Environmental chamber control simplified with dual zone control.

Environmental chambers have traditionally used separate controls to handle the temperature and relative humidity control tasks. The Love Controls 32DZ dual zone control with Love 5000 Series RTD and Dwyer® RH Humidity transmitter controls both parameters in a single small format (1/32 DIN) control to handle both zones, simplifying wiring and reducing panel costs.

The 32DZ can switch small resistive loads directly or, when used with Dwyer® Series 62 solid state relays (not shown), can switch larger loads.

Dwyer® controllers used within heater controllers.

In bioscience laboratories, the preferred methods of temperature control for experiments are heated water baths. There are experiments where water cannot be used, so the next feasible option is to send temperature controlled air to the experiment site. In order to use temperature controlled air, an air heater is needed. Within this product, a Love Controls temperature controller is used for accurate and responsive temperature control. The Love Controls controller can adapt to a different environment through different operating modes such as SELF-TUNE or manual PID adjustments, or preset PID responses.

Love Controls controllers involved in insulation removal.

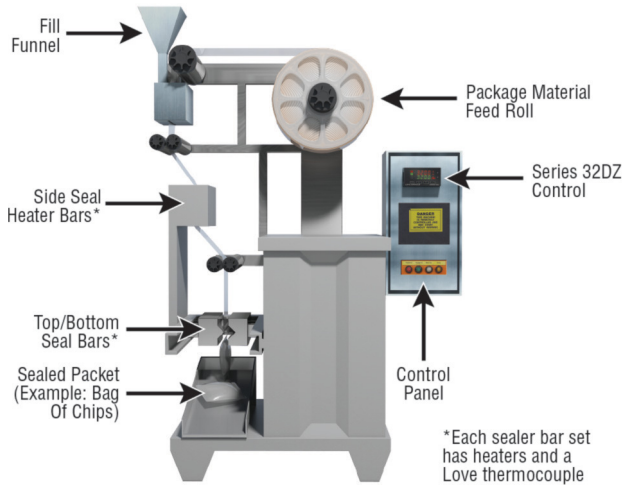

For most wires, removing the insulation is easy, but for magnetic and enamel wires, removing the insulation is very difficult. One way to easily remove the insulation of the magnetic or enamel wire is to dip them in a solution of molten fused salts. The salts are heated to a temperature high enough to melt the salts into a liquid, but not deteriorate them. This process uses a Love Controls feedback temperature controller. The Love Controls controller allows the operator to input a desired temperature and maintain that temperature accurately. The Love Controls controller will also retain the input temperature after the power is disconnected.

Series TS Digital Temperature Switches regulate temperature in refrigerated and display cases.

When storing food or other perishables in chillers or display cases, temperature must be carefully regulated to ensure the products remain fresh. If the storage area rises above the critical preservation temperature, products can have their shelf life dramatically shortened or be spoiled altogether. A Dwyer® Series TSX3 Digital Temperature Switch will prevent these scenarios by monitoring temperature and activating refrigeration and defrost cycles to ensure the storage temperature stays within safe limits.

Form, fill and seal machine control simplified with dual zone control.

Form, fill and seal machines traditionally have used separate controls to handle the temperature control requirement for the side and top/bottom seal bars. The Love Controls® 32DZ with Love® 5000 Series thermocouples allows for a single small format (1/32 DIN) control to handle both zones, simplifying wiring and reducing panel costs.

The 32DZ can switch small resistive loads directly or, when used with the Love® 62 Series solid state relays (not shown), can switch larger loads.

Love Controls controllers used in the packaging of condiments.

Packaging of condiments require the sealing bars to be heated to a temperature hot enough to seal the packages, but not destroy the packaging material. The heat on the sealing bars needs to be controlled to ensure the heat does not become excessive. Love Controls controllers are used in this process to accurately control the heat on the sealing bars. The sensors from the Love Controls controllers are placed on the sealing bars to ensure accurate temperature readings. Should the heat become excessive, an alarm light on the controller notifies the operator of the impending conditions.

Resin transfer molding.

Accurate control of temperature and epoxy resin flow is important during resin transfer molding. For the epoxy resin to have an even and thorough flow, the resin must be at a temperature high enough to allow it to flow, yet not burn the resin. With the help of a Love Controls controller, the temperature of the resin is accurately controlled under different conditions through the different PID operating modes. Another Love Controls controller, with a flow transducer, is used in this process to control the flow of the epoxy resin. The Love Controls controller provides information on the temperature and flow rate to the computer through an RS-485 serial communication option.

Controlling water temperature in outdoor wood furnace.

The Series TSWB is the ideal control for monitoring water temperature and water level in outdoor wood furnaces. The Series TSWB controls the damper and/or the fan that provides oxygen to the flame in the fire box. Usually an external light will also be controlled by the Series TSWB to inform the user that the furnace is out of wood or that the water level is low. The TSWB accepts thermistor inputs for temperature and conductivity probe, Dwyer CLP-1, inputs for monitoring water level.

Adjustable Angle Connection

Series BT Bimetal Thermometers offer accurate, reliable service even in the toughest environments. These corrosion resistant units are constructed from stainless steel and are hermetically sealed to prevent crystal fogging. The bimetal element directly drives pointer, eliminating gears and linkage. An external reset screw allows field calibration and easy-to-read aluminum dial minimizes parallax error. Choose back connection, lower connection or adjustable angle for easy viewing and installation. Adjustable models can be rotated a full 360° and tilted over a 180° arc. NOTE: When using in pressurized applications, use a suitable thermowell. Bimetal thermometers are commonly used to measure water temperature on chillers and boilers.

Measure the temperature of boilers, air ducts, motors, bearings, furnaces or other surfaces with Series ST Surface Mount Thermometers. Dual magnet design allows easy mounting on any ferrous surface. Bi-metallic thermal sensing coil provides quick temperature measurement with ±2% full-scale accuracy.

APPLICATIONS

Manifolds, platens, boilers, air ducts, furnaces, engines, motors, bearings, enclosures, cabinets, drums, plumbing, piping, refrigerators, and other ferrous surfaces.

