2. Our AMA will: (a) oppose changes to residency and fellowship application requirements unless (i) those changes have been evaluated by working groups which have students and residents as representatives, (ii) there are data which demonstrates that the proposed application components contribute to an accurate representation of the candidate, (iii) there are data available to demonstrate that the new application requirements reduce, or at least do not increase, the impact of bias that affects medical students and residents from underrepresented minority backgrounds, and (iv) the costs to medical students and residents are mitigated; and (b) continue to work with specialty societies, the

Association of American Medical Colleges, the National Resident Matching Program and other relevant stakeholders to improve the application process in an effort to accomplish these requirements.
Citation: Res. 93, I-79; Reaffirmed: CLRPD Rep. B, I-89; Appended: Res. 302 and Res. 313, I-97; Reaffirmed: CME Rep. 2, A-07; Modified: Res. 302, A-14; Appended: Res. 314, A-19;

The Grading Policy for Medical Licensure Examinations H-275.953
1. Our AMA's representatives to the ACGME are instructed to promote the principle that selection of residents should be based on a broad variety of evaluative criteria, and to propose that the ACGME General Requirements state clearly that residency program directors must not use NBME or USMLE ranked passing scores as a screening criterion for residency selection.
2. Our AMA adopts the following policy on NBME or USMLE examination scoring: (a) Students receive "pass/fail" scores as soon as they are available. (If students fail the examinations, they may request their numerical scores immediately.) (b) Numerical scores are reported to the state licensing authorities upon request by the applicant for licensure. At this time, the applicant may request a copy of his or her numerical scores. (c) Scores are reported in pass/fail format for each student to the medical school. The school also receives a frequency distribution of numerical scores for the aggregate of their students.
3. Our AMA will: (a) promote equal acceptance of the USMLE and COMLEX at all United States residency programs; (b) work with appropriate stakeholders including but not limited to the National Board of Medical Examiners, Association of American Medical Colleges, National Board of Osteopathic Medical Examiners, Accreditation Council for Graduate Medical Education and American Osteopathic Association to educate Residency Program Directors on how to interpret and use COMLEX scores; and (c) work with Residency Program Directors to promote higher COMLEX utilization with residency program matches in light of the new single accreditation system.
4. Our AMA will work with appropriate stakeholders to release guidance for residency and fellowship program directors on equitably comparing students who received 3-digit United States Medical Licensing Examination Step 1 or Comprehensive Osteopathic Medical Licensing Examination of the United States Level 1 scores and students who received Pass/Fail scores.
Citation: CME Rep. G, I-90; Reaffirmed by Res. 310, A-98; Reaffirmed: CME Rep. 3, A-04; Reaffirmed: CME Rep. 2, A-14; Appended: Res. 309, A-17; Modified: Res. 318, A-18; Appended: Res. 955, I-18; Appended: Res. 301, I-21; Modified: CME Rep. 1, A-22;

The Preservation, Stability and Expansion of Full Funding for Graduate Medical Education D-305.967
1. Our AMA will actively collaborate with appropriate stakeholder organizations, (including Association of American Medical Colleges, American Hospital Association, state medical societies, medical specialty societies/associations) to advocate for the preservation, stability and expansion of full funding for the direct and indirect costs of graduate medical education (GME) positions from all existing sources (e.g. Medicare, Medicaid, Veterans Administration, CDC and others).
2. Our AMA will actively advocate for the stable provision of matching federal funds for state Medicaid programs that fund GME positions.
3. Our AMA will actively seek congressional action to remove the caps on Medicare funding of GME positions for resident physicians that were imposed by the Balanced Budget Amendment of 1997 (BBA-1997).
4. Our AMA will strenuously advocate for increasing the number of GME positions to address the future physician workforce needs of the nation.
5. Our AMA will oppose efforts to move federal funding of GME positions to the annual appropriations process that is subject to instability and uncertainty.
6. Our AMA will oppose regulatory and legislative efforts that reduce funding for GME from the full scope of resident educational activities that are designated by residency programs for accreditation and the board certification of their graduates (e.g. didactic teaching, community service, off-site ambulatory rotations, etc.).
7. Our AMA will actively explore additional sources of GME funding and their potential impact on the quality of residency training and on patient care.
8. Our AMA will vigorously advocate for the continued and expanded contribution by all payers for health care (including the federal government, the states, and local and private sources) to fund both the direct and indirect costs of GME.
9. Our AMA will work, in collaboration with other stakeholders, to improve the awareness of the general public that GME is a public good that provides essential services as part of the training process and

serves as a necessary component of physician preparation to provide patient care that is safe, effective and of high quality.
10. Our AMA staff and governance will continuously monitor federal, state and private proposals for health care reform for their potential impact on the preservation, stability and expansion of full funding for the direct and indirect costs of GME.
11. Our AMA: (a) recognizes that funding for and distribution of positions for GME are in crisis in the United States and that meaningful and comprehensive reform is urgently needed; (b) will immediately work with Congress to expand medical residencies in a balanced fashion based on expected specialty needs throughout our nation to produce a geographically distributed and appropriately sized physician workforce; and to make increasing support and funding for GME programs and residencies a top priority of the AMA in its national political agenda; and (c) will continue to work closely with the Accreditation Council for Graduate Medical Education, Association of American Medical Colleges, American Osteopathic Association, and other key stakeholders to raise awareness among policymakers and the public about the importance of expanded GME funding to meet the nation's current and anticipated medical workforce needs.
12. Our AMA will collaborate with other organizations to explore evidence-based approaches to quality and accountability in residency education to support enhanced funding of GME.
13. Our AMA will continue to strongly advocate that Congress fund additional graduate medical education (GME) positions for the most critical workforce needs, especially considering the current and worsening maldistribution of physicians.
14. Our AMA will advocate that the Centers for Medicare and Medicaid Services allow for rural and other underserved rotations in Accreditation Council for Graduate Medical Education (ACGME)-accredited residency programs, in disciplines of particular local/regional need, to occur in the offices of physicians who meet the qualifications for adjunct faculty of the residency program's sponsoring institution.
15. Our AMA encourages the ACGME to reduce barriers to rural and other underserved community experiences for graduate medical education programs that choose to provide such training, by adjusting as needed its program requirements, such as continuity requirements or limitations on time spent away from the primary residency site.
16. Our AMA encourages the ACGME and the American Osteopathic Association (AOA) to continue to develop and disseminate innovative methods of training physicians efficiently that foster the skills and inclinations to practice in a health care system that rewards team-based care and social accountability.
17. Our AMA will work with interested state and national medical specialty societies and other appropriate stakeholders to share and support legislation to increase GME funding, enabling a state to accomplish one or more of the following: (a) train more physicians to meet state and regional workforce needs; (b) train physicians who will practice in physician shortage/underserved areas; or (c) train physicians in undersupplied specialties and subspecialties in the state/region.
18. Our AMA supports the ongoing efforts by states to identify and address changing physician workforce needs within the GME landscape and continue to broadly advocate for innovative pilot programs that will increase the number of positions and create enhanced accountability of GME programs for quality outcomes.
19. Our AMA will continue to work with stakeholders such as Association of American Medical Colleges (AAMC), ACGME, AOA, American Academy of Family Physicians, American College of Physicians, and other specialty organizations to analyze the changing landscape of future physician workforce needs as well as the number and variety of GME positions necessary to provide that workforce.
20. Our AMA will explore innovative funding models for incremental increases in funded residency positions related to quality of resident education and provision of patient care as evaluated by appropriate medical education organizations such as the Accreditation Council for Graduate Medical Education.
21. Our AMA will utilize its resources to share its content expertise with policymakers and the public to ensure greater awareness of the significant societal value of graduate medical education (GME) in terms of patient care, particularly for underserved and at-risk populations, as well as global health, research and education.
22. Our AMA will advocate for the appropriation of Congressional funding in support of the National Healthcare Workforce Commission, established under section 5101 of the Affordable Care Act, to provide data and healthcare workforce policy and advice to the nation and provide data that support the value of GME to the nation.
23. Our AMA supports recommendations to increase the accountability for and transparency of GME funding and continue to monitor data and peer-reviewed studies that contribute to further assess the value of GME.

24. Our AMA will explore various models of all-payer funding for GME, especially as the Institute of Medicine (now a program unit of the National Academy of Medicine) did not examine those options in its 2014 report on GME governance and financing.
25. Our AMA encourages organizations with successful existing models to publicize and share strategies, outcomes and costs.
26. Our AMA encourages insurance payers and foundations to enter into partnerships with state and local agencies as well as academic medical centers and community hospitals seeking to expand GME.
27. Our AMA will develop, along with other interested stakeholders, a national campaign to educate the public on the definition and importance of graduate medical education, student debt and the state of the medical profession today and in the future.
28. Our AMA will collaborate with other stakeholder organizations to evaluate and work to establish consensus regarding the appropriate economic value of resident and fellow services.
29. Our AMA will monitor ongoing pilots and demonstration projects, and explore the feasibility of broader implementation of proposals that show promise as alternative means for funding physician education and training while providing appropriate compensation for residents and fellows.
30. Our AMA will monitor the status of the House Energy and Commerce Committee's response to public comments solicited regarding the 2014 IOM report, Graduate Medical Education That Meets the Nation's Health Needs, as well as results of ongoing studies, including that requested of the GAO, in order to formulate new advocacy strategy for GME funding, and will report back to the House of Delegates regularly on important changes in the landscape of GME funding.
31. Our AMA will advocate to the Centers for Medicare & Medicaid Services to adopt the concept of “Cap-Flexibility” and allow new and current Graduate Medical Education teaching institutions to extend their cap-building window for up to an additional five years beyond the current window (for a total of up to ten years), giving priority to new residency programs in underserved areas and/or economically depressed areas.
32. Our AMA will: (a) encourage all existing and planned allopathic and osteopathic medical schools to thoroughly research match statistics and other career placement metrics when developing career guidance plans; (b) strongly advocate for and work with legislators, private sector partnerships, and existing and planned osteopathic and allopathic medical schools to create and fund graduate medical education (GME) programs that can accommodate the equivalent number of additional medical school graduates consistent with the workforce needs of our nation; and (c) encourage the Liaison Committee on Medical Education (LCME), the Commission on Osteopathic College Accreditation (COCA), and other accrediting bodies, as part of accreditation of allopathic and osteopathic medical schools, to prospectively and retrospectively monitor medical school graduates’ rates of placement into GME as well as GME completion.
33. Our AMA encourages the Secretary of the U.S. Department of Health and Human Services to coordinate with federal agencies that fund GME training to identify and collect information needed to effectively evaluate how hospitals, health systems, and health centers with residency programs are utilizing these financial resources to meet the nation’s health care workforce needs. This includes information on payment amounts by the type of training programs supported, resident training costs and revenue generation, output or outcomes related to health workforce planning (i.e., percentage of primary care residents that went on to practice in rural or medically underserved areas), and measures related to resident competency and educational quality offered by GME training programs.
34. Our AMA will publicize best practice examples of state-funded Graduate Medical Education positions and develop model state legislation where appropriate.

Strategies for Enhancing Diversity in the Physician Workforce D-200.985
1. Our AMA, independently and in collaboration with other groups such as the Association of American Medical Colleges (AAMC), will actively work and advocate for funding at the federal and state levels and

in the private sector to support the following: (a) Pipeline programs to prepare and motivate members of underrepresented groups to enter medical school; (b) Diversity or minority affairs offices at medical schools; (c) Financial aid programs for students from groups that are underrepresented in medicine; and (d) Financial support programs to recruit and develop faculty members from underrepresented groups.
2. Our AMA will work to obtain full restoration and protection of federal Title VII funding, and similar state funding programs, for the Centers of Excellence Program, Health Careers Opportunity Program, Area Health Education Centers, and other programs that support physician training, recruitment, and retention in geographically-underserved areas.
3. Our AMA will take a leadership role in efforts to enhance diversity in the physician workforce, including engaging in broad-based efforts that involve partners within and beyond the medical profession and medical education community.
4. Our AMA will encourage the Liaison Committee on Medical Education to assure that medical schools demonstrate compliance with its requirements for a diverse student body and faculty.
5. Our AMA will develop an internal education program for its members on the issues and possibilities involved in creating a diverse physician population.
6. Our AMA will provide on-line educational materials for its membership that address diversity issues in patient care including, but not limited to, culture, religion, race and ethnicity.
7. Our AMA will create and support programs that introduce elementary through high school students, especially those from groups that are underrepresented in medicine (URM), to healthcare careers.
8. Our AMA will create and support pipeline programs and encourage support services for URM college students that will support them as they move through college, medical school and residency programs.
9. Our AMA will recommend that medical school admissions committees and residency/fellowship programs use holistic assessments of applicants that take into account the diversity of preparation and the variety of talents that applicants bring to their education with the goal of improving health care for all communities.
10. Our AMA will advocate for the tracking and reporting to interested stakeholders of demographic information pertaining to URM status collected from Electronic Residency Application Service (ERAS) applications through the National Resident Matching Program (NRMP).
11. Our AMA will continue the research, advocacy, collaborative partnerships and other work that was initiated by the Commission to End Health Care Disparities.
12. Our AMA opposes legislation that would undermine institutions' ability to properly employ affirmative action to promote a diverse student population.
13. Our AMA will work with the AAMC and other stakeholders to create a question for the AAMC electronic medical school application to identify previous pipeline program (also known as pathway program) participation and create a plan to analyze the data in order to determine the effectiveness of pipeline programs.

US Physician Shortage H-200.954
Our AMA:
(1) explicitly recognizes the existing shortage of physicians in many specialties and areas of the US;
(2) supports efforts to quantify the geographic maldistribution and physician shortage in many specialties;
(3) supports current programs to alleviate the shortages in many specialties and the maldistribution of physicians in the US;
(4) encourages medical schools and residency programs to consider developing admissions policies and practices and targeted educational efforts aimed at attracting physicians to practice in underserved areas and to provide care to underserved populations;
(5) encourages medical schools and residency programs to continue to provide courses, clerkships, and longitudinal experiences in rural and other underserved areas as a means to support educational program objectives and to influence choice of graduates' practice locations;
(6) encourages medical schools to include criteria and processes in admission of medical students that are predictive of graduates' eventual practice in underserved areas and with underserved populations;
(7) will continue to advocate for funding from public and private payers for educational programs that provide experiences for medical students in rural and other underserved areas;
(8) will continue to advocate for funding from all payers (public and private sector) to increase the number

of graduate medical education positions in specialties leading to first certification;
(9) will work with other groups to explore additional innovative strategies for funding graduate medical education positions, including positions tied to geographic or specialty need;
(10) continues to work with the Association of American Medical Colleges (AAMC) and other relevant groups to monitor the outcomes of the National Resident Matching Program; and
(11) continues to work with the AAMC and other relevant groups to develop strategies to address the current and potential shortages in clinical training sites for medical students.
(12) will: (a) promote greater awareness and implementation of the Project ECHO (Extension for Community Healthcare Outcomes) and Child Psychiatry Access Project models among academic health centers and community-based primary care physicians; (b) work with stakeholders to identify and mitigate barriers to broader implementation of these models in the United States; and (c) monitor whether health care payers offer additional payment or incentive payments for physicians who engage in clinical practice improvement activities as a result of their participation in programs such as Project ECHO and the Child Psychiatry Access Project; and if confirmed, promote awareness of these benefits among physicians.
(13) will work to augment the impact of initiatives to address rural physician workforce shortages.

Residents and Fellows' Bill of Rights H-310.912
1. Our AMA continues to advocate for improvements in the ACGME Institutional and Common Program Requirements that support AMA policies as follows: a) adequate financial support for and guaranteed leave to attend professional meetings; b) submission of training verification information to requesting agencies within 30 days of the request; c) adequate compensation with consideration to local cost-of-living factors and years of training, and to include the orientation period; d) health insurance benefits to include dental and vision services; e) paid leave for all purposes (family, educational, vacation, sick) to be no less than six weeks per year; and f) stronger due process guidelines.
2. Our AMA encourages the ACGME to ensure access to educational programs and curricula as necessary to facilitate a deeper understanding by resident physicians of the US health care system and to increase their communication skills.
3. Our AMA regularly communicates to residency and fellowship programs and other GME stakeholders this Resident/Fellows Physicians' Bill of Rights.
4. Our AMA: a) will promote residency and fellowship training programs to evaluate their own institution's process for repayment and develop a leaner approach. This includes disbursement of funds by direct deposit as opposed to a paper check and an online system of applying for funds; b) encourages a system of expedited repayment for purchases of $200 or less (or an equivalent institutional threshold), for example through payment directly from their residency and fellowship programs (in contrast to following traditional workflow for reimbursement); and c) encourages training programs to develop a budget and strategy for planned expenses versus unplanned expenses, where planned expenses should be estimated using historical data, and should include trainee reimbursements for items such as educational materials, attendance at conferences, and entertaining applicants. Payment in advance or within one month of document submission is strongly recommended.
5. Our AMA will partner with ACGME and other relevant stakeholders to encourage training programs to reduce financial burdens on residents and fellows by providing employee benefits including, but not limited to, on-call meal allowances, transportation support, relocation stipends, and childcare services.
6. Our AMA will work with the Accreditation Council for Graduate Medical Education (ACGME) and other relevant stakeholders to amend the ACGME Common Program Requirements to allow flexibility in the specialty-specific ACGME program requirements enabling specialties to require salary reimbursement or "protected time" for resident and fellow education by "core faculty," program directors, and assistant/associate program directors.
7. Our AMA encourages teaching institutions to offer retirement plan options, retirement plan matching, financial advising and personal finance education.
8. Our AMA adopts the following "Residents and Fellows' Bill of Rights" as applicable to all resident and fellow physicians in ACGME-accredited training programs:
RESIDENT/FELLOW PHYSICIANS' BILL OF RIGHTS
Residents and fellows have a right to:
A. An education that fosters professional development, takes priority over service, and leads to

independent practice.
With regard to education, residents and fellows should expect: (1) A graduate medical education experience that facilitates their professional and ethical development, to include regularly scheduled didactics for which they are released from clinical duties. Service obligations should not interfere with educational opportunities and clinical education should be given priority over service obligations; (2) Faculty who devote sufficient time to the educational program to fulfill their teaching and supervisory responsibilities; (3) Adequate clerical and clinical support services that minimize the extraneous, time-consuming work that draws attention from patient care issues and offers no educational value; (4) 24-hour per day access to information resources to educate themselves further about appropriate patient care; and (5) Resources that will allow them to pursue scholarly activities to include financial support and education leave to attend professional meetings.

B. Appropriate supervision by qualified physician faculty with progressive resident responsibility toward independent practice.
With regard to supervision, residents and fellows must be ultimately supervised by physicians who are adequately qualified and allow them to assume progressive responsibility appropriate to their level of education, competence, and experience. In instances where clinical education is provided by non-physicians, there must be an identified physician supervisor providing indirect supervision, along with mechanisms for reporting inappropriate, non-physician supervision to the training program, sponsoring institution or ACGME as appropriate.

C. Regular and timely feedback and evaluation based on valid assessments of resident performance.
With regard to evaluation and assessment processes, residents and fellows should expect: (1) Timely and substantive evaluations during each rotation in which their competence is objectively assessed by faculty who have directly supervised their work; (2) To evaluate the faculty and the program confidentially and in writing at least once annually and expect that the training program will address deficiencies revealed by these evaluations in a timely fashion; (3) Access to their training file and to be made aware of the contents of their file on an annual basis; and (4) Training programs to complete primary verification/credentialing forms and recredentialing forms, apply all required signatures to the forms, and then have the forms permanently secured in their educational files at the completion of training or a period of training and, when requested by any organization involved in credentialing process, ensure the submission of those documents to the requesting organization within thirty days of the request.

D. A safe and supportive workplace with appropriate facilities.
With regard to the workplace, residents and fellows should have access to: (1) A safe workplace that enables them to fulfill their clinical duties and educational obligations; (2) Secure, clean, and comfortable on-call rooms and parking facilities which are secure and well-lit; (3) Opportunities to participate on committees whose actions may affect their education, patient care, workplace, or contract.

E. Adequate compensation and benefits that provide for resident well-being and health.
(1) With regard to contracts, residents and fellows should receive: a. Information about the interviewing residency or fellowship program including a copy of the currently used contract clearly outlining the conditions for (re)appointment, details of remuneration, specific responsibilities including call obligations, and a detailed protocol for handling any grievance; and b. At least four months advance notice of contract non-renewal and the reason for non-renewal.
(2) With regard to compensation, residents and fellows should receive: a. Compensation for time at orientation; and b. Salaries commensurate with their level of training and experience. Compensation should reflect cost of living differences based on local economic factors, such as housing, transportation, and energy costs (which affect the purchasing power of wages), and include appropriate adjustments for changes in the cost of living.
(3) With regard to benefits, residents and fellows must be fully informed of and should receive: a. Quality and affordable comprehensive medical, mental health, dental, and vision care for residents and their families, as well as retirement plan options, professional liability insurance and disability insurance to all residents for disabilities resulting from activities that are part of the educational program; b. An institutional written policy on and education in the signs of excessive fatigue, clinical depression, substance abuse and dependence, and other physician impairment issues; c. Confidential access to mental health and substance abuse services; d. A guaranteed, predetermined amount of paid vacation leave, sick leave, family and medical leave and educational/professional leave during each year in their training program, the total amount of which should not be less than six weeks; e. Leave in compliance with the Family and Medical Leave Act; and f. The conditions under which sleeping quarters, meals and laundry or their equivalent are to be provided.

F. Clinical and educational work hours that protect patient safety and facilitate resident well-being and education.
With regard to clinical and educational work hours, residents and fellows should experience: (1) A reasonable work schedule that is in compliance with clinical and educational work hour requirements set forth by the ACGME; and (2) At-home call that is not so frequent or demanding such that rest periods are significantly diminished or that clinical and educational work hour requirements are effectively circumvented. Refer to AMA Policy H-310.907, "Resident/Fellow Clinical and Educational Work Hours," for more information.
G. Due process in cases of allegations of misconduct or poor performance.
With regard to the complaints and appeals process, residents and fellows should have the opportunity to defend themselves against any allegations presented against them by a patient, health professional, or training program in accordance with the due process guidelines established by the AMA.
H. Access to and protection by institutional and accreditation authorities when reporting violations.
With regard to reporting violations to the ACGME, residents and fellows should: (1) Be informed by their program at the beginning of their training and again at each semi-annual review of the resources and processes available within the residency program for addressing resident concerns or complaints, including the program director, Residency Training Committee, and the designated institutional official; (2) Be able to file a formal complaint with the ACGME to address program violations of residency training requirements without fear of recrimination and with the guarantee of due process; and (3) Have the opportunity to address their concerns about the training program through confidential channels, including the ACGME concern process and/or the annual ACGME Resident Survey.
9. Our AMA will work with the ACGME and other relevant stakeholders to advocate for ways to defray additional costs related to residency and fellowship training, including essential amenities and/or high cost specialty-specific equipment required to perform clinical duties.
10. Our AMA believes that healthcare trainee salary, benefits, and overall compensation should, at minimum, reflect length of pre-training education, hours worked, and level of independence and complexity of care allowed by an individual's training program (for example when comparing physicians in training and midlevel providers at equal postgraduate training levels).
11.The Residents and Fellows' Bill of Rights will be prominently published online on the AMA website and disseminated to residency and fellowship programs.
12. Our AMA will distribute and promote the Residents and Fellows' Bill of Rights online and individually to residency and fellowship training programs and encourage changes to institutional processes that embody these principles.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 304
(A-23)

Introduced by: Medical Student Section

Subject: Increasing Access to Gender-Affirming Procedures Through Expanded Training and Equitable Reimbursement

Referred to: Reference Committee C

Whereas, Gender-affirming care is an important and potentially life-saving aspect of health care for transgender and gender diverse individuals[1,2]; and

Whereas, Gender-affirming procedures represent an important component of gender-affirming care with numerous benefits for transgender and gender diverse individuals[3,4]; and

Whereas, Demand for gender-affirming procedures continues to increase[5,6]; and

Whereas, A barrier to patients receiving gender-affirming procedures is the limited number of providers trained to perform them[6,7]; and

Whereas, Only 1 in 4 plastic surgery residency programs incorporate structured training for gender-affirming procedures[8]; and

Whereas, Centers for Medicare and Medicaid Services determines reimbursement rates for procedures based on “relative value units” which are influenced by recommendations from the AMA/Specialty Society RVS Update Committee[9]; and

Whereas, Since 2014, health insurance reimbursement for gender-affirming procedures has lagged considerably behind inflation[10]; and

Whereas, Lack of equitable reimbursement further limits the number of providers and institutions willing to perform gender-affirming procedures due to lack of financial sustainability[11]; and

Whereas, Lack of equitable reimbursement has led to providers and institutions being unwilling to accept particular health insurances, which creates an additional barrier to patients with these insurances receiving gender-affirming procedures[11]; and

Whereas, Existing AMA policy (H-185.927) states our AMA will “advocate for federal, state, and local policies to provide medically necessary care for gender dysphoria”, but does not address instances of gender-affirming care for individuals who do not have gender dysphoria nor structured training for gender-affirming procedures nor reimbursement for said procedures by health insurance providers[12] ; and

Whereas, Existing AMA policy (H-185.950) states our AMA “supports public and private health insurance coverage for treatment of gender dysphoria as recommended by the patient's physician”, but does not address instances of gender-affirming care for individuals who do not

have gender dysphoria nor reimbursement for gender-affirming procedures by health insurance providers[13]; and

Whereas, Existing AMA policy (D-295.312) states our AMA will "advocate for policies addressing the medical spectrum of gender identity to ensure access to quality health care", but does not address structured training for gender-affirming procedures nor reimbursement for said procedures by health insurance providers[14]; and

