PAB1091: 2014-LATER - BOOM! BOX GTS - FITMENT UPDATE

Purpose for Parts and Accessories Bulletin

To inform dealers of the upcoming software change expanding the Boom!™ Box GTS radio fitment from 2019-later Touring to 2014-later Touring.

Markets Affected

All markets are affected.

Changes Coming

GTS radios with the revised part numbers will be capable of being installed on 2014-later vehicles. Instructions covering the required parts and installation process will be included. Refer to Table 1.

Table 1. Old and New Part No.

Fairing Mounting	Old Part No.	New Part No.	USB Cable Part No.
Fork	76000829	76000829A	69200031A
Frame	76000834	76000834A	76000374A

Figure 1. Boom! Box GTS

Parts will be available in time for Black Friday shopping.

Genuine Harley-Davidson vs. Aftermarket

The Boom! Box GTS radio is a feature-rich vehicle infotainment hub. In addition to delivering music, the GTS communicates with the vehicle and informs the rider with navigation details, provides engine and fuel information, displays TPMS (Tire Pressure Monitoring System), and provides ride summary specifics such as average speed, distance traveled, fuel used/stops.

Another benefit is the level of integration. No other competitive unit is more integrated with the vehicle and tested with the same rigor as the original equipment Boom! Box GTS radio.

When the Boom! Box GTS replaces the existing radio it is not simply a screen update but rather a complete Infotainment computer refresh.

Questions

Contact Technical Service with any concerns regarding application. Direct all other questions to the Dealer Services Representative.
