Allied Telesis

x930 Series

Advanced Gigabit Layer 3 Stackable Switches with 10G and 40G Uplinks

The Allied Telesis x930 Series of stackable Gigabit Layer 3 switches provide resiliency, reliability and high performance, making them ideal for distribution and network core solutions.

Allied Telesis x930 Series switches are a high-performing and feature-rich choice for today's networks. With a choice of 24- and 48-port models with 10 Gigabit and 40 Gigabit uplink ports, plus the power of Allied Telesis Virtual Chassis Stacking (VCStackTM) with up to 160Gbps of stacking bandwidth per switch, the x930 Series have the flexibility and performance for key network connectivity.

Powerful network management

The Allied Telesis Management Framework (AMF) meets the increased management requirements of modern converged networks, automating many everyday tasks including configuration management. AMF has powerful centralized management features that manage a complete network as a single virtual device. The network can be expanded with plug-and-play simplicity, and network node recovery is fully zero-touch. AMF Guestnode allows third party devices, such as IP phones and security cameras, to be part of an AMF network.

Network resiliency

The convergence of network services in the enterprise has led to increasing demand for highly available networks with minimal downtime. VCStack, in conjunction with link aggregation, provides a network with no single point of failure and an easy, resilient solution for high availability applications.

The x930 Series can form a VCStack of up to eight units for enhanced resiliency and simplified device management. Stacks can be created over long distance fiber links with VCStack LD (Long Distance), making

the x930 Series the perfect choice for distributed environments.

The addition of Ethernet Protection Switched Ring (EPSRing™) resilient ring protocol ensures distributed network segments have high-speed, resilient access to online resources and applications.

Reliable

The x930 Series was designed with reliability in mind, and guarantees continual delivery of essential services. With dual hot-swappable load-sharing power supplies and near-hitless online stack reconfiguration, maintenance may be performed without affecting network uptime.

Secure

Advanced security features protect the network from the edge to the core. The x930 Series offers powerful control over network traffic types, protection against network attacks, secure management options, loop guard to detect cabling mistakes, and tri-authentication for comprehensive end-point access control.

Future-proof

The x930 Series ensures a futureproof network, with superior flexibility coupled with the ability to stack multiple units. All x930 Series models feature 10 Gigabit and the option of 40 Gigabit uplinks ports and a comprehensive IPv6 feature set, to ensure they are ready for future network traffic demands. All x930 Series switches are Software Defined Networking (SDN) ready and are able to support OpenFlow v1.3.

Environmentally friendly

The x930 Series supports
Energy Efficient Ethernet
(EEE), automatically
reducing the power consumed by the
switch whenever there is no traffic on
a port. This sophisticated feature can
significantly reduce operating costs
by reducing the power requirements
of the switch and any associated
cooling equipment.

New / Key Features

- ▶ 40G Ethernet uplinks and stacking ports
- ▶ 10G copper Ethernet expansion module
- ▶ AMF Guestnode
- ▶ Active Fiber Monitoring
- OpenFlow for SDN
- Microsoft Network Load Balancing (MS NLB) support
- ▶ VLAN Mirroring (RSPAN)

Key Features

Allied Telesis Management Framework (AMF)

- Allied Telesis Management Framework (AMF) is a sophisticated suite of management tools that provide a simplified approach to network management. Powerful features like centralized management, auto-backup, auto-upgrade, auto-provisioning and auto-recovery enable plug-and-play networking and zero-touch management.
- Any x930 Series switch can operate as the AMF network master, storing firmware and configuration backups for other network nodes. The AMF master enables auto-provisioning and auto-upgrade by providing appropriate files to new network members. New network devices can be pre-provisioned making installation easy because no on-site configuration is required.
- AMF Guestnode allows Allied Telesis wireless access points and further switching products, as well as third party devices such as IP phones and security cameras, to be part of an AMF network.

VCStack (Virtual Chassis Stacking)

Create a VCStack of up to eight units with 40Gbps (or 160Gbps with the AT-StackQS model) of stacking bandwidth on each unit. Stacking links are connected in a ring so each device has dual connections to further improve resiliency. VCStack provides a highly available system where network resources are spread out across stacked units, reducing the impact if one of the units fails. Aggregating switch ports on different units across the stack provides excellent network resiliency.

Long-distance Stacking

 Long-distance stacking allows a VCStack to be created over longer distances, perfect for a distributed network environment.

