Major in Early Childhood Education

(Effective Spring Semester 2015, the major in Early Childhood Education replaces the preparation for teacher licensure in Early Childhood Education, Birth through Grade 3. Contact the department for details.)

In collaboration with the Center for Educator Preparation (CEP) (<http://cep.chhs.colostate.edu>) within the School of Education (<http://soe.chhs.colostate.edu>) (SOE), the Department of Human Development and Family Studies (HDFS) (<http://www.hdfs.chhs.colostate.edu>) provides a competitive-entry Early Childhood Education Major requiring an application in the sophomore year for possible admission in the junior year. The degree enables students to apply for Early Childhood teacher licensure and D (<http://www.coloradoofficeofearlychildhood.com/#!director-qualifications/c15f>)irector Qualifi (<http://www.coloradoofficeofearlychildhood.com/#!director-qualifications/c15f>)cation (<http://www.coloradoofficeofearlychildhood.com/#!director-qualifications/c15f>) in the state of Colorado, and will thus qualify students to engage in a number of early childhood professions: teaching grades P-3 in public or private schools in Colorado, teaching in Head Start or other preschool or childcare programs, establishing a business as a family child care or center child care provider, or serving as director of a childcare center. An understanding of human development and family studies provides a strong foundation for students desiring a license to teach young children between the ages of 0 and 8. Knowledge of lifespan developmental processes and family systems prepares future teachers to work in partnership with parents and grandparents in educating children. Students aspiring to work with children between the ages of 0 and 8 can apply during their sophomore year to the major in Early Childhood Education. If accepted, students take courses in HDFS and SOE as a part of their degree requirements.

Students are encouraged to check the program of study as a small number of prerequisites are required prior to entry in the major. The

Early Childhood Education Major uses a cohort model, and admits a limited number of students, typically between 25-30, each year. The admission process takes place once a year in the spring, with the admitted candidates starting in the fall. Students in the Early Childhood Education major achieve both Early Childhood Education core learning outcomes, obtained through HDFS and SOE courses, and all learning outcomes required by the Colorado Department of Education for Early Childhood Education licensure. Major in Human Development and Family Studies

Human Development and Family Studies (HDFS) is an interdisciplinary major focusing on the development of individuals across the lifespan, within the context of family and culture. Students complete foundational coursework in human development (i.e., infancy and childhood, adolescence, emerging and young adulthood, middle and later adulthood/aging) and in the area of family studies. Students become familiar with theory and research in the field and learn to identify factors influencing cognitive, emotional, social, and physical development across the lifespan. Students participate in an internship in order to apply knowledge and skills acquired in foundational course work. The HDFS major offers five concentrations that enable students to specialize within the major and prepare for different career paths. In addition to selecting one of five concentrations, students also have the opportunity to work toward the Gerontology Interdisciplinary Minor or director qualifications in early childhood settings, or apply to the Early Childhood Education Major.

Learning Outcomes

Students will demonstrate:

- Content knowledge and understanding of theory, research, and practice relevant to optimizing the development, health, and well-being of individuals and families across the lifespan in the context of the larger social environment.
- Effective written and oral communication skills appropriate to the field of human development and family studies.
- The ability to access, critically evaluate, and apply multiple forms of information related to individuals and families.
- Professional and leadership skills with individuals and families, including ethical and culturally sensitive conduct.

Potential Occupations

Graduates with a major in HDFS are prepared to work in a variety of human service settings including youth services organizations; early childhood, elementary, adolescent, and parent education programs; health care organizations; juvenile and adult corrections; family and community services; and programs serving older adults, including long-term care facilities. Students interested in teaching human development and family studies content at the secondary level should explore the interdepartmental major in Family and Consumer Sciences, Education Concentration. HDFS graduates are also well prepared to pursue advanced degrees in mental health, behavioral and social sciences, education, health and medicine, or other professional programs.

Some examples of career opportunities with a bachelor's degree in HDFS include, but are not limited to: early childhood teacher, early childhood administrator, adult recreation programmer, career development specialist, family services specialist, human development specialist, adult education teacher, human resources coordinator, youth agency administrator, community outreach worker, women's program administrator, youth intervention and prevention program administrator, youth employment, training, and development specialist, parent educator, children-family educator, child protection worker, family assistance worker, program administrator, public

relations specialist, youth services worker, case manager, nonprofit agency administrator, and residential center manager.

To help guide students in their career planning, there are five concentrations within the Human Development and Family Studies major. The HDFS Major Program of Study consists of the HDFS foundational courses, which are required for all students regardless of concentration, 15 credits selected from the list of courses within students' chosen concentration, and additional electives to reach 120 credits as required for graduation. Students must declare a minimum of one concentration and may not declare more than two concentrations in the HDFS major. The declared concentration(s) are listed on the students' transcripts and thus indicate specialized training within the HDFS degree program.

Human Development and Family Studies Concentration

The Human Development and Family Studies Concentration is a general concentration that is available to HDFS majors who do not choose one of the more specific concentrations. This general concentration is an excellent choice for students who are interested in a lifespan or more general focus in HDFS and are not seeking the specialized training offered in the other four concentrations. Students choosing this concentration will be preparing to enter a variety of different careers or graduate programs, as outlined above. The curriculum includes primarily HDFS, psychology, and social work courses as well as selected courses from other disciplines for a well-rounded and robust education in human development and family studies. By selecting this concentration, students have an opportunity to participate in a variety of experiential learning courses and internship options as they explore and prepare for their career path and additional credentialing options. Please note that the HDFS general concentration does not appear on students' transcripts.

Early Childhood Professions Concentration

The courses in the Early Childhood Professions Concentration prepare students for careers in early childhood education as well as professional work with children across a variety of settings, including working with children with special needs. This concentration is an ideal choice for first and second year HDFS majors who plan to apply to the competitive on-campus Early Childhood Education Major during their sophomore year. As well, this concentration is the preferred choice for students interested in the early childhood education careers that do not require teacher licensure, or for students who will pursue a graduate degree and licensure in childhood education. Students interested in working with children with special needs, those seeking director qualifications in early childhood education, and those seeking other relevant credentials would also benefit from choosing this concentration. The curriculum incorporates courses from several disciplines that focus on early child development, education, diversity, and professional skills.

Pre-Health Professions Concentration

Many students pursuing an HDFS degree plan to apply to graduate or professional programs in a variety of health professions. The Pre-Health Professions Concentration prepares students for these careers and supports their goals of obtaining graduate training. Some of the careers students in this concentration pursue are: allied health practitioner, anesthesiologist assistant, child life specialist, chiropractor, dentist, medical doctor, music therapist, naturopathic or complementary medicine practitioner, nurse, occupational therapist, optometrist, pharmacist, physical therapist, physician's assistant,

podiatrist, speech and language pathologist, or veterinarian. The courses within this concentration include a focus on science and also help prepare students to work with individuals (and their families) with disabilities, mental and physical illness, or those experiencing death, dying, or grief. In addition, students in this concentration are strongly encouraged to consult with pre-professional advisors in the Center for Advising and Student Achievement for specific course (and corresponding course prerequisite) recommendations based on the credentials that they are pursuing, as the prerequisite requirements vary for graduate and professional programs.

Prevention and Intervention Sciences Concentration

The Prevention and Intervention Sciences Concentration is designed for students who are preparing for careers in the helping and human services professions such as counselors, educators, and social service providers, as well as for students seeking a research career in human development and family studies or a related field. This concentration is an excellent choice for students interested in careers requiring either a bachelor's degree or additional credentials. Concentration coursework emphasizes evidence-based programs, and students will learn how to design and implement community-based prevention and intervention programs for youth, adults, and families. Students can either focus on a specific aspect of the lifespan or choose courses across the lifespan.

Leadership and Entrepreneurial Professions Concentration

The Leadership and Entrepreneurial Professions Concentration guides students who are preparing for entry-level or long-term leadership positions in organizations that promote the optimal development of individuals and families. Students in this concentration may intend to work in organizations as directors, managers, or owners. This concentration includes coursework in finance, management, marketing, public policy, professional communication, and leadership. This concentration is also appropriate for students preparing for careers in legal services, such as lawyers or politicians. Students in this concentration may choose to pursue additional credentials in leadership, business and entrepreneurship.

Online Degree Program

The HDFS major is offered in two formats, both leading to a Bachelor of Science degree. We offer on-campus classes to local degree-seeking students, and we offer distance students the HDFS degree through the Division of Continuing Education and CSU OnlinePlus (<http://www.online.colostate.edu>). The Online Bachelor of Science Degree in HDFS (<http://www.online.colostate.edu/degrees/hdfs>) provides a high-quality university education that is flexible, convenient, and accessible for working and distance students. The courses in the online program are the same as the on campus courses. As well, the five HDFS concentrations are available online with only some limitations, as not all CSU courses are available online. The online Bachelor of Science degree in HDFS carries the full accreditation of CSU and is indistinguishable on student transcripts from the on campus version of the degree.

Major in Social Work

Social work is distinguished by a tradition of concern for people and their interactions with society. Social work professionals are community problem solvers who intervene in organizational settings, communities, social service agencies, groups, individuals, and families with goals of enhancing well-being and promoting social and economic justice. Most social workers are employed in fields such as child welfare and family services, mental health, medical social work, school social work, corrections, community organization, or advocacy.

The Social Work curriculum focuses on the practical application of social work principles, policies, and practices within human rights and social justice perspectives. Students acquire a professional social work foundation transferable to different settings, population groups, and problem areas. Attention is devoted to understanding the social welfare system in the U.S., and working with individuals, families, and communities to affect desired change. Several practical experiences are required. Students work with an agency participant throughout their sophomore year, and then as seniors, participate in a social work agency internship. The curriculum also includes a strong liberal arts base in social science research and statistics, arts, humanities, social science, and natural sciences.

CSU students are admitted to the School of Social Work (SSW) when they declare Social Work as a major. Two professional organizations, The National Association of Social Workers (NASW) and the Council on Social Work Accreditation (CSWE) guide social work practice and education. The NASW develops the Code of Ethics for practicing social workers. The CSWE accredits bachelors and masters social work educational programs in the United States. The BSW program is accredited by CSWE.

Learning Outcomes

Graduating seniors will have demonstrated:

- Skills in conceptualizing and applying knowledge of social welfare policy and services, a systems perspective, theory, community resources, and community policy-making processes and practices.
- Knowledge and mastery of the foundation competencies as required by the CSWE for accreditation of the BSW degree.
- An understanding of the social work code of ethics including mastery of skills in maintaining client confidentiality, establishing professional boundaries, and resolving ethical dilemmas that are presented in case situations.

Potential Occupations

Social Work graduates are employed in a variety of settings including welfare agencies, schools, hospitals, clinics, institutions, community centers, public health, corrections, and group homes. Entry-level job opportunities are plentiful. Graduates should be willing to work with

people of all ages and in a multitude of circumstances and settings. Opportunities to work with older adults are especially prevalent. Internships are required. Graduates of the BSW program are eligible to apply for advanced standing in MSW social work programs.

Some examples of career opportunities include, but are not limited to: child welfare worker, adolescent group home counselor, crisis counselor, child protection worker, adult protection worker, geriatric social worker, case manager, nursing home administrator, medical social service counselor, community outreach coordinator, youth program counselor, home health worker, occupational social services worker, foster parent consultant, probation officer, client advocate, victim-witness program counselor, program manager, substance abuse counselor, domestic violence counselor, or adoption worker.

Progression in the Major

Progression in the Major in the SSW is guided by standards required by both NASW (<http://socialworkers.org/pubs/code/code.asp>) and CSWE (<http://cswe.org/File.aspx?id=41861>) to ensure compliance with accreditation standards and that SSW students meet nationally recognized ethical requirements for their profession.

The NASW (<http://socialworkers.org/pubs/code/code.asp>) Code of Ethics requires that social workers act ethically in their work with clients. It also requires that social workers take action when their colleagues are not acting competently or ethically. The CSWE (<http://cswe.org/File.aspx?id=41861>) requires that social work programs describe the procedures for informing students of the program's criteria for evaluating students' academic and professional performance and that the program have policies and procedures for terminating students' enrollment in the social work program for reasons of academic and professional performance.

To meet the requirements of these professional governing bodies, the SSW has developed this Progression in the Major procedure. Progression in the Major is a time in a student's academic career when faculty and students can review each student's character and fitness for the profession of social work. Prior to enrolling in the 300 level practice courses (SOWK 340, SOWK 341, SOWK 342), students must apply for Progression in the Major. Approval of the Progression in the Major application is a prerequisite for enrollment in SOWK 340. Generally students who have 60 or more credits must apply for progression in order to graduate in the following four semesters. The application for Progression in the Major will be distributed in SOWK 286A and SOWK 286B.

As a professional program, academic performance and fitness to proceed in the SSW program requires a minimum grade point average, completion of required course work, and behaviors appropriate to the performance of social work. Problems in student performance may be addressed with the student at any time in the student's academic career in the SSW.

Student Expectations for Progression:

- Maintain a minimum GPA of 2.5 in SOWK course work; a grade of C or better in all SOWK coursework; 2.0 in overall university course work; 2.0 in All University Core Curriculum (AUCC) course work.
- Demonstrate conduct that complies with the CSU Student Code of Conduct.
- Demonstrate conduct that adheres to the NASW Code of Ethics and social work values in interactions with faculty, peers, the community, organizations and clients.

- Remain free of criminal convictions while enrolled in the SSW and CSU.
- Refrain from substance use that interferes with the performance of responsibilities to clients and agencies and/or interferes with classroom performance.
- Demonstrate behavior that prioritizes the welfare of those to whom the student has a responsibility such as clients and coworkers.
- Refrain from any behaviors that cause harm to clients, including romantic or sexual relationships.
- Demonstrate respect for all persons and appreciation for race, age, color, religion, national origin or ancestry, sex, gender, disability, veteran status, genetic information, sexual orientation, or gender identity or expression.
- Demonstrate sound judgment, both in work with clients and in regard to oneself, such as seeking professional help for physical and emotional problems that interfere with professional functioning.
- Demonstrate honesty and integrity in work with client systems and in the classroom.

Review Process

Concerns regarding a student's application for progression will be reported to the Director of the BSW Program. Concerns may be identified during the Progression in the Major application review process or at any time before or after progression. Progression applications will be reviewed by the Director of the BSW Program. Concerns regarding any of the foregoing student expectations will be addressed by the BSW Director directly with the student and the student's advisor. Major concerns regarding the student's ability to proceed in the program will be reviewed by the Director of the BSW program with the administrative team of the SSW, including but not limited to the Director of the SSW. A meeting will then be scheduled for review of the concerns with the student, faculty member(s) involved, the Director of the BSW Program and the Director of SSW. Review of concerns may result in one or more of the following resolutions, through the Director of SSW:

- Dismissal or resolution of the expressed concerns.
- A probationary period which includes a remediation contract with the student to address concerns that will be monitored by the BSW Program Director or designated faculty.
- Dismissal of the student from the Social Work major.
- A report to the CSU Office of Conflict Resolution and Student Conduct Services, in the event the concerns include possible violations of the Student Conduct Code.

Students may appeal these decisions using established university and SSW procedures.

Practicum and Internship

Students directly apply classroom knowledge, skills, and social work values through a six-credit supervised practicum, SOWK 286A and SOWK 286B, in the sophomore year. In this practicum, students are matched with community agencies which require background checks before placement.

In the senior year, students fulfill a 10-credit field placement in a social work agency or program in a community setting. Field placement agencies generally require background checks also, Examples of

available field placements include child and public welfare programs; hospitals, homeless and women's shelters, rehabilitation and mental health agencies, schools, adolescent residential care, geriatric centers, and correction programs. In their field placement and under supervision, students have the opportunity to demonstrate the required CSWE competencies.