Whereas, Existing AMA policy (H-160.991) states our AMA "is committed to taking a leadership role in…encouraging the development of educational programs in LGBTQ Health", thus indicating that this policy is an extension of previously expressed values[15]; and

Whereas, Existing AMA policy (D-385.968) states our AMA will "oppose any attempts…to restrict reimbursement for procedures and services based on physician specialty", thus indicating that this policy is an extension of previously expressed values[16]; therefore be it

RESOLVED, That our American Medical Association advocate for expanded structured training for gender-affirming procedures by working with relevant stakeholders including but not limited to the Accreditation Council for Graduate Medical Education (Directive to Take Action); and be it further

RESOLVED, That our AMA advocate for equitable reimbursement of gender-affirming procedures by health insurance providers, including public and private insurers. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 3/27/23

RELEVANT AMA POLICY

Clarification of Medical Necessity for Treatment of Gender Dysphoria H-185.927
Our AMA: (1) recognizes that medical and surgical treatments for gender dysphoria, as determined by shared decision making between the patient and physician, are medically necessary as outlined by generally-accepted standards of medical and surgical practice; (2) will advocate for federal, state, and local policies to provide medically necessary care for gender dysphoria; and (3) opposes the criminalization and otherwise undue restriction of evidence-based gender-affirming care.
Citation: Res. 05, A-16; Modified: Res. 015, A-21;

Removing Financial Barriers to Care for Transgender Patients H-185.950
Our AMA supports public and private health insurance coverage for treatment of gender dysphoria as recommended by the patient's physician.
Citation: Res. 122; A-08; Modified: Res. 05, A-16; Reaffirmed: Res. 012, A-22;

Medical Spectrum of Gender D-295.312
Given the medical spectrum of gender identity and sex, our AMA: (1) will work with appropriate medical organizations and community based organizations to inform and educate the medical community and the public on the medical spectrum of gender identity; (2) will educate state and federal policymakers and legislators on and advocate for policies addressing the medical spectrum of gender identity to ensure access to quality health care; and (3) affirms that an individual’s genotypic sex, phenotypic sex, sexual orientation, gender and gender identity are not always aligned or indicative of the other, and that gender for many individuals may differ from the sex assigned at birth.
Citation: Res. 003, A-17; Modified: Res. 005, I-18;

Support for Appropriate Billing and Payment Procedures by Physicians D-385.968
Our AMA will oppose any attempts by federal and state legislatures, regulatory bodies, hospitals, private and government payers, and others to restrict reimbursement for procedures and services based on physician specialty.
Citation: BOT Rep. 32, A-08; Reaffirmed: CMS Rep. 01, A-18;

Health Care Needs of Lesbian, Gay, Bisexual, Transgender and Queer Populations H-160.991
1. Our AMA: (a) believes that the physician's nonjudgmental recognition of patients' sexual orientations, sexual behaviors, and gender identities enhances the ability to render optimal patient care in health as well as in illness. In the case of lesbian, gay, bisexual, transgender, queer/questioning, and other (LGBTQ) patients, this recognition is especially important to address the specific health care needs of people who are or may be LGBTQ; (b) is committed to taking a leadership role in: (i) educating physicians on the current state of research in and knowledge of LGBTQ Health and the need to elicit relevant gender and sexuality information from our patients; these efforts should start in medical school, but must also be a part of continuing medical education; (ii) educating physicians to recognize the physical and psychological needs of LGBTQ patients; (iii) encouraging the development of educational programs in LGBTQ Health; (iv) encouraging physicians to seek out local or national experts in the health care needs of LGBTQ people so that all physicians will achieve a better understanding of the medical needs of these populations; and (v) working with LGBTQ communities to offer physicians the opportunity to better understand the medical needs of LGBTQ patients; and (c) opposes, the use of "reparative" or "conversion" therapy for sexual orientation or gender identity.
2. Our AMA will collaborate with our partner organizations to educate physicians regarding: (i) the need for sexual and gender minority individuals to undergo regular cancer and sexually transmitted infection screenings based on anatomy due to their comparable or elevated risk for these conditions; and (ii) the

need for comprehensive screening for sexually transmitted diseases in men who have sex with men; (iii) appropriate safe sex techniques to avoid the risk for sexually transmitted diseases; and (iv) that individuals who identify as a sexual and/or gender minority (lesbian, gay, bisexual, transgender, queer/questioning individuals) experience intimate partner violence, and how sexual and gender minorities present with intimate partner violence differs from their cisgender, heterosexual peers and may have unique complicating factors.
3. Our AMA will continue to work alongside our partner organizations, including GLMA, to increase physician competency on LGBTQ health issues.
4. Our AMA will continue to explore opportunities to collaborate with other organizations, focusing on issues of mutual concern in order to provide the most comprehensive and up-to-date education and information to enable the provision of high quality and culturally competent care to LGBTQ people.
Citation: CSA Rep. C, I-81; Reaffirmed: CLRPD Rep. F, I-91; CSA Rep. 8 - I-94; Appended: Res. 506, A-00; Modified and Reaffirmed: Res. 501, A-07; Modified: CSAPH Rep. 9, A-08; Reaffirmation A-12; Modified: Res. 08, A-16; Modified: Res. 903, I-17; Modified: Res. 904, I-17; Res. 16, A-18; Reaffirmed: CSAPH Rep. 01, I-18;

Sexual Orientation and/or Gender Identity as Health Insurance Criteria H-180.980
The AMA opposes the denial of health insurance on the basis of sexual orientation or gender identity.
Citation: Res. 178, A-88; Reaffirmed: Sub. Res. 101, I-97; Reaffirmed: CMS Rep. 9, A-07; Modified: BOT Rep. 11, A-07; Reaffirmed: CMS Rep. 01, A-17;

Reducing Suicide Risk Among Lesbian, Gay, Bisexual, Transgender, and Questioning Youth Through Collaboration with Allied Organizations H-60.927
Our AMA will partner with public and private organizations dedicated to public health and public policy to reduce lesbian, gay, bisexual, transgender, and questioning (LGBTQ) youth suicide and improve health among LGBTQ youth.
Citation: Res. 402, A-12; Reaffirmed: CSAPH Rep. 1, A-22;

Establishing A Task Force to Preserve the Patient-Physician Relationship When Evidence-Based, Appropriate Care Is Banned or Restricted G-605.009
1. Our AMA will convene a task force of appropriate AMA councils and interested state and medical specialty societies, in conjunction with the AMA Center for Health Equity, and in consultation with relevant organizations, practices, government bodies, and impacted communities for the purpose of preserving the patient-physician relationship.
2. This task force, which will serve at the direction of our AMA Board of Trustees, will inform the Board to help guide organized medicine's response to bans and restrictions on abortion, prepare for widespread criminalization of other evidence-based care, implement relevant AMA policies, and identify and create implementation-focused practice and advocacy resources on issues including but not limited to:
a. Health equity impact, including monitoring and evaluating the consequences of abortion bans and restrictions for public health and the physician workforce and including making actionable recommendations to mitigate harm, with a focus on the disproportionate impact on under-resourced, marginalized, and minoritized communities;
b. Practice management, including developing recommendations and educational materials for addressing reimbursement, uncompensated care, interstate licensure, and provision of care, including telehealth and care provided across state lines;
c. Training, including collaborating with interested medical schools, residency and fellowship programs, academic centers, and clinicians to mitigate radically diminished training opportunities;
d. Privacy protections, including best practice support for maintaining medical records privacy and confidentiality, including under HIPAA, for strengthening physician, patient, and clinic security measures, and countering law enforcement reporting requirements;
e. Patient triage and care coordination, including identifying and publicizing resources for physicians and patients to connect with referrals, practical support, and legal assistance;
f. Coordinating implementation of pertinent AMA policies, including any actions to protect against civil, criminal, and professional liability and retaliation, including criminalizing and penalizing physicians for referring patients to the care they need; and
g. Anticipation and preparation, including assessing information and resource gaps and creating a blueprint for preventing or mitigating bans on other appropriate health care, such as gender affirming

care, contraceptive care, sterilization, infertility care, and management of ectopic pregnancy and spontaneous pregnancy loss and pregnancy complications.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 305
(A-23)

Introduced by: Medical Student Section

Subject: Indian Health Service Graduate Medical Education

Referred to: Reference Committee C

Whereas, Patients require a sufficient, well-trained supply of primary care physicians to meet the nation's current and projected demand for health care services (H-200.949); and

Whereas, The Indian Health Service (IHS), an agency within the U.S. Department of Health and Human Services, is responsible for providing federal health services to American Indians and Alaska Natives[1]; and

Whereas, In areas where the IHS has substantial direct care obligations, the IHS physician vacancy rate ranges from 21 to 46 percent[2]; and

Whereas, IHS officials note that the vacancies mentioned above are longstanding and thus have negative effects longitudinally, including inequitable access to healthcare, decreased quality of patient care, and adverse impact on employee morale[2]; and

Whereas, The U.S. Government Accountability Office has found that 57% of medical residents stay to practice in the geographical location where they completed their graduate residency training[3,4]; and

Whereas, The IHS is the only large federal health system to lack formalized graduate medical education (GME) partnerships with academic medical centers and teaching hospitals[5]; and

Whereas, Federal systems like the Veterans Health Administration have 75 years of partnerships with teaching hospitals through its Office of Academic Affiliations, supporting 11,000 GME positions[6]; and

Whereas, The nation's $15 billion in GME funding flows heavily to non-rural, non-American Indian and Alaska Native communities[5]; therefore be it

RESOLVED, That our American Medical Association advocate for the establishment of an Office of Academic Affiliations with the Indian Health Service (IHS) responsible for coordinating partnerships with LCME- and COCA-accredited medical schools and ACGME-accredited residency programs (Directive to Take Action); and be it further

RESOLVED, That our AMA support the development of novel graduate medical education (GME) funding streams for full-time positions at Indian Health Service, Tribal, and Urban Indian Health Programs. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Funding to Support Training of the Health Care Workforce H-310.916
1. Our American Medical Association will insist that any new GME funding to support graduate medical education positions be available only to Accreditation Council for Graduate Medical Education (ACGME) and/or American Osteopathic Association (AOA) accredited residency programs, and believes that funding made available to support the training of health care providers not be made at the expense of ACGME and/or AOA accredited residency programs.
2. Our AMA strongly advocates that: (A) there be no decreases in the current funding of MD and DO graduate medical education while there is a concurrent increase in funding of graduate medical education (GME) in other professions; and (B) there be at least proportional increases in the current funding of MD and DO graduate medical education similar to increases in funding of GME in other professions.
3. Our AMA will advocate to appropriate federal agencies, and other relevant stakeholders to oppose the diversion of direct and indirect funding away from ACGME-accredited graduate medical education programs.
Citation: Sub. Res. 913, I-09; Appended: Res. 917, I-15; Appended: Res. 309, I-20; Reaffirmed: Res. 305, A-21;

Securing Funding for Graduate Medical Education H-310.917
Our American Medical Association: (1) continues to be vigilant while monitoring pending legislation that may change the financing of medical services (health system reform) and advocate for expanded and broad-based funding for graduate medical education (from federal, state, and commercial entities); (2) continues to advocate for graduate medical education funding that reflects the physician workforce needs of the nation; (3) encourages all funders of GME to adhere to the Accreditation Council for Graduate Medical Education's requirements on restrictive covenants and its principles guiding the relationship between GME, industry and other funding sources, as well as the AMA's Opinion 8.061, and other AMA policy that protects residents and fellows from exploitation, including physicians training in non-ACGME-accredited programs; and (4) encourages entities planning to expand or start GME programs to develop a clear statement of the benefits of their GME activities to facilitate potential funding from appropriate sources given the goals of their programs.
Citation: (CME Rep. 3, I-09; Modified: CME Rep. 15, A-10; Reaffirmed in lieu of Res. 324, A-12; Reaffirmed: CME Rep. 5, A-13; Appended: CME Rep. 1, I-15)

Improving Health Care of American Indians H-350.976
Our AMA recommends that: (1) All individuals, special interest groups, and levels of government recognize the American Indian people as full citizens of the U.S., entitled to the same equal rights and privileges as other U.S. citizens.
(2) The federal government provide sufficient funds to support needed health services for American Indians.
(3) State and local governments give special attention to the health and health-related needs of nonreservation American Indians in an effort to improve their quality of life.
(4) American Indian religions and cultural beliefs be recognized and respected by those responsible for planning and providing services in Indian health programs.

(5) Our AMA recognize the "medicine man" as an integral and culturally necessary individual in delivering health care to American Indians.
(6) Strong emphasis be given to mental health programs for American Indians in an effort to reduce the high incidence of alcoholism, homicide, suicide, and accidents.
(7) A team approach drawing from traditional health providers supplemented by psychiatric social workers, health aides, visiting nurses, and health educators be utilized in solving these problems.
(8) Our AMA continue its liaison with the Indian Health Service and the National Indian Health Board and establish a liaison with the Association of American Indian Physicians.
(9) State and county medical associations establish liaisons with intertribal health councils in those states where American Indians reside.
(10) Our AMA supports and encourages further development and use of innovative delivery systems and staffing configurations to meet American Indian health needs but opposes overemphasis on research for the sake of research, particularly if needed federal funds are diverted from direct services for American Indians.
(11) Our AMA strongly supports those bills before Congressional committees that aim to improve the health of and health-related services provided to American Indians and further recommends that members of appropriate AMA councils and committees provide testimony in favor of effective legislation and proposed regulations.
Citation: (CLRPD Rep. 3, I-98; Reaffirmed: Res. 221, A-07; Reaffirmation A-12; Reaffirmed: Res. 233, A-13)

Indian Health Service H-350.977
The policy of the AMA is to support efforts in Congress to enable the Indian Health Service to meet its obligation to bring American Indian health up to the general population level. The AMA specifically recommends: (1) Indian Population: (a) In current education programs, and in the expansion of educational activities suggested below, special consideration be given to involving the American Indian and Alaska native population in training for the various health professions, in the expectation that such professionals, if provided with adequate professional resources, facilities, and income, will be more likely to serve the tribal areas permanently; (b) Exploration with American Indian leaders of the possibility of increased numbers of nonfederal American Indian health centers, under tribal sponsorship, to expand the American Indian role in its own health care; (c) Increased involvement of private practitioners and facilities in American Indian care, through such mechanisms as agreements with tribal leaders or Indian Health Service contracts, as well as normal private practice relationships; and (d) Improvement in transportation to make access to existing private care easier for the American Indian population.
(2) Federal Facilities: Based on the distribution of the eligible population, transportation facilities and roads, and the availability of alternative nonfederal resources, the AMA recommends that those Indian Health Service facilities currently necessary for American Indian care be identified and that an immediate construction and modernization program be initiated to bring these facilities up to current standards of practice and accreditation.
(3)Manpower: (a) Compensation for Indian Health Service physicians be increased to a level competitive with other Federal agencies and nongovernmental service; (b) Consideration should be given to increased compensation for service in remote areas; (c) In conjunction with improvement of Service facilities, efforts should be made to establish closer ties with teaching centers, thus increasing both the available manpower and the level of professional expertise available for consultation; (d) Allied health professional staffing of Service facilities should be maintained at a level appropriate to the special needs of the population served; (e) Continuing education opportunities should be provided for those health professionals serving these communities, and especially those in remote areas, and, increased peer contact, both to maintain the quality of care and to avert professional isolation; and (f) Consideration should be given to a federal statement of policy supporting continuation of the Public Health Service to reduce the great uncertainty now felt by many career officers of the corps.
(4)Medical Societies: In those states where Indian Health Service facilities are located, and in counties containing or adjacent to Service facilities, that the appropriate medical societies should explore the possibility of increased formal liaison with local Indian Health Service physicians. Increased support from organized medicine for improvement of health care provided under their direction, including professional consultation and involvement in society activities should be pursued.
(5) Our AMA also support the removal of any requirement for competitive bidding in the Indian Health Service that compromises proper care for the American Indian population.

Citation: (CLRPD Rep. 3, I-98; Reaffirmed: CLRPD Rep. 1, A-08; Reaffirmation A-12; Reaffirmed: Res. 233, A-13)

AMA Support of American Indian Health Career Opportunities H-350.981
AMA policy on American Indian health career opportunities is as follows:
(1) Our AMA, and other national, state, specialty, and county medical societies recommend special programs for the recruitment and training of American Indians in health careers at all levels and urge that these be expanded.
(2)) Our AMA supports the inclusion of American Indians in established medical training programs in numbers adequate to meet their needs. Such training programs for American Indians should be operated for a sufficient period of time to ensure a continuous supply of physicians and other health professionals, prioritize consideration of applicants who self-identify as American Indian or Alaska Native and can provide some form of affiliation with an American Indian or Alaska Native tribe in the United States, and support the successful advancement of these trainees.
(3) Our AMA will utilize its resources to create a better awareness among physicians and other health providers of the special problems and needs of American Indians and particular emphasis will be placed on the need for stronger clinical exposure and a greater number of health professionals to work among the American Indian population.
(4) Our AMA will continue to support the concept of American Indian self-determination as imperative to the success of American Indian programs, and recognize that enduring acceptable solutions to American Indian health problems can only result from program and project beneficiaries having initial and continued contributions in planning and program operations.
(5) Our AMA acknowledges long-standing federal precedent that membership or lineal descent from an enrolled member in a federally recognized tribe is distinct from racial identification as American Indian or Alaska Native and should be considered in medical school admissions even when restrictions on race-conscious admissions policies are in effect.
Citation: CLRPD Rep. 3, I-98; Reaffirmed: Res. 221, A-07; Reaffirmation A-12; Reaffirmed: CME Rep. 1, A-22; BOT Action in response to referred for decision: Res. 308, A-22;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 306
(A-23)

Introduced by:	Medical Student Section
Subject:	Increased Education and Access to Fertility Resources for U.S. Medical Students
Referred to:	Reference Committee C

Whereas, The Centers for Disease Control and Prevention (CDC) define infertility as the inability to conceive after one year (or longer) of unprotected sex, which has an increased prevalence in women aged 35 years or older[1]; and

Whereas, The American College of Obstetricians and Gynecologists (ACOG) reports peak fertility occurs in the late teens and early twenties and issued a committee opinion acknowledging that fertility decreases drastically in a woman's early thirties[2,3]; and

Whereas, ACOG has acknowledged advanced maternal age to be a pregnant woman who is 35 years of age or older and mothers considered to be of advanced maternal age have been found to be at greater risk of adverse pregnancy outcomes, including chromosomal abnormalities, adverse maternal outcomes, and miscarriage or stillbirth[4,5]; and

Whereas, An increasing number of females have been enrolling in medical school over the years, with 55.5% of 2021-2022 matriculants identifying as female[6]; and

Whereas, 68.5% of medical students report taking one or more gap years in between their undergraduate institution and medical school in 2021 compared with 66.3% and 65.2% in 2020 and 2019 respectively, effectively increasing the average age of medical school matriculants[7,8,9]; and

Whereas, The percentage of students pursuing non-degree research years has increased in the last 15 years, and only 81% of matriculating MD-only students graduated in 4 years, the lowest percentage to date[10]; and

Whereas, The average age of females completing their medical training is 31 and on average, the age for female physicians give birth for the first time at 32 compared to 27 for non-physicians[11]; and

Whereas, An estimated 25% of female physicians experience infertility, and the rate of female physicians seeking fertility evaluation and requiring the use of reproductive technology is six times higher than that of the general population[12,13,14]; and

Whereas, The rate of miscarriage among medical and surgical residents in North America is almost three times higher than that of their non-physician counterparts[15]; and

Whereas, Female physicians have reported that their careers significantly influenced their family planning and childbearing decisions, with many delaying childbearing to achieve certain career milestones or balance a less "family-friendly" specialty[16]; and

Whereas, The most comprehensive study on physician fertility to date found that nearly 55% of female participants would have attempted to conceive earlier in their careers if they had known the prevalence of infertility among female physicians was as prevalent an issue as it is[16]; and

Whereas, While medical students are more knowledgeable about fertility than their non-medical student counterparts, several studies have found medical trainees are underprepared to address topics such as age-related fertility decline, gamete preservation, and the effectiveness of assisted reproductive technologies[17-20]; and

Whereas, Although 8.8% of matriculating medical students identified as gay, lesbian, or bisexual and 0.7% identified as transgender or non-binary in 2019, there is little research on fertility experiences among physicians of sexual and gender minority backgrounds[21]; and

Whereas, Transgender and non-binary individuals have complex fertility needs and face challenges such as lack of timely information regarding gamete preservation, which may further impact medical trainees in this population[22]; and

Whereas, Studies show that the average cost of an in vitro fertilization (IVF) cycle is $13,000 and a successful IVF pregnancy costs upwards of $112,700[23-25]; and

Whereas, Oocyte cryopreservation is currently the gold standard for fertility preservation for female patients with the estimated costs of one cycle being $7,000-$9,253 with a long-term estimated storage cost of $343-$1,000 per year as of 2017[26-28]; and

Whereas, Sperm cryopreservation is the process of retrieving and freezing the semen sample with an estimated cost for one cycle of $745[26]; and

Whereas, 73% of medical school graduates finished with education debt in 2021 with an average of $203,062 for those indebted, not including any accumulated undergraduate debt[29]; and

Whereas, Only seventeen states have laws that require insurers to either cover or offer coverage for infertility diagnosis and treatment[30]; and

Whereas, Coverage of fertility benefits for faculty at the top 14 U.S. Medical Schools for research as defined by the U.S. News and World Reports vary widely in their application, particularly for cycle and coverage limitations for IVF coverage and limited fertility preservation, even in states with legislation requiring infertility diagnosis and treatment coverage or options[31]; and

Whereas, AMA Policy H-420.952 supports the WHO designation of infertility as a disease state with multiple etiologies requiring a range of interventions to advance fertility treatment and preservation; and

Whereas, AMA Policy H-185.922 supports the coverage of gamete preservation for individuals for whom a medical diagnosis or treatment modality is expected to result in loss of fertility; and

Whereas, AMA Policy H-310.902 encourages insurance providers to cover fertility preservation and infertility treatment for residents and fellows, as well as supports the accommodation of those persons seeking those services and treatments; and

Whereas, Although AMA Policy H-185.990 and H-185.926 support insurance coverage for the diagnosis and treatment of infertility regardless of marital status or sexual orientation, there is a current lack of policy specifically addressing fertility issues among medical students; therefore be it

RESOLVED, That our American Medical Association work with the Association of American Medical Colleges and other appropriate organizations to develop gender- and sexual minority-inclusive initiatives in medical education that raise awareness about (1) how peak child-bearing years correspond to the peak career-building years for many medical students and trainees; (2) the significant decline in oocyte quality and quantity and increase in miscarriage and infertility rates, with increasing age in medical students and trainees; (3) the high rate of infertility among medical students, trainees, and physicians; and (4) various fertility preservation options and including cryopreservation of oocytes and sperm and associated costs (Directive to Take Action); and be it further

RESOLVED, That our AMA work with relevant organizations to increase access to strategies by which medical students can preserve fertility (such as cryopreservation of oocytes, sperm, and embryos), with associated mechanisms for insurance coverage. (Directive to Take Action)

RELEVANT AMA POLICY

Recognition of Infertility as a Disease H-420.952
Our AMA supports the World Health Organizations designation of infertility as a disease state with multiple etiologies requiring a range of interventions to advance fertility treatment and prevention.
Citation: Res. 518, A-17;

Infertility and Fertility Preservation Insurance Coverage H-185.990
1. Our AMA advocates for third party payer health insurance carriers to make available insurance benefits for the diagnosis and treatment of recognized male and female infertility.
2. Our AMA advocates for payment for fertility preservation therapy services by all payers when iatrogenic infertility may be caused directly or indirectly by necessary medical treatments as determined by a licensed physician, and will support state and federal legislation requiring payment for fertility preservation therapy services by all payers when iatrogenic infertility may be caused directly or indirectly by necessary medical treatments as determined by a licensed physician, including but not limited to cryopreservation of embryos, sperm, oocytes, and ovarian and testicular tissue.
3. Our AMA advocates for the inclusion of impaired fertility as a consequence of gender-affirming hormone therapy and gender-affirming surgery within legislative definitions of iatrogenic infertility and supports access to fertility preservation services for those affected.
Citation: Res. 150, A-88; Reaffirmed: Sunset Report, I-98; Reaffirmed: CMS Rep. 4, A-08; Appended: Res. 114, A-13; Modified: Res. 809, I-14; Appended: Res. 012, A-22; Modified: Res. 224, I-22;

Reproductive Health Insurance Coverage H-185.926
Our AMA supports: (1) insurance coverage for fertility treatments regardless of marital status or sexual orientation when insurance provides coverage for fertility treatments; and (2) local and state efforts to

promote reproductive health insurance coverage regardless of marital status or sexual orientation when insurance provides coverage for fertility treatments.
Citation: Res. 804, I-16;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 307
(A-23)

Introduced by: Medical Student Section

Subject: Amending AMA Policy H-295.858, "Access to Confidential Health Services for Medical Students and Physicians" to Include Annual Opt-Out Mental Health Screening for Suicide Prevention for Residents

Referred to: Reference Committee C

Whereas, Between 2000 and 2014, 66 resident physicians died by suicide - the second most prevalent cause of resident death in that time frame after neoplastic diseases[1]; and

Whereas, Psychological autopsy studies of physicians show that psychiatric illnesses such as depression and substance abuse contribute to suicide among physicians[2,3]; and

Whereas, Resident physicians presenting with depression or depressive symptoms may be as high as 43.2% with depressive symptoms increasing by 15.8% within a year of the onset of residency training, with 28% of resident physicians experiencing a major depressive episode during training[4]; and