EPSRing (Ethernet Protection Switched Ring)

- EPSRing and 10 Gigabit Ethernet allow several switches to form high-speed protected rings capable of recovery within as little as 50ms. This feature is perfect for high performance and high availability at the core of enterprise or provider access networks.
- Superloop Protection enables a link between two EPSR nodes to be in separate EPSR domains, improving redundancy and network fault resiliency.

Virtual Routing and Forwarding (VRF Lite)

 VRF Lite provides Layer 3 network virtualization by dividing a single switch into multiple independent virtual routing domains. With independent routing domains, IP addresses can overlap without causing conflict, allowing multiple customers to have their own secure virtual network within the same physical infrastructure.

Optical DDM

Most modern optical SFP/SFP+/XFP transceivers support Digital Diagnostics Monitoring (DDM) functions according to the specification SFF-8472. This enables real time monitoring of the various parameters of the transceiver, such as optical output power, temperature, laser bias current and transceiver supply voltage. Easy access to this information simplifies diagnosing problems with optical modules and fiber connections.

Active Fiber Monitoring

 Active Fiber Monitoring prevents eavesdropping on fiber communications by monitoring received optical power. If an intrusion is detected, the link can be automatically shut down, or an operator alert can be sent

UniDirectional link Detection

UniDirectional Link Detection (UDLD) is useful for monitoring fiber-optic links between two switches that use two single-direction fibers to transmit and receive packets. UDLD prevents traffic from being sent across a bad link by blocking the ports at both ends of the link in the event that either the individual transmitter or receiver for that connection fails.

Power over Ethernet Plus (PoE+)

With PoE, a separate power connection to media endpoints such as IP phones and wireless access points is not necessary. PoE+ reduces costs and provides even greater flexibility, providing the capability to connect devices requiring more power (up to 30 Watts) such as, tilt and zoom security cameras.

High Reliability

➤ The x930 series switches feature front to back cooling and dual power supply units (PSUs). The x930 features dual hot-swappable load sharing power supplies for maximum uptime, and the option of either front-to-back or back-to-front cooling. This makes it ideal for use as a top-ofrack data center switch.

VLAN Mirroring (RSPAN)

VLAN mirroring allows traffic from a port on a remote switch to be analysed locally. Traffic being transmitted or received on the port is duplicated and sent across the network on a special VLAN.

Microsoft Network Load Balancing (MS NLB) Support

 Support for MS NLB, which clusters identical servers together for increased performance through load-sharing.

sFlow

SFlow is an industry-standard technology for monitoring high-speed switched networks. It provides complete visibility into network use, enabling performance optimization, usage accounting/billing, and defense against security threats. Sampled packets sent to a collector ensure it always has a real-time view of network traffic.

Dynamic Host Configuration Protocol (DHCP) Snooping

▶ DHCP servers allocate IP addresses to clients, and the switch keeps a record of addresses issued on each port. IP source guard checks against this DHCP snooping database to ensure only clients with specific IP and/or MAC address can access the network. DHCP snooping can be combined with other features, like dynamic ARP inspection, to increase security in Layer 2 switched environments, and also provides a traceable history, which meets the growing legal requirements placed on service providers.

Premium Software License

By default, the x930 Series offers a comprehensive Layer 2 and basic Layer 3 feature set that includes static routing and IPv6 management features. The feature set can easily be elevated to full Layer 3 by applying the premium software license. This adds dynamic routing protocols and Layer 3 multicasting capabilities.

Find Me

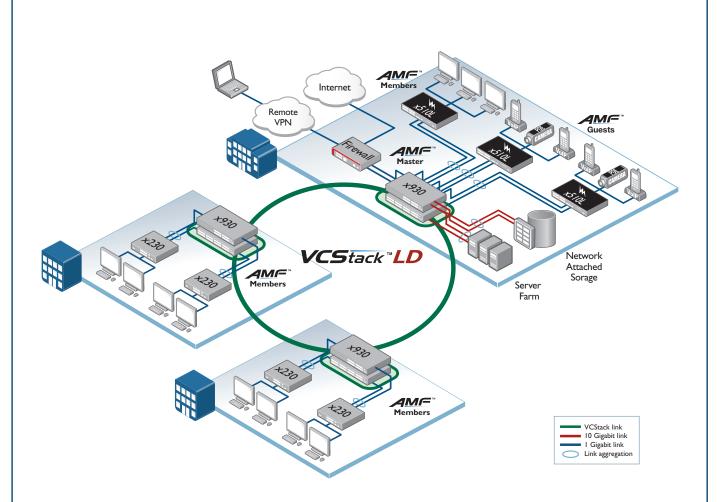

▶ In busy server rooms, comprised of a large number of equipment racks, it can be quite a job finding the correct switch quickly among many similar units. The "find me" feature is a simple visual way to quickly identify the desired physical switch for maintenance or other purposes, by causing its LEDs to flash in a specified pattern.