Master Program

- Master in Arts Leadership and Administration, Plan C

The College of Liberal Arts aims to educate committed and active citizens and to develop in them an understanding of humans, including their history, literature, and art; their social, political, and economic systems; and their relationship to the environment. The College offers courses in the arts, humanities, and social sciences, which constitute the foundation of a liberal arts education.

College Programs

Undergraduate majors lead to one of three degrees: Bachelor of Arts, Bachelor of Fine Arts, or Bachelor of Music. Descriptions of the specific departmental and interdepartmental majors and concentrations in the College of Liberal Arts are located in the following pages.

Students should consider simultaneously completing the requirements of a second major or a departmental or interdisciplinary minor, either in the College of Liberal Arts or in another college. With careful planning, numerous combinations are possible within four years of study.

The minimum scholastic average acceptable for graduation in any college program is a 2.000 average in all major courses in addition to the university's overall grade point average requirement of 2.000 for Colorado State courses.

Undergraduate Career Opportunities and Career Counseling

Graduates from the College of Liberal Arts enter a remarkable variety of careers. Degrees from the College of Liberal Arts prepare students for success in their professional, personal, and civic lives. The skills and dispositions students develop through study in the liberal arts are widely sought. In preparing themselves for future career opportunities students are encouraged to work closely with Academic Support Coordinators, departmental mentors, and career counselors. Through these conversations students will be encouraged to develop resumes, interviewing skills, and articulation of the ways in which their skills will benefit potential employers. Students should also consider participating in internships to gain practical work experience.

Prelaw

Clark C, Room 336B
 (970) 491-0704
courtenay.daum@colostate.edu

Prelaw adviser, Dr. Courtenay Daum

Students preparing for law school can choose any major. Law schools seek above-average students with broad educational backgrounds and excellent communication, and analytical skills. Prelaw students, regardless of major, should design a course of study that develops their skills in speaking, writing and analytical capabilities. Law schools require an undergraduate degree for admission. Visit the Department of Political Science (<http://politicalscience.colostate.edu/undergraduate/pre-law>) for more information.

Education Abroad

Because the knowledge of at least one other culture is valuable in understanding our own, students are encouraged to take a semester or longer to study outside of the United States as part of their overall program at CSU. Students interested in education abroad should plan, far in advance, by discussing opportunities with their advisor and by visiting the Office of International Programs (<http://educationabroad.colostate.edu>) in Laurel Hall.

Foreign Service Officer Career

Students interested in a career as a foreign service officer may prepare for both the general Foreign Service Officer Examination and the associated language examination within the following majors: economics; history; international studies, journalism and technical communication; languages, literatures, and cultures; liberal arts; political science; or sociology.

Graduate Programs

A variety of liberal arts advanced degrees are available in the College. Academic degrees offered are Doctor of Philosophy, Master of Arts, Master of Science, Master of Fine Arts, and Master of Music. The last two are generally considered professional degrees.

The College offers three interdisciplinary master's degrees. The Department of Anthropology offers a master's degree in Anthropology with a specialization in International Development, with courses from across CSU. The Departments of English and Foreign Languages and

Literatures offer a joint master's program in foreign languages and the teaching of English as a second/foreign language. The LEAP Institute for the Arts offers a Masters in Arts Leadership and Administration in collaboration with the College of Business, the College of Liberal Arts and others, that prepares students for leadership opportunities within and outside of the creative sector. Information on all three degree programs may be obtained from any participating department.

For detailed information about graduate programs, contact individual departments. See also the Graduate and Professional Bulletin.

The LEAP Institute for the Arts at CSU opens possibilities for career and life through visionary leadership, creative entrepreneurship, impassioned advocacy, and public engagement through a deeper understanding of arts and culture. This Special Academic unit in the College of Liberal Arts is pleased to offer a Masters in Arts Leadership and Administration.

This graduate degree program helps students to apply their creative talents and develop new skills to meet the rising demand for entrepreneurial arts management professionals and visionary organizational leaders. We believe the arts serve a valuable purpose in society, and we need leaders and entrepreneurs to ensure their success. Often, however, those best suited to serve in these roles—those who are passionate about their creative work and making positive change in the community—lack formal administrative and entrepreneurial training. This arts administration master's helps students fill their knowledge gaps, so they can do the work that they love, and be more successful at it. Students will gain the foundational skills they need to operate their own business, or take on leadership roles and impact meaningful change in an organization. The program covers a broad range of entrepreneurial subjects, including finance management, media communication, policy, project planning, events management and community engagement. These are skills that not only will be immediately applicable to their career today, but will provide valuable insight to help students make informed decisions throughout their career.

The Masters in Arts Leadership and Administration is a two-year 32 credit program available both in person and 100% online. For more information about the program, admissions, or the LEAP Institute for the Arts, please visit LEAP Institute for the Arts (<http://leap.colostate.edu>).

Graduate Graduate Programs in Anthropology

The department offers graduate programs leading to a Master of Arts degree (Plan A thesis option or Plan B portfolio option). It also has a Master of Arts specialization in each of four programmatic areas: Health and Well-Being, Humans and the Environment, International Development and Globalization, and Professional Methods and Techniques. Students may develop a research project or professional program in these programmatic areas, or in any area related to our faculty's research interests.

Health and Well-Being—Studies the ways that human health and wellness are influenced by past and present sociocultural, environmental, biological, and biocultural forces, by drawing from broad and holistic perspectives on human well-being.

Humans and the Environment—Investigates how past and present human activities influence the environment; the ways ecological and other processes affect human evolution and the human condition today; and the resilience of social and ecological systems.

International Development and Globalization—examines how local societies respond to global influences; the extent to which cultural meanings, beliefs, institutions, structures of inequality, and social relations between genders and among kin are changing as a result; and how processes of economic and community development can improve basic aspects of human welfare.

Professional Methods and Techniques—develops skills in a wide range of methods and techniques used by professional in applied anthropology, federal and state natural resource agencies, and other arena of social, historical, biological and spatial research about humans. These include qualitative research and interview protocols, quantitative analysis, GIS and remote sensing, archaeological field survey, historic archaeological methods, culture and heritage resource management, and paleoanthropological methods.

Students interested in graduate work should refer to the Graduate and Professional Bulletin, and the department's website (<http://anthropology.colostate.edu>).

Major in Anthropology

The mission of the Anthropology Department is to

1. offer and maintain instructional programs that provide a comprehensive overview and analyses of people and their cultures, both past and present;
2. conduct research in order to advance and expand knowledge of the fields of anthropology and geography;
3. participate actively in programs of interdisciplinary research.

The Department of Anthropology houses a faculty of cultural anthropologists, archaeologists, biological anthropologists, and geographers whose scholarship spans the breadth of the human experience. The program prepares undergraduate students to describe, analyze, and interpret the human condition. An examination of the social, environmental, and evolutionary contexts in which the human species is embedded defines most course work in the discipline. The program is integrative, drawing from geography, biology, the humanities, and other social and natural sciences. Geography figures prominently in our program and provides an important spatial lens through which human groups are examined over time. Four programmatic areas define faculty research and scholarship with which students can engage: humans and the environment, international development and globalization, health and well-being, and professional methods and techniques. In the education of undergraduates, the department values and promotes experiential training, primary research, and public engagement and education.

The research endeavors of the anthropology faculty are trans-disciplinary and international, they are interested in diverse topics including but not limited to contemporary culture, ethnicity, linguistics, comparative religion, virtual worlds, subsistence patterns, archaeology, human ecology, human anatomy, evolution, biogeography, land cover/land use patterns, glaciology, and the behavior of non-human primates.

Anthropology majors follow a liberal arts curriculum that provides a broad education with an emphasis on learning how to learn. The department has ten research and teaching laboratories and three summer field schools; the Ethnographic Field School at the Pine Ridge Indian Reservation, the Archaeology Field School, and the Paleontology Field School.

Undergraduate students can pursue a general anthropology degree, learning about the diversity of the human existence from a broad and holistic perspective. Students can also declare a concentration

within the program. Declaring a concentration allows for a focused course of study, specializing in the particular subfield of interest. Within each concentration (Archaeology, Biological Anthropology, Cultural Anthropology and Geography), specific categories of classes guide students in learning the major theories, methods, and applications related to modern practice of our discipline. Along with our offerings of world class field schools, archaeological, biological, and ethnographic methods and geographical techniques are encouraged in order to further gain experience and perspective. Upon graduation, students are prepared for jobs or advanced training in graduate school. Students come away with a respect and appreciation for the diversity of human existence.

Learning Outcomes

Students will:

- Demonstrate knowledge related to a basic appreciation of anthropology and its potential including:
 - a. respect for the similarities and differences that characterize human cultures over time and across space;
 - b. the theoretical perspectives that anthropologists use to comprehend these similarities and differences;
 - c. the methods and tools used to describe and analyze them; and
 - d. how the relationship between theory, methods, and data intersects.
- Integrate anthropological concepts across subfields or with other social sciences and humanities disciplines, and articulate their anthropological understandings through papers written and presented during their senior year.
- Use what they have learned in their anthropology courses in future activities after graduation.

Potential Occupations

Anthropology, like many majors in the liberal arts, provides students with a broad academic background suitable for a variety of jobs in the public and private sectors. Anthropology majors are trained to think independently and critically, communicate effectively, and function in a multicultural world. Employers appreciate liberal arts majors for their multiple skills and their ability to adapt to a variety of tasks and work environments. Participating in internships and cooperative education opportunities is highly recommended to enhance students' practical training and development. Careers for graduates are available in international development, health care, education, business, natural resource management, and government. Graduates who go on for advanced studies can pursue careers in anthropology or attain advanced positions with the possibility of rising to top professional levels.

Some career opportunities for anthropology graduates include, but are not limited to: museum curator/researcher, genealogist, international relief representative, salvage archaeologist, collections assistant, resource specialist, classical or historical anthropologist, cultural affairs officer, diplomatic service representative, immigration or foreign service officer, linguist, educational television researcher, forensic osteologist, biographical writer, scientific/technical writer, reporter, ethnographic photographer, anthropological linguist, rural development worker, ethnic groups' special concerns advocate, intercultural educator, medical anthropologist, grant writer, psychological anthropologist, international development administrator, public relations representative, public opinion pollster,

sales/marketing representative, consultant for cross-cultural relations, personnel worker, geographic information systems specialist.

Major in Anthropology, Biological Anthropology Concentration

Over the past half century biological anthropology has undergone tremendous change from a discipline that was defined by a descriptive, typological approach to human morphology to one that includes both experimental and comparative analyses in a population based framework.

Biological anthropologists continue to cross traditional disciplinary boundaries and interact with both the physical and natural sciences, including biology, anatomy, genetics, chemistry, biometry, or endocrinology as well as the social sciences.

The expertise of existing faculty in Biological Anthropology at CSU includes:

- Human skeletal biology
- Evolutionary theory
- Neanderthal paleobiology and paleobiogeography
- Dental anthropology
- Public Health
- Early hominid feeding ecology
- Taphonomy
- Public Health
- Plio-Pleistocene Africa
- Pleistocene Asia

Special resources include the Paleoanthropology and Zooarchaeology lab, the Human Origins Lab and the Bioanthropology Lab. Existing faculty also have geographic foci significant to their research. Research areas include Uzbekistan, Kazakhstan, Tanzania, and Mexico.

Major in Anthropology, Cultural Anthropology Concentration

The Cultural Anthropology concentration focuses on contemporary experiences of culturally distinct communities encountering a rapidly globalizing political economy. Students are provided with robust training in mixed methods, community-based approaches, and applied anthropology. Typically, faculty investigate issues related to the transformation of individual experience and community relations within the context of economic development, governmental and nongovernmental policy, and environmental change. Increasingly, faculty seek to understand the way subjective and material well-being are impacted by the rapidly changing contexts of modernity. Topics of research interest include:

- Human-Environment Interactions
- Community and Economic Development
- Health and Well-Being
- Cultural Psychiatry
- Disasters and Resilience
- Gender
- Culture Continuity and Change

Passionate about teaching, faculty strive to bring excitement and relevance to the classroom by infusing it with their practical field experiences. Cultural faculty conducts their research in India, Southeast Asia, Central Asia, East Africa, the Caribbean, New Orleans, Native North America, and in virtual reality. Students concentrating in Cultural Anthropology explore issues of place and space, cultural theory, cultural content and methods.

Major in Anthropology, Geography Concentration

Geography at CSU focuses on providing undergraduate students with a broad background in geographic thinking with an emphasis on the traditional geographic focus of understanding dynamic interaction between human and the environment in an era of rapid global change. Faculty use a wide range of research methods including geographic information systems (GIS), remote sensing, spatial modeling, and dendrochronology to address applied research questions in Colorado, the Rocky Mountains, Southeast Asia, Mesoamerica, Melanesia, and southern South America. Research focus areas include:

- Climate change implications for society and ecosystems
- Land-use and land-cover change
- Biogeography
- Livelihood systems
- Glaciology
- Colorado geography
- Forest biogeography
- Mountains

A concentration and minor in Geography are degree options within the Department of Anthropology. Current courses offered range from introductory courses that introduce students to geography and the two main branches of cultural and physical geography, to advanced courses which focus on methods (e.g. spatial analysis and GIS, remote sensing) and topical subjects such as climate change, forest ecology, mountain geography, the geography of commodities, and land change science.

Master of Arts in Anthropology Plan A

The thesis option must consist of a minimum of 30 semester credits of course work concentrated in anthropological areas relevant to the participant's professional goals. The thesis is the culmination of a research project carried out by the student under the guidance of his or her advisor. A final examination consists of a defense of the thesis, as well as other parts of the program of study.

Plan B

The non-thesis option is intended for students seeking development of an understanding of anthropology which will allow them to move on to a PhD program in anthropology, or be incorporated in their work. Plan B students are expected to take a more broadly distributed series of courses and to show less specialization than that which characterizes Plan A programs of study.

Requirements for Plan B are a minimum of 36 credits of study. Students must complete a portfolio of work demonstrating both the breadth of their understanding of anthropology and their own area of specialization, selected in consultation with the student's advisor. A final examination consists of a defense of the portfolio, as well as other parts of the program of study.

Major in Art, B.F.A.

Throughout history, art has been a fundamental language of the human spirit. Visual arts express human experience through an ever-widening range of media and materials, some of which include: oils,

acrylics, pastels, charcoal, clay, plaster, steel, bronze, wood, copper, litho stones, and computers. Visual artists create abstract works and images of objects, people, nature, topography, and events. The Department of Art and Art History offers several options of study. The B.F.A. (Bachelor of Fine Arts) degree in studio art and the B.A. (Bachelor of Arts) degree in art history, art education, or studio art are all professional degrees, leading to related art careers.

Learning Outcomes

Students will demonstrate:

- Fundamental knowledge and mastery of media and processes necessary to communicate meaning in a work of art.
- Ability to communicate clearly about their own art and the art of others.
- Knowledge about contemporary art and motivation to view and discuss current local, regional, and national exhibitions. Students well versed on contemporary art would:
 - a. regularly read reviews of exhibitions in local and national newspapers;
 - b. regularly read art periodicals;
 - c. attend multiple exhibitions; and
 - d. be knowledgeable about contemporary artists in their discipline (i.e., nationally known painters, sculptors, etc.).

Potential Occupations

Art graduates possess a number of transferable communication, analytical, and critical thinking skills, and as a result find positions in academia, in addition to roles as freelance artists, graphic designers, art educators, art historians, studio fine artists and as “creatives” in government and industry. Many employers appreciate art majors for their multiple skills and their ability to adapt to a variety of tasks and work environments. Participation in internships, cooperative education, and service learning opportunities is highly recommended to enhance practical training and development. Graduates who go on for advanced studies can attain more responsible positions with the possibility of rising to top professional levels.

Depending on student interests, the electives taken, or the concentration selected, available career choices include, but are not limited to: art appraiser, art director, art therapist, exhibit designer, art critic, jeweler, gallery director, graphic design artist, free lance artist, sculptor, woodworker, welder, foundry worker, studio photographer, technical illustrator, painter, textile designer, weaver, art educator, art historian, art curator, art librarian, art museum educator, web page designer, photo lab technician, art restorer, and master printer.