SPECIFICATIONS

Housing Material: Aluminum.

Accuracy: ±2% full-scale.

Sensing Element: Bimetal coil.

Dial Size: 2" (5.08 cm).

Response Time: Approximately one minute.

Mounting: Two Alnico magnets on back.

Height: 1/2" (1.27 cm).

Weight: 2 oz (56.7 g).

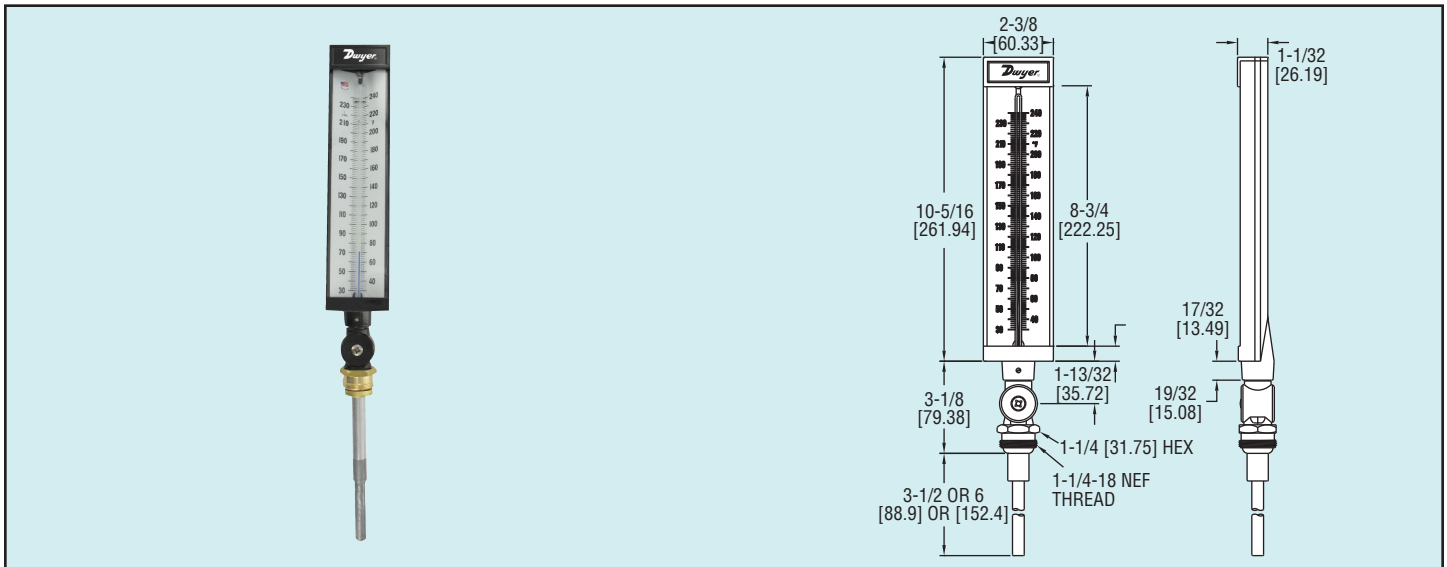

Series
IT

Industrial Thermometer

9" Scale, Adjustable Angle Stem

The Series IT Industrial Thermometer allows users to easily take accurate temperature measurements in any environment. The case of the IT series is made of die cast aluminum for extra durability in industrial environments. The glass lens is easily cleaned and resists scratches for better viewing of the scale. The stem can be adjusted 180° in order to achieve the best viewing angle. The blue organic fill is non-toxic and allows users to better see the temperature reading. The scales can be ordered with dual units, °F, or °C.

SPECIFICATIONS

Wetted Material: Tapered cast aluminum with graphite fill.
Housing Material: 9" (228 mm) aluminum.
Lens: Glass.

Accuracy: 1% accuracy.
Scales: Aluminum painted white with black markings.
Process Connection: 1-1/4-18 NEF thread.
Liquid Filling: Organic blue liquid filled tube.
Mounting: Adjustable stem: Vertical plane 180° horizontal plane 360°.

IT-W

Industrial Thermometer Thermowells

Fits IT Thermometers with 3-1/2" and 6" Stem Lengths

The Series IT-W Thermowells reduce installation cost and time by eliminating the need to drain the system when servicing industrial thermometers. The thermowells protect industrial thermometers from high pressure, flow and corrosive media. Series IT-W Thermowells are available with 2-1/2" and 5" insertion lengths and with the option of a 2-1/2" lagging extension. These cost efficient brass, 304 stainless steel, and 316 stainless steel thermowells with 3/4" NPT threads are compatible with Series IT for most applications.

RRT3

Remote Reading Thermometer with Switch

SPDT Relay, Liquid Actuated Bulb and Capillary

The Series RRT3 Remote Reading Thermometer with Switch combines an easy to read 3-1/4" dual scale dial thermometer and a SPDT relay. Color coordinated pointers display the current process temperature and set point. In order to change the set point, a front adjustment knob controls the red set point pointer. The design of the internal mechanical switch movement prevents the set point pointer from sticking to the process indicating pointer. A 10.5 ft (3.2 m) stainless steel flex hose capillary prevents kinking and leaking of the measuring fluid when bending the capillary. For quick installation, electrical connections can be made to male quick connects or to the finger-safe screw terminals. Thermometer includes a u-clamp mounting bracket for panel mounting.

BTO

Bimetal Thermometer with Transmitter Output

Bimetal Stem with 4-20 mA Output, 3" or 5" Dial

The Series BTO Bimetal Thermometer with Transmitter Output eliminates the need for a separate thermometer and transmitter. By only needing one connection, the BTO series reduces installation cost and saves space. The head-mount transmitter is located in a weatherproof thermal head located on the side of the stem. The BTO series is ideal for use on power generating boilers, skid mounted compressors, and thermal oxidation systems.

