Conditions of use and contact details

- The data should only be used in accordance with the UK Data Archive guidelines
- Please acknowledge the assistance of the GLA in any published use of the data
- Please acknowledge the funding assistance of the Housing Corporation without which the survey could not have taken place
- A copy of any analysis should be provided free to the GLA – this is partly in order to share the benefits of analysis, and partly to enable us to track the main uses of the data to help plan any future surveys

1. Introduction

The Greater London Authority (GLA) commissioned Taylor Nelson Sofres (TNS) to carry out a London population survey in 2002. The survey was required to assist the GLA in policy development across a wide range of policy areas, including quantifying the linkages between different aspects of needs - for example, housing affordability, poverty, employment, health, etc.

A pilot study was conducted in January 2002. The fieldwork for the main survey took place in a six-month period between February and August 2002, with interim data files delivered in June and final data files delivered in October 2002.

There was a target of 8,000 household interviews (8,158 interviews were achieved), which is adequate for analysis at London wide, sub-regional and GLA constituency levels, with a target of 260 interviews per borough.

The household selection was based on a 'pre-selected addresses' method (rather than a quota sample), with a minimum number of calls to each address at different times of day and different days of the week. Further details of the method, the response rate and the outcomes of the visits to the preselected addresses are provided later in this report. The average interview length was around 45 minutes. Interview length varied from around 35 to 55 minutes; the main factors determining the interview length were household size and whether there were children present in the household. The interview was conducted with 'head of household' or partner i.e. an adult household member who was responsible or jointly responsible for the mortgage or rent on the household's accommodation.

The survey provides new reliable information at London wide, sub-regional and GLA constituency level on key housing, household characteristics and income data.

The survey provides:

- vital baseline information for a number of the Mayor's strategies and policy priorities – spatial planning, transport, economic development, health, diversity and social inclusion
 - a comparative framework for local Borough surveys and studies
 - highlights the needs of particular household groups
-
- Standard housing needs questions such as tenure, housing costs and affordability, preferences/aspirations, extent of sharing and potential households, aspects of unsatisfactory housing
 - Specific issues such as vehicle ownership and parking, energy efficiency, household formation, social exclusion/poverty, disability, income, employment, age and ethnicity.
 - Wherever possible, questions are compatible with government surveys and the Census. In general, the survey covers a broad range of issues, rather than a few in great depth, in order to examine linkages between different types of housing needs.

- A summary of questions is included in Appendix 1.

The datasets

The LHS comprises a mixture of household-level data (for example, the respondent's views on the local area) and individual-level data (for example, the age, sex, ethnicity etc of each individual in the household). All the individuals in the Household file are also in the Person file.

- The Household File – containing household-level data plus some key individual data usually for respondent or partner only (such as incomes). The File contains 773 variables and 8,158 cases
- The Person File – containing all the household data and all the individual data. The File contains 20,910 cases and 685 variables

Weighting

A number of weights are included in each dataset. For the household file the weight titled “MAIN WEIGHT PLUS GROSSING”, corrects the sampling and response errors in the datasets and grosses the data to the GLA population as recorded in the 2001 Census. See section 5 for further discussion of person file weights.

Data validation

The datasets have been subject to cross-checking against other reliable data sources, in terms of key ‘high-level’ variables such as income, tenure, household type and numbers, ethnicity, etc. A full description of the tests, and our conclusions, is given in the Appendices.

In summary, we are satisfied that the profile of data is fairly close to expectations from other sources, with few exceptions for example, the number of single-parent families appears to differ significantly.

2. Sampling

2.1 Overview

The survey design was based on a random sample of pre-selected addresses in the Greater London area, but with the following adjustments:

- the survey was ‘weighted’ towards ‘deprived’ areas (at the sampling stage, rather than analysis stage)
- an equal number of interviews per Borough was required (32 Boroughs = 250 interviews per Borough with total sample size of 8,000 interviews), even though the Boroughs vary in size and population. Although there are 33 boroughs in London, it was agreed that City of London would be combined with City of Westminster due to the small amount of residential housing in City of London.

Sample Frame

The sample frame is defined as all residential addresses in ‘Greater London’; Greater London is the 33 London Boroughs (but treated as 32 boroughs because City of London and City of Westminster combined).

Sampling Methodology

The survey was based on a multi-stage clustered stratified sample. Ideally, the survey would have been based on a pure random sample of addresses spread across Greater London; however, in practice this would be impractical (costly and time-consuming), so a clustered approach was adopted, where TNS selected a series of interviewing locations and then selected a sample of addresses within each location. This is a standard approach to interviewing in large areas.

2.2 Selection of Wards as interviewing locations within Boroughs

The first stage was designed to select a sample of Wards within each Borough as interviewing locations (each location would become an individual interviewer assignment). We decided (based on experience) that interviewer assignments should each contain around 36 addresses and we estimated that each assignment should yield around 20 interviews, allowing for refusals, non-contacts, empty properties and other reasons for non-interview. This meant that 13 assignments (interviewing locations), each containing 36 addresses, would be required per Borough in order to reach the target of 260 interviews.

Before selecting certain Wards as interviewing locations, we needed to take into account: the relative size of the Ward (population) and the requirement to ‘over-sample’ deprived areas within each Borough.

The first stage was to stratify all the Wards within each Borough by the ‘DETR ward index of deprivation’ (2000), with the Ward ‘population’ (population = number of addresses, rather than number of people). The second stage was to calculate a sampling interval and apply it to the list of Wards in order to select 13 of them as interviewing locations. However, this process itself does not result in over-sampling the deprived wards; in order to achieve this, we needed to ‘weight’ or ‘over-sample’ the deprived Wards in order to increase their chance of selection. We applied these ‘weights’ by artificially boosting the population counts for the deprived Wards so that they were more likely to be selected when the sampling interval was applied. In order to illustrate this, we

have given a two-stage example (Tables 1 and 2 below), based on a (fictional) Borough with 22 Wards. Table 1 illustrates the process, **without** the weighting/over-sampling of deprived Wards, whereas Table 2 includes this process. The result is that without the weighting/over-sampling, we would have selected only 4 of the 9 most deprived Wards in this Borough, whereas with the weighting/over-sampling we would have actually selected 6 of the 9 most deprived Wards in that Borough.

Table 1 below shows the Borough containing 22 Wards, stratified (ranked) by deprivation score with Ward population. A sampling interval was then calculated to ensure that the Wards with every 'nth address' were selected, where 'n' (the sampling interval) = total population (60,000) / number of interviewing locations required (13) = 4615. However, this table illustrates the effect of selecting Wards with probability proportionate to size (population), but without allowing for any 'over-sampling' of deprived areas.

Table 1: Example of selecting wards within a Borough **without** allowing for deprivation index ward weighting

Ward (in order of most to least deprived)	Ward 'population' (number of residential addresses)	Accumulated Ward population	Sampling interval	Selected Wards for survey	
1 (most deprived)	5000	5000	4615	1	Most deprived third*, based on 'population' i.e. 20,000 from 60,000
2	3000	8000		0	
3	1000	9000		0	
4	2000	11000	9230	1	
5	2000	13000		0	
6	1000	14000	13845	1	
7	1000	15000		0	
8	2000	17000		0	
9	3000	20000	18460	1	
10	6000	26000	23075	1	
11	3000	29000	27690	1	
12	1000	30000		0	
13	2000	32000		0	
14	4000	36000	32305	1	
15	3000	39000	36920	1	
16	1000	40000		0	
17	5000	45000	41535	1	
18	7000	52000	46150 +50765	2	
19	1000	53000		0	
20	2000	55000		0	
21	1000	56000	55380	1	
22 (least deprived)	4000	60000	59995	1	
TOTAL	60,000			13	

*'most deprived third' comprises 9 most deprived Wards which together contain one third of the Borough population

Table 2 illustrates the same selection procedure, but taking into account the weighting / over-sampling of the most deprived Wards. In this example, the population counts of the 9 most deprived wards (containing 33% of the Ward population) are given a weight of 2, whereas the remaining 13 Wards have their true population counts (i.e. a weight of 1). To select 13 Wards from the weighted population, we need a sampling interval of $13 / 80,000$ (weighted population) = 6153.

Table 2: Example of selecting wards within a Borough *with* deprivation index ward weighting

Ward (in order of most to least deprived)	Ward population	Ward Weight	Weighted population	Accumulated population	Sampling interval (accumulated)	Select-ed Wards for survey	
1 (most deprived)	5000	2	10000	10000	6153	1	Most deprived third, based on unweighed 'population' i.e. 20,000 from 60,000
2	3000	2	6000	16000	12306	1	
3	1000	2	2000	18000		0	
4	2000	2	4000	22000	18459	1	
5	2000	2	4000	26000	24610	1	
6	1000	2	2000	28000		0	
7	1000	2	2000	30000		0	
8	2000	2	4000	34000	30765	1	
9	3000	2	6,000	40000	36918	1	
10	6000	1	6000	46000	43071	1	
11	3000	1	3000	49000			
12	1000	1	1000	50000	49224	1	
13	2000	1	2000	52000			
14	4000	1	4000	56000	55377	1	
15	3000	1	3000	59000			
16	1000	1	1000	60000			
17	5000	1	5000	65000	61530	1	
18	7000	1	7000	72000	67683	1	
19	1000	1	1000	73000			
20	2000	1	2000	75000	73836	1	
21	1000	1	1000	76000			
22 (least deprived)	4000	1	4000	80000	79989	1	
TOTAL	60,000		80,000			13	

The effect of weighting the Wards where the 'most deprived third' of the population live is that 6 Wards are selected in this deprived sector (i.e. Wards 1, 2, 4, 5, 8, 9), so 6 of our 13 Wards are 'deprived' (46%). Without any Ward weighting, only 4 'deprived' Wards were selected (30%) in our example. Therefore, in this example, we are 'boosting' the deprived Wards by 33% (from 4 to 6) and giving the residents in those Wards twice the chance of selection compared with residents of other Wards.

