**PROJECT 1569**

## **UPLAND SITE DATA SUMMARY**

### **FORMER MANUFACTURED GAS PLANT SITE TWO RIVERS, WISCONSIN**

**Prepared For:**

**Wisconsin Public Service Corporation  
700 North Adams Street  
Green Bay, WI 54307**

**Prepared By:**

**Natural Resource Technology, Inc.  
23713 West Paul Road, Suite D  
Pewaukee, WI 53072**

**NRT Project No. 1569**

**May 13, 2005**

# TWO RIVERS MGP SITE

Wisconsin Public Service Corporation

---

## General Information

Site Size: 5 acres

Years of Operation: 1925-1946

Ownership: WPSC

Gas Process: Coal Carbonization, Carbureted Water Gas

Major Site Features:

Most of the site is a wetland (west of the MGP operations area bordering the west Twin River). The former MGP building and other structure foundations are present

## Site Status Summary

### *Overview of Remediation Work Completed*

- A remedial alternatives analysis (RAOR) for upland work was submitted to WDNR in December 2003 and approved. The selected remedial action identified by the RAOR includes limited soil removal/disposal from upland areas and in-situ chemical oxidation.
- Bench scale treatability testing for in-situ chemical oxidation was completed in 2003. A field scale pilot test program was conducted in December 2004, post-treatment groundwater monitoring was performed through March 2005.
- Groundwater monitoring is in progress as part of the pre-remediation planning work.
- An initial river sediment quality assessment was completed and reported by NRT in 1996. Supplemental field poling observations were made in 2003.

### *Status of Site Conditions & Monitoring*

- The depth to groundwater ranges from approximately 0.5 to 3 feet below ground surface. Groundwater flow is southwest toward the West Twin River.
- Surficial soils consist of silts/sands, discontinuous peat units and fill material (wood, glass, brick, concrete, wire, and ash/cinder) overlying clay with intermittent sand layers.

- Residual concentrations of PVOCs, PAHs, and cyanide are present in soil and/or groundwater at the site, as described in the project reports of record
- Preliminary bench testing resulted in selecting BIOX<sup>®</sup> for the field scale pilot test program.
- Water depths in the West Twin River adjacent to the site range from 2 to 6 feet.
- In 1996, residual tar, sheens, and odor were detected in the sediments adjacent to the site, in an area extending approximately 120 feet outward from shore, and for a length of about 720 feet. The thickness of soft sediments in this area ranged from 2.0 to 11.3 feet, averaging about 7.2 feet. Tar was sometimes evident only in the lower portion of the soft sediment. Although the 2003 supplemental poling found occasional evidence of MGP-residuals outside this area, it was generally isolated and random.
- Within the area described above, total PAH concentrations from vibracore samples ranged from <1 to 2,004 mg/kg. Outside this area, based on limited testing, the PAH concentrations were ND to < 1 mg/kg. A “background” sediment sample at the upstream property line had 0.011 mg/kg total PAHs (0 to 20 inch composite).

***Interim/Supplemental Actions Identified***

- Design and implementation of upland remediation work (scheduled for 2005/2006 prior to transitioning sites to USEPA lead regulatory agency).

Notes:

- VOCs : Volatile Organic Compounds
- Cyanide: Dissociable cyanide analyzed by Method OIA-1677 in July and October 2003
  - 1) Concentrations equaling/exceeding the enforcement standard (ES) are shown in bold
  - 2) Concentrations equaling/exceeding the preventive action limit (PAL) are italicized
- µg/L : Micrograms per liter
- mg/L : Milligrams per liter
- : Analysis was not performed
- <0.30 : Analyte not detected above method detection limit shown for parameter

- ns : NR140 ES or PAL standards have not been established
- duplicate (MW-B) : Field duplicate sample with field identity shown in parentheses
- Q : Analyte detected between the limit of detection (LOD) and limit of quantitation (LOQ)
- K : Detection limit may be elevated due to the presence of an unrequested analyte
- A : Analyte present in method blank at 0.0029 mg/L
- \* : Quality standards for Trimethylbenzenes combined

**Notes:**

**PAHs :** Polynuclear Aromatic Hydrocarbons

1) Concentrations equaling/exceeding the enforcement standard (ES) are shown in bold

2) Concentrations equaling/exceeding the preventive action limit (PAL) are italicized.

**nd :** Analysis was not performed

**µg/L :** Micrograms per liter

**<0.018 :** Analyte concentration less than method detection limit shown

**ns :** NR140 ES or PAL standards have not been established

**duplicate (MW-B) :** Field duplicate sample with field identity shown in parentheses

**Q:** Analyte detected between the limit of detection (LOD) and limit of quantitation (LOQ)

**D:** Laboratory Data Qualifier - Analyte value from diluted analysis

(JTB/EPK/C-PAH 2003 U HMS/GRL 8/26/04)

NOTES:

TOC : Top of well casing

NGVD : All elevations relative to National Vertical Geodetic Datum

U : Upward vertical hydraulic gradient

D : Downward vertical hydraulic gradient

ice : Ice present on the inside of the well casing prohibited groundwater elevation measurement

-- : not applicable

\* : not measured

\*\*\* : Measurement was not collected, area was inaccessible

Notes

- 1 Sample locations provided on Sheet 2
- 2 na Parameter not analyzed for in this sample.
- 3 NR720 RCL is the WDNR Residual Contaminant Level for the protection of groundwater quality  
 Samples equaling or exceeding the RCL are bold/underlined
- 4 ns There is no NR720 P S N S has been established for this parameter
- 5 nd Parameter not detected in this sample
- 6 No samples were analyzed for amenable cyanides

Notes.