32B

1/32 DIN Temperature/Process Controller

Universal Input, Dual Temperature Output Control, RS-485 Communication

The compact Series 32B Temperature/Process Controller offers advanced control features for the most demanding temperature or process applications. Enclosed in a 1/32 DIN housing, the Series 32B is designed with dual, 4-digit LED displays for local indication of process value and setpoint. Control methods include ON/OFF, PID, self-tune, and manual tune. PID control is supported with 64 temperature and time (ramp/soak) control actions. The dual loop output control allows simultaneous heating and cooling control. The second output can be configured as an alarm mode using one of the thirteen built-in alarm functions.

RS-485 communication is standard on the Series 32B. Up to 247 communication addresses are available with transmission speeds of 2400 to 38,400 bps. The controller also features universal input, selectable temperature units (°F/°C), selectable resolution, quick sampling rate and security protection.

16B

1/16 DIN Temperature/Process Controller

Dual Control Output, RS-485 Communication, Universal Inputs

Monitor and control temperature or process applications with precision using the Series 16B controllers. The units offer two separate outputs for dual loop control in direct or reverse acting. Select relay, voltage, or current output combined with a second relay output.

The Series 16B provides dual LED displays for local indication of process value and setpoint value. Output status, engineering scale, auto tuning and alarm status is also indicated on the front panel.

Control methods include ON/OFF, PID, self-tune and manual tune. PID control is supported with 64 ramp/soak control actions. Two additional alarm outputs are standard on the Series 16B. The alarm outputs can be quickly configured by using the thirteen built-in alarm functions.

The controller easily communicates with other external devices such as PC's and PLC's for data search and system integration using the built-in RS-485 interface. Up to 247 communication addresses are available with transmission speeds of 2400 to 38,400 bps. 1/16 DIN Temperature Controller

PID Control, Auto-Tuning, Dual Display, RS-485 Communication

The compact Series 16C Temperature Controller offers accurate temperature measurement and control in a 1/16 DIN package. Designed for direct or reverse acting (cooling or heating) control, the Series 16C can be programmed for simple ON/OFF or more complex PID control functions. PID control is supported with manual or auto-tuning. Select relay, voltage or current output for control methods. The Series 16C accepts a variety of thermocouple and RTD inputs. Process value and setpoint value are displayed simultaneously on the large dual LED. Auto-tuning, engineering units (°F or °C), and alarm status is also indicated on the faceplate. Two alarm outputs are included on the unit with 12 preprogrammed alarm functions.

Series
4B

1/4 DIN Temperature/Process Controller

Dual Control Output, RS-485 Communication, Auto-Tuning

The Series 4B 1/4 DIN Temperature/Process Controller is designed to accept thermocouple, RTD, current or voltage input and provide dual outputs for control. Available outputs include relay/relay, voltage pulse/relay, current/relay, or linear voltage/relay. The units can be programmed for ON/OFF, PID, auto-tuning, or manual tuning control methods. The PID control is supported by 64 ramp/soak actions. The Series 4B also includes two additional alarm outputs. The second relay output can be reconfigured as a third alarm output. The alarm type can be selected from 13 different preprogrammed alarm functions. The controller features dual LED displays for local indication of process and setpoint values.

8C

1/8 DIN Temperature Controller

ON/OFF or PID Control, Auto-Tuning, RS-485 Communication

The Series 8C Temperature Controller offers easy-to-use programming menus designed for quick installation. The unit is designed for direct or reverse acting (cooling or heating) control. The Series 8C can be programmed for simple ON/OFF or more complex PID control functions. PID control is supported with manual or auto-tuning. Select relay, voltage pulse, or current output control methods. The controller also includes two additional alarm outputs. The alarm outputs can be configured from 12 different preprogrammed settings.

The temperature controller accepts a variety of thermocouple and RTD inputs. The process value and setpoint value are displayed simultaneously on the large dual LED. Auto-tuning, engineering units (°F or °C) and alarm status is also indicated on the faceplate.

SCD

DIN Rail Temperature/ Process Controller

Universal Inputs, Up to 8 PID Loops, Modbus® Communications

The DIN Rail Mount Series SCD offers multiple PID loops in a compact size. Each SCD-1000 master controller can be combined with up to seven SCD-2000 slave controllers without any wires. Each controller has one universal input, one relay output and one user selected output. The outputs can be used for a dual loop to control heating and cooling or a single loop with an alarm. These controllers support up to 64 ramp/soak actions. The SCD series controllers are programmed using a user-friendly software program via the RS-485 Modbus® communications.

Model
LoveLink™ III

Configuration Monitoring & Logging Software

Designed for Love Temperature Controls

LoveLink™III Configuration, Monitoring and Logging Software is an easy to use program allowing connection of up to 40 controls on a single computer port. Data logging can be set up by individual control with varying logging parameters. LoveLink™III Software is compatible with all Love 4B, 4C, 2600, 8B, 8C, 8600, 16A, 16B, 16C, 16L, 32A, 32B, 32DZ, SCD and SCZ Series controls.

FEATURES

- Address and store data for up to 40 controls
- Data logging at individually adjustable rates
- On-screen graphing for up to 10 zones
- Control configuration profiles
- Configuration profiles
- Interface

Computer Requirements

The LoveLink™III software application will run on Windows® 2000 and Windows® XP Software. One available RS-232 or RS-485 port is needed to communicate with the temperature control(s). A minimum of 4 MB of hard disk space is needed for the LoveLink™III software application files, and additional hard disk space is needed to store temperature log files. Log file size will vary depending on the Duration and Rate selected for the controls and the number of controls on line.

Control Requirements

The temperature controls supported by LoveLink™III software are the Love 4B, 4C, 2600, 8B, 8C, 8600, 16A, 16B, 16C, 16L, 32A, 32B, 32DZ, SCD and SCZ Series.

Other Requirements

Love temperature control product series can be ordered with either RS-485 or RS-232 communication options. To connect temperature controls using RS-485 communication, one of the following converters can be used:

- Love Model MN-1 Mini-Node™ Communication Signal Converter, USB to RS-485
- Love Model 351-9 Mother Node™ Communication Signal Converter, RS-232 to RS-485

TID

Temperature/Process Indicator

Low Cost, 3-Digit Display, 1% Accuracy

The affordable Series TID allows user to monitor temperature or a process value. Temperature ranges are available from -58 to 302°F using one of our PTC or NTC thermistors. Process values can be displayed from -999 to 999 counts using a 4 to 20 mA from one of our various transmitters. The process indicator has an adjustable span and zero.