Bachelor of Fine Arts (B.F.A.)

The B.F.A. degree is a professional program for careers in studio art. Students have an opportunity to concentrate in one of ten studio fields: Drawing, Electronic Art, Graphic Design, Fibers, Metalsmithing, Painting, Photo Image Making, Pottery, Printmaking, and Sculpture. The curriculum progression in the department is similar within the concentrations and some concentrations may have restrictions. Freshmen study foundation courses in the fine arts, which include drawing, painting, sculpture, and art history. Sophomores explore various concentration courses and become familiar with the studio practices for the concentration studios housed in separate wings that feature large, well-equipped studio spaces designed for exploration of work in a specific media. Juniors and seniors focus on advanced topics

in their chosen concentration by taking one upper-division course in their chosen field each semester.

Concentrations

- Drawing Concentration
- Electronic Art Concentration
- Fibers Concentration
- Graphic Design Concentration
- Metalsmithing Concentration
- Painting Concentration
- Photo Image Making Concentration

Major in Art, B.A.

Throughout history, art has been a fundamental language of the human spirit. Visual arts express human experience through an ever-widening range of media and materials, some of which include: oils, acrylics, pastels, charcoal, clay, plaster, steel, bronze, wood, copper, litho stones, and computers. Visual artists create abstract works and images of objects, people, nature, topography, and events. The Department of Art and Art History offers several options of study. The B.F.A. (Bachelor of Fine Arts) degree in studio art and the B.A. (Bachelor of Arts) degree in art history, art education, or studio art are all professional degrees, leading to related art careers.

Learning Outcomes

Students will demonstrate:

- Fundamental knowledge and mastery of media and processes necessary to communicate meaning in a work of art.
- Ability to communicate clearly about their own art and the art of others.

- Knowledge about contemporary art and motivation to view and discuss current local, regional, and national exhibitions. Students well versed on contemporary art would:
 - a. regularly read reviews of exhibitions in local and national newspapers;
 - b. regularly read art periodicals;
 - c. attend multiple exhibitions; and
 - d. be knowledgeable about contemporary artists in their discipline (i.e., nationally known painters, sculptors, etc.).

Potential Occupations

Art graduates possess a number of transferable communication, analytical, and critical thinking skills, and as a result find positions in academia, in addition to roles as freelance artists, graphic designers, art educators, art historians, studio fine artists and as “creatives” in government and industry. Many employers appreciate art majors for their multiple skills and their ability to adapt to a variety of tasks and work environments. Participation in internships, cooperative education, and service learning opportunities is highly recommended to enhance practical training and development. Graduates who go on for advanced studies can attain more responsible positions with the possibility of rising to top professional levels.

Depending on student interests, the electives taken, or the concentration selected, available career choices include, but are not limited to: art appraiser, art director, art therapist, exhibit designer, art critic, jeweler, gallery director, graphic design artist, free lance artist, sculptor, woodworker, welder, foundry worker, studio photographer, technical illustrator, painter, textile designer, weaver, art educator, art historian, art curator, art librarian, art museum educator, web page designer, photo lab technician, art restorer, and master printer.

Concentrations

- Art Education Concentration
- Art History Concentration
- Studio Concentration

Bachelor of Arts, Art Education Concentration

The Art Education concentration embraces the artist-teacher concept, which allows students to develop a studio concentration while preparing to teach art at the K-12 level. The program is comprehensive, meaning students take course work to prepare them to teach at the elementary and secondary school levels. The Art Education program enjoys good working relationships with school districts in the state of Colorado. Students integrate studio, art history, criticism, and aesthetics as they observe and teach—through a variety of experiences—in the public schools.

Students interested in pursuing a teaching license through CSU may refer to the Center for Educator Preparation (CEP) (<http://cep.chhs.colostate.edu/students/teacher/admissions.aspx>), College of Health and Human Sciences section for general information.

Art Education students must maintain a 2.75 cumulative GPA for admission to the Art Education program, eligibility for student teaching placement, and licensure.

Bachelor of Arts, Art History Concentration

Art History provides a basic preparation in art history for graduate studies; careers in research and teaching at the college level; for

positions in museums, libraries, or private collections; or for writing and criticism in the arts. Graduate studies or advanced-level classes are necessary for advancement. In-depth study in a second field allows students to refine their focus.

Graduate Graduate Programs in Communication Studies

The graduate program leads to a Master of Arts in Communication Studies. Graduate coursework, as well as a required thesis for the Plan A master's, enables students to develop expertise in one or a combination of three areas of emphasis:

1. media and visual culture;
2. relational and organizational communication; and/or
3. rhetoric and civic engagement.

In each of these areas, students select course work from among the following topics:

1. contemporary issues in media, media theories, media audiences, media texts, and media industries;
2. communication theories, communication and diversity, interpersonal theories, and discourse and organization; or
3. public address, rhetoric and public affairs, rhetorical theory, rhetorical criticism, rhetoric of everyday life, and feminist theory.

The Plan B master's provides a Deliberative Practices Specialization with coursework in deliberative theory and practice, a practicum, and an Independent Study serving as the culminating report in lieu of a thesis.

Students interested in graduate work should refer to the Graduate and Professional Bulletin and the Department of Communication Studies (<http://communicationstudies.colostate.edu>).

Major in Communication Studies

Communication Studies majors receive a broad-based, liberal arts education, designed to equip them for the challenges of the 21st century, the need to adapt to a rapidly changing workplace, and the likelihood of more than one career. The major encompasses many facets of media and visual culture, relational and organizational communication, and rhetoric and civic engagement. Along with courses in communication studies, the major requires courses in the arts and humanities, the social sciences, and history, and a minor or second major.

The department's goals for undergraduate majors include helping students to achieve an outstanding education in communication studies, to further their knowledge and understanding of human communication, and to provide leadership in communication activities. In so doing, we hope to help students prepare for successful careers, the duties of citizenship, and productive and rewarding lives.

Learning Outcomes

Students will demonstrate:

- **Totality:** Students will be able to demonstrate a comprehensive understanding of the Communication Studies discipline. They will be able to discuss the central topics in the field related to history, theory, and research. Students' knowledge of the field will also span several contexts of communication scholarship, including media and visual culture, relational and organizational communication, and rhetoric and civic engagement.
- **Synthesis:** In addition to having a comprehensive understanding of the foundational concepts, theories and research domains in the Communication Studies discipline, students will be able to integrate what they have learned in these areas and apply their knowledge to address contemporary issues salient to their personal, professional, and civic lives.
- **Skillfulness:** Central to the Communication Studies discipline is the development of strong oral and written skills. Students will be able to construct and deliver high-quality, evidence-based arguments tailored to specific audiences. Additionally, students will be able to thoughtfully and ethically critique the oral and written work of their peers (as well as communicators in other professional and public settings).

Potential Occupations

The Communication Studies major, like many liberal arts majors, provides students with a broad academic background suitable for a variety of jobs in the public and private sectors. Majors are trained to think independently and critically, communicate effectively, and function in a multicultural world. Employers appreciate Communication Studies majors for their multiple skills and their ability to adapt to a variety of tasks and work environments.

Many majors find employment in public relations/marketing, politics, sales, human relations, government, business management, convention and meeting planning, education, and computer-mediated communication. Some students move on to graduate work in communication studies and to post-graduate study in law and theology.

Career opportunities include, but are not limited to employee relations specialist, employment counselor, human resource consultant, industrial relations representative, public relations specialist, labor relations consultant, training director, vocational rehabilitation counselor, advance agent, business communicator, equal opportunity representative, foreign service officer, cooperative extension service worker, politician, lobbyist, speechwriter, press agent, literary agent, interviewer, sales representative, scriptwriter, lawyer, teacher.

Internships are available to Communication Studies majors and are highly recommended to enhance practical training and development. Graduates who seek advanced studies can attain more responsible positions with the possibility of rising to top professional levels.

Major in Economics

Economics is the study of how people and societies use scarce resources to produce the things they want. Economic theory provides a framework for understanding economic issues, analyzing and predicting the likely effects of economic behavior and government policies, and formulating efficient and equitable solutions to pressing economic problems.

A strong liberal arts curriculum including arts and humanities, social and natural sciences, advanced composition, mathematics, and statistics provides the depth and breadth of knowledge needed to systematically and logically analyze problems, generate and test ideas, and develop effective communication and quantitative skills. Economics majors develop an appreciation of economic issues, and learn to analyze and critically evaluate economic phenomena and policies. The major core includes four semesters of economic theory, a semester of econometrics, a senior capstone seminar, and several semesters of economics electives covering a wide variety of economic topics from environmental and natural resource economics to the history of economic institutions and political economy.

Learning Outcomes

Students will:

- Display command of basic microeconomic concepts such as rationality, cost/benefit, supply and demand theory, decision making at the margin, monopoly and competition, and efficiency and equity.
- Display command of basic macroeconomic concepts such as aggregate demand and supply, fiscal and monetary policy, and the use of these policies in the macro-economy.
- Understand and analyze basic economic issues found in the news and understand how the economic aspects of society work.

Potential Occupations

Economists are employed in a wide variety of fields from education and research to business and government. Nonprofit and international organizations use economists in overseas development,

environmental conservation, and international relations. Economics, like many liberal arts majors, provides students with a broad academic background suitable for a variety of jobs. Economics majors are trained to think independently and critically, communicate effectively, and function in a multicultural world. Many employers appreciate liberal arts majors for their multiple skills and their ability to adapt to a variety of tasks and work environments. Careers for graduates are available in education, business, and government. Participation in internships or cooperative education opportunities is highly recommended to enhance practical training and development. Graduates who go on for advanced studies can pursue careers in economics or attain advanced positions with the possibility of rising to top professional levels.

Depending on interests, the electives taken, or the minor selected, available career choices include, but are not limited to: commodities/stock broker, financial analyst, economic forecaster, trust administrator, loan counselor, pension funds administrator, foreign trade analyst, public policy analyst, regional/urban planner, foreign service officer, tax auditor, natural resource analyst, educator, program administrator, researcher, community organizer, environmental activist, international aid organization analyst or administrator, marketing analyst, purchasing agent, public relations/media planner, program consultant, contract administrator, systems evaluator, personnel planner, portfolio administrator, finance manager, secondary school teacher.

Requirements Effective Spring 2013

Major in English

English majors develop an understanding of diverse cultures, literary traditions, and great works of English, American, and world literature. Students expand their ability to analyze a variety of texts and view them through the lenses of diverse critical perspectives. Majors develop the ability to write for both specialized and general audiences. There are five concentrations from which students can choose

- Creative Writing,
- English Education,
- Language,
- Literature, or

- Writing.

Learning Outcomes

Students will demonstrate:

- Competency in critical reading and interpretive techniques, including:
- formulating, developing, and supporting interpretive positions with appropriate evidence;

- being original and creative.
- Effective written expression in a variety of genres for a range of audiences on literary and non-literary topics.
- Familiarity with the main writers, texts, genres, and movements in the literary history of the United States and British Isles; and/or the history and development of the English language; and/or literacy issues in their historical contexts.

Potential Occupations

A major in English prepares students for business, government, or education careers that require broadly educated people who can think critically, communicate effectively, analyze texts, and write well. Many employers appreciate liberal arts majors for their multiple skills and their ability to adapt to a variety of tasks and work environments.

The department encourages experiential education by offering a variety of internship opportunities.

Students are also invited to generate their own positions in fields of interests, as well as pursue established local, regional, or national internships. Graduates who go on for advanced studies can attain more responsible positions with the possibility of rising to top professional levels.

Depending on a student's interests, the electives taken, or the concentration selected, available career choices include, but are not limited to: copy editor; project editor; manuscript reader or story analyst; sales representative; publicity and promotion specialist; advertising coordinator; production specialist; assistant book publicist; contracts and permission specialist; agency or arts administrator; human resource manager; human services program developer; public relations; English teacher; teacher of English as a second language; curriculum developer; education administrator; grant writer; technical writer for business, industry, or science; magazine, newspaper, television, education, or government writer; biographer or writer of prose, fiction, or nonfiction; lyricist.

Major in English, Creative Writing Concentration

The Creative Writing concentration gives students the opportunity to strengthen their creative writing and reading skills and their imaginations. Students take beginning, intermediate, and advanced courses in one or more of the following genres: fiction, poetry, and nonfiction. Intermediate and advanced courses are primarily workshop classes in which students read and critique one another's work. At the center of all creative writing courses is the study of craft. Students in the creative writing concentration also take a wide variety of literature classes, which prepare them to be writers by schooling them in literary traditions and styles. An internship program for all English majors offers creative writing students writing and research positions that may lead to employment. In addition, the creative writing program runs a vibrant reading series that gives students the chance to meet visiting writers.

Major in English, English Education Concentration

The English Education concentration provides students with preparation for teaching in secondary schools. It is designed for students who wish to pursue a career in teaching language arts and offers a range of courses in language, literature, and writing. Students may receive an endorsement from the State of Colorado in English Language Arts. In addition to the common requirements for the English major, students pursuing teaching licensure take several extra courses in English, as well as education classes through the School of Education.

Students interested in pursuing a teaching license through CSU may refer to the Center for Educator Preparation (CEP) (<http://cep.chhs.colostate.edu>).

Graduate Graduate Program in Ethnic Studies

The Department of Ethnic Studies seeks to teach students to understand the unique and interlocking experiences of racially marginalized groups and to analyze how race intersects with other forces of social differentiation, such as gender, sexuality, and class, in national and international contexts. The program recognizes the importance not only of the history of racial exclusion and marginalization but also the creative ways in which various racial groups sustain their humanity through cultural preservation, transference, and renewal. Ethnic Studies is committed to nurturing students to become culturally aware, astute, civic-minded individuals who strive to strengthen the communities in which they reside. Because the study of ethnic groups intrinsically reveals how race structures life chances and opportunities, the scholarly orientation of the department reflects a commitment to meaningful changes in public policy and social life. The department offers graduate-level education to prepare students as leaders in the field of ethnic studies.

Students interested in earning a Master of Arts degree in Ethnic Studies should refer to the Graduate and Professional Bulletin and the Department of Ethnic Studies (<http://ethnicstudies.colostate.edu>).

Major in Ethnic Studies

Ethnic Studies critically examines the interlocking forces of race, gender, class, sexuality, and other forms of social differentiation that shape the histories and experiences of racially marginalized groups. The programs of study interrogate how these socially constructed ideas impact distribution of social goods, affect life chances, shape identities and worldviews, and reproduce social inequalities. Drawing from interdisciplinary and comparative theoretical frameworks, we bring to bear issues of power, privilege, and social justice pertinent to the experiences of diverse populations in the U.S. and abroad. We are especially committed to nurturing civic-minded and culturally informed students who strive to strengthen the communities in which they reside. In support of the land-grant mission of CSU, Ethnic Studies engages with communities on and off campus in order to effect meaningful change in public policy and social life.

Learning Outcomes

Upon completion of the programs of study, students will demonstrate:

- An understanding of the key concepts shaping the experiences of various racial and ethnic groups in the United States and abroad.
- Familiarity with social histories and experiences of racial and ethnic groups.
- Effective oral communication, writing, and research skills.
- An increase in critical thinking, intellectual, and personal growth.
- An understanding of the value of social consciousness and personal responsibility.

Potential Occupations

Both theoretical understandings of and practical experience in cross-cultural and inter-ethnic relations are invaluable in today's world. Ethnic Studies graduates work in the following fields and occupations. Education: K-12 and adult education (e.g. refugee/immigrant education, diversity training in the private sector); human social services including counseling, health care, and civil service; federal, state, tribal, and local government, and community service; natural resources development and technology transfer: practices, economics, and law in ethnic contexts; communications media such as newspaper, radio, video, and television; archival and museum studies; non-profit agencies; and advanced studies including graduate programs in the social sciences and professional programs (e.g. law, social work).

