61\)](#).
- Reset the counter in the Software Operation Panel. For details, refer to ["Resetting the sheet counters" \(page 175\)](#).

Cleaning the Flatbed (fi-7260/fi-7280)

The flatbed should be cleaned with a piece of cloth moistened with Cleaner F1, or a sheet of Cleaning Wipe.

- 1 Open the document cover.
For details, refer to "1.5 Opening/Closing the Document Cover (fi-7260/fi-7280)" (page 27).
- 2 Clean the following locations with a cloth moistened with Cleaner F1 or a sheet of Cleaning Wipe.

ATTENTION

Be careful not to let the cleaner in between the document bed and the plastic frame.

- 3 Wait for the cleaned parts to dry.
- 4 Close the document cover.
For details, refer to "1.5 Opening/Closing the Document Cover (fi-7260/fi-7280)" (page 27).

6.4 Cleaning the Carrier Sheet

The Carrier Sheet should be cleaned with either a piece of dry cloth, a cloth moistened with Cleaner F1, or a sheet of Cleaning Wipe.

Gently wipe the dirt and dust off the surface and the inside of the Carrier Sheet.

As you keep using the Carrier Sheet, dirt and dust will accumulate on the surface and the inside.

Clean it regularly because it may result in scanning errors.

ATTENTION

- Make sure that the Carrier Sheet is not creased.
- To avoid deformation and discoloration, never use paint thinner or any other organic solvents.
- Do not use force to rub against the Carrier Sheet because it may be damaged or deformed.
- After cleaning the inside, do not close the Carrier Sheet until it is completely dry.
- The Carrier Sheet should be replaced approximately every 500 scans.

For information on purchasing the Carrier Sheet, contact your FUJITSU scanner dealer or an authorized FUJITSU scanner service provider.

[TOP](#)[Contents](#)[Index](#)[Introduction](#)[Scanner Overview](#)[How to Load Documents](#)[Configuring the Scan Settings](#)[How to Use the Operator Panel](#)[Various Ways to Scan](#)[Daily Care](#)[Replacing the Consumables](#)[Troubleshooting](#)[Operational Settings](#)[Appendix](#)[Glossary](#)

Chapter 7 Replacing the Consumables

This chapter describes how to replace the consumables for the scanner.

CAUTION

The glasses inside the ADF become very hot when the scanner is being used. Before you replace the consumables, make sure to turn off the power, unplug the power cable and wait at least 15 minutes for the ADF glass to cool down.

| | |
|---|-----|
| 7.1 Consumables and Replacement Cycles..... | 115 |
| 7.2 Replacing the Brake Roller..... | 116 |
| 7.3 Replacing the Pick Roller | 118 |

7.1 Consumables and Replacement Cycles

The following table shows the consumables used for the scanner.

| Name | Part No. | Suggested replacement cycle |
|---|--------------|-----------------------------|
| BRAKE ROLLER  | PA03670-0001 | 200,000 sheets or one year |
| PICK ROLLER  | PA03670-0002 | 200,000 sheets or one year |

Consumables need to be replaced periodically. It is recommended that you keep a stock of new consumables and replace them before it reaches the end of the consumable life. The scanner records the number of sheets scanned after replacing the consumables (brake roller/pick roller), which allows you to check the status on each consumable. For details, refer to "[9.4 Settings Related to Sheet Counters](#)" (page 174).

Note that the suggested replacement cycles are guidelines for using A4 (80 g/m² [20 lb]) wood-free or wood-containing paper, as these cycles vary depending on the type of documents scanned and how often the scanner is used and cleaned.

Only use the specified consumables.

To purchase the consumables, contact your FUJITSU scanner dealer or an authorized FUJITSU scanner service provider.

7.2 Replacing the Brake Roller

Replace the brake roller in following procedure.

- 1 Remove all documents from the ADF paper chute (feeder).
- 2 Open the ADF.
For details, refer to "1.4 Opening/Closing the ADF" (page 26).

CAUTION

When opening, the ADF might close accidentally. Be careful not to have your fingers caught when the ADF closes.

- 3 Remove the brake roller.
 - 1 Hold both ends of the cover, and open it in the direction of the arrow.

- 2 Lift the right side of the roller first, then pull out the shaft from the slot on the left.

- 4 Remove the brake roller from its shaft.

- 5** Attach a new brake roller on the shaft.
Insert the protrusion on the shaft into the slot.

- 6** Attach the shaft.
1 Insert the left end of the shaft into the hole in accordance with the hole shape, and then attach the right side of the shaft.

- 2 Close the cover.

ATTENTION

Confirm that the brake roller is installed properly. Otherwise, it may cause feeding errors such as paper jams.

- 7** Close the ADF.
For details, refer to ["1.4 Opening/Closing the ADF" \(page 26\)](#).

Be careful not to have your fingers caught when closing the ADF.

- 8** Reset the brake roller counter.
Reset the counter by performing one of the following actions:
- Reset the counter in [4: Consumable counters] on the [Settings Menu] screen of the operator panel.
For details, refer to ["4.2 Settings Menu" \(page 61\)](#).
 - Reset the counter in the Software Operation Panel.
For details, refer to ["Resetting the sheet counters" \(page 175\)](#).

7.3 Replacing the Pick Roller

Replace the pick roller in following procedure.

- 1 Remove all documents from the ADF paper chute (feeder).
- 2 Remove the ADF paper chute (feeder).
Hold both ends of the ADF paper chute (feeder), then lift it in the direction of arrow ① and pull it out in the direction of arrow ②.

- 3 Open the ADF.
For details, refer to "1.4 Opening/Closing the ADF" (page 26).

When opening, the ADF might close accidentally. Be careful not to have your fingers caught when the ADF closes.

- 4 Remove the pick roller.
 - 1 Open the sheet guide by lifting the tab.

- 2 Rotate the bushing on the shaft.

- 3 Lift up the bushing in direction ① (about 5 mm), and slide the shaft in direction ② to pull out the leading end from the slot, then lift the shaft in direction ③ to remove it.

ATTENTION

Be careful not to touch the gear near the bushing on the shaft as it contains grease.

5 Remove the two pick rollers from the shaft one at a time.

- 1 Pull out the pick roller from the shaft as you lift the retaining clip.

- 2 Pull out the other pick roller from the shaft as you lift the retaining clip.

6 Attach the two new pick rollers on the shaft on at a time.

- 1 Insert the retaining clip of the pick roller into the slot.

- 2 Insert the retaining clip of the other pick roller into the slot.

ATTENTION

Confirm that the pick roller is installed properly. Otherwise, it may cause feeding errors such as paper jams. Make sure to insert the pick roller until it locks in place.

7 Attach the shaft.

- 1 Insert the left end of the shaft into the slot, and lower the other end gradually.

- 2 Rotate the bushing to lock the shaft.

- 3 Close the sheet guide. Make sure that both ends of the sheet guide are locked firmly.

ATTENTION

Confirm that the pick roller is installed properly. Otherwise, it may cause feeding errors such as paper jams.

8 Close the ADF.

For details, refer to "[1.4 Opening/Closing the ADF](#)" (page 26).

Be careful not to have your fingers caught when closing the ADF.

9 Attach the ADF paper chute (feeder).

Insert the tabs into the slots on the back of the scanner in the direction of arrow ①, and tilt the ADF paper chute (feeder) downwards in the direction of arrow ② until it locks in place.

ATTENTION

Do not leave any space between the ADF paper chute (feeder) and the scanner.

10 Reset the pick roller counter.

Reset the counter by performing one of the following actions:

- Reset the counter in [4: Consumable counters] on the [Settings Menu] screen of the operator panel. For details, refer to "[4.2 Settings Menu](#)" (page 61).
- Reset the counter in the Software Operation Panel. For details, refer to "[Resetting the sheet counters](#)" (page 175).

Chapter 8 Troubleshooting

This chapter explains about the countermeasures against paper jams and other troubles, items to check before contacting your scanner service provider, and how to read the product labels on the scanner.

ATTENTION

For details about other errors/troubles that are not covered in this chapter, refer to the scanner driver's Help or the Error Recovery Guide.

| | |
|---|-----|

8.1 Paper Jam

When your document is jammed inside the scanner, remove the document in the following procedure.

- Do not use force to pull out the jammed document, and make sure to open the ADF first.
- Be careful not to touch any sharp parts upon removing jammed documents.
- Be careful not to get your accessories (e.g. ties, necklaces) or hair caught inside the scanner.
- The glass surface may become extremely hot during operation.

1 Remove all documents from the ADF paper chute (feeder).

2 Open the ADF.
For details, refer to ["1.4 Opening/Closing the ADF" \(page 26\)](#).

When opening, the ADF might close accidentally. Be careful not to have your fingers caught when the ADF closes.

3 Remove the jammed document.

ATTENTION

- Make sure to check the documents and the paper path thoroughly. Remove any metal objects such as staples and paper clips to prevent paper jams.
- Be careful not to damage the glass surface and the guides when removing documents with metal objects such as staples or paper clips.

4 Close the ADF.

For details, refer to ["1.4 Opening/Closing the ADF" \(page 26\)](#).

Be careful not to have your fingers caught when closing the ADF.

ATTENTION

- Confirm that the ADF is closed properly. Otherwise, the document may not be fed into the ADF.
- Occasionally when scanning is complete or canceled, documents may remain in the ADF without any error message displayed. In that case, remove the documents by following the above steps 1 to 4.
- To continue scanning, check which page you want to resume from, and load the document in the ADF paper chute (feeder) again.

8.2 Error Indications on Operator Panel

When an error occurs, the LED indicator lights in orange. For temporary errors, the LCD displays an error code beginning with the letter "J" or "U". For device errors, an error code beginning with the letter "E", "F", "C", "H", "A" or "L" is displayed. Temporary errors can be recovered by the operator, whereas device errors require a service engineer to perform recovery. You can clear the error display by pressing the [Stop/Clear] button. Note that a paper jam message disappears after a certain period of time elapses if there are no documents ([Ready] status) in the scanner.

If the Error Recovery Guide is installed in the computer, the Error Recovery Guide window appears when the Windows operating system is started up. When an error or a malfunction occurs, the Error Recovery Guide window displays related information such as the name of the error and the error code (number).

Write down the information shown in the dialog box and click the [More Info] button to check for troubleshooting methods.

HINT

The Error Recovery Guide is included in the Setup DVD-ROM. For details about installation, refer to "Installing the Software" in Getting Started.

Temporary Errors

The following are lists of temporary errors which can be recovered by operators.

■ Paper feeding errors

Error codes beginning with the letter "J" are displayed.

| Error code | Error messages | Resolution |
|------------|--|---|
| J0:37 | Paper Protection Remove and check the document, and then try again carefully. | <ol style="list-style-type: none"> 1 Remove the jammed document. For details, refer to "8.1 Paper Jam" (page 123). 2 Check if the document is suitable for scanning by ADF. | Error code | Error messages | Resolution |
|------------|---|--|
| J8:01 | Sensor(s) dirty Clean the Pick Sensor. | Open the ADF and clean the eight document sensors. For details, refer to "Chapter 6 Daily Care" (page 103). |
| J8:04 | Sensor(s) dirty Clean the READ-TOP Sensor. | |

■ Transport lock, cover open, and print errors

Error codes beginning with the letter "U" are displayed.

| Error code | Error messages | Resolution |
|------------|---|---|
| U0:10 | Transport lock error Unlock the transport lock switch. (fi-7260/fi-7280) | Unlock the transport lock switch. For details, refer to "Installing the Scanner" in Getting Started. |
| U4:40 (*1) | ADF open | Close the ADF and reload the documents. |
| U5:4A (*2) | Imprinter Cover Open (only when imprinter is installed) | Close the print section of the imprinter, and load the document again. |
| U6:B4 | Print cartridge not installed Check if the Print Cartridge is mounted correctly. (only when imprinter is installed) | This error is related to the imprinter. For details, refer to the fi-718PR Imprinter Operator's Guide. |

| Error code | Error messages | Resolution |
|------------|---|--|
| U7:B9 | Imprinting area error (only when imprinter is installed) | Adjust the imprinting start position and the imprinter strings to fit the imprinting area in the document. For details, refer to "fi-718PR Imprinter Operator's Guide". |

*1: When you open the ADF while the scanner is in standby, only an error message will appear without an error code.