Whereas, Medical interns have increased mean Patient Health Questionnaire (PHQ-9) depression scores from baseline through first year[5], and residents demonstrate increased suicidal ideation of nearly 370% in the first three months of training[5], as well as high rates of burnout signs[6], which has independently been associated with increased risk for depression and suicide[7]; and

Whereas, Residency program directors tend to underestimate the rates of burnout among resident physicians as 43% of residents reported that the inability to take time off of work as a significant barrier to seeking help[8]; and

Whereas, Screening for burnout in gynecology residents found 89.8% demonstrated moderate burnout[9], and depression screening in Otolaryngology-Head and Neck Surgery residents was demonstrated to be cost effective in identifying and treating mental health[9]; and

Whereas, Tools have been developed to evaluate physician burnout including the AMA sponsored Physician Well-Being Index (PWBI), which has been used to screen physicians, stratify by distress level, and identify individuals likely to benefit from individualized support[10], and the American Foundation for Suicide Prevention (AFSP) Interactive Screening Program (ISP), a confidential, anonymous, web-based stress and depression questionnaire, and subsequent counselor meeting[11]; and

Whereas, The University of California, San Diego, School of Medicine (UCSD) implemented AFSP's ISP, and in the first year found that of the 374 respondents, 101 respondents and 251 respondents had a high risk and moderate risk for suicide, respectively, of which less than 20% received treatment[12]; and

Whereas, UCSD implemented AFSP's ISP, and found that over the course of 7 years, 180 physicians and trainees at UCSD have accepted referrals for mental health care, with the majority saying they would not have done so on their own[13]; and

Whereas, Institutions that rely on self-referral to establish mental health care are likely to miss individuals in need as seen at Northwestern University, where 110 residents and fellows felt they would benefit from mental health care, but less than half sought medical treatment[14]; and

Whereas, Resident physicians face barriers to accessing mental health assessments including cost, time, stigma, and pervasive cultures of stoicism, even when mental health services are available and free, resulting in low utilization[15]; and

Whereas, Opt-out/auto-enrollment strategy refers to when "a preferred behavior occurs automatically but can be disregarded," contrary to opt-in/self-referral strategy where "active steps must be taken to perform a preferred behavior"[16]; and

Whereas, Opt-out strategy makes target behavior more likely by conveying a sense of normalcy[18] and leveraging status-quo bias, "a preference for familiarity where people tend to resist chance and prefer the current state of affairs"[17]; and

Whereas, Previous studies comparing opt-out versus opt-in methods showed opt-out strategies significantly increased participation across various domains, including COVID-19 surveillance testing (opt-out screening had 5.1% increased testing compared to opt-in)[18], HIV testing (opt-out screening had 12% increased uptake compared to opt-in)[19], and colorectal screening (opt-out screening had 19.5% increase screening than opt-in)[20]; and

Whereas, Annual opt-out mental health screenings can mitigate cost, time, and stigma barriers by offering "access to a no-cost evaluation in the same location and contiguous with workday time slots where trainees will not have to sacrifice personal time and funds to obtain evaluation"[21]; and

Whereas, Opt-out mental health program implemented in West Virginia University (WVU) found that postgraduate year 1 (PGY-1) and PGY-2 resident physicians showed a 93% attendance in auto-enrolled wellness appointments, of which a majority mentioned they were "likely to return for future visits if they had concerns about depression, anxiety, and burnout"[22]; and

Whereas, Opt-out mental health screening implemented in WVU used "wellness days" biannually where residents who participated were not required to come to work, were not required to use sick/personal/vacation days, and did not bear any personal cost[22]; and

Whereas, Opt-out mental health screening implemented in WVU were scheduled 1 hour visits with a licensed therapist with experience with residents where all information obtained confidential (not shared with administration) and stored in a separate electronic health record system[22]; and

Whereas, 85% of internal medicine and internal medicine-pediatrics residents participating in an opt-out mental health program at the University of Colorado (UC) agreed the program should continue in the future, with the majority of interns feeling that the program positively affected their wellness regardless of whether they attended the appointment[23]; and

Whereas, Opt-out mental health screening implemented at UC provided "half-days" for interns where students could take off half of a clinic day to meet with an in-house mental health provider, or opt-out and still take off half of a clinic day[23]; and

Whereas, Opt-out mental health screening implemented at UC was provided at no personal cost to the interns and all information obtained was kept confidential[23]; therefore be it

RESOLVED, That our American Medical Association policy H-295.858, "Access to Confidential Health Services for Medical Students and Physicians," be amended by addition and deletion to read as follows:

Access to Confidential Health Services for Medical Students and Physicians H-295.858

1. Our AMA will ask the Liaison Committee on Medical Education, Commission on Osteopathic College Accreditation, American Osteopathic Association, and Accreditation Council for Graduate Medical Education to encourage medical schools and residency/fellowship programs, respectively, to:

A. Provide or facilitate the immediate availability of urgent and emergent access to low-cost, confidential health care, including mental health and substance use disorder counseling services, that:

(1) include appropriate follow-up; (2) are outside the trainees' grading and evaluation pathways; and (3) are available (based on patient preference and need for assurance of confidentiality) in reasonable proximity to the education/training site, at an external site, or through telemedicine or other virtual, online means;

B. Ensure that residency/fellowship programs are abiding by all duty hour restrictions, as these regulations exist in part to ensure the mental and physical health of trainees;

C. Encourage and promote routine health screening among medical students and resident/fellow physicians, and consider designating some segment of already-allocated personal time off (if necessary, during scheduled work hours) specifically for routine health screening and preventive services, including physical, mental, and dental care; and

D. Remind trainees and practicing physicians to avail themselves of any needed resources, both within and external to their institution, to provide for their mental and physical health and well-being, as a component of their professional obligation to ensure their own fitness for duty and the need to prioritize patient safety and quality of care by ensuring appropriate self-care, not working when sick, and following generally accepted guidelines for a healthy lifestyle.

2. Our AMA will urge state medical boards to refrain from asking applicants about past history of mental health or substance use disorder diagnosis or treatment, and only focus on current impairment by mental illness or addiction, and to accept "safe haven" non-reporting for physicians seeking licensure or relicensure who are undergoing treatment for mental health or addiction issues, to help ensure confidentiality of such treatment for the individual physician while providing assurance of patient safety.

3. Our AMA encourages ~~medical schools~~ undergraduate and graduate medical programs to create mental health and substance abuse awareness and suicide prevention screening programs that would:

A. be available to all medical students, residents, and fellows on an opt-out basis

B. ensure anonymity, confidentiality, and protection from administrative action;

C. provide proactive intervention for identified at-risk students by mental health and addiction professionals; and

D. inform students and faculty about personal mental health, substance use and addiction, and other risk factors that may contribute to suicidal ideation.

4. Our AMA: (a) encourages state medical boards to consider physical and mental conditions similarly; (b) encourages state medical boards to recognize that the

presence of a mental health condition does not necessarily equate with an impaired ability to practice medicine; and (c) encourages state medical societies to advocate that state medical boards not sanction physicians based solely on the presence of a psychiatric disease, irrespective of treatment or behavior.

5. Our AMA: (a) encourages study of medical student mental health, including but not limited to rates and risk factors of depression and suicide; (b) encourages medical schools to confidentially gather and release information regarding reporting rates of depression/suicide on an opt-out basis from its students; and (c) will work with other interested parties to encourage research into identifying and addressing modifiable risk factors for burnout, depression and suicide across the continuum of medical education.

6. Our AMA encourages the development of alternative methods for dealing with the problems of student-physician mental health among medical schools, such as: (a) introduction to the concepts of physician impairment at orientation; (b) ongoing support groups, consisting of students and house staff in various stages of their education; (c) journal clubs; (d) fraternities; (e) support of the concepts of physical and mental well-being by heads of departments, as well as other faculty members; and/or (f) the opportunity for interested students and house staff to work with students who are having difficulty. Our AMA supports making these alternatives available to students at the earliest possible point in their medical education.

7. Our AMA will engage with the appropriate organizations to facilitate the development of educational resources and training related to suicide risk of patients, medical students, residents/fellows, practicing physicians, and other health care professionals, using an evidence-based multidisciplinary approach. (Modify Current HOD Policy)

Fiscal Note: Minimal - less than $1,000

Youth and Young Adult Suicide in the United States H-60.937
Our AMA:
(1) Recognizes youth and young adult suicide as a serious health concern in the US;
(2) Encourages the development and dissemination of educational resources and tools for physicians, especially those more likely to encounter youth or young adult patients, addressing effective suicide prevention, including screening tools, methods to identify risk factors and acuity, safety planning, and appropriate follow-up care including treatment and linkages to appropriate counseling resources;
(3) Supports collaboration with federal agencies, relevant state and specialty medical societies, schools, public health agencies, community organizations, and other stakeholders to enhance awareness of the increase in youth and young adult suicide and to promote protective factors, raise awareness of risk factors, support evidence-based prevention strategies and interventions, encourage awareness of community mental health resources, and improve care for youth and young adults at risk of suicide;
(4) Encourages efforts to provide youth and young adults better and more equitable access to treatment and care for depression, substance use disorder, and other disorders that contribute to suicide risk;
(5) Encourages continued research to better understand suicide risk and effective prevention efforts in youth and young adults, especially in higher risk sub-populations such as Black, LGBTQ+, Hispanic/Latinx, Indigenous/Native Alaskan youth and young adult populations, and among youth and young adults with disabilities;
(6) Supports the development of novel technologies and therapeutics, along with improved utilization of existing medications to address acute suicidality and underlying risk factors in youth and young adults;
(7) Supports research to identify evidence-based universal and targeted suicide prevention programs for implementation in middle schools and high schools;
(8) Will publicly call attention to the escalating crisis in children and adolescent mental health in this country in the wake of the COVID-19 pandemic;
(9) Will advocate at the state and national level for policies to prioritize children's mental, emotional and behavioral health;
(10) Will advocate for a comprehensive system of care including prevention, management and crisis care to address mental and behavioral health needs for infants, children and adolescents; and
(11) Will advocate for a comprehensive approach to the child and adolescent mental and behavioral health crisis when such initiatives and opportunities are consistent with AMA policy.

Study of Medical Student, Resident, and Physician Suicide D-345.983
Our AMA will: (1) explore the viability and cost-effectiveness of regularly collecting National Death Index (NDI) data and confidentially maintaining manner of death information for physicians, residents, and medical students listed as deceased in the AMA Physician Masterfile for long-term studies; (2) monitor progress by the Association of American Medical Colleges, the American Association of Colleges of Osteopathic Medicine, and the Accreditation Council for Graduate Medical Education (ACGME) to collect data on medical student and resident/fellow suicides to identify patterns that could predict such events; (3) support the education of faculty members, residents and medical students in the recognition of the

signs and symptoms of burnout and depression and supports access to free, confidential, and immediately available stigma-free mental health and substance use disorder services; (4) collaborate with other stakeholders to study the incidence of and risk factors for depression, substance misuse and substance use disorders, and attempted and completed suicide among physicians, residents, and medical students; and (5) work with appropriate stakeholders to explore the viability of developing a standardized reporting mechanism for the collection of current wellness initiatives that institutions have in place to inform and promote meaningful mental health and wellness interventions in these populations. AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 308
(A-23)

Introduced by:	Medical Student Section
Subject:	Increased Inclusivity and Admission Policies Clarification for DACA Medical School and Residency Applicants
Referred to:	Reference Committee C

Whereas, The Deferred Action for Childhood Arrivals (DACA) program has existed since 2012 as a policy established by a memorandum from the Secretary of Homeland Security, granting individuals who entered the United States before June 15, 2007, and who have resided in the United States continuously through June 15, 2012, deferred action from removal proceedings, lawful presence (but not lawful status), and employment authorization for a two year period, provided that they entered the United States when they were under the age of 16, and met certain criteria[1]; and

Whereas, The DACA policy is on track to become codified as a federal regulation, with a final rule taking effect on October 31, 2022[2]; and

Whereas, As of March 2022 there are 611,270 DACA recipients in the United States, with an estimate of 1,159,000 considered immediately eligible without actively awarded DACA status; and[3]

Whereas, The American Association of Medical Colleges (AAMC) estimates that over the first eight years since DACA was established, only about 200 DACA-status individuals, representing less than 0.1% of all DACA recipients, have trained in US medical schools and residency programs[4]; and

Whereas, For the 2022-2023 school year, 70 medical institutions are listed on the AAMC website as accepting DACA-status eligible applicants, 5 fewer than in 2020[4,5]; and

Whereas, Despite institutions knowing what DACA was, only 58% were familiar with their DACA admission policies[4]; and

Whereas, The Federal government permits DACA recipients to rotate through medical facilities operated by the Department of Veterans Affairs (VA), and while certain states, including New York and California, have expanded licensure eligibility to include DACA recipients, many states restrict licensure for non-U.S. citizens who are not “qualified aliens”, excluding DACA recipients from licensure[7]; and

Whereas, DACA students have reported acceptance to several institutions only to have their offers rescinded due to their status, despite being transparent about their DACA status from the start of the admission process[6]; and

Whereas, DACA-status students are ineligible for Federal Student Aid and must resort to private student loans[6]; and

Whereas, The median debt of a medical school graduate is $200,000 as of 2020, and there are programs available for loan forgiveness through Public Service Loan Forgiveness, or service to rural communities through the National Health Service Corps Rural Community Loan Repayment Program[6]; and

Whereas, DACA recipients are ineligible for such loan forgiveness programs, despite being more likely to serve in underserved and/or rural communities than the general population[2,6]; and

Whereas, Less than 10% of schools reserved funds for DACA students, and some required proof of payment for all four years for matriculation[4]; and

Whereas, Half of US states allow for public schools to charge DACA students out-of-state tuition, despite eligibility for in-state tuition if documented[6]; and

Whereas, DACA recipients are hired through the same procedure as US Citizens or Permanent Residents using the federal I-9 process[7]; and

Whereas, DACA recipients and their households pay about $5.6 billion annually in federal taxes and about $3.1 billion annually in state and local taxes[2]; and

Whereas, DACA individuals are considered resident aliens for federal and state tax purposes, and as such they do not qualify for government assistance programs such as Supplemental Nutrition Assistance Program (SNAP), Medicaid, Supplemental Security Income (SSI), Temporary Assistance for Needy Families (TANF), health insurance subsidies under the Affordable Care Act (ACA), or any other federal, state, or local benefit as defined by 8 U.S.C 1611 and 8 U.S.C 1621[8,9]; and

Whereas, Our American Medical Association supports efforts to increase the applicant pool of qualified minority students (H-350.979); and

Whereas, Our AMA supports that medical schools should be explicit in publications of their admissions requirements and the methods they employ in the selection of students (H-295.995); and

Whereas, Our AMA supports the efforts of the AAMC increasing transparency in the medical school application process for international students (H-255.968); and

Whereas, Our AMA has no policy encouraging medical schools to provide transparency on admissions requirements in the selection of DACA eligible applicants; and

Whereas, Our AMA supports legislation that provides targeted financial aid to financially disadvantaged students at both collegiate and medical school levels (H-350.979); and

Whereas, There currently exists no similar policy for DACA-eligible medical school applicants; and

Whereas, During the COVID-19 pandemic over 200,000 DACA recipients were working essential positions, at least 29,000 of whom were healthcare workers[10]; and

Whereas, DACA healthcare workers increase diversity of the medical field and contribute to the learning of fellow medical students to the culture of immigrant patients, broadening access to care for underserved populations[11]; and

Whereas, DACA recipients who are healthcare workers are more likely to work in underserved communities, helping to alleviate a particularly dire shortage of healthcare professionals in these areas; and[2,12];

Whereas, Each DACA recipient in the healthcare field will care for an average of between 1,533 and 4,600 patients a year[12]; therefore be it

RESOLVED, That our American Medical Association encourage transparency from institutions in the medical school application process for DACA recipients, including the following and on a national level when possible: (1) the percentage of Deferred Action for Childhood Arrivals applicants of total applicants, (2) the percentage of accepted Deferred Action for Childhood Arrivals applicants of total accepted applicants, (3) the percentage of matriculated Deferred Action for Childhood Arrivals students of total matriculated applicants, (4) financial aid and scholarship options available for Deferred Action for Childhood Arrivals applicants. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Evaluation of DACA-Eligible Medical Students, Residents and Physicians in Addressing Physician Shortages D-350.986
1. Our American Medical Association will study the issue of Deferred Action for Childhood Arrivals-eligible medical students, residents, and physicians and consider the opportunities for their participation in the physician profession and report its findings to the House of Delegates.
2. Our AMA will issue a statement in support of current US healthcare professionals, including those currently training as medical students or residents and fellows, who are Deferred Action for Childhood Arrivals recipients.
Citation: Res. 305, A-15; Appended: Late Res. 1001, I-16; Reaffirmation: A-19;

Advance Tuition Payment Requirements for International Students Enrolled in US Medical Schools H-255.968
Our AMA:
1. supports the autonomy of medical schools to determine optimal tuition requirements for international students;
2. encourages medical schools and undergraduate institutions to fully inform international students interested in medical education in the US of the limited options available to them for tuition assistance;
3. supports the Association of American Medical Colleges (AAMC) in its efforts to increase transparency in the medical school application process for international students by including school policy on tuition requirements in the Medical School Admission Requirements (MSAR); and
4. encourages medical schools to explore alternative means of prepayment, such as a letter of credit, for four years of medical school.
Citation: CME Rep. 5, A-12; Reaffirmed: CME Rep. 1, A-22;

Impact of Immigration Barriers on the Nation's Health D-255.980
1. Our AMA recognizes the valuable contributions and affirms our support of international medical students and international medical graduates and their participation in U.S. medical schools, residency and fellowship training programs and in the practice of medicine.
2. Our AMA will oppose laws and regulations that would broadly deny entry or re-entry to the United States of persons who currently have legal visas, including permanent resident status (green card) and student visas, based on their country of origin and/or religion.
3. Our AMA will oppose policies that would broadly deny issuance of legal visas to persons based on their country of origin and/or religion.
4. Our AMA will advocate for the immediate reinstatement of premium processing of H-1B visas for physicians and trainees to prevent any negative impact on patient care.
5. Our AMA will advocate for the timely processing of visas for all physicians, including residents, fellows, and physicians in independent practice.
6. Our AMA will work with other stakeholders to study the current impact of immigration reform efforts on residency and fellowship programs, physician supply, and timely access of patients to health care throughout the U.S.
Citation: Alt. Res. 308, A-17; Modified: CME Rep. 01, A-18; Reaffirmation: A-19; Reaffirmed: CME Rep. 4, A-21; Reaffirmed: Res. 234, A-22;

Increase the Representation of Minority and Economically Disadvantaged Populations in the Medical Profession H-350.979
Our AMA supports increasing the representation of minorities in the physician population by: (1) Supporting efforts to increase the applicant pool of qualified minority students by: (a) Encouraging state and local governments to make quality elementary and secondary education opportunities available to all; (b) Urging medical schools to strengthen or initiate programs that offer special premedical and precollegiate experiences to underrepresented minority students; (c) urging medical schools and other health training institutions to develop new and innovative measures to recruit underrepresented minority students, and (d) Supporting legislation that provides targeted financial aid to financially disadvantaged students at both the collegiate and medical school levels.
(2) Encouraging all medical schools to reaffirm the goal of increasing representation of underrepresented minorities in their student bodies and faculties.
(3) Urging medical school admission committees to consider minority representation as one factor in

reaching their decisions.
(4) Increasing the supply of minority health professionals.
(5) Continuing its efforts to increase the proportion of minorities in medical schools and medical school faculty.
(6) Facilitating communication between medical school admission committees and premedical counselors concerning the relative importance of requirements, including grade point average and Medical College Aptitude Test scores.
(7) Continuing to urge for state legislation that will provide funds for medical education both directly to medical schools and indirectly through financial support to students.
(8) Continuing to provide strong support for federal legislation that provides financial assistance for able students whose financial need is such that otherwise they would be unable to attend medical school.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 309
(A-23)

Introduced by: Medical Student Section

Subject: Against Legacy Preferences as a Factor in Medical School Admissions

Referred to: Reference Committee C

Whereas, Legacy admissions are defined as a preference given by an institution to children of alumni and sometimes to applicants of varying relation to alumni[1,2]; and

Whereas, Legacy admissions date back to the 1920s when they were established to protect universities' white, wealthy and Protestant applicants from competing with recent European and Jewish immigrants[1]; and

Whereas, Legacy admissions continue today to significantly favor the admission of white, wealthy applicants, with nearly 70% of legacy applicants to Harvard identifying as white[3]; and

Whereas, 75% of the nation's major research universities and elite liberal arts college - including their medical schools - factor legacy status into the decision to admit or reject an applicant[4]; and

Whereas, 42% of private institutions - including most of the nation's elite institutions - use legacy admissions[5,6]; and

Whereas, Admissions data are tightly kept university secrets and ascertaining information on how legacy admissions factor into the admissions process is extremely difficult[5]; and

Whereas, The advantage awarded by legacy status can be stark, with one study estimating that legacy status provides an undergraduate applicant with the equivalent of 160 extra points on the SAT and another indicating that legacy applicants are admitted at the rate of more than five times non-legacy applicants[7,8]; and

Whereas, In 2014, Johns Hopkins University removed legacy as a factor in admissions in efforts to increase its student diversity, and subsequently from 2009 to 2019, Pell Grant eligible students increased by 10%, students on financial aid increased by more than 20%, and minority students increased by 10%[9]; and

Whereas, Johns Hopkins University attributes ending legacy admissions with building a more diverse student body[10]; and

Whereas, Johns Hopkins University in 2014 and Amherst College in 2021 recently ended their legacy policies[11,12]; and

Whereas, Colorado banned public colleges and universities from considering legacy status in the admissions process based on the conviction that providing preferential treatment to students with familial relationships to alumni is discriminatory[13]; and

Whereas, Legislation has been introduced in Congress that ends federal funding for universities that employ legacy admissions due to their ability to exacerbate racial and economic inequalities[14]; and

Whereas, The ACLU has called for an end to legacy admissions in order to help address long-standing disparities and inequality in higher education while increasing access for underrepresented students[15]; and

Whereas, A bill was introduced by state lawmakers in New York and Connecticut in 2022 to bar public and private colleges from using legacy admissions due to the impact on low income students and underrepresented communities[16]; and

Whereas, Some experts on race, inequity, and social policy believe that legacy admissions limit access for medium and low-income students as well as African American, Latino, and Native American students and indefensibly provide special access to higher education to the most privileged[17,18]; and

Whereas, Physicians' children are 24x more likely to become physicians than their peers making it the most inherited career requiring higher education[19]; and

Whereas, The most common occupation for a wealthy person, i.e. the nation's 1% of top earners, is medical doctor[20]; and

Whereas, Applicants, especially those not from medical or privileged backgrounds, face numerous barriers to entry in medical school; and

Whereas, Legacy admissions have been shown to limit social mobility, making it harder for disadvantaged students such as those without resources or knowledge to gain admission[15]; and

Whereas, The University of Arizona College of Medicine guarantees an interview for legacy applicants – those who have a sibling, parent or grandparent who graduated from the University of Arizona College of Medicine - a privilege it offers to only 6.6% of non-legacy applicants[21,22]; and

Whereas, Most medical schools "have some sort of legacy process in place," per the University of Arizona College of Medicine's executive director of admissions[21]; and

Whereas, Tufts University School of Medicine in April of 2021 eliminated its use of legacy admissions in response to its anti-racism initiative[23]; and

Whereas, The AAMC recognizes the impact of racism on all aspects of medicine, including "inequitable admissions practices"[24]; and

Whereas, The American Medical Association released a strategic plan in 2021 to dismantle structural racism, address the historical inequities that marginalized populations have faced, and "pivot from ambivalence to urgent action […] and from lack of accountability to an active embrace of equity as a core mission and strategy"[25,26]; and

Whereas, Policy H-65.952 states that AMA recognizes racism as a serious threat to public health and supports the development of policies that combat racism and its effects, but does not oppose the use of legacy admissions[27], and

Whereas, Policy H-200.951 states that the AMA encourages medical school policies that promote diversity and include underrepresented individuals in medicine, but does not oppose the use of legacy admissions, which have been shown to limit racial and socioeconomic diversity[28]; and

Whereas, Policy H-350.970 states that the AMA will work with stakeholders to promote programs that are aimed at increasing minority medical student admissions, but does not recognize that the lack of a stance against legacy admissions contradicts this policy[29]; and

Whereas, Policy H-295.888 states that the AMA encourages medical schools to give weight to personal qualities (such as empathy, integrity, commitment to service) during the admissions process, but does not have a policy stating legacy admissions are not one of the personal qualities that should be considered[30]; and

Whereas, Policy H-295.998 reaffirms the Liaison Committee on Medical Education's policy about establishing effective policies and procedures in regards to medical school admissions, but does not recognize that preferential legacy admissions policies fail to guarantee an equitable admissions process and therefore current policies and procedures are not effective[31]; and

Whereas, Legacy admissions are incompatible with the AMA's current plan to dismantle structural racism by perpetuating socioeconomic and racial disparities across medical institutions; therefore be it

RESOLVED, That our American Medical Association recognize that legacy admissions are rooted in discriminatory practices (New HOD Policy); and be it further

RESOLVED, That our AMA oppose the use of legacy status as a screening tool for medical school admissions (New HOD Policy); and be it further

RESOLVED, That our AMA study the prevalence and impact of legacy status in medical school admissions. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Strategies for Enhancing Diversity in the Physician Workforce H-200.951
Our AMA: (1) supports increased diversity across all specialties in the physician workforce in the categories of race, ethnicity, disability status, sexual orientation, gender identity, socioeconomic origin, and rurality; (2) commends the Institute of Medicine (now known as the National Academies of Sciences, Engineering, and Medicine) for its report, "In the Nation's Compelling Interest: Ensuring Diversity in the Health Care Workforce," and supports the concept that a racially and ethnically diverse educational experience results in better educational outcomes; (3) encourages the development of evidence-informed programs to build role models among academic leadership and faculty for the mentorship of students, residents, and fellows underrepresented in medicine and in specific specialties; (4) encourages physicians to engage in their communities to guide, support, and mentor high school and undergraduate students with a calling to medicine; (5) encourages medical schools, health care institutions, managed care and other appropriate groups to adopt and utilize activities that bolster efforts to include and support individuals who are underrepresented in medicine by developing policies that articulate the value and importance of diversity as a goal that benefits all participants, cultivating and funding programs that nurture a culture of diversity on campus, and recruiting faculty and staff who share this goal; and (6) continue to study and provide recommendations to improve the future of health equity and racial justice in medical education, the diversity of the health workforce, and the outcomes of marginalized patient populations.
Citation: CME Rep. 1, I-06; Reaffirmed: CME Rep. 7, A-08; Reaffirmed: CCB/CLRPD Rep. 4, A-13; Modified: CME Rep. 01, A-16; Reaffirmation A-16; Modified: Res. 009, A-21; Modified: CME Rep. 5, A-21;

Racism as a Public Health Threat H-65.952
1. Our AMA acknowledges that, although the primary drivers of racial health inequity are systemic and structural racism, racism and unconscious bias within medical research and health care delivery have caused and continue to cause harm to marginalized communities and society as a whole.
2. Our AMA recognizes racism, in its systemic, cultural, interpersonal, and other forms, as a serious threat to public health, to the advancement of health equity, and a barrier to appropriate medical care.
3. Our AMA encourages the development, implementation, and evaluation of undergraduate, graduate, and continuing medical education programs and curricula that engender greater understanding of: (a) the causes, influences, and effects of systemic, cultural, institutional, and interpersonal racism; and (b) how to prevent and ameliorate the health effects of racism.
4. Our AMA: (a) supports the development of policy to combat racism and its effects; and (b) encourages governmental agencies and nongovernmental organizations to increase funding for research into the epidemiology of risks and damages related to racism and how to prevent or repair them.
5. Our AMA will work to prevent and combat the influences of racism and bias in innovative health technologies.
Citation: Res. 5, I-20; Reaffirmed: Res. 013, A-22; Modified: Speakers Rep., A-22;

Diversity in Medical Education H-350.970
Our AMA will: (1) request that the AMA Foundation seek ways of supporting innovative programs that strengthen pre-medical and pre-college preparation for minority students; (2) support and work in partnership with local state and specialty medical societies and other relevant groups to provide education on and promote programs aimed at increasing the number of minority medical school admissions; applicants who are admitted; and (3) encourage medical schools to consider the likelihood of service to underserved populations as a medical school admissions criterion.
Citation: (BOT Rep. 15, A-99; Reaffirmed: CME Rep. 2, A-09; Reaffirmed in lieu of Res. 311, A-15)

Progress in Medical Education: the Medical School Admission Process H-295.888
1. Our AMA encourages: (A) research on ways to reliably evaluate the personal qualities (such as empathy, integrity, commitment to service) of applicants to medical school and support broad dissemination of the results. Medical schools should be encouraged to give significant weight to these qualities in the admissions process; (B) premedical coursework in the humanities, behavioral sciences, and social sciences, as a way to ensure a broadly-educated applicant pool; and (C) dissemination of models that allow medical schools to meet their goals related to diversity in the context of existing legal requirements, for example through outreach to elementary schools, high schools, and colleges.