- Petroleum Volatile Organic Compounds (PVOCs) analyzed by EnChem, Inc., Green Bay, Wisconsin, by SW846 Method 8021.
- Sample locations are provided on Figure 2 and Sheet 2
- Groundwater Pathway RCL from Wisconsin Administrative Code Department of Natural Resources Chapter NR 720.09 Table 1 Residual Contaminant Levels Protective of groundwater, January 2001.

na = not analyzed

fbs = feet below ground surface

ug/kg = micrograms per kilogram

< = constituent was analyzed for but not detected at the listed detection limit

RCL = residual contaminant levels

Q = analyte was detected between the limit of detection and limit of quantitation

K = detection limit may be elevated due to the presence of an unrequested analyte

Concentrations attaining or exceeding the NR 720 RCL are **bold/underlined**

3 Wisconsin Administrative Code Department of Natural Resources Chapter NR 720.11 Table 2 Residual Contaminant Levels January 2001

fbgs = feet below ground surface

% = percent

mg/Kg = milligrams per kilogram

< = constituent was analyzed for but not detected at the listed detection limit

Q = analyte was detected between the limit of detection and limit of quantitation

na = not analyzed

ns = no standard exists

Concentrations attaining or exceeding the NR 720 RCL are **bold/underlined**

Notes

1. PVOC (petroleum volatile organic compounds) analyzed by EnChem, Inc, Green Bay, Wisconsin, by SW846 Method 8021.
2. Sample Locations provided on Figure 1
3. EPA Generic Direct Contact Soil Screening Level (SSLs) for Residential Scenario in the Supplemental Guidance for Developing Soil
4. EPA Generic Direct Contact SSLs for Commercial/Industrial Scenario for Outdoor Workers in the Supplemental Guidance for Developing Soil Screening Levels for Superfund Sites (OSWER 9355 4-24)

Constituent concentrations which attain or exceed the EPA SSLs are **underlined and bold**.

fbgs = Feet below ground surface.

Q = Laboratory note - analyte was detected between the limit of detection and limit of quantitation.

K = Laboratory note - Detection limit may be elevated due to presence of an unrequested analyte

na = Not analyzed

ns = No standard exists

µg/kg = micrograms per kilogram

< = Constituent was analyzed for but not detected above the listed detection limit.

**Notes**

1 Polynuclear Aromatic Hydrocarbons (PAHs) analyzed by EnChem, Inc. Green Bay, Wisconsin, by EPA Method 8270C

2 Sample Locations provided on Figure 1.

3 Wisconsin Department of Natural Resources Draft Soil Cleanup Levels (DSCLs) from Table 1 of the Soil Cleanup Levels for Polycyclic Aromatic Hydrocarbons Interim Guidance Document, April 1997

fbs = Feet below ground surface

DCP = Direct Contact Pathway

µg/kg = Micrograms per kilogram

< = Constituent was analyzed for but not detected above the listed detection limit

Q = Laboratory note - analyte was detected between the limit of detection and limit of quantitation

B = Laboratory note - Analyte present in the method blank

\* = Laboratory note - Precision not within control limits

Notes

- Percent Solids analyzed by SM 2540 G Total Iron by SW846 6020, Total Organic Carbon (TOC) by SW846 M9060, Biological Oxygen Demand (BOD) by SM5210B and Chemical Oxygen Demand (COD) by EPA 410.4 Analysis performed by EnChem Inc. Green Bay, Wisconsin
- December 6 2004 Heterotrophic Plate Count samples were analyzed by University of Laval in Quebec, Canada. Each sample was analyzed three times to provide an average count
- EPA Generic Direct Contact Soil Screening Level (SSLs) for Residential in the Supplemental Guidance for Developing Soil Screening Levels for Superfund Sites (OSWER 9355.4-24)
- EPA Generic Direct Contact Soil Screening Level (SSLs) for Commercial/Industrial Scenario for Outdoor Workers in the Supplemental Guidance for Developing Soil Screening Levels for Superfund Sites (OSWER 9355.4-24)
- Wisconsin Administrative Code Department of Natural Resources Chapter NR 720.11 Table 2 Residual Contaminant Levels January 2001
- Sample Locations provided on Figure 1

Concentrations attaining or exceeding the NR 720 Non-Industrial RCL are italicized/underlined

Concentrations attaining or exceeding the NR 720 Industrial RCL are **bold/underlined**

fbgs = Feet below ground surface

% = percent

mg/kg = milligrams per kilogram

CFU/g =

< = Constituent was analyzed for but not detected above the listed detection limit

\* = Laboratory note - Precision not within control limits

N = Laboratory note - Spiked sample recovery not within control limits

Q = Laboratory note - analyte was detected between the limit of detection and limit of quantitation

4 = Laboratory note - BOD duplicate precision not within control limits

7 = Laboratory note - BOD result is estimated due to complete oxygen depletion

na = not analyzed

ns = no standard exists