Software Defined Networking (SDN)

 OpenFlow is a key technology that enables the use of SDN to build smart applications that unlock value and reduce cost.

Key Solutions

Distributed Network Core

Allied Telesis x930 Series switches are ideal for core and distribution solutions, where resiliency and flexibility are required. In the above diagram, long distance Virtual Chassis Stacking (VCStack-LD) is used to create a single virtual unit out of multiple devices. The increased distance provided by fiber stacking connectivity means that members of the virtual chassis do not need to be colocated. Instead, they can be kilometers apart – perfect for a distributed network environment.

When combined with link aggregation to access switches, this provides a solution with no single point of failure that fully utilizes all network bandwidth, and ensures high availability of data for network users.

AMF allows this large distributed network to be managed as a single virtual entity, greatly reducing administration and automating many day to day tasks.

Allied Telesis x930 Series switches support enterprises and their use of business-critical online resources and applications, with a resilient and reliable solution.

AT-x930-52GPX	48	-	4 (2 if stacked)	2*	1	48	336Gbps	250Mpps

^{*} Stacking ports can be configured as additional 1G/10G Ethernet ports when unit is not stacked, or if StackQS module is used

Performance

- ► 40Gbps of stacking bandwidth per switch using front panel 10G SFP+ ports
- ▶ 160Gbps of stacking bandwidth per switch using optional AT-StackQS expansion module
- ► Supports 13KB jumbo frames
- Wirespeed multicasting
- ▶ 4094 configurable VLANs
- ▶ Up to 64K MAC addresses
- ▶ Up to 16,000 OSPF routes
- ▶ Up to 2.000 IPv4 multicast entries
- ▶ Up to 2000 OpenFlow v1.3 entries
- ▶ 2GB DDR SDRAM, 256MB flash memory
- Packet buffer memory: AT-x930-28 2MB AT-x930-52 - 4MB

Reliability

- ▶ Modular AlliedWare Plus operating system
- ► Internal dual hot-swappable PSUs, providing uninterrupted power and extra reliability
- Full environmental monitoring of PSUs, fans, temperature and internal voltages. SNMP traps alert network managers in case of any failure

Expandability

- ▶ Stack up to eight units in a VCStack
- ▶ Versatile licensing options for additional features

Flexibility and Compatibility

- ► Gigabit SFP ports on x930-28GSTX will support any combination of Allied Telesis 100Mbps and 1000Mbps SFP modules listed in this document under Ordering Information
- ▶ 10G SFP+ ports will support any combination of Allied Telesis 1000Mbps SFP and 10GbE SFP+ modules and direct attach cables listed in this document under Ordering Information
- ► Port speed and duplex configuration can be set manually or by auto-negotiation
- ► Front-panel SFP+ stacking ports can be configured as additional 1G/10G Ethernet ports

Diagnostic Tools

- Active Fiber Monitoring detects tampering on optical links
- ▶ Built-In Self Test (BIST)
- ► Cable fault locator (TDR)
- UniDirectional Link Detection (UDLD)
- ► Find-me device locator
- ► Hardware health monitoring
- Automatic link flap detection and port shutdown
- Optical Digital Diagnostic Monitoring (DDM)
- ▶ Ping polling and TraceRoute for IPv4 and IPv6
- ► Port and VLAN mirroring (RSPAN)

IPv4 Features

- ▶ Black hole routing
- ► Directed broadcast forwarding
- DNS relav
- ► Equal Cost Multi Path (ECMP) routing
- Policy-based routing
- ► Route maps and redistribution (OSPF, BGP, RIP)
- ▶ Static unicast and multicast routing for IPv4
- ► UDP broadcast helper (IP helper)
- Up to 64 Virtual Routing and Forwarding (VRF lite) domains (with license)