2. Our AMA: (A) will continue to work with the Association of American Medical Colleges (AAMC) and other relevant organizations to encourage improved assessment of personal qualities in the recruitment process for medical school applicants including types of information to be solicited in applications to medical school; (B) will work with the AAMC and other relevant organizations to explore the range of measures used to assess personal qualities among applicants, including those used by related fields; (C) encourages the development of innovative methodologies to assess personal qualities among medical school applicants; (D) will work with medical schools and other relevant stakeholder groups to review the ways in which medical schools communicate the importance of personal qualities among applicants, including how and when specified personal qualities will be assessed in the admissions process; (E) encourages continued research on the personal qualities most pertinent to success as a medical student and as a physician to assist admissions committees to adequately assess applicants; and (F) encourages continued research on the factors that impact negatively on humanistic and empathetic traits of medical students during medical school.
Citation: CME Rep. 8, I-99; Reaffirmed: CME Rep. 2, A-09; Appended: CME Rep. 3, A-11; Reaffirmed: CME Rep. 1, A-21;

Due Process H-295.998
(1) Our AMA reaffirms its 1974 approval of the policy adopted by the Liaison Committee on Medical Education, which states: “The faculty of a medical school establish criteria for student selection and develop and implement effective policies and procedures regarding, and make decisions about, medical student application, selection, admission, assessment, promotion, graduation, and any disciplinary action. The medical school makes available to all interested parties its criteria, standards, policies, and procedures regarding these matters.”
(2) In addition, to clarify and protect the rights of medical students, the AMA recommends that: (a) Each school develop and publish in its catalog, student handbook or similar publication the institutional policies and procedures both for evaluation of academic performance (promotion, graduation, dismissal, probation, remedial work, and the like) and for nonacademic disciplinary decisions. (b) These policies and procedures should define the responsible bodies and their function and membership, provide for timely progressive verbal and written notification to the student that his/her academic/nonacademic performance is in question, and provide an opportunity for the student to learn why it has been questioned. (c) These policies and procedures should also ensure that when a student has been notified of recommendations by the responsible committee for nonadvancement or dismissal, he/she has adequate notice and the opportunity to appear before the decision-making body to respond to the data submitted and introduce his/her own data. (d) The student should be allowed to be accompanied by a student or faculty advisor. (e) The policies and procedures should include an appeal mechanism within the medical school. (f) The student should be allowed to continue in the academic program during the proceedings unless extraordinary circumstances exist, such as physical threat to others.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 310
(A-23)

Introduced by: Medical Student Section

Subject: Teaching and Assessing Osteopathic Manipulative Treatment and Osteopathic Principles and Practice to Resident Physicians in the Context of ACGME Single System of Accreditation

Referred to: Reference Committee C

Whereas, The evidence basis for osteopathic manipulative medicine/treatment (OMM/OMT) is quite broad and spans across many disease processes and organ systems evidence that supports its use as an adjunct treatment in a variety of conditions[1-7]; and

Whereas, For example, there have been demonstrated improvements in symptoms of menopause, perimenopause, and pregnancy by meta-analyses[1]; and

Whereas, In a separate meta-analysis, OMT has shown benefits to both chronic low back pain and acute low back pain during the peripartum and postpartum times[2]; and

Whereas, Evidence also exists showing benefits in premature neonate, pneumonia, and neck pain populations[3–5]; and

Whereas, In order to train residents in osteopathic practice and principles (OPP) and osteopathic manipulative treatment (OMT), faculty must be available and qualified to train these residents; and

Whereas, Non-osteopathic faculty are unlikely to have any experience with OMT, let alone sufficient expertise to train residents in the practice as multiple osteopathic professional organizations and schools have to offer allopathic physicians and international medical graduates a variety of paid training classes and courses to receive education on osteopathic manipulation[8,9]; and

Whereas, Notably, the ACGME's Osteopathic Principles Committee (ACGME-OPC), the body which outlines criteria for osteopathic recognition (OR) of graduate medical education programs, requires that program leadership, including a portion of faculty be certified by other professional bodies in order to considered for formal osteopathic recognition[10]; and

Whereas, Those considered as acceptable faculty may include: AOA board-certified physicians; a Doctor of Osteopathy with board certification through an American Board of Medical Specialties; or a Doctor of Medicine graduate of an already recognized program with board certification through an American Board of Medical Specialties[10]; and

Whereas, Though it is reasonable to assume that any graduate medical education program seeking to properly educate residents in osteopathic manipulative medicine would need to recruit faculty to leadership positions with the above qualifications, no formal studies have been conducted to evaluate whether programs have adopted such requirements; and

Whereas, AACOM published surveys in 2015 and 2017 indicating that approximately two thirds of osteopathic medical students would think more highly of programs if informed that a program has OR[11]; and

Whereas, With the recent merger into a single ACGME accreditation system, allopathic and osteopathic residency programs are now available for all graduate medical students; therefore be it

RESOLVED, That our American Medical Association collaborate with the Accreditation Council on Graduate Medical Education (ACGME), the American Osteopathic Association (AOA), and any other relevant stakeholders to investigate the need for graduate medical education faculty development in the supervision of Osteopathic Manipulative Treatment across ACGME accredited residency programs. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 4/5/23

RELEVANT AMA POLICY

Additions to United States Medical Licensure Examination and Comprehensive Osteopathic Medical Licensure Examination H-275.929
Our AMA opposes additions to the United States Medical Licensing Examination and Comprehensive Osteopathic Medical Licensure Examination that lack predictive validity for future performance as a physician.
Citation: (Res. 308, A-04; Reaffirmed: CME Rep. 2, A-14)

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 311
(A-23)

Introduced by: Medical Student Section

Subject: Residency Application Support for Students of Low-Income Backgrounds

Referred to: Reference Committee C

Whereas, The Association of American Medical Colleges (AAMC) and American Association of Colleges of Osteopathic Medicine (AACOM) have long offered fee assistance programs (FAPs) to mitigate costs of medical school applications for students from low-socioeconomic status (low-SES), though each association's FAP typically covers primary application service fees and access to online databases of medical school information or interview advice[1]; and

Whereas, The AAMC program goes further, subsidizing the not-insignificant prices of test preparation as well as applications to ≤ 20 medical schools[2]; and

Whereas, These programs have been critical in increasing the number of applicants and matriculants to medical school who normally face economic barriers to entering medicine[3-6]; and

Whereas, In contrast to medical school applications, there has never been a fee assistance program for the undergraduate medical education (UME) to graduate medical education (GME) transition[7,8]; and

Whereas, Applying for residency is a multi-step process with multifactorial costs, including board exam fees from the National Board of Medical Examiners (NBME) and National Board of Osteopathic Medical Examiners (NBOME), away rotations expenses, fees for the Electronic Residency Application Service (ERAS), National Resident Matching Program (NRMP), SF (ophthalmology) Match, or Urology Match, and overall interview costs[7,8]; and

Whereas, For direct application, interview, or match costs, neither the AAMC nor NRMP provide any form of financial assistance, and applicants must budget for these expenses by taking out extra student loans, applying for general medical student scholarships, or incurring credit card debt[9]; and

Whereas, According to a survey of M.D. students analyzed by the AAMC FIRST team in December 2022, interview costs range from $600 to $24,000, including travel, lodging, meals, etc., with a median value of approximately $3,000[10]; and

Whereas, A separate survey of allopathic students found a single interview costs between $250 and $499 and the majority of respondents spent at least $2500 in total[11]; and

Whereas, Costs of away rotations, often required by competitive specialties, are also borne by applicants, and those who are interested in away rotations must find funding earmarked visiting students[12-14]; and

Whereas, A survey of applicants in the 2014-2015 academic year found that the estimated cost of a single visiting rotation was $958, including travel, housing, and transportation[12]; and

Whereas, The same survey found that the average applicant spent around $2000, and many students spent upwards of $5,000 and $10,000 on visiting rotations[12]; and

Whereas, The cost of applying to away rotations with the AAMC's Visiting Student Learning Opportunities (VSLO) is $15 for each application[15]; and

Whereas, In H-305.925, our AMA attests that "the costs of medical education should never be a barrier to the pursuit of a career in medicine nor to the decision to practice in a given specialty", which sets a foundation for financial support for medical students; and

Whereas, Our American Medical Association acknowledges the financial burden of applying to residency programs in H-310.966; therefore be it

RESOLVED, That our American Medical Association advocate for residency application platforms that are no-cost to all residency applicants (Directive to Take Action); and be it further

RESOLVED, That our AMA support that residency and fellowship application services grant fee assistance to applicants who previously received fee assistance from medical school application services. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Principles of and Actions to Address Medical Education Costs and Student Debt H-305.925
The costs of medical education should never be a barrier to the pursuit of a career in medicine nor to the decision to practice in a given specialty. To help address this issue, our American Medical Association (AMA) will:
1. Collaborate with members of the Federation and the medical education community, and with other interested organizations, to address the cost of medical education and medical student debt through public- and private-sector advocacy.
2. Vigorously advocate for and support expansion of and adequate funding for federal scholarship and loan repayment programs--such as those from the National Health Service Corps, Indian Health Service, Armed Forces, and Department of Veterans Affairs, and for comparable programs from states and the private sector--to promote practice in underserved areas, the military, and academic medicine or clinical research.
3. Encourage the expansion of National Institutes of Health programs that provide loan repayment in exchange for a commitment to conduct targeted research.
4. Advocate for increased funding for the National Health Service Corps Loan Repayment Program to assure adequate funding of primary care within the National Health Service Corps, as well as to permit: (a) inclusion of all medical specialties in need, and (b) service in clinical settings that care for the underserved but are not necessarily located in health professions shortage areas.
5. Encourage the National Health Service Corps to have repayment policies that are consistent with other federal loan forgiveness programs, thereby decreasing the amount of loans in default and increasing the number of physicians practicing in underserved areas.
6. Work to reinstate the economic hardship deferment qualification criterion known as the "20/220 pathway," and support alternate mechanisms that better address the financial needs of trainees with educational debt.
7. Advocate for federal legislation to support the creation of student loan savings accounts that allow for pre-tax dollars to be used to pay for student loans.
8. Work with other concerned organizations to advocate for legislation and regulation that would result in favorable terms and conditions for borrowing and for loan repayment, and would permit 100% tax deductibility of interest on student loans and elimination of taxes on aid from service-based programs.
9. Encourage the creation of private-sector financial aid programs with favorable interest rates or service obligations (such as community- or institution-based loan repayment programs or state medical society loan programs).
10. Support stable funding for medical education programs to limit excessive tuition increases, and collect and disseminate information on medical school programs that cap medical education debt, including the types of debt management education that are provided.
11. Work with state medical societies to advocate for the creation of either tuition caps or, if caps are not feasible, pre-defined tuition increases, so that medical students will be aware of their tuition and fee costs for the total period of their enrollment.
12. Encourage medical schools to (a) Study the costs and benefits associated with non-traditional instructional formats (such as online and distance learning, and combined baccalaureate/MD or DO programs) to determine if cost savings to medical schools and to medical students could be realized without jeopardizing the quality of medical education; (b) Engage in fundraising activities to increase the availability of scholarship support, with the support of the Federation, medical schools, and state and specialty medical societies, and develop or enhance financial aid opportunities for medical students, such as self-managed, low-interest loan programs; (c) Cooperate with postsecondary institutions to establish collaborative debt counseling for entering first-year medical students; (d) Allow for flexible scheduling for

medical students who encounter financial difficulties that can be remedied only by employment, and consider creating opportunities for paid employment for medical students; (e) Counsel individual medical student borrowers on the status of their indebtedness and payment schedules prior to their graduation; (f) Inform students of all government loan opportunities and disclose the reasons that preferred lenders were chosen; (g) Ensure that all medical student fees are earmarked for specific and well-defined purposes, and avoid charging any overly broad and ill-defined fees, such as but not limited to professional fees; (h) Use their collective purchasing power to obtain discounts for their students on necessary medical equipment, textbooks, and other educational supplies; (i) Work to ensure stable funding, to eliminate the need for increases in tuition and fees to compensate for unanticipated decreases in other sources of revenue; mid-year and retroactive tuition increases should be opposed.

13. Support and encourage state medical societies to support further expansion of state loan repayment programs, particularly those that encompass physicians in non-primary care specialties.

14. Take an active advocacy role during reauthorization of the Higher Education Act and similar legislation, to achieve the following goals: (a) Eliminating the single holder rule; (b) Making the availability of loan deferment more flexible, including broadening the definition of economic hardship and expanding the period for loan deferment to include the entire length of residency and fellowship training; (c) Retaining the option of loan forbearance for residents ineligible for loan deferment; (d) Including, explicitly, dependent care expenses in the definition of the “cost of attendance”; (e) Including room and board expenses in the definition of tax-exempt scholarship income; (f) Continuing the federal Direct Loan Consolidation program, including the ability to “lock in” a fixed interest rate, and giving consideration to grace periods in renewals of federal loan programs; (g) Adding the ability to refinance Federal Consolidation Loans; (h) Eliminating the cap on the student loan interest deduction; (i) Increasing the income limits for taking the interest deduction; (j) Making permanent the education tax incentives that our AMA successfully lobbied for as part of Economic Growth and Tax Relief Reconciliation Act of 2001; (k) Ensuring that loan repayment programs do not place greater burdens upon married couples than for similarly situated couples who are cohabitating; (l) Increasing efforts to collect overdue debts from the present medical student loan programs in a manner that would not interfere with the provision of future loan funds to medical students.

15. Continue to work with state and county medical societies to advocate for adequate levels of medical school funding and to oppose legislative or regulatory provisions that would result in significant or unplanned tuition increases.

16. Continue to study medical education financing, so as to identify long-term strategies to mitigate the debt burden of medical students, and monitor the short-and long-term impact of the economic environment on the availability of institutional and external sources of financial aid for medical students, as well as on choice of specialty and practice location.

17. Collect and disseminate information on successful strategies used by medical schools to cap or reduce tuition.

18. Continue to monitor the availability of and encourage medical schools and residency/fellowship programs to (a) provide financial aid opportunities and financial planning/debt management counseling to medical students and resident/fellow physicians; (b) work with key stakeholders to develop and disseminate standardized information on these topics for use by medical students, resident/fellow physicians, and young physicians; and (c) share innovative approaches with the medical education community.

19. Seek federal legislation or rule changes that would stop Medicare and Medicaid decertification of physicians due to unpaid student loan debt. The AMA believes that it is improper for physicians not to repay their educational loans, but assistance should be available to those physicians who are experiencing hardship in meeting their obligations.

20. Related to the Public Service Loan Forgiveness (PSLF) Program, our AMA supports increased medical student and physician participation in the program, and will: (a) Advocate that all resident/fellow physicians have access to PSLF during their training years; (b) Advocate against a monetary cap on PSLF and other federal loan forgiveness programs; (c) Work with the United States Department of Education to ensure that any cap on loan forgiveness under PSLF be at least equal to the principal amount borrowed; (d) Ask the United States Department of Education to include all terms of PSLF in the contractual obligations of the Master Promissory Note; (e) Encourage the Accreditation Council for Graduate Medical Education (ACGME) to require residency/fellowship programs to include within the terms, conditions, and benefits of program appointment information on the employer’s PSLF program qualifying status; (f) Advocate that the profit status of a physician’s training institution not be a factor for PSLF eligibility; (g) Encourage medical school financial advisors to counsel wise borrowing by medical

students, in the event that the PSLF program is eliminated or severely curtailed; (h) Encourage medical school financial advisors to increase medical student engagement in service-based loan repayment options, and other federal and military programs, as an attractive alternative to the PSLF in terms of financial prospects as well as providing the opportunity to provide care in medically underserved areas; (i) Strongly advocate that the terms of the PSLF that existed at the time of the agreement remain unchanged for any program participant in the event of any future restrictive changes; (j) Monitor the denial rates for physician applicants to the PSLF; (k) Undertake expanded federal advocacy, in the event denial rates for physician applicants are unexpectedly high, to encourage release of information on the basis for the high denial rates, increased transparency and streamlining of program requirements, consistent and accurate communication between loan servicers and borrowers, and clear expectations regarding oversight and accountability of the loan servicers responsible for the program; (l) Work with the United States Department of Education to ensure that applicants to the PSLF and its supplemental extensions, such as Temporary Expanded Public Service Loan Forgiveness (TEPSLF), are provided with the necessary information to successfully complete the program(s) in a timely manner; and (m) Work with the United States Department of Education to ensure that individuals who would otherwise qualify for PSLF and its supplemental extensions, such as TEPSLF, are not disqualified from the program(s).

21. Advocate for continued funding of programs including Income-Driven Repayment plans for the benefit of reducing medical student load burden.

22. Strongly advocate for the passage of legislation to allow medical students, residents and fellows who have education loans to qualify for interest-free deferment on their student loans while serving in a medical internship, residency, or fellowship program, as well as permitting the conversion of currently unsubsidized Stafford and Graduate Plus loans to interest free status for the duration of undergraduate and graduate medical education.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 312
(A-23)

Introduced by: Medical Student Section

Subject: Indian Health Service Licensing Exemptions

Referred to: Reference Committee C

Whereas, The Indian Health Service (IHS) is responsible for providing direct and indirect healthcare services to nearly 3 million American Indians and Alaska Natives in the United States[1]; and

Whereas, Compared to other federal health programs like Medicaid, Medicare, and the Veterans' Health Administration, the IHS is unique in that it serves members of federally recognized American Indian and Alaska Native Tribes and Villages[1]; and

Whereas, There are three types of healthcare facilities under the umbrella of the IHS: federal or IHS (I) facilities operated by the federal government, and tribal (T) and urban (U) Indian health programs which are operated under the authority and support of the Indian Self-Determination and Education Assistance Act of 1975 (ISDEAA) (Public Law 93-638) and Indian Health Care Improvement Act (Public Law 94-437)[3,4]; and

Whereas, These facilities are operated through compacts and contracts with federally-recognized American Indian and Alaska Native Tribes and Villages and nonprofit Indian healthcare organizations[3,4]; and

Whereas, The Affordable Care Act established that licensed health professionals employed by a Tribal health program shall be exempt, if licensed in any state, from the licensing requirement of the state in which the Tribal health program performs the services described in the contract or compact of the Tribal health program under the authority of ISDEAA[5]; and

Whereas, Current federal law defines a "[T]ribal health program" as an Indian Tribe or Tribal organization that operates any health program, service, function, activity, or facility funded, in whole or part, by the Indian Health Service[5]; and

Whereas, In 2012, California Governor Jerry Brown signed Assembly Bill 1896 (AB 1896), which codified the federal licensing requirement specifying that a person who is licensed as a health care practitioner in any other state and is employed by a Tribal health program is exempt from the respective state's licensing requirements with respect to acts authorized under the person's license where the Tribal health program performs specific services, in order to help align state law with federal law, make it easier to hire healthcare professionals, and fill longstanding I/T/U vacancies[6,7]; and

Whereas, In 2015, California Governor Jerry Brown took up a similar issue and signed Assembly Bill 941 (AB 941) which allowed for a clinic conducted, maintained, or operated by a federally recognized Indian tribe under a contract with the United States pursuant to federal law, without regard to the location of the clinic, to be exempt from licensing provisions from the State Department of Public Health[8]; and

Whereas, During the 111th Congress, the Rahall Amendment was added to H.R. 3200: America's Affordable Health Choices Act of 2009 to preserve the federal trust responsibility to provide health care to American Indians and Alaska Natives and to protect the Indian Health Service from inadvertent harm[9]; and

Whereas, Sec. 225 of H.R. 3200 barred any health care provider not licensed or certified under State law from participating in the public health insurance option and because federal (IHS) and Tribal facilities are not subject to state licensing laws, as written, Sec. 225 would have barred all of these facilities from participation in a public health insurance option[9]; and

Whereas, This provides another example of why I/T/U licensing and related exemptions should be considered when discussing the merits of healthcare legislation, similar to what was presented by AB 1896 and AB 941 in California[9]; and

Whereas, The IHS has active policy to address the possibility that state licensing exemptions for healthcare providers at I/T/U facilities may create "blindspots" allowing for physicians and other healthcare professionals to practice with a restricted state license in a state not concordant with their license[10]; and

Whereas, Without knowledge of federal statutes regarding licensing of IHS physicians and facilities, state health agencies may create unnecessary burdens for filling IHS physician vacancies, which average between 25 to 50 percent across the country, and licensing new facilities[11]; therefore be it

RESOLVED, That our American Medical Association advocate that physicians at Indian Health Service, Tribal, and Urban Indian Health Programs be exempt from duplicative licensure requirements, such as requirements for state licensure when these physicians are already federally licensed (Directive to Take Action); and be it further

RESOLVED, That our AMA advocate that future health reform proposals include corresponding licensure and eligibility exceptions for Indian Health Service, Tribal, and Urban Indian Health Program facilities and physicians to ensure that these physicians can fully participate. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Facilitating Credentialing for State Licensure D-275.994
Our AMA: (1) encourages the Federation of State Medical Boards to urge its Portability Committee to complete its work on developing mechanisms for greater reciprocity between state licensing jurisdictions as soon as possible; (2) will work with the Federation of State Medical Boards (FSMB) and the Association of State Medical Board Executive Directors to encourage the increased standardization of credentials requirements for licensure, and to increase the number of reciprocal relationships among all licensing jurisdictions; (3) encourages the Federation of State Medical Boards and its licensing jurisdictions to widely disseminate information about the Federation's Credentials Verification Service, especially when physicians apply for a new medical license; and (4) supports the FSMB Interstate Compact for Medical Licensure and will work with interested medical associations, the FSMB and other interested stakeholders to ensure expeditious adoption by the states of the Interstate Compact for Medical Licensure and creation of the Interstate Medical Licensure Compact Commission.

