Software, Service & Support

Easy-to-use but powerful software and exceptional support take document management to a new level.

Intelligent Software: Maximum control and productivity. Each of our scanners comes with a collection of software that adds extra features, optimises image quality and makes for easier operation – for maximum productivity.

Canon Software

Capture OnTouch

Offers fast and accurate scanning via a user-friendly interface. Choose from two easy ways to scan. New users can quickly transform paper documents into digital archives that are easy to manage and share. More advanced users can scan and send their documents to multiple destinations, including directly into a document management system or to image editing software. In addition, CaptureOnTouch can easily create searchable PDF files using OCR technology.

Capture OnTouch Lite

Offers unique portability and convenience while on the move as CaptureOnTouch Lite software is built into the P-215 and P-208 scanners – allowing fast and effortless connectivity without the need to install any drivers or application software.

Capture OnTouch Mobile

Increase productivity, reduce costs and improve service levels dramatically with Canon's CaptureOnTouch Mobile, a free application that lets you scan directly to your smart devices.

Save valuable time with features that include double-sided scanning of documents in a single pass. Advanced image processing tools, such as auto document size detection, deskew and blank page deletion, give consistently superior image quality results.

Convenient for wireless scanning around the home, the app supports mobile working and on-demand capture at customer service points. Staff can scan sales orders, multi-page contracts and new customer applications then send them to the cloud or a specific workflow application, for immediate processing and validation.

Download on both Apple and Android platforms.

Capture Perfect

Batch scan documents quickly and easily with this intuitive application that offers multi-window and thumbnail views alongside flexible and powerful batch output options:

- Scan directly to email, PDF, file or presentation at the touch of a button
- Register routine jobs and edit, rearrange or manage files effortlessly
- Obtain precise digital documents every time with a range of features that improve legibility, remove skew and improve the sharpness of images
- Customise functionality quickly and easily with a readily-available SDK
- Supports Kofax VRS

Third Party Software

eCopy® PDF Pro Office

A powerful, easy-to-use desktop application that creates, edits and converts PDFs enabling collaboration like never before:

- Easy to install and use
- Fast in launch and PDF creation
- Most accurate and versatile document conversion to editable formats
- Complete markup, annotation and editing capabilities
- Form filling and automatic form field recognition
- Full suite of document security and signature tools
- Full featured PDF Print Driver with security, watermarks and compression
- Connectivity to popular ECM and business workflow systems

OmniPage®

Convert documents into editable digital content that looks and acts just like an original digital document – complete with columns, colours, pictures and graphics.

Using Optical Character Recognition (OCR) technology, OmniPage takes the documents scanned via your Canon scanner and transforms them into electronic files that can be edited, searched and shared in the format of your choice.

This high-performance imaging software radically enhances the way in which paper and digital documents are processed, archived and shared.

Presto! PageManager

Presto! PageManager – is a simple but powerful filing software for Mac that enables you to store, organise and edit your digital documents.

PaperPort®

Take document management to the next level with the easy-to-use but incredibly powerful PaperPort. This software complements your Canon scanners providing fast, easy scanning tools with powerful PDF creation for simplified management of all your documents.

- Easy scanning – scan at the press of a button
- Get the most from your Canon scanners – automatically route scanned documents to individual desktops
- Share information securely – create and combine documents into industry-standard PDF files
- Find anything – search and view PDF files quickly
- Collaborate more efficiently – quickly move or scan files from desktop to document management repositories such as Microsoft® SharePoint®
- Improve business processes – automatically convert forms into fillable PDF forms

Presto! BizCard

Never lose touch with a potentially valuable business contact thanks to the Presto BizCard Reader. It helps you quickly and easily convert the vital contact information on business cards into a searchable, digital database that can be easily synchronised between PCs, notebooks, PDAs and PIMs.

Kofax VRS

Industry's leading image-processing software, KOFAX Virtual ReScan (VRS) adds image quality assurance. VRS reduces the time involved in manual document preparation and enhances the quality of scanned images. Capturing high-quality images is critical to the rest of the document management process because image quality significantly impacts the success of data extraction, recognition, and retrieval. By improving readability and raising OCR recognition rates, you can reduce re-scans significantly, increase overall productivity and save costs.

Developer
Programme

Solutions Integration
Business Solutions Developer Programme
Our Business Solutions Developer Programme (BSDP) is dedicated to giving you quick and easy access to a range of technical information to assist development of applications for our range of business products.

With our strong heritage and expertise in the imaging field, we're able to offer further excellent product integration support through our BSDP.

This programme offers software developers the tools and technical resources necessary to develop solutions for our devices. Some of the benefits include access to command information, **Software Development Kits (SDK)**, technical support and our Third-Party Solutions Catalogue.

ScanFront Network Scanners
SDKs are available to integrators to develop unique scanning capture solutions with the ScanFront Network Scanner. Further information about the SDK is available to integrators through our BSDP.

CaptureOnTouch Plug-in SDKs
SDKs are available for CaptureOnTouch and CaptureOnTouch Lite. They enable ISVs and developers to integrate their software solutions more closely with Canon's scanning hardware and bundled software. They also deliver a more seamless solution to support customers' individual business processes. The SDK for CaptureOnTouch Lite uniquely allows ISVs to develop their own software connectivity directly on the P-215 portable scanner.

CapturePerfect Application Software
CapturePerfect SDK is a practical tool that allows software developers to create tailor-made solutions designed to meet the precise scanning requirements of customers. It is cost-effective, easy-to-use and compatible with all DR scanners. What's more, with a quick development cycle, CapturePerfect SDK provides an exciting opportunity for expanding your business.