Major in Ethnic Studies, Women's Studies Concentration

Eddy Hall, Room 210

(970) 491-6182

womensstudies.colostate.edu (<http://womensstudies.colostate.edu>)

Coordinated by the Director of the Center for Women's Studies and Gender Research

Dr. Caridad Souza, Director

The Women's Studies Program prepares individuals for the needs and opportunities of an increasingly interconnected and interdependent world. Three distinct paths allow students to acquire Women's Studies academic preparation. The Ethnic Studies concentration in Women's Studies allows students to engage the complex indices of intersection including gender, sexuality, race, ethnicity, class, ability, religion, and nationality as analyzed within various disciplines. The minor in Women's Studies prepares individuals for the needs and opportunities of a changing world by building awareness of the range of human experience, potential, and accomplishment that place gender and women at the center of inquiry. The graduate-level interdisciplinary studies in Women's Studies is for students who for professional and/or personal reasons wish to supplement their graduate programs of study. At the graduate level, the program presumes a background in Women's Studies courses or substantial work, paid or volunteer, in a Women's Studies applied area of work or service. Each path uniquely fills CSU's central mission and contributes to intersectional, interpersonal, intercultural, and international understandings. Women's Studies transforms traditional disciplinary assumptions and theories, creates innovative models for teaching and research, and develops practices for challenging systems of power and privilege.

Learning Outcomes

Upon completion of the program of study, students will demonstrate:

- Knowledge of academic disciplines from feminist and intersectional perspectives
- An understanding of the historic and contemporary contributions of women of all cultures
- Effective oral communication, writing, and research skills
- An increase in critical thinking, intellectual, and personal growth
- A critical ideological understanding regarding women and gender implicit in social institutions

Potential Occupations

Contemporary career opportunities can be directly enhanced by students who have a women's studies background. Students acquire jobs in the non-profit sector, such as international relief agencies, domestic violence agencies, homeless shelters, after school programs, and children and family services. Other fields our students have entered include public relations, counseling, union organizing, public policy and research, victim advocacy, and human/civil rights. In several areas such as journalism, communication, business, law, education, and human services, it is now common to choose a career that has a direct focus on women and gender.

In areas that have not traditionally focused on women and gender, an awareness of the history and culture of feminism, women and the intersections of gender, race, class, and sexism can enhance a person's ability to cope with dilemmas and issues related to gender and sex

that arise in the workplace. In addition, students in women's studies have the unique opportunity to apply insights from course work to their own lives, helping them to make more informed choices about careers, education, relationships, and community participation.

A student with a broadly based education, including a foreign language, will be better prepared to deal with changing technological, economic, and social conditions on an international scale. A student who minors in a foreign language may expect to

develop sufficient competency to speak and write with reasonable accuracy and fluency while pursuing interest in language, literature, and culture. See the department for specific information on upper-division transfer work in the language of the minor.

All majors and minors in the department must earn a minimum grade of C (a grade of C- is not acceptable) in each upper-division course that carries the LARA, LCHI, LFRE, LGEN, LGER, LITA, LJPN, LLAT, LRUS, LSGN, or LSPA subject code.

Major in History

History is an account of our human past and seeks to interpret the course of human affairs through evidence and reason. Historians use written records, images, artifacts, and other materials to understand the past and also the relationship between the past and the present. Historians ask not only what happened and why, but also how the present came to be. History provides insights into how individuals and groups made decisions, exercised power, and responded to change. History helps us to understand how processes—such as revolution, migration, war, ecological disturbance, and globalization—shaped societies over time. It helps us to understand how people grappled with class, ethnicity, gender, and race, and how they conceptualized the world through religion and ideology. History provides a form of knowledge that people in all times and places have used to answer basic questions about the human predicament.

The History major is designed for students to enlarge their knowledge about the past, improve their ability to think logically and critically, and sharpen their powers of written and oral expression. It is an

outstanding choice for students planning further professional study in law, medicine, ministry, academia, business, and many other fields.

Learning Outcomes

Students will demonstrate:

- Ability to analyze and interpret historical materials, such as documents, artifacts, and images
- Ability to engage in chronological reasoning, to understand causation and change over time
- Ability to examine critically how people in the past understood their own history, in scholarly works and in popular forms such as myths or commemorations
- Ability to interpret, write, and speak about the past using evidence and according to the standards and expectations of the historical discipline

Potential Occupations

Government official in foreign service, national security, military, cultural resources management, and other areas.

History teacher in public and private schools; any professional occupation in business or public service requiring a liberal arts education and skills in research, writing, and the analysis of information. With additional graduate training: lawyer, physician, social worker, minister, librarian, museum curator, archivist, professor, educational administrator, or other professional.

Concentrations

- General History Concentration
- Language Concentration
- Social and Behavioral Sciences Concentration
- Social Studies Teaching Concentration

Major in History, General History Concentration

Major in Journalism and Media Communication

The study of journalism, mass communication, and specialized media combines high-level professional training with a broad foundation in the liberal arts. All students complete a common 21-credit core, including writing, multimedia, and conceptual courses, as well as a capstone course and an internship. Students work closely with a faculty advisor to select an additional 19 credits in a focus area crafted to match their career interests. Practical experience can be gained on the staffs of the daily *Rocky Mountain Collegian*, the award-winning campus television station CTV, *College Avenue* magazine, and KCSU-FM Radio. Graduating seniors present professional portfolios for assessment by panels of faculty and communication

professionals from Denver and elsewhere in Colorado. Because successful communicators require broad knowledge, this flexible program encourages development of a background in the humanities, social sciences, natural sciences, and in-depth study in an area of interest outside journalism. The addition of a minor or double major in disciplines such as political science, information technology, history, economics, business, communication studies, psychology, the arts, or natural or applied sciences is possible.

The Department of Journalism and Technical Communication is one of a relatively small number of departments formally recognized by the Accrediting Council on Education in Journalism and Mass Communications. Participation in volunteer activities, cooperative education opportunities, or communication-related part time jobs is highly recommended to enhance practical training and development.

Learning Outcomes

Students will demonstrate:

- Competence in writing, editing, and producing media messages as well as in planning, designing, and evaluating effective public information programs
- Knowledge and use of communication theory and research principles to guide the selection of communication audiences, message content and format, and media channels to enhance communication impact
- Understanding of the ethics, laws, and values associated with professional communication activity

Potential Occupations

The Journalism and Media Communication program emphasizes the role of mass and specialized media in society and prepares students for entry-level work in private business, government, and education. Depending upon the focus of study, students may find career opportunities in a wide variety of professional communication venues. Specific career opportunities may include: advertising copywriter, designer, or producer; agriculture writer, reporter, or editor; attorney specializing in communication law; blogger, columnist, or editorial cartoonist; college professor; communications manager or director; company spokesperson; corporate media specialist; e-mail and direct mail strategist; environmental media specialist; freelance writer, editor, or photographer; health writer, editor, or producer; marketing coordinator; media relations director or strategist; multimedia producer; non-profit communications director; novelist or non-fiction author; reporter or photojournalist for the web, magazines, newspapers, or television; owner of public relations agency or production company; professional speaker; public affairs officer for government agency; public relations agency account executive; publication designer for magazines or newspapers; radio disc jockey, reporter, or music director; reality television producer, writer, photographer, or on-camera talent; science writer or editor; social media specialist; sports writer, photographer, or producer; technical writer or editor; teacher for any level of K-12 education upon completion of appropriate licensing (see the Center for Educator Preparation (<http://cep.chhs.colostate.edu>)); television news anchor or program host; television or radio news program producer or director; television documentary producer; travel writer, photographer, or program host; video editor for news, corporate, or entertainment television; website designer and manager.

Technical and Science Communication Minor

The minor in Technical and Science Communication is designed to educate highly qualified communicators who have interests in specialized academic disciplines and career fields. Because science and technology often involve complicated research and processes, communicating the results of that work requires special skills. This program is designed to prepare students for a wide range of niche career opportunities in media, corporate communication, technology related industries, and scientific environments.

Students in this minor will learn to write and manage communication efforts, with a focus on turning complex ideas and processes into simple, clear messages applicable for publication and electronic delivery via broadcast, cable, or the Web. The accuracy and effectiveness of this communication is especially important as the Internet and the ubiquity of mobile devices make the delivery and consumption of information widely available. Having the skills to interpret and communicate complicated processes provides significant career advantages in one of the highest-paying areas of professional communication.

Requirements Effective Fall 2013

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Dr. Daniel Goble, Director, School of Music, Theatre, and Dance

Undergraduate

The School of Music, Theatre, and Dance at Colorado State University provides a rigorous undergraduate educational experience.

The Music program is focused on the belief that music is both an artistic and intellectual achievement. We offer intense training in specialized music disciplines combined with a balance of core music courses in music history and theory. Most of all, our renowned and versatile faculty are committed to helping students discover their own unique identities through music. We offer B.M. degrees in music therapy, music education, music composition, and music performance as well as a B.A. in music degree. Additionally undergraduates can earn a performance-based music minor.

The Theatre program emphasizes a reciprocal relationship between practice and scholarly study, combining practical training with theory and history, while stressing creative critical thinking. Students are encouraged to engage intellectual and physical approaches to explore diverse cultural forms, historical traditions, and contemporary theatre practice. During their first two years as Theatre majors, all students will take the same core of courses in all sub-disciplines. Following their sophomore review, students will be directed into one of four concentrations offered to Theatre majors at CSU: Directing, Performance, Playwriting and Dramatic Literature, and Theatrical Design and Production.

The Dance program offers a rigorous program in classical and contemporary dance education culminating in a B.A. in Dance. The degree requires a total of 120 credits with the following focus: technical training and foundations, performance, composition, pedagogy, professional preparation, theatrical production and design, and academics. In the Dance major, students explore the many possibilities for movement expression, along with creativity and scholarly examination, in a challenging and supportive environment.

Major in Dance

Office in University Center for the Arts, Room 120
(970) 491-5529dance.colostate.edu (<http://dance.colostate.edu>)

Professor Jane Slusarski-Harris, Director

CSU offers a rigorous program in classical and contemporary dance education culminating in a B.A. in Dance. The degree requires a total of 120 credits with the following focus: technical training and foundations, performance, composition, pedagogy, professional preparation, theatrical production and design, and academics. In the Dance major, students explore the many possibilities for movement expression, along with creativity and scholarly examination, in a challenging and supportive environment. Dance major and scholarship auditions for prospective students (high school seniors or transfers) are held during Fall and Spring Visit Days. The audition assesses training background, technical level, and the potential to successfully complete the degree program at an advanced and/or pre professional level. To be placed into the Dance major, students should have professional quality dance training in both ballet and modern technique, be at the intermediate technical level, and have the ability to withstand rigorous daily work throughout the year. Other forms of previous dance training are applicable and highly encouraged. For non-majors, enrollment in dance major technique classes depends on space availability, technical level, and suitability, and takes place during the classes of the first week of the semester. All technique classes are accompanied by accomplished musicians in piano, percussion, and a variety of other instruments. Performance, choreographic, and production opportunities take place each semester and students are encouraged to collaborate with other majors in music, theatre, and the visual arts. Visiting guest artists teach master classes and workshops and choreograph for the students on a regular basis. Supervised student teaching experiences are offered with different age groups and in a variety of situations.

Upon graduation, students will have a theoretical and practical foundation in dance. Graduates will achieve an intermediate/ advanced level of proficiency in modern and ballet technique and be able to apply this knowledge to the areas of professional performance, choreography, and teaching. They will have a foundation in technical production and design which supports dance and theatrical productions. They will have a working knowledge of anatomy, kinesiology, and various movement theories relating to dance techniques. They will have a solid knowledge and appreciation of the history and philosophy of dance from many cultures and time periods.

Potential Occupations

Dance careers are rigorous and demanding, requiring years of training and discipline. Dance professionals must be versatile with a broad base of experiences in dance or related fields. Dance majors often

select a second major such as music, theatre, business, occupational therapy, technical journalism, or exercise and sport science to enhance their job prospects. Experience acquired through extracurricular performances or internships is highly recommended to enhance practical training, development, and career opportunities. Students are encouraged to go on for advanced study at the graduate level in dance in order to secure teaching positions in higher education.

Some examples of the career opportunities in dance include, but are not limited to: professional dancer, professional choreographer, artistic director, university/college faculty, studio owner and faculty, conservatory or school faculty, dance critic, dance therapist, dance somatics specialist, arts manager, lighting designer, costume designer, sound designer, theatre technician, production crew, producer, fashion coordinator, special events coordinator, makeup artist, musical theatre director.

Major in Music (B.M.)

Our primary goal is to prepare students to become highly skilled music educators, music therapists, performers, composers, and conductors. Program goals encourage and develop high standards of teaching, scholarship, performance, and research in music. We are pleased to offer small academic classes, applied study with highly qualified faculty, and careful attention to advising. Courses in music appreciation, music theory fundamentals, and ensembles are open to all students regardless of major.

A successful audition is required prior to entrance into any B.M. Music degree program.

Learning Outcomes

Students will demonstrate:

- Ability to perform music from a variety of historical/ style periods, and exhibit the appropriate skills for musical self-expression in juried performances. These skills include: techniques, musicianship, tone, diction/articulation, style, interpretation, and artistry.
- Understanding of the common elements and organizational patterns of music, including musical forms, processes, and structures.
- Knowledge of music history and representative composers and works from each on a defined evaluation instrument.

Students are also expected to learn music literature from all periods through aural and score analysis. Performance skills are tested at the end of the sophomore year and in a graduation recital if required by the degree option. Some programs require satisfactory completion

of supervised student teaching, an internship, or a senior project. In addition, all students must pass a piano proficiency examination.

Potential Occupations

The undergraduate music curricula at CSU can lead to personally fulfilling careers as music educators, music therapists, performers, composers, and conductors. Music graduates from CSU have successfully gained employment in public and private schools, hospitals and institutions, and as professional performers, conductors, and composers.

Major in Music (B.A.)

This major allows students to study music within a larger context of a liberal education. In comparison to majors leading to the bachelor of music (B.M.), less emphasis is placed on studies specific to music. In lieu of fewer credits in music, the student completes a 21-credit option in an area outside of music. In addition, completion of a major paper, lecture/recital, or full recital is required during the senior year.

A successful audition is required prior to entrance into this B.A. Music degree program.

Major in Theatre

Division of Theatre and Dance
Office in University Center for the Arts, Room 120
(970) 491-5529
theatre.colostate.edu (<http://theatre.colostate.edu>)

Professor Price Johnston, Interim Director

As a branch of the arts and humanities, theatre claims a rich history and literature and an equally rich repertoire of embodied knowledge and theory and a varied and complex cultural practice for over 3,000 years. The Theatre Major at CSU emphasizes a reciprocal relationship between practice and scholarly study, combining practical training with theory and history, while stressing creative critical thinking. Students are encouraged to engage intellectual and physical approaches to explore diverse cultural forms, historical traditions, and contemporary theatre practice. They will apply foundational knowledge of cognate disciplines such as history, philosophy, anthropology, political science, film, art, music, and literature through the lens of serious and disciplined study of acting, theatre design and production, dramaturgy, dramatic criticism, storytelling, playwriting in theory and practice. During their first two years as Theatre majors, all students will take the same core of courses in all sub-disciplines. Following their sophomore review, students will be directed into one of four concentrations offered to Theatre majors at CSU: Directing, Performance, Playwriting and Dramatic Literature, and Theatrical Design and Production.

Concentrations

- Design and Technology Concentration
- Directing Concentration
- General Theatre Concentration
- Performance Concentration
- Playwriting and Dramatic Literature Concentration

Major in Theatre, Directing Concentration

Students whose goal is to earn a Bachelor of Arts degree in Theatre at CSU with a concentration in Directing will develop an inclusive vision that synthesizes visual, textual, and conceptualization from their mastery of all of the sub-disciplines in the professional theatre.