However, we also implemented a further variation: Having studied the Deprivation Index by Ward and Borough, we identified a huge difference between Boroughs with the highest and lowest scores. For example, Richmond’s average Ward deprivation score was 8, and the most deprived Ward in Richmond has a score of only 15. However, for Tower Hamlets, even the least deprived Ward had a score of 36 and the worst Ward had a score of 73.

Table 3

Borough Name	Number of Wards	Lowest Ward Index	Highest Ward Index	Average Index
Richmond upon Thames	19	3	15	8

Table 4

Borough Name	Number of Wards	Lowest Ward Index	Highest Ward Index	Average Index
Tower Hamlets	19	36	73	62

With this in mind, we decided to vary the sampling approach for those Boroughs at the **extremes** of the Deprivation Index.

For the most deprived location, our rationale is that Tower Hamlets has such a high level of deprivation across all Wards (compared to other Boroughs), that there was little benefit in over-representing the ‘poorest’ Wards; we decided instead that the weighting is removed for the sampling within this Borough, so that every resident had an equal chance of selection.

As Hackney, Newham and Islington have similar profiles, we applied the same procedure to these Boroughs. (We included Islington because the least deprived Ward still had a score of 37, which is very high compared to other Boroughs, and there was less variation between the minimum and maximum scores).

Table 5

Borough Name	Number of Wards	Lowest Ward Index	Highest Ward Index	Average Index
Tower Hamlets	19	36	73	62
Hackney	23	45	71	57
Newham	24	41	75	57
Islington	20	37	55	46

At the other end of the scale, we decided that Boroughs like Richmond need a **higher** representation of relatively deprived Wards than proposed in our ‘standard’ model. Here, we proposed that a weight of 3 is given to the Wards where the most deprived third of the population live. Therefore, residents living in these Wards in these Boroughs are 3 times more likely to be selected to take part in the survey.

We decided that this variation should be applied to the Boroughs in the following table. It was clear that Richmond and Kingston should be included as they represented the extremes of the Index. After this, we also included a selection of ‘prosperous’ Boroughs where over half the Wards had very low deprivation scores (1-10); the exception is Harrow, which is included because it is relatively prosperous across all Wards (the ‘worst’ Ward only has a score of 24).

Table 6

Borough Name	Number of Wards	Lowest Ward Index	Highest Ward Index	Average Index	% Wards with Index 1-10
Richmond upon Thames	19	3	15	8	79%
Kingston upon Thames	20	3	26	10	75%
Bromley	26	2	39	13	58%
Sutton	25	4	38	14	44%
Bexley	23	5	43	16	52%
Harrow	21	5	24	16	19%

The effect of a weight of 3 in the ‘example Borough illustration’ shown in Tables 1 and 2 would be that 7 Wards are selected from the most deprived Wards, rather than the 6 Wards shown in Table 2 (where a weight of 2 was applied) or the 4 Wards shown in Table 1 (where no weights were applied).

The overall result of this sample design was that large, ‘deprived’ Wards were deliberately over-sampled and small, prosperous Wards were under-sampled.

2.2 Selection of sampling points within Wards

At this stage, TNS statisticians liaised with Business Geographics, an agency specialising in the provision random samples of addresses from the Post Office Address File. Ideally, the survey would be based on a pure random sample of addresses spread across each of the selected Wards; however, even within a Ward, the addresses would have been too geographically dispersed for efficient fieldwork. Instead, Business Geographics stratified the Enumeration Districts (ED) according to their deprivation score (using the SAD Index: Small Area Deprivation Index, based on the Census 1991, as this had not been updated).

Within each Ward, 4 EDs (and one separate ED) was selected with probability proportionate to population (number of residential addresses).

Within each of the selected EDs, 9 addresses were randomly selected, using a random start and a 1 in ‘n’ interval.

Postcode to ED matching files were used to generate the addresses needed for each interviewer assignment. Only residential addresses as flagged on the latest version of Post Office Address File (final quarter, 2001) were used.

3. Fieldwork

3.1 Fieldwork period

The fieldwork for the main survey started on February 15th 2002 and finished on 9th September 2002. There were three Bank Holidays during the fieldwork period: Easter, May Bank Holiday and the Jubilee Bank Holiday in June. Although interviewing continued over these holidays, they were not very productive as some interviewers chose to take a break and many respondents were away.

3.2 Pilot

A pilot study was carried out in January 2002. A separate report was produced which described the detailed findings of the pilot study and made recommendations for the main stage; therefore, the pilot process and results are only briefly summarised in this section.

The original intention was to carry out the pilot with 5 interviewers working in 5 different areas, each producing 20 interviews i.e. 100 interviews in total. However, for a number of reasons, the pilot was expanded and extended (but without affecting the schedule for the main stage).

Over 200 interviews were achieved in the pilot study, carried out by a team of around 20 interviewers. The pilot briefings were held in the first week of January. Clearly, the pilot findings were enhanced by this revised approach as it has provided greater variety of different geographical areas and included the experience of a larger number of different interviewers. The pilot fieldwork included interviews in the following areas: Northolt, Greenford, Twickenham, Sheen, Southgate, Hampstead, Stoke Newington, Muswell Hill, Camden, Bayswater, Wanstead, Ilford, Vauxhall, Tulse Hill.

After the pilot fieldwork was completed, most of the pilot interviewers attended a half-day debriefing session on 30th January, attended by the 4 members of the TNS project team, the GLA contract manager and supervisor. At this debriefing, we went through the questionnaire, question by question, inviting comments from the interviewers and discussing possible changes. The general conclusion was that the interview worked well, reflecting the considerable work and consultation undertaken by the GLA and TNS in preparing the pilot interview.

The average interview length allowed for in the Contract was 45 minutes. The average interview length in the pilot was 50 minutes. Interview lengths are recorded on the 'real-time' clocks inside the personal computers used to conduct the interviews (rather than relying on interviewers to keep a record of their interview lengths).

In terms of the overall flow and structure of the interview, interviewers had few significant comments about this. Extensive testing at the design stage indicated that the interview flowed reasonably, with one topic leading to another without 'jarring' and the pilot appears to have confirmed this. However, there was perceived to be a problem with the 'poverty indicator' section, where all interviewers agreed that it was often difficult to keep the respondent interested – especially where the respondent had to go through both the adult and child poverty questions. This section of the interview was substantially reduced for the main stage.

There were only very minor suggestions for question order changes. Interviewers felt that the majority of questions worked well i.e. they were understood immediately by respondents, who were able to give answers without requesting further clarification.

Some respondents interrupted the interview at certain points wanting clarification about why the GLA was asking certain questions; this usually applied to the financial and home ownership questions. Inevitably, some respondents refused to answer certain questions and there were higher than average levels of ‘don’t know’ at certain questions.

Following the pilot, it was agreed that the interview would be reduced in length to 45 minutes (to conform to the TNS / GLA contract and to minimise respondent burden). TNS proposed some changes to wording and question order aimed at reducing amount of time spent on some questions. However, there were also a small number of questions where additional information or extra questioning was required to enhance the accuracy of responses, for example, in the ‘energy efficiency’ section and the ‘rental costs’ section. There were two significant proposals for change:

- to delete certain items from the ‘poverty’ questions to shorten this section
- to confine the information collected about place of work, job description and individual income to two members of the household, rather than every working adult (due to the time that this takes to collect and the high levels of ‘don’t know’ at these questions)

3.3 Interviewer training and briefing

Comprehensive training and detailed briefing for all interviewers working on the project was absolutely essential to the success of the survey. This was followed up with a high level of support, supervision and accompaniment in the first few days, to get interviewers off to the best possible start.

3.4 Initial contact and selection of respondent

Initial contact was made through a brief letter introducing the survey, delivered by the interviewers by hand to the selected addresses in their assignments. The letter explained the background and purpose of the survey, stating that an interviewer would be working in the area in the next few weeks and would visit the address to interview the household. TNS produced the letters for each assignment on GLA headed paper, with the address ‘mail-merged’ individually and addressed as ‘Dear Resident’. The exact distribution method varied slightly; some interviewers preferred to deliver all letters before revisiting the addresses to make personal contact, but others preferred to deliver the letters and make contact where possible at the same time, explaining the survey in person to the respondent.

Interviews were conducted with a ‘head of household or partner’, defined as a household member who was responsible or jointly responsible for the rent or mortgage at that address – or the partner of the person responsible or jointly responsible. In 52 of the 8,158 households, the partner was interviewed; although this seems low, it is due to several factors:

- a third of household are one-person households
- many households have more than one person responsible for the rent or mortgage
- many households were owner-occupied, where ‘the person responsible for the rent or mortgage’ was not applicable

3.5 Data capture method

CAPI (Computer Assisted Personal Interviewing) was used for this survey, where interviewers administered the interview on handheld PC's. Interview data was sent daily by the interviewers directly to a PC server; avoiding the use of email, file attachments etc.

3.6 Survey helpline

TNS offered a telephone helpline for respondents participating in the survey, which was staffed by the TNS executives working on the GLA project (and other colleagues in the department). The helpline hours were 9am and 7pm weekdays (minimum), with an answerphone message outside these hours and at weekends. About 5 calls per week came from people who had received the letter saying that they did not want to take part in the survey. About 2-3 people per week phoned to rearrange their interview appointment with the interviewer and a similar number came from elderly people, or their relatives, to check that the interviewer was bona fide.

There was about 1 call per week from 'annoyed' respondents who had been interviewed and were complaining about the content of the interview (too much personal, financial, private and confidential information etc.) – about 5 of these asked for their interviews to be deleted from our records (which we did). A similar number of calls came from people who were seeking reassurance about the survey, wanting further explanation of why there were so many personal (especially financial) questions (but not necessarily complaining) and/or enquiring how the survey results would be used. A few of these enquirers were referred to the GLA when they requested to speak to a GLA representative.