Cheque Scanners
SDKs are available for CR-scanners in order to integrate with various kinds of software developed by third-parties.

For more information please visit our BSDP website:
www.canon-europe.com/bsdp

EMC Runtime Controls
Canon provides Runtime controls for EMC Captiva Cloud Toolkit. EMC Captiva Cloud Toolkit is a scanning and imaging SDK that enables Canon to add scanning capability to their web-based line of business applications. The toolkit enables applications to communicate with document scanners that use ISIS or TWAIN drivers. There are no special server requirements, and no ActiveX plug-ins are used.

For more information please visit the EMC website:
www.emc.com/enterprise-content-management/captiva/cloud-toolkit.html

Canon Scanner Technology Guide

A simple explanation of the technical terms used in this guide.

Our scanner technology explained:

Built upon a tradition of superior image quality and reliability, Canon imageFORMULA document scanners feature state-of-the-art scanning technology. The following features are available in most Canon imageFORMULA document scanner models.

3-Dimensional Colour Correction
For unprecedented colour reproduction and accuracy, 3-Dimensional Colour Correction faithfully reproduces a document's colour information. The end result is superior colour quality, plus enhanced readability for OCR scanning applications.

ADF
Automatic Document Feeder – allows for fast, unattended scanning of batches of documents.

Automatic Size & Deskew
Wasting time sorting your documents before scanning? Automatic size checks the size of each fed document and ensures properly sized images for each page, and deskew automatically straightens out the scanned image.

Automatic Colour Detection
Allows the scanner to automatically determine which documents of a mixed batch should be saved in colour, based on detected colour content. No need to separate black-and-white and colour documents, file sizes are dramatically reduced as a result.

Automatic Colour Dropout
Red, green or blue can be removed from document images for improved readability in OCR applications and also for reduced file-storage size.

CIS
Contact Image Sensors (CIS) are optical sensors used in document scanners to capture the document image. CIS sensor technology benefits include sharper images and less image distortion, with better text readability for enhanced OCR accuracy.

Colour Enhance
The 3-Dimensional Colour Correction function faithfully reproduces a document's colour information using an incorporated colour conversion chip to pinpoint the exact RGB coordinates in one process.

Daily Duty Cycle
The daily duty cycle is the manufacturer's suggested maximum usage level per day for a scanner. You should choose a scanner with a daily duty cycle that exceeds your current production needs to ensure a longer life for your scanner. You should also ensure you take into account any peak volume periods during the month.

Duplex
Scans both sides of a document in one-pass scanning path operation.

Double Feed Release
This function is useful for users to check if the double feed detected is actually a double feed, or a special document such as an envelope. If a document double feed is detected during scanning, document feeding stops with the double fed document at the paper exit. Then the DFR button illuminates. Also, the Rapid Recovery System screen appears to prompt you to select whether to continue scanning. If pushed, the DFR button saves the displayed image and scans the rest of the document.

Face-up Feeding
Users can scan as you see them. With this capability, DR-C125 scans documents from the top page but reads the image from the bottom by rotating images automatically by 180º, images are presented with proper orientation and order.

Full Auto Mode
Full Auto Mode applies the best settings on each scanned image according to our unique algorithm. The following settings are applied – Auto Colour Detection, Auto Document Size, Auto Resolution, Skip Blank Page, Deskew and Text Orientation.

J-Path
Canon's unique J-path approach to a footprint saving scanner functionality allows vertical in-feed and vertical out-feed functionality on the DR-C125.

Prescan
The option of previewing a scanned document before completing a scan can be helpful to ensure data isn't captured erroneously or duplicated unnecessarily.

Resolution
Image resolution describes the detail an image holds. The term applies equally to digital images, film images, and other types of images. Higher resolution means more image detail but also often means a higher file storage size. The scanning speed of a document scanner will more than likely decrease as you increase the resolution setting.

Separation Re-try
If double feed has occurred, 'Separation Re-try' function returns the document to the document feeder and re-feeds the pages. Even when the double feed occurs, the scanner can solve the problem by itself and resume scanning.

Simplex
Refers to scanning when only capturing one side of the document.

Skip Blank Page
Useful when scanning batches that include single-sided and double-sided documents mixed together, this function automatically removes blank pages from the image data, which leads to smaller file sizes as a result.

Text Enhance
The scanners offer two Text Enhancement scanning modes you can use to get clearer, more legible black and white images from documents with hard-to-scan elements. Each mode should be selected according to document type.

Text Orientation Recognition
Perfect for scanning batches of documents that are facing different directions, this feature recognises the text orientation of each fed document and rotates the scanned images accordingly.

Thin Paper Mode
Feeding speed slows down to transport thin documents gently to prevent any damage (available on DR-M160).

Ultrasonic Double Feed Detection
Ultrasonic sensors detect the gap between overlapping pages and prevent multiple pages from being fed together, ensuring that each page of a document is scanned.

U-turn/Straight Path Feeding
For enhanced efficiency and flexible scanning of a range of documents, including plastic cards and thick documents, certain scanner models feature a straight paper path in addition to the standard U-turn path.

We are committed to innovation throughout the document lifecycle, with a comprehensive range of smart scanners that have a number of unique features. These are designed to provide high quality, fast image scanning that delivers exceptional productivity.

Our commitment to quality is part of our business philosophy, called Kyosei. This is a way of thinking and acting that demonstrates the importance of working together to achieve the common good. With our partners we help deliver the same exceptional value to our customers.

We take the same approach in our responsibility to the environment. We have been pioneering cartridge recycling since 1990 and through our environmental innovations, 30% of our product housings are made with recycled plastic.
