

AT-DC2552XS/L3

High Performance, Stackable 10 and 40 Gigabit Layer 3 Switch

Designed for enterprise core and private cloud environments, the Allied Telesis DC2552XS/L3 switch provides high density 10GbE connectivity, 40GbE uplinks, and Virtual Chassis Stacking (VCStack™), to meet the demands of today's large data, cloud, and enterprise workloads.

Overview

11001001010011

The AT-DC2552XS/L3 is a 48 x 10GbE (SFP+) port high-bandwidth and high density switch designed for large data applications. It provides four QSFP+ 40Gb slots which can connect two units together in a VCStack—perfect for a high capacity resilient network core.

A smarter enterprise data center can be achieved by connecting servers and storage facilities with a high-speed, low latency network fabric that is faster, greener, and easy to manage. This switch delivers 1280Gbps of switching fabric with ultra low sub-µsec latency, and also provides 1+1 resilient power in a very compact 1RU chassis.

High-bandwidth

As bandwidth-intensive applications such as Web 2.0, virtualization, High-Performance Computing (HPC) and Network Attached Storage (NAS) continue to proliferate within enterprise data centers, 10 and 40 Gigabit Ethernet provides a cost effective way to increase throughput and seamlessly deliver customer service level agreements.

Future-proof

The performance of 40GbE uplinks and 48 x 10GbE ports empowers companies to expand application capabilities, and quickly respond to changing customer needs and market conditions. In combination with the AT-VNC10S Network Interface Cards for servers, clients can reduce costs and complexity.

The DC2552XS/L3 is Software Defined Networking (SDN) ready and able to support OpenFlow v1.3.

High Availability

The AT-DC2552XS/L3 has two slots for hot-swappable power supplies and fans. Also SFP+ and QSFP+ modules can be easily removed and replaced with no interruption to the network. These hot-swappable modules guarantee the continued delivery of essential services.

Cut-through

Cut-through switching sends packets to their destination as soon as the first packet is ready. The delay is minimal and the packet reaches its destination in the shortest possible time. With cut-through mode, the AT-DC2552XS/L3 forwards packets with a latency of 800 nanoseconds, and is ideal for interserver communication.

Air Flow

Cooling air flow has become a major design concern in modern data centers. The AT-DC2552XS/L3 utilizes back (PSU/and FAN side) to front (ports side) airflow which is suitable for rack mounting in data centers.

Powerful Network Management

Meeting the increased management requirements of modern converged networks, Allied Telesis Management FrameworkTM (AMF) automates many everyday tasks including configuration management. The complete network can be managed as a single virtual device with powerful centralized management features. Growing the network can be accomplished with Plug-and-Play simplicity, and network node recovery is fully zero-touch. AMF Guestnode allows third party devices, such as IP phones and

security cameras, to be part of an AMF network.

Eco-friendly

In keeping with our commitment to environmentally friendly products, this switch is designed to reduce power consumption and minimize hazardous waste.

New Features

- ► Allied Telesis Management Framework (AMF) Master
- ▶ AMF Guestnode
- ▶ Active Fiber Monitoring
- ▶ Long-Distance stacking over 40G
- OpenFlow for SDN
- Microsoft Network Load Balancing (MS NLB) support
- ▶ VLAN ACLs

Key Features

Allied Telesis Management Framework (AMF)

- Allied Telesis Management Framework (AMF) is a sophisticated suite of management tools that provide a simplified approach to network management. Powerful features like centralized management, auto-backup, auto-upgrade, auto-provisioning and auto-recovery enable plug-and-play networking and zero-touch management.
- Any AT-DC2552XS/L3 switch can operate as the AMF network master, storing firmware and configuration backups for other network nodes. The AMF master enables auto-provisioning and auto-upgrade by providing appropriate files to new network members. New network devices can be pre-provisioned making installation easy because no on-site configuration is required.
- AMF Guestnode allows Allied Telesis wireless access points and further switching products, as well as third party devices such as IP phones and security cameras, to be part of an AMF network.

VCStack (Virtual Chassis Stacking)

Create a single virtual device out of two units with VCStack. VCStack provides a highly available system where network resources are spread out across stacked units, reducing the impact if one of the units fails. Aggregating switch ports on different units across the stack provides excellent network resiliency.

Long-distance Stacking

 Long-distance stacking allows a VCStack to be created over longer distances, perfect for a distributed network environment.

EPSRing (Ethernet Protection Switched Ring)

- ► EPSRing and 10 Gigabit Ethernet allow several DC2552XS/L3 switches to form high-speed protected rings capable of recovery within as little as 50ms. This feature is perfect for high performance and high availability in enterprise networks.
- Super-Loop Protection (SLP) enables a link between two EPSR nodes to be in separate EPSR domains, improving redundancy and network fault resiliency.

