

Justification for used equipment

Equipment: 2008 Competition Shower Trailer

Size: 32ft custom built fifth wheel

Shower Units: Two (grey water holding tank)

Changing Rooms: Two

Lockers: 10

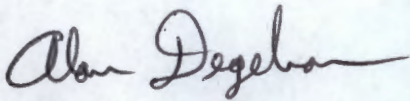

On Board Generator: Onan 12KW Diesel

Custom fabricated and self-contained.

A recent purchase for a similar sized shower trailer was with P.O. #P900478 (6 station, 25 ft) and cost \$72,208.50.

Research for this exact model and configuration was difficult as this was a custom trailer but my research indicates that to have an equivalent trailer built today would cost us at least \$75,000.

As the chief procurement officer for this agency, I'm approving this purchase for used equipment.

One correction, the generator should be a Onan 12KW Diesel generator, not a 30.

Good Morning Robby,

The Shower Trailer that the Texas Poultry Federation (TPF) has offered to us for \$25,000.00 is a **2008 Competition Trailers (Henderson, Texas) custom fabrication self-contained** (gray water holding tank/hot water heater) **shower trailer with a 30KW generator and two separate 10 locker dressing rooms** (i.e. one entry for dirty/contaminated side and the other being the clean-decon side each w/separate entries/exits) and is a **32" custom built fifth wheel trailer**. **This trailer company is top-notch, one of the best in the custom trailer business, see link: <https://competitiontrailers.com/>

The trailer was custom built for TPF in 2008 at a purchase price of \$100,000 and they've only utilized it once since then, and only very briefly. Today's market value for this custom fabricated trailer w/same features would be at a cost of \$175,000.00

Let me know if you need anything else.

Les