TID-3200	4 to 20 mA	230 VAC	None
TID-3400	4 to 20 mA	24 VAC/DC	None

SPECIFICATIONS

Range: -58 to 302°F (thermistor); -999 to 999 counts (4 to 20 mA).
Input: PTC/NTC thermistor or 4 to 20 mA.
Power Requirements: 115 VAC, 230 VAC, 24 VAC/DC.

Accuracy: Better than 1%.

Display: 3-digits; red, green or blue display.
Resolution: 1° or 0.1 count.
Front Panel Rating: IP64 (NEMA 3R).
Weight: 2.3 oz (65 g).
Agency Approvals: CE, cUR, UR.

Series
LTI

Temperature Panel Meter

1/8 DIN, Large Dual-Line Display

The Series LTI Temperature Panel Meters can be configured in a variety of configurations to provide visual indication and control of a process temperature. Field pluggable modules are available to add additional relay outputs, digital I/O ports, and serial communications. Utilizing an easy-to-read, dual 6-digit display, more descriptive programming parameters are displayed to simplify initial setup. A set of parameters can be copied from one panel meter to another for applications that require multiple panel meters programmed with the same parameters. The industry standard 1/8 DIN housing can be panel mounted or mounted in one of the NEMA 4X panel meter enclosures. All of the Series LTI panel meters come with universal thermocouple and RTD inputs.

SPECIFICATIONS

Inputs: Thermocouple J, K, T, E, R, S, B, N, C; RTD 100 Ω platinum, 10 Ω copper, 120 Ω nickel, 1000 Ω platinum.

Input Impedance: Greater than 100 kΩ.

Output: 4 to 20 mA.

Power Requirements: 85 to 265 VAC 50/60 Hz, 90 to 265 VDC or jumper selectable 12 to 24 VDC ±10%.

Power Consumption:

90 to 265 VAC models: 20 W max;
 12 to 24 VDC models: 15 W max.

Switch Rating: 2 or 4 SPDT (Form C) internal and/or 4 SPST (Form A) external; Rated 3A @ 30 VDC and 125/250 VAC resistive load, 1/14 HP @ 125/250 VAC for inductive loads.

Display: Dual-line, 6-digit display.

Resolution: 1° (up to four digits) or 0.1° (up to five digits).

Temperature Limits:

Operating: -4 to 149°F (-20 to 65°C);
 Storage: -40 to 185°F (-40 to 85°C).

Humidity Limits: 0 to 90% (non-condensing).

Front Panel Rating: NEMA 4X, IP65.

Weight: 9.5 oz (269 g).

Agency Approvals: CE, RoHS, cUL, UL.

Thermocouple Limit Alarm

UL Approved Temperature Limit Control

The **Series TSF-DF Digital Thermocouple Limit Alarm** is a UL approved temperature limit control that provides visual alarm status along with a 16 amp SPST relay output. The Series TSF-DF controls have a built in reset button on the front panel or can accept an external reset signal.

Program settings on model TSF-DF controls cannot be changed through the buttons on the device. It is necessary to purchase a model TSF-MDF and a model TS2-K in addition to the model TSF-DF. Desired program parameters are entered on a TSF-MDF programming control. Using the TS2-K configuration key, the parameters can be easily copied from the TSF-MDF and transferred to the TSF-DF Limit Alarms.

Limit Controls

FM Approved, Large Dual Display, Universal Input

The 16L Series Temperature/Process FM Approved Limit Controls set a new standard in 1/16 DIN limit controls. The 16L offers universal input (10 thermocouple types, 4 RTD types, voltage, and current), single set point or dual set point. Standard features include remote reset capability, peak/valley indication, open sensor protection, input rate of change protection, and much more. Unit offers 1500 VAC resolution, selectable high or low input, programmable sensor break protection and adjustable differential. Outputs include normally open (form A) and normally closed (form B) relays. Form A and form B relays can be setup one for each set point output and logically linked to emulate a form C output. Designed and built in the USA, the 16L family of controls offers the highest levels of features, function, and quality available today.

Digital Dispensing Temperature Control

Controls Product Temperature and Dispensing Flow Rates

The Series TSCC Digital Dispensing Temperature Control is used to monitor and control product temperature and dispensing rate in the production of melted cheese, chili, or other heated food products. One selectable PTC or NTC thermistor is used to monitor the product temperature while a SPDT relay is used to control the temperature. Two SPST relays are used for controlling two dispensing rates for either different size containers or different products. A three digit, easy-to-read display is included on the controller. The buttons on the face of the controller enable the user to program the desired parameters into the controller itself. Parameters can be copied from one device to another using our TS2-K configuration key. Security protection is offered using a password code. Includes TS-6 temperature probe.

Digital Temperature Switch

3-1/2 Digit Display, Programming Configuration Key

The Series 40 Digital Temperature Switch accepts a variety of inputs to allow temperature measurements and set points up to 1999°F (1300°C). Observing the current status of the control is made easier with the 3-1/2 digit, multi-color LED display that has alarm, defrost and output symbols. For added versatility, the temperature units can be field selected for °F or °C. For cooling applications, manual defrost mode can be initiated by pushing a single button. A flashing alarm informs users when the current temperature exceeds preset limits. When programming multiple units, a programming key is available to reduce set up time.

Thermocouple Temperature Switch

Heating and Cooling Control, 16 Amp Rating, Two Alarms

Monitor and control temperature in heating and cooling applications with the Series TCS Thermocouple Switch. The Series TCS offers a wide temperature range, two selectable alarm sets, and an internal buzzer indicating alarm condition or error. The user can define set point, heating/cooling regulation, cycle time, alarm configuration, load status, and ambient probe adjustment. The thermocouple switch features password protection and error/alarm messaging. Temperature and output status is indicated on the bright red LED display. Use the configuration key (sold separately) to quickly program multiple units. The Series TCS includes a fitting clip for panel mounting, gasket, rear terminal cover and instruction manual.