IPv6 Features

- ▶ DHCPv6 client and relay
- ▶ DNSv6 client and relay
- ▶ IPv4 and IPv6 dual stack
- ▶ IPv6 aware storm protection and QoS
- ▶ IPv6 hardware ACLs
- ▶ Device management over IPv6 networks with SNMPv6, Telnetv6 and SSHv6
- ▶ Log to IPv6 hosts with Syslog v6
- NTPv6 client and server
- ▶ Static unicast and multicast routing for IPv6

Management

- ▶ Front panel 7-segment LED provides at-a-glance status and fault information
- Allied Telesis Management Framework (AMF) enables powerful centralized management and zero-touch device installation and recovery
- Try AMF for free with the built-in AMF Starter license
- Console management port on the front panel for ease of access
- Eco-friendly mode allows ports and LEDs to be disabled to save power
- ▶ Web-based Graphical User Interface (GUI)
- ▶ Industry-standard CLI with context-sensitive help
- Out-of-band 10/100/1000T Ethernet management port
- ▶ Built-in text editor and powerful CLI scripting engine
- ► Comprehensive SNMP MIB support for standardsbased device management
- Event-based triggers allow user-defined scripts to be executed upon selected system events
- USB interface allows software release files, configurations and other files to be stored for backup and distribution to other devices

Quality of Service

- 8 priority queues with a hierarchy of high priority queues for real time traffic, and mixed scheduling, for each switch port
- Limit bandwidth per port or per traffic class down to 64kbps

- Wirespeed traffic classification with low latency essential for VoIP and real-time streaming media applications
- ▶ IPv6 QoS support
- Policy-based QoS based on VLAN, port, MAC and general packet classifiers
- ► Policy-based storm protection
- Extensive remarking capabilities
- ► Taildrop for queue congestion control
- Strict priority, weighted round robin or mixed scheduling
- ▶ IP precedence and DiffServ marking based on layer 2, 3 and 4 headers

Resiliency Features

- Control Plane Prioritization (CPP) ensures the CPU always has sufficient bandwidth to process network control traffic
- ▶ Dynamic link failover (host attach)
- ► EPSRing (Ethernet Protection Switched Rings) with SuperLoop Protection (SLP) and enhanced recovery for extra resiliency
- Long-Distance stacking (LD-VCStack) using SFP+ or QSFP+ modules
- ▶ Loop protection: loop detection and thrash limiting
- PVST+ compatibility mode
- ▶ STP root guard
- ▶ VCStack fast failover minimizes network disruption

Security Features

- Access Control Lists (ACLs) based on layer 3 and 4 headers
- ► Configurable ACLs for management traffic
- ► Auth-fail and guest VLANs
- Authentication, Authorisation and Accounting (AAA)
- Bootloader can be password protected for device security
- ▶ BPDU protection
- ► DHCP snooping, IP source guard and Dynamic ARP Inspection (DAI)
- ▶ DoS attack blocking and virus throttling
- ▶ Dynamic VLAN assignment
- ► MAC address filtering and MAC address lock-down
- Network Access and Control (NAC) features manage endpoint security
- ► Port-based learn limits (intrusion detection)
- ▶ Private VLANs provide security and port isolation for multiple customers using the same VLAN
- ► Secure Copy (SCP)
- ► Strong password security and encryption
- ► Tri-authentication: MAC-based, web-based and
- ▶ RADIUS group selection per VLAN or port

Environmental Specifications

- ➤ Operating temperature range: 0°C to 50°C (32°F to 122°F) AT-x930-GTX models and AT-x930-28GSTX 0°C to 45°C (32°F to 113°F) AT-x930-GPX models Derated by 1°C per 305 meters (1,000 ft)
- Storage temperature range: -25°C to 70°C (-13°F to 158°F)
- Operating relative humidity range: 5% to 90% non-condensing
- Storage relative humidity range: 5% to 95% non-condensing
- Operating altitude: 3,048 meters maximum (10,000 ft)

Electrical Approvals and Compliances

- ► EMC: EN55022 class A, FCC class A, VCCI class A, ICES-003 class A
- ► Immunity: EN55024, EN61000-3-levels 2 (Harmonics), and 3 (Flicker) AC models only

Power Supply Requirements

- ► AC voltage: 90 to 260V (auto-ranging)
- ► Frequency: 47 to 63Hz
- DC voltage: 40 to 60VDC (for PWR250-80 PSU only)

Safety

- Standards: UL60950-1, CAN/CSA-C22.2 No. 60950-1-03, EN60950-1, EN60825-1, AS/NZS 60950.1
- ► Certification: UL, cUL