With collaborations in both coursework and in practical exercises, assistantships, workshops, and in production, student directors will develop a mature and personal conceptual aesthetic, a recognizable and individual perspective in the interpretation of texts based on considered research. Student directors will identify visual visceral metaphors with their collaborators, staking out their future through a deep contextual study of the past ensuring the creation of responsible, innovative and singular productions, while developing an artist's worldview and their artistic aesthetic.

Major in Theatre, Performance Concentration

Students whose goal is to earn a Bachelor of Arts degree in Theatre at CSU with a concentration in Performance will be students who have the ability, aptitude, and stamina to pursue a program of study intended to provide rigorous professional training for a career as a performing artist within the context of a liberal arts curriculum, either as a professional actor or as a creative collaborator with the strong interpersonal communication and group problem-solving skills essential to success in the public sector. This course of study will provide student actors with core physical and vocal technique and a variety of approaches to the acting process from which they may glean their own approach to building a character.

This program of study emphasizes both the theoretical and the practical aspects of theatre as an art form and as a commercial industry, and trains well-rounded, responsible theatre artists who value ensemble and collaboration within an artistic community.

Students who complete the Performance concentration will be well prepared to enter the competitive professional field for which they have trained as well-rounded, renaissance artists and technicians. They will learn practical industry skills as well as conceptual techniques and begin to develop an artist's aesthetic and worldview. Through real-time production experiences, they will learn to think on their feet and adapt to the rapid-paced, high-energy career in the performing arts. Along with their diplomas, students will graduate with the confidence, skills, portfolios, and industry connections they need to pursue professional careers or seek appointments with graduate level programs.

Major in Theatre, Playwriting and Dramatic Literature Concentration

Students whose goal is to earn a Bachelor of Arts degree in Theatre at CSU with a concentration in Playwriting and Dramatic Literature will be guided in creative and practical approaches to discovering their individual voices as playwrights or dramaturges. At the core of their training, students will explore a wide range of strategies for storytelling by analyzing exemplary models from the canon of dramatic literature. The work of the world's greatest playwrights representing a broad range of historical periods and cultural origins will be studied. Students will be introduced in tandem to the emerging styles, theories, and criticism of contemporary writers.

Student playwrights and dramaturges will not only learn a language with a vocabulary common to their fellow collaborators in making theatre—directors, performers, designers—but also how the unique use of theatrical language creates the world of the staged play, a world subject to the oral and physical interpretation of actors, enhanced by non-verbal audio and visual design elements, and witnessed by a live audience in real time.

Students in the Playwriting and Dramatic Literature concentration must have vivid imaginations, intelligent minds, and an excellent ability to articulate themselves both on paper and in person. Collaborative opportunities within a community of fellow theatre artists will allow student playwrights to hone their skills and develop their talents for writing good stories well told.

Major in Philosophy

Philosophy is the oldest form of systematic, scholarly inquiry. It is the study of the most basic moral, legal, aesthetic, religious, and metaphysical ideas by which we quest for understanding and develop principles of conduct. Philosophers seek to establish standards of evidence, provide rational methods of conflict resolution, establish criteria for just social orders, and create techniques for evaluating ideas and arguments.

The study of philosophy broadens and intensifies liberal education while enhancing interpretive abilities in many fields. The curriculum encourages a broad liberal arts background, including courses in foreign languages and a plan for graduate school and teaching careers in philosophy. The broad relevance of philosophy to other fields permits most students to work toward goals such as professional training in law, medicine, business, or theology. There are three concentrations available to Philosophy majors: General Philosophy; Philosophy and Religion; and Philosophy, Science and Technology. It is not unusual for philosophy majors to also major in other disciplines, and these concentrations combine easily with other majors in the University.

Learning Outcomes

Philosophy students will:

- Recognize and analyze arguments; reconstruct arguments from major texts in both the history of philosophy and in significant contemporary philosophical work; evaluate these arguments for the validity of argument structures and the truth of premises (soundness); and construct valid and sound arguments of their own in a fashion that is as clear and concise as possible.
- Demonstrate in their senior year knowledge of the works of major figures in the history of philosophy as well as significant current issues from the major sub-disciplines of philosophy, including particularly ethics, metaphysics, and epistemology.
- Demonstrate in their senior year skills in written and oral presentation, engaging in fruitful oral discussion, debate, and formal presentations that are logically coherent, clearly and concisely stated, and accessible to their peers in philosophy.

Potential Occupations

A major in Philosophy prepares students for a wide variety of professional aspirations, including graduate study in philosophy or other disciplines; training in law, computer technology, social work, health care, the ministry, business; and general intellectual flexibility

in a changing world. The high level of skill that Philosophy majors acquire in communication, writing, and analytical and critical thinking enables them to secure jobs in a variety of private and public sector professions and to become leaders in their field.

Depending on the major concentration that a student pursues, available career opportunities include, but are not limited to, public policy analyst, business manager, public administrator, computer programmer, intelligence officer, legislator, teacher, foreign diplomat, social worker, community developer, philanthropic organizer, physician, lawyer, researcher, writer, theologian, human resources manager, publisher, and ethics consultant, in a variety of fields, e.g., in medicine, business, law, public administration, non-profit administration, engineering, and the sciences.

Major in Political Science

Political science is the study of politics and political action in society. It encompasses international agreements and organizations as well as the patterns of political action which both create and shape them. It encompasses citizen action and the institutions which produce public policy at the local, state, and national levels within the United States. It encompasses systems of voting, political parties, courts, compared across national political systems. It encompasses the raising of normative questions about the nature and purposes of political life. The presence of politics is felt in all areas and sectors of society at all times. The dynamic and transformative effects of political action are seen virtually everywhere.

The department's curriculum is distributed across five subfields of the discipline: American politics, political theory, comparative politics, international relations, and public policy. Political Science major course work across the subfields of the discipline is complemented by the requirement that each Political Science major completes a designated support option, which includes: a minor in another

department, an interdisciplinary minor, the second language support option, the methods support option, or a second major.

Learning Outcomes

Students majoring in Political Science shall demonstrate the following:

- Ability to reason through political claims and assertions by political actors
- Skill in recognizing and responding to diverse ideological perspectives
- Ability to locate political issues and controversies within their relevant institutional and historical contexts
- Familiarity with the institutional processes of politics in numerous global and domestic political arenas
- Confidence in expressing opinions and presenting analyses of political problems and their solutions.

Potential Occupations

The Political Science major, like all studies in the liberal arts, provides students with a broad academic background that is serviceable across a broad spectrum of employment in the public and private sectors. Political Science majors are trained to be independent and critical thinkers; to be discerning and active observers and listeners; to communicate persuasively; to constructively engage and solve intellectual and practical problems; to adapt and function effectively in a number of distinct occupational and institutional settings; to function comfortably in a multiethnic, multiracial, and globalizing society. The employment profiles of departmental alumni attest to the breadth of possibilities for today's graduates: public and non-profit organization managers, prosecutors, public policy analysts and consultants, federal law enforcement agents, legislators and legislative analysts, foreign service officers, private attorneys, demographers, criminal investigators, advertising specialists, urban/regional planners, environmental policy analysts, state budget analysts, public relations representatives, market researchers, elementary and high school teachers, international businessmen and businesswomen, lobbyists, novelists, construction industry managers, insurance agents and managers, financiers, and real estate brokers. Some graduates join professions following advanced study in law, international relations, area studies, public administration, public policy analysis, and business management.

Concentrations

Students may complete the general Political Science major or select one of the following concentrations for a more specialized course of study.

- Environmental Politics and Policy Concentration
- Global Politics and Policy Concentration
- U.S. Government, Law, and Policy Concentration

Major in Political Science, Environmental Politics and Policy Concentration

The Department’s Environmental Politics and Policy concentration is designed to help students develop the knowledge and skills to analyze the connections between politics and the natural world and pursue careers in environmental politics and policy-making. Graduates may work as policy analysts, advocates, planners, educators or decision-makers in government agencies, non-profit organizations, businesses and consulting firms at the local, state, national and international levels. Students will learn about how political forces contribute to environmental degradation, the process for developing environmental policies, strategies to assess the strengths and weaknesses of different policy approaches, and how political forces can be harnessed to develop effective responses to problems such as climate change, water and air pollution, food security, and energy provision. Students will explore these issues from both domestic and global perspectives. Environmental Politics and Policy students are strongly encouraged to complete an internship to gain practical experience working in the field.

Major in Political Science, U.S. Government, Law and Policy Concentration

21-24

The Department's U.S. Government, Law, and Public Policy concentration is designed to prepare students to become future leaders in the public sector. The skills gained in this concentration help prepare students for a variety of careers (for example, government agencies, nonprofits, community organizations, lobbying firms, elected office, political communication, research and policy analysts) as well as prepare students for law and graduate schools. Resources for careers include the American Political Science Association (<http://www.apsanet.org/careersinpoliticalscience>) and the Network of Schools of Public Policy, Affairs, and Administration (<http://www.naspaa.org/students/careers/joblinks.asp>). The courses in this concentration educate students about the political processes and the legal environment of all levels of American government as well as the processes of policymaking and the administrative apparatus used to implement public policy. Students will also be exposed to a variety of substantive policy issues including urban policy, energy policy, and environmental policy in the United States. U.S. Government, Law, and Public Policy students are strongly encouraged to complete an internship in one of the many organizations in the broader community. Past students have completed internships with a variety of law firms (<http://polisci.colostate.edu/undergraduate/pre-law>), the Cities of Fort Collins, Windsor, Loveland, and Westminster, the Colorado General Assembly, and Woodward Governor among others. Students in this concentration are also encouraged to participate in the Legislative Internship Program (<http://polisci.colostate.edu/undergraduate/legislative-internship>) during their junior or senior years.

Major in Sociology

Sociology is the study of social life, focusing on the mutual interaction between human groups and institutions. Human beings, through patterned social interactions, construct and reconstruct the social webs within which they live. The nature and type of social relationships are central to their lives. Sociologists study relationships within family units from the most primitive cultures to interactions of large, bureaucratic institutions in major industrialized nations. Social issues are studied in a variety of ways: direct observation of groups; surveying or interviewing individuals; analyzing historical research; and a variety of other methods.

Sociology majors have many opportunities to pursue broad and diverse ranges of interest. Students gain a sense of social perspective, an understanding of human affairs, an ability to think critically, and a capacity to write well. The curriculum includes general courses in the arts and humanities and the social sciences along with sociology course work. A generous selection of electives allows students to major or minor in a complementary discipline. A Sociology major also may enroll in one of the interdisciplinary minors, such as, Latin American and Caribbean Studies, Religious Studies, or Women's Studies.

Learning Outcomes

Students will:

- Analyze critically the major classical and contemporary theories from the 19th and 20th centuries. Students are expected to demonstrate how well these theories help us understand or explain current social phenomena both in the U.S. and abroad. Students will learn to apply a wide variety of theories, including European critical theory, functionalism, symbolic interactionism, and post-modern theory, in required empirical research.
- Analyze critically sociological phenomena by applying objective social research methodologies. Students will demonstrate a working knowledge of sociological theories and the application of these theories to real world social phenomena. Specifically, students will understand conceptual frameworks associated with
 - a. social structure (social stratification, ethnic structures, social institutions, small group dynamics, social demography, and social organizations);
 - b. culture (socialization and the development of personalities, social norms, framing normative assumptions of societies and organizations); and

- c. social agency (the behavior of the individual, collective behavior such as with social movements, and the principles of social-psychology).
- Analyze critically sociological phenomena by applying social statistical techniques. Students will demonstrate a strong working knowledge of statistical techniques including
 - a. parametric statistics,
 - b. non-parametric statistics,
 - c. ordinary least squares statistical analysis, and
 - d. the application of the SPSS statistical package.

Potential Occupations

Careers are exceptionally varied. Participating in internships and cooperative education opportunities is highly recommended to enhance practical training and development. Sociology graduates apply their education to a large variety of occupations in the non-profit, private, and public sectors. Because Sociology graduates possess a number of transferable communication, analytical, and people skills, they find positions in government, industry, and academia. Many employers appreciate liberal arts majors for their multiple skills and their ability to adapt to a variety of tasks and work environments. Graduates who go on for advanced studies can pursue careers in sociology or attain advanced positions with the possibility of rising to top professional levels.

Depending on student interests, the electives taken, or the concentration selected, available career choices include, but are not limited to: business manager, personnel director, city manager, clinical social worker, college/university instructor, human relations director, demographer, government aide, labor relations specialist, market analyst, researcher, medical administrator, police officer, politician, probation/parole officer, program director/manager, public administrator, publishers, sociologist-specialist, consultant, criminologist, lawyer, librarian.

Major in Sociology, Criminology and Criminal Justice Concentration

The Criminology and Criminal Justice concentration supplements general sociological training with course work focused on the social aspects of crime and criminal justice. Sociology majors who opt for the Criminology and Criminal Justice concentration will supplement their general sociological training with course work focused on social aspects of crime and criminal justice. Such students will find the concentration helpful in enhancing their ability to think critically about issues of crime and justice, and in preparing for various careers within the criminal justice system.

Major in Sociology, Environmental Sociology Concentration

The Environmental Sociology concentration takes sociology's long established disciplinary orientation to the world and applies it to the study of nature-society relations. Sociology is about people, institutions, and behaviors. It is about social interactions and social structures. The task of the sociologist, therefore, is to stand back from commonsense views of the world and understanding the structure and processes of a society as a whole, including global societies. Environmental sociology is about translating these tasks into analysis and action around environmental issues. Some of the pressing contemporary environmental issues that environmental sociology can be applied to are, for example, transboundary pollution, climate change, biodiversity loss, and water and soil degradation. Students will find the concentration helpful in preparing them for a growing number of jobs that have a focus in environmentally related matters.

Major in Sociology, General Sociology Concentration

The General Sociology concentration is designed to provide students with a broad liberal arts education and a greater understanding and insight into the social systems and processes that bear upon everyday lives. Students will find the concentration helpful in enhancing their ability to grasp the complexities of the world so as to prepare them for a variety of jobs upon graduation. Opportunities for students with bachelor's degrees in Sociology are quite varied. Some go on to work for human service agencies; others work in the fields of criminal justices and urban planning; others enter graduate programs in sociology, education, law, medicine, or social work.

The College offers studies and professional training in the management, administration, and scientific investigation of renewable and nonrenewable natural resources. Programs include the study of every component of natural systems with particular emphasis on fish, forests, minerals, range, watershed, wildlife, and outdoor recreation areas.

The Natural Resource Ecology Laboratory, housed in the College, is devoted to research and training in ecosystem science and management.

The College also houses the Center for Environmental Management of Military Lands which is a team of environmental professionals experienced in the conservation and sustainable management of natural and cultural resources on Department of Defense lands.

College Programs

Undergraduate Majors

The scope of the College's programs is more broadly based than most natural resources schools. There are nine undergraduate curricula, most with specialized concentrations or designated areas of further study. Undergraduate majors in all five departments lead to the Bachelor of Science degree, which requires a minimum of 120 credits. A minimum of 42 credits in upper division courses is required for all majors.

Field Training Programs

Most undergraduate majors require the completion of a four-week summer field training program (five credits) *before* their junior year. Summer field instruction is given at the CSU Mountain Campus (<http://www.colostate.edu/features/pingree-park.aspx>) campus, 55 miles west of Fort Collins. Permanent quarters and meals are provided.

During interim or summer periods, some majors devote several weeks to advanced field training programs off campus. Students taking advanced ROTC should arrange their schedules with their advisors in their junior year to avoid conflicts during senior spring semester. It is recommended for all majors, and required for some, that students have a minimum of one summer of field experience before graduation.