Digital Temperature Switch

Field Selectable Engineering Units, Real Time Clock

The Series TS3 Digital Temperature Switch is the ideal control for on/off heating or cooling applications. This generation of controls has field-selectable engineering units and temperature probe types in order to reduce the combination of parts that need to be stocked. A built-in real time clock is used for HACCP logging of temperature alarms caused by temperatures outside of their set limits or loss of power. For refrigeration applications, the defrost cycle can be initiated based on time or using the front panel keys. For programming multiple units, the model TS2-K configuration key can be used to quickly download parameter settings.

Series TS2

Digital Temperature Switch

Easy Multi-Unit Programming, 16A SPDT Relay Output

Monitor and control temperature for heating and cooling applications with the Series TS2 Digital Temperature Switch. The Series TS2 offers twelve programmable functions to customize the unit to fit application requirements. Use the 16 (5) Amp SPDT relay output to drive a motor, compressor, or fan. Designed with the OEM in mind, the TS2 offers the ability to configure multiple units with the touch of a button. Programming multiple units is quick and easy. Simply program one switch with the desired parameter settings and connect the configuration key (sold separately) to the back of the unit. Press the button on the configuration key and download the parameter settings. Connect the key to the other switches to upload the stored settings with the push of a button. The TS2 features set point adjustments, static defrost timing, compressor mean time, hysteresis, and ambient probe adjustment. Security protection is offered using a password code. The Series TS2 Digital Temperature Switches are designed to operate with PTC (1000Ω @ 25°C) probes sold separately.

TSW

Weather Proof Digital Temperature Switch

NEMA 4X Housing, Single or Dual Stage, 20A Contact Rating

The Series TSW Digital Temperature Switch combines the trusted, reliable TS family of temperature controls and an installation friendly weatherproof enclosure. By using the same programming parameters as our Series TS2 and Series TSS2, set up can be quickly completed using the front keypad or by using the TS2-K configuration key. In order to prevent tampering from unauthorized users, a parameter lock physical jumper and software passcode security are standard in the unit. The bright, easy-to-read LED display shows the current output status and the temperature measurement.

The multiple conduit knockouts on the Series TSW give flexibility to the installer to determine the best location for the conduit entry. Another installation friendly feature of the Series TSW is the ability to quickly jumper the line voltage to the common of the output relay using fast tabs.

In order to reduce time in selecting models, the Series TSW has universal high and low power supply models and field selectable engineering units. The Series TSW includes one TS-1 PTC thermistor probe.

Digital Temperature/Water Level Switch

Two Temperature Set Points, Low Water Level Alarm

The Series TSWB Digital Temperature Switch has a high and a low set point for controlling the water temperature. The low set point can either be manually or automatically reset. This control also has a conductivity probe input. This input supplies 12 VAC to the conductivity probe to check for low water condition. There are three relay outputs which can be assigned in the field to the high temperature set point, low temperature set point or the low water level input. The Model TS2-K configuration key can make configuring multiple controls quick and easy.

Digital Programmable Indoor Thermostat with Heat Pump Control

4 Event - 2 Day Program Schedule, Filter Use Indicator

The Series LVT Digital Programmable Indoor Thermostats with Heat Pump controls the ambient temperature inside of commercial and residential buildings. For energy conservation, the thermostats have separate programming for weekdays and weekends, along with four programmable events per day to allow building owners to have different settings for occupied and unoccupied times of the day. Set points are stored for both heating and cooling stages to eliminate the need to reprogram when the seasons change. Internal jumpers allow for the selection of the engineering units, time delay between compressor starts and fan controlled heating type. A system and filter usage timer can be used as a maintenance tool to schedule filter replacement. A filter icon will display when the filter needs to be changed. For protection against frozen pipes, if the temperature falls below 40°F (5°C), the heater will be turned on regardless of the set point.

Model TLVT1

Digital Touch Screen Programmable Thermostat with Heat Pump Control

5 Control Modes, Large LCD Display

The Model TLVT1 Digital Touch Screen Programmable Thermostat with Heat Pump simplifies controlling indoor temperatures in commercial and residential buildings. A large easy to read LCD display shows the current temperature, set point, as well as time and day of the week. By touching the icons on the display, building occupants can temporarily change the set point, edit the weekly program, or select the control mode. For larger offices or homes, a single thermostat can control up to two heating and two cooling units. For Heat pump applications, the thermostat can control a two stage compressor. To make programming the time easier, there is a daylight savings time function that will automatically change the time based on the US time change dates. To prevent tampering, the Model TLVT1 has a security code feature that can lock out the programming. For additional energy savings, the filter, UV and energy usage timers tracks the number of hours the fan, heater/cooler, and thermostat is powered on. Additional energy savings can be achieved by programming the thermostat for up to 4 temperature events for each day of the week.

The Series 650 Temperature Transmitter combines low cost with small size making it ideal for a wide variety of HVAC, industrial and commercial multi-point temperature monitoring applications. Non-polarized terminals simplify connection to any 12 to 35 VDC power supply. Capable of operation with long cable runs, Series 650 Transmitters are well suited for monitoring air or water temperatures at remote locations. Three models are stocked in popular ranges factory calibrated within 0.3% of span. All are linear within 0.25% of span and may be recalibrated within low range and span limits shown in chart. Low range is temperature corresponding to 4 mA output. Span is temperature difference between Low and High Ranges corresponding to 4 to 20 mA output signal.

Push-Button Temperature Transmitter

Programmable, RTD, Thermistor or Thermocouple Input, In-Head Mounting

Series 659 Push-Button Temperature Transmitters accept thermocouple (J, K, T), RTD (Pt100 Ω) or thermistor input and provide a linearized 4 to 20 mA output. The transmitter is quickly ranged and calibrated by using a single on-board switch. An LED provides visual indication of sensor fault and programming mode. Models feature reverse polarity protection. Thermocouple models are also galvanically isolated and cold junction compensated.