High Reliability

➤ The DC2552XS/L3 switches feature front to back cooling and dual power supply units (PSUs). The DC2552XS/L3 features dual hot-swappable load sharing power supplies for maximum uptime, and the option of either front-to-back or back-to-front cooling. This makes it ideal for use as a top-ofrack data center switch.

Virtual Routing and Forwarding (VRF Lite)

 VRF Lite provides Layer 3 network virtualization by dividing a single switch into multiple independent virtual routing domains. With independent routing domains, IP addresses can overlap without causing conflict, allowing multiple customers to have their own secure virtual network within the same physical infrastructure.

sFlow

SFlow is an industry-standard technology for monitoring high speed switched networks. It provides complete visibility into network use, enabling performance optimization, usage accounting/billing, and defense against security threats. Sampled packets sent to a collector ensure it always has a real-time view of network traffic.

Virtual Router Redundancy Protocol (VRRPv3)

VRRPv3 is a protocol for providing device redundancy, by connecting redundant WAN gateway routers or server access switches in an IPv6 network. It allows a backup router or switch to automatically take over if the primary (master) router or switch fails.

Open Shortest Path First (OSPFv3)

 OSPF is a scalable and adaptive routing protocol for IP networks. The addition of OSPFv3 adds support for IPv6 and further strengthens the Allied Telesis focus on next-generation networking.

Dynamic Host Configuration Protocol (DHCPv6)

▶ DHCPv6 is used to dynamically assign IPv6 addresses to hosts from a central location. Acting as DHCPv6 client enables the switch to receive an IPv6 address, and acting as server enables the switch to dynamically allocate IPv6 addresses to hosts. The DHCPv6 server and client both support the Prefix Delegation feature, which allocates a whole IPv6 subnet to a DHCP client. The client, in turn, can allocate addresses from this subnet to the hosts that are connected to it.

Hardware performance

 Layer-3 switching and routing is performed in specialized ASIC hardware for wirespeed packet forwarding and maximum throughput.

Ease of management

- The AlliedWare Plus operating system incorporates an industry-standard CLI, facilitating intuitive manageability.
- Configuration tasks can be automated since commands may be used in scripts. Triggers can also be utilized. These provide a powerful mechanism for automatic and timed management, by automating command execution in response to specific events.
- With three distinct user modes, the CLI is highly secure, and the use of encrypted remote login sessions ensures CLI access is not compromised.

Active Fiber Monitoring

Active Fiber Monitoring prevents eavesdropping on fiber communications by monitoring received optical power. If an intrusion is detected, the link can be automatically shut down, or an operator alert can be sent.

Premium Software License

▶ By default, the DC2552XS/L3 switch offers a comprehensive Layer 2 and basic Layer 3 feature set that includes static routing and IPv6 management features. The feature set can easily be elevated to full Layer 3 by applying the premium software license. This adds dynamic routing protocols and Layer 3 multicasting capabilities.

Find Me

▶ In busy server rooms, comprised of a large number of equipment racks, it can be quite a job finding the correct switch quickly among many similar units. The "find me" feature is a simple visual way to quickly identify the desired physical switch for maintenance or other purposes, by causing its LEDs to flash in a specified pattern.

UniDirectional link Detection

UniDirectional Link Detection (UDLD) is useful for monitoring fiber-optic links between two switches that use two single-direction fibers to transmit and receive packets. UDLD prevents traffic from being sent across a bad link by blocking the ports at both ends of the link in the event that either the individual transmitter or receiver for that connection fails.

Software Defined Networking (SDN)

 OpenFlow is a key technology that enables the use of SDN to build smart applications that unlock value and reduce cost.

Microsoft Network Load Balancing (MS NLB) Support

 Support for MS NLB, which clusters identical servers together for increased performance through load-sharing.

VLAN ACLs

 Simplify access and traffic control across entire segments of the network. Access Control Lists (ACLs) can be applied to a Virtual LAN (VLAN) as well as a specific port.

Key Solutions

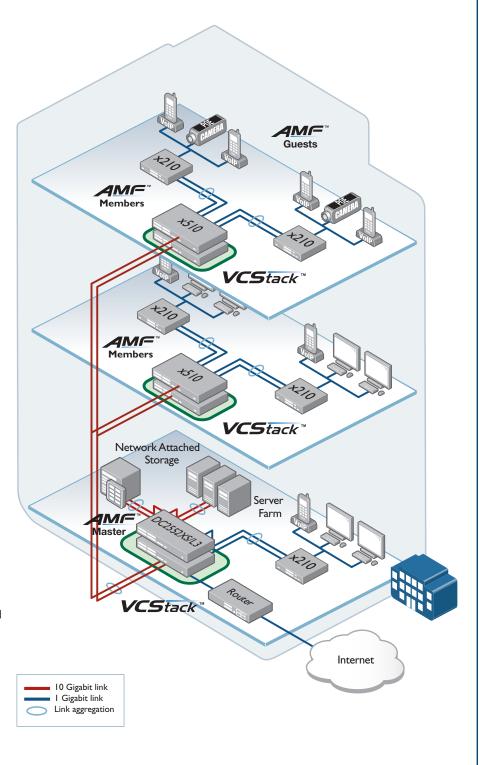

Resilient Network Core

The convergence of network services in the enterprise has led to increasing demand for high performing networks with minimal downtime.