3.7 Language difficulties

We made every reasonable effort to include non-English speaking households of any ethnic group or nationality in the survey. A 'language barrier' was reported as a reason for non-interview in 70 cases (from a total of 16,752 addresses). Interviewers were asked to establish, wherever possible, which language was spoken and throughout the survey we monitored the situation. We succeeded in covering most of the assignments in high density Asian areas (e.g. Southall) through recruitment of interviewers with Asian language skills and achieved good response rates in these areas.

Other languages were more diverse, reflecting the new trends in the origins of asylum-seekers; for example, eastern European, Afghanistan, former Yugoslavia etc. Here we were not as successful in conducting interviews where there was a language barrier which could not be overcome. As these tended to be individual cases, rather than clusters, it was difficult to justify employing a translator to follow these cases up. Our recent experience in working for the Home Office interviewing asylum-seekers who are learning English reveals that translators charge around £60 per hour, plus travel time and expenses.

3.8 Questionnaire design

The interview length was around 45 minutes on average. The first part of the interview established key demographics for all household members, including relationship to respondent. Although it was logical to place these questions at the start of the interview and it helped the interviewer to understand the household composition from the start (which was useful later in the interview), there were some problems with respondents objecting to the personal nature of the questions when they were expecting to be asked for their opinions. This required interviewers to skilfully explain that some personal and demographic information was needed initially.

A large proportion of the interview was about housing; this covered both previous and current homes (tenure, size, amenities, cost, affordability, 2nd home ownership), whether anyone in the household was likely to move in the next five years and what type of accommodation they would be seeking. Some home-owners questioned the relevance of this information to the GLA, which required interviewers to explain that the future demand (and affordability) for housing in London needs to be measured and monitored. Other topics included opinions of the local environment and attitudes to crime. The GLA provided much of the question wording (from previous social surveys) to ensure that survey results could be compared with other sources.

4. Response Rates

4.1 Overview

As described in Section 2 the survey was designed using a standard random sampling method, which involved issuing interviewers with assignments, each containing 36 addresses, grouped geographically to minimise travelling between each address. Interviewers were instructed to visit each address in their sample and record the outcome for every visit to every address.

The GLA set an overall target response rate of 60% and stipulated that ‘at least 3 visits to each address should be made (at least 2 in the evening or at weekends)’.

The final response rate was 52% and the average number of visits to each address was 6.

4.2 Recording outcomes of visits

In any survey based on pre-selected addresses, it is important that interviewers are ‘forced’ to visit addresses on a number of occasions in order to make contact with residents who are ‘hard to contact’. If not, there is a risk that the survey will underestimate certain households, for example, couples where both household members work full-time. This approach will ensure that the selection of households finally interviewed maintains the statistical integrity of the sampling framework employed.

Ideally, a representative from every household in the sample of addresses would be interviewed. However, in practice, a 100% response rate is not realistic for the following reasons:

- some addresses will be empty during the entire fieldwork period
- some addresses will turn out to be non-residential
- some addresses will be impossible to find (although this is quite rare)
- some residents will be away for the fieldwork period (on holiday, in hospital)
- some residents will be not capable of taking part (e.g. too elderly / sick / dementia)
- some residents will refuse
- some residents will remain uncontactable despite repeated visits

The outcomes that interviewers recorded for each visit to each address were compiled by assignment (and by Borough and overall). The exact number of visits made to each address was recorded by the interviewers on their PC’s and could be reviewed during fieldwork, however, the final outcome reports compiled by the CAPI system were only based on the last (most recent) visit. The average number of visits was around 6 per address.

4.3 Overall response rate (achieved) and sample breakdown

In total, we issued 16,750 addresses. This yielded an overall response rate of 52% after the exclusion of ‘deadwood’ (e.g. empty or non-residential properties, residents too sick or elderly to take part).

Table 7

	Actual numbers	%	Breakdown excluding deadwood	% breakdown excluding deadwood
Total addresses issued	16,750	100	15,742	99 (due to rounding)
Interviews achieved	8,158	49	8,158	52
DEADWOOD	1008	6		
Empty	439	3		
Non-residential	267	2		
Address not traced	131	1		
Resident(s) too elderly/sick	171	*		
NON-RESPONSE	7556	45	7556	47
Refusal	2964	18	2964	19
Proxy refusal (refused to open door, refusal from child etc.)	76	*	76	*
No contact (on final visit)	3953	24	3953	25
Access difficulties	207	1	207	1
Language barrier	74	*	74	*
Partial (rejected)	27	*	27	*
Away / sick during fieldwork	255	2	255	2
‘No go’ area	28	*	28	*

4.4 Response rates by Borough

As might be expected, even with a minimum of 4 visits per address, the response rate varied considerably by Borough. In general, response rates were higher in the Outer Boroughs compared to Inner Boroughs. Where response rates were low, it became clear during fieldwork that more addresses would need to be issued in order to achieve the target number of interviews per Borough. This is taken into account in the table below which shows the number of interviews achieved and the corresponding response rates:

Table 8

	Number of interviews	Overall Response rate (after deadwood) %
Barking and Dagenham	259	72
Hillingdon	252	68
Bexley	260	63
Ealing	293	62
Harrow	252	60

TOTAL	8158	52

The table below shows the overall response rate and also the main factors influencing the response rate: non-contact, refusals and ‘deadwood’, within each Borough. Although ‘refusals’ are included in ‘other non-response’, they account for at least 80% of this category. The figures shown here relate to the **final** outcome at each address (i.e. the outcome of the final visit); this is particularly relevant for ‘non-contact’ which means there was no contact on the final visit, but there may have been contact on previous visits.

Table 9

	Overall Response rate % (after deadwood)	Non-contact %	Other non-response % (mainly refusals, but also away/sick during fieldwork*, language barrier, access problems and partial interviews)	‘Deadwood’ % (address empty, non-residential, not found or respondent too old / sick)

5. Data Coding, Weighting and Checking

5.1 Outputs

There were two key outputs:

- An initial interim data file delivered on 7th June 2002, covering results based on 3,110 interviews divided into two files: as household-based file and a person-based file.
- Final data files were delivered during 2003 (following the release of the Census data, which necessitated reweighting the data) and in 2004 (when additional coding was carried out) based on 8,158 interviews. The final file was delivered in July 2004.

5.2 Coding of information collected during the interview

As interviews were conducted on CAPI PCs, interviewers typed in the verbatim responses at certain questions and these required coding separately after the interview. These questions were only asked about the respondent or 'person 2' in the household (rather than other household members) and related to their working status.

The questions where information was typed in are shown below:

Question	Coding
Address of work / education (for person 1 and 2 in the household, if they are in work or education). We asked for postcode here, but if this could not be provided, we asked for the address or any details of location that they could supply.	We coded this information to the most detailed level of postcode possible from the information provided.
What is the main thing the company you work for does or makes?	This was coded according to SOC (Standard Occupational Classification), which is a 4-digit code. We coded to the 2000 version of SOC.
What is your job title? What do you do in your job? Do you supervise other employees or have any managerial duties?	This was coded to SIC (Standard Industrial Classification), which is a 4-digit code using the UK STANDARD INDUSTRIAL CLASSIFICATION OF ECONOMIC ACTIVITIES - UK SIC(92)

Coding was carried out by our experienced team of coders, who were personally briefed by the research executive team; there was close liaison between coders and our survey team. Our coding supervisor checked a 10% sample of coding on the open questions.

5.3 Weighting

The final dataset was weighted and grossed up using 2001 Census data, provided by the GLA. However, because of the delay in this data becoming available, temporary weights were applied to the interim and initial data sets. The following section describes the final weights which were applied to the final dataset after the Census data was supplied to TNS by the GLA in 2003.

There were a number of stages in the weighting process, described below. The base for the SPSS file, after grossing up, is 3,048,019 households (from our sample of 8,158 households).

The weights were applied in the following order. The priority weight was considered to be the borough grossing, so this was applied as the final weight.

1st stage: A new weight was introduced for the December 2002 SPSS data re-run to correct for over-representation of multiple households. The weight was derived from information collected in the survey about the number of households sharing bathrooms and/or kitchens at each address. This weight now becomes the 1st weight to be applied to the data.

2nd stage: This is the deprivation score 'correction'. This is applied by assignment, which corresponds to Ward based on data provided by TNS (from DETR). At the sampling stage, Wards were given a score of 1, 2 or 3 according to their deprivation score. This score determined their chance of selection for the survey. This weight (1, 0.5 or 0.3) corrects the 'oversampling' of Wards with scores 2 and 3.

3rd stage: A new weight applied to the dataset in May 2003 using the tenure figures based on Census data provided by GLA. This was applied at borough level. The following categories were used:

1. Own outright
2. Own with mortgage inc. part rent / part buy
3. LA/Council/HAT
4. HA/co-op
5. Private rented sector (remainder)

Tenure is defined from the responses to QA5 and B12 in the questionnaire, shown below:

<i>Does your household own or rent this accommodation?</i>	
Rent	Code 1
Part rent / part mortgage (share ownership)	Code 2
Own with mortgage	Code 3
Own outright (no mortgage)	Code 4
Live rent-free in relative / friend's property	Code 5
Squatting	Code 6

<i>(IF RENT: Who is the landlord / owner of this accommodation?)</i>	
Local authority / council / Housing Action Trust	Code 1
Housing Association / Co operative / charitable Trust / local housing company	Code 2
Employer (organisation) of household member	Code 3
Other organisation	Code 4

Friend (before moved in) / relative of household member	Code 5
Employer (individual) of household member	Code 6
Other individual private landlord	Code 7

Categories 1 and 2 are only defined from QA5. Categories 3-5 are defined from Q5 and also B12. For example, Category 3 (rent from council) is defined as Q5/code 1 who are also B12/code 1.

