Chapter 4 - DDR4 System memory

D

Each CPU offers 6 Slots for DDR4 Memory Modules organised in 1 Banks and 6 Channels with 2 Memory Controllers (3 Channels each).

If you need more than 6 Slots you have to configure the 2nd CPU.

Depending on the amount of memory configured you can decide between 4 basic modes of operation (see explanation below).

There are 2 different kinds of DDR4 Memory Modules available: RDIMM and RDIMM 3DS (also known as TSV)

Mix of RDIMM and RDIMM 3DS is under investigation (currently not allowed).

Supported memory capacities per CPU:

192 GB DDR4 RDIMM (6x 32GB 2Rx4)

384 GB DDR4 RDIMM 3DS (6x 64GB 4Rx4)

Supported memory capacities per System:

384 GB using RDIMM

768 GB using RDIMM 3DS technology with 64GB per module

The memory speed is independent from the configuration (1DPC) but restricted by the CPU SKU (max. 2.666 MT/s).

DDR4 memory is operated at 1.2V

Preview on NVDIMM support in 2018 (not POR for release in 2017)

Up to 4 NVDIMMs are supported per System (2 per CPU)

This leads to the following maximum memory capacity per System:

2-304 GB DDR4 with 4x 512GB NVDIMM (2.048GB) + 8x 32GB RDIMM (256GB)

S26361-F3694-E10	Independent Memory Mode
Independent Channel Mode allows all channels to be populated in any order. All channels must run at the same interface frequency. But each channel may run at different DIMM timings (RAS latency, CAS latency, and so forth). The slowest memory module defines to bus speed.	
Configuration: minimum 1 memory module per CPU, maximum 6 memory modules per CPU	
S26361-F3694-E2	Performance Memory Mode
BIOS preconfiguration for maximum Performance. Four identical memory modules will be equipped in each slot of each channel to achieve highest memory performance. Always a multiple of 6 identical modules must be configured per CPU. All six modules are active and full capacity can be used.	
Configuration: 6 memory modules per CPU	
S26361-F3694-E3	Mirror Channel Mode
BIOS preconfiguration for Mirror mode. Two or three identical memory modules are always equipped at one memory controller to use the mirrored channel mode. Half of the modules contain active data, the remaining modules contain mirrored data. See details below.	
Configuration: minimum 4 memory module or 8 memory module or 12 memory modules per CPU

Chapter 6 - HD drive cage

HD drive cage is a metal box providing bays for 3.5" HDDs or 2.5" HDDs/SSDs/PCIe-SSDs. Choose out of the following HD cage upgrade kits, depending on pre-selected TX2550 M4 base unit and the targeted configuration. Each upgrade kit contains all relevant parts such as metal cage, backplane, cables and mounting material.

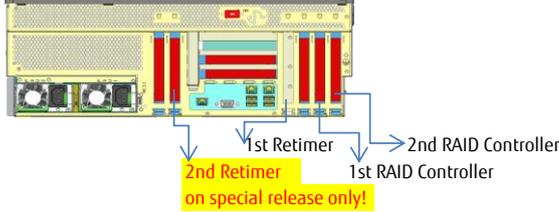

Upgrade kits for the upper drive area require the completion of the mid drive area (except for PCIeSSDs).

Up to 3x 1.6x5.25" bays are available in the upper drive area for an ODD and/or backup drive configurations; in the 12x3.5" configuration, a 9.5mm bay is available for a slim ODD. Refer to sections "ODD" and "backup" for details.

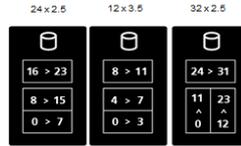

Upgrade kits are available either ex factory (E-codes) or for retrofit upgrade (L-codes). RAID configurations are recommendations; refer to section "RAID" for available options.

Chapter 8 - ODD optical disk drives

PRIMERGY TX2550 M4 offers up to 3x 1.6" bays (located in the upper side of Tower- / right side of Rack-server) for various ODD's and/or backup drives. Depending on the HDD drive cage configuration there may be some or all of 1.6" bays already occupied; please find the number of available bays in the chapter 6, "HD-cage", incl. further configuration details.

Chapter 9 - backup drives

With most configurations the TX2550 M4 offers 3 x 1.6" bay in the accessible drives area located at the top of the Tower Server (or at the right side of the Rack) for various ODD and or backup drives.
Depending on the HDD drive configuration there may be some or all of these 1.6" bays already occupied - please find the number of available bays and the size listed as point 3) at each of the drive bundles. All bundles with limitations are highlighted with 2 exclamation marks in the front (e.g. "!! 1x 9.5mm ...")

Chapter 10 - storage drives

SAS drives and SATA drives can be mixed, but cannot be used in one logical RAID volume.
 SAS drives require a dedicated SAS / RAID Controller
 Hard Disk Sector Format Information:
 512n HDD: 512 byte sectors on the drive media.
 512e (e-emulation) HDD: 4K physical sectors on the drive media with 512 byte logical configuration.
 512e HDD Disk Drives: VMware 6.0 or earlier is not supported.
 When using SSDs with VMware ESXi, select the SSDs that meet the endurance requirement described in KB2145210 below.
<https://kb.vmware.com/kb/2145210>
 DWP: Drive Writes Per Day over 5 years.
 SED (=Self Encrypting Drives) require either a RAID controller with *SafeStore (SED) support or an HBA and in addition a software instance, supporting SED Key Management.
 It is strongly recommended to order SafeStore (SED) RAID controller with SED HDD or SSD devices for SafeStore (SED) functionality.
HDD Classes:
 Business-Critical (BC) -SATA-Nearline SATA Enterprise Drives / 7.2Krpm, SATA 6G.
 Business-Critical (BC) -SAS-Nearline SAS Enterprise Drives / 7.2Krpm, SAS 12G .
 Mission-Critical (MC) -SAS 10K and SAS 15K Enterprise Drives with max. performance and reliability.

Warranty:
 SSD and SATA DOM have a built-in Wear-Out indicator. In this case the warranty for such a component, as an exception to the system warranty, is restricted to the time period until the indicator reaches the exhaust level.
