Dome Head - Most popular for industrial applications. The low profile head diameter is twice the rivet body diameter, providing adequate bearing surface for nearly all applications.

Large Flange - Provides greater bearing surface for fastening soft and brittle facing materials such as plywood and plastics including, vinyl, etc.

Countersunk - for applications where a flush appearance is required.

BLIND NUTS

FLUSH MOUNT BLIND NUT FASTENERS

HOW IT WORKS

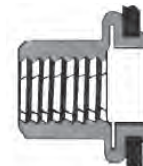

The blind nut, held securely by the tool, is placed into a prepared hole. Upon the tool's actuation, the threaded portion is pulled until the fastener's wall collapse radially outward, clinching it tight against the sheet. The tool is withdrawn, leaving the blind nut ready to receive a bolt or screw. This complete operation takes only a few seconds and can be performed by anyone.

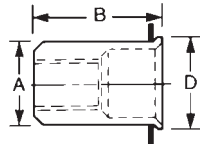

1.
INSERT BLIND NUT
INTO PREPARED
HOLE.

2.
ENGAGE THE TOOL.

3.
BLIND NUT
INSTALLED WITH STANDARD
HEAD CONFIGURATION.

FLANGED BLIND NUTS

FLANGED BLIND NUT

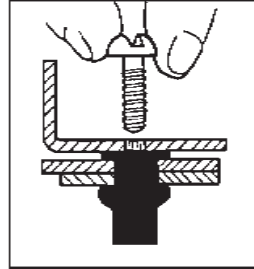

Flanged blind nuts work the same as flush mount blind nuts, However because of their large diameter heads they offer Extra strength on softer materials.

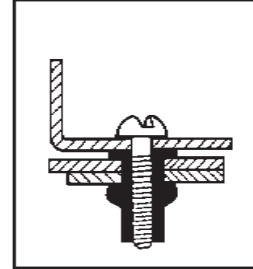

1. Drill hole to correct diameter, thread fastener onto tool mandrel and insert into hole.

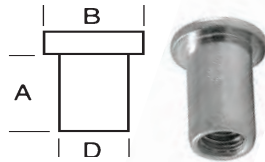

2. Actuate tool to properly set fastener into material.

3. Complete your fastening operation with a bolt or screw with the proper thread.

4. The positive riveting action of blind nuts provide consistent firm fastening. Push-out & shake-loose are virtually eliminated.

KRIMPA-SEAL TERMINALS

Krimpa-Seal - "Sealed for Quality"

Our enhanced Krimpa-Seal product line is the finest line of "crimp-and-seal" connectors on the market today. New design features, the use of only the finest components, and an expanded product selection, place Krimpa-Seal squarely at the top of the class. Our line provides a quick, effective sealed connection in applications where crimping is preferred. In just a few easy steps, Krimpa-Seal will prevent corrosion and contamination in your critical wiring applications.

These connectors require the installer to insert the stripped wire(s) into the connector barrel. Using a crimping tool, crimp the barrel to the wire. Apply heat to the connector to shrink and activate sealer.

Tubing will shrink and release a sealer to completely seal the entire connection, protecting the connection from moisture, vibration, strain and unnecessary flexing.

KEY FEATURES & BENEFITS

Seamless butt connectors & brazed seam rings and spades

Prevents opening of connector barrel!

Color-coded tubing with wire gauge imprint

Provides easy identification of the correct part for the job!

Conforms to automotive manufacturers' specifications for wiring repairs

Necessary for maintaining electrical warranties!

ELECTRALINK TERMINALS

Electralink - "Sealed for Superiority"

Electralink is the clear choice of professionals that demand a superior electrical connection. Soldered connections facilitate maximum current flow with minimal resistance, provide exceptional tensile strength, and prevent reverse plating. However, with the advent of crimp connections and their ease of use, the popularity of soldering declined. Electralink has once again made soldering a viable option by providing a high quality, sealed solder connection that takes the guesswork out of installation.

These connectors require the installer to insert the stripped wire(s) into the solder barrel; Apply heat to the shrink tubing; Concentrate the heat source on the solder barrel after shrinking the tubing; When the solder flows through the wire strands, remove the heat and let the terminal cool.

Tubing will shrink to completely seal the entire connection, protecting the connection from moisture, vibration, strain and unnecessary flexing.

KEY FEATURES & BENEFITS

Translucent, adhesive-lined polyolefin tubing

Allows visual inspection, prevents corrosion & provides a waterproof seal!

Easy installation with pre-measured solder

Takes the guesswork out of the soldering process!

A soldered electrical connection

Provides superior current flow and tensile strength!

PERMA-SEAL NYLON HEAT SEALABLE BUTT CONNECTORS (With Adhesive Liner For Moisture Resistance)

Perma-Seal Connectors provide ideal protection from moisture intrusion for exposed wiring on Automobiles, Fleet Vehicles, R.V.'s, Trailers and Motorcycles. As connector is heated and begins to shrink, the adhesive liner melts and flows to encapsulate the connection.

