ICX ICX 7750

Brocade Confidential and Proprietary

NOTES: Prices and features subject to change without notification. As it is Brocade's standard practice to round both MSRP and partner pricing to a whole dollar, this may result in a range of discounts to the partner.

The Brocade ICX 7750 switches are a series of high density 10G and 40G L3+ fixed configuration switches with three versions; a 48 SFP+ ports, 6 QSFP+ ports and an optional module slot for an additional 6 QSFP+ ports, a 48 1/10GE RJ-45 ports, 6 QSFP+ ports and an optional module slot for an additional 6 QSFP+ ports, and a 26 QSFP+ ports and an optional module slot for an additional 6 QSFP+ ports. These have all been optimized for a chassis experience within a stackable for campus deployment.

Modular Ordering

To improve ordering flexibility and streamline the number of SKUs, Brocade has adopted a new ordering process for the Brocade ICX 7750. The process enables customers to build their own switch by selecting a "base" Brocade ICX 7750 unit (ICX7750-26Q, ICX7750-48F or ICX7750-48C) and adding their power supplies (AC/DC, Intake/Exhaust airflow), fan assembly kit (Intake/Exhaust airflow) and optional ICX7750-6Q six 40G QSFP module.

Brocade Confidential and Proprietary

NOTES: Prices and features subject to change without notification. As it is Brocade's standard practice to round both MSRP and partner pricing to a whole dollar, this may result in a range of discounts to the partner.

The Brocade ICX 7450 switches are a series of mid-market enterprise stackable switches with unique design that provide three modular slots, offering up to 12×1/10 GbE SFP+ ports, 12×10GBASE-T ports, or up to 3×40 GbE QSFP+ ports for uplink or stacking. As a result, the Brocade ICX 7450 can easily deliver sufficient bandwidth between the edge and aggregation layers to support expanding video traffic, VDI adoption, and high-speed wireless 802.11ac deployment.

Modular Ordering

To improve ordering flexibility and streamline the number of SKUs, Brocade has adopted an ordering process for the ICX 7450 that enables customers to build their own switch by selecting a “base” ICX 7450 unit (ICX7450-24, ICX7450-24P, ICX7450-48, ICX7450-48P, or ICX7450-48F) and adding their power supplies (AC/DC, Intake/Exhaust airflow), fan assembly kit (Intake/Exhaust airflow) and optional interface modules for uplink and stacking.

Brocade Confidential and Proprietary

NOTES: Prices and features subject to change without notification. As it is Brocade's standard practice to round both MSRP and partner pricing to a whole dollar, this may result in a range of discounts to the partner.

The Brocade ICX 6650 switches are high density 10G and 40G L3+ fixed configuration switches with 56 SFP+ ports and 6 QSFP+ ports, optimized for demanding data center environment, but also suitable for campus deployment. The Brocade ICX 6650 switches are available in different starting configurations, with the flexibility of Ports-on-Demand licensing to add more ports up to the full configuration of 64x10GbE and 4x40GbE.

In addition, the ICX 6650 switches come with Advanced L3 software, redundant power supplies and fans, and choice of intake or exhaust airflow.

Modular Ordering, beginning September, 2013

To improve ordering flexibility and streamline the number of SKUs, Brocade has adopted a new ordering process for the Brocade ICX 6650, starting September 2013. The new process enables customers to build their own switch by selecting a "base" Brocade ICX 6650 unit (ICX6650-32-ADV) and adding their power supplies (AC/DC, Intake/Exhaust airflow), fan assembly (Intake/Exhaust airflow) and POD (Port on Demand) licenses of choice.

FastIron Edge FastIron CX

Brocade Confidential and Proprietary

NOTES: Prices and features subject to change without notification. As it is Brocade's standard practice to round both MSRP and partner pricing to a whole dollar, this may result in a range of discounts to the partner.