The Allied Telesis DC2552XS/L3 10GbE Layer 3 switch provides high density 10 Gigabit connectivity, and the ability to create a single virtual chassis out of 2 units with VCStack. With the benefits of high availability, increased capacity, and ease of management, VCStack makes networking reliable and simple.

The diagram shows link aggregation between the core VCStack and distribution switches, as well as servers and storage. With link aggregation across ports on different virtual chassis members, there is no perceptible disruption in the case of a link failure, and the full bandwidth of the network remains available. Fast Failover ensures access to online resources is always available, and realtime applications like VoIP and streaming video are assured premium service on the network.

AMF allows the network to be managed as a single virtual entity, greatly reducing administration and automating many day-to-day tasks. AMF Guestnode allows third party devices, such as IP phones and security cameras, to be part of the AMF network.

NETWORK SMARTER AT-DC2552XS/L3 | 3

Enterprise Data Center VCStack AGGREGATION Server Rack 1 VCStack link 4x 10G links Link Aggregation Server Rack N

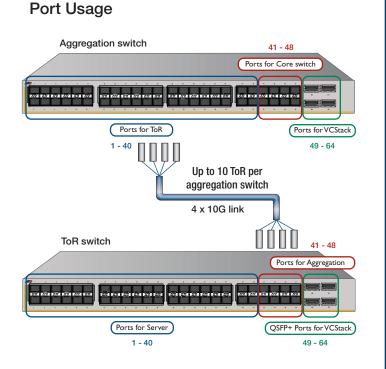

This network configuration enables servers and storage to communicate with low-latency high-speed connectivity. VCStack creates a single virtual unit out of two devices with high-speed 40 Gigabit QSFP+ connections, ensuring no single point of failure.

Aggregation VCStack

- ► Two DC2552XS/L3 switches can be stacked with QSFP direct attach cables, or optics.
- Multiple 10Gb connections using link aggregation ensures high-speed resilient data transfer.

Top of Rack (ToR) VCStack

- ► Two DC2552XS/L3 switches can be stacked with QSFP direct attach cables, or optics.
- Servers and storage devices can be connected to both ToR switches using link aggregation for high availability and network resiliency.

AT-DC2552XS/L3 | High Performance, Stackable 10 and 40 Gigabit Layer 3 Switch

Specifications

- Switch ports48 SFP+ (1G/10G) slots4 QSFP+ (4x10G/40G) slots
- Supports any combination of 1000X, 1000SX, 1000LX, 1000ZX, 1000ZX CWDM, SFP or 10G-SR SFP+ modules
- Console port RS-232 (USB connector) x 1
- Management port (eth0) 10/100/1000T (RJ-45 connector) x 1 Auto negotition, MDI-MDI-X
- ► Forwarding rate 952.32Mpps
- ► Switching capacity 1280Gbps
- 9MB packet buffer

Performance

- IPv4 routes 16K
- IPv6 routes 8K
- ▶ 128K MAC addresses
- ▶ Maximum jumbo frames 12Kbytes
- ► Cut-through mode Latency 10GB:800ns (64byte)
- ▶ 1.2Ghz CPU, 2GB RAM, 128MB flash memory
- Wirespeed switching (unicast and multicast) on all ethernet ports

Diagnostic Tools

- ▶ Built-In Self Test (BIST)
- Find-me device locator
- Automatic link flap detection and port shutdown
- ► Optical Digital Diagnostic Monitoring (DDM)
- ► UniDirectional Link Detection (UDLD)
- ▶ Ping polling for IPv4 and IPv6
- Port mirroring
- TraceRoute for IPv4 and IPv6

IPv4 Standards

- ▶ Black hole routing
- ▶ Directed broadcast forwarding
- ▶ DNS relav
- ► Equal Cost Multi Path (ECMP) routing
- ▶ Policy-based routing
- Route maps
- ► Route redistribution (OSPF, BGP, RIP)
- Static unicast and multicast routes for IPv4
- ► UDP broadcast helper (IP helper)
- Up to 64 Virtual Routing and Forwarding (VRF lite) domains (with license)