Also, note that buttons on the operator panel are disabled while the ADF is open.

*2: When you open the imprinter print section while the scanner is in standby, only an error message will appear without an error code.

Also, note that buttons on the operator panel are disabled while the imprinter print section is open.

Device Errors

The following are lists of device errors which require troubleshooting by a service engineer.

Internal and optical errors

Error codes beginning with the letter "E" are displayed.

| Error code | Error messages | Resolution |
|------------|--|--|
| E0:87 | FB carrier error Unlock the transport lock switch. (fi-7260/fi-7280) | Unlock the transport lock switch. For details, refer to "Installing the Scanner" in Getting Started. |
| E1:7E | Optical error (FB) If the problem persists after turning the power back on, please inform your service provider of the above error code. (fi-7260/fi-7280) | <ol style="list-style-type: none"> 1 Confirm that the transport lock switch is not locked. For details, refer to "Installing the Scanner" in Getting Started. 2 Turn the scanner off then back on. If the problem persists, write down the displayed error code and contact your FUJITSU scanner dealer or an authorized FUJITSU scanner service provider. |

| Error code | Error messages | Resolution |
|------------|--|---|
| E2:74 | Optical error (ADF Front) If the problem persists after turning the power back on, please inform your service provider of the above error code. | 1 Clean the glass section. For details, refer to " Chapter 6 Daily Care " (page 103). 2 Turn the scanner off then back on. If the problem persists, write down the displayed error code and contact your FUJITSU scanner dealer or an authorized FUJITSU scanner service provider. |
| E3:75 | Optical error (ADF Back) If the problem persists after turning the power back on, please inform your service provider of the above error code. | |
| E6:D3 | Operator Panel error If the problem persists after turning the power back on, please inform your service provider of the above error code. | Turn the scanner off then back on. If the problem persists, write down the displayed error code and contact your FUJITSU scanner dealer or an authorized FUJITSU scanner service provider. |
| E7:D2 | EEPROM error If the problem persists after turning the power back on, please inform your service provider of the above error code. | |

■ Overrun error

Error codes beginning with the letter "F" are displayed.

| Error code | Error messages | Resolution |
|------------|---|---|
| F4:C2 | Background switching mechanism error (ADF Front) If the problem persists after turning the power back on, please inform your service provider of the above error code. | Turn the scanner off then back on. If the problem persists, write down the displayed error code and contact your FUJITSU scanner dealer or an authorized FUJITSU scanner service provider. |
| F4:C3 | Background switching mechanism error (ADF Back) If the problem persists after turning the power back on, please inform your service provider of the above error code. | |

■ Chip error

Error codes beginning with the letter "C" are displayed.

| Error code | Error messages | Resolution |
|------------|--|---|
| C0:E5 | Memory error If the problem persists after turning the power back on, please inform your service provider of the above error code. | Turn the scanner off then back on. If the problem persists, write down the displayed error code and contact your FUJITSU scanner dealer or an authorized FUJITSU scanner service provider. |
| C6:F9 | USB error If the problem persists after turning the power back on, please inform your service provider of the above error code. | |
| C8:F2 | Internal communication error of the scanner If the problem persists after turning the power back on, please inform your service provider of the above error code. | |

■ Motor circuit error

Error codes beginning with the letter "H" are displayed.

| Error code | Error messages | Resolution |
|-------------------------|---|---|
| H0:83 H2:81 H8:88 | Motor circuit error If the problem persists after turning the power back on, please inform your service provider of the above error code. | Turn the scanner off then back on. If the problem persists, write down the displayed error code and contact your FUJITSU scanner dealer or an authorized FUJITSU scanner service provider. |
| H6:B1 | Imprinter system error If the problem persists after turning the power back on, please inform your service provider of the above error code. | |
| H7:84 | Lamp circuit error If the problem persists after turning the power back on, please inform your service provider of the above error code. | |

■ Option error (when imprinter is installed)

Error codes beginning with the letter "A" are displayed.

| Error code | Error messages | Resolution |
|------------|--|---|
| A0:B2 | Imprinter error (RAM) If the problem persists after turning the power back on, please inform your service provider of the above error code. | <ol style="list-style-type: none"> 1 Confirm that the EXT cable of the imprinter is connected properly to the EXT connector on the back of the scanner. For details about the EXT cable, refer to "Back" (page 17). For details about how to connect the EXT cable, refer to the fi-718PR Imprinter Operator's Guide. 2 Confirm that the print cartridge is installed correctly. For details, refer to the fi-718PR Imprinter Operator's Guide. 3 Turn the scanner off then back on. If the problem persists, write down the displayed error code and contact your FUJITSU scanner dealer or an authorized FUJITSU scanner service provider. |
| A1:B3 | Imprinter error (communication timeout) If the problem persists after turning the power back on, please inform your service provider of the above error code. | |
| A2:B5 | Imprinter error (print head) If the problem persists after turning the power back on, please inform your service provider of the above error code. | |
| A3:B6 | Imprinter error (EEPROM) If the problem persists after turning the power back on, please inform your service provider of the above error code. | |
| A4:B8 | Imprinter error (ROM) If the problem persists after turning the power back on, please inform your service provider of the above error code. | |

■ Sensor error

Error codes beginning with the letter "L" are displayed.

| Error code | Error messages | Resolution |
|----------------|---|---|
| L0:11 L2:13 | Sensor error If the problem persists after turning the power back on, please inform your service provider of the above error code. | <ol style="list-style-type: none"> 1 Clear any paper dust around the document sensors. 2 Turn the scanner off then back on. If the problem persists, write down the displayed error code and contact your FUJITSU scanner dealer or an authorized FUJITSU scanner service provider. |
| L6:1B | Sensor error If the problem persists after turning the power back on, please inform your service provider of the above error code. | <ol style="list-style-type: none"> 1 Clear any paper dust around the ultrasonic sensors. 2 Turn the scanner off then back on. If the problem persists, write down the displayed error code and contact your FUJITSU scanner dealer or an authorized FUJITSU scanner service provider. |

8.3 Troubleshooting

This section describes the resolutions for troubles that may occur while using the scanner. Please check the following items before you request a repair. If the problem persists, check each item in ["8.4 Before You Contact the Scanner Service Provider" \(page 154\)](#), and then contact your FUJITSU scanner dealer or an authorized FUJITSU scanner service provider.

The following are some examples of troubles that you may experience.

| Symptoms |
|--|
| "Scanner cannot be powered ON." (page 133) |
| "The LCD and the [Power] button light switch OFF." (page 134) |
| "Scanning does not start." (page 135) |
| "Scanning takes a long time." (page 136) |
| "Image quality is poor when scanning pictures/photos in black & white." (page 137) |
| "Quality of scanned text or lines is unsatisfactory." (page 138) |
| "Images are distorted or not clear." (page 139) |
| "Vertical streaks appear on the scanned image." (page 140) |
| "An error (error code "U0:10", "U4:40" or "U5:4A") is already displayed in the LCD after power-on." (page 141) |
| "Multifeed error occurs frequently." (page 142) |
| "Situation in which the document is not fed into the ADF occurs frequently." (page 144) |

| Symptoms |
|--|
| "Paper protection is set off frequently." (page 145) |
| "Paper jams/pick errors occur frequently." (page 147) |
| "Scanned images turn out elongated." (page 148) |
| "A shadow appears at the top or the bottom of the scanned image." (page 149) |
| "There are black traces on the document." (page 150) |
| "The Carrier Sheet is not fed smoothly. / Paper jams occur." (page 151) |
| "Part of the image appears missing when using the Carrier Sheet." (page 153) |

Chapter 9 Operational Settings

This chapter explains how to use the Software Operation Panel to configure the scanner settings.

| | |
|--|-----|
| 9.1 Starting Up the Software Operation Panel | 158 |
| 9.2 Password Setting..... | 160 |
| 9.3 Configuration Items | 166 |
| 9.4 Settings Related to Sheet Counters | 174 |
| 9.5 Settings Related to Scanning | 179 |
| 9.6 Settings Related to Multifeed Detection | 192 |
| 9.7 Settings Related to Waiting Time..... | 198 |
| 9.8 Settings Related to Power ON/OFF | 200 |
| 9.9 Settings Related to Scanner Maintenance | 201 |

9.1 Starting Up the Software Operation Panel

The Software Operation Panel is installed together with the PaperStream IP driver.

This application allows you to configure various settings such as the operation of the scanner and managing the consumables.

ATTENTION

- Do not use the operator panel while the Software Operation Panel is running.
- If you connect multiple scanners, the second scanner and so forth will not be recognized. Connect only one scanner at a time.

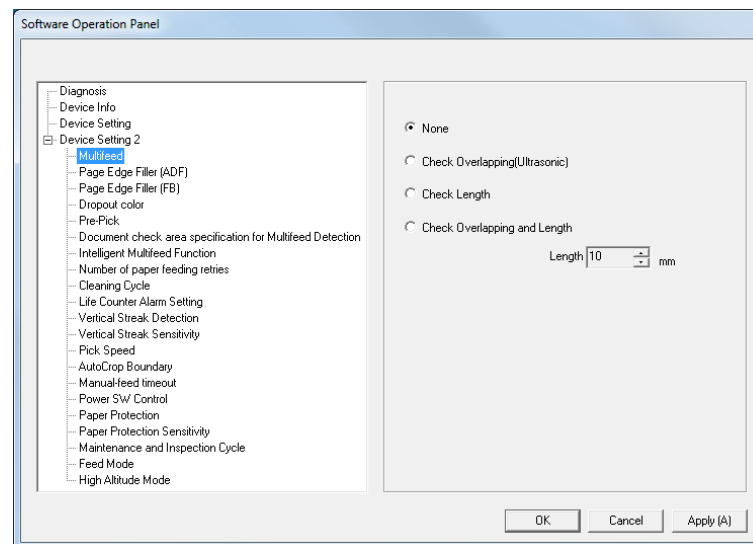

1 Confirm that the scanner is connected to the computer, then turn on the scanner.

For details about how to connect the scanner to the computer, refer to "Connecting the Cables" in Getting Started.

For details about how to turn on the scanner, refer to ["1.3 Turning the Power ON/OFF"](#) (page 24).

2 Display the [Software Operation Panel] dialog box.

- Windows Server 2008 R2/Windows 7
Click [Start] menu → [All Programs] → [fi Series] → [Software Operation Panel].
- Windows Server 2012
Right-click the Start screen, and select [All apps] on the app bar → [Software Operation Panel] under [fi Series].
- Windows Server 2012 R2/Windows 8.1
Click [↓] on the lower left side of the Start screen → [Software Operation Panel] under [fi Series].
To display [↓], move the mouse cursor.
- Windows 10/Windows Server 2016/Windows Server 2019/Windows Server 2022
Click [Start] menu → [fi Series] → [Software Operation Panel].
- Windows 11
Click [Start] menu → [All apps] → [fi Series] → [Software Operation Panel].

9.2 Password Setting

By setting a password, the Software Operation Panel can run in [View Only mode] which allows users to only view the scanner settings.

The scanner settings can be configured if no password is set. In order to prevent unnecessary changes to the settings, a password can be used to restrict user operations.

Setting a Password

Set a password in the following procedure.

- 1 Right-click the Software Operation Panel icon in the notification area, and select [Password Setting] from the menu.

⇒ The [Password setting] dialog box appears.

- 2 Enter a new password then again to confirm, and click the [OK] button.

Up to 32 characters can be used for the password.

Note that only alphanumeric characters (a to z, A to Z, 0 to 9) are allowed.

⇒ A confirmation message appears.