Tenure	Label	QA5 (Does your household own or rent this accommodation?)	Who are also B12. (IF RENT: Who is the landlord / owner of this accommodation?)
Category 1	Own outright	Code 4	
Category 2	Own with mortgage / shared ownership	Code 2 (part rent/part buy) or code 3 (own with mortgage)	
Category 3	Rent from council/LA	Code 1 (rent)	Code 1 (rent from LA/council)
Category 4	Rent from HA/coop	Code 1 (rent)	Code 2 (rent from HA/coop)
Category 5	Private rent+other	Code 1 (rent), Code 5 (live rent-free) or code 6 (squatting)	Codes 3-7 (employer organisation, other organisation, friend, employer individual, other individual)

The target weights for tenure based on 2001 Census data at borough level are shown below:

	Category 1	Category 2	Category 3	Category 4	Category 5	Total
	Households: Owner occupied: Owns outright	Own with mortgage/shared ownership	Households: Rented Council (local authority)	Households: Rented Housing Association/Registered Social Landlord	Private + other

4th stage: This is the household composition weight, applied by borough. This weight ensures that the different types of household in London are represented in each borough in their correct proportions.

This weight was based on the following household definitions, which were defined in priority order, shown below (as some households could qualify for more than one category). Therefore, each household is classified according to the first category that applies, regardless of whether they would also fit into other categories.

Category 1	Married couple h'hld	Any household which contains at least one married couple (defined from 'relationship')
Category 2	Co-hab couple h'hld	Any household which contains at least one co-habiting couple defined from 'relationship'
Category 3	Lone parent h'hld	Any household which does not contain any married or co-hab couples, but which contains at least one 'lone parent family'. A lone-parent family is one adult parent (or grandparent) + at least one son/daughter (inc. step) under 16yrs. <u>Multiple lone-parent</u> households are included e.g. 2 adult sisters, each with one under 16yr old child. Needs to be defined using 'relationship' and 'age' of members.
Category 4	Other 2+ person h'hld	Any other household with 2 or more members (any age) not already classified above
Category 5	One person h'hld	Any one-person household

The target weights for household composition based on 2001 Census data at borough level are shown below:

	Category 1 Married Couple Households	Category 2 Cohabiting Couple Households	Category 3 Lone Parent Households	Category 4 Other (2+ non-family) Households	Category 5 One-person Households	Total Households
Camden	21.75	10.54	7.49	14.13	46.09	100.00

Waltham Forest	34.64	10.25	10.22	11.79	33.11	100.00

5th stage: This was the final weight to gross up the number of households in the sample to the total number of households in Greater London, by borough. This weight ensures that each borough is represented correctly in the survey in terms of number of households. As the survey design was based on a similar number of interviews being achieved in each borough (around 250), regardless of size (population/number of households), it was important to restore the true proportions at the analysis stage.

5.4 Data checking / cleaning / data processing

The survey data is provided in SPSS format. Weighting or grossing variables were presented as separate variables in the SPSS file.

All data processing was carried out in-house by TNS. The SPSS file was finally checked by the TNS project managers for completion, logic and clear labelling.

The levels of item non-response and refusals were generally very low. As might be expected, the highest levels were observed at the financial questions, but these were still relatively low and the GLA expressed their satisfaction with the response rates at these questions. For household income, we achieved a response rate of 73% (i.e. 73% of respondents told us which income band corresponded to their household income, 15% refused and 12% were unable to give a response). When the respondents were asked for their personal income, we achieved a response rate of 82%.

Two data files were produced: a file based on households and a separate file based on household members (the ‘person’ file).

5.5 Calculation of Statistical error

Calculations of statistical error are based on UNWEIGHTED data i.e. 8,158 households (rather than 3,109,730 households). TNS statisticians have estimated a design effect (1.6) for this survey, which is taken into account in the following sampling error calculations. The design effect takes account of the survey design and method, the response rate, sample (geographical location) clustering and the results of empirical investigations from previous surveys.

Sampling error can be expressed at a 90%, 95% or 99% confidence level; 95% is most commonly used.

Overall, the sampling error (at 95% confidence level) for the total sample of 8,158 households is 1.73% (at 50%, which is the highest level of error). This means that if the survey reports that 50% of households own their homes, the true proportion is between 48.27% and 51.73%. However, if the survey reports that 75% of household own their homes, the sampling error is reduced to 1.50%, and the true proportion is between 73.5% and 76.5%. (In fact, the results show that 55% own their homes, with an error of 1.72% – this figure was the same unweighted and weighted).

Further examples of some key statistics from the survey, with the corresponding sampling error, are shown below:

How many cars/vans are owned/available by household?	Base: all (8,158 households)	Sampling error	Rounded % @ 95% confidence level
None	37%	3.34%	34-40%
1	44%	3.44%	41-47%
2 or more	19%	2.72%	16-22%

Does anyone in household have any long-term illness, health problem or disability limiting daily activities or work they can do, including problems due to old age?	Base: all (8,158 households)	Sampling error	Rounded % @ 95% confidence level
Yes	20%	2.78%	17-23%

Does anyone in your household pay for day-time childcare?	Base: all (8,158 households)	Sampling error	Rounded % @ 95% confidence level
Yes	5%	1.50%	4-7%

How often, on average, do you drink alcohol?	Base: all (8,158 households)	Sampling error	Rounded % @ 95% confidence level
At least once a week	44%	3.44%	41-47%
Less than once a week	24%	2.96%	21-28%
Never drink alcohol	32%	3.24%	39-35%

Appendix 1. Summary list of question topics

Note that not everyone will be asked all questions (eg renters will not be asked owners' questions)

Section A – Household structure

Whether own or rent

Age, sex, relationship to respondent, of every person in household

Date respondent moved in

If moved within last two years, where moved from (borough, South-East, east, rest of UK, outside UK)

Age and sex of anyone leaving in previous 12 months

Section B – Accommodation etc

Tenure, number of bedrooms, borough/LA of previous residence

Reasons for moving here (all, and single most important)

Type of accommodation (structure eg terraced, and purpose eg nursing home)

Entry level (front door)

Number of floors in building

Date property built

Council Tax band

Whether tied accommodation

Type of landlord

Who rent is paid to (type of organisation eg employer)

Satisfaction with accommodation

Numbers and types of rooms, and whether any shared with other households; if so, how many households

Satisfaction with sharing

Satisfaction with number of rooms

Type of room heating

Main fuel used for heating

Type of hot water supply

Whether can afford to heat home

Energy measures (double glazing, roof insulation etc)

Use of garden (exclusive; shared; if none, whether this is a problem)

Car and van use; where parked overnight

Use of bikes, prams, etc

Section C – Moving intentions

Whether anyone in household is on a housing list

Does anyone in household need to, and/or likely to, move within next five years; if so, who

Number of homes needed; when; and number of bedrooms needed

Household formation in new homes (including whether anyone not currently in household)

Destination (borough, South-East, east, rest of UK, outside UK) – both for 'like and 'expect'

Reasons for moving out (all, and single most important)

Preferred tenure if moving, and expected tenure

Preferred type of housing, and expected type; whether any types not acceptable (eg shared housing)

Views on sharing with other households

Section D – Housing costs (owners)

Whether freehold or leasehold; if latter, number of years on lease

Mortgage costs, and ease of paying
Outstanding value of property after mortgage

Section E – Housing costs (renters)

Type of tenancy
Rental costs and amount of any HB contribution
Whether HB claim outstanding
Whether rent holiday
Items included in rent (heating, lighting, etc)
Whether would consider moving to rented accommodation outside London

Section F – Second homes

Whether have second home, and county
Reason for having second home

Section G – Health

Overall state of health
Nature of any disability, and to whom it applies
How best could accommodation or services best be adapted to meet needs

Section H – Neighbourhood

Satisfaction with neighbourhood
Views on local quality of life (crime, graffiti, pollution, etc)
Views on different sources of noise (road traffic, aircraft, etc)
Whether area got better or worse in last two years
Satisfaction with local facilities (parks, schools, transport, etc)
Whether experienced any harassment in last 12 months; if so, reasons
Attitude to, and experience of, crime

Section J (no Section I) – Poverty and wealth

Overall view on whether income adequate
Access to essential household items (clothing, food, etc); if not, whether it is a problem
Degree of Internet access
Access to essential children's items (toys, food, etc); if not, whether it is a problem
Use of daytime childcare; if so, cost, who looks after them, number of hours/days per week

Section K – Alcohol consumption and effect

Amount, frequency, and (if been drunk) effect of drink

Section L – Employment etc

Highest qualifications (of all in household)
Ethnic group of all
Country of origin of all
When moved to UK, of all
Working status of all
Mode of travel to work, of all
Where park vehicle at work, of respondent and partner
Place of work of respondent and partner
Type of occupation of respondent and partner

Appendix 2. Definitions and Derived Variables

Family

A family is either:

a married or cohabiting couple (including same-sex couples) without children
a married or cohabiting couple or a lone parent with their (including step etc) child(ren) providing that these children have no partner or children of their own living in the household exceptionally, grandparent(s) and grandchild(ren) where no parent is living in the household

There is no age limit on the children in this definition. This definition is based solely on the relationship matrix.

Family Unit

A family unit is either a family or an individual not living as part of a family. A household consisting of a couple family with children together with the children's grandparent, for example would be two family units.

Dependent Child

A dependent child is:

any person aged 0-15 in a household or
any person aged 16-18 living in a family with his/her parent(s) who is in full-time education

Adult

An adult is any person who is not a dependent child

Student

A student is any household member in full-time education

Pensioner

A pensioner is either a male aged 65 or over or a female aged 60 or over

Family Reference Person (FRP)

In a lone parent family, the lone parent is the FRP. In a couple family, the FRP is one of the couple selected on the basis of economic activity from the following priority order:

Working full-time

Working part-time

Unemployed

Retired

Other

If the economic status of both members of the couple is the same, the FRP is the elder of the two, or, if they are also the same age, the first member on the form.