Indian Health Service H-350.977
The policy of the AMA is to support efforts in Congress to enable the Indian Health Service to meet its obligation to bring American Indian health up to the general population level. The AMA specifically recommends: (1) Indian Population: (a) In current education programs, and in the expansion of educational activities suggested below, special consideration be given to involving the American Indian and Alaska native population in training for the various health professions, in the expectation that such professionals, if provided with adequate professional resources, facilities, and income, will be more likely to serve the tribal areas permanently; (b) Exploration with American Indian leaders of the possibility of increased numbers of nonfederal American Indian health centers, under tribal sponsorship, to expand the American Indian role in its own health care; (c) Increased involvement of private practitioners and facilities in American Indian care, through such mechanisms as agreements with tribal leaders or Indian Health Service contracts, as well as normal private practice relationships; and (d) Improvement in transportation to make access to existing private care easier for the American Indian population.
(2) Federal Facilities: Based on the distribution of the eligible population, transportation facilities and roads, and the availability of alternative nonfederal resources, the AMA recommends that those Indian Health Service facilities currently necessary for American Indian care be identified and that an immediate construction and modernization program be initiated to bring these facilities up to current standards of practice and accreditation.
(3)Manpower: (a) Compensation for Indian Health Service physicians be increased to a level competitive with other Federal agencies and nongovernmental service; (b) Consideration should be given to increased compensation for service in remote areas; (c) In conjunction with improvement of Service facilities, efforts should be made to establish closer ties with teaching centers, thus increasing both the available manpower and the level of professional expertise available for consultation; (d) Allied health professional staffing of Service facilities should be maintained at a level appropriate to the special needs of the population served; (e) Continuing education opportunities should be provided for those health professionals serving these communities, and especially those in remote areas, and, increased peer contact, both to maintain the quality of care and to avert professional isolation; and (f) Consideration should be given to a federal statement of policy supporting continuation of the Public Health Service to reduce the great uncertainty now felt by many career officers of the corps.
(4)Medical Societies: In those states where Indian Health Service facilities are located, and in counties containing or adjacent to Service facilities, that the appropriate medical societies should explore the possibility of increased formal liaison with local Indian Health Service physicians. Increased support from organized medicine for improvement of health care provided under their direction, including professional consultation and involvement in society activities should be pursued.
(5) Our AMA also support the removal of any requirement for competitive bidding in the Indian Health Service that compromises proper care for the American Indian population.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 313
(A-23)

Introduced by: International Medical Graduates Section

Subject: Filtering International Medical Graduates During Residency or Fellowship Applications

Referred to: Reference Committee C

Whereas, Many graduate training programs report that they receive thousands of residency applications each match cycle, leading them to implement a filtering process that screens out a significant number of applications based on program-specific criteria; and

Whereas, The filtering process lacks transparency and clear understanding, potentially leading to unfair and biased decisions; and

Whereas, Some program directors or literature suggest that being an international medical graduate is one of the first filters used, despite this not reflecting an applicant's individual merit and representing a social disadvantage compared to American medical graduates; and

Whereas, Graduating from a foreign medical school doesn't reflect an applicant's individual merit but rather could represent a social disadvantage compared to American medical graduates; and

Whereas, It is imperative that residency applications should reflect a candidate's overall academic accomplishments (standardized test results, medical school evaluations, letters of recommendation, and diverse cultural background) rather than solely their IMG status used as a single metric; and

Whereas, Filtering applicants based on foreign medical school training eliminates a fair and equitable application process for international medical graduates and rather represents explicit bias and stigma against this group of applicants; therefore be it

RESOLVED, That our American Medical Association collaborate with relevant stakeholders to identify alternative methods of reducing the number of applications to review without using a discriminatory filtering system that deprives international medical graduates of equitable training opportunities (Direction to Take Action); and be it further

RESOLVED, That our AMA advocate for removal of the ability to filter out international medical graduates during application to a residency or fellowship. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Eliminating Questions Regarding Marital Status, Dependents, Plans for Marriage or Children, Sexual Orientation, Gender Identity, Age, Race, National Origin and Religion During the Residency and Fellowship Application Process H-310.919

Our AMA:

1. opposes questioning residency or fellowship applicants regarding marital status, dependents, plans for marriage or children, sexual orientation, gender identity, age, race, national origin, and religion;
2. will work with the Accreditation Council for Graduate Medical Education, the National Residency Matching Program, and other interested parties to eliminate questioning about or discrimination based on marital and dependent status, future plans for marriage or children, sexual orientation, age, race, national origin, and religion during the residency and fellowship application process;
3. will continue to support efforts to enhance racial and ethnic diversity in medicine. Information regarding race and ethnicity may be voluntarily provided by residency and fellowship applicants;
4.encourages the Association of American Medical Colleges (AAMC) and its Electronic Residency Application Service (ERAS) Advisory Committee to develop steps to minimize bias in the ERAS and the residency training selection process; and
5. will advocate that modifications in the ERAS Residency Application to minimize bias consider the effects these changes may have on efforts to increase diversity in residency programs.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 314
(A-23)

Introduced by: International Medical Graduates Section

Subject: Support for International Medical Graduates from Turkey

Referred to: Reference Committee C

Whereas, The earthquake that hit Turkey on February 6, 2022, left 45,000 people dead and over a million homeless; and

Whereas, The Turkish Enterprise and Business Confederation estimates the total cost of the earthquake is $84 billion, including $34 billion in immediate damage, which represents 4% of the country's annual economic output; and

Whereas, Hundreds of international medical graduates (IMGs) from Turkey have matched into residency and fellowship positions, or are currently practicing physicians in many medical and surgical specialties in the United States; and

Whereas, Immigration status is being increasingly recognized as a social determinant of health, contributing to making the Turkish IMG immigrant population vulnerable, that is at increased risk for psychological, social health outcomes, and financial distress, which can significantly impact performance at work; and

Whereas, Bereavement, mental distress from losing family members and friends, financial difficulty while providing support to relatives in devastated areas in Turkey, and inability to provide immediate assistance to populations in dire need of help, are unique at this time for this population; therefore be it

RESOLVED, That our American Medical Association publicly recognize and express its support to immigrant physicians and trainees from Turkey (New HOD Policy); and be it further

RESOLVED, That our AMA acknowledge and address interpersonal and acute systemic factors that negatively affect Turkish IMGs and their families (New HOD Policy); and be it further

RESOLVED, That our AMA affirm its support and advocate for immigrant physicians and trainees working in the United States when their country of origin faces major humanitarian crises, to promote an understanding of the challenges specific to immigrant physicians (Directive to Take Action); and be it further

RESOLVED, That our AMA support the development and implementation of channels of communication for immigrant physicians to share their personal and professional journey when facing severe destruction, humanitarian crises, or personal losses in their country of origin, contributing therefore to improving the understanding of the difficulties faced by immigrant physicians. (New HOD Policy)

Fiscal Note: Modest - between $1,000 - $5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 315
(A-23)

Introduced by: Michigan

Subject: Prohibit Discriminatory ERAS® Filters In NRMP Match

Referred to: Reference Committee C

Whereas, Graduate training programs require applicants to go through the Electronic Residency Application Service® (ERAS®) for residency selection in the National Residency Match Program (NRMP), and

Whereas, The ERAS® requires mandatory information be filled out in the application including, but not limited to gender and medical school, and

Whereas, There are pre-programmed filters available in the ERAS® system such as being an international medical graduate, and

Whereas, Many program directors apply these filters regularly, according to the survey by the NRMP post-match data, and

Whereas, Many program directors admit to applying the medical school accreditation filter - Liaison Committee on Medical Education (LCME) vs non-LCME - frequently in downloading applications, and

Whereas, Applying this filter completely eliminates the downloading of all international medical graduates' applications; thereby, preventing them from being considered regardless of how competitive their applications may be, and

Whereas, AMA policy is not to discriminate candidates in residency selection based on their education in foreign countries,

Whereas, According to Accreditation Council for Graduate Medical Education criteria, program directors are required not to discriminate in the selection process of any group as a block; therefore be it

RESOLVED, That our American Medical Association oppose the use of discriminatory filters for foreign graduates in the Electronic Residency Application Service® (ERAS®) system and aggressively work to eliminate discriminatory filters including, but not limited to, those based on foreign medical school training, that prevent international medical graduates and others from consideration based on merit. (Directive to Take Action)

RELEVANT AMA POLICY

Mitigating Demographic and Socioeconomic Inequities in the Residency and Fellowship Selection Process D-310.945
Our AMA will: 1. encourage medical schools, medical honor societies, and residency/fellowship programs to work toward ethical, equitable, and transparent recruiting processes, which are made available to all applicants.
2. advocate for residency and fellowship programs to avoid using objective criteria available in the Electronic Residency Application Service (ERAS) application process as the sole determinant for deciding which applicants to offer interviews.
3. advocate to remove membership in medical honor societies as a mandated field of entry on the Electronic Residency Application Service (ERAS)—thereby limiting its use as an automated screening mechanism—and encourage applicants to share this information within other aspects of the ERAS application.
4. advocate for and support innovation in the undergraduate medical education to graduate medical education transition, especially focusing on the efforts of the Accelerating Change in Medical Education initiative, to include pilot efforts to optimize the residency/fellowship application and matching process and encourage the study of the impact of using filters in the Electronic Residency Application Service (ERAS) by program directors on the diversity of entrants into residency.
5. encourage caution among medical schools and residency/fellowship programs when utilizing novel online assessments for sampling personal characteristics for the purpose of admissions or selection and monitor use and validity of these tools.

AMA Principles on International Medical Graduates H-255.988
Our AMA supports:
1. Current U.S. visa and immigration requirements applicable to foreign national physicians who are graduates of medical schools other than those in the United States and Canada.
2. Current regulations governing the issuance of exchange visitor visas to foreign national IMGs, including the requirements for successful completion of the USMLE.
3. The AMA reaffirms its policy that the U.S. and Canada medical schools be accredited by a nongovernmental accrediting body.
4. Cooperation in the collection and analysis of information on medical schools in nations other than the

U.S. and Canada.
5. Continued cooperation with the ECFMG and other appropriate organizations to disseminate information to prospective and current students in foreign medical schools. An AMA member, who is an IMG, should be appointed regularly as one of the AMA's representatives to the ECFMG Board of Trustees.
6. Working with the Accreditation Council for Graduate Medical Education (ACGME) and the Federation of State Medical Boards (FSMB) to assure that institutions offering accredited residencies, residency program directors, and U.S. licensing authorities do not deviate from established standards when evaluating graduates of foreign medical schools.
7. In cooperation with the ACGME and the FSMB, supports only those modifications in established graduate medical education or licensing standards designed to enhance the quality of medical education and patient care.
8. The AMA continues to support the activities of the ECFMG related to verification of education credentials and testing of IMGs.
9. That special consideration be given to the limited number of IMGs who are refugees from foreign governments that refuse to provide pertinent information usually required to establish eligibility for residency training or licensure.
10. That accreditation standards enhance the quality of patient care and medical education and not be used for purposes of regulating physician manpower.
11. That AMA representatives to the ACGME, residency review committees and to the ECFMG should support AMA policy opposing discrimination. Medical school admissions officers and directors of residency programs should select applicants on the basis of merit, without considering status as an IMG or an ethnic name as a negative factor.
12. The requirement that all medical school graduates complete at least one year of graduate medical education in an accredited U.S. program in order to qualify for full and unrestricted licensure. State medical licensing boards are encouraged to allow an alternate set of criteria for granting licensure in lieu of this requirement: (a) completion of medical school and residency training outside the U.S.; (b) extensive U.S. medical practice; and (c) evidence of good standing within the local medical community.
13. Publicizing existing policy concerning the granting of staff and clinical privileges in hospitals and other health facilities.
14. The participation of all physicians, including graduates of foreign as well as U.S. and Canadian medical schools, in organized medicine. The AMA offers encouragement and assistance to state, county, and specialty medical societies in fostering greater membership among IMGs and their participation in leadership positions at all levels of organized medicine, including AMA committees and councils, the Accreditation Council for Graduate Medical Education and its review committees, the American Board of Medical Specialties and its specialty boards, and state boards of medicine, by providing guidelines and non-financial incentives, such as recognition for outstanding achievements by either individuals or organizations in promoting leadership among IMGs.
15. Support studying the feasibility of conducting peer-to-peer membership recruitment efforts aimed at IMGs who are not AMA members.
16. AMA membership outreach to IMGs, to include a) using its existing publications to highlight policies and activities of interest to IMGs, stressing the common concerns of all physicians; b) publicizing its many relevant resources to all physicians, especially to nonmember IMGs; c) identifying and publicizing AMA resources to respond to inquiries from IMGs; and d) expansion of its efforts to prepare and disseminate information about requirements for admission to accredited residency programs, the availability of positions, and the problems of becoming licensed and entering full and unrestricted medical practice in the U.S. that face IMGs. This information should be addressed to college students, high school and college advisors, and students in foreign medical schools.
17. Recognition of the common aims and goals of all physicians, particularly those practicing in the U.S., and support for including all physicians who are permanent residents of the U.S. in the mainstream of American medicine.
18. Its leadership role to promote the international exchange of medical knowledge as well as cultural understanding between the U.S. and other nations.
19. Institutions that sponsor exchange visitor programs in medical education, clinical medicine and public health to tailor programs for the individual visiting scholar that will meet the needs of the scholar, the institution, and the nation to which he will return.
20. Informing foreign national IMGs that the availability of training and practice opportunities in the U.S. is limited by the availability of fiscal and human resources to maintain the quality of medical education and

patient care in the U.S., and that those IMGs who plan to return to their country of origin have the opportunity to obtain GME in the United States.
21. U.S. medical schools offering admission with advanced standing, within the capabilities determined by each institution, to international medical students who satisfy the requirements of the institution for matriculation.
22. The Federation of State Medical Boards, its member boards, and the ECFMG in their willingness to adjust their administrative procedures in processing IMG applications so that original documents do not have to be recertified in home countries when physicians apply for licenses in a second state.
23. Continued efforts to protect the rights and privileges of all physicians duly licensed in the U.S. regardless of ethnic or educational background and opposes any legislative efforts to discriminate against duly licensed physicians on the basis of ethnic or educational background.
24. Continued study of challenges and issues pertinent to IMGs as they affect our country's health care system and our physician workforce.
25. Advocacy to Congress to fund studies through appropriate agencies, such as the Department of Health and Human Services, to examine issues and experiences of IMGs and make recommendations for improvements.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 316
(A-23)

Introduced by: Illinois

Subject: Physician Medical Conditions and Questions on Applications for Medical Licensure, Specialty Boards, and Institutional Privileges

Referred to: Reference Committee C

Whereas, There is an increasing number of physicians experiencing burnout, a potential factor in the increased rates of physicians having depression and committing suicide; and

Whereas, Physicians who have or have had mental health concerns may be reluctant to seek treatment as it may cause difficulty in obtaining and/or renewing a medical license as well as obtaining institutional privileges; and

Whereas, Physicians not receiving treatment for mental health issues may pose harm to patients and can contribute to untreated burnout, depression as well as increased rates of suicide; and

Whereas, Physicians have the right to obtain the same care as patients without retribution and with respect of the privacy of physicians' protected health information; and

Whereas, The American Psychiatric Association has found no evidence that a physician who has been treated for a mental illness is any more likely to harm a patient than a physician with no mental health issues; and

Whereas, The Americans with Disabilities Act of 1990 states that employers can't discriminate against employees based on mental or physical health; and

Whereas, The 2018 American Psychiatric Association Position Statement on Inquiries About Diagnosis and Treatment of Mental Disorders in Connection with Professional Credentialing and Licensing recommends that medical license bodies not inquire of applicants about prior diagnosis and treatment of mental health disorders; and

Whereas, Per the 2018 American Psychiatric Association Position Statement on Inquiries About Diagnosis and Treatment of Mental Disorders in Connection with Professional Credentialing and Licensing: "Medical or hospital records requested shall be by way of narrowly tailored requests and releases that provide access only to information that is reasonably needed to assess the applicant's fitness to practice. All personal or health-related information shall be kept strictly confidential and shall be accessed only by individuals with a legitimate need for such access…Personal health information collected by the board should be kept confidential and should be destroyed after a reasonable period of time"; and

Whereas, Many initial and renewal applications for medical licenses and associated applications and application reference forms, medical specialty boards, and institutional privilege and credential applications continue to include questions about physicians' mental health and

physicians who disclose a current or past mental health condition may be investigated or sanctioned; and

Whereas, Those applications that continue to make inquiries about a physician's mental health should use language consistent with Americans with Disabilities Act, which limit questions to whether the individual has a medical condition that *currently* impacts his or her ability to practice medicine; and

Whereas, In an analysis of state medical board applications and a survey of state medical board executives, 97% of the executives responded that the board was not required to sanction a physician who is diagnosed with a medical illness, yet 37% responded that a mental illness diagnosis alone was sufficient for sanctioning physicians; and

Whereas, AMA Policy H-275.970, *Licensure Confidentiality,* addresses issues of potential discrimination and confidentiality violations in the licensing, privileging and credentialing processes; therefore be it

RESOLVED, That our American Medical Association amend Policy H-275.970, *Licensure Confidentiality*, by addition to read as follows:

1. The AMA (a) encourages specialty boards, hospitals, and other organizations involved in credentialing and/or privileging, as well as state licensing boards, to take all necessary steps to assure the confidentiality of information contained on application forms for credentials; (b) encourages boards these entities to include in application forms only requests for information that can reasonably be related to medical practice; (c) encourages state licensing boards, specialty boards, hospitals and other organizations involved in credentialing and/or privileging to exclude from license application forms and associated application forms including credentialing/privileging application forms information that refers to psychoanalysis, counseling, or psychotherapy required or undertaken as part of medical training; (d) encourages state medical societies and specialty societies to join with the AMA in efforts to change statutes and regulations to provide needed confidentiality for information collected by licensing boards and related organizations; and (e) encourages state licensing boards, specialty boards, hospitals and other organizations involved in credentialing and/or privileging to require disclosure of physical or mental health conditions only when a physician is suffering from any condition that currently impairs his/her judgment or that would otherwise adversely affect his/her ability to practice medicine in a competent, ethical, and professional manner, or when the physician presents a public health danger.

2. Our AMA will encourage will verify that, by 2024, those state medical boards, specialty boards, hospitals, and other organizations involved in credentialing/privileging that wish to retain questions about the health of applicants on medical licensing applications use language consistent with that recommended by the Federation of State Medical Boards, which reads, "Are you currently suffering from any condition for which you are not being appropriately treated that impairs your judgment or that would otherwise adversely affect your ability to practice medicine in a competent, ethical and professional manner? (Yes/No)."

3. Our AMA will work with the Federation of State Medical Boards, the American Hospital Association, the American Board of Medical Specialties, and state medical societies to develop policies and strategies to ensure that by 2024 all new and renewal medical licensure and associated applications and application reference forms, privileging, credentialing and related applications and documentation will request or disclose only information that is reasonably

needed to address the applicant's current fitness to practice medicine and respect the privacy of physician's protected health information. (Modify Current HOD Policy)

RELEVANT AMA POLICY

Self-Incriminating Questions on Applications for Licensure and Specialty Boards H-275.945
The AMA will: (1) encourage the Federation of State Medical Boards and its constituent members to develop uniform definitions and nomenclature for use in licensing and disciplinary proceedings to better facilitate the sharing of information; (2) seek clarification of the application of the Americans with Disabilities Act to the actions of medical licensing and medical specialty boards; and (3) until the applicability and scope of the Americans with Disabilities Act are clarified, will encourage the American Board of Medical Specialties and the Federation of State Medical Boards and their constituent members to advise physicians of the rationale behind inquiries on mental illness, substance abuse or physical disabilities in materials used in the licensure, reregistration, and certification processes when such questions are asked.
Citation: (BOT Rep. 1, I-933; CME Rep. 10 - I-94; Reaffirmed: CME Rep. 2, A-04; Reaffirmed: CME Rep. 2, A-14)

Licensure Confidentiality H-275.970
1. The AMA (a) encourages specialty boards, hospitals, and other organizations involved in credentialing, as well as state licensing boards, to take all necessary steps to assure the confidentiality of information contained on application forms for credentials; (b) encourages boards to include in application forms only requests for information that can reasonably be related to medical practice; (c) encourages state licensing boards to exclude from license application forms information that refers to psychoanalysis, counseling, or psychotherapy required or undertaken as part of medical training; (d) encourages state medical societies and specialty societies to join with the AMA in efforts to change statutes and regulations to provide needed confidentiality for information collected by licensing boards; and (e) encourages state licensing boards to require disclosure of physical or mental health conditions only when a physician is suffering from any condition that currently impairs his/her judgment or that would otherwise adversely affect his/her ability to practice medicine in a competent, ethical, and professional manner, or when the physician presents a public health danger.
2.Our AMA will encourage those state medical boards that wish to retain questions about the health of applicants on medical licensing applications to use the language recommended by the Federation of State Medical Boards that reads, Are you currently suffering from any condition for which you are not being appropriately treated that impairs your judgment or that would otherwise adversely affect your ability to practice medicine in a competent, ethical and professional manner? (Yes/No).

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 317
(A-23)

Introduced by: Illinois

Subject: Supporting Childcare for Medical Residents

Referred to: Reference Committee C

Whereas, The healthcare field is experiencing a major shortage of physicians[1]; and

Whereas, Work-home conflicts, including decisions regarding family-life balance, have been cited as a contributing factor to physician burnout[2]; and

Whereas, Over half of the surveyed residents report delaying childbearing, half of these cite childcare as a contributing factor for this decision, and only 1/3 are content with this decision [3]; and

Whereas, Only 3% of resident respondents believe their institution provides adequate childcare resources[4]; and

Whereas, Specific hospital centers have found providing childcare is more cost effective than missed work days[5]; and

Whereas, Providing childcare will increase resident satisfaction and allow for more focused care of patients[6]; and

Whereas, The American Medical Association has recognized the challenges facing residents as parents in H-200.948 yet has not addressed specificities or ways to mitigate these challenges; therefore be it

RESOLVED, That our American Medical Association reaffirm Policy D-200.974, *Supporting Child Care for Health Care Professionals,* committing to investigate barriers to childcare for medical trainees, as well as innovative childcare methods. (Reaffirm HOD Policy)

Fiscal Note: Minimal - less than $1,000

Received: 5/5/23

The topic of this resolution is currently under study by the Council on Medical Education and will be presented as CME 1-I-23, *Leave Policies for Medical Students and Physicians*.

RELEVANT AMA POLICY

Onsite and Subsidized Childcare for Medical Students, Residents and Fellows H-200.948
Our AMA recognizes: (1) the unique childcare challenges faced by medical students, residents and fellows, which result from a combination of limited negotiating ability (given the matching process into residency), non-traditional work hours, extended or unpredictable shifts, and minimal autonomy in selecting their work schedules; and (2) the fiscal challenges faced by medical schools and graduate medical education institutions in providing onsite and/or subsidized childcare to students and employees, including residents and fellows.
Citation: CME Rep. 3, A-22;

Supporting Child Care for Health Care Professionals D-200.974
Our AMA: (1) will work with interested stakeholders to investigate solutions for innovative childcare policies and flexible working environments for all health care professionals (in particular, medical students and physician trainees); (2) encourages provision of onsite and/or subsidized childcare for medical students, residents, and fellows; and (3) will work with the Accreditation Council for Graduate Medical Education, Association of American Medical Colleges, and American Association of Colleges of Osteopathic Medicine to identify barriers to childcare for medical trainees and innovative methods and best practices for instituting on-site and/or subsidized childcare that meets the unique needs of medical students, residents, and fellows.
Citation: Res. 309, A-21; Appended: CME Rep. 3, A-22;

Prescription Drug Diversion, Misuse and Addiction H-95.945
Our AMA: (1) supports permanent authorization of and adequate funding for the National All Schedules Prescription Electronic Reporting (NASPER) program so that every state, district and territory of the US can have an operational Prescription Drug Monitoring Program (PDMP) for use of clinicians in all jurisdictions; (2) considers PDMP data to be protected health information, and thus protected from release outside the healthcare system unless there is a HIPAA exception or specific authorization from the individual patient to release personal health information, and recommends that others recognize that PDMP data is health information; (3) recommends that PDMP's be designed such that data is immediately available when clinicians query the database and are considering a decision to prescribe a controlled substance; (4) recommends that individual PDMP databases be designed with connectivity among each other so that clinicians can have access to PDMP controlled substances dispensing data across state boundaries; and (5) will promote medical school and postgraduate training that incorporates curriculum topics focusing on pain medicine, addiction medicine, safe prescribing practices, safe medication storage and disposal practices, functional assessment of patients with chronic conditions, and the role of the prescriber in patient education regarding safe medication storage and disposal practices, in order to have future generations of physicians better prepared to contribute to positive solutions to the problems of prescription drug diversion, misuse, addiction and overdose deaths.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 318
(A-23)

Introduced by: Illinois

Subject: Fostering Pathways for Resident Physicians to Pursue MBA Programs in Order to Increase the Number of Qualified Physicians for Healthcare Leadership Positions

Referred to: Reference Committee C

Whereas, Recent research has found a strong association between higher hospital quality rankings and the CEO being a physician. The majority of hospitals in the U.S. are led by non-physicians. According to a study by the American College of Physician Executives in 2014, only 5% of hospitals were led by physicians; and

Whereas, Today's intricate healthcare system operates in a constantly changing environment, requiring complex and demanding professional healthcare management. Being a physician doesn't necessarily qualify one to be a super performing hospital CEO. In order to manage hospitals in a competent manner, the need for physician CEOs who possess various managerial skills as well as familiarity with problems in healthcare is strongly needed; and

Whereas, The idea of a medical doctor earning additional education or certification might seem counterintuitive at first, given how much time physicians have already devoted to a bachelor's degree, medical school and a residency before they begin to practice. However, the benefits of education in healthcare leadership can merit the extra investment in time, money and effort; therefore be it

RESOLVED, That our American Medical Association encourage education for medical trainees in healthcare leadership, which may include additional degrees at the master's level and/or certificate programs, in order to increase physician-led healthcare systems. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