- 3 Click the [OK] button.
- ⇒ The password is set.

Setting [View Only mode]

Set the Software Operation Panel to [View Only mode] in the following procedure.

- 1 Set a password.
For details, refer to "Setting a Password" (page 160).
- 2 Right-click the Software Operation Panel icon in the notification area, and select [View Only mode] from the menu.

⇒ The Software Operation Panel enters [View Only mode].

HINT

In [View Only mode], a check mark appears next to [View Only mode] in the menu that is displayed by right-clicking the Software Operation Panel icon in the notification area.

Clearing [View Only mode]

Clear [View Only mode] in the following procedure.

- 1 Right-click the Software Operation Panel icon in the notification area, and select [View Only mode] from the menu.

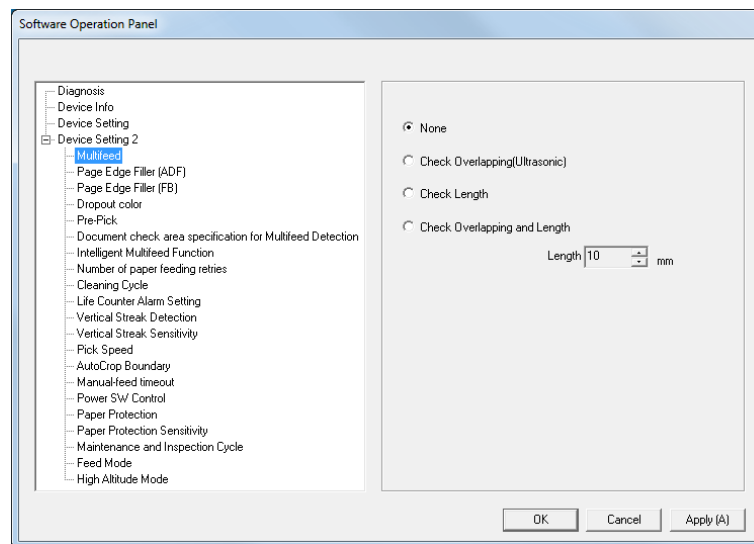

⇒ The [Password setting] dialog box appears.

- 2 Enter the current password and click the [OK] button.

⇒ [View Only mode] is cleared, and the scanner settings can now be changed.

HINT

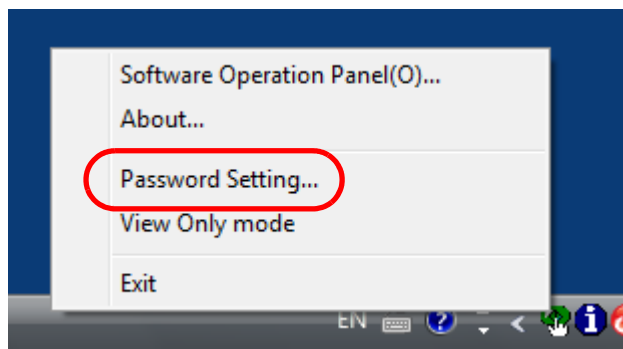

When you exit [View Only mode], the check mark next to [View Only mode] disappears from the menu that is displayed by right-clicking the Software Operation Panel icon in the notification area.

Changing the Password

Change the password in the following procedure.

- 1 Right-click the Software Operation Panel icon in the notification area, and select [Password Setting] from the menu.

⇒ The [Password setting] dialog box appears.

- 2 Enter the current password and click the [OK] button.

⇒ The [Password setting] dialog box appears.

- 3 Enter a new password then again to confirm, and click the [OK] button.

Up to 32 characters can be used for the password.

Note that only alphanumeric characters (a to z, A to Z, 0 to 9) are allowed.

⇒ A confirmation message appears.

- 4 Click the [OK] button.

⇒ The password is set.

Clearing the Password

Clear the password in the following procedure.

- 1 Right-click the Software Operation Panel icon in the notification area, and select [Password Setting] from the menu.

⇒ The [Password setting] dialog box appears.

- 2 Enter the current password and click the [OK] button.

⇒ The [Password setting] dialog box appears.

- 3 Leave both fields blank and click the [OK] button.

⇒ A confirmation message appears.

- 4 Click the [OK] button.
⇒ The password is cleared.

Resetting the Password

In case you forgot your password, it can be reset in the following procedure.

- 1 Right-click the Software Operation Panel icon in the notification area, and select [Password Setting] from the menu.

⇒ The [Password setting] dialog box appears.

- 2 Enter the default password which is "fi-scanner", and click the [OK] button.

⇒ The [Password setting] dialog box appears.

- 3 Enter a new password then again to confirm, and click the [OK] button.

Up to 32 characters can be used for the password.

Note that only alphanumeric characters (a to z, A to Z, 0 to 9) are allowed.

⇒ A confirmation message appears.

- 4 Click the [OK] button.

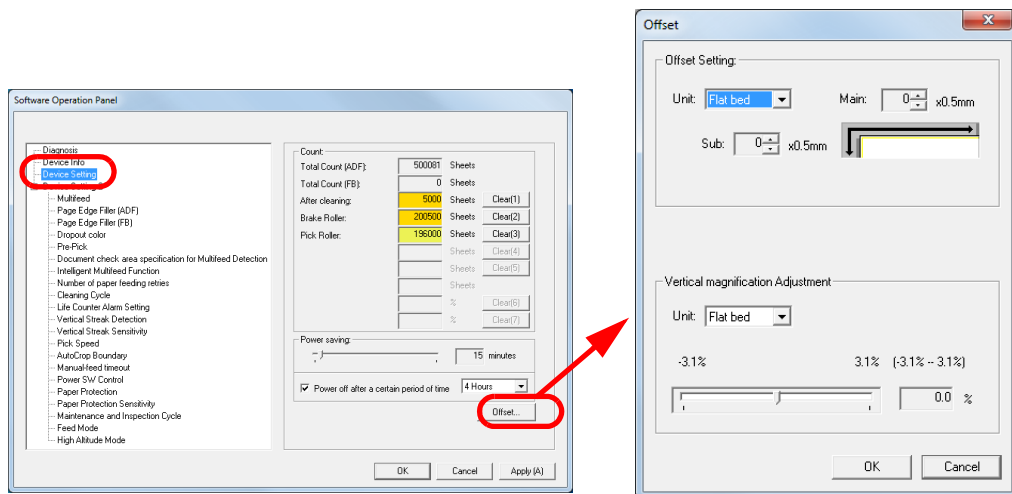

⇒ The password is set.

9.3 Configuration Items

The Software Operation Panel allows the configuration of the following settings for the scanner that is connected to the computer.

Device Setting

- 1 Start up the Software Operation Panel.
For details, refer to "9.1 Starting Up the Software Operation Panel" (page 158).
- 2 From the listing on the left, select [Device Setting].

Items that can be configured in the above dialog box are shown in the next page.

Appendix

Glossary

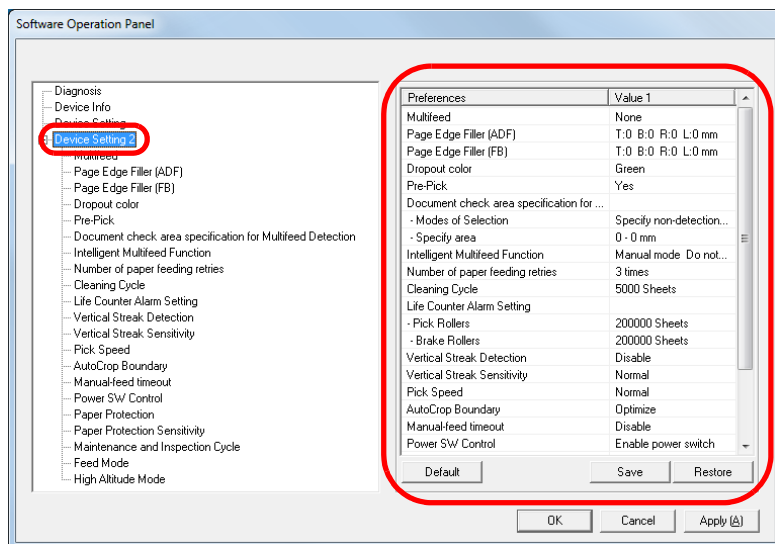

| Item | Description | Parameter/Value | Factory Default |
|---|---|---|-----------------|
| Count (page 174) | Check the counters to determine when to replace the consumables and to perform cleaning. Also use it to reset the counter when you have replaced the consumables or performed cleaning. | Total Page Count(ADF) / Total Page Count(FB) (*1)/ After cleaning/Brake Roller/Pick Roller | 0 |
| | | Remaining Ink (when the imprinter is installed) | (*2) |
| Power saving (page 199) | Specify the waiting time before entering power saving mode. This setting can also be configured in the operator panel. Power off after a certain period of time: Select to set the scanner to turn the power off automatically if the scanner is left on for a certain period of time without being used. Specify the timeout period for the scanner to be automatically turned off. This setting can also be configured in the operator panel. | Range: 5 to 115 min. (in increments of 5) | 15 min. |
| | | [Power off after a certain period of time] check box | Selected |
| Offset Setting (page 179) | Adjust the position to start the scan on the selected scanning side(s). | Unit: Flat bed (*1) / ADF(front) / ADF(back) | Main/Sub: 0 mm |
| | | Main/Sub: -2 to 2 mm (in increments of 0.5) | |
| Vertical magnification Adjustment (page 179) | Adjust the magnification level in feed direction for the selected scanning method. | Unit: Flat bed (*1) / ADF Range: -3.1 to 3.1% (in increments of 0.1) | 0% |

*1: Displayed when using the fi-7260 or fi-7280.

*2: Displayed when the imprinter is installed.

Device Setting 2

- 1 Start up the Software Operation Panel.
For details, refer to "9.1 Starting Up the Software Operation Panel" (page 158).
- 2 From the listing on the left, select [Device Setting 2].

The settings that are currently configured in [Device Setting 2] are listed on the right of the dialog box.

Items that can be configured in the above dialog box are shown in the next page.

HINT

- The Software Operation Panel settings can be restored to the factory default.
To restore the settings to the factory default, click the [Default] button. After a message is displayed, click the [OK] button. Note that the settings you have configured will be cleared.
- The Software Operation Panel settings can be backed up.
To back up the settings, click the [Save] button, then specify the file name and click the [Save] button in the displayed dialog box.
- You can use a backup file of the Software Operation Panel settings to restore the settings on other scanners only if the scanner type is the same.
To restore the settings, click the [Restore] button, then specify the backup file and click the [Open] button in the displayed dialog box. After a message is displayed, click the [OK] button. Note that restoration cannot be performed for other types of scanners.