IPv6 Standards

- ▶ DHCPv6 client and relay
- DNSv6 client and relay
- ▶ IPv4 and IPv6 dual stack
- ▶ IPv6 aware storm protection and QoS
- ▶ IPv6 hardware ACLs
- Device management over IPv6 networks with SNMPv6, Telnetv6 and SSHv6
- NTPv6 client and server
- ▶ Static unicast and multicast routes for IPv6
- ▶ Log to IPv6 hosts with Syslog v6

Management

 Allied Telesis Management Framework (AMF) enables powerful centralized management and zero-touch device installation and recovery

- ▶ Try AMF for free with the built-in AMF Starter license
- Console management port on the front panel for ease of access
- Eco-friendly mode allows ports and LEDs to be disabled to save power
- ▶ Industry-standard CLI with context-sensitive help
- Powerful CLI scripting engine
- Comprehensive SNMP MIB support for standards-based device management
- Built-in text editor
- Event-based triggers allow user-defined scripts to be executed upon selected system events

Quality of Service (QoS)

- 8 priority queues with a hierarchy of high priority queues for real time traffic, and mixed scheduling, for each switch port
- Limit bandwidth per port or per traffic class down to 64kbps
- Wirespeed traffic classification with low latency essential for VoIP and real-time streaming media applications
- Policy-based QoS based on VLAN, port, MAC and general packet classifiers
- Policy-based storm protection
- Extensive remarking capabilities
- ► Taildrop for queue congestion control
- Strict priority, weighted round robin or mixed scheduling
- ► IP precedence and DiffServ marking based on Layer 2, 3 and 4 headers

Resiliency

- Control Plane Prioritization (CPP) ensures the CPU always has sufficient bandwidth to process network control traffic
- ► Dynamic link failover (host attach)
- EPSRing (Ethernet Protection Switched Rings) with SuperLoop Protection (SLP) and enhanced recovery for extra resiliency
- Loop protection: loop detection and thrash limiting
- ▶ PVST+ compatibility mode
- ▶ STP root guard
- Long-Distance VCStack with 40G QSFP+ modules
- QSFP+ stacking ports can be configured as 40G Ethernet ports
- VCStack fast failover minimizes network disruption

Security

- Access Control Lists (ACLs) based on Layer 3 and 4 headers, per VLAN or port
- Configurable ACLs for management traffic
- ▶ Configurable auth-fail and guest VLANs
- Authentication, Authorisation and Accounting (AAA)
- Bootloader can be password protected for device security
- BPDU protection
- ► DHCP snooping, IP source guard and Dynamic ARP Inspection (DAI)
- DoS attack blocking and virus throttling
- ▶ Dynamic VLAN assignment
- MAC address filtering and MAC address lockdown

- Network Access and Control (NAC) features manage endpoint security
- ► Port-based learn limits (intrusion detection)
- Private VLANs provide security and port isolation for multiple customers using the same VLAN
- ► Secure Copy (SCP)
- Strong password security and encryption
- ► Tri-authentication: MAC-based, web-based and IEEE 802.1x
- ▶ RADIUS group selection per VLAN or port

Environmental Specifications

Deperating temperature 0°C to 40°C
 Storage temperature -20°C to 60°C
 Deperating humidity (non-condensing)
 10% to 80%

► Storage humidity 5% to 90% (non-condensing)

Safety and Electromagnetic Emissions Certifications

- EMI: FCC class A, CISPR class A, EN55022 class A
- ► C-TICK, VCCI Class A, CE
- Immunity: EN50024, EN601000-3-3, EN601000-3-2
- ► Safety: UL 60950-1 (cUlus), EN60950-1 (TUV)

Restrictions on Hazardous Substances (RoHS) Compliance

- Compliant with European RoHS standards
- Physical Specifications
- ▶ 19 inch rack mount
- ▶ Dimensions 44.1 cm x 46 cm x 4.4 cm
- ► (W x D x H) 17.4 in x 18.1 in x 1.7 in
- Weight
 8.3 kg /18.3 lb (chassis only)
 11.3 kg/24.9 lb (chassis with two fans and two PSUs)

Power Characteristics

- ► Voltage: 100-240V AC (10% auto-ranging)
- ► Frequency: 50/60 Hz
- ► Maximum current: 14A @ 100V
- ► Heat dissipation: 900 BTU/hr

Power Consumption

▶ 250W (max 280W)

Noise Characteristics

► Tba - Tested to ISO7779; front bystander position

Package Contents

- AT-DC2552XS/L3 switch with two PSU bay cover and two FAN unit bay covers
- ► Management cable (RS-232 to USB)
- Rubber feet and 19" rack-mountable hardware kit accessories