International Education

International resources management is an increasingly important concern of the Warner College of Natural Resources. It is desirable

that students in the College have opportunities to study abroad, just as students from abroad are encouraged to study here. CSU has agreements covering study abroad opportunities with institutions throughout the world. Students may complete one or two semesters of resources management education abroad. Students interested in studying abroad should plan far in advance by discussing opportunities with their academic advisor and by visiting the Office of International Programs (<http://international.colostate.edu>) in Laurel Hall.

Graduate Programs

Master of Science and Doctor of Philosophy degree programs are offered in most departments. A program leading to the professional degree, Master of Natural Resources Stewardship, is offered in the Department of Forest and Rangeland Stewardship. The Department of Fish, Wildlife, and Conservation Biology also offers a professional degree, Master of Fish, Wildlife, and Conservation Biology. Descriptions of the various graduate programs may be found in the Graduate and Professional Bulletin or on the departmental websites.

For High School Graduates

High school students are advised to take all the English, science, and mathematics courses possible to prepare for college-level work in natural resources.

Limitation on Transfer of Credits

Students planning to attend another college or community college prior to enrolling at CSU should follow the freshman program for their chosen major as closely as possible. To assure that they have the opportunity to complete all degree requirements in four years, they should plan to transfer to CSU no later than the beginning of their junior year. Credits which transfer but are not equivalent to specific curriculum requirements may be used as elective credits.

Transfer Students

Students are required to choose a major when enrolling. Transfer students, therefore, should follow the departmental curriculum closely. Check the individual major and concentration for specific courses.

Major in Ecosystem Science and Sustainability

The Bachelor of Science in Ecosystem Science and Sustainability provides a strong scientific foundation in ecosystem ecology integrated with a broad knowledge of the cultural, social, economic, and political issues that are shaping the issue of sustainability. Students in the major learn to integrate science into real-world decision making, with the goal of developing sustainable strategies to maintain ecosystem services around the globe. We provide students with a broad base of experiential and collaborative learning opportunities, opportunities for research through our affiliation with the Natural Resource Ecology Laboratory, and the latest scientific knowledge about how organisms interact with their environments to form complex ecosystems. Students begin their program with core courses that build a strong foundation in the physical and natural sciences. Courses in ecosystem science put that core understanding into the context of our natural resources, with coursework in the classroom, laboratory, and field. Capstone courses task groups of students with proposing cutting-edge solutions for sustainability.

Learning Outcomes

Students in the major are learning:

- How to help people use natural resources in a sustainable way.
- About environmental change at local and global scales.
- How they can identify ways people can adapt to change and improve their lives.
- The amazing connections between different earth system components.
- How to conduct field work in a variety of settings addressing questions important to sustainability.

Potential Occupations

Completion of the undergraduate degree qualifies students for a wide variety of careers related to natural resource science. Examples of possible careers include: sustainability coordinator, ecologist, environmental educator, invasive species specialist, biological science technician, climate change scientist, natural resource specialist, or corporate environmental consultant. Students completing the undergraduate degree in Ecosystem Science and Sustainability will also be well placed to succeed in graduate education in a variety of disciplines.

Major in Watershed Science

Watershed Science is the interdisciplinary study of the natural processes and human activities that affect freshwater resources. Water is a critical component of Earth's ecosystems and is used for human consumption, agriculture, energy production, transportation, and recreation. Sustainable management of freshwater resources is an increasingly important and complex challenge in Colorado and worldwide. The major in Watershed Science focuses on the physical, chemical, social, and biological factors that affect the quantity, quality, and flux of water through engagement in the field, laboratory, and classroom. Students begin their program with core courses that build a strong foundation in the physical and natural sciences in preparation for upper-division coursework in land use and snow hydrology, land use and water quality, and watershed problem analysis. Courses emphasize field learning and technical skills, with core classes emphasizing watershed measurements, data analysis, modeling, and research.

Learning Outcomes

Students will:

- Demonstrate understanding of the key concepts in watershed science including surface and subsurface hydrology and water quality.
- Demonstrate understanding of land use effects on fresh water resources.
- Develop skills in collection and analysis of meteorological, hydrological, and water quality data.
- Develop skills in watershed problem analysis, including the use of watershed models.
- Demonstrate strong critical thinking, writing, and oral communication skills.

Potential Occupations

Completion of the undergraduate degree qualifies students for a wide variety of careers in hydrology and water resources management. Examples of possible careers include: watershed scientist, hydrologist, water quality analyst, watershed manager, watershed analyst, watershed use specialist, and water conservation specialist. Employment opportunities for graduates are found in consulting firms, governmental agencies, international development and resource management agencies, non-profit organizations, and private industry.

Major in Fish, Wildlife, and Conservation Biology

Professor Will Clements

Fish, Wildlife, and Conservation Biology is intended for students interested in understanding wildlife and the habitats in which they live. We offer three concentrations: Conservation Biology, Fisheries and Aquatic Sciences, and Wildlife Biology. The curriculum has a strong foundation in the biological, physical, and social sciences with the focus on solving current and future issues related to conservation and sustainability of wild animals and their habitats. The faculty offers a wide range of expertise with a keen interest in innovative teaching and research methods. Our program prepares students for professional careers involving fish, wildlife, and conservation that include federal and state agencies, nongovernmental organizations, the private sector, academic institutions, and graduate school. Numerous opportunities exist for students to get experience through research and internships, including professional and career mentoring and involvement with professional societies to further their studies, practical experience, and career potential. A summer field course at CSU's Mountain Campus is required and provides students with hands-on learning about natural resource ecology and measurements. Required natural science courses include general biology, vertebrate

biology, botany, calculus, and statistics, while required courses in the major focus on wildlife ecology and conservation, principles of wildlife management, design of wildlife projects, conservation biology, fishery science, and wildlife data collection and analysis. Required courses in the concentrations as well as elective courses explore specific areas of fish, wildlife, and conservation biology. Along with a strong science foundation, problem solving, communication skills and outreach, are important to resolve difficult issues faced by today's natural resource professionals.

Learning Outcomes

Students will:

- Demonstrate a mastery of ecological concepts and fundamental principles and techniques to manage and conserve fish and wildlife populations, and how they apply to current natural resource management issues
- Demonstrate mathematical, statistical, and study design knowledge and skills required for careers in fishery, wildlife, and conservation biology
- Become effective in oral and written communication about issues related to the environment and natural resources, including as members of multi-disciplinary teams
- Learn approaches to solving complex natural resource management issues, including planning, organizing, creating, and presenting group projects

Potential Occupations

Federal and state agencies that manage natural resources offer most employment opportunities in fish, wildlife, and conservation biology. Key federal agencies include the U.S. Forest Service, Fish and Wildlife Service, Bureau of Land Management, Geological Survey, National Park Service, Environmental Protection Agency, Bureau of Reclamation, National Marine Fisheries Service, and state departments of wildlife and natural resources. Non-governmental organizations, e.g., The Nature Conservancy, private companies, and environmental consultants also offer excellent opportunities. Participation in internships, independent study/research, volunteer activities, or cooperative education opportunities is highly recommended to enhance practical training and development. Undergraduates who go on for graduate-level studies can attain more advanced positions with the possibility of rising to top professional levels, e.g., researchers and teachers in academic institutions and scientists at natural resource agencies. Our degree is also excellent preparation for veterinary school.

Examples of career opportunities include, but are not limited to: fishery/wildlife/conservation biologist, ecologist, wildlife refuge or natural resource manager, environmental consultant, research scientist, and educator. Within these areas, a variety of specializations are possible including fish, wildlife, and conservation education and interpretation; endangered species; habitat enhancement and restoration; administration; research; law enforcement, fish and wildlife population assessment, statistical analyst, and human-wildlife conflicts.

Concentrations

- Conservation Biology Concentration
- Fisheries and Aquatic Sciences Concentration

- Wildlife Biology Concentration

Major in Fish, Wildlife, and Conservation Biology, Conservation Biology Concentration

The Conservation Biology concentration focuses on understanding the ecological processes necessary to conserve biological diversity with an emphasis on fish and wildlife species and their habitats.

Requirements Effective Fall 2015

A minimum grade of C (2.000) is required in all biological, mathematical/ statistical, physical science, fish, wildlife, and conservation biology and natural resource courses used to meet graduation requirements for the fish, wildlife, and conservation biology major. The minimum applies to courses taken as substitutions for meeting these requirements.

The fire and emergency services have a long and proud history of serving their communities with a wide variety of fire protection, prevention, emergency medical, and public education services. The fire and emergency services administrators of the future need advanced administration, management, and leadership skills to address the ever-evolving nature of emergency services. The major prepares students for managerial and officer positions in emergency and fire service organizations.

The major is a degree completion program for students to gain advanced knowledge of emergency service related subjects. The coursework builds upon technical skills and experiences earned in fire science technology associate degree programs and on-the-job training. Students will explore key administrative and management areas such as emergency operations, public service budgeting, human resources, prevention, and incident command. The major is both administrative and First Responder oriented.

All fire and emergency services administration courses are upper-division and offered online via distance education only through the Division of Continuing Education/CSU Online (<http://www.online.colostate.edu>).

Learning Outcomes

Students will demonstrate their ability to:

- Effectively integrate academic knowledge into fire and emergency services administrative and managerial roles within current and future employment situations.
- Collaborate with peers to solve fire and emergency services organizational problems. Effective collaboration includes the ability to organize and synthesize ideas, develop a persuasive argument, interact with individuals and groups, and use applicable presentation aids.
- Apply their knowledge, skills, and competencies in the fire and emergency services field to fire and emergency services organizations. Examples include knowledge of proposal and report writing, trends in emergency management and incident command systems, and comprehension of public service administration practices.
- Interact with professional First Responders nationally and internationally.

Potential Occupations

Students in the Fire and Emergency Services Administration major should have work experience in the fire and emergency services field. Typical students are employed as career or volunteer firefighters, wildland firefighters, paramedics, emergency medical technicians,

inspectors, or trainers. Graduates can expect positions as fire chiefs, company officers, public administrators, fire marshals, or educators.

Major in Forestry

Forest landscapes are always changing, sometimes very slowly as a result of long-term processes, followed by rapid changes as a result of fires or harvesting. Sustaining forests in the modern world requires managers who understand these changes, and how forests connect to global, ecological, and social systems. The Department of Forest and Rangeland Stewardship provides forestry education that spans the entire range of experiences necessary to understand and manage forests. Curricula include a background in the biological, physical, social, and management sciences, followed by professional forestry courses. The degree is accredited by the Society of American Foresters. The curricula meet the Office of Personnel Management requirements for the forestry series (0460) and the forestry technician series (0462). The program includes a summer course at the CSU Mountain Campus for field studies in forest ecology, plant and animal identification, wildland fire measurements, forest mapping, and forest measurements. Forestry education is supported by departmental strengths in the full spectrum of land stewardship, including research, and application of knowledge to address real-world issues in forests and communities.

Four concentrations are available in the Forestry major—Forest Biology, Forest Fire Science, Forest Management, and Forestry Business.

Learning Outcomes

Students will:

- Effectively communicate knowledge of forestry and natural resources, both verbally and in writing
- Demonstrate proficiency in subject areas outside their major study focus, including principles/issues in wildlife, water, recreation, wilderness, soil, range, and fishery resources
- Demonstrate comprehensive knowledge of subject areas relevant to the major fields of study in forest sciences, including forest ecology and forest management, and apply this knowledge in a complex, problem-solving environment

Potential Occupations

Careers in forestry and natural resources are exceptionally varied, challenging, and personally satisfying. Opportunities are available in rural and urban settings worldwide. Participation in internships, volunteer activities, or cooperative education opportunities is highly recommended to enhance practical training and development. Positions are available in industry, education, consulting, public

service, and government agencies. Graduates who go on for advanced studies can attain more responsible positions with the possibility of rising to top professional levels.

The demographics of an aging workforce in federal natural resource management agencies will be creating significant opportunities for graduates of this program over the next three to five years.

Some examples of career opportunities include, but are not limited to: forest manager, forest/park ranger, environmental policy and conservation consultant, fire fighter/manager, natural resource journalist, naturalist, land use planner, geospatial information systems specialist, forest products business person, researcher/professor.

Major in Forestry, Forest Fire Science Concentration

Forest Fire Science is the study of fire as an ecological process and its application as a forest management tool. Students learn how to control wildfires and how prescribed fires can enhance habitat, prepare seedbeds, control forest insects and disease, and reduce fuel hazards. The curriculum combines courses in fire science, forest biology, natural resource management, and the physical sciences to build skills for a career or graduate study in fire science.

Major in Forestry, Forest Management Concentration

Forest Management is a Forestry concentration designed to instill an understanding of the basic principles of forest ecology and forest management.

Although many students go on to graduate studies, the program is primarily intended for students interested in managing forestlands. State and federal land management agencies, private forestland owners, consultants, and conservation organizations employ graduates. The curriculum includes a balanced mix of courses in forest biology, integrated forest resource management, and the physical sciences. Students learn about forest productivity, economics, policy, conservation, and the latest in computer-based management tools.

¹ Students will need to obtain a prerequisite override to take this course.

² Students wishing to continue in an MBA program should consider substituting MGT 320.

Major in Natural Resources Management

The goal of the Natural Resources Management major is to provide students with a broad-based understanding of the interconnectedness of social, political, and ecological systems. This knowledge will enable

students to design sustainable solutions to address natural resource conservation and management problems. Students will learn about natural resource stewardship in both theory and practice, with an eye toward designing systems that are adaptable and resilient in light of the social and ecological complexity and change that characterize today's challenges. Using an integrative approach, students will learn how to develop local solutions that are sustainable and ethical at larger, global scales. Environmental issues such as land-use change and planning, conservation biology, energy use, climate change, renewable resource management, and citizen engagement in place-based conservation will be addressed. Field measurements and field skills are important components of this major, and students are required to attend a four-week summer field course in ecological investigations and resource management.

Specific objectives are to provide each student with:

1. a science-based core curriculum in biological, physical, and social sciences;
2. a broad foundation in natural resources science and environmental management; and
3. specialization in a subject relevant to natural resources management.

The breadth of the major allows students to specialize in a wide range of topics, including conservation biology, geographic information systems, forest management, rangeland ecology, restoration ecology, natural resource policy, recreation resources, watershed management, wildlife management, or other topics related to natural resources management. This specialization is accomplished by coupling the major with a required minor, typically declared by a student's junior year.

Students are encouraged to participate in internships and obtain related work experience. Participating in seasonal and voluntary work, internships, and cooperative education opportunities will enhance your chances for permanent full-time employment. The department offers numerous opportunities to become engaged in these kinds of endeavors. At the completion of the program, students should have the technical and communication skills that are critical to resolving important natural resource management problems.

Learning Outcomes

Students will:

- Demonstrate knowledge of a wide range of natural resource topics spanning ecological, social and physical aspects of wildland ecosystems
- Demonstrate proficiency in an area of specialization through completion of a minor in an area complementary to natural resource management. Some minors that students find well-suited to develop a proficiency are Global Environmental Sustainability, Forestry, Rangeland Ecology, Ecological Restoration, Watershed Science, Conservation Biology, or Environmental Affairs, though there are many additional options
- Be able to apply their broad natural resources knowledge to create sustainable solutions at local, national, and global scales
- Accurately communicate their knowledge of natural resources, both verbally and in written form

Potential Occupations

Opportunities are available with a wide array of local, national, and international organizations and institutions involved in natural resource management. Graduates apply their education in science, technology, social science, and policy to solving today's critical natural resource and environmental problems. Positions are found with federal, state, and local government agencies, industry, and education and advocacy organizations. Some natural resource professionals are employed in environmental consulting firms and corporate environmental departments. The nonprofit sector provides a variety of environmentally-related jobs, ranging from science application to policy development, education, and collaborative conservation.