| Multifeed (page 192) | Specify a method for multifeed detection. Detect multifeeds by monitoring the overlap, document length, or the combination of both. This setting can also be configured in the scanner driver. Note that priority is given to the scanner driver setting. | None / Check Overlapping (Ultrasonic) / Check Length / Check Overlapping and Length Length (When [Check Length] is specified; select from 10/15/20 mm) | None Length: 10 mm |
| Page Edge Filler (ADF) Page Edge Filler (FB)(For fi-7260/fi-7280) (page 180) | Specify a width for the margin around the edge of the scanned image to fill in white or black, according to the background color. This setting can also be configured in the scanner driver. In that case, Page Edge Filler of the scanner driver is used on the output image. | ADF: Top / Left / Right: 0 to 15 mm Bottom: -7 to 7 mm (in increments of 1) FB (For fi-7260/fi-7280): Top / Bottom / Left / Right: 0 to 15 mm  (A: image, B: filled area, A+B: output) | Top/Bottom/Left/Right: 0 mm |
| Dropout color (page 182) | Select a color to be removed from the scanned image (only available in black & white or grayscale mode). This setting can also be configured in the scanner driver. Note that priority is given to the scanner driver setting. | Red / Green / Blue / None | Green |
| Pre-Pick (page 183) | Select [Yes] to prioritize the processing speed and [No] for otherwise. This setting can also be configured in the scanner driver or the operator panel. Note that priority is given to the scanner driver setting. | Yes / No | Yes |

| Item | Description | Parameter/Value | Factory Default |
|---|---|---|-----------------|
| Document check area specification for Multifeed Detection (page 194) | Selected range: Select this item to restrict the area to run multifeed detection. | [Selected range] check box | Not selected |
| | Enable / Disable (Middle): Specify whether to enable or disable multifeed detection in the selected area. | Enable / Disable (When [Selected range] is selected) | Disable |
| | Start (Middle): Specify the start position of the area in length (mm) from the leading edge of the document. | 0 to 510 mm (in increments of 2) | 0 mm |
| | End (Middle): Specify the end position of the area in length (mm) from the leading edge of the document. | 0 to 510 mm (in increments of 2) | 0 mm |
| Intelligent Multifeed Function (page 197) | When there is a paper of the same size attached to a designated location on the page, configure the scanner to memorize the location of the attachment and not detect multifeeds for that location. Note that you first need to select [Check Overlapping (Ultrasonic)] or [Check Overlapping and length] in either the scanner driver or the multifeed detection setting in "Specifying a Multifeed Detection Method [Multifeed]" (page 192). This setting can also be configured in the operator panel. | Manual mode / Auto mode 1 / Auto mode 2 | Manual mode |
| | Select to clear the overlap pattern (length, location) memorized in Auto mode. This setting can also be configured in the operator panel. | [Clear overlap pattern] check box | Not selected |
| | Select to enable the function for memorizing an overlap pattern when overlapped documents are detected in Auto mode. | [Memorize the overlap pattern automatically] check box | Not selected |
| | Specify whether or not to memorize the overlap pattern upon power-off. | Remember / Do not remember | Do not remember |

| Item | Description | Parameter/Value | Factory Default |
|---|---|---|---|
| Number of paper feeding retries (page 184) | Configure this setting to change the number of feeding retries when a pick error occurs. This setting can also be configured in the operator panel. | 1 to 12 times | 3 times |
| Cleaning Cycle (page 177) | Specify the scanner cleaning cycle. Select whether or not to display the cleaning instruction message from the scanner driver. | 1,000 to 255,000 sheets (in increments of 1,000) Show cleaning instructions: Selected/Not selected | 5,000 sheets Not selected |
| Life Counter Alarm Setting (page 177) | Specify the replacement cycle for the consumables. | Pick Rollers / Brake Rollers: 10,000 to 2,550,000 sheets (in increments of 10,000) | Pick Rollers: 200,000 sheets Brake Rollers: 200,000 sheets |
| Vertical Streak Detection (page 201) | Select whether to enable or disable vertical streak detection. Enable to detect vertical streaks (dirt on the glass) when you perform scanning with the ADF. This setting can also be configured in the operator panel. | Enable / Disable | Disable |
| Vertical Streak Sensitivity (page 202) | Specify the sensitivity level to detect vertical streaks (dirt on the glass) when vertical streak detection is enabled. This setting can also be configured in the operator panel. | Low / Normal / High | Normal |
| Pick Speed (page 184) | When you experience frequent multifeeds and paper jams, the symptom may be improved by slowing down the speed in which documents are picked (fed). This setting can also be configured in the operator panel. | Normal / Slow | Normal |
| AutoCrop Boundary (page 185) | Specify whether or not to optimize (round up/down) the fractional part of the scanned image data. | Optimize / Round Down | Optimize |

| Item | Description | Parameter/Value | Factory Default |
|--|--|---|---------------------|
| Manual-feed timeout (page 198) | Select whether to disable or enable manual feeding. | Disable / Enable | Disable |
| | Paper-out detection time: Specify the waiting time to cancel manual feeding. This setting can also be configured in the operator panel. | 5, 10, 20, 30, 40, 50, 60, 70, 80, 90, 100, 110 (seconds) | 10 seconds |
| Power Switch Control (page 200) | Specify the method by which the scanner is powered on/off. | Enable power switch / Disable power switch / Enable USB power feeding | Enable power switch |
| Paper Protection (page 186) | Select a paper protection detection method. This function can be set to reduce the risk of having the documents damaged by detecting anomalies upon feeding the documents and stopping the scan when: <ul style="list-style-type: none"> ● The scanner detects a document that is unusually warped when a feeding error occurs. ● The scanner detects paper jam noise ● The scanner either detects a document that is usually warped when a feeding error occurs or detects paper jam noise This setting can also be configured in the scanner driver or the operator panel. When the operation panel setting is prioritized, the operator panel setting is prioritized over the Software Operation Panel setting. Note that even if the operation panel setting is prioritized, the scanner driver setting has the highest priority. | Disable/Feeding Accuracy/Feeding Noise/ Feeding Accuracy & Noise | Feeding Accuracy |
| Paper Protection Sensitivity (page 188) | Specify the sensitivity level to detect anomalies upon feeding the documents when paper protection is used. This setting can also be configured in the operator panel. When the operation panel setting is prioritized, the operator panel setting is prioritized over the Software Operation Panel setting. | Detect: Feeding Accuracy/Feeding Noise Low/Normal/High | Normal |

| Item | Description | Parameter/Value | Factory Default |
|--|---|--|-----------------|
| Maintenance and Inspection Cycle (page 203) | Specify the period of time for regular maintenance and inspection of the scanner by a service engineer. | Disable / Enable Maintenance and Inspection Cycle: 1 to 12 months | Disable |
| Feed Mode (For fi-7180/fi-7280) (page 190) | Configure this setting to scan plastic cards with a thickness up to 1.4 mm when using fi-7180/fi-7280 (at 300 dpi or less (80 ppm) in landscape). | Normal / Thick cards (1.25 mm or more) | Normal |
| High Altitude Mode (page 190) | Select whether to enable or disable high altitude mode. Enable to use the scanner at 2,000 m or higher altitudes. | Enable / Disable | Disable |
| Image Quality Mode (page 191) | Set the image quality mode. To obtain an image quality that is close to the image quality for scanning with fi-6x30Z/fi-6x40Z, set the image quality mode. | fi-6x30Z/fi-6x40Z Disable | Disable |

9.4 Settings Related to Sheet Counters

Checking and Resetting the Sheet Counters

■ Checking the sheet counters

The status of each consumable part can be viewed to determine when to replace or clean the consumables.

The color of the counter changes to prompt replacement or cleaning. The color of each counter changes when:

- The consumable counter turns light yellow when the page count after replacing the consumable reaches 95% of the value specified in "[Replacement Cycle of Consumables \[Life Counter Alarm Setting\]](#)" (page 177), and turns yellow when it reaches 100%.
- The cleaning counter turns yellow when the page count after cleaning reaches 100% of the value configured in "[Scanner Cleaning Cycle \[Cleaning Cycle\]](#)" (page 177) in the Software Operation Panel.
- Ink counter turns yellow when the amount of remaining ink reaches below 33% (only displayed when the imprinter is installed).

- 1 Start up the Software Operation Panel.
For details, refer to "[9.1 Starting Up the Software Operation Panel](#)" (page 158).
- 2 From the listing on the left, select [Device Setting].

In this dialog box, you can check the following items:

| Item | Description |
|---|---|
| Total Page Count (ADF) | Approximate total number of sheets scanned through the ADF |
| Total Page Count (FB) (fi-7260/fi-7280) | Approximate total number of sheets scanned on the flatbed (fi-7260/fi-7280) |
| After cleaning | Approximate total number of sheets scanned after cleaning |
| Brake Roller | Number of sheets scanned after replacing the brake roller |
| Pick Roller | Number of sheets scanned after replacing the pick roller |

| Item | Description |
|---------------|---|
| Remaining Ink | Amount of ink remaining in the print cartridge of the imprinter (Only displayed when imprinter is installed) |

ATTENTION

If the scanner was turned off by unplugging the power cable, or [Disable power switch] is selected, the number of scanned sheets may not be counted in [Total Page Count].

For details about disabling the power switch, refer to "[Method of Turning the Scanner ON/OFF \[Power Switch Control\]](#)" (page 200).

Resetting the sheet counters

When you have replaced or cleaned a consumable part, reset the corresponding counter by using the following procedure.

- 1 If you have replaced a consumable, click the [Clear] button of the consumable that you replaced. If you performed cleaning, click the [Clear] button of [After cleaning].

⇒ The counter is reset to 0.
For ink counter, the value will be set to 100.

- 2 Click the [OK] button in the Software Operation Panel.

⇒ A confirmation message appears.

- 3 Click the [OK] button.
⇒ The settings are saved.

■ Messages for cleaning or replacing consumables

The following message may appear while using the scanner.

Message for replacing consumables

Message for cleaning

Check the message, and replace the consumable or perform cleaning accordingly.

If you click the [Ignore] button, the message disappears and the scan can be continued. However, it is recommended that you replace the consumable as soon as possible.

To stop the scan and replace the consumable right away, click the [Cancel] button.

Also, while this message appears, **MENU** flashes on the LCD.

Depending on the message, one of the following indications appears on the second line in the [Ready] screen.

- Message for replacing consumables
[Consumables] flashes.
- Message for cleaning
[Cleaning] flashes.

Check the information, and replace the consumable or perform cleaning accordingly.

For details about checking the information, refer to "[Checking the information](#)" (page 66).

For details about replacing consumables, refer to the following:

- Brake roller
["7.2 Replacing the Brake Roller"](#) (page 116)
- Pick roller
["7.3 Replacing the Pick Roller"](#) (page 118)

For details about cleaning, refer to "[Chapter 6 Daily Care](#)" (page 103).

Scanner Cleaning Cycle [Cleaning Cycle]

The cleaning cycle for the scanner can be specified. The background color of the cleaning counter (in [Device Setting]) turns yellow when the page count after cleaning is performed reaches 100% of the specified value. You can also display a cleaning instruction message (page 176).

- 1 Start up the Software Operation Panel.
For details, refer to "9.1 Starting Up the Software Operation Panel" (page 158).
- 2 From the listing on the left, select [Device Setting 2] → [Cleaning Cycle].

- 3 Specify a value for the cleaning cycle.
The value can range from 1,000 to 255,000 sheets (in increments of 1,000).
Specify whether or not to display the cleaning instruction message.

Replacement Cycle of Consumables [Life Counter Alarm Setting]

The replacement cycle for each consumable can be specified. The background color of the brake roller/pick roller counter (in [Device Setting]) changes to light yellow when the page count after replacing the consumable reaches 95% of the value specified here, and turns yellow when it reaches 100%. A message that prompts consumable replacement (page 176) also appears.

- 1 Start up the Software Operation Panel.
For details, refer to "9.1 Starting Up the Software Operation Panel" (page 158).
- 2 From the listing on the left, select [Device Setting 2] → [Life Counter Alarm Setting].

- 3** Specify a value as the replacement cycle.
The value can range from 10,000 to 2,550,000 sheets (in increments of 10,000).

9.5 Settings Related to Scanning

Adjusting the Position to Start the Scan [Offset/Vertical magnification Adjustment]

When the output position of the scanned image is not correct or the image appears shortened/elongated (vertically), adjust the offset and the vertical magnification in the following procedure.

ATTENTION

Normally, you should not have to make any adjustments as the factory default settings are configured at appropriate values.

- 1 Start up the Software Operation Panel.
For details, refer to "9.1 Starting Up the Software Operation Panel" (page 158).
- 2 From the listing on the left, select [Device Setting] and click the [Offset] button.