Received: 5/5/23

RELEVANT AMA POLICY

Management and Leadership for Physicians D-295.316
1. Our AMA will study advantages and disadvantages of various educational options on management and leadership for physicians with a report back to the House of Delegates; and develop an online report and guide aimed at physicians interested in management and leadership that would include the advantages and disadvantages of various educational options.
2. Our AMA will work with key stakeholders to advocate for collaborative programs among medical schools, residency programs, and related schools of business and management to better prepare physicians for administrative, financial and leadership responsibilities in medical management.
3. Our AMA: (a) will advocate for and support the creation of leadership programs and curricula that emphasize experiential and active learning models to include knowledge, skills and management techniques integral to achieving personal and professional financial literacy and leading interprofessional team care, in the spirit of the AMA's Accelerating Change in Medical Education initiative; and (b) will

advocate with the Liaison Committee for Medical Education, Association of American Medical Colleges and other governing bodies responsible for the education of future physicians to implement programs early in medical training to promote the development of leadership and personal and professional financial literacy capabilities.
4. Our AMA will: (a) study the extent of the impact of AMA Policy D-295.316, “Management and Leadership for Physicians,” on elective curriculum; and (b) expand efforts to promote the tenets of health systems science to prepare trainees for leadership roles and address prevalent challenges in the practice of medicine and public health.
Citation: Sub. Res. 918, I-14; Appended: Res. 306, I-16; Reaffirmed in lieu of: Res. 307, A-17; Modified: Res. 313, A-18; Appended: Res. 327, A-22;

Health Care Economics Education D-295.321
Our AMA, along with the Association of American Medical Colleges, Accreditation Council for Graduate Medical Education, and other entities, will work to encourage education in health care economics during the continuum of a physician’s professional life, including undergraduate medical education, graduate medical education and continuing medical education.
Citation: Res. 320, A-09; Reaffirmation I-15; Modified: CEJA Rep. 01, A-20;

Future Directions for Socioeconomic Education H-295.924
The AMA: (1) asks medical schools and residencies to encourage that basic content related to the structure and financing of the current health care system, including the organization of health care delivery, modes of practice, practice settings, cost effective use of diagnostic and treatment services, practice management, risk management, and utilization review/quality assurance, is included in the curriculum; (2) asks medical schools and residencies to ensure that content related to the environment and economics of medical practice in fee-for-service, managed care and other financing systems is presented at educationally appropriate times during undergraduate and graduate medical education; and (3) will encourage the Liaison Committee on Medical Education (LCME) to ensure that survey teams pay close attention during the accreditation process to the degree to which ‘socioeconomic’ subjects are covered in the medical curriculum.
Citation: CME Rep. 1-I-94; Reaffirmed and Modified: CME Rep. 2, A-04; Reaffirmation A-12; Reaffirmation I-15; Reaffirmed in lieu of: Res. 307, A-17; Modified: CME Rep. 2, I-19;

Systems-Based Practice Education for Medical Students and Resident/Fellow Physicians H-295.864
Our AMA: (1) supports the availability of educational resources and elective rotations for medical students and resident/fellow physicians on all aspects of systems-based practice, to improve awareness of and responsiveness to the larger context and system of health care and to aid in developing our next generation of physician leaders; (2) encourages development of model guidelines and curricular goals for elective courses and rotations and fellowships in systems-based practice, to be used by state and specialty societies, and explore developing an educational module on this topic as part of its Introduction to the Practice of Medicine (IPM) product; and (3) will request that undergraduate and graduate medical education accrediting bodies consider incorporation into their requirements for systems-based practice education such topics as health care policy and patient care advocacy; insurance, especially pertaining to policy coverage, claim processes, reimbursement, basic private insurance packages, Medicare, and Medicaid; the physician's role in obtaining affordable care for patients; cost awareness and risk benefit analysis in patient care; inter-professional teamwork in a physician-led team to enhance patient safety and improve patient care quality; and identification of system errors and implementation of potential systems solutions for enhanced patient safety and improved patient outcomes.
Citation: Sub. Res. 301, A-13; Reaffirmation I-15; Reaffirmed in lieu of: Res. 307, A-17;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 319
(A-23)

Introduced by: Minority Affairs Section, National Medical Association

Subject: Supporting Diversity, Equity, & Inclusion Offices and Initiatives at United States Medical Schools to Enhance Longitudinal Community Engagement

Referred to: Reference Committee C

Whereas, Diversity, Equity, and Inclusion (DEI) programs are formal offices, resources, and structures that promote expansion of community representation at an institution, advocate for equal access to opportunities, and increase overall sense of belonging and respect among individuals;[1−3] and

Whereas, The majority of medical schools host diversity initiatives including, but not limited to, community outreach, pathway programs for underrepresented in medicine (URM) individuals, and free clinics;[4] and

Whereas, Academic medical centers rely on medical students, often historically URM individuals, to promote diversity initiatives;[5−6] and

Whereas, “Minority tax” includes the cumulative effects of additional responsibilities placed on minority faculty and trainees to promote DEI initiatives, which can detract from other academic endeavors and emotional well-being and lead to burnout and exits from the DEI space;[7−16] and

Whereas, DEI work at academic medical institutions is hindered by limited financial support, limited dedicated staff, directives skewed toward broad generalities, and under-appreciation and under-compensation of the trainees, community members, and scholars engaged in these missions;[17] and

Whereas, Faculty and staff may be discouraged from participating in DEI initiatives considering only 35.6% of medical schools offer incentives for employees to meet DEI goals and 43.6% have career advancement policies as a reward for DEI work;[18] and

Whereas, Ongoing state efforts attacking DEI initiatives and opposing their funding, to limit consideration of DEI criteria in employment decisions, and opposing affirmative action for students and trainees threaten to hinder the initiatives that promote diversity in the physician workforce and encourage a multicultural education that better allows physicians to understand unique patient needs;[19−25] and

Whereas, Physician representation better aligned with the US population is associated with improved health measures;[26] and

Whereas, The Supreme Court of the United States (SCOTUS) anticipated ruling on affirmative action cases brought forth my Students for Fair Admissions (SFFA) in 2023 poses a significant threat to the promotion of DEI at higher education institutions;[27] and

Whereas, The Association of American Medical Colleges' (AAMC's) "The Power of Collective Action: Assessing and Advancing Diversity, Equity, and Inclusion Efforts at AAMC Medical Schools" found that institutional accountability for advancing DEI resources to support DEI was critical to ensuring institutional DEI advances;[4] therefore be it

RESOLVED, That our American Medical Association recognize the disproportionate efforts by and additional responsibilities placed on minoritized individuals to engage in diversity, equity, and inclusion efforts (New HOD Policy); and be it further

RESOLVED, That our AMA collaborate with the Association of American Medical Colleges, the Liaison Committee on Medical Education, and relevant stakeholders to encourage academic institutions to utilize Diversity, Equity, and Inclusion activities and community engagement as criteria for faculty and staff promotion and tenure (Directive to Take Action); and be it further

RESOLVED, That our AMA amend D-295.963, *Continued Support for Diversity in Medical Education,* by addition and deletion to read as follows:

> Our AMA will: (1) publicly state and reaffirm its ~~stance on~~ support for diversity in medical education and acknowledge the incorporation of DEI efforts as a vital aspect of medical training; (2) request that the Liaison Committee on Medical Education regularly share statistics related to compliance with accreditation standards IS-16 and MS-8 with medical schools and with other stakeholder groups; (3) work with appropriate stakeholders to commission and enact the recommendations of a forward-looking, cross-continuum, external study of 21st century medical education focused on reimagining the future of health equity and racial justice in medical education, improving the diversity of the health workforce, and ameliorating inequitable outcomes among minoritized and marginalized patient populations; and (4) advocate for funding to support the creation and sustainability of Historically Black College and University (HBCU), Hispanic-Serving Institution (HSI), and Tribal College and University (TCU) affiliated medical schools and residency programs, with the goal of achieving a physician workforce that is proportional to the racial, ethnic, and gender composition of the United States population; (5) directly oppose any local, state, or federal actions that aim to limit diversity, equity, and inclusion initiatives, curriculum requirements, or funding in medical education; and (6) advocate for resources to establish and maintain DEI offices at medical schools that are staff-managed and student- and physician-guided as well as committed to longitudinal community engagement.

(Modify Current HOD Policy)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Continued Support for Diversity in Medical Education D-295.963

Our AMA will: (1) publicly state and reaffirm its stance on diversity in medical education; (2) request that the Liaison Committee on Medical Education regularly share statistics related to compliance with accreditation standards IS-16 and MS-8 with medical schools and with other stakeholder groups; (3) work with appropriate stakeholders to commission and enact the recommendations of a forward-looking, cross-continuum, external study of 21st century medical education focused on reimagining the future of health equity and racial justice in medical education, improving the diversity of the health workforce, and ameliorating inequitable outcomes among minoritized and marginalized patient populations; and (4) advocate for funding to support the creation and sustainability of Historically Black College and University (HBCU), Hispanic-Serving Institution (HSI), and Tribal College and University (TCU) affiliated medical schools and residency programs, with the goal of achieving a physician workforce that is proportional to the racial, ethnic, and gender composition of the United States population.
Res. 325, A-03; Appended: CME Rep. 6, A-11; Modified: CME Rep. 3, A-13; Appended: CME Rep. 5, A-21; Modified: CME Rep. 02, I-22

Diversity in Medical Education H-350.970
Our AMA will: (1) request that the AMA Foundation seek ways of supporting innovative programs that strengthen pre-medical and pre-college preparation for minority students; (2) support and work in partnership with local state and specialty medical societies and other relevant groups to provide education on and promote programs aimed at increasing the number of minority medical school admissions; applicants who are admitted; and (3) encourage medical schools to consider the likelihood of service to underserved populations as a medical school admissions criterion.
BOT Rep. 15, A-99; Reaffirmed: CME Rep. 2, A-09; Reaffirmed in lieu of Res. 311, A-15

Minorities in the Health Professions H-350.978
The policy of our AMA is that (1) Each educational institution should accept responsibility for increasing its enrollment of members of underrepresented groups.
(2) Programs of education for health professions should devise means of improving retention rates for students from underrepresented groups.
(3) Health profession organizations should support the entry of disabled persons to programs of education for the health professions, and programs of health profession education should have established standards concerning the entry of disabled persons.
(4) Financial support and advisory services and other support services should be provided to disabled persons in health profession education programs. Assistance to the disabled during the educational process should be provided through special programs funded from public and private sources.
(5) Programs of health profession education should join in outreach programs directed at providing information to prospective students and enriching educational programs in secondary and undergraduate schools.
(6) Health profession organizations, especially the organizations of professional schools, should establish regular communication with counselors at both the high school and college level as a means of providing accurate and timely information to students about health profession education.
(7) The AMA reaffirms its support of: (a) efforts to increase the number of black Americans and other minority Americans entering and graduating from U.S. medical schools; and (b) increased financial aid from public and private sources for students from low income, minority and socioeconomically disadvantaged backgrounds.
(8) The AMA supports counseling and intervention designed to increase enrollment, retention, and graduation of minority medical students, and supports legislation for increased funding for the HHS Health Careers Opportunities Program.
CLRPD Rep. 3, I-98; Reaffirmed: CLRPD Rep. 1, A-08; Reaffirmed: CEJA Rep. 06, A-18

Strategies for Enhancing Diversity in the Physician Workforce H-200.951
Our AMA
(1) supports increased diversity across all specialties in the physician workforce in the categories of race, ethnicity, gender, sexual orientation/gender identity, socioeconomic origin and persons with disabilities;
(2) commends the Institute of Medicine for its report, "In the Nation's Compelling Interest: Ensuring Diversity in the Health Care Workforce," and supports the concept that a racially and ethnically diverse educational experience results in better educational outcomes; and
(3) encourages medical schools, health care institutions, managed care and other appropriate groups to develop policies articulating the value and importance of diversity as a goal that benefits all participants, and strategies to accomplish that goal.
CME Rep. 1, I-06; Reaffirmed: CME Rep. 7, A-08; Reaffirmed: CCB/CLRPD Rep. 4, A-13; Modified: CME Rep. 01, A-16; Reaffirmation A-16

Underrepresented Student Access to US Medical Schools H-350.960
Our AMA: (1) recommends that medical schools should consider in their planning: elements of diversity including but not limited to gender, racial, cultural and economic, reflective of the diversity of their patient population; (2) supports the development of new and the enhancement of existing programs that will identify and prepare underrepresented students from the high-school level onward and to enroll, retain and graduate increased numbers of underrepresented students; (3) recognizes some people have been historically underrepresented, excluded from, and marginalized in medical education and medicine because of their race, ethnicity, disability status, sexual orientation, gender identity, socioeconomic origin, and rurality, due to racism and other systems of exclusion and discrimination; (4) is committed to promoting truth and reconciliation in medical education as it relates to improving equity; (5) recognizes

the harm caused by the Flexner Report to historically Black medical schools, the diversity of the physician workforce, and the outcomes of minoritized and marginalized patient populations; (6) will urge medical schools to develop or expand the reach of existing pathway programs for underrepresented middle school, high school and college aged students to motivate them to pursue and prepare them for a career in medicine; (7) will encourage collegiate programs to establish criteria by which completion of such programs will secure an interview for admission to the sponsoring medical school; (8) will recommend that medical school pathway programs for underrepresented students be free-of-charge or provide financial support with need-based scholarships and grants; (9) will encourage all physicians to actively participate in programs and mentorship opportunities that help expose underrepresented students to potential careers in medicine; and (10) will consider quality of K-12 education a social determinant of health and thus advocate for implementation of Policy H-350.979, (1) (a) encouraging state and local governments to make quality elementary and secondary education available to all.

Strategies for Enhancing Diversity in the Physician Workforce D-200.985
1. Our AMA, independently and in collaboration with other groups such as the Association of American Medical Colleges (AAMC), will actively work and advocate for funding at the federal and state levels and in the private sector to support the following: (a) Pipeline programs to prepare and motivate members of underrepresented groups to enter medical school; (b) Diversity or minority affairs offices at medical schools; (c) Financial aid programs for students from groups that are underrepresented in medicine; and (d) Financial support programs to recruit and develop faculty members from underrepresented groups.
2. Our AMA will work to obtain full restoration and protection of federal Title VII funding, and similar state funding programs, for the Centers of Excellence Program, Health Careers Opportunity Program, Area Health Education Centers, and other programs that support physician training, recruitment, and retention in geographically-underserved areas.
3. Our AMA will take a leadership role in efforts to enhance diversity in the physician workforce, including engaging in broad-based efforts that involve partners within and beyond the medical profession and medical education community.
4. Our AMA will encourage the Liaison Committee on Medical Education to assure that medical schools demonstrate compliance with its requirements for a diverse student body and faculty.
5. Our AMA will develop an internal education program for its members on the issues and possibilities involved in creating a diverse physician population.
6. Our AMA will provide on-line educational materials for its membership that address diversity issues in patient care including, but not limited to, culture, religion, race and ethnicity.
7. Our AMA will create and support programs that introduce elementary through high school students, especially those from groups that are underrepresented in medicine (URM), to healthcare careers.
8. Our AMA will create and support pipeline programs and encourage support services for URM college students that will support them as they move through college, medical school and residency programs.
9. Our AMA will recommend that medical school admissions committees and residency/fellowship programs use holistic assessments of applicants that take into account the diversity of preparation and the variety of talents that applicants bring to their education with the goal of improving health care for all communities.
10. Our AMA will advocate for the tracking and reporting to interested stakeholders of demographic information pertaining to URM status collected from Electronic Residency Application Service (ERAS) applications through the National Resident Matching Program (NRMP).
11. Our AMA will continue the research, advocacy, collaborative partnerships and other work that was initiated by the Commission to End Health Care Disparities.
12. Our AMA opposes legislation that would undermine institutions' ability to properly employ affirmative action to promote a diverse student population.
13. Our AMA will work with the AAMC and other stakeholders to create a question for the AAMC electronic medical school application to identify previous pipeline program (also known as pathway program) participation and create a plan to analyze the data in order to determine the effectiveness of pipeline programs.
CME Rep. 1, I-06; Reaffirmation I-10; Reaffirmation A-13; Modified: CCB/CLRPD Rep. 2, A-14; Reaffirmation: A-16; Appended: Res. 313, A-17; Appended: Res. 314, A-17; Modified: CME Rep. 01, A-18; Appended: Res. 207, I-18; Reaffirmation: A-19; Appended: Res. 304, A-19; Appended: Res. 319, A-19; Modified: CME Rep. 5, A-21; Modified: CME Rep. 02, I-22

Service Learning in Medical Education H-295.880
Our AMA will support the concept of service learning as a key component in medical school and residency curricula, and that these experiences should include student and resident collaboration with a community partner to improve the health of the population.
Res. 321, A-04; Reaffirmed: CME Rep. 2, A-14

Reducing Racial and Ethnic Disparities in Health Care D-350.995
Our AMA's initiative on reducing racial and ethnic disparities in health care will include the following recommendations:
(1) Studying health system opportunities and barriers to eliminating racial and ethnic disparities in health care.
(2) Working with public health and other appropriate agencies to increase medical student, resident physician, and practicing physician awareness of racial and ethnic disparities in health care and the role of professionalism and professional obligations in efforts to reduce health care disparities.
(3) Promoting diversity within the profession by encouraging publication of successful outreach programs that increase minority applicants to medical schools, and take appropriate action to support such programs, for example, by expanding the "Doctors Back to School" program into secondary schools in minority communities.
BOT Rep. 4, A-03; Reaffirmation A-11; Reaffirmation: A-16; Reaffirmed: CMS Rep. 10, A-19

Racial and Ethnic Disparities in Health Care H-350.974
1. Our AMA recognizes racial and ethnic health disparities as a major public health problem in the United States and as a barrier to effective medical diagnosis and treatment. The AMA maintains a position of zero tolerance toward racially or culturally based disparities in care; encourages individuals to report physicians to local medical societies where racial or ethnic discrimination is suspected; and will continue to support physician cultural awareness initiatives and related consumer education activities. The elimination of racial and ethnic disparities in health care an issue of highest priority for the American Medical Association.
2. The AMA emphasizes three approaches that it believes should be given high priority:
A. Greater access - the need for ensuring that black Americans without adequate health care insurance are given the means for access to necessary health care. In particular, it is urgent that Congress address the need for Medicaid reform.
B. Greater awareness - racial disparities may be occurring despite the lack of any intent or purposeful efforts to treat patients differently on the basis of race. The AMA encourages physicians to examine their own practices to ensure that inappropriate considerations do not affect their clinical judgment. In addition, the profession should help increase the awareness of its members of racial disparities in medical treatment decisions by engaging in open and broad discussions about the issue. Such discussions should take place in medical school curriculum, in medical journals, at professional conferences, and as part of professional peer review activities.
C. Practice parameters - the racial disparities in access to treatment indicate that inappropriate considerations may enter the decision making process. The efforts of the specialty societies, with the coordination and assistance of our AMA, to develop practice parameters, should include criteria that would preclude or diminish racial disparities
3. Our AMA encourages the development of evidence-based performance measures that adequately identify socioeconomic and racial/ethnic disparities in quality. Furthermore, our AMA supports the use of evidence-based guidelines to promote the consistency and equity of care for all persons.
4. Our AMA: (a) actively supports the development and implementation of training regarding implicit bias, diversity and inclusion in all medical schools and residency programs; (b) will identify and publicize effective strategies for educating residents in all specialties about disparities in their fields related to race, ethnicity, and all populations at increased risk, with particular regard to access to care and health outcomes, as well as effective strategies for educating residents about managing the implicit biases of patients and their caregivers; and (c) supports research to identify the most effective strategies for educating physicians on how to eliminate disparities in health outcomes in all at-risk populations.
CLRPD Rep. 3, I-98; Appended and Reaffirmed: CSA Rep.1, I-02; Reaffirmed: BOT Rep. 4, A-03; Reaffirmed in lieu of Res. 106, A-12; Appended: Res. 952, I-17; Reaffirmed: CMS Rep. 10, A-19; Reaffirmed: CMS Rep. 3, A-21; Reaffirmed: Joint CMS/CSAPH Rep. 1, I-21

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 320
(A-23)

Introduced by: Minority Affairs Section, National Medical Association

Subject: Banning Affirmative Action is a Critical Threat to Health Equity and to the Medical Profession

Referred to: Reference Committee C

Whereas, Affirmative action is a race-conscious recruitment policy designed to equalize access to jobs and professions such as medicine and based on the premise that relief from illegal racial discrimination is not enough to remove the burden of overt and covert prejudice limiting social, educational, and fiscal mobility for minoritized groups[1,2]; and

Whereas, Affirmative action has been identified as a potent method for ameliorating racial disparities and increasing diversity in public universities;[3,4] and Whereas, University enrollment is directly correlated with attaining higher social status through increased access to professions such as medical practice[5]; and

Whereas, Racial diversity in the medical field fosters a greater understanding of patient populations through racial concordance; as it has been shown through peer reviewed literature that health outcomes for patients belonging to minoritized groups are improved when there is shared racial identity between patient and provider[6,7,8,9]; and

Whereas, Physicians belonging to minoritized groups are more likely to practice in areas with limited access to medical resources, and more often serve populations with higher percentages of patients who are disproportionately impacted by racial health disparities[10,11,12,13]; and

Whereas, Several states that have instituted bans on affirmative action have experienced subsequent decreases in college enrollment by minority students, completion of STEM degrees by minority students, and representation of minority students among matriculating medical school students[14,15]; and

Whereas, In 1978, 2003, and 2016 the supreme court upheld affirmative action in the cases of *Regents of the University of California v. Bakke*, *Grutter v. Bollinger*, and *Fisher v. The University of Texas at Austin,* respectively, allowing race to be one of several factors in college admission policy[16,17,18,19]; and

Whereas, Although AMA policy establishes a significant precedent to support undergraduate education as a means to produce medical school matriculants (H-60.917, H-350.979, H-200.985), existing policy falls short of addressing the necessity of affirmative action as mechanism for equality at the undergraduate level, which is necessary to bolster the pool of students belonging to racially minoritized groups who are eligible to apply to medical programs; and

Whereas, Race-Conscious Admissions directly empowers institutions of higher education to optimize the learning environment by fostering diverse representations of race, culture, nationality, and experience to best serve the advancement of knowledge creation and service to

humankind, particularly in light of centuries-long efforts to eliminate opportunities for non-White individuals to read or white through Anti-Literacy Laws,[20] and to eradicate representation of non-White individuals in spaces of higher education through racial segregation of schools and universities[21]; and

Whereas, Two lawsuits challenging the application of race as a measure of affirmative action for admissions decisions at Harvard and The University of North Carolina is currently under the consideration of the Supreme Court [22, 23] and serve two functions: 1) seeking to name race-conscious admissions as a form of racial discrimination and in violation of the Equal Protection Clause, and 2) threatening the application of affirmative action measures towards the expansion of racial diversity in medical schools and higher education nationwide; therefore be it

RESOLVED, That our American Medical Association amend H-350.979, *Increase the Representation of Minority and Economically Disadvantaged Populations in the Medical Profession,* by deletion and addition to read as follows:

> (3) urging medical school and undergraduate admissions committees to ~~consider minority representation as one factor in reaching their decisions~~ proactively implement policies and procedures that operationalize race-conscious admission practices in admissions decisions, among other factors (Modify Current HOD Policy); and be it further

RESOLVED, That our AMA amend D-200.985, *Strategies for Enhancing Diversity in the Physician Workforce*, by deletion and addition to read as follows:

> (12) unequivocally opposes legislation that would ~~undermine institutions' ability to properly employ~~ dissolve affirmative action or punish institutions for properly employing race-conscious admissions as a measure of affirmative action in order to promote a diverse student population (Modify Current HOD Policy); and be it further

RESOLVED, That our AMA recognize the consideration of race in admissions is a necessary safeguard in creating a pipeline to an environment within medical education that will propagate the advancement of health equity through diversification of the physician workforce. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

Received: 5/10/23

RELEVANT AMA POLICY

Disparities in Public Education as a Crisis in Public Health and Civil Rights H-60.917
Our AMA: (1) considers continued educational disparities based on ethnicity, race and economic status a detriment to the health of the nation; (2) will issue a call to action to all educational private and public stakeholders to come together to organize and examine, and using any and all available scientific evidence, to propose strategies, regulation and/or legislation to further the access of all children to a quality public education, including early childhood education, as one of the great unmet health and civil rights challenges of the 21st century; and (3) acknowledges the role of early childhood brain development in persistent educational and health disparities and encourage public and private stakeholders to work to strengthen and expand programs to support optimal early childhood brain development and school readiness.

Equal Opportunity H-65.968
Our AMA: (1) declares it is opposed to any exploitation and discrimination in the workplace based on gender; (2) affirms the concept that equality of rights under the law shall not be denied or abridged by the U.S. Government or by any state on account of gender; (3) affirms the concept of equal rights for men and women; and (4) endorses the principle of equal opportunity of employment and practice in the medical field.

Strategies for Enhancing Diversity in the Physician Workforce D-200.985
1. Our AMA, independently and in collaboration with other groups such as the Association of American Medical Colleges (AAMC), will actively work and advocate for funding at the federal and state levels and in the private sector to support the following: a. Pipeline programs to prepare and motivate members of underrepresented groups to enter medical school; b. Diversity or minority affairs offices at medical schools; c. Financial aid programs for students from groups that are underrepresented in medicine; and d. Financial support programs to recruit and develop faculty members from underrepresented groups.
2. Our AMA will work to obtain full restoration and protection of federal Title VII funding, and similar state funding programs, for the Centers of Excellence Program, Health Careers Opportunity Program, Area Health Education Centers, and other programs that support physician training, recruitment, and retention in geographically-underserved areas.
3. Our AMA will take a leadership role in efforts to enhance diversity in the physician workforce, including engaging in broad-based efforts that involve partners within and beyond the medical profession and medical education community.