The compact transmitter can be mounted directly within any standard thermal head for connection to the sensor. The Series 659 Transmitters are ideal for temperature measurement in boilers, burners, ducts, furnaces, refrigeration systems, food processing, tanks, chemical processing, steam generators or any other process application.

Model A-709, Temperature Transmitter Enclosure

Model
652-0

Programmable Transmitter

RTD, Thermocouple, Voltage or Potentiometer Input, Galvanically Isolated

Model 652-0 Programmable Transmitter accepts any commonly used temperature sensor, slidewire transducer or millivolt signal and produces a 4 to 20 mA output signal. Input type and range are easily programmed using a PC and the simple Windows® based software program model 652-C sold separately. The user can completely reconfigure units of measure, high/low range, filtering factor, offset, and transmitter reference details. The model 652-0 features 500V input to output isolation to remove ground loop effects and four filter settings to remove incoming signal noise. Outstanding versatility and compact size make this unit ideal for any temperature application.

Model 652-0, Programmable Transmitter

ACCESSORY

652-C, Configuration Kit (includes power adapter, configuration module, software and carrying case).

SPECIFICATIONS

Input/Output Isolation: 500 VAC RMS.

Thermocouple Input Range:

J: -328 to 2192°F (-200 to 1200°C);

K: -328 to 2498°F (-200 to 1370°C);

T: -328 to 752°F (-200 to 400°C);

R and S: -14 to 3200°F (-10 to 1760°C);

E: -328 to 1832°F (-200 to 1000°C);

F: -148 to 1112°F (-100 to 600°C);

N: -292 to 2372°F (-180 to 1300°C).

RTD Input Range: (Pt100Ω): -328 to 1562°F (-200 to 850°C).

Output: Linearized 4 to 20 mA.

Output Impedance: 700Ω @ 24 VDC.

Power Requirements: 10 to 35V.

Accuracy: T/C: ±0.04% full range input, ±0.04% rdg.; RTD: ±0.01 full range input, ±0.05% of rdg.; Voltage: 10μV, ±0.07% rdg.; Potentiometer: 0.1% full range input.

Thermal Drift: Zero: 0.1μV/°C (RTD zero drift is 0.008°F/°F); Span: 100ppm/°C.

Temperature Limit: Ambient: -40 to 185°F (-40 to 85°C).

Response Time: < 1 second.

Update Time: 250 msec max.

Filtering: Off, 2 seconds, 10 seconds, or adaptive.

Cold Junction Error: ±29°F (±0.5°C).

Computer Interface: RS232 via configurator 652-C, IBM compatible 386 or above with 4mB Ram and serial port.

Housing: PPE & PS.

Weight: 0.92 oz (26 g).

Max. Output Load: 700Ω @ 24 VDC.

Agency Approvals: CE.

The Series TTE Explosion-Proof RTD Temperature Transmitter is the ideal product for hazardous temperature measurement applications. The TTE series has seven pre-programmed temperature ranges that are selectable via an internal dip switch. For those applications that need a custom range, the transmitter can be easily configured for any range between -30 to 250°F with a minimum span of 40°F. The span and zero can be quickly adjusted with a simple push button design. The compact housing allows for the transmitter to be mounted in virtually any application.

SPECIFICATIONS

- Temperature Sensor:** Pt1000, 0.00385 DIN.
- Output Temperature Ranges:** User selectable – any range between -30 to 250°F with a minimum span of 40°F.
- Temperature Limits:** Ambient: 0 to 158°F (-18 to 70°C); Process: -30 to 250°F (-34.4 to 121.1°C).
- Accuracy:** Transmitter ±0.1% FS; Probe ±0.3% FS.
- Thermal Drift Effects:** ±0.02%/°C max.
- Response Time:** 250 ms.
- Wetted Materials:** 316 SS.
- Process Connection:** 1/2" male NPT.
- Conduit Connection:** 1/2" female NPT.
- Probe Length:** 2" to 18" (depending on model).
- Pressure Limits:** 2000 psi (137.9 bar).
- Power Requirements:** 10 to 35 VDC.
- Output Signal:** 4 to 20 mA (two wire loop powered).
- Optional Display:** 2 lines X 8 character LCD.
- Enclosure Rating:** NEMA 4X (IP66) and explosion-proof for Class I, Groups B, C, D; Class II, Groups E, F, G; Class III.
- Weight:** 2 lb 8 oz (1134 g).
- Agency Approvals:** CE, FM.

Field-Selectable Ranges

Ordering Sensors

Sensors are constructed with various types of protection/mounting hardware, extensions, and wire terminations. The sensor types and their temperature ranges are shown in the table. See "Temperature Limits" for maximum service temperatures applicable to the protection tube, mounting hardware, wire extensions, etc.

This section shows only a limited selection of the available sensors. The sensors are organized by hardware type. Most hardware can house any type thermocouple or RTD. Terminations are usually either lug type or standard plugs, but many other types are available. Various 'head enclosures' are also available. Dimensions can be custom designed to meet your specifications.

Temperature Limits

Sensor selection depends on two separate temperatures: process temperature and connector temperature. Make sure the local temperature at each component does not exceed the maximum rated service temperature for that component. Note that extension wire must withstand the process temperature.

Mineral Insulated Thermocouples and RTD's

Mineral Insulated Thermocouples and RTDs are known for their excellent mechanical durability and resistance to electrical breakdown. Mineral Insulated Thermocouples can be bent to most any angle without special equipment

Due to the varying size of connection wire and cable, a transition fitting is used between the cold end of the sheath and the connecting wires. This fitting measures 1-1/4" long by 1/4" OD for 1/8" or smaller sheaths, and 1-1/2" long by 3/8" OD for 3/16" and 1/4" sheaths. Larger sheaths and sheaths terminating in connectors other than wire or cable do not require transition fittings.