- 3 Adjust the level of offset/vertical magnification as needed.

| Offset Setting | Description |
|----------------|---|
| Unit | Select [Flat bed] (fi-7260/fi-7280), [ADF (front)] or [ADF (back)] as the target for offset adjustment. |
| Main | Adjusts the horizontal (width) offset. The value can range from -2 to +2 mm (in increments of 0.5). |
| Sub | Adjusts the vertical (length) offset. The value can range from -2 to +2 mm (in increments of 0.5). |

Glossary

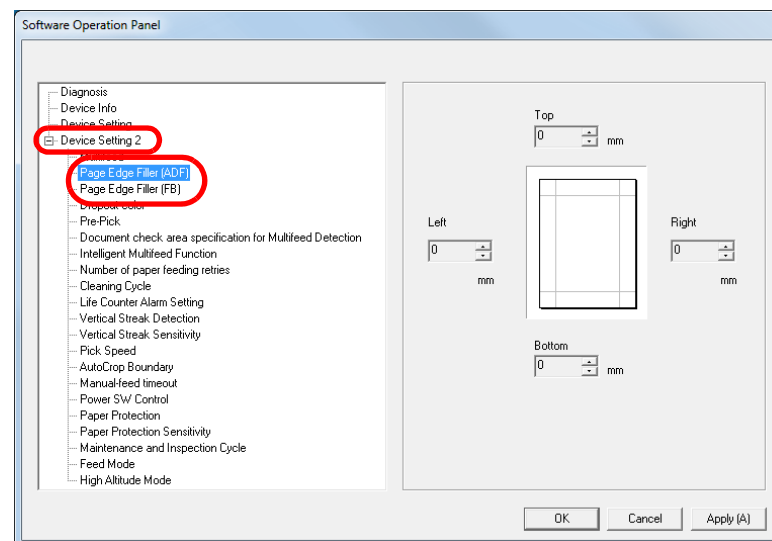

| Vertical magnification Adjustment | Description |
|---|---|
| Unit | Select [Flat bed] (*1) or [ADF] as the target for vertical magnification adjustment. |
| Vertical magnification Adjustment (Sub: length) | Adjusts the vertical (length) magnification. The value can range from -3.1 to +3.1% (in increments of 0.1). |

*1: Displayed when using fi-7260 or fi-7280.

Removing Shadows/Streaks that Appear around the Scanned Image [Page Edge Filler (ADF)]/[Page Edge Filler (FB)] (fi-7260/fi-7280)

Depending on the condition of the documents that you scan, the shadow of the document may appear as black streaks. In that case, you can improve the image quality around the edges of the document by using the "Page Edge Filler" function to fill in the edges.

- 1 Start up the Software Operation Panel.
For details, refer to ["9.1 Starting Up the Software Operation Panel"](#) (page 158).
- 2 From the listing on the left, select [Device Setting 2] → [Page Edge Filler (ADF)] or [Page Edge Filler (FB)].

3 Specify the width of each margin to fill in: top/bottom/left/right.

ADF

T: top = 0 to 15 mm

B: bottom = -7 to 7 mm

R: right = 0 to 15 mm

L: left = 0 to 15 mm

FB (fi-7260/fi-7280)

T: top = 0 to 15 mm

B: bottom = 0 to 15 mm

R: right = 0 to 15 mm

L: left = 0 to 15 mm

(in 1 mm increments)

The specified area is filled in white or black, according to the background color.

ATTENTION

Note that if the target range of Page Edge Filler is too wide, some characters near the edge may appear missing.

HINT

- The color of the background is normally white. You can change the background to black in the scanner driver. For details, refer to the scanner driver's Help.
- Depending on the value you specify, the bottom edge is filled in as follows:
 - 1 to 7 mm
Fills the margin in white, from the detected page bottom.
 - -1 to -7 mm
Outputs the image without filling in the margin.
 "Detected page bottom" refers to the bottom edge of the scanned document detected by the scanner.
- This setting can also be configured in the scanner driver. In that case, Page Edge Filler of the scanner driver is used on the output image.

Removing a Color from the Scanned Image [Dropout color]

With "Dropout color", you can select either green, red, or blue (primary colors) to remove the details of the selected color from a scanned image.

For example, when a document with black characters and a green background is scanned, only the black characters of the document can be scanned by selecting green for the dropout color.

ATTENTION

Dropout works the best with light (low intensity) colors, and dark colors may not drop out.

HINT

Dropout color is only available in black & white or grayscale mode.

- 1 Start up the Software Operation Panel.
For details, refer to "9.1 Starting Up the Software Operation Panel" (page 158).
- 2 From the listing on the left, select [Device Setting 2] → [Dropout color].

- 3 Select a color to drop out.
Red, Green, Blue: The selected color is dropped out.
None: No color is dropped out.

ATTENTION

The Software Operation Panel allows you to choose the color from red, green, and blue only. To drop out a color of your choice, configure the setting in the scanner driver.
For details, refer to the scanner driver's Help.

HINT

This setting can also be configured in the scanner driver. Note that priority is given to the scanner driver setting.

Shortening the Scanning Intervals [Pre-Pick]

"Pre-pick" refers to feeding the document to the starting position for scanning before the next scan.

Enabling [Pre-Pick] shortens the interval between scanning each document.

- 1 Start up the Software Operation Panel.
For details, refer to "9.1 Starting Up the Software Operation Panel" (page 158).
- 2 From the listing on the left, select [Device Setting 2] → [Pre-Pick].

- 3 Select [Yes] or [No].

HINT

- If you cancel in the middle of scanning while pre-pick is enabled, you will have to remove the pre-picked document, then load the document again.
- This setting can also be configured in the scanner driver or the operator panel. Note that priority is given to the scanner driver setting.

Number of Paper Feeding Retries

Configure this setting to change the number of feeding retries when a pick error occurs.

- 1 Start up the Software Operation Panel.
For details, refer to "9.1 Starting Up the Software Operation Panel" (page 158).
- 2 From the listing on the left, select [Device Setting 2] → [Number of paper feeding retries].

- 3 Specify the number of paper feeding retries.
The value can range from 1 to 12 times.

HINT

This setting can also be configured in the operator panel.

Document Feed Speed [Pick Speed]

When you experience frequent multifeeds and paper jams, the symptom may be improved by slowing down the speed in which documents are picked (fed).

This setting is effective when you scan thin paper.

- 1 Start up the Software Operation Panel.
For details, refer to "9.1 Starting Up the Software Operation Panel" (page 158).
- 2 From the listing on the left, select [Device Setting 2] → [Pick Speed].

3 Specify the document feed speed.

Normal: Normal document feed speed

Slow: The document feed speed is slower than normal

ATTENTION

The total time for scanning is longer because the document feed speed slows down.

HINT

This setting can also be configured in the operator panel.

Cropping the Image Boundary [AutoCrop Boundary]

Some fractional data may be generated in the images in the process of scanning. You can specify whether to include or exclude such fractional data by using the "AutoCrop Boundary" function.

- 1 Start up the Software Operation Panel.
For details, refer to "[9.1 Starting Up the Software Operation Panel](#)" (page 158).
- 2 From the listing on the left, select [Device Setting 2] → [AutoCrop Boundary].

- 3** Select whether to include or exclude the fractional data. Select [Optimize] to prevent any exclusion of fractional data from scanned images.

ATTENTION

- While selecting [Optimize] can prevent data loss, it may also generate black lines near the right edge.
- When you scan a document with text near the right edge while [Round Down] is selected, some pixel data there may be lost.
- For details about setting automatic page size detection, refer to the scanner driver's Help.

HINT

This setting is only applied in black & white mode.

Protecting the Documents from Being Damaged [Paper Protection]

Select a paper protection detection method.

Feeding errors during scanning could damage or tear valuable documents.

This function can be set to reduce the risk of having the documents damaged by detecting anomalies upon feeding the documents and stopping the scan when:

- The scanner detects a document that is unusually warped when a feeding error occurs.
- The scanner detects paper jam noise
- The scanner either detects a document that is usually warped when a feeding error occurs or detects paper jam noise

This function can be used to scan documents such as thin papers which are difficult to feed.

- 1** Start up the Software Operation Panel.
For details, refer to "[9.1 Starting Up the Software Operation Panel](#)" (page 158).
- 2** From the listing on the left, select [Device Setting 2] → [Paper Protection].

3 Click the detection method.

| Detection Method | Description |
|--------------------------|---|
| Disable | Disables paper protection. |
| Feeding Accuracy | Stops the scan when the scanner detects a document that is unusually warped when a feeding error occurs. |
| Feeding Noise | Stops the scan when the scanner detects paper jam noise. |
| Feeding Accuracy & Noise | Stops the scan when the scanner detects a document that is unusually warped when a feeding error occurs, or when the scanner detects paper jam noise. |

ATTENTION

- Note that paper protection is a function that suppresses the documents from being damaged, and does not guarantee all documents to be saved.
- When you use paper protection, make sure to load the documents with their top edges aligned (especially for a mixed batch with different lengths). If the top edges are not aligned properly, the paper protection function may be activated and stop the scan even when the documents are being fed correctly.

- Glossary

HINT

- If you scan a wrinkled document, paper protection may be set off forcing a scan to be stopped even though paper is fed normally. In this case, you can disable paper protection on the operator panel for a single scan after paper protection is set off. For details, refer to "[Disabling Paper Protection for a Single Scan After Paper Protection Is Set Off](#)" (page 101).
- If paper protection is set off frequently, refer to "[Paper protection is set off frequently.](#)" (page 145).
- This setting can also be configured in the scanner driver or the operator panel. When the operation panel setting is prioritized, the operator panel setting is prioritized over the Software Operation Panel setting. Note that even if the operation panel setting is prioritized, the scanner driver setting has the highest priority.

Specifying the Sensitivity Level for Paper Protection

[Paper Protection Sensitivity]

Specify the sensitivity level to detect anomalies upon feeding the documents when paper protection is on.

Documents are deformed (e.g. warped, bent, creased) or paper jam noise is made when documents are not being fed by the rollers properly. To detect such a symptom and stop the scan, select [Low] to only detect documents that are highly deformed or paper jam noise that are loud. Select [High] to also detect documents that are slightly deformed or small paper jam noise.

- 1** Start up the Software Operation Panel.
For details, refer to "[9.1 Starting Up the Software Operation Panel](#)" (page 158).
- 2** From the listing on the left, select [Device Setting 2] → [Paper Protection Sensitivity].

3 Select a paper protection detection method which you want to change the sensitivity level for.

Feeding Accuracy :Select this to detect a document that is unusually warped when a feeding error occurs. This is available when you have selected [Feeding Accuracy] or [Feeding Accuracy & Noise] for the paper protection detection method.

Feeding Noise :Select this to detect paper jam noise. This is available when you have selected [Feeding Noise] or [Feeding Accuracy & Noise] for the paper protection detection method.

4 Specify the sensitivity level.

Low: Decreases the sensitivity level to detect warped documents or paper jam noise.

Normal: Monitors warped documents or paper jam noise in normal sensitivity. Keep this setting for normal use.

High: Increases the sensitivity level to detect warped documents or paper jam noise.

HINT

- To detect paper warp or paper jam noise faster and stop the scan, select [High].
- To decrease the frequency of paper jam detection if paper jams occur frequently in the feeder, select [Low].
- This setting can also be configured in the operator panel. When the operation panel setting is prioritized, the operator panel setting is prioritized over the Software Operation Panel setting.

Scanning Thick Plastic Cards [Feed Mode] (fi-7180/fi-7280)

When you use fi-7180/fi-7280 to scan at 300 dpi or less (80 ppm) in landscape, plastic cards with a thickness up to 1.4 mm can be scanned.

- 1 Start up the Software Operation Panel.
For details, refer to "9.1 Starting Up the Software Operation Panel" (page 158).
- 2 From the listing on the left, select [Device Setting 2] → [Feed Mode].

- 3 Specify the feed mode.
To scan a plastic card up to 1.4 mm thick, select [Thick cards (1.25 mm or more)].

