

Fedora on RISC-V

RISC-V in servers everywhere?

Richard W.M. Jones rjones@redhat.com Emerging Technologies, Red Hat 8th May 2018

fedora

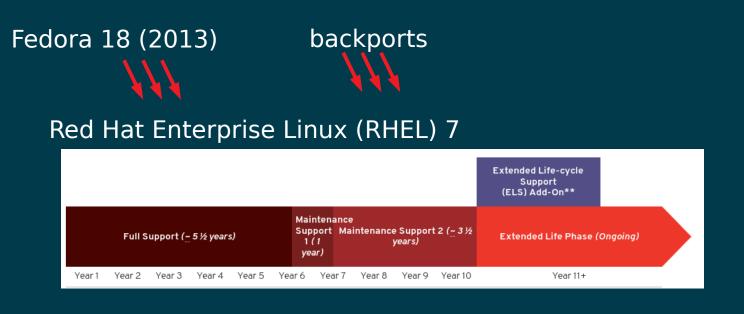

Upstream developers Fedora Rawhide Fedora 28 (May 2018)

Red Hat Enterprise Linux

CentOS 7

Upstream First

QUMRANET

😥 Manage IQ

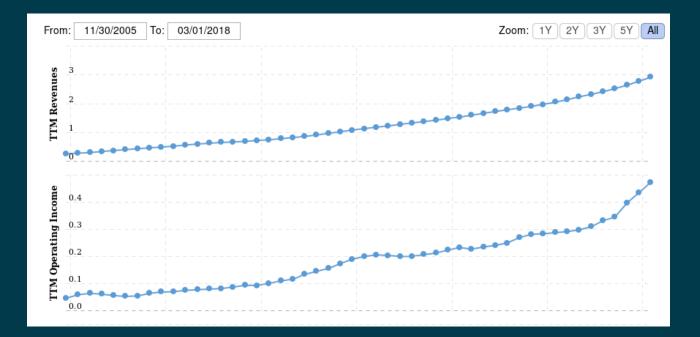

MAKARA

Step 3 - profit

Fedora on RISC-V

Final bootstrap took 2 months

- 16,725 builds
- 12,785 binary packages

Current build farm:

- 2 x HiFive Unleashed boards
- 11 qemu instances on 4 Intel servers
- Fedora Rawhide & Fedora 28, plus "shadow Koji"

Bootable disk images widely used by developers experiencing RISC-V for the first time.

Fedora on RISC-V

- IRC: #fedora-riscv (FreeNode)
- https://fedoraproject.org/wiki/Architectures/RISC-V
- https://fedorapeople.org/groups/risc-v/disk-images/

RISC-V on the server

RISC-V on the server

Don't make these mistakes

- Require manual intervention to choose the right bootloader/kernel per vendor
- X Out of tree drivers or patches
- No standards / constantly changing standards
- ***** No organization providing direction on server standards
- Incompatible variants of the ISA
 - => single kernel image cannot be made
- Breaking ABIs:
 - ISA | kernel | modules | glibc | libraries | ISV software
- Intimately tied to Linux, so other OS vendors are excluded
- * Developer boards are too expensive for developers