Household Reference Person (HRP)

For a person living alone, that person is the HRP. For households containing one family (with or without other family units), the HRP is the FRP of the family. If there is more than one family or there are several individuals, but no families, the HRP is chosen from the FRPs/individuals using

the same criteria as for selecting the FRP, ie economic position, then age, then position on the form.

Classifications

Individual Type

All people are classified into one of the following categories

- Dependent Child
- Working Age Adult
- Pensioner

Family Type

Families are classified into one of the following categories:

Married couple family

- 1 With no children
- 2 With dependent child(ren)
- 3 With non-dependent child(ren) only

Cohabiting couple family

- 4 With no children
- 5 With dependent child(ren)
- 6 With non-dependent child(ren) only

Lone parent family

- 7 With dependent child(ren)
- 8 With non-dependent child(ren) only

Demographic Household Type

The basis of this classification is defining a priority order for family units. A household is classified according to the first category that applies, regardless of whether it would also fit into other categories. The priority order is as follows:

Married couple with dependent children household – any household containing at least one family type 2

Married couple with no dependent children – any household containing at least one family type 1 or 3 (but not 2)

Cohabiting couple with dependent children household – any household containing at least one family type 5 (but not family type 1,2 or 3) unless the couple are same-sex

Cohabiting couple with no dependent children – any household containing at least one family type 4 or 6 (but not family type 1,2,3 or 5) unless the couple are same-sex

Lone parent household – any household containing at least one family type 7 and no opposite sex couples (a same sex couple, where dependent child(ren) of one of the couple lived with them would also be included in this category)

One person household – a household with only one resident

Other multi-person households – a household with no couples and no lone parents with dependent children

Demographic household representative

This is based on the demographic household type and tries to take the eldest male from the family type defining the household, eg the eldest husband with dependent child(ren) in a married couple with dependent children household, not the eldest husband with no dependent children. Only if there is no male in the upper generation of the defining family type, is the eldest female taken as the representative, so a male lone parent takes precedence over a female lone parent, even if she is older, but a female lone parent takes precedence over a male not in a family. A male in a household of six unrelated females and one male would be the household representative.

Household Classification

The standard household classification required is detailed below and uses the definitions of family and family type as above.

HOUSEHOLD COMPOSITION (HHCHUK)

Applicability: All households with at least one resident (excluding students away during term-time)

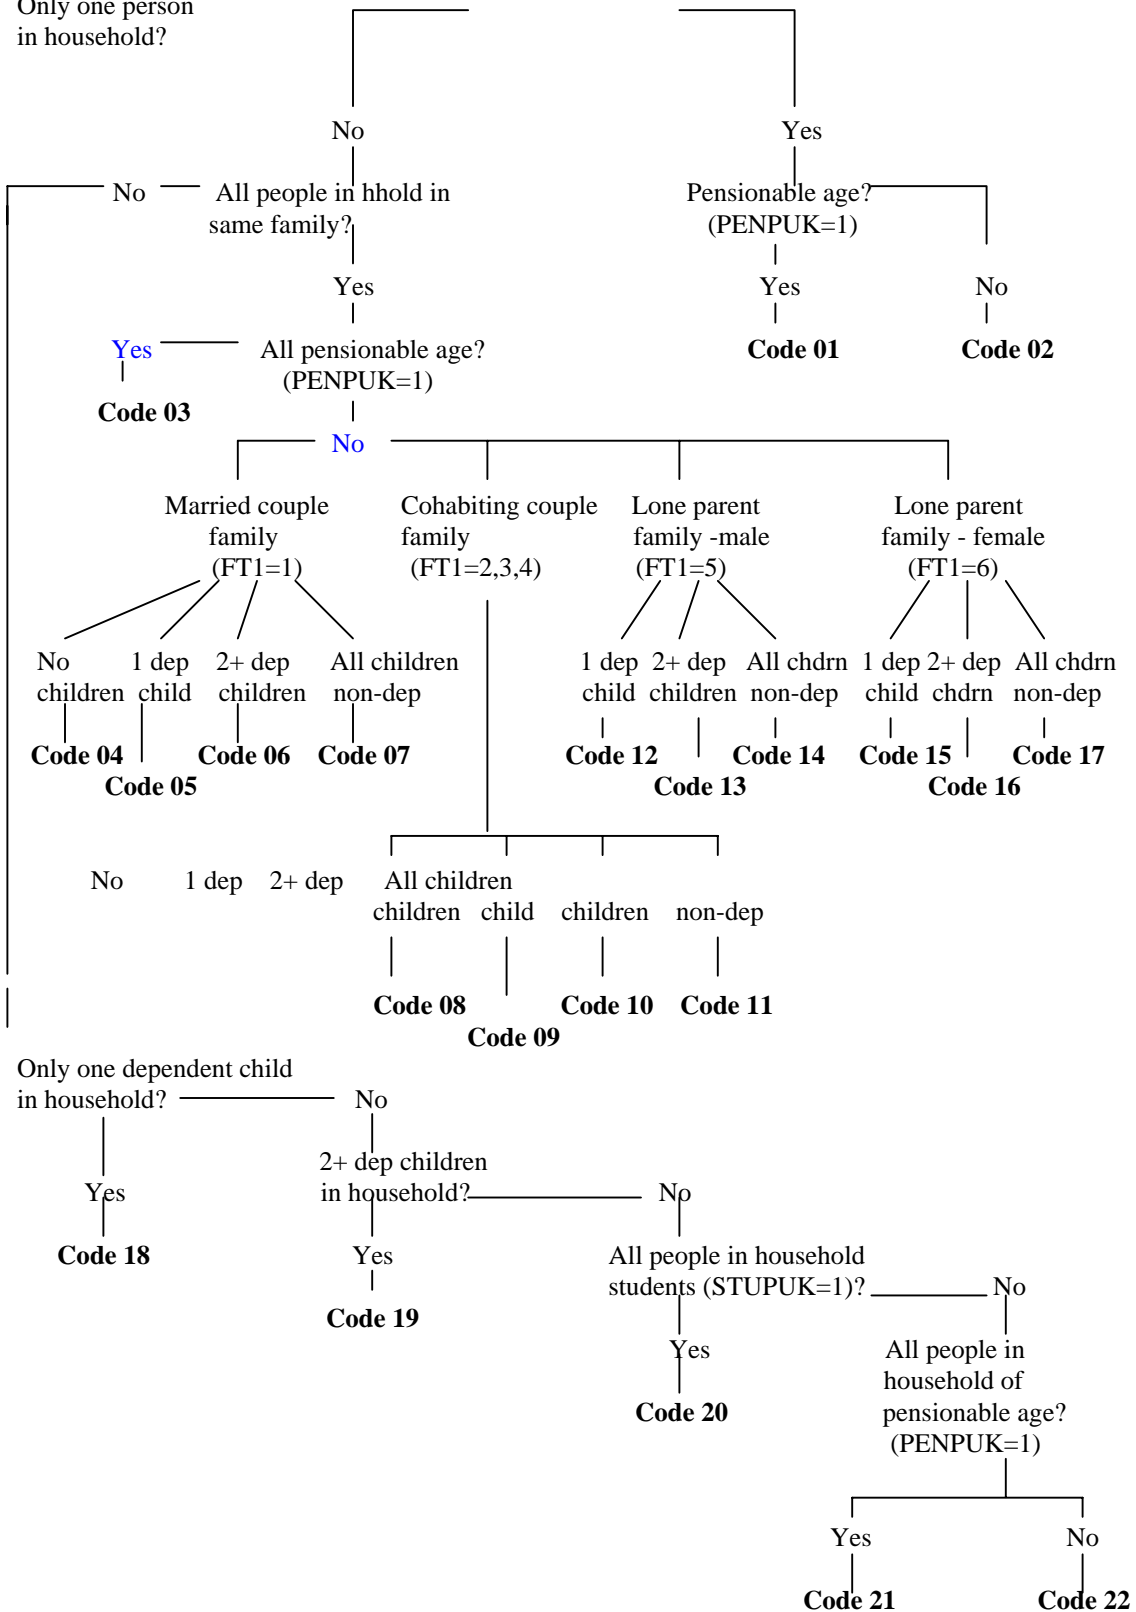

One Person Household	
Pensioner	01
Other	02
One Family Household	
All Pensioner	03
Married Couple Family Households	
no children	04
with one dependent child	05
with two or more dependent children	06
all children non-dependent	07
Cohabiting Couple Family Households	
no children	08
with one dependent child	09
with two or more dependent children	10
all children non-dependent	11
Lone Parent Family Household	
with male head	
with one dependent child	12
with two or more dependent children	13
all children non-dependent	14
with female head	
with one dependent child	15
with two or more dependent children	16
all children non-dependent	17
Other household types	
with one dependent child	18
with two or more dependent children	19
all student	20
all pensioner	21
other	22

See algorithm for derivation of codes.

HOUSEHOLD COMPOSITION

NB Exclude all students away during term-time. ie algorithm excludes people with TERM_IND=2
 All households (ie households with at least one person)

Only one person
 in household?

Appendix 3. Data Validation

This report summarises the analysis that was carried out to inform the validation of the London Household Survey (LHS). The LHS is a large sample survey that has been weighted and grossed up to reflect London's population. To ensure that the weighting and grossing is working well and that results are representative of London's population, the GLA have carried out a series of validation checks. These have involved comparing LHS survey estimates to those from official data sources (eg 2001 Census).

Early validation exercises were carried out to inform the development of weighting and grossing factors. More recently, the survey was re-grossed to be consistent with new population estimates based on 2001 Census data. The final validation assesses this dataset (supplied in May 2003). Validation was carried out on three sets of variables that were felt to be key with regard to assessing representativeness of the sample. These were:

- Demographic variables
- Income and economic variables
- Housing tenure variable

The conclusions of the final validation process were that the LHS was robust and generally representative of London households. However, the analysis also highlighted that the survey data did have some limitations and in view of this, it was felt important that health warnings be attached to the data to ensure users made 'appropriate use' of the survey.