4. Our AMA will encourage the Liaison Committee on Medical Education to assure that medical schools demonstrate compliance with its requirements for a diverse student body and faculty.
5. Our AMA will partner with key stakeholders (including but not limited to the Association of American Medical Colleges, Association of American Indian Physicians, Association of Native American Medical Students, We Are Healers, and the Indian Health Service) to study and report back by July 2018 on why enrollment in medical school for Native Americans is declining in spite of an overall substantial increase in medical school enrollment, and lastly to propose remedies to solve the problems identified in the AMA study.
6. Our AMA will develop an internal education program for its members on the issues and possibilities involved in creating a diverse physician population.
7. Our AMA will provide on-line educational materials for its membership that address diversity issues in patient care including, but not limited to, culture, religion, race and ethnicity.
8. Our AMA will create and support programs that introduce elementary through high school students, especially those from groups that are underrepresented in medicine (URM), to healthcare careers.
9. Our AMA will create and support pipeline programs and encourage support services for URM college students that will support them as they move through college, medical school and residency programs.
10. Our AMA will recommend that medical school admissions committees use holistic assessments of admission applicants that take into account the diversity of preparation and the variety of talents that applicants bring to their education.
11. Our AMA will advocate for the tracking and reporting to interested stakeholders of demographic information pertaining to URM status collected from Electronic Residency Application Service (ERAS) applications through the National Resident Matching Program (NRMP).
12. Our AMA will continue the research, advocacy, collaborative partnerships and other work that was initiated by the Commission to End Health Care Disparities.

Increase the Representation of Minority and Economically Disadvantaged Populations in the Medical Profession H-350.979
Our AMA supports increasing the representation of minorities in the physician population by: (1) Supporting efforts to increase the applicant pool of qualified minority students by: (a) Encouraging state and local governments to make quality elementary and secondary education opportunities available to all; (b) Urging medical schools to strengthen or initiate programs that offer special premedical and precollegiate experiences to underrepresented minority students;
(c) urging medical schools and other health training institutions to develop new and innovative measures to recruit underrepresented minority students, and (d) Supporting legislation that provides targeted financial aid to financially disadvantaged students at both the collegiate and medical school levels.
(2) Encouraging all medical schools to reaffirm the goal of increasing representation of underrepresented minorities in their student bodies and faculties.
(3) Urging medical school admission committees to consider minority representation as one factor in reaching their decisions.
(4) Increasing the supply of minority health professionals.
(5) Continuing its efforts to increase the proportion of minorities in medical schools and medical school faculty.
(6) Facilitating communication between medical school admission committees and premedical counselors concerning the relative importance of requirements, including grade point average and Medical College Aptitude Test scores.
(7) Continuing to urge for state legislation that will provide funds for medical education both directly to medical schools and indirectly through financial support to students.
(8) Continuing to provide strong support for federal legislation that provides financial assistance for able students whose financial need is such that otherwise they would be unable to attend medical school.

Continued Support for Diversity in Medical Education D-295.963
Our AMA will: (1) publicly state and reaffirm its stance on diversity in medical education; (2) request that the Liaison Committee on Medical Education regularly share statistics related to compliance with accreditation standards IS-16 and MS-8 with medical schools and with other stakeholder groups; (3) work

with appropriate stakeholders to commission and enact the recommendations of a forward-looking, cross-continuum, external study of 21st century medical education focused on reimagining the future of health equity and racial justice in medical education, improving the diversity of the health workforce, and ameliorating inequitable outcomes among minoritized and marginalized patient populations; and (4) advocate for funding to support the creation and sustainability of Historically Black College and University (HBCU), Hispanic-Serving Institution (HSI), and Tribal College and University (TCU) affiliated medical schools and residency programs, with the goal of achieving a physician workforce that is proportional to the racial, ethnic, and gender composition of the United States population.
Res. 325, A-03; Appended: CME Rep. 6, A-11; Modified: CME Rep. 3, A-13; Appended: CME Rep. 5, A-21; Modified: CME Rep. 02, I-22

Diversity in Medical Education H-350.970
Our AMA will: (1) request that the AMA Foundation seek ways of supporting innovative programs that strengthen pre-medical and pre-college preparation for minority students; (2) support and work in partnership with local state and specialty medical societies and other relevant groups to provide education on and promote programs aimed at increasing the number of minority medical school admissions; applicants who are admitted; and (3) encourage medical schools to consider the likelihood of service to underserved populations as a medical school admissions criterion.
BOT Rep. 15, A-99; Reaffirmed: CME Rep. 2, A-09; Reaffirmed in lieu of Res. 311, A-15

Minorities in the Health Professions H-350.978
The policy of our AMA is that (1) Each educational institution should accept responsibility for increasing its enrollment of members of underrepresented groups.
(2) Programs of education for health professions should devise means of improving retention rates for students from underrepresented groups.
(3) Health profession organizations should support the entry of disabled persons to programs of education for the health professions, and programs of health profession education should have established standards concerning the entry of disabled persons.
(4) Financial support and advisory services and other support services should be provided to disabled persons in health profession education programs. Assistance to the disabled during the educational process should be provided through special programs funded from public and private sources.
(5) Programs of health profession education should join in outreach programs directed at providing information to prospective students and enriching educational programs in secondary and undergraduate schools.
(6) Health profession organizations, especially the organizations of professional schools, should establish regular communication with counselors at both the high school and college level as a means of providing accurate and timely information to students about health profession education.
(7) The AMA reaffirms its support of: (a) efforts to increase the number of black Americans and other minority Americans entering and graduating from U.S. medical schools; and (b) increased financial aid from public and private sources for students from low income, minority and socioeconomically disadvantaged backgrounds.
(8) The AMA supports counseling and intervention designed to increase enrollment, retention, and graduation of minority medical students, and supports legislation for increased funding for the HHS Health Careers Opportunities Program.
CLRPD Rep. 3, I-98; Reaffirmed: CLRPD Rep. 1, A-08; Reaffirmed: CEJA Rep. 06, A-18

Strategies for Enhancing Diversity in the Physician Workforce H-200.951
Our AMA
(1) supports increased diversity across all specialties in the physician workforce in the categories of race, ethnicity, gender, sexual orientation/gender identity, socioeconomic origin and persons with disabilities;
(2) commends the Institute of Medicine for its report, "In the Nation's Compelling Interest: Ensuring Diversity in the Health Care Workforce," and supports the concept that a racially and ethnically diverse educational experience results in better educational outcomes; and
(3) encourages medical schools, health care institutions, managed care and other appropriate groups to develop policies articulating the value and importance of diversity as a goal that benefits all participants, and strategies to accomplish that goal.
CME Rep. 1, I-06; Reaffirmed: CME Rep. 7, A-08; Reaffirmed: CCB/CLRPD Rep. 4, A-13; Modified: CME Rep. 01, A-16; Reaffirmation A-16

Underrepresented Student Access to US Medical Schools H-350.960
Our AMA: (1) recommends that medical schools should consider in their planning: elements of diversity including but not limited to gender, racial, cultural and economic, reflective of the diversity of their patient population; (2) supports the development of new and the enhancement of existing programs that will identify and prepare underrepresented students from the high-school level onward and to enroll, retain and graduate increased numbers of underrepresented students; (3) recognizes some people have been historically underrepresented, excluded from, and marginalized in medical education and medicine because of their race, ethnicity, disability status, sexual orientation, gender identity, socioeconomic origin, and rurality, due to racism and other systems of exclusion and discrimination; (4) is committed to promoting truth and reconciliation in medical education as it relates to improving equity; (5) recognizes the harm caused by the Flexner Report to historically Black medical schools, the diversity of the physician workforce, and the outcomes of minoritized and marginalized patient populations; (6) will urge medical schools to develop or expand the reach of existing pathway programs for underrepresented middle school, high school and college aged students to motivate them to pursue and prepare them for a career in medicine; (7) will encourage collegiate programs to establish criteria by which completion of such programs will secure an interview for admission to the sponsoring medical school; (8) will recommend that medical school pathway programs for underrepresented students be free-of-charge or provide financial support with need-based scholarships and grants; (9) will encourage all physicians to actively participate in programs and mentorship opportunities that help expose underrepresented students to potential careers in medicine; and (10) will consider quality of K-12 education a social determinant of health and thus advocate for implementation of Policy H-350.979, (1) (a) encouraging state and local governments to make quality elementary and secondary education available to all.
Res. 908, I-08; Reaffirmed in lieu of Res. 311, A-15; Appended: CME Rep. 5, A-21; Appended: Res. 305, I-22

Strategies for Enhancing Diversity in the Physician Workforce D-200.985
1. Our AMA, independently and in collaboration with other groups such as the Association of American Medical Colleges (AAMC), will actively work and advocate for funding at the federal and state levels and in the private sector to support the following: (a) Pipeline programs to prepare and motivate members of underrepresented groups to enter medical school; (b) Diversity or minority affairs offices at medical schools; (c) Financial aid programs for students from groups that are underrepresented in medicine; and (d) Financial support programs to recruit and develop faculty members from underrepresented groups.
2. Our AMA will work to obtain full restoration and protection of federal Title VII funding, and similar state funding programs, for the Centers of Excellence Program, Health Careers Opportunity Program, Area Health Education Centers, and other programs that support physician training, recruitment, and retention in geographically-underserved areas.
3. Our AMA will take a leadership role in efforts to enhance diversity in the physician workforce, including engaging in broad-based efforts that involve partners within and beyond the medical profession and medical education community.
4. Our AMA will encourage the Liaison Committee on Medical Education to assure that medical schools demonstrate compliance with its requirements for a diverse student body and faculty.
5. Our AMA will develop an internal education program for its members on the issues and possibilities involved in creating a diverse physician population.
6. Our AMA will provide on-line educational materials for its membership that address diversity issues in patient care including, but not limited to, culture, religion, race and ethnicity.
7. Our AMA will create and support programs that introduce elementary through high school students, especially those from groups that are underrepresented in medicine (URM), to healthcare careers.
8. Our AMA will create and support pipeline programs and encourage support services for URM college students that will support them as they move through college, medical school and residency programs.
9. Our AMA will recommend that medical school admissions committees and residency/fellowship programs use holistic assessments of applicants that take into account the diversity of preparation and the variety of talents that applicants bring to their education with the goal of improving health care for all communities.
10. Our AMA will advocate for the tracking and reporting to interested stakeholders of demographic information pertaining to URM status collected from Electronic Residency Application Service (ERAS) applications through the National Resident Matching Program (NRMP).

11. Our AMA will continue the research, advocacy, collaborative partnerships and other work that was initiated by the Commission to End Health Care Disparities.
12. Our AMA opposes legislation that would undermine institutions' ability to properly employ affirmative action to promote a diverse student population.
13. Our AMA will work with the AAMC and other stakeholders to create a question for the AAMC electronic medical school application to identify previous pipeline program (also known as pathway program) participation and create a plan to analyze the data in order to determine the effectiveness of pipeline programs.
CME Rep. 1, I-06; Reaffirmation I-10; Reaffirmation A-13; Modified: CCB/CLRPD Rep. 2, A-14; Reaffirmation: A-16; Appended: Res. 313, A-17; Appended: Res. 314, A-17; Modified: CME Rep. 01, A-18; Appended: Res. 207, I-18; Reaffirmation: A-19; Appended: Res. 304, A-19; Appended: Res. 319, A-19; Modified: CME Rep. 5, A-21; Modified: CME Rep. 02, I-22

Service Learning in Medical Education H-295.880
Our AMA will support the concept of service learning as a key component in medical school and residency curricula, and that these experiences should include student and resident collaboration with a community partner to improve the health of the population.
Res. 321, A-04; Reaffirmed: CME Rep. 2, A-14

Reducing Racial and Ethnic Disparities in Health Care D-350.995
Our AMA's initiative on reducing racial and ethnic disparities in health care will include the following recommendations:
(1) Studying health system opportunities and barriers to eliminating racial and ethnic disparities in health care.
(2) Working with public health and other appropriate agencies to increase medical student, resident physician, and practicing physician awareness of racial and ethnic disparities in health care and the role of professionalism and professional obligations in efforts to reduce health care disparities.
(3) Promoting diversity within the profession by encouraging publication of successful outreach programs that increase minority applicants to medical schools, and take appropriate action to support such programs, for example, by expanding the "Doctors Back to School" program into secondary schools in minority communities.
BOT Rep. 4, A-03; Reaffirmation A-11; Reaffirmation: A-16; Reaffirmed: CMS Rep. 10, A-19

Racial and Ethnic Disparities in Health Care H-350.974
1. Our AMA recognizes racial and ethnic health disparities as a major public health problem in the United States and as a barrier to effective medical diagnosis and treatment. The AMA maintains a position of zero tolerance toward racially or culturally based disparities in care; encourages individuals to report physicians to local medical societies where racial or ethnic discrimination is suspected; and will continue to support physician cultural awareness initiatives and related consumer education activities. The elimination of racial and ethnic disparities in health care an issue of highest priority for the American Medical Association.
2. The AMA emphasizes three approaches that it believes should be given high priority:
A. Greater access - the need for ensuring that black Americans without adequate health care insurance are given the means for access to necessary health care. In particular, it is urgent that Congress address the need for Medicaid reform.
B. Greater awareness - racial disparities may be occurring despite the lack of any intent or purposeful efforts to treat patients differently on the basis of race. The AMA encourages physicians to examine their own practices to ensure that inappropriate considerations do not affect their clinical judgment. In addition, the profession should help increase the awareness of its members of racial disparities in medical treatment decisions by engaging in open and broad discussions about the issue. Such discussions should take place in medical school curriculum, in medical journals, at professional conferences, and as part of professional peer review activities.
C. Practice parameters - the racial disparities in access to treatment indicate that inappropriate considerations may enter the decision making process. The efforts of the specialty societies, with the coordination and assistance of our AMA, to develop practice parameters, should include criteria that would preclude or diminish racial disparities

3. Our AMA encourages the development of evidence-based performance measures that adequately identify socioeconomic and racial/ethnic disparities in quality. Furthermore, our AMA supports the use of evidence-based guidelines to promote the consistency and equity of care for all persons.
4. Our AMA: (a) actively supports the development and implementation of training regarding implicit bias, diversity and inclusion in all medical schools and residency programs; (b) will identify and publicize effective strategies for educating residents in all specialties about disparities in their fields related to race, ethnicity, and all populations at increased risk, with particular regard to access to care and health outcomes, as well as effective strategies for educating residents about managing the implicit biases of patients and their caregivers; and (c) supports research to identify the most effective strategies for educating physicians on how to eliminate disparities in health outcomes in all at-risk populations.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 321
(A-23)

Introduced by: New York

Subject: Corporate Compliance Consolidation

Referred to: Reference Committee C

Whereas, Physicians have ever increasing non-clinical educational requirements that occupy time otherwise needed for direct patient care; and

Whereas, Most hospitals and practices are requiring physicians to take multiple educational courses in corporate compliance with topics such as the Health Insurance Portability and Accountability Act (HIPPA), fraud and abuse prevention, sexual harassment, diversity and inclusiveness, the Occupational Safety and Health Administration (OSHA), and emergency preparedness on a yearly basis; and

Whereas, The vast majority of these courses have similar or identical content which is determined by The Centers for Medicare & Medicaid Services (CMS), the New York State Department of Health (NYS DOH), and other government agencies; and

Whereas, Many independent physicians have privileges in multiple settings which may require yearly completion of courses for each of these settings which results in redundancy of essentially identical educational requirements and wastes valuable physician time and effort; therefore be it

RESOLVED, That our American Medical Association work to create a minimum, standard curriculum for corporate compliance education requirements, the completion of which is acceptable to all stakeholders (Directive to Take Action); and be it further

RESOLVED, That our AMA advocate for satisfactory completion of the new approved standard corporate compliance curriculum at one setting to fulfill the requirements of all settings that require such a mandate, to eliminate wasting of valuable physician time and effort. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/10/23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 322
(A-23)

Introduced by: New York

Subject: Disclosure of Compliance issues and Creating a National Database of Joint Leadership

Referred to: Reference Committee C

Whereas, Accreditation Council for Continuing Medical Education (ACCME) is the national organization which sets all policy and procedures for all accredited Continuing Medical Education (CME); and

Whereas, ACCME serves as an accreditor as well as the authority for recognition of state medical societies which serve both as recognized accreditors and providers of accredited CME; and

Whereas, ACCME has developed the new standards for integrity and independence in Accredited Continuing Education which were adopted on Jan 1, 2022, as necessary for compliance in accredited CME; and

Whereas, ACCME collects data and maintains registries such as the Program and Activity Reporting System (PARS) which is a source of information for accredited providers; and

Whereas, MSSNY and other State Medical Societies (SMS) have limited resources and staff to ensure that non-accredited provider applicants are not submitting applications which have been previously denied accreditation due to compliance issues with the new standards; and

Whereas, There is no mechanism currently in place for accredited providers to have access for a timely review of the previously denied accreditation due to compliance issues with the new standards; and

Whereas, The American Medical Association is a founding member of ACCME with representation on the board of ACCME; therefore be it

RESOLVED, That our American Medical Association urge the Accreditation Council for Continuing Medical Education to require organizations that apply for joint providership for accreditation of Continuing Medical Education activities to disclose on its application if the activity has previously been denied accreditation and the reason for denial (Directive to Take Action); and be it further

RESOLVED, That our AMA urge the Accreditation Council for Continuing Medical Education to develop a national database for this information (in a manner similar to the Program and Activity Reporting System) which would allow State Medical Societies providers to cross-reference this information. (Directive to Take Action)

Fiscal Note: Minimal - less than $1,000

Received: 5/10/23

RELEVANT AMA POLICY

Restoring Integrity to Continuing Medical Education H-300.988
The AMA (1) supports retention of the definitions of continuing medical education in the Physicians' Recognition Award ("Continuing medical education consists of educational activities which serve to maintain, develop, or increase the knowledge, skills, and professional performance and relationships that a physician uses to provide services for patients, the public, or the profession. The content of CME is that body of knowledge and skills generally recognized and accepted by the profession as within the basic medical sciences, the discipline of clinical medicine, and the provision of health care to the public."); (2) urges members of the medical profession to be attentive to the distinction between continuing medical education and continuing education which is not related directly to their professional activities; (3) believes that accredited sponsors should designate as continuing medical education only those continuing education activities which meet the definition of continuing medical education; (4) encourages the ACCME and state medical associations on the state level to weigh seriously, in considering the sponsor's continued accreditation, instances where an accredited sponsor identifies non-continuing medical education activities as continuing medical education; and (5) encourages state medical boards to accept for credit continuing education which relates directly to the professional activities of physicians, although each state with mandatory continuing medical education for reregistration of license has the prerogative of defining the continuing education it will accept for credit.

REPORT 17 OF THE BOARD OF TRUSTEES (A-23)
AMA Public Health Strategy
Reference Committee D

EXECUTIVE SUMMARY

BACKGROUND. Given the number of requests from the House of Delegates for ongoing reports on public health-related topics as well as large national campaigns, the Board of Trustees is taking this opportunity to outline the AMA's work in public health. The intent is to provide clarity on our current efforts and priorities, with regular updates on progress.

DISCUSSION. The AMA's current priorities around public health are as follows:

1. Promote evidence-based clinical and community preventive services.

    A. Serve as a liaison to the U.S. Preventive Services Task Force (USPSTF), the Advisory Committee on Immunization Practices (ACIP), and the Community Preventive Services Task Force (CPSTF) and support the dissemination of recommendations to physicians.
    B. Help prevent cardiovascular disease (CVD) by addressing major risk factors.
    C. Collaborate with CDC to improve the implementation of routine screening for HIV, STI, Viral Hepatitis and LTBI.
    D. Promote evidence-based preventive services to the public in collaboration with the Ad Council and other health partners.

2. Respond to public health crises impacting physicians, patients, and the public.

    A. Address the public health crisis of climate change.
    B. Prevent firearm injuries and deaths.
    C. Respond to emerging and remerging infectious disease threats and prepare for future pandemics.
    D. End the nation's drug overdose epidemic.

3. Strengthen the health system through improved collaboration between medicine and public health.
    A. Strengthen physician and trainee knowledge of public health and social determinants of health.
    B. Maintain AMA relationships with national public health organizations.
    C. Collaborate with leading health care organizations to strengthen the interface between public health and health care.

4. Combat the spread of misinformation and disinformation.
    A. Make evidence-based medical and public health information accessible.
    B. Combat public health disinformation that undermines public health initiatives.
    C. Collaborate with scientific and health organizations to ensure all patients have equitable access to and confidence in accurate, understandable, and relevant information necessary to make health decisions.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 17-A-23

Subject: AMA Public Health Strategy

Presented by: Sandra A. Fryhofer, MD, Chair

Referred to: Reference Committee D

BACKGROUND

Policy D-440.922, "Full Commitment by our AMA to the Betterment and Strengthening of Public Health Systems" adopted by House of Delegates (HOD) at I-21 directed our American Medical Association (AMA) to:

> develop an organization-wide strategy on public health including ways in which the AMA can strengthen the health and public health system infrastructure and report back regularly on progress.

Policy D-135.966, "Declaring Climate Change a Public Health Crisis," adopted by the House of Delegates at A-22 directed our AMA to:

> develop a strategic plan for how we will enact our climate change policies including advocacy priorities and strategies to decarbonize physician practices and the health sector with report back to the House of Delegates at the 2023 Annual Meeting.

Resolution 605-A-22, "Fulfilling Medicine's Social Contract with Humanity in the Face of the Climate Health Crisis" was referred by the House of Delegates and asked the AMA to:

> establish a climate crisis campaign that will distribute evidence-based information on the relationship between climate change and human health, determine high-yield advocacy and leadership opportunities for physicians, and centralize our AMA's efforts towards environmental justice and an equitable transition to a net-zero carbon society by 2050.

Policy D-145.992, "Further Action to Respond to the Gun Violence Public Health Crisis" has also called for the AMA to:

> report annually to the House of Delegates on our AMA's efforts relating to legislation, regulation, and litigation at the federal, state, and local levels to prevent gun violence.

Given the number of requests from the HOD for ongoing reports on public health-related topics as well as large national campaigns, the Board of Trustees is taking this opportunity to outline the AMA's work in public health, so the HOD has clarity on

current efforts and priorities. Our intent is to provide regular updates on the status of this work to the HOD.

METHODS

This report is informed semi-structured, in-depth interviews with public health and physician experts (n=17), members of the AMA Board of Trustees (n=11), and members of the AMA's Senior Management Group (n=11). Public health experts had federal, state, and local public health experience and were affiliated with governmental public health organizations, national public health organizations, schools of public health, public health foundations, and national medical specialty societies. Stakeholder organizations were identified by the members of the Council on Science and Public Health (CSAPH). Members of the AMA Board of Trustees were asked to participate in interviews at the discretion of the Board Chair. Members of the Senior Management Group were identified based on whether they reported that their work involves public health.

What is Public Health?

Since its founding in 1847, the AMA's mission has been "to promote the art and science of medicine and the betterment of public health." Through the course of the interviews conducted across stakeholders, it was clear that there are many different definitions and understanding of what public health is.

According to the World Health Organization (WHO) public health is "the art and science of preventing disease, prolonging life and promoting health through the organized efforts of society." [i] Public health promotes and protects the health of people and the communities where they live, learn, work and play.[ii] Public health practice is a different field than clinical medicine with different motivating values, responsibilities, and goals.[iii] While a doctor treats people who are sick, those working in public health try to prevent people from getting sick or injured in the first place. A public health professional's duty is to the community rather than an individual patient.

Connection with Health Equity

It is important to acknowledge that health equity is a central concept in public health and is essential to improving the health of populations. The WHO defines health equity as the "absence of unfair and avoidable or remediable differences in health among social groups."[iv] It calls for just opportunities, conditions, resources and power for all people to be as healthy as possible. Public health interventions and policies aim to reduce health disparities and are essential for promoting health equity and improving the health of entire populations. Opportunities and resources for health are inequitably distributed, public health seeks to right this inequity.

The AMA's health equity strategy recognizes that structural and social drivers of health inequities shape a person's and community's capacity to make healthy choices, noting that downstream opportunities provided by the health care system and individual-level factors are estimated to only contribute 20 percent to an individual's overall health and well-being, while upstream opportunities of public health and its structural and social drivers account for 80 percent of impact on health outcomes.[v]

The five strategic approaches of the health equity strategy are highly relevant to the AMA's public health work and include:

1. Embed racial and social justice throughout the AMA enterprise culture, systems, policies and practices.
2. Build alliances and share power with historically marginalized and minoritized physicians and other stakeholders.
3. Push upstream to address all determinants of health and the root causes of inequities.
4. Ensure equitable structures and opportunities in innovation.
5. Foster pathways for truth, racial healing, reconciliation and transformation for the AMA's past.

The AMA already develops an annual report on health equity activities. While integral to the AMA's public health strategy, progress towards the health equity strategy will continue to be reported in the BOT's annual health equity report. (See BOT 10-A-23, "Center for Health Equity Annual Report.")

CURRENT AMA APPROACHES TO PREVENTION & PUBLIC HEALTH

1. Promote evidence-based clinical and community preventive services.

Clinical preventive services involve the care provided by physicians and other health care professionals during a routine one-to-one encounter.[vi] They have a strong evidence base for efficacy in health improvement and/or cost-effectiveness. These services are not public health, but rather clinical care. However, they are included here because they are necessary to achieve the goals of public health. Community preventive services are evidence-based options that decision makers and affected community members can consider when determining what best meets the specific needs, preferences, available resources, and constraints of their jurisdictions and constituents.[vii] They are not oriented to a single patient or all of the patients within a practice. The target is an entire population or subpopulation usually identified by a geographic area.[viii]

A. Serve as a liaison to the U.S. Preventive Services Task Force (USPSTF), the Advisory Committee on Immunization Practices (ACIP), and the Community Preventive Services Task Force (CPSTF) and support the dissemination of recommendations to physicians.