The FastIron CX Series are IronStack enabled L3+ stackable switches designed for flexible campus convergence solutions. FastIron CX series is available in IEEE 802.3 at PoE+ and non PoE+ models. The FCX series models include 24 or 48 10/100/1000 Mbps RJ45 ports with 4 combo copper/fiber Gigabit Ethernet ports supporting 10/100/1000 Mbps (RJ45) or 100/1000 Mbps Ethernet Fiber (SFP) connectivity. All FastIron CX models include two high speed dedicated stacking ports. In addition, the FastIron CX Series switches support an optional field-upgradeable 2-port 10GbE XFP module. All orders include one (1) modular AC power supply, rack mount kit and one 0.5m CX4 stacking cable. Pluggable 10-GbE modules, SFP and XFP optics and additional CX4 stacking cables are optional and must be purchased separately.

FastIron Edge FastIron SX 800 and 1600

Brocade Confidential and Proprietary

NOTES: Prices and features subject to change without notification. As it is Brocade's standard practice to round both MSRP and partner pricing to a whole dollar, this may result in a range of discounts to the partner.

FastIron SX family of layer 2/3 switches includes the FastIron SX 800, FastIron SX 1600 modular systems. These products enable customers to deploy a scalable and resilient infrastructure featuring a rich feature set to secure and simplify network convergence from edge to core. Advanced system software featuring Full Layer 3 IPv4 or IPv6 routing is available as a pre-configured option at the time of purchase or may be purchased separately for a field upgrade.

The FastIron SX products support First, Second and Third Generation packet processing ASIC interface modules. The First Generation modules are limited to IPv4 routing support. The Second Generation models are hardware ready to support IPv6 routing. Actual IPv6 routing operation will require the purchase of an IPv6 routing upgrade. The Third Generation modules have greater scalability than the earlier generation modules and interoperate in chassis with First or Second Generation modules. All FastIron SX products support Layer 2 switching of IPv4 and IPv6 traffic and Layer 3 routing of IPv4 and IPv6 traffic with appropriate software upgrade.

Note 1: These chassis models may be configured with either all First Generation and Third Generation modules, all Second Generation and Third Generation modules, or all Third Generation modules (i.e., line modules and management modules).

NOTES: Prices and features subject to change without notification. As it is Brocade's standard practice to round both MSRP and partner pricing to a whole dollar, this may result in a range of discounts to the partner.

The Brocade MLXe routers are designed for high scalability, and high performance Service Provider backbones, Internet routing, and MPLS applications as well as for high end enterprise backbones. Each of the Brocade MLXe routers offers hardware based IPv4 and IPv6 routing, MPLS TE, and MPLS VPNs as well as Layer 2 switching for integration with Layer-2 metros. Each Brocade MLXe router has a base system which includes the chassis with redundant fans and fan controllers, and a number of switch fabrics and power supplies (chassis dependent) required to support most fully loaded system configurations. Management modules are included in certain chassis SKUs. Each system can support up to 2 management modules. Customers can optionally add components (switch fabric, power supplies) to the system for redundancy and high availability.

NetIron NetIron XMR Series

Brocade Confidential and Proprietary

NOTES: Prices and features subject to change without notification. As it is Brocade's standard practice to round both MSRP and partner pricing to a whole dollar, this may result in a range of discounts to the partner.

The NetIron XMR Series of routers are designed for high scalability, and high performance backbone, Internet routing, and MPLS applications. Each of the NetIron XMR routers offers hardware based IPv4 and IPv6 routing, MPLS TE, and MPLS VPNs as well as Layer 2 switching for integration with Layer-2 metros. Each NetIron XMR router has a base system which includes the chassis with redundant fans and fan controllers, one management module, and a number of switch fabrics and power supplies (chassis dependent) required to support a fully loaded system. Customers can optionally add components (management, switch fabric, power supplies) to the system for redundancy and high availability.

NOTES: Prices and features subject to change without notification. As it is Brocade's standard practice to round both MSRP and partner pricing to a whole dollar, this may result in a range of discounts to the partner.

The NetIron MLX Series of switching routers are designed for cost effective high performance metro applications, Internet edge/aggregation applications, as well as high end enterprise backbones. Each NetIron MLX switching router offers hardware based advanced layer-2 switching capabilities as well as IPv4, IPv6, and MPLS routing. Each NetIron MLX router has a base system which includes the chassis with redundant fans and fan controllers, one management module, and a number of switch fabrics and power supplies (chassis dependent) required to support a fully loaded system. Customers can optionally add components (management, switch fabric, power supplies) to the system for redundancy and high availability.