This report provides the technical detail behind the validations across each of the three key areas and discusses the strengths and limitations of selected variables.

A) Demographic Validation (London Household Survey)

Introduction

The final survey validation is being carried out using variables based upon the 2001 Census. Some have been reconfigured so as to relate to mid-2002 using the GLA 2002 Round of demographic projections. This includes total households, private household population, population by gender and population by age. The distribution of households by type and population by ethnic group draw directly on the 2001 Census.

Households

The weighted survey results show a difference of only 676 with the target validation total for London, equivalent to a trivial difference of 0.022%. At borough level there are differences greater than 50 for only 5 boroughs. The main differences are in Hackney (164, 0.19%), Tower Hamlets (163, 0.20%) and Lambeth (141, 0.12%). See Table 1.

Households by Type

The resulting household type distribution may be compared to that for mid-2002, based on the 2001 census:

Household Composition

	LHS Weighted		Target	
	Frequency	Percent	Frequency	Percent
Married couple household	1,067,340	35.0	1067912	35.0
Cohabiting couple household	301,945	9.9	301926	9.9
Lone parent household	260,194	8.5	252304	8.3
Other multi-person household	360,880	11.8	367433	12.1
One person household	1,057,660	34.7	1057769	34.7

The only differences are trivial, the LHS having about 8 thousand more lone parent households and 7 thousand fewer other multi-person households.

Private Household Population

The weighted survey results show an overall private household population of London of 7.279 million. This is about 1.9% higher than the estimated mid-2002 population of 7.144 million. Since the number of households and the household type structure were both very close to the validation targets it would seem that the average number of Person in multi-person households was inflated. Looking at overall average household size the survey shows 2.388 compared to the validation target of 2.344. The average household size of multi-person households is 3.126 in the LHS and 3.059 in the validation data. This is consistent with the overstatement of children (see next Section).

Of more concern are those boroughs where the LHS estimates of the total private household population are significantly greater (or, in a few cases, lower) than the validation targets. The results are shown in Table 2, which also highlights those boroughs with populations more than 10 thousand different to the validation targets. The most significant differences are found in Lambeth (34 thousand), Haringey (15 thousand), Ealing (12 thousand), Islington (11 thousand), Hounslow

(11 thousand) and Croydon (10 thousand). The boroughs showing the most deficient populations are Enfield (-8 thousand) and Kingston upon Thames (-4 thousand).

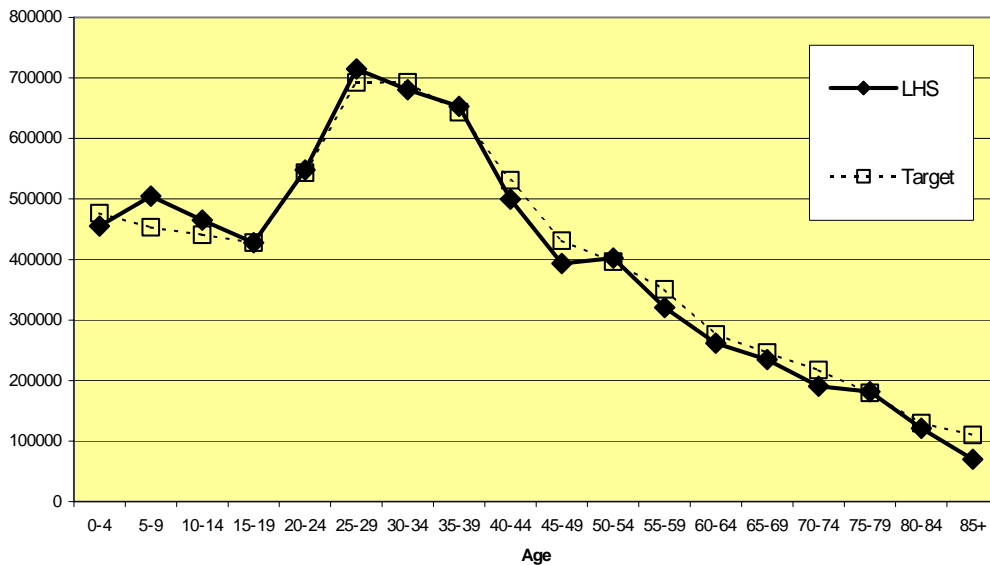

Table 2 also shows the borough average household sizes and highlights those where the difference is greater than 3% from the validation targets. The most extreme case is again Lambeth at +12%).

Age and Gender Structure

The LHS shows 49.0% of the population as being male compared to 48.4% in the mid-2002 validation targets.

The resulting LHS age structure has been compared with the GLA mid-2002 estimate of the total population (ie both private household and communal establishment residents). It should be noted that about 154 thousand Person are not classified by age. Looking initially at five-year age groups the LHS appears to have too many Person aged 5-14 and 25-29. There are too few Person aged 0-4, 40-49, 55-74 and 80+. The picture clarifies a little when single-year of age data are inspected. Of most significance is the very low number of infants – only about 40% of the expected number – and an extension of the age range of overestimated children to between 1 and 17. The low number of infants is a common feature of household surveys and censuses. The high number of young children might be expected from any household survey when it is more likely to make contact with couples with children than those without. Looking at broad age bands, the LHS may be about 68 thousand too high across the main working ages (20-59). Chart 1 shows the main differences by five-year age groups.

Chart 1: Population by five-year age-bands

Ethnic Group

The weighted survey results for the 16 ethnic groups (as used in the 2001 Census) are as follows:

		LHS Weighted		Grouped Percent	2001 Census Target			Grouped Difference Percent
		Frequency	Percent		Percent	Grouped Percent	Difference Percent	
White	British	4,097,867	56.30		59.79		-3.49	
White	Irish	177,177	2.43		3.07		-0.64	
White	Other	719,553	9.89	68.62	8.29	71.15	1.60	
Mixed	White & Black Caribbean	47,576	0.65		0.99		-0.34	
Mixed	White & Black African	21,764	0.30		0.48		-0.18	
Mixed	White & Asian	33,456	0.46		0.84		-0.38	
Mixed	Other Mixed	90,537	1.24	2.66	0.85	3.16	0.39	
Asian	Indian	469,414	6.45		6.09		0.36	
Asian	Pakistani	158,363	2.18		1.99		0.19	
Asian	Bangladeshi	147,642	2.03		2.15		-0.12	
Asian	Other Asian	97,223	1.34	11.99	1.86	12.09	-0.52	
Black	Caribbean	352,146	4.84		4.79		0.05	
Black	African	491,606	6.75		5.28		1.47	
Black	Other Black	67,833	0.93	12.52	0.84	10.91	0.09	
Other	Chinese	62,315	0.86		1.12		-0.26	
Other	Other	167,374	2.30	3.16	1.58	2.70	0.72	
NS	Don't know/ not stated	32,672	0.45				0.45	
NS	Refused	44,430	0.61	1.06		0.00	0.61	
Total		7,278,947	100	100	100	100	0.00	

The only significant deviations from the distribution of the total population at the 2001 Census are that the representation of the White group is low by 2.53% and that of the Black group is high by 1.61%. Within the Black group the Black African's are the most over-represented (6.75% compared with 5.28%). When the distribution is converted to show differences for the total population of these groups it is apparent that the following differences emerge, ignoring the 1.06% of the LHS sample that were coded as Refused, Don't Know or Not Stated:

White	-3.7%	-184,000
Mixed	-19.0%	-37,000
Asian	-0.8%	-7,000
Black	+12.9%	+117,000
Other	+14.4%	+33,000

While all groups (except White and Asian) appear to have been significantly over or underestimated it is not possible to be categorical as to why or how this happened. As has been shown above, although most boroughs had correct estimates for households the resulting household populations were more deviant, leading to overall higher estimates of average household size. This is consistent with the much higher number of children and a younger age-structure of adults.

The pattern of boroughs in which the population was overestimated implies that it may have been easier to contact families with children, rather than childless couples. Thus the overstatement of the Black population and the understatement of the White population are feasible outcomes if there was such a bias in contacts at borough level.

Summary

The following are the key outcomes of the demographic validation of the LHS weighted estimates:

- The numbers of households in all boroughs are extremely close to the validation targets for mid-2002
- The distribution of households by type for London is consistent with the 2001 Census distribution
- The private household population for London is about 1.9% too high with an extreme value in Lambeth of over 12% inflation
- The age distribution of London shows only about 40% of expected infants, while children aged 1 –17 are generally over estimated.
- While there are too few Person aged 40-49 and over 55 those in the working ages are about 68 thousand to high
- The distribution of the London population into 5 broad categories of ethnic group appears to show too few Person in the White group (184 thousand) and Mixed group (37 thousand) and too many in the Black group (117 thousand) and the Other group (33 thousand)
- The Black African population has been overestimated by over 25%

The overestimation of the total population, particularly children and Black ethnic groups at the expense of older people and White groups, is consistent with contacting too many households, particularly in inner boroughs, that had families with children rather than childless couples.

Overall this does not detract from the success of the LHS, but there need to be health warnings about using the data as a source of population estimates and, generally, at borough level. Users will note that – with an average sample of around 250 achieved interviews per borough – the survey is intended primarily for regional and sub-regional analysis.

B) Income and economic validation (London Household Survey)

The analysis that follows summarises the final validation of LHS results and covers selected variables on income and economic position. The overall verdict is: While the data are acceptable and provide a reasonably good overview of the differing economic circumstances of Londoners, health warnings need to be attached to their use.