Examples of available career choices include, but are not limited to: natural resource manager; professional forester; land use planner; geographic information system (GIS) or remote sensing specialist; fishery/wildlife manager; environmental policy analyst; environmental advocate; environmental consultant; resources/environmental lawyer (with continued education); youth agency administrator; natural resource communications specialist; law enforcement officer; natural resources/environmental educator; restoration specialist; multiple resource use planner; regulatory compliance enforcement officer.

At least 200 hours of acceptable professional work experience in the student's field prior to graduation is highly recommended. This can include summer/seasonal/school semester employment in natural resource management through paid summer jobs, an approved internship, volunteer positions, or work study experience. Acceptable work experience includes (but is not limited to) working for federal, state, non-governmental, private, and university organizations that research or manage natural resources, or are responsible for public policy or public relations related to natural resources.

¹ Students must complete the requirements for a minor in any discipline, or the interdisciplinary minor in either Conservation Biology or Environmental Affairs.

Major in Rangeland Ecology

The major in Rangeland Ecology emphasizes interdisciplinary study, research, and management of the world's rangelands. Rangelands occupy nearly 50 percent of the earth's land surface and consist of natural grasslands, savannas, shrublands, riparian areas, deserts, tundra, and coastal marshes. Colorado is an ideal setting for the study of rangeland ecology and management with shortgrass steppe to the east and high elevation grasslands, woodlands, and riparian areas to the west.

Students are prepared to understand and manage the animal, soil, and vegetation resources on rangelands for state and federal land management agencies as well as a variety of private companies and non-governmental agencies. The curricula are accredited by the Society for Range Management and meet U.S. Civil Service requirements for range conservationist and soil conservationist. With a few additional courses, graduates can meet U.S. Civil Service requirements for soil scientist and ecologist. Students develop an in-depth understanding of basic plant and animal biology; a basic understanding of the physical sciences as they relate to rangeland ecology; knowledge of important concepts of ecology and range management; an understanding of economics related to recognizing alternatives; and analytical and decision making skills. Students also develop communication, political and interpersonal skills to make their education effective.

Three concentrations are offered: Conservation and Management, Range and Forest Management, and Restoration Ecology.

Learning Outcomes

Students will:

- Accurately and effectively communicate their understanding of rangeland ecology both verbally and in written form
- Demonstrate learning of subject areas outside their major study focus, including (but not restricted to) principles/issues in wildlife, water, recreation, wilderness, soil, range, and fishery resources;

students will also demonstrate knowledge of social science analytic techniques

- Demonstrate comprehensive knowledge of subject areas relevant to the major fields of study in range ecology and management, including plant/animal interactions, grazing methods, range improvements, animal nutrition, plant ecology, and soil science, and apply this knowledge in a complex, problem-solving environment

Potential Occupations

Examples of career opportunities include, but are not limited to: restoration ecologist, rangeland scientist, range management specialist, soil conservationist, soil scientist, rangeland conservationist, plant ecologist, riparian ecologist, ranch management, researcher, commercial sales and service representative, consultants, mine rehabilitation specialist, real estate/land manager, international rangeland specialist.

Participation in internships, volunteer activities, or cooperative education opportunities is highly recommended to enhance practical training and development. Graduates who go on for advanced studies can attain more responsible positions with the possibility of rising to top professional levels.

Concentrations

- Conservation and Management Concentration
- Range and Forest Management Concentration
- Restoration Ecology Concentration

Major in Rangeland Ecology, Conservation and Management Concentration

Rangeland Conservation and Management focuses on the stewardship of rangelands for multiple uses. These uses include both consumptive and non-consumptive activities such as recreation, preservation of wildlife habitat, providing for aesthetic beauty, livestock grazing, and ranching.

Minor in Ecological Restoration

The Ecological Restoration minor allows students in related majors to gain knowledge of the science and art of restoring ecosystems. This background is especially valuable to students who will be working in the various natural resource management fields. Since the prevalence of damaged, degraded or destroyed ecosystems is likely to increase in the future, restoration will be imperative for transforming these lands to once again provide ecosystem services.

Requirements Effective Spring 2013

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Major in Geology

The Geology major is broad-based, allowing students to obtain a sound academic and practical basis for professional careers in private sector resource industries, federal and state natural resource management and regulatory agencies, or in education; or for graduate training in specialized areas of geology or related fields in the geosciences.

The Geology curriculum provides a technical background within the broader framework of a liberal education. Emphasis is placed on integrating field studies in the Rocky Mountains and elsewhere with on-campus work in both the classroom and the laboratory. In addition to a solid core in geology, students complete course work in math, the

physical sciences, communications, and the liberal arts. Four Geology major concentrations are offered: Environmental Geology, Geology, Geophysics, and Hydrogeology.

Learning Outcomes

Students will demonstrate:

- A solid foundation in the physical sciences and broad understanding of geological processes
- Application of scientific reasoning skills to data analysis and problem solving in the geosciences, both individually and in teams
- An awareness of sociopolitical and economic factors and ethical practices and standards that apply to careers in geosciences

Potential Occupations

A variety of opportunities exist for Geology graduates in the private and public sectors, and in education. Energy companies, industry service companies, mining companies, power companies, computer software companies, and diverse entrepreneurs all hire geologists for exploration, development, mining, production, and research. Federal government agencies use geologists for geologic mapping, oil-gas-coal-groundwater-geothermal resource evaluation, geochemical and resource-related water studies, leasing and conservation studies, resource restoration and rehabilitation programs, hazards mitigation, and research. State and local governments typically hire geologists for geologic and soils mapping, natural resource and hazards evaluation, public information, consulting, and writing. Environmental, engineering, and groundwater firms use geologists for mapping, restoration and rehabilitation planning, monitoring and evaluation of geologic hazards, and site evaluation for feasibility and implementation of construction projects, water management and reuse evaluation, groundwater pollution assessment, groundwater remediation, and contaminant prevention. Schools, colleges, universities, national laboratories, and private research firms employ geologists in a variety of teaching, research, and administrative positions.

Participation in internships, volunteer activities, or cooperative education and public outreach is highly recommended to enhance practical training and development. Graduates who go on for advanced studies can acquire a strong disciplinary base to continue in one of a number of geological disciplines or can opt for related fields of study, including seismology, hydrology, meteorology, oceanography, and the space sciences. Those with advanced degrees can attain more responsible positions with the possibility of rising to top professional levels. Some examples of career possibilities include, but are not limited to: educator, professor, environmental consultant, exploration geologist, petroleum geologist, environmental geologist, geologist, geophysicist, hydrologist, mining geologist, oceanographer, production geologist, researcher, resource evaluator, geobiologist, or seismologist. With additional training, geologists may also pursue careers in business, law, medicine, and other diverse professional fields. By obtaining a teaching certificate, graduates can teach earth sciences and related subjects in primary and secondary schools.

Concentrations

- Environmental Geology Concentration
- Geology Concentration
- Geophysics Concentration

- Hydrogeology Concentration

Major in Geology, Environmental Geology Concentration

Environmental Geology prepares students to address the environmental implications of geologic processes and human effects on the earth. Graduates commonly find careers in environmental, engineering, and groundwater firms, and in government agencies.

Major in Natural Resource Recreation and Tourism, Global Tourism Concentration

The Global Tourism concentration is focused on a unique blend of subjects. Business and tourism topics provide students with planning, management, marketing, financial, and entrepreneurship skills essential in the tourism industry. Because sustainable tourism requires a healthy natural environment, the environment is another area of study. Finally, students are provided cross-cultural experience by learning a second language, studying at a university abroad, and participating in an international internship.

Major in Natural Resource Recreation and Tourism, Parks and Protected Area Management Concentration

Parks and Protected Area Management graduates develop expertise in inventorying, planning, and managing public lands and waters, and providing quality outdoor recreational experiences to their visitors. The concentration is oriented to employment with government agencies and non-governmental organizations from the federal to local levels, including local open space and natural area programs. The department works closely with federal and Colorado resource

management agencies and nonprofit land management organizations. The department works internationally with several Latin American countries as establishment of parks and outdoor recreation programs has become a worldwide trend. The curriculum emphasizes natural resource management and recreation with supporting courses in the social sciences, natural sciences, and communications.

College Programs

Our goal is to provide an extraordinary education to students in the natural sciences in order to prepare them for careers in modern research, industry, and academia. The College of Natural Sciences (<http://www.natsci.colostate.edu>) offers students the chance to meet with an academic advisor to plan the coursework necessary to graduate from CSU. If you are working toward a major or minor in a specific department, you should contact that department for advising. The College of Natural Sciences, in conjunction with the CSU Career Center, has a satellite office located on the Oval in the Statistics building. Our services are offered to all Natural Science students and alumni in all aspects of their career development.

Undergraduate Majors

The college's eight departments offer twelve undergraduate majors, all leading to a Bachelor of Science degree which requires a minimum of 120 credits including 42 or more credits in upper-division courses. The undergraduate major in Neuroscience is offered jointly with the College of Veterinary Medicine and Biomedical Sciences.

In addition to degree programs, the College of Natural Sciences provides foundational courses in the biological, mathematical, behavioral, and physical sciences for CSU's seven other colleges. In this role the College serves CSU's broad liberal arts and general education objectives.

The college provides a range of service (Ambassadors, Student Leaders in Science), living-learning community (Ingersoll Hall) and research opportunities (Undergraduate Research Institute).

Preparation for the Science- and Mathematics-Based Professions

Students earning degrees in College of Natural Sciences majors will be well prepared to succeed in careers in, biochemistry, biology, chemistry, computer science, mathematics, physics, and statistics, including middle/high school science and math instruction.

Since many students seeking entry into health professions are interested in the sciences, majors in the College of Natural Sciences including Biological Sciences, Biochemistry, Zoology, and Psychology are popular pre-health professions majors.

Students planning to enter a human or animal health profession must formally declare an academic major (there is no specific premedical, pre-veterinary, etc. major at CSU). Health profession programs do not require a specific major, just specific prerequisite course work.

A major should be chosen based on educational and alternative career objectives in mind. The pre-health professions advisors are located at the Center for Advising and Student Achievement (<http://www.casa.colostate.edu>) (CASA), in The Institute for Learning and Teaching (TILT) building, Room 121.

Education Abroad

Education abroad programs are available to students in the College of Natural Sciences. Because the knowledge of at least one other culture is valuable in understanding our own, students are strongly encouraged to take a semester or longer to study outside the United States as part of their overall program at CSU. Students interested in education abroad should plan, well in advance, by discussing opportunities with their academic advisor and by visiting the Office of International Programs (<http://educationabroad.colostate.edu>).

The College of Natural Sciences has a special agreement for exchange students with the University of Tasmania. The college is also developing exchange agreements with institutions in other countries, in particular, Ireland, China, and Russia.

Graduate Programs

Faculty and graduate students in the College of Natural Sciences are engaged in cutting-edge research in multiple disciplines and the college is proud of the graduate student education it provides. The Master of Science and Doctor of Philosophy degrees are offered by all departments and a Master of Natural Sciences Education is offered through the college. The college also offers a Master of Professional Natural Sciences with a specialization in Zoo, Aquarium and Animal Shelters. For detailed information about graduate degree programs consult the appropriate department and see the Graduate and Professional Bulletin.

Major in Natural Sciences

The Bachelor of Science in Natural Sciences meets the needs of two audiences:

- Students who want to become high school or junior high/middle school science teachers.
- Students who want a broad exposure to mathematics and the physical sciences, rather than specialization in one discipline.

Learning Outcomes

Students will demonstrate:

- Skills to critically interpret scientific data.
- Logical and critical thinking.
- Analysis and solving of complex problems.
- Strong written and oral communication skills.

Potential Occupations

Graduates with *licensure in secondary science education* will find a strong demand for high school and junior high/middle school teachers in Colorado and elsewhere in the nation. In addition, these graduates will also have the background required for graduate science education programs.

With proper planning, *physical science* graduates can meet requirements for professional schools (e.g., medicine or law) or

graduate programs in the basic or applied sciences. Internships and volunteer activities can provide practical training and experience.

Secondary Education

The Bachelor of Science in Natural Sciences degree provides the subject matter, the education classes, and the classroom experience required for secondary science education licensure in Colorado.

Concentrations in the Natural Sciences major include: Biology Education, Chemistry Education, Geology Education, and Physics Education.

The program includes science courses in a concentration such as Biology, Geology, Physics, Chemistry; the All-University Core Curriculum and professional classes in the Center for Educator Preparation (CEP) (<http://cep.chhs.colostate.edu>) program in the College of Health and Human Sciences. In addition, the CEP program helps schedule classroom visits and practica. The experience culminates in a semester of student teaching under the supervision of a master teacher.

Major in Natural Sciences, Physical Science Concentration

The Physical Science concentration begins with two semesters each of calculus, chemistry, and physics, plus a semester of biological science. Students then complete the major by earning two minors selected from Biochemistry, Chemistry, Computer Science, Geology, Mathematics, Statistics, or Physics. Completion of the double minor gives an unusual breadth in the physical sciences. Recent graduates have pursued careers in the sciences. Others use this background as

a basis for graduate work and research or for entry into medical or veterinary professional programs.

Major in Biochemistry

As the name suggests, Biochemistry links biology and chemistry. Biochemistry is most simply defined as the chemistry of living systems. It is the science that tries to explain how "lifeless" molecules work together to make "living" organisms. The methods of chemistry and molecular biology are used to study the structure and behavior of the complex molecules found in biological materials and the ways these molecules interact to form cells, tissues, and whole organisms. Biochemistry provides the basis for advances in human and veterinary medicine, agriculture, and biotechnology. Biochemists may participate in interdisciplinary research and development projects alongside chemical engineers, biologists, microbiologists, agronomists, physicians, and other professionals. They investigate the molecular mechanisms of such diseases as AIDS, diabetes, cancer, heart disease and stroke, and develop solutions to environmental problems through biotechnology.

The Biochemistry major provides a student with a strong, well-balanced background in the biological, physical, and mathematical sciences. As a Biochemistry major, studies include macromolecular structure and function; cellular biochemistry; metabolism; gene expression, DNA and protein structure, DNA replication and repair; cell organization, communication, growth, aging, and death. Students are also required to take courses in physics, organic chemistry, physical

chemistry for life sciences, and statistical measurements and methods used in research. Independent study and internships during the junior and senior years provide opportunities for experiential learning and working closely with the faculty, sometimes leading to authorship of original publications.

Learning Outcomes

Students will obtain:

- A command of the basic concepts of chemistry, biology, biochemistry, molecular biology, and cellular biology
- The ability to critically analyze, and present the methods, results, and conclusions of scientific papers in the current biochemical literature, and orally present technical material in a clear and comprehensible form
- Experience in use of a variety of laboratory techniques; critically interpret experimental results; and design new experiments
- Demonstrate the ability to perform original research in biochemistry and molecular biology

Potential Occupations

Possible career opportunities include, but are not limited to: process research technician, production/quality assurance lab technician, biomedical/pharmaceutical researcher or salesperson, molecular biologist, biophysicist, cytologist, toxicologist, crime scene investigator, industrial hygienist, dairy technologist, environmental analyst, hygienist, chemist, wastewater treatment chemist, food and drug inspector, museum technician, teacher, writer, fisheries biologist, research analyst, and medical or clinical lab technologist. Many biochemistry majors go on to graduate school or health care related professional schools.

Concentrations

Major in Biological Science

Biology is the study of all living things—from bacteria and viruses that can be seen only under a microscope, to plants, animals, and humans and their relationship to their environments. Biology majors study the structure and function of cells, organ systems and tissues in animals and plants, ecology (the relationship between living things and their environment), and evolution. They learn about physiology, behavior, genetics and heredity, aquatic toxicology, microscopic organisms such as bacteria, and laboratory techniques for diverse areas ranging from field research to biotechnology. This major provides a solid foundation of understanding in the basic biological sciences. It also offers an opportunity to choose an area of emphasis within life sciences that is related to particular career goals (for example: the ecology of organisms in the field, cell and molecular biology for biomedical professions or biotechnology, aquatic biology for marine biologists, plant molecular biology for agricultural biotechnology and bioenergy, etc.).