Simple Installation

Select the correct splice size for the wire gauge. Strip the wires 0.3" (7.6mm) from the end and insert into the crimp barrel.

Making sure the wire end is properly seated, make the crimp connection using a tool designed for insulated splices.

Apply heat directly to the splice, working from the center out to the edges, using a hot air gun or other heat source, until

the tubing shrinks and the adhesive flows. Allow to cool before inspecting splice and checking the integrity.

SOLDER SPLICE CONNECTORS

Our Solder Splice Connectors consist of a fluxed solder ring with a heat shrinkable insulation sleeve, when heated, provide a completely soldered, strain relieved, and encapsulated connection.

- * Clear insulation sleeve for easy inspection.
- * UL recognized.
- * One-piece design makes installation easy!
- * Temperature rating: -55° C to 125° C
- * Minimum shrink temperature: 149° C (300° F)
- * Meets or exceeds the requirements of UL486A.

Installation:

1. Wire sizes from 26AWG to 18AWG strip 3/8" of insulation. All other size wires strip 1/2" of insulation.
2. Position the wire strands into the Solder Splice connector so that they overlap and are centered in the solder ring, See above. (The easiest method is to lay the splice connection down on a flat, heat resistant surface, then follow step 3.)
3. Apply heat, using an appropriate heat gun, directly to the solder ring until it melts, forming a solder joint. Then move the heat back & forth so that the insulation sleeve is completely shrunk.

NOTE: If the connection cannot be laid down on a flat surface, an alternate method would be to overlap the stripped wire & center in the solder ring. With your thumb & forefinger, pinch the solder ring so it deforms over the wires, this holding them in place. Then apply the heat.

SPOOLED FUSIBLE LINK WIRE

A fusible link is a special section of low tension wire installed by an OEM and designed to open a circuit when subjected to extreme current overload. Its purpose is to minimize wiring system damage when such an overload accidentally occurs in those circuits protected by the fusible link. Our fusible link wire meets the requirements of SAE J-156 and the insulation has the characteristics as listed for SAE J-1128 type SXL. The vehicle manufacturer should be consulted about questions on fusible link length and size. Typically fusible link wire should be 4 gauges smaller than the circuit wire.

AIR HOSE / COUPLERS

HVLV EURO Coupler & Plugs

To achieve optimum atomization, an HVLV Spray Gun requires sufficient air transfer through the gun to produce the necessary air pressure at the air cap and attain the proper CFM (cubic feet per minute). This is accomplished by using the new quick converting HVLV EURO Coupler that provides a larger inside diameter enabling more CFM to pass through the connection. The design of this system also enables complete insertion of the plug into the coupler before air is activated thus eliminating air pressure resistance during the plug connection.

- 3591** 1/4" Quick Converting Coupler - Female, NPT 1 Per Pkg.
- 3592** 1/4" Plug - Female, NPT 1 Per Pkg.
- 3593** 1/4" Plug - Male, NPT 1 Per Pkg.

Flap Discs (Zirconia)

Design allows flap to conform to curved surfaces resulting in excellent blending and contouring results. The flaps extend beyond the edge of the disc allowing smooth operation close to awkward spaces. Spacing of flaps allows operation with less heat build-up for long life and consistent finish.

The **Trim-Kut® Abrasive Disc** is a versatile tool used for grinding, sanding, cleaning and general surface preparation in Autobody Repair. It can be used for rust/paint removal, leveling welded seams and MIG-weld residue removal.

Trim-Kut® Abrasive Discs are a unique one-piece design, with the grinding surface bonded to a hard copolymer backing. It is a highly durable grinding unit that will not fly-off during use and eliminates the need for additional backing pads. The disc can be trimmed when the outside edge has been sufficiently "loaded" to the point where it is not grinding effectively, by simply placing the back of the disc against a sharp edge or object and with activation of the electric/air tool, the "loaded" portion on the outside edge can be removed from the rest of the disc creating a new edge ready for use. **Trim-Kut® Abrasive Discs** can be trimmed in such a manner right up to the mandrel.

Each box of 25 **Trim-Kut® Abrasive Discs** comes with 1 mandrel.

Maximum operating speed for a 3" disc is 21,000 RPM

IES™ Boron Buster Carbide Spot Weld Bit w/ TiCN or AlTiN Coating

Finally a drill bit designed to cut spotwelds from Boron Steel! The Boron Buster Carbide Spotweld Bit has an TiCN coating (Titanium CarboNitride) that creates a protective oxide layer that keeps its hardness at higher temperatures and also improves lubricity. Tools coated in TiCN typically last 3-10 times longer than uncoated tools. Comes with a "Tri-flute" head. #12210 has three flat sides and #12205 has one .75 flat side on the shank that can be used in most conventional electric and pneumatic drills.

"Tri-Flute"

- Designed to cut spot welds from Boron Steel
- High Temperature Applications
- Recommended 900RPM-1,000RPM
- Best When Used With #12020 Boron Buster Cutting Tool Lubricant/ Coolant

Carbide bits are brittle and may break due to the angle, pressure and speed being exerted by the operator. We will not warranty broken bits.