There are significant differences between validation and LHS data on certain income and economic position variables. However, many of these differences are not unexpected and are due – at least in part – to methodological issues. For this reason, these variables should really only be used to filter out groups of interest (eg low income households, full-time workers) and for cross-tabulations. They should not be seen as authoritative counts of Londoners by economic position or on different incomes. Other data sources such as the LFS, the 2001 Census and DWP administrative data are better suited to this.

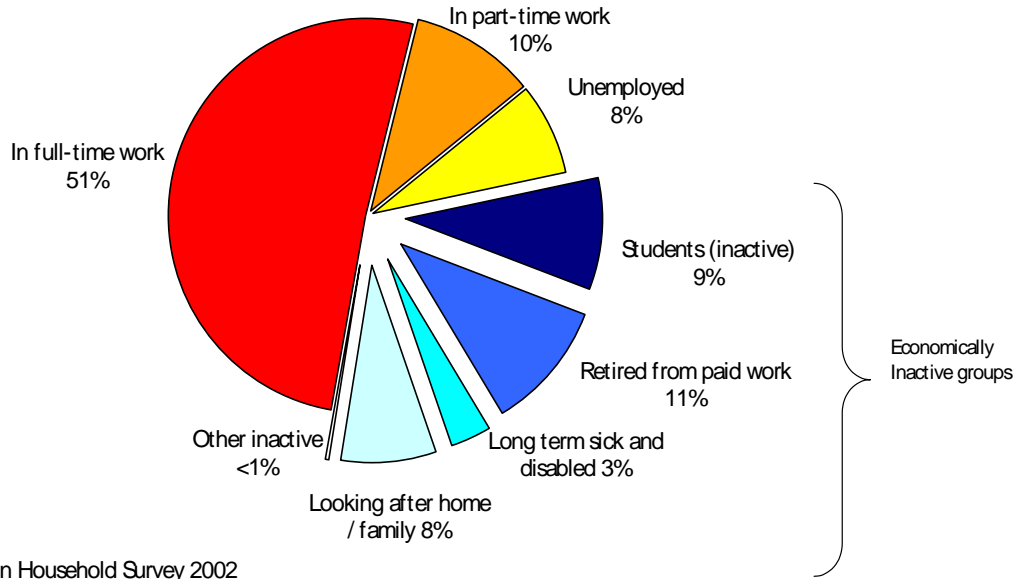

Key findings:

- The broad composition of the sample in terms of economic position is 'reasonably' close to that of the Census, but there are significant differences for certain groups within the population. The LHS overcounts the number unemployed and the number economically inactive, at the same time it undercounts the number in part-time employment. Further the LHS picks up more students. While some of this may be due to sample bias, it is also likely to be reflecting a methodological issue with the LHS question. As the LHS collects information on economic position using only one question, there is scope for confusion with the mixing of economic activity questions with student status. Also there is no 'other category' on the LHS question suggesting interviewers would have to push respondents on this one, unlike the Census option. Considering the limitations of the question, the overall bias isn't too bad, but it does mean the LHS should not be used to generate accurate estimates of employment or unemployment. LFS & Census would be better for this (See table 3 and charts 2a and 2b).
- The LHS appears to be undercounting those on certain means tested benefits (CTB/IS/WFTC). This may be highlighting the benefits unit issue as well as poor provision of data by respondents. Benefits data is difficult to collect via surveys and administrative sources are usually better. (See table 3)
- The income validation suggests that the LHS income distribution is skewed towards the bottom of the income distribution. Comparisons with FRS suggest LHS over-represents households on incomes below £5k pa and under represents those on incomes of £5k-£15k. At levels above £15k, the LHS distribution is similar to that of the FRS. The extent and profile of refusals/don't knows on the income question could be playing a part here (ie are low income households more likely to provide information?). It is also possible that some individuals could be understating their earnings. Evidence from the Labour Force Survey (also a household survey) suggests that income and earnings data collected at household level on behalf of other individuals in the household tend to lead to an under estimation of levels of earnings. This is consistent with the under-reporting of benefits receipt. (See chart 3)

Table 3: LHS validation of economic position and income variables : summary table of analysis

	Validation source	LHS estimate	Validation estimate	Difference (LHS-val)		Comments
				number	% diff.	
ECONOMIC POSITION VARIABLES (for 16-74 age group):						<p>The size of the economically active population is very close, but the composition of the EA workforce is a bit skewed as LHS under-estimates part-time employment and over-estimates the unemployed. The LHS economically inactive population is larger than we would expect and picks up more students, but fewer long-term sick. While some of this may be due to sampling bias (the fact that inactive groups are more likely to be in) it is also likely that definitional/ methodological issues are playing a part. First, the LHS has no 'other' inactive category like the Census. So interviewers had to allocate people into one of the options, whereas on the Census, over 200,000 people were classed as 'other' inactive. This could explain the high counts of LHS unemployment and higher student numbers. The LHS unemployment is a wider measure than census (which is similar to the ILO measure which excludes those not actively seeking work).</p> <p>Second, the LHS and Census both deal with students differently. It is not that clear on the LHS where someone in full time education who works part-time would be categorised. So the higher inactive student number on LHS might be linked to the under-representation of those in part-time employment. On LHS people were asked to describe their main activity - it is possible that students who were also working part-time, described themselves as 'full-time education' rather than part-time workers who also studied. It is also not clear what the LHS definition of part-time/ full-time is. Student counts could also be affected by the timing of the Census and LHS.</p>
Total population 16-74		5,239,537	5,300,333	-60,796	-1	
Economically active 16-74		3,612,560	3,580,387	32,173	1	
Economic inactive 16-74		1,626,977	1,719,946	-92,969	-5	
In full-time work*		2,672,508	2,642,444	30,064	1	
In part-time work*		539,020	681,590	-142,570	-21	
Unemployed*		390,828	256,354	134,475	52	
Students (econ. inactive)		483,083	348,023	135,060	39	
Retired from paid work		553,568	519,865	33,703	6	
Long term sick and disabled	2001	174,085	242,408	-68,323	-28	
Looking after home / family	Census	408,005	379,846	28,159	7	
Other econ.inactive (On LHS those waiting for asylum or visa approval are included here whereas on Census there was a large 'other inactive')	data (& GLA estimates based on Census*)	8,235	229,804	-221,569	-96	
INCOME AND BENEFITS VARIABLES:						
Housing Benefit (HB) : All	DWP	571,024	588,000	-16,976	-2.9	<p>The LHS estimate of the % households on HB in London is close to the FRS estimate as are claimant numbers (not bad considering benefit unit vs household issue). While there is a slight over-representation of LA HB recipients and unrepresentation of private HB claimants, the skew is not a major issue and is considerably better than it was in previous validations (consistent with the improved data on tenure).</p>
- LA households on HB	DWP	330,101	315,000	15,101	4.8	
- HA & other on HB	DWP	164,941	171,000	-6,059	-3.5	
- Private tenants on HB	DWP	75,982	101,000	-25,018	-24.8	
% households on HB	FRS	19%	20%	same		
No of h'olds on CTB	DWP	535,950	612,000	-76,050	-12.4	<p>Survey CTB estimate a bit lower than both DWP estimate of claimants and FRS estimate of % households. Skew worse than before but this is expected given the number of proportion of LA households has reduced.</p>
% households on CTB	FRS	18%	23%	-5%		
Number of WFTC recipients	IR	69,517	97,316	-27,799	-28.6	LHS is underestimating families on WFTC.
Number of h'hlds on IS	DWP	413,081	571,000	-157,919	-27.7	<p>The LHS estimate of the % households on IS is marginally lower than the FRS estimate for 2000/ 01. LHS claimant no's are much lower than administrative data on IS claimant numbers - but this could be reflecting the fact there may be more than one benefit unit in a household. FRS % data are better verification material.</p>
% households on Income Support	FRS	14%	15%	same		
Household income	FRS	<p>See chart 3. We have compared the LHS income distribution to specially commissioned FRS data for 2000/ 01, though it is recognised that comparisons are difficult as there will be definitional differences between FRS and LHS and the timing of the surveys is different (FRS was conducted 1/ 2 years before the LHS). However, the comparison suggests the LHS income distribution has a strong skew within the lower end - with those at the very bottom of the distribution being over-represented. At levels above £15,000 a year both distributions are similar. The extent and nature of those who refused to answer the income question as well as the 'don't knows' could be relevant here as FRS data adjusts for non-reponses whereas LHS doesn't. It is also likely that some respondents are underestimating income (impact of proxy responses etc). These findings are not unexpected as income data is problematic to collect. Large government surveys like the LFS tend to pick up similar bias on earnings data. The under-reporting of income is consistent with the lower benefits reporting (as people were perhaps failing to consider benefits as income).</p>

C) Housing tenure validation (London Household Survey)

Summary

This note provides comparisons on the tenure profile of the May 2003 (Census-calibrated) household file, in terms of (a) May profile, (b) profile from interim dataset (November 2002), and (c) expectations from other data sources.

Overall conclusion – much better fit than achieved in interim dataset, and we can live with the differences.

Profile

<i>Tenure</i>	<i>Households</i>	<i>%</i>	<i>Households</i>	<i>(%)</i>
	<i>(Interim)</i>		<i>(Final)</i>	
Owned outright	687,580	22.1	669,132	22.0
Owned with mortgage	1,037,457	33.4	999,021	32.8
Part-rent, part-buy	13,237	0.4	12,763	0.4
LA	669,683	21.5	546,613	17.9
RSL (HA)	269,977	8.7	299,149	9.8
Other rented	423,302	13.6	511,985	16.8
Refused, DK	6,444	0.2	9,356	0.3
Total:	3,107,680	100.0	3,048,019	100.0

The best evidence we have from other data sources (other than 2001 Census, to which of course the data have been calibrated) is:

- LA stock – April 2002 HIP gives 512,766 dwellings of which 9,971 were empty. Assuming little or no multi-occupation (ie one household per occupied dwelling), this implies 502,795 households. Ignoring Refused/DK above, the May 2003 profile is very much closer to expectation
- RSL stock – April 2002 HIP gives 291,910 dwellings of which 6,149 were empty. Probably some multi-occupation - but assuming nil, this implies 285,761 households. Again, the May profile is closer to expectation
- Private rented (equivalent to ‘other rented’ above) – no reliable data on split between privately rented and privately owned. The SEH 2000/01 estimated that private renting accounted for around 14% of London households, compared to 16.8% above (and two years later). Acceptable in my view.