The Series TE Duct and Immersion Temperature Sensor can be used to monitor air or water temperature throughout a building management system or an air handler unit. Flanged duct sensors monitor the supply or return air and provide a thermistor or RTD output to the digital controller. Immersion sensors which are supplied with compression fittings are typically used to monitor the hot or chilled water lines throughout a building. Thermowells are recommended, but not required on the immersion sensors. For variable air volume applications, the Series TE can be configured to have 8 plenum rated cable with flying leads. Standard units come with 4" leads with an integral terminal block to eliminate carrying extra wire nuts. For housing models, multiple knockouts provide easy conduit access to any side of the housing. The 1/4 turn lid comes with a chain to prevent it from being lost during installation.

SPECIFICATIONS

Accuracy:

Thermistor temperature sensor: ±0.22°C @ 25°C (±0.4°F @ 77°F);

RTD temperature sensor: DIN class A: ±0.15°C @ 0°C (±0.28°F @ 32°F).

Temperature Limits: Operating: -40 to 302°F (-40 to 150°C).

Sensor Curves: See page reference below.

Cable Rating: Plenum option includes UL listed plenum cable.

Housing Material: Meets UL, 94 V-0 polycarbonate plastic.

Housing Rating: NEMA 4X (IP66) (DFW, IBW only).

TE-I

Immersion Temperature Sensors

New Integral Mounting Connection, Welded Thermowells

The Series TE-I Immersion Style Temperature Sensors accurately measure water temperature inside chilled and hot water loops in HVAC systems. Sensors can be ordered either with a general purpose or weatherproof enclosure and have an integral 1/2" NPT threaded connection so that the housing mounts flush against the thermowell. All models come standard with a terminal block that ensure a better electrical connection to the sensor. Both housing configurations include a chain that prevents the lid from being lost during installation. Electrical knockouts on the housing can adapt to either a cable gland or conduit. Thermowells are required to protect the electrical connection from the process water and to allow replacement of the sensors without draining the system.

Protection Against Radiated Heat, NEMA 4X (IP65) Enclosure

Scan here to watch product video

The Series TE-OND/TE-RND Outdoor Air Temperature Sensors are offered in two different configurations to increase measurement accuracy by reducing radiated heat effects. For applications where the north side of the building is accessible, the TE-OND can be used to protect against low levels of radiated heat. If the sensor must be mounted in direct sunlight or a more precise measurement is required, our six plate radiation shield mounts over the temperature probe. The TE-RND radiation shield models can be surface or pipe mounted. All models include removable terminal blocks to simply wire.

Wall Mount Temperature Sensor

Discrete Wall Mount Housing

The Series TE-E/N Wall Mount Temperature Sensor provides a low cost temperature input for any building management system. With large vents in the housing for proper air flow, the sensor accurately measures the ambient temperature in hotel rooms or office buildings. Multiple mounting holes on the wall plate allow for mounting to numerous surfaces.

The Series TE-WSS Stainless Steel Wall Plate Temperature Sensor measures the ambient air temperature in classrooms and industrial environments. By having a flush mount design, the temperature sensor can withstand a wash down. A foam gasket prevents ambient temperature from behind the wall plate from skewing the temperature measurements. The discrete stainless steel wall plate sensor also hides the sensor to prevent tampering. Each sensor comes with a terminal block and two mounting screws for quick installation.

product video

The Series TE-A Averaging Temperature Sensors are used to measure the temperature in large ducts and air handler units. Bendable aluminum capillaries are available in 6', 12', and 24' foot lengths. These capillaries consist of four thermistor or RTD sensors which are internally averaged to give a single output signal. Series CC1 mounting brackets are available to mount the capillary to the wall of the duct or air handler without kinking the sensor wires inside the probe. For faster installation, the enclosure has multiple knockouts, wide mounting ears, and a screw-off captured lid.

Series
TE-SNW

Weather Resistant Surface Temperature Sensor

Strap On Design, Twist Off Cover, 2 to 6" Pipe Sizes

The Series TE-SNW Surface Temperature Sensor non-intrusively measures the process temperature in hot and cold water loops in buildings. An adjustable metal strap can tightly fit around 2 through 6" pipe sizes, allowing the surface area of the copper plate on the sensor to make good contact with the pipe surface. In order to work with most common building controllers, the output of the sensor can be chosen from 6 different RTD and Thermistor curves. Additional features include a quarter turn twist off cap that is chained to the housing to prevent it from getting lost, and multiple knockout locations and sizes to reduce installation time.

Model	Sensor Type
TE-SNW-A	10KΩ Type III Thermistor
TE-SNW-B	10KΩ Type II Thermistor
TE-SNW-C	3KΩ Thermistor
TE-SNW-D	Pt100Ω RTD
TE-SNW-E	Pt1000Ω RTD
TE-SNW-F	20KΩ Thermistor

SPECIFICATIONS

Accuracy:

Thermistor Temperature Sensor: $\pm 0.22^{\circ}\text{C}$ @ 25°C ($\pm 0.4^{\circ}\text{F}$ @ 77°F);
RTD Temperature Sensor: DIN Class A $\pm 0.15^{\circ}\text{C}$ @ 0°C ($\pm 0.28^{\circ}\text{F}$ @ 32°F).

Temperature Limits: Operating: -32 to 240°F (-35.5 to 115.5°C).

Sensor Curves: See page reference below.

Housing Material: Meets UL 94 V-0 polycarbonate plastic, NEMA 3R.

Weight: 7 oz (198 g).

Resistance vs. Temperature Table: See page 280 (Series TE-OND/RND/OSA)

Series
I2-1

Immersion Temperature Probes

RTD & Thermistor Outputs, 304 SS Probes

The Series I2-1 Immersion Temperature Probes are designed to monitor the hot and chilled water lines throughout a building's water distribution loop. The multiple temperature sensor outputs allow these sensors to connect to virtually any digital building controller. The Series IW2 SS thermowells allow the temperature sensors to be replaced without draining the water line. The temperature sensors are available in 4" and 6" insertion lengths.

Note: A Series IW2 Thermowell must be used on pressurized air and water lines to prevent leakage around the probe.