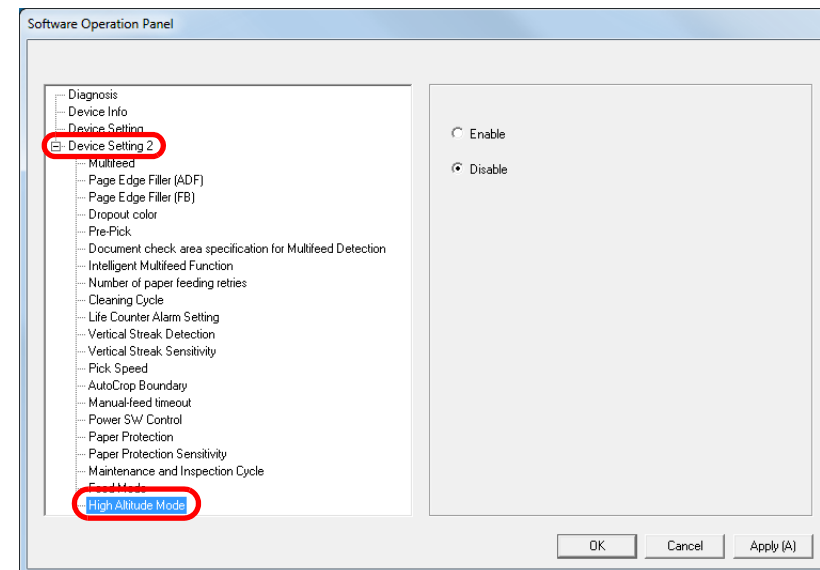

ATTENTION

Scanning speed slows down when you select [Thick cards (1.25 mm or more)].

Scanning at High Altitude [High Altitude Mode]

Select whether to enable or disable high altitude mode. Enabling this setting allows you to use the scanner at 2,000 m or higher altitudes.

- 1 Start up the Software Operation Panel.
For details, refer to "9.1 Starting Up the Software Operation Panel" (page 158).
- 2 From the listing on the left, select [Device Setting 2] → [High Altitude Mode].

- 3 Select whether to enable or disable [High Altitude Mode].
When you select [Enable], you can use the scanner at 2,000 m or higher altitudes.

Setting the Image Quality for Scanning [Image Quality Mode]

Set the image quality mode.

To obtain an image quality that is close to the image quality for scanning with fi-6x30Z/fi-6x40Z, set the image quality mode.

- 1 Start up the Software Operation Panel.
For details, refer to "9.1 Starting Up the Software Operation Panel" (page 158).
- 2 From the listing on the left, select [Device Setting 2] → [Image Quality Mode].

- 3 Select whether to obtain an image quality that is close to the image quality with fi-6x30Z/fi-6x40Z.

9.6 Settings Related to Multifeed Detection

Specifying a Multifeed Detection Method [Multifeed]

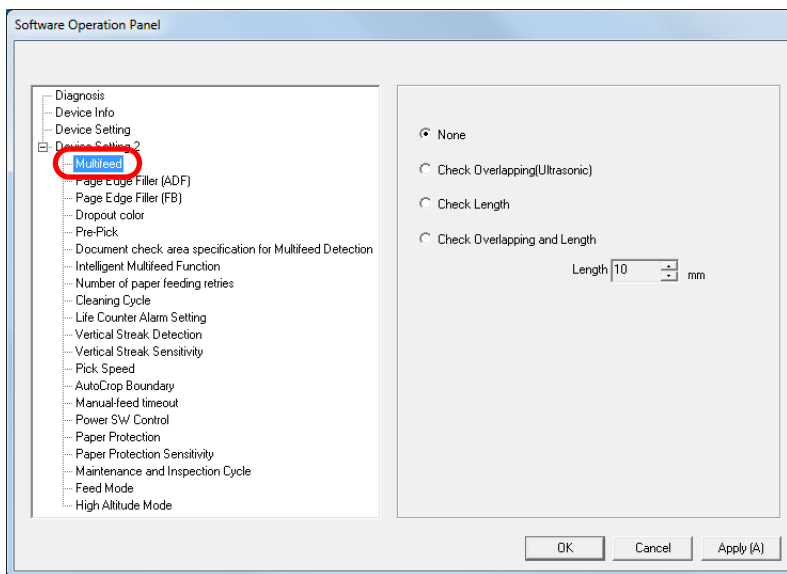

Multifeed is an error where two or more sheets are fed through the ADF at once. It is also called a multifeed when a different document length is detected.

Not noticing multifeed errors while scanning may put you in a situation where important data are missing from the scanned images.

Multifeed detection can be used to prevent such troubles.

When this function is enabled, an error message is displayed as soon as it detects a multifeed, and stops the scan. Note that multifeed cannot be detected within 30 mm from the leading edge of the document.

- 1 Start up the Software Operation Panel.
For details, refer to "9.1 Starting Up the Software Operation Panel" (page 158).
- 2 From the listing on the left, select [Device Setting 2] → [Multifeed].

3 Select a detection method.

| Method | Description |
|--------------------------------|---|
| None | Does not detect multifeed. |
| Check Overlapping (Ultrasonic) | <p>Detects multifeed by the overlapping of documents.</p> <p>When this is selected, you can also specify the two following options:</p> <ul style="list-style-type: none"> Specify the detection range by the length from the top of the document. Proceed to "Specifying the Area to Detect Multifeed [Document check area specification for Multifeed Detection]" (page 194) for more details. Ignore the multifeed when there is paper of the same size attached to a designated location on the page. Proceed to "Ignoring Multifeed for a Set Pattern" (page 98) for more details. |
| Check Length | <p>Detects multifeed by the difference in length of the documents.</p> <p>Note that multifeeds cannot be detected accurately when scanning a mixed batch of different sizes.</p> |

| Method | Description |
|------------------------------|--|
| Check Overlapping and Length | <p>Detects multifeed by the combination of [Check Overlapping (Ultrasonic)] and [Check Length]. Note that multifeeds cannot be detected accurately when scanning a mixed batch of different sizes.</p> <p>When this is selected, you can also specify the two following options:</p> <ul style="list-style-type: none"> Specify the detection range by the length from the top of the document. Proceed to "Specifying the Area to Detect Multifeed [Document check area specification for Multifeed Detection]" (page 194) for more details. Ignore the multifeed when there is paper of the same size attached to a designated location on the page. Proceed to "Ignoring Multifeed for a Set Pattern" (page 98) for more details. |
| Length | Select a length difference from 10/15/20 mm. Any length under the specified value will not be detected as multifeed. |

ATTENTION

- To scan documents with different lengths, specify [Check Overlapping (Ultrasonic)].
- When an attachment such as a sticky note, receipt, or photo is attached on the document, the overlapping part of the document may be falsely detected as multifeed if [Check Overlapping (Ultrasonic)] is specified. In that case, specify [Check Length].
Note however that [Check Overlapping (Ultrasonic)] can still be used by restricting the detection range.
- Multifeed cannot be detected when using the Carrier Sheet.

HINT

This setting can also be configured in the scanner driver. Note that priority is given to the scanner driver setting.

Glossary

Specifying the Area to Detect Multifeed [Document check area specification for Multifeed Detection]

The following setting is only available when you specified [Check Overlapping (Ultrasonic)] or [Check Overlapping and Length].

- From the listing on the left, select [Device Setting 2] → [Document check area specification for Multifeed Detection]. Select the [Selected range] check box in the dialog box.

- Specify the detection range.

| Range | Description |
|------------------|--|
| Selected range | <p>Select the check box to specify the detection range (colored in light blue) in the picture below.</p> <p>Select the check box to enable the setting in this dialog box. Clear the check box to disable the setting. Clearing this check box sets both start and end positions to "0", making the whole document to be detected for multifeeds. The above condition applies when the document is set to the center of the pick roller width.</p> |
| Disable (Middle) | Does not detect multifeeds for the selected area. |
| Enable (Middle) | Detects multifeeds for the selected area. |
| Start (Middle) | Displays the start position of the detection by the length from the leading edge of the document. Range: 0 to 510 mm, in 2 mm increments, Start<End |

| Range | Description |
|--------------|--|
| End (Middle) | Displays the end position of the detection by the length from the leading edge of the document. Range: 0 to 510 mm, in 2 mm increments, Start<End |

HINT

- When both [Start] and [End] are set to "0", multifeed detection is performed for the whole area regardless of whether it is enabled or disabled.
- To disable multifeed detection for the whole document, select [Disable] and set the start position to "0" and the end position to equal the document length or longer.
- If you set a value larger than the document length for the start position, selecting [Disable] detects the whole length of the document and selecting [Enable] disables the multifeed detection.
- To detect multifeeds, the detection range must be at least 5 mm in length. Configure the setting so that the value of the end position minus the start position is 6 mm or more.
- You can also set the start and the end positions by the following methods:
 - Draw an area with the mouse on the displayed image.
 - Drag the handles for [Start] and [End] positions on the displayed image.

Example 1:

Position: Middle

Selected range = Enable, Start = 50 mm, End = 200 mm

Multifeeds are detected only within the area of light blue.

- Glossary

Example 2:

Position: Middle

Selected range = Enable, Start = 0 mm, End = 0 mm

Multifeeds are detected only within the area of light blue.

HINT

When you use detection by overlapping, accuracy of multifeed detection may drop if the documents are glued tightly or attached together by static electricity.

Example 3: (Bad example)

Position: Middle

Selected range = Enable, Start = 100 mm, End = 102 mm

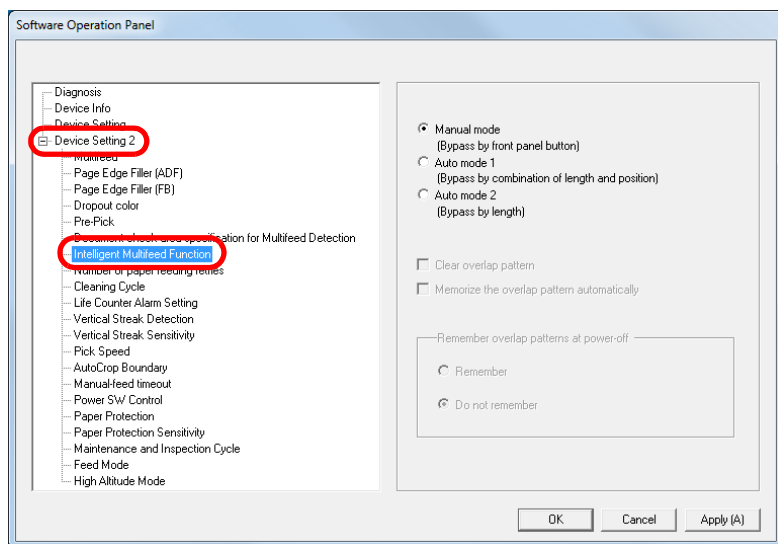

Since the detection range (length) is less than 5 mm, multifeeds cannot be detected accurately.

Specifying an Area Not to Detect Multifeed [Intelligent Multifeed Function]

When there is paper of the same size attached to a designated location on the page, the scanner memorizes the location of the attachment and can be configured not to detect multifeeds for that location. Note that you first need to select [Check Overlapping (Ultrasonic)] or [Check Overlapping and length] in either the scanner driver or the multifeed detection setting in "Specifying a Multifeed Detection Method [Multifeed]" (page 192).

- 1 Start up the Software Operation Panel.
For details, refer to "9.1 Starting Up the Software Operation Panel" (page 158).
- 2 From the listing on the left, select [Device Setting 2] → [Intelligent Multifeed Function].

- 3 Specify an operation mode.

| Mode | Description |
|-------------|---|
| Manual mode | Does not memorize the size or location of the paper attachment when a multifeed is detected. Ignores the multifeed when you load the documents back in the ADF paper chute (feeder) and scan them again. |
| Auto mode 1 | Memorizes the size and location of the paper attachment when a multifeed is detected. The memorized pattern is ignored from the next scan. |
| Auto mode 2 | Memorizes the size of the paper attachment when a multifeed is detected. The memorized pattern (including any length less than the attachment) is ignored from the next scan. |

HINT

- By selecting the [Clear overlap pattern] check box, you can erase the overlapping patterns (length, position) that were memorized in Auto mode.
- By selecting the [Memorize the overlap pattern automatically] check box, you can enable the function for memorizing an overlap pattern when overlapped documents are detected in Auto mode.
- In [Remember overlap patterns at power-off], you can select whether or not to keep the overlap pattern upon turning the power off. When [Remember] is selected, you can use eight of the most recent patterns the next time the scanner is powered on.
- This setting can also be configured in the operator panel.