Restrictions on Hazardous Substances (RoHS) Compliance

- ▶ EU RoHS compliant
- China RoHS compliant

Country of Origin

Indonesia

Sliding rack mount kit

Expansion Module

AT-StackQS

2 x QSFP+ expansion module

AT-x9EM/XT4

4 x 10GBASE-T expansion module

Power Supplies (for all models)

AT-PWR150-xx*

150W system power supply

AT-PWR250-xx*

250W system power supply

AT-PWR250-80*

250W DC system power supply

AT-PWR800-xx*

800W PoE+ power supply

AT-PWR1200-xx*

1200W PoE+ power supply

Fan accessories

AT-FAN09

Spare x930 fan module

AT-FAN09ADP

Spare x930 fan adaptor board

StackQS module

Where xx = 10 for US power cord 20 for no power cord 30 for UK power cord 40 for Australian power cord 50 for European power cord

NETWORK SMARTER x930 Series | 7

^{*} Power supplies must be ordered separately

40G QSFP+ Modules

AT-QSFP1CU (use with AT-StackQS module)

1 meter QSFP+ direct attach stacking cable

AT-QSFPLR4

40GLR4 1310 nm medium-haul, 10 km with SMF

AT-OSFPSR

40GSR 850nm short-haul up to 150 m with MMF

AT-MTP12-1

1 meter MTP optical cable for AT-QSFPSR

AT-MTP12-5

5 meter MTP optical cable for AT-QSFPSR

Breakout Cables For 4 x 10G connections

AT-QSFP-4SFP10G-3CU

QSFP to 4 x SFP+ breakout direct attach cable (3 m)

AT-QSFP-4SFP10G-5CU

QSFP to 4 x SFP+ breakout direct attach cable (5 m)

10G SFP+ Modules

(Note that any Allied Telesis 10G SFP+ module can be used for stacking with the front panel 10G ports)

AT-SP10SR*

10GSR 850 nm short-haul, 300 m with MMF

AT-SP10SR/I

10GSR 850 nm short-haul, 300 m with MMF industrial temperature

AT-SP10LRM

10GLRM 1310 nm short-haul, 220 m with MMF

AT-SP10LR*

10GLR 1310 nm medium-haul, 10 km with SMF

AT-SP10LR/I

10GLR 1310 nm medium-haul, 10 km with SMF industrial temperature

AT-SP10LR20/I

10GER 1310nm long-haul, 20 km with SMF industrial temperature

AT-SP10ER40/I*

10GER 1310nm long-haul, 40 km with SMF industrial temperature

AT-SP10ZR80/I*

10GER 1550nm long-haul, 80 km with SMF industrial temperature

AT-SP10TW1

1 meter SFP+ direct attach cable

AT-SP10TW3

3 meter SFP+ direct attach cable

AT-SP10TW7

7 meter SFP+ direct attach cable

100Mbps SFP Modules

100Mbps SFP modules are only compatible with the SFP ports on the AT-x930-28GSTX switch)

AT-SPFX/2

100FX multi-mode 1310 nm fiber up to 2 km

AT-SPFX/15

100FX single-mode 1310 nm fiber up to 15 km

AT-SPFXBD-LC-13

100BX Bi-Di (1310 nm Tx, 1550 nm Rx) fiber up to 10 km $\,$

AT-SPFXBD-LC-15

100BX Bi-Di (1550 nm Tx, 1310nm Rx) fiber up to 10 km

1000Mbps SFP Modules

AT-SPTX

1000T 100 m copper

AT-SPSX

1000SX GbE multi-mode 850 nm fiber up to 550 m

AT-SPEX

1000X GbE multi-mode 1310 nm fiber up to 2 km

AT-SPLX10

1000LX GbE single-mode 1310 nm fiber up to 10 km

AT-SPLX10/I

1000LX GbE single-mode 1310 nm fiber up to 10 km industrial temperature

AT-SPBD10-13

1000LX $\,$ GbE Bi-Di (1310 nm Tx, 1490 nm Rx) fiber up to 10 km $\,$

AT-SPBD10-14

1000LX $\,$ GbE Bi-Di (1490 nm Tx, 1310 nm Rx) fiber up to 10 km $\,$

AT-SPLX40

1000LX GbE single-mode 1310 nm fiber up to 40 km

AT-SPZX80

1000ZX $\,$ GbE single-mode 1550 nm fiber up to 80 km $\,$