NetIron NetIron CES 2000 Series

Brocade Confidential and Proprietary

NOTES: Prices and features subject to change without notification. As it is Brocade's standard practice to round both MSRP and partner pricing to a whole dollar, this may result in a range of discounts to the partner.

The NetIron CES 2000 Series of switches is a family of 1 RU fixed form factor Layer 3 edge/aggregation switches that is purpose built for advanced Carrier Ethernet, metro edge/aggregation and high-end data center applications. These switches deliver wire-speed 24-port and 48-port 10/100/1000 Mbps or 100/1000 SFP to 10GbE aggregation in a compact, fixed-configuration 1 RU form factor. With support for upto 2 optional 10GbE ports, the NetIron CES 2000 Series of switches provide a smooth migration from Gigabit Ethernet to 10-Gigabit Ethernet.

The NetIron CES 2000 series switches are MEF certified and designed to deliver an optimized set of Layer 2, IPv4 and Advanced Layer 2 services based on Provider Bridging (PB) and Provider Backbone Bridging (PBB). The NetIron CES 2000 Series switches are powered by Foundry's proven Multi-Service IronWare operating system software.

The BASE software package in the NetIron CES 2000 Series comes with the classic Layer 2 capabilities, ACLs, basic Layer 3 capabilities (static routing, RIP v1/v2, VRRP, VRRP-E), QoS capabilities and management support. Upgrade packages are available for:

- Layer 3 Premium software package (including OSPFv2, BGPv4, IS-IS) in addition to the capabilities in the BASE software package and
- Metro Edge Premium software package (including PB, PBB, 802.1ag CFM, Ethernet Service Instance ESI framework)

All units ship with a console cable and US power cord unless otherwise specified at time of order. All orders include one (1) integral power supply, manual on CD-ROM, and rack ears affixed to the unit. These switches are upgradeable with one redundant, hot-swappable power supply.

SFP and XFP optics must be purchased and shipped separately.

ServerIron ADX

Brocade Confidential and Proprietary

NOTES: Prices and features subject to change without notification. As it is Brocade's standard practice to round both MSRP and partner pricing to a whole dollar, this may result in a range of discounts to the partner.

The ServerIron ADX 1000 Series is comprised of two hardware platforms – the ADX 1000 and ADX 1000F. The ADX 1000 platform offers up to sixteen 10/100/1000-Mbps copper RJ45 Ethernet ports and two 10-Gigabit fiber XFP Ethernet ports, while the ADX 1000F platform offers up to eight 10/100/1000-Mbps copper RJ45 Ethernet ports, sixteen 100/1000-Mbps fiber SFP Ethernet ports, and two 10-Gigabit fiber SFP+ Ethernet ports. Each of these hardware platforms offer four product flavors - ADX 1008(F)-1, ADX 1016(F)-2, ADX 1016(F)-4 and ADX 1216(F)-4. They also provide on demand capacity upgrades for performance, interface ports and/or features through a simple software license key. The ServerIron ADX 1000 and 1000F switches come pre-equipped with one power supply, and can optionally support a second redundant power supply. The fiber optic connectors are required to be ordered separately. All of these platforms support the same software features with the following exceptions: a) The ADX 1008(F)-1 does not support the GSLB controller function b) The ADX 1008(F)-1 supports a lesser number of real and virtual servers and ports c) Multitenancy is only available on systems which have four or more cores licensed (i.e. 1016-4, 1216-4). To enable this functionality, the PREM license must be installed.

The ADX 1000 and ADX 1000F platforms can be field-upgraded for performance, interface ports and features through a simple software license key. The modular ADX 4000 and ADX 10000 platforms too can be upgraded for performance and/or features through software license.

When deployed in Multitenant mode, the ADX 4000 and ADX 10000 have the capacity to support higher tenant densities than the default value of 4 included in the PREM license. These higher tenant levels are available with the purchase of a software license and must be deployed with the SI-MM-2 or SI-MM-SSL-2 modules and release 12.5 or higher. The ADX 4000 supports upto 16 tenants (via the ADX-CH-LIC-MT-TIER1 license). The ADX 10000 supports either 16 tenants or 32 tenants along with a corresponding upgrade path (via the ADX-CH-LIC-MT-TIER2 and ADX-CH-LIC-MT-TIER2-UPG licenses).