For details about the procedure after this step, refer to "Ignoring Multifeed for a Set Pattern" (page 98).

9.7 Settings Related to Waiting Time

Waiting Time in Manual Feed Mode [Manual-feed timeout]

When you scan by manually loading one sheet at a time, you can specify the waiting time (interval) for loading the next document in the ADF paper chute (feeder). This enables continuous scanning as long as you load a document within the set time.

If not, the scan is finished automatically and manual feeding will be canceled.

Note that you can also press the [Stop/Clear] button on the operator panel to cancel manual feeding.

- 1 Start up the Software Operation Panel.
For details, refer to "9.1 Starting Up the Software Operation Panel" (page 158).
- 2 From the listing on the left, select [Device Setting 2] → [Manual-feed timeout].

- 3 Specify whether to enable or disable [Manual-feed timeout].
If you selected [Enable], then also specify the time in [Paper-out detection time].

HINT

- When [Manual-feed timeout] is enabled, the scanner will wait for the set time even if you start scanning with no document in the ADF paper chute (feeder).
- This setting can also be configured in the operator panel.

Waiting Time to Enter Power Saving Mode [Power saving]

The waiting time for the scanner to enter power saving mode can be specified.

- 1 Start up the Software Operation Panel.
For details, refer to "9.1 Starting Up the Software Operation Panel" (page 158).
- 2 From the listing on the left, select [Device Setting].

- 3 Use the slider to specify the waiting time before entering power saving mode.
The value can range from 5 to 115 minutes (in increments of 5).

HINT

- Selecting the [Power off after a certain period of time] check box turns the power off automatically if the scanner is left on for a certain period of time without being used.
You can select the timeout period for the scanner to be automatically turned off by [1 Hour]/[2 Hours]/[4 Hours]/[8 Hours].
- This setting can also be configured in the operator panel.

9.8 Settings Related to Power ON/OFF

Method of Turning the Scanner ON/OFF [Power Switch Control]

The method by which the scanner is powered on/off can be specified from one of the following:

- Press the [Power] button on the operator panel
- Unplug the power cable then plug it back in
- Have the scanner turn on/off in sync with the computer's power

- 1 Start up the Software Operation Panel.
For details, refer to "9.1 Starting Up the Software Operation Panel" (page 158).
- 2 From the listing on the left, select [Device Setting 2] → [Power Switch Control].

- 3 Select one of the following:
 - [Enable power switch] : Press the [Power] button on the operator panel.
 - [Disable power switch] : Unplug the power cable then plug it back in.
 - [Enable USB power feeding] : Have the scanner turn ON/OFF in sync with the computer's power.

ATTENTION

- When you select [Disable power switch], the scanner is not turned off even if the [Power off after a certain period of time] check box is selected in [Device Setting] on the Software Operation Panel.
- Some types of computers and USB hubs keep supplying power to the USB bus even after the computer is turned off. In that case, the [Enable USB power feeding] mode may not work properly.

9.9 Settings Related to Scanner Maintenance

Detecting Vertical Streaks [Vertical Streak Detection]

Select whether to enable or disable vertical streak detection.

After enabling this setting, **[MENU]** flashes on the LCD when a vertical streak may occur in the images that are scanned through the ADF.

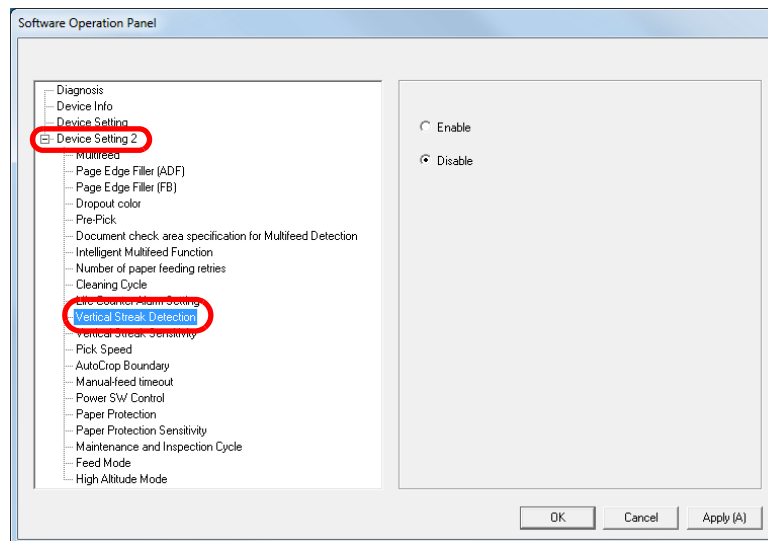

[Clean glass!] also flashes on the second line in the [Ready] screen.

Check the information, and then clean the glass.

For details about checking the information, refer to ["Checking the information"](#) (page 66).

For details about cleaning, refer to ["Chapter 6 Daily Care"](#) (page 103).

- 1 Start up the Software Operation Panel.
For details, refer to ["9.1 Starting Up the Software Operation Panel"](#) (page 158).
- 2 From the listing on the left, select [Device Setting 2] → [Vertical Streak Detection].

- 3 Select whether to enable or disable [Vertical Streak Detection].
When you select [Enable], the scanner detects vertical streaks (dirt on the glass) during scanning with the ADF.

HINT

This setting can also be configured in the operator panel.

Specifying the Sensitivity Level for Vertical Streak Detection

[Vertical Streak Sensitivity]

Specify the sensitivity level to detect dirt on the glass when vertical streak detection is enabled.

Select [Low] to only detect large amounts of dirt on the glass.
Select [High] to also detect small amounts of dirt on the glass.

- 1 Start up the Software Operation Panel.
For details, refer to "9.1 Starting Up the Software Operation Panel" (page 158).
- 2 From the listing on the left, select [Device Setting 2] → [Vertical Streak Sensitivity].

- 3 Specify the sensitivity level.
Low: Decreases the sensitivity level to detect dirt on the glass.
Normal: Monitors dirt on the glass in normal sensitivity.
Keep this setting for normal use.
High: Increases the sensitivity level to detect dirt on the glass.

HINT

- If [Clean glass!] frequently flashes on the second line in the [Ready] screen, select [Low].
- This setting can also be configured in the operator panel.

Scanner Maintenance and Inspection Cycle [Maintenance and Inspection Cycle]

Specify the period of time for regular maintenance and inspection of the scanner by a service engineer.

When the specified period has passed after the last regular maintenance and inspection date, **MENU** flashes on the LCD.

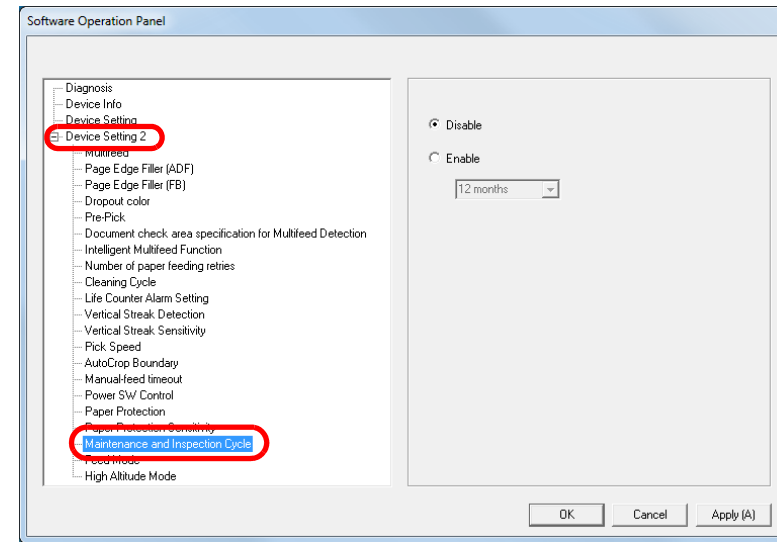

In this case, [maintenance] flashes on the second line in the [Ready] screen.

Check the information and perform a regular maintenance and inspection on the scanner by a service engineer.

For details about checking the information, refer to ["Checking the information"](#) (page 66).

For regular maintenance and inspection on the scanner by a service engineer, contact your FUJITSU scanner dealer or an authorized FUJITSU scanner service provider.

- 1 Start up the Software Operation Panel.
For details, refer to ["9.1 Starting Up the Software Operation Panel"](#) (page 158).
- 2 From the listing on the left, select [Device Setting 2] → [Maintenance and Inspection Cycle].

- 3 Select whether to enable or disable [Maintenance and Inspection Cycle].
If you select [Enable], select the period of time for regular maintenance and inspection of the scanner by a service engineer.

*1: The minimum scanning area only applies to using the ADF. There is no limitation when using the flatbed.

*2: Long page scanning supports documents with a length of up to 5,588 mm (220 in.) when the scanning resolution is set to 200 dpi or less.

*3: When scanning plastic cards from the ADF, you can load up to 3 cards in the ADF paper chute (feeder).

*4: Up to 1.25 mm is supported for scanning at 300 dpi or less (80 ppm) in landscape when using the fi-7180/fi-7280.

This setting can be changed in the Software Operation Panel to scan plastic cards with a thickness up to 1.4 mm.

For details, refer to "[Scanning Thick Plastic Cards \[Feed Mode\] \(fi-7180/fi-7280\)](#)" (page 190).

*5: The paper weight only applies to using the ADF. There is no limitation when using the flatbed.

*6: Note that this is the hardware limitation, and the software's processing time such as data transfer time is added to the actual time of scanning.

*7: The capacity varies depending on the paper weight.

For details, refer to "[2.3 Documents for Scanning \(ADF\)](#)" (page 44).

*8: Connection with USB 3.0/2.0 requires the USB port and the hub to support USB 3.0/2.0. Also note that the scanning speed slows down when using USB 1.1.

A.2 Installation Specification

| Item | | Specification | | | |
|-------------------------------------|-----------------|---|---|--|---|

A.4 Scanner Options

| Name | Model | Supported model | Description |
|---|--------------|--|---|
| Imprinter  | PA03670-D201 | fi-7160 fi-7180 | An option imprinter that can print text (e.g. alphabets, numbers) on the back of the document after scanning. It can be used to organize your documents by printing a name, date or serial number on the scanned document. For details, refer to the fi-718PR Imprinter Operator's Guide. |
| Black Document Pad  | PA03670-D801 | fi-7260 fi-7280 | An option that enables scanning in black background on the flatbed. It is available as a document cover with a black document pad, and can be replaced with the standard document cover that has a white document pad. It can be used to automatically correct skewed images or accurately detect the size of the scanned document when scanning with the flatbed. |
| Carrier Sheet  | PA03360-0013 | fi-7160 fi-7260 fi-7180 fi-7280 | Use this option to scan documents larger than A4/Letter size, as well as non-standard size documents such as photographs and clippings. Using the Carrier Sheet allows you to scan documents that are larger than A4/Letter size such as A3 and B4, scan documents that can be easily damaged such as photographs, and scan documents that are difficult to load directly such as newspaper clippings. When the Carrier Sheet is too damaged or worn out to be used for scanning, it can be purchased separately (5 sheets per set). The Carrier Sheet should be replaced approximately every 500 scans. However, replace it if damage or dirt is noticeable. |

For details about purchasing the scanner options and more information, contact your FUJITSU scanner dealer or an authorized FUJITSU scanner service provider.