Overall, the figures are in my view close enough to be acceptable. The LA and RSL estimates from HIP are likely to be much more accurate than Census (in part because they are based on rent payments, and in part because occupiers can be confused at Census time as to who their landlord is – especially if, for example, they are ex-homeless households placed in private rented accommodation by a local authority and managed by a RSL). But the Census is probably more likely to be accurate on private sector sub-divisions than a high-quality but small-sample survey like the SEH, so it is easier to stick with one source – 2001 Census – as the key determinant for this and other variables.

Data Management and Analysis Group (DMAG)
Greater London Authority

1:

Question 9752

162L1

GLA MAIN STAGE JN260144

INTERVIEWER:

You have selected assignment number

0<Q9372>

Is this correct ?

1 YES

2 NO

↩ Continue at question 10003

If [Q9317 <> 0] continue at question 9102

Question 9102

'no answer' allowed

105L1

Hello, I'm....from Taylor Nelson Sofres, carrying out a survey for the Greater London Authority about living in London and the surrounding area. We need to hear resident's views about local issues, to help the government and the local authorities with planning for the needs in your area.

1

Question 1

1021L1

Q.A1 First, please can I just check who lives here...do you live here alone or with others ?

1 Alone

2 With others

Question 1111

Minimum 2

Maximum 12

Question only asked, if [Q1 , 2]

1022L2

Q.A2 Can I just ask, how many people are in your household ? By household, I mean the people living here who share a living or sitting room or share at least one meal a day with you.

INTERVIEWER: Confirm number of people in household with respondent and record here

INTERVIEWER INSTRUCTION: if respondent does not share living room or one meal a day with others, consider respondent alone as a (one-person) household. Anyone that respondent shares living room with or eats meals with is part of respondent's household.

Question 1299

Question only asked, if [RAN 1]

1036L2

99

Question 5

1038L1

Q.A5 Does your household own or rent this accommodation ?

Probe for details and code one answer

- 1 Rent
- 3 Own with mortgage
- 4 Own outright (no mortgage)
- 2 Part rent \ part mortgage (share ownership)
- 5 Live Rent-free in relative \ friend's property
- 6 Squatting

Question 6

Question only asked, if [Q5 , 1-3]

1039L1

Q.A6 And are **you** responsible, or jointly responsible for your household's mortgage or rent on this property ?

- 1 Yes (including where social services pay the rent)
- 2 No

Question 7

Question only asked, if [Q6 , 2]

1040L1

Q.A7 Are you the partner of the person responsible for the mortgage or rent ?

- 1 Yes
- 2 No

If [Q7 , 2] continue at question 8

Otherwise continue at question 8107

Question 8

1041L1

Q.A8 **INTERVIEWER INSTRUCTION: If respondent is not responsible for mortgage or rent and is also not the partner of the person responsible, they are not eligible for interview. You should ask for the appropriate person(s) or revisit the address if not available.**

- 1 Appropriate person(s) available
- 2 Appropriate person(s) **NOT** available - this will end the interview

If [Q8 , 2] continue at question 1200

Question 1200

Thank you for your time.

If [Q9317 < 0] *ENDST "34"
Otherwise continue at question 8107
Continue at question 10001
If [Q1299 , 1] continue at question 2222

Question 9241

User defined button : 9 "R"

User defined button : 8 "no phone"

407L17

Could I please take your phone number. This is for market research quality control, where 10% of my interviews are checked. This means that someone from our Head Office might phone you just to check that this interview was genuine.

PHONE NUMBER (include area code and record without spaces between figures):

Question 2929

8102L1

Thank you very much for your time. This 'thank you' leaflet explains that your personal details remain confidential to the Taylor Nelson Sofres survey team. The Greater London Authority will only receive the information from this interview when it has been combined and analysed with other interviews and all name and address identification has been removed.

The Greater London Authority may wish to carry out further research among people who have taken part in this survey. You would, of course, have the choice of deciding at the time whether to take part or not. They would not contact you directly, but only through a market research organisation like us. Would that be OK ?

- 1 Yes
2 No

Question 9258

714L1

Is this the correct address ?

<Q9223> <Q9225> <Q9227>

- 1 YES
2 NO

If [Q9258 , 2] otherwise continue at question 9269

239 Manufacture of explosives
240 Manufacture of glues and gelatine
241 Manufacture of essential oils
242 Manufacture photographic chemical material
243 Manufacture of prepared unrecorded media
244 Manufacture of other chemical products not elsewhere classif
245 Manufacture of man-made fibres
246 MANUFACTURE OF RUBBER AND PLASTIC PRODUCTS
247 Manufacture of rubber products
248 Manufacture of rubber tyres and tubes
249 Retreading and rebuilding of rubber tyres
250 Manufacture of other rubber products

251 Manufacture of plastic products
252 Manufacture of plastic plates, sheets, tubes and profiles
253 Manufacture of plastic packing goods
254 Manufacture of builders ware of plastic
255 Manufacture plastic of floor coverings
256 Manufacture of other builders ware of plastic
257 Manufacture of other plastic products
258 MANUFACTURE OF OTHER NON-METALLIC MINERAL PRODUCTS
259 Manufacture of glass and glass products
260 Manufacture of flat glass
261 Shaping and processing of flat glass
262 Manufacture of hollow glass
263 Manufacture of glass fibres
264 Manufacture and processing of other glass including technica
265 Manufacture of non-refractory ceramic goods other than for c
266 Manufacture of ceramic household and ornamental articles
267 Manufacture of ceramic sanitary fixtures
268 Manufacture of ceramic insulators and insulating fittings
269 Manufacture of other technical ceramic products
270 Manufacture of other ceramic products
271 Manufacture of refractory ceramic products
272 Manufacture of ceramic tiles and flags
273 Manufacture of bricks, tiles and construction products, in b
274 Manufacture of cement, lime and plaster
275 Manufacture of cement
276 Manufacture of lime
277 Manufacture of plaster
278 Manufacture of articles of concrete, plaster and cement
279 Manufacture of concrete products for construction purposes
280 Manufacture of plaster products for construction purposes
281 Manufacture of ready-mixed concrete
282 Manufacture of mortars

283 Manufacture of fibre cement
284 Manufacture of other articles of concrete, plaster and cemen
285 Cutting, shaping and finishing of stone
286 Manufacture of other non-metallic mineral products
287 Production of abrasive products
288 Manufacture of other non-metallic mineral products not elsew
289 Manufacture of asbestos
290 Manufacture of other non-metallic mineral products not elsew
291 MANUFACTURE BASIC METALS
292 Manufacture of basic iron and steel and of ferro-alloys (ECS
293 Manufacture of tubes
294 Manufacture of cast iron tubes
295 Manufacture of steel tubes
296 Other first processing of iron and steel not elsewhere class
297 Cold drawing
298 Cold rolling of narrow strip
299 Cold forming or folding
300 Wire drawing
301 Other first processing of iron and steel not elsewhere class
302 Manufacture of basic precious and other non-ferrous metals
303 Precious metals production

304 Aluminium production
305 Lead, zinc and tin production
306 Copper production
307 Other non-ferrous metal production
308 Casting of metals
309 Casting of iron
310 Casting of steel
311 Casting of light metals
312 Casting of other non-ferrous metals
313 MANUFACTURE OF FABRICATED METAL PRODUCTS, EXCEPT MACHINERY A
314 Manufacture of structural metal products
315 Manufacture of metal structures and parts of structures
316 Manufacture of builders carpentry and joinery of metal
317 Manufacture of tanks, reservoirs and containers of metal- ma
318 Manufacture of tanks, reservoirs and containers of metal
319 Manufacture of central heating radiators and boilers
320 Manufacture of steam generators, except central heating hot
321 Forging, pressing, stamping and roll forming of metal- powde
322 Treatment and coating of metals- general mechanical engineer
323 Treatment and coating of metals
324 General mechanical engineering
325 Manufactury of cutlery, tools and general hardware
326 Manufacture of cutlery
327 Manufacture of tools
328 Manufacture of locks and hinges
329 Manufacture of other fabricated metal products
330 Manufacture of steel drums and similar containers
331 Manufacture of light metal packaging
332 Manufacture of wire products
333 Manufacture of fasteners, screw machine products, chains and
334 Manufacture of other fabricated metal products not elsewhere
335 MANUFACTURE OF MACHINERY AND EQUIPMENT NOT ELSEWHERE CLASSIF
336 Manufacture of machinery for the production and use of mecha
337 Manufacture of engines and turbines, except aircraft, vehicl
338 Manufacture of pumps and compressors
339 Manufacture of pumps
340 Manufacture of compressors
341 Manufacture of taps and valves
342 Manufacture of bearings, gears, gearing and driving elements

343 Manufacture of other general purpose machinery
344 Manufacture of furnaces and furnace burners
345 Manufacture of lifting and handling equipment
346 Manufacture of non-domestic cooling and ventilation equipmen
347 Manufacture of other general purpose machinery not elsewhere
348 Manufacture of agricultural and forestry machinery
349 Manufacture of agricultural tractors
350 Manufacture of other agricultural and forestry machinery
351 Manufacture of machine tools
352 Manufacture of metalworking machine tools
353 Manufacture of other machine tools
354 Manufacture of other special purpose machinery
355 Manufacture of machinery for metallurgy
356 Manufacture of machinery for mining, quarrying and construct

357 Manufacture of machinery for mining