Learning Outcomes

Students will:

- Interpret scientific data.
- Demonstrate strong organizational and laboratory skills.
- Define scientific hypotheses and design experiments to test them.
- Work effectively in groups.
- Demonstrate strong writing and oral communication skills.

Potential Occupations

Training in biology prepares students for a very large number of occupations. Some involve daily interaction with dozens of people, others can be done in relative isolation; some are highly focused, others require knowledge far beyond science. Career options related to biology include water quality assessments, field and lab technician work, biotechnology in biomedical sciences and agriculture, genetic research, agriculture, or sales (i.e., pharmaceutical, agricultural). Graduates work in small businesses, multinational corporations, academia, and government research laboratories and policy agencies. A degree in biological science offers a broad foundation for dental, medical, or veterinary school, and a number of health professions such as podiatry or optometry. Graduates often pursue advanced degrees in life sciences to carry out basic research or advance into leadership positions in industry. Participation in internships and/or laboratory research experience is highly recommended and strongly encouraged by the department to enhance practical training and development.

Combining biology with non-science skills can also lead to exciting careers. Biology and English can be incorporated into a career as a technical writer or science fiction novelist. Biology and art are combined in medical and scientific illustration. Biology and computer science can be linked in the exciting area of bioinformatics, or as an historian of science or medicine. Work in both biology and philosophy/

religion can be incorporated in careers in bioethics. Biology is linked with psychology for the neuroscientist or genetic counselor. Study biology and political science to work in environmental law or be a patent lawyer in biotechnology. Try mixing biology and business to get into hospital administration, small business or biotechnology administration. Specialized master's degrees are designed for many of these unique career paths.

Some career opportunities include, but are not limited to: aquarium, zoo, and museum worker; assistant research scientist; research technician in industry or university laboratories; biology photographer; biotechnologist; brewery laboratory assistant; consumer product researcher; marine bacteriologist, biologist, or ecologist; nuclear medicine technician; park naturalist; pharmaceutical researcher or salesperson; public health officer; science librarian; environmental educator, health specialist, or impact specialist; ecologist; fisheries biologist or conservationist; industrial hygienist; occupational therapist (with a master's degree); and medical or clinical laboratory technologist.

Major in Biological Science, Botany Concentration

Botany is the general study of plants and plant-like organisms from microscopic algae to giant redwoods, from mushrooming fungi to flowering angiosperms. Plant anatomy, how plants grow and develop, and how they survive and interrelate within their environments are topics of study. For students who like the outdoors, a career in plant ecology, taxonomy, or forestry might be appealing. Students attracted to the beauty and design of the microscopic world might enjoy a career in plant anatomy or plant developmental biology. Those interested in chemistry might enjoy plant biochemistry, molecular biology, or plant biotechnology. Those intrigued by plant diseases might become plant pathologists and the mathematically oriented might explore systems ecology, genetics, or plant biotechnology.

The Botany curriculum begins with a solid foundation in mathematics, the biological sciences, chemistry, organic chemistry, physics, evolution, and genetics. Botany emphasizing terrestrial plant studies including plant systematics, anatomy, and ecology, biochemistry, and earth sciences round out the core. Botany students also take liberal arts and communications courses to give breadth to their education.

Major in Zoology

Zoologists study animals—their origin, behavior, diseases, and life processes. Some experiment with live animals in controlled or natural surroundings while others study the structure and function of animal cells, tissues, and organ systems. Some zoologists go on to study veterinary medicine. Zoologists participate in research that has practical outcomes in farming, medicine, pharmacy, wildlife conservation, and pest control. Zoology encompasses many specialties. At CSU, students may focus on general training in animal biology or choose a concentration in the following areas: animal behavior, development, aquatic biology, ecology (how animals adapt to their environments), genetics and evolution, invertebrate organisms, cellular/molecular biology and physiology, systematics, and morphology of vertebrate organisms.

The curriculum is designed to provide a basic understanding of zoology through a variety of laboratory experiences in combination with the study of basic theories and defining concepts. The program encourages flexibility, strength, and depth. The course work includes a two-semester introductory biology sequence, one course each in invertebrates and vertebrates, and courses in evolution and ecology. Required courses in the physical sciences include a minimum of one year of introductory chemistry and at least one course in organic chemistry, two courses in physics (all with labs) and one in biochemistry. A course each in calculus and statistics is also required. In addition, students select a minimum of 15 credits of Zoology courses in their chosen areas of concentration.

Learning Outcomes

Students will:

- Interpret scientific data.
- Demonstrate strong organizational and laboratory skills.
- Define scientific hypotheses and design experiments to test them.
- Work effectively in groups.
- Demonstrate strong writing and oral communication skills.

Potential Occupations

This major prepares students to work in various areas of zoology, such as research or private industry, or to begin graduate school or professional studies. Career opportunities include medical biotechnology, research technician, protective agencies such as shelters and refuges, trainers and handlers, animal-related business, aquatic/marine biologists, exotic animal specialists, and wildlife conservation. It is an appropriate major for students planning to attend medical or veterinary school. Graduates often pursue advanced degrees to carry out basic research or advance

into leadership positions in industry. Participation in internships, laboratory, or research opportunities is highly recommended and encouraged by the department to enhance practical training and development.

Additional careers for Zoology majors include, but are not limited to: aquarium and museum curator/director; zoo keeper, animal trainer and instructor, science librarian, environmental technician, fish and wildlife technician, veterinary technician/assistant, marine bacteriologist or biologist or ecologist, humane society positions, cytotechnologist, ecologist, fisheries biologist or conservationist, laboratory technician, marketing researcher, medical technologist, park ranger, pharmaceutical sales representative, production supervisor, quality analysis technician in food or pharmaceutical industry, radiation protection technician, research technician, industrial hygienist, wildlife photographer.

Major in Chemistry

Chemists study the atomic and molecular structure of physical matter and analyze how it changes. More specifically, they investigate how basic atomic and molecular components are combined and can be manipulated to produce useful or improved products. They also develop methods to measure atomic and molecular properties and their interactions enabling insight into a range of processes from mining to clinical diagnostics. Chemistry majors develop a solid foundation in general chemistry and mathematics followed by course work in organic chemistry, analytical chemistry, physical chemistry, inorganic chemistry, biochemistry, and physics. The curriculum is rounded out by courses in the liberal and communications arts.

Chemistry majors are encouraged to participate in undergraduate research. Ample opportunities exist for undergraduate students to become involved in ground-breaking research in the laboratories of individual faculty members. Students have access to state-of-the-art equipment in faculty laboratories and in the Central Instrument Facility including NMR, FTIR, UV/Vis, fluorescence, and mass spectrometers, vacuum lines, x-ray diffractometers and many more. Undergraduate research is strongly encouraged for any student considering a career in chemistry and many students complete supervised research for academic credit.

Learning Outcomes

Chemistry students will:

- Organize, critically evaluate, and present chemical information coherently through oral and written discourse
- Upon obtaining a Bachelor of Science degree in chemistry, demonstrate contemporary skills and knowledge necessary for entry-level positions in chemical industry and allied fields, or for admission to a graduate or professional school
- Demonstrate original research skills, namely the ability to plan investigations allowing them to resolve research questions, conduct such theoretical and/or laboratory experimentation, solve problems arising in such situations and interpret and communicate results

Potential Occupations

Chemists are employed in a vast array of professional fields in private industry, government, and education. Chemists work in research and development, analysis and testing, consulting, industrial quality control and assurance, environmental resource management, and forensics. Principal employers are petrochemical firms, biotechnology firms, consumer chemical firms, environmental testing laboratories, pharmaceutical companies, agricultural companies, governmental regulatory agencies, governmental and educational research laboratories, and manufacturing firms. Many chemists are also engaged in startup companies. Chemistry is also an excellent major for those preparing for careers in veterinary medicine and the health professions. Students whose career goals involve teaching

at the secondary school level have the opportunity to complete the teacher licensure program through the School of Education (<http://soe.chhs.colostate.edu>).

Many possible occupations for chemists include, but are not limited to: agricultural chemist, air and water quality analyst, biochemical technician, chemical sales and marketing representative, clinical chemist, consultant, educator, forensic analyst, laboratory technician/bench chemist, materials analyst, patent examiner, pharmaceutical chemist, polymer technician, technical writer, and toxicologist.

Concentrations

- ACS Certified Concentration
- Non-ACS Certified Concentration

Major in Chemistry, ACS Certified Concentration

Students who wish to work as professional chemists should select the ACS Certified Concentration to obtain professional certification by the American Chemical Society. The ACS-approved curriculum comprising this concentration offers an extensive and rigorous chemistry education that gives students intellectual, experimental, and communication skills to become effective chemistry professionals.

Major in Computer Science

Computer Science is the study of algorithms and software systems: their theory, analysis, design, efficiency, implementation, maintenance, and application. Computer scientists seek to advance the fundamental understanding of how information is processed, as well as the practical design of software to perform specific functions. Computer science courses include, but are not limited to, the study of algorithm design, networks, security, programming languages, software engineering, graphics, databases, and artificial intelligence.

Computer Science majors are required to complete basic courses in calculus, core courses in programming and mathematical foundations, computer organization, data structures, software engineering, algorithmic theory, computer security, and systems software. An understanding of statistics is also required. Majors select senior-level courses from offerings such as graphics, artificial intelligence, networks, compilers, bioinformatics, architecture, parallel programming, cloud computing, and database systems. A minor in Computer Science is also available.

Department of Computer Science laboratories are open to students 24/7. All major systems are networked and accessible by direct network connection from student residences.

Learning Outcomes

Students will:

- Demonstrate proficiency in the areas of software design and development, computing systems, and algorithmic analysis. Students will, upon completing this program, have a thorough grounding in the key principles and practices of computing, and in the mathematical and scientific principles of computation
- Be able to work effectively in groups to develop computational solutions to complex problems
- Be able to communicate ideas effectively, both generally and specifically, with regard to technology and computing
- Upon completing this program, either attend graduate school in computer science or find professional computer-related employment

Potential Occupations

Most Computer Science students are able to find related employment at graduation. The proven performance of CSU graduates has resulted in annual recruiting visits by a wide variety of commercial firms, government agencies, and research laboratories. Graduates have found employment as software developers and with research and development teams in government and industry. Internships are readily available that enhance skills and marketability.

Some career opportunities include, but are not limited to: systems programmer, software designer, computer researcher, software engineer, software tester, systems administrator, security systems designer, database programmer, consultant, technical product support personnel, and educator.

Major in Applied Computing Technology

The Applied Computing Technology Major is a program oriented towards the use of computers and computer applications in specific domains depending on the student's concentration, rather than towards developing large-scale commercial computer applications and software. Students will receive a strong background in computer programming and information technology in a specific application area. At this time there are three concentrations: human-centered computing, computing technology, and computing education.

Learning Outcomes

Students completing this program will be able to:

- Write complex and sophisticated computer programs.
- Develop computer applications to be used in a variety of areas.
- Develop websites, including web-based software and databases for use by experts in a broad range of fields.
- Grasp and demonstrate the subject matter of a specific field in which computers are to be used.
- Work effectively in groups to develop solutions to complex, field-specific problems.
- Communicate through writing about their technical activities.

Concentrations

- Human-Centered Computing Concentration
- Computing Education Concentration
- Computing Technology Concentration

Major in Applied Computing Technology, Human-Centered Computing Concentration

This concentration is designed to meet the demand for experts in human-centered computing and interface design, and provide an academic program for students interested in the interdisciplinary study of cognitive psychology and artificial intelligence applied to human-computer interaction.

The program combines computer science courses leading to expertise in artificial intelligence and graphics with cognitive psychology courses and specialized courses in human-computer interaction. This program aims to produce an understanding of human psychological abilities and relate them to computer use and the ergonomics of computational services.

Potential Occupations

This program prepares students for work in computer interface design and within organizations evaluating human factors in computer software design. Graduates of this program may go on to become user interface (UI) designers and architects, human factors engineers/interaction designers, user trial engineers/researchers, computer user interface programmers, and computer ergonomics consultants.

Major in Applied Computing Technology, Computing Technology Concentration

This concentration emphasizes the use of programming skills and computer applications and technology (e.g., web development, computer and network system administration) in a variety of computer application areas needed in business and other organizations. This is essentially an Information Technology (IT) program, stressing the maintenance and use of computers and computer applications rather than developing large-scale software from scratch.

The Computing Technology Concentration includes all computer science classes taken by computer science majors in the first and second year, and combines those with specialized computing technology courses, business courses, and a selection of advanced courses from the Departments of Computer Science (<http://www.cs.colostate.edu/cstop>) and Computer Information Systems (<http://biz.colostate.edu/cis/Pages/default.aspx>).

www.cs.colostate.edu/cstop) and Computer Information Systems (<http://biz.colostate.edu/cis/Pages/default.aspx>).

Potential Occupations

The Computing Technology Concentration prepares students for careers in information technology in which knowledge of computer programming, applications, and computing systems are used in businesses or other organizational settings. Computing technology students can be employed as computer programmers, web developers, network and system administrators, computing consultants, and business analysts.

Major in Mathematics

Mathematics is the science of numbers, shapes, probabilities, and measurements. It is a universal language in which information is stated in the simplest possible form. Mathematics has a dual nature—it is an independent discipline valued for its precision and elegance,

and it is an essential source of ideas and techniques for many, if not most, other scientific endeavors.

The undergraduate program is structured to provide both a broad liberal arts education in mathematics, as well as a concentration in one of seven focused areas. The liberal arts component requires students to acquire a broad background in communication skills, humanities, social sciences, and natural sciences. The major core focuses on developing students' understanding and appreciation of the mathematical sciences, problem solving skills, and their ability to combine knowledge and skills in productive ways. Core mathematics subjects include calculus, matrices and linear equations, advanced calculus of a single variable, abstract algebra, linear algebra, computer programming, and statistics.

Six concentrations are available in the program: Actuarial Science, Applied Mathematics, Computational Mathematics, General Mathematics, Mathematics Education, and Mathematics of Information.

Learning Outcomes

Graduates will:

- Obtain a solid background in theoretical mathematics and will be able to participate in mathematical work in a variety of fields or continue on to graduate school.
- Be able to apply a range of mathematical and statistical tools to a diverse set of problems as presented to them in either employment or the pursuit of further education.
- Be capable of describing their mathematical assumptions and results to colleagues.

Potential Occupations

The Mathematics major prepares students for a wide variety of occupations in business, industry, government, and education. Although a national shortage of mathematics teachers no longer exists, our mathematics education graduates have been successful in finding positions. Actuarial science graduates who have passed the first two professional actuary exams can expect to find positions in large metropolitan areas with good entry-level salaries. Applied mathematics graduates continue to find employment opportunities in government and private industry. Many pursue advanced degrees in mathematics, computational science, or engineering. About one-third of general mathematics graduates continue on to graduate school in mathematics or other disciplines, with the rest finding employment in a large variety of capacities. Participation in internships, volunteer activities, or cooperative education opportunities is highly recommended to enhance practical training and development. Graduates who continue to pursue advanced degrees can attain more responsible positions with the possibility of rising to top professional levels.

Career opportunities include, but are not limited to: applied mathematician, actuary, engineer, statistician, financial analyst/advisor, computer programmer, computer systems analyst, mortgage officer, market analyst, risk analyst, tax auditor, accountant, math educator.

Major in Mathematics, Applied Mathematics Concentration

The Applied Mathematics Concentration prepares students for careers as applied mathematicians working in business, government, and industry. It is recommended that students supplement the core mathematical program with courses in their chosen application area, for example, engineering, public health, finance, electronics, or geology. Course requirements emphasize mathematical foundations as well as the application of mathematics in other disciplines. In particular, students receive training in numerical analysis, mathematical modeling, statistics, and computing, as well as a solid preparation for further study.