A.5 Uninstalling the Software

- 1 Turn on the computer and log onto Windows as a user with administrator privileges.
- 2 Exit all running software.
- 3 Display the [Control Panel] dialog box.
 - Windows Server 2008 R2/Windows 7
Click [Start] menu → [Control Panel].
 - Windows Server 2012
Right-click the Start screen, and select [All apps] on the app bar → [Control Panel] under [Windows System].
 - Windows Server 2012 R2/Windows 8.1
Click [↓] on the lower left side of the Start screen → [Control Panel] under [Windows System].
To display [↓], move the mouse cursor.
 - Windows 10/Windows Server 2016/Windows Server 2019/
Windows Server 2022
Click [Start] menu → [Windows System] → [Control Panel].
 - Windows 11
Click [Start] menu → [All apps] → [Windows Tools] and double-click [Control Panel].
- 4 Select [Uninstall a Program].
⇒ The [Programs and Features] dialog box appears with a list of the currently installed software.
- 5 Select a software to uninstall.
 - PaperStream IP driver:
One of the following:
 - [PaperStream IP (TWAIN)]
 - [PaperStream IP (TWAIN x64)]
 - [PaperStream IP (ISIS) for fi-71xx/72xx]
 - 2D Barcode for PaperStream (fi-7180/fi-7280): [2D Barcode for PaperStream]
 - Software Operation Panel: [Software Operation Panel]
(The Software Operation Panel is installed together with the PaperStream IP driver.)
 - Error Recovery Guide: [Error Recovery Guide for fi-7160/7260/7180/7280]
 - PaperStream ClickScan: [PaperStream ClickScan]
 - PaperStream Capture/PaperStream Capture Pro (EVALUATION): [PaperStream Capture]
 - ABBYY FineReader for ScanSnap™: [ABBYY FineReader for ScanSnap(TM)]
 - Manuals: [fi Series manuals for fi-7160/7260/7180/7280]
 - Scanner Central Admin Agent: [Scanner Central Admin Agent]
 - fi Series Online Update: [fi Series Online Update]
- 6 Click the [Uninstall] button or the [Uninstall/Change] button.
- 7 If a confirmation message appears, click [OK] or [Yes].
⇒ The software is uninstalled.

A

A4 size

A standard paper size which is 210 × 297 mm (8.27 × 11.7 in.).

A5 size

A standard paper size which is 148 × 210 mm (5.83 × 8.27 in.).

A6 size

A standard paper size which is 105 × 148 mm (4.13 × 5.83 in.).

A7 size

A standard paper size which is 74 × 105 mm (2.91 × 4.13 in.).

A8 size

A standard paper size which is 52 × 74 mm (2.05 × 2.91 in.).

ADF (Automatic Document Feeder)

A paper feeding mechanism which allows multiple sheets of documents to be scanned one sheet at a time.

Automatic size/skew detection

End of Page Detection:

Detects the end of the page and scans the length of the document.

Automatic Page Size Detection:

Detects the paper size and outputs the image data in the same size.

Black Background:

Sets the background color to black for scanning.

B

Blank Page Skip

A function that detects and automatically deletes blank (white or black) pages in a batch of documents.

Brake roller

A roller that prevents more than one sheet of documents to be fed into the ADF at once.

Brightness

Refers to the brightness of a scanned image.

C

Canadian DOC

A standard issued by Industry Canada, a department of the Canadian government, which sets out the technical requirements relative to the radiated and conducted radio noise emissions from digital apparatus.

Carrier Sheet

A transparent plastic sheet designed for scanning documents that are larger than A4/ Letter size.

CCD (Charge-Coupled Device) Image Sensor

A sensor which perceives the light reflected from the document and converts it into digital form. CCD technology is the basis of high quality image acquisition in scanners, cameras and other devices.

Color balance

The balance of colors in an image.

D

Default setting

(Hardware)

Preset values from the factory.

(Software)

Values set upon installation of software.

Density

Refers to the deepness of a color in an image.

Device Errors

The following are lists of device errors which require troubleshooting by a service engineer.

Dither

The process by which a group of dots is arranged to reproduce the density of grayscale. Grayscale density is reproduced by configuring preset dot patterns. This method requires less memory compared to multilevel gray.

Double Letter size

A standard paper size used in the United States and other countries (11 × 17 in.).

dpi (dots per inch)

A measurement of resolution which is used for scanners and printers. Higher dpi indicates better resolution.

Driver

A program specifically designed for operating systems, which enables interaction with a hardware device.

Dropout color

A function which removes a specified color from a scanned image.

Duplex scanning mode

A mode for scanning both sides of the document at once. (⇔ simplex scanning mode)

E

Edge Extract

A function which traces the boundaries between black and white areas, and extracts them as outlines.

Edge Processing

A function which decreases the density of bright colors (except for white) around black areas. Increasing the value for this function removes dotted image noise and also produces “softened” images.

Eject roller

Rollers that feed documents from the ADF onto the stacker.

Energy Star

ENERGY STAR is an international standard for energy-efficient electronic equipment which was established by the US Environmental Protection Agency (EPA) in 1992. The standard program has now been adopted by countries around the world.

Error diffusion

Method of halftone (pseudo-grayscale) image processing which is based on black & white pixel binarization. It sums the optical density of a pixel and its adjacent pixels, then relocates black pixels in the order of density to minimize the difference between scanned and output images. By diffusing the errors onto other pixels, the density data of adjacent pixels can be binarized. This function suppresses moire patterns of dotted halftone images such as newspapers, and reproduces its grayscale gradation.

F

FCC

Acronym for "The Federal Communications Commission", an independent United States government agency which is in charge of regulating interstate and international communications via radio, television, wire, satellite and cable. The Part 15 of the FCC regulations mentioned in this manual is designed to prevent harmful interferences on radio communication of radio receivers and other devices which radiate radio frequency energy, and provides for the certification of radio receivers. It also provides the certification of low power transmitters and the operation of certified transmitters without a license.

Feed roller

A roller that feeds the document through the ADF.

Filter

Refers to the following types of processing on a scanned image.

Digital Endorser:

Adds alphanumeric character strings on the scanned image data.

Page Edge Filler:

Fills in the margins of the scanned image in a specified color.

Flatbed

An input device of the scanner.

Used to scan documents that cannot be scanned in the ADF, such as books and magazines.

G

Gamma

A unit which indicates the changes in the brightness of an image. It is expressed as a function of the electric input power to devices (e.g. scanner, display) and the brightness of the image. If the gamma rate is larger than 1, the brightness of an image increases and vice versa. Normally, the gamma rate is set to 1 when reproducing the same brightness as the original.

Grayscale

A method which expresses the gradation (density) from black to white in 256 levels. Suitable for scanning images such as photographs.

H

Halftone

Reproduces the color density in black & white by using dot patterns. This method is effective for scanning images such as photographs in black & white.

I

Image processing

Refers to processing and outputting the scanned image via specified scan parameters.

Imprinter

A printer that can print text (e.g. alphabets, numbers) on the back of the scanned document.
It can be use to manage the documents by adding a name, date or serial number on the scanned document.

Intelligent Multifeed Function

A function that excludes certain patterns of overlapping of documents that is detected as multifeed, by letting the scanner memorize the overlap pattern.

For instance, when there is paper of the same size attached to a designated location on the page, the scanner memorizes the location of the attachment and can be configured not to detect multifeeds for that location.

Interface

The connection that allows communication between the computer and the scanner.

Inversion

A scanning method in which the black part and the white part of the image are inverted.

ISIS

ISIS (Image Scanner Interface Specification) is an API (Application Program Interface) standard for imaging devices (e.g. scanners, digital cameras) which was developed by Captiva, a division of EMC Corporation (the former Pixel Translations) in 1990. In order to use devices that comply with this standard, it is necessary to install a driver software that supports ISIS standard.

J

Job Separator

A sheet to insert between documents in a batch for separating different jobs.
The following types of job separators are available:

Job separator with patch codes:
A sheet with patch codes printed.

Job separator with barcodes:
A sheet with barcode(s) printed.

L

Landscape

Orientation in which the short side of the document is set parallel to the feed direction.

Legal size

A standard paper size used in the United States and other countries (8.5 × 14 in.).

Letter size

A standard paper size used in the United States and other countries (8.5 × 11 in.).

M

Multi Image

A function which outputs the image in both color/grayscale and black & white at once.

Multifeed

Multifeed is an error when two or more sheets are fed through the ADF at once. It is also called a multifeed when a different document length is detected.

Moiré patterns

Recurrent patterns on scanned images caused by incorrect settings of angles.

N

Noise removal

A function which improves the quality of an image by removing isolated noise that appear as black dots in a white area (or vice versa).

O

OCR (Optical Character Recognition)

A device or a technology that recognizes the text on documents and converts them into text data that can be edited. The shape of the characters are recognized by the differences in the light reflected off the documents.

Operating environment

Conditions (e.g. temperature, humidity) required to operate or store the scanner.

Operator panel

A panel that consists of a display and buttons. It is used for scanner operations such as selecting functions and changing settings.

Optical sensor

A sensor which detects the changes in the amount of light transmission. Paper feeding errors such as multifeed and paper jam are detected by monitoring the passing of documents.

Overscan

A function that scans the document in a size larger than the specified paper size.

P

Paper jam

Refers to an error in which a document is jammed inside the paper path or feeding is interrupted by documents slipping.

Paper protection

A function that detects anomalies upon feeding the documents and stops the scan when:

- The scanner detects a document that is unusually warped when a feeding error occurs.
- The scanner detects paper jam noise
- The scanner either detects a document that is usually warped when a feeding error occurs or detects paper jam noise

Patch code

A special code to let the scanner recognize the start and the end of each job or image mode.

Pick roller

A set of rollers which separates one sheet off the documents loaded in the ADF paper chute (feeder), and feeds the document into the ADF.

Pick start time

The period of time between setting the document and until picking starts after the document passes the hopper empty sensor.

Pixel

The dots that make up a scanned image.

Portrait

Orientation in which the long side of the document is set parallel to the feed direction. Documents/images are set/displayed vertically.

Pre-pick

Refers to feeding the document in advance to the position to start scanning. It shortens the interval between setting the document and feeding the document to the starting position.

R

Resolution

A measurement to indicate the quality (fineness) of an image. Resolution is displayed by the number of pixels within an inch. Since image data is a collection of small dots (pixels), if the same image contains different amount of pixels, the one with more pixels can express greater details. Therefore, the higher the resolution, the finer the image becomes.

S

Simplex scanning mode

A mode for scanning only one side (front or back) of the document. (↔ duplex scanning mode)

Smoothing

Refers to the removal of irregularities on diagonal lines and curves, which is a processing method commonly used in OCR applications.

T

Temporary error

An error that can be fixed by the operator.

Threshold

The value which is used to determine whether a certain color is black or white. Threshold value must be configured in order to scan images with grayscale gradation. Each pixel is converted into black or white according to the specified value.

TÜV

An institution that controls products for conformity with various standards related to security, usability and environmental issues.

TWAIN

TWAIN (Technology Without Any Interesting Name) is an API (Application Program Interface) standard for imaging devices (e.g. scanners, digital cameras) developed by TWAIN Working Group. In order to use devices that comply with this standard, it is necessary to install a driver software that supports TWAIN standard.

U

Ultrasonic sensor

A sensor that detects multifeed errors by ultrasonic soundwave. It detects multifeeds by monitoring the difference in the amount of ultrasonic waves transmitted through the documents.

USB

USB (Universal Serial Bus) is a standard for interfaces used to connect devices such as keyboards and scanners. Up to 127 devices can be connected by this interface. It can be connected and disconnected without powering off the devices.

For USB 3.0, the data transfer rate is a maximum of 480 Mbps in Hi-Speed and a maximum of 5 Gbps in Super-Speed mode. For USB 2.0, the data transfer rate is 1.5 Mbps in Low-Speed, 12 Mbps in Full-Speed, and a maximum of 480 Mbps in Hi-Speed mode.

For USB 1.1, the data transfer rate is 1.5 Mbps in Low-Speed and 12 Mbps in Full Speed mode.

W

White reference sheet

The white part located inside the ADF which the scanner defines as white, in order to adjust the brightness of all other areas accordingly.

Z

Zone OCR

A function which performs text recognition on the specified area of the scanned image.