SPECIFICATIONS

Accuracy: Platinum RTD: $\pm 0.6\%$ @ 32°F (0°C); Nickel RTD: $\pm 0.5^{\circ}\text{F}$ @ 32°F (0°C); Balco RTD: $\pm 0.1\%$ @ 32°F (0°C); Thermistors: $\pm 0.36^{\circ}\text{F}$ from 32 to 158°F (0 to 70°C).

Operating Temperature: -32 to 240°F (-35.5 to 115.5°C).

Probe Diameter: $1/4"$ (6.3 mm).

Cable Length: 6' (1.8 m).

Probe Material: 304 SS.

Mounting: $1/2"$ threaded connection to fit Series IW2 thermowell.

Resistance Temperature Detector

High Temperature, Mineral Insulated, 316 SS Sheath

Precision RTD (Resistance Temperature Detector) offers excellent accuracy and stability over a wide temperature range. Industry standard 3-wire 100 Ω (DIN) probes are available in 6" (15 cm), 12" (30.5 cm), or 18" (46 cm) sheath lengths with 30" (76 cm) extension cable and spade lug terminals.

RTD-6418	18" (46 cm)	1/4"

SPECIFICATIONS

Sensor Type: Wire wound, 100 Ω.
Temperature Range: -328 to 1202°F (-200 to 650°C).
Pressure Limits: 250 psig (17.2 bar).
Probe Material: 316 SS.
Extension Length: 30" (76 cm).
Standard: DIN .00385 (class B, 0.12%).

APPLICATIONS

Typical applications are: air ducts, bearing temperature, oil temperature indicator, soldering equipment, ovens, environmental test chambers, pharmaceutical mfg., food processing, plastic molding, petroleum & chemical processing, electric generating plants, etc.

Series
ILA

In-Line IR Sensor

15:1 Distance-to-Target Ratio, 32 to 932°F

The **Series ILA Non-Contact Sensors**, measure temperatures from 32 to 932°F (0 to 500°C) and provide a linear 4 to 20 mA, 0 to 50 mV VDC or thermocouple output. The 2-wire signal is compatible with almost any indicator, controller, recorder, data logger, etc., without the need for special interfacing or signal conditioning. They are suitable for most materials such as food, paper, textiles, plastics, leather, tobacco, pharmaceuticals, chemicals, rubber, coal, and asphalt.

Model	Output
ILA10	J Thermocouple
ILA20	4-20 mA

SPECIFICATIONS

Temperature Range: 32 to 932°F (0 to 500°C).
Accuracy: 1% of reading or 1°C whichever is greater.
Emissivity: 0.95 (fixed).
Distance to Target Size Ratio: 15:1.
Response Time: 240 ms.
Temperature Limits: Ambient: 32 to 158°F (0 to 70°C).
Power Requirement: 24 VDC.
Repeatability: 0.5% of reading or 0.5°C whichever is greater.
Outputs: 4 to 20 mA, 0 to 50 mV, J type thermocouple.
Cable Length: 3.3 ft (1 m).
Spectral Response: 8 to 14 microns.
Housing: SS.
Weight: 3.35 oz (95 g).
Agency Approval: CE.

HTDL-20/30

High Temperature Data Logger

Submersible, Continuous Recording, User Replaceable Battery

The Model HTDL-20/30 is a high temperature data logger that can measure temperatures up to 500°F (260°C). This submersible and portable data logger can record up to 32,700 measurements and has an external probe to ensure fast and accurate temperature readings. The HTDL-20 contains non-volatile solid state relay memory that will retain data even if the battery becomes discharged. The HTDL-20 can easily be started and stopped from a PC or delayed to start up to 18 months after initialization.

SPECIFICATIONS

Range: -328 to 500°F (-200 to 260°C).
Memory Size: 32,700 readings.
Accuracy: 0.18°F (0.1°C) @ 68 to 284°F (20 to 140°C); 0.54°F (0.3°C) @ -4 to 67.98°F (-20 to 19.99°C).
Resolution: 0.02°F (0.01°C).
Temperature Limits: -4 to 284°F (-20 to 140°C).
Sampling Method: Stop on memory full or continuous recording.
Sampling Rate: Selectable from 1 sec to 24 hrs.

Computer Requirements: Windows® Xp Sp3, Windows Vista®, Windows® 7 operating systems.

Power Requirements: 3.6 V 1/2 AA ER1425SM lithium metal battery, installed functional, user replaceable.
Battery Life: 1 year (approx).
Interface: Docking station and USB cable.
Housing Material: 316 SS.
Weight: 4.2 oz (120 g).
Agency Approvals: CE.

Temperature Data Loggers

Model
DW-USB-1-HT

High Temperature USB Data Logger

316 SS Construction, Up To 32,510 Readings

Model DW-USB-1-HT High Temperature USB Data Logger allows users to monitor temperatures up to 257°F (125°C). The rigid, stainless steel enclosure protects the sensor against corrosion, impact, and water ingress. With the easy to install Windows® based software, parameters can be configured to work in many applications. Data can be downloaded by plugging the data logger directly into a PC's USB port, with no cable required. Downloaded data can then be graphed, printed, or exported to other spreadsheet applications.

Model DW-USB-1-HT, High Temperature USB Data Logger

SPECIFICATIONS

Range: -40 to 257°F (-40 to 125°C).
Accuracy: ±1°F (±0.5°C).
Resolution: 0.2°F (0.1°C).
Memory Size: 32,510 readings.
Sampling Mode: Continuous or stop on memory full.
Sampling Rate: Selectable from 1 s. to 12 hours.
Computer Requirements: Windows® 2000, Windows® XP, Windows Vista®, and Windows® 7; 32 or 64-bit operating systems.

Power Requirements: 3.6 V 2/3 AA lithium metal battery, included, user replaceable.

Battery Life: Approximately 1 to 3 years.
Housing: 316 SS.
Enclosure Rating: IP67/NEMA 4X.
Alarms: Programmable high/low.
Interface: USB port.
Weight: 4.6 oz (130.4 g).
Agency Approvals: CE, RoHS.