The U.S. Preventive Services Task Force (USPSTF) is an independent, volunteer panel of national experts in disease prevention and evidence-based medicine. The Task Force works to improve the health of people nationwide by making evidence-based recommendations about clinical preventive services. The AMA is USPSTF Dissemination and Implementation (D&I) partner, through which we contribute expertise by helping disseminate the work of the task force to physician members to help put the recommendations into practice.[ix] Partners are also a powerful vehicle for ensuring the U.S. primary care workforce remains up to date on USPSTF recommendations.

The Advisory Committee on Immunization Practices (ACIP) comprises medical and public health experts who develop recommendations on the use of vaccines in the civilian population of the United States. The recommendations stand as public health guidance for safe use of vaccines and related biological products. In addition to the voting members, there are 30 non-voting representatives from professional organizations, including the AMA, that are highly regarded in the health field.[x] These members comment on ACIP's recommendations and offer the perspectives of groups that will implement the recommendations.

The Community Preventive Services Task Force (CPSTF) is an independent, non-federal panel whose members are appointed by the CDC Director. CPSTF members represent a broad range of research, practice, and policy expertise in prevention, wellness, health promotion, and public health. The CPSTF was convened in 1996 by the Department of Health and Human Services (HHS) to identify community preventive programs, services, and policies that increase health, longevity, save lives and dollars, and improve Americans' quality of life. The CPSTF's recommendations, along with the systematic reviews of the evidence on which they are based, are compiled in the *The Community Guide.* The AMA serves as an organizational liaison to the CPSTF.[xi]

B. Help prevent cardiovascular disease (CVD) by addressing major risk factors (AMA Strategic Priority led by the Improving Health Outcomes Group)

The AMA is committed to improving the health of the nation and reducing the burden of chronic diseases. In collaboration with health care leaders and organizations, the AMA is developing and disseminating new chronic disease prevention and management approaches. Our primary focus is cardiovascular disease (CVD), the leading cause of death in the U.S., accounting for 1 in 4 deaths.[xii,xiii] The AMA engages in this work through strategic alliances with various organizations including the CDC, the American Heart Association (AHA), and West Side United in Chicago.

Two major risk factors for CVD are hypertension and type 2 diabetes. An estimated 116 million adults have hypertension and 96 million have prediabetes which can lead to hypertension.[xiv,xv,] Obesity also leads to the development of cardiovascular disease and cardiovascular disease mortality independently of other cardiovascular risk factors.[xvi] To help prevent Type 2 diabetes, the AMA developed clinical practice tools that support the screening and managing of people with prediabetes in alignment with clinical guidelines. The AMA also developed AMA MAP BP™, a clinical quality improvement program that includes population dashboards and reports as well as coaching, training and support for clinical teams. IHO provides the AMA MAP BP program to health care delivery organizations and other collaborators to support improvement in blood pressure control for patients. The AMA MAP™ framework is expanding to include management for other cardiovascular disease risk factors, including cholesterol, prediabetes, and type 2 diabetes. The AMA is examining how to integrate obesity into its chronic disease portfolio. It completed a landscape assessment to identify existing opportunities and will convene an expert panel to review recommendations from the landscape assessment to provide guidance.

Additionally, in response to the high prevalence of uncontrolled blood pressure and to support physicians in managing their patients' high blood pressure, the AMA, in collaboration with the American Heart Association, developed Target: BP™, a national initiative offering a series of online resources, using the latest evidence-based information. Target: BP recognizes organizations committed to improving blood pressure control. In 2022, the program recognized 1,309 health care organizations (HCO) for their efforts in representing 49 states or U.S. territories and serving more than 28 million patients, including 8.1 million people with hypertension.

Black, Latinx, Indigenous, Asian/Pacific Islanders, and other people of color are disproportionally impacted by CVD risk factors and resulting morbidity and mortalities.[xvii] To better address these disparities the AMA partnered with the American College of Preventive Medicine and Black Women's Health Imperative to increase Black and Latinx women's enrollment in the CDC's National Diabetes Prevention Program lifestyle change program.

The AMA, along with physician groups and heart health experts, launched the Release the Pressure (RTP) campaign.[xviii] The campaign has reached over 300,000 Black women, encouraging them to

pledge to "know your numbers, talk with your doctor, bring your squad," in addition to training 75,000 individuals to track their blood pressure via self-monitoring blood pressure tracking tools.

C. Collaborate with CDC to improve the implementation of routine screening for HIV, STI, Viral Hepatitis and latent tuberculosis (LTBI).

Through funding from the CDC, the AMA has been engaged in work on a project entitled, "Promoting HIV, Viral Hepatitis, STDs and LTBI Screening in Hospitals, Health Systems and Other Healthcare Settings." The scope of this project includes developing, piloting and launching a toolkit that outlines ways to increase routine screening for HIV, STIs, viral hepatitis and latent TB infection.

As a first phase of this work, the AMA conducted in-depth interviews, virtual clinic visits and co-creation groups with clinicians working in organizations where a well-defined routine screening process is already in place in order to better understand best practices, key challenges and critical considerations when implementing a routine screening program. The findings from these sessions were synthesized and used as the framework to build out the toolkit and its key recommendations.

The toolkit consists of a series of webpages on the AMA's corporate website. Information and recommendations are organized along the screening and testing continuum and offer helpful resources and best practices from the AMA, CDC and other organizations. The resources include a mix of both implementation and training-related materials for the care team. It is intended to be flexible, allowing an organization to follow along throughout the entire continuum to help improve the end-to-end screening and testing approach or narrow in and focus on a specific stage where additional guidance and support may be needed. Two versions of the toolkit are being developed—one targeted to community health centers and a second to emergency departments.

In order to validate the initial iteration of the community health center toolkit that was developed, the AMA conducted a pilot with a cohort of 6 community health centers across the country.[xix] This work included pilot sites implementing 2-3 toolkit recommendation during the pilot period as well as participating in a series of 5 telementoring sessions with other pilot sites, with each session being focused on a different section of the toolkit. A second pilot to test elements of the toolkit in practice is planned to take place in the spring of 2023 with a cohort of emergency departments. Following these pilots, any feedback and comments received from pilot sites will be prioritized and incorporated into the toolkit before the toolkit is launched more broadly.

D. Promote evidence-based preventive services to the public in collaboration with the Ad Council and other health partners.

While the AMA's primary audience is physicians, there are limited instances where the AMA has partnered on public information campaigns on select priority issues. This work has been made possible through partnerships with other health-related organizations and the Ad Council. The AMA will explore opportunities for future campaigns on an ongoing basis, with recognition that we have to prioritize our efforts and engaging in these campaigns alone is not feasible due to cost.

1. Get My Flu Shot

The Ad Council, AMA, CDC and the CDC Foundation have partnered since the 2020-2021 flu season through an annual campaign to motivate more people to get vaccinated against seasonal influenza (flu) to protect themselves and their loved ones. During a severe season, flu has resulted in as many as 41 million illnesses and 710,000 hospitalizations among the U.S. population. The *Get*

My Flu Shot campaign PSAs are launched nationwide to reach people with the message that a flu shot can help you stay healthy, reduce risk of severe outcomes, such as hospitalization and death, and avoid missing work, school, or special moments with family and friends. The campaign ads direct audiences to GetMyFluShot.org for more information, including where to get a flu vaccine in their area.

2. It's Up to You

The Ad Council and COVID Collaborative, including the AMA, led a massive communications effort to educate the American public and build confidence around the COVID-19 vaccines. Guided by the leading minds in science and medicine and fueled by the best talent in the private sector, the COVID-19 Vaccine Education Initiative is designed to reach different audiences, including communities of color who have been disproportionately affected by COVID-19. Under the umbrella of the "It's Up to You" campaign, we worked to ensure that Americans have accurate and timely information to answer their questions and concerns about vaccine side effects, efficacy, and clinical trials. The goal being to shift the public mindset from vaccine concern to vaccine confidence.

3. Do I have Prediabetes

More than one in three American adults have prediabetes and are at high risk of developing type 2 diabetes —a serious health condition that can lead to heart attack or stroke. Of these individuals, more than 80% of people with prediabetes don't know they have it. However, the vast majority of people with prediabetes can take steps to reduce their risk. Prediabetes can often be reversed through weight loss, diet changes, and increased physical activity. The AMA, in collaboration with the CDC developed a series of PSAs encouraging viewers to visit DoIHavePrediabetes.org, where they can take a one-minute risk test to highlight the importance of early diagnosis and speaking with their physician. Over 12.5M risk tests have been completed since 2016.

4. Get Down with Your Blood Pressure

Nearly half of all American adults have high blood pressure, yet only about 1 in 4 individuals have their condition under control. Because of the pandemic and persisting health inequities, there is an increased risk of high blood in communities of color, particularly for Black, Hispanic/Latinx, and Native American adults. The AMA and AHA "Get Down With Your Blood Pressure" campaign teaches adults that self-monitoring their blood pressure is as easy as four simple steps: get it, slip it, cuff it, check it. Along with talking to your health care provider about a blood pressure management plan, taking these steps can decrease the incidence of stroke, heart attack, and heart failure. The AMA in collaboration with the AHA maintain both ManageYourBP.org or BajaTuPresion.org which host tools and resources to help educate patients about the how to self-monitor your blood pressure and speak to your health care provider.

2. Responding to public health crises impacting physicians, patients, and the public.

The AMA's public health work has also been focused around responding to public health crises. These crises are often associated with significant health risk for patients, raising concerns among physicians. However, these crises are unlikely to be solved in a clinical setting alone. The AMA's response to public health crises are typically focused on (1) ensuring physicians and trainees have the data and resources needed; (2) identifying evidence-based policies and interventions; (3) elevating the voices of physician leaders through AMA channels and platforms; and (4) convening and collaborating with stakeholders to advance priority policies and interventions.

A. Address the public health crisis of climate change.

At 2022 Annual Meeting of the House of Delegates, policy was adopted declaring "climate change a public health crisis that threatens the health and well-being of all individuals." At I-22, the Council on Science and Public Health presented a council-initiated report on this topic "due to the significant public health threat that climate change represents and the impact on the health of patients, with marginalized populations expected to be disproportionately impacted." That report noted the health effects of climate change include increased allergies, asthma, respiratory and cardiovascular disease; injuries and premature deaths related to extreme weather events; heat-related deaths due to continued warming; changes in the prevalence and geographical distribution of food- and water-borne illnesses and other infectious diseases, and threats to mental health. The report's recommendations, which were adopted by the HOD called for a reduction in US greenhouse gas (GHG) emissions aimed at a 50 percent reduction in emissions by 2030 and carbon neutrality by 2050. In the coming year the AMA's priorities will be as follows:

1. Educate physicians and trainees on the health effects of climate change.

The AMA has made climate change education available via the Ed Hub™ from a variety of sources including the AMA Journal of Ethics (JOE), the Journal of the American Medical Association (JAMA), and the American Public Health Association (APHA). However, the AMA has not developed a CME module for physicians and trainees on climate change, that will be an area of focus over the coming year.

2. Identify and disseminate information to physicians on decarbonizing the health care sector and reducing GHG emissions.

The U.S. health sector accounts for 25 percent of global health sector emissions, the highest proportion attributable to any individual country's health sector. The Joint Commission is in the process of convening a technical advisory panel to initiate a directional standard that encourages health systems to address reducing their own carbon footprint, and to review existing standards to be sure, explicitly, that they do not require excess consumption. With the goal of reducing U.S. GHG emissions aimed at a 50 percent reduction in emissions by 2030 and carbon neutrality by 2050, the AMA will create a resource page to share information on high-impact actions needed to decarbonize the health care sector.

There are several resources that already exist including Health Care Without Harm's Road Map that provides a plan to get health care toward zero emissions.[xx] The Road Map identifies seven high-impact actions as key to health care decarbonization. Agency for Healthcare Research and Quality (AHRQ) and Institute for Healthcare Improvement's primer that offers guidance on high-priority measures and strategies for health care organizations to reduce their carbon footprint.[xxi] The primer describes six domains contributing to GHG emissions in health care: building energy, transportation, anesthetic gas, pharmaceuticals and chemicals, medical devices and supplies, and food. To meaningfully track and reduce GHG emissions, the primer recommends health care organizations should use the Greenhouse Gas Protocol (GHGP) framework, a globally recognized standard for quantifying and reporting on emissions. The National Academy of Medicine's Action Collaborative on Decarbonizing the U.S. Health Sector has also hosted a series of Carbon Clinics designed for health care delivery organizations to learn about carbon accounting. The Carbon Clinics will soon be made public along with related resources.

3. Elevate the voices of physician leaders on the issue of climate change and health.

Through the AMA's video updates and podcast series, we amplify physician voices and highlight developments and achievements throughout medicine. On January 20, 2022, the AMA featured Renee Salas, MD, MPH, MS, a climate and health expert and emergency medicine physician who discussed research on the intersection of health and the climate crisis.[xxii] On August 25, 2022, the AMA featured Colin Cave, MD, medical director of external affairs, government relations and community health, Northwest Permanente to discuss the link between health and climate change, and how physicians and health systems can be a part of the solution.[xxiii] The AMA will continue to look for opportunities to highlight physicians doing this important work.

4. Collaborate with stakeholders to advance policies and interventions with a unified voice.

Medical Society Consortium on Climate and Health. The AMA will continue to engage in the Medical Society Consortium on Climate and Health (Consortium), which brings together associations representing over 600,000 clinical practitioners to carry three simple messages:

A. Climate change is harming Americans today and these harms will increase unless we act;
B. The way to slow or stop these harms is to decrease the use of fossil fuels and increase energy efficiency and use of clean energy sources; and
C. These changes in energy choices will improve the quality of our air and water and bring immediate health benefits.[xxiv]

The Consortium recognizes that medical societies have an important opportunity to weigh in to help ensure that the health risks of climate change and the health benefits of climate solutions, especially clean energy, are clearly understood. The voices of America's medical societies have the potential to help reframe the dialogue – putting human health and wellbeing front and center in the conversation. This is especially important to communities who are experiencing a disproportionate impact from climate change.

National Academy of Medicine Action Collaborative on Decarbonizing the U.S. Health Sector. The AMA is also a member of the National Academy of Medicine Action Collaborative on Decarbonizing the Health Sector as a member of the Steering Committee and co-lead of the Health Care Delivery Workgroup. The Climate Collaborative is a public-private partnership of leaders from across the health system committed to addressing the sector's environmental impact while strengthening its sustainability and resilience. The Climate Collaborative provides a neutral platform for its participants to align around collective goals and actions for decarbonization, based on evidence, shared solutions, and a commitment to improve health equity.[xxv]

In the first year of the Climate Collaborative, the Health Care Delivery Workgroup has focused on the following goals:

- Goal 1: Make the multi-faceted case for health systems and hospitals to minimize their carbon footprints and operate more sustainably;
- Goal 2: Identify a set of policy and regulatory barriers preventing progress on decarbonization and resilience from accelerating, and identify solutions;
- Goal 3: Identify a core set of sustainability metrics for hospitals and clinical practice;
- Goal 4: Develop decarbonization playbooks and best practices for hospitals and health care delivery institutions, leveraging existing frameworks and success stories.

At the time of this report, the Health Care Delivery Workgroup is in the final stages of building consensus around goals for 2023.

Healthy Air Partners. The AMA has joined the American Lung Association's Healthy Air Partners campaign, which is a coalition of 40 national public health, medical, nursing and health care organizations engaged in healthy air advocacy efforts.[xxvi] The Coalition is united in its calling for strong federal laws and policies to slash air pollution and address climate change, recognizing climate change can affect air quality, and certain air pollutants can affect climate change. So far in 2023, the AMA has joined partners on a letter to the EPA urging them to quickly strengthen and finalize the Standards of Performance for New, Reconstructed, and Modified Sources and Emissions Guidelines for Existing Sources: Oil and Natural Gas Sector so that implementation can begin and communities can begin to see the benefits of the pollution reductions.[xxvii]

The Inflation Reduction Act (IRA), which was signed into law on August 16, 2022, was the most significant measure ever adopted by the U.S. Congress to combat climate change. The IRA is likely to play an important role in mitigating the adverse health effects of climate change. Implementation of the IRA will require extensive rulemaking; therefore, we anticipate that to be the focus of our advocacy efforts in the coming year.

B. Prevent firearm injuries and deaths.

In the 1980's the AMA recognized firearms as a serious threat to the public's health as the weapons are one of the main causes of intentional and unintentional injuries and deaths. At the 2016 Annual Meeting, following the Pulse nightclub shooting, policy was adopted declaring that "gun violence represents a public health crisis which requires a comprehensive public health response and solution." Since that time firearm injuries and deaths have increased and disparities have widened.[xxviii]

1. Educate physicians on how to counsel at risk patients on firearm injury prevention and what steps to take if a patient is at risk.

In 2018, the AMA created a CME module with physician experts on "The Physician's Role in Firearm Safety." The learning objectives of the module are as follows: (1) Describe the epidemiology of firearm morbidity and mortality in the U.S.; (2) Recognize common risk factors that elevate the potential for firearm injury; (3) Identify barriers to communicating with patients about firearm safety; (4) Determine practical approaches to prepare for firearm safety counseling; and (5) Effectively communicate how to reduce the risk of firearm injury and death.[xxix] The module had 619 completions from 2019 - 2023 and has an overall quality rating of 4.4/5.0. The AMA is currently in the process of updating the information in the module and will add a new case study around dementia and firearms. The updated version is expected to launch in May of 2023. We recognize that a broader dissemination strategy of the updated module will be necessary to improve uptake among health care professionals.

Along with the updated CME, the AMA will launch an online tool to provide physicians with state-specific laws in their jurisdiction related to counseling restrictions, safe storage and child access protection laws, temporary transfer requirements, and extreme risk protection orders. This information will help guide physicians when they identify patients at risk of firearm injury and death by sharing details on what is allowed under state law.

2. Advocate for common sense policies to prevent firearm injuries and increased funding for research.

Congress succeeded in passing the first major firearm legislation in over 30 years with

S. 2938, the "Bipartisan Safer Communities Act" (Murphy, D-CT/Cornyn, R-TX), which the AMA supported. President Biden signed this bill into law on June 25, 2022, and AMA Board Chair Sandra Adamson Fryhofer, MD, attended the signing ceremony. Key provisions of the bill include:

- Providing grants for states to establish or strengthen extreme risk protection orders;
- Adding convicted domestic violence abusers in dating relationships to the National Instant Criminal Background Check System (NICS);
- Requiring the NICS to contact authorities to see whether an individual under the age of 21 has a "disqualifying" juvenile record for buying a firearm;
- Making it a federal crime to buy a firearm on behalf of an individual who is prohibited from doing so; and
- Including new spending for school security and mental health treatment.

Our AMA is now focused on advocating to ensure that the new funding authorized in the new law is actually appropriated, advocating for states to establish or strengthen extreme risk protection orders, and ensuring that the other provisions are properly and quickly implemented. Pursuant to the new law, the Department of Justice recently awarded over $200 million in grants to states, territories, and the District of Columbia to fund state crisis intervention court proceedings, including but not limited to, extreme risk protection order (ERPO) programs that work to keep guns out of the hands of those who pose a threat to themselves or others.

The AMA has also advocated for Congress to appropriate increased funding for research to prevent firearm violence. The AMA is working with medical specialties, including the American Academy of Pediatrics, to support $60 million in funding for the CDC and the National Institutes of Health (NIH) to conduct public health research on firearm morbidity and mortality prevention. This would double the amount of funding provided last year. Our AMA will continue to monitor appropriations developments and advocate to ensure that this funding is approved by Congress.

Through the AMA's litigation center, we work to represent the interests of the medical profession on this issue in the courts by providing support or becoming actively involved in litigation of importance to physicians. The AMA has created a website broadly outlining the organization's advocacy efforts on gun violence prevention, this includes cases for which the AMA has filed amicus briefs.[xxx]

3. Elevate the voices of physician leaders on the issue of firearm injury and violence prevention.

Through the AMA's video updates and podcast series, we amplify physician voices and highlight developments and achievements throughout medicine. In June of 2022, the AMA featured Megan Ranney MD, MPH, a practicing emergency physician, researcher and national advocate for innovative approaches to public health at Brown University, talking about gun violence and why we need to approach it as a public health issue with physicians playing an important role.[xxxi] On February 23, 2023, Emmy Betz, MD, MPH, professor of emergency medicine and director of the Firearm Injury Prevention Initiative at the University of Colorado School of Medicine was featured to discuss firearm-related injury and suicide and the role physicians can play in helping to prevent it.[xxxii] AMA leaders, including Immediate Past President Gerald Harmon, MD, have also talked about firearm injuries and deaths being a public health crisis that can affect everybody and that requires a comprehensive public health response and a solution.[xxxiii]

4. Collaborate across the federation of medicine and with other interested partners to address the public health crisis of firearm injuries and deaths with a unified voice.

American Foundation for Firearm Injury Reduction in Medicine. The AMA is a partner organization of AFFIRM at The Aspen Institute, which is a non-profit dedicated to ending the American firearm injury epidemic using a health-based approach. AFFIRM combines the health expertise with the knowledge and traditions of responsible firearm stewardship to achieve consensus recommendations. AFFIRM is committed to reducing the rate of firearm injuries and deaths. AFFIRM at The Aspen Institute also builds partnerships with non-medical organizations that are equally committed to preventing firearm injury, including groups committed to firearm safety and shooting sports.

ACP-Led Call to Action on Firearm-Related Injury and Death. The AMA has joined the American College of Physicians (ACP), American Academy of Family Physicians, American Academy of Pediatrics, American College of Surgeons (ACS), American Psychiatric Association, and the American Public Health Association in calling for policies to help stem firearms-related injuries and deaths in the United States. The organizations endorsed the article, "Firearm-Related Injury and Death in the United States: A Call to Action From the Nation's Leading Physician and Public Health Professional Organizations."[xxxiv]

Medical Summits and Coalition for Firearm Injury Prevention. The AMA also participated in a 2019 meeting on firearm violence organized by ACS and participated in a follow-up Medical Summit on Firearm Injury Prevention sponsored by ACS in collaboration with the ACP, the American College of Emergency Physicians, and the Council of Medical Specialty Societies in September of 20022. The objectives of the 2022 summit were to use a consensus-based, non-partisan approach to selecting recommendations for executive action and/or legislation at the federal, state, and municipal levels that would decrease firearm-related injuries and identify elements of the most effective programs that can be implemented by physician practices/clinics/hospitals/health systems in partnership with their communities to effectively lower the risk of violence, with an emphasis on marginalized communities that are disproportionately impacted by violence. The Summit included representatives from 46 organizations, making it one of the largest gatherings of medical and injury prevention professionals on this issue. The proceedings of the Summit were published in the *Journal of the American College of Surgeons*.[xxxv] To achieve the goals outlined at the Summit, the sponsoring organizations agreed to establish the Healthcare Coalition for Firearm Injury Prevention.[xxxvi]

AMA convened task force. On February 27, 2023, the AMA convened Phase I of the gun violence task force, which consisted of those Federation members who have been most highly engaged on the issue of firearm injury prevention for many years. Representatives from the American Academy of Family Physicians, American Academy of Pediatrics, American College of Emergency Physicians, American College of Physicians, American College of Surgeons, American Psychiatric Association met with members of the AMA Board and staff. AMA Board Chair Sandra Adamson Fryhofer, MD, Chair of the first phase of this Task Force, led the meeting. The goal was to better understand work already underway to address this issue, what has worked well, and the unique role an AMA convened task force could play. Gun violence advocacy organizations (Brady, Giffords, and the Johns Hopkins Center for Gun Violence Solutions) were also invited to share their perspectives on the role of physicians and organized medicine in firearm injury prevention. The advocacy groups strongly encouraged organized medicine to pick one or two things to focus on and to speak on them with a unified voice.

C. Respond to emerging and remerging infectious disease threats and prepare for future pandemics.

Infectious diseases continue to be a threat to the U.S. population. Although some diseases have been conquered by modern advances such as antibiotics and vaccines, new ones are constantly emerging, whereas others reemerge in drug-resistant forms (e.g., malaria, tuberculosis, and bacterial pneumonias). Because no one knows what new diseases will emerge, the health system must be prepared for the unexpected. Because the AMA is relied upon as a source of information by physicians and patients, the AMA has to maintain a level of capacity to respond and share information and advocate for physicians, patients, and the public in line with AMA policies. Over the course of the past few years, this work has focused heavily on responding to the COVID-19 pandemic and the outbreak of monkeypox (mpox).

1. Educate physicians on how to protect themselves and their patients from infectious disease threats.

The AMA is a collaborator in Project Firstline, the CDC's National Training Collaborative for Healthcare Infection Control. Project Firstline offers educational resources in a variety of formats to meet the diverse learning needs and preferences of the health care workforce.[xxxvii] Resources are designed to empower and enable health care professionals to think critically about infection control, using adult learning principles, educational best practices, CDC recommendations, and the science that informs them. Project Firstline encourages all health care professionals to take advantage of these free infection control training resources – that were developed with health care professionals, specifically for health care professionals. For COVID-19 and mpox, the AMA also developed resource centers to share information on testing, therapeutics, and vaccines along with the latest clinical information.

2. Address preparedness for future infectious disease outbreaks and pandemics.

With over 1,000,000 individuals in the U.S. who have died as a result of COVID-19, it is critical that we evaluate shortcomings and successes and provide evidence-based guidelines to protect our patients and the public from COVID-19 and other future infectious pathogens. Given the challenges that patients, physicians, hospitals, health care facilities, and our communities have endured and continue to experience, we need to work to remedy the problems experienced during the COVID-19 pandemic regarding effective testing strategies, timely directives on appropriate utilization of public health mitigation strategies, evidence-supported efforts to maintain strategic stockpiles of personal protective equipment, ventilators, and other supplies, and to inform future health system preparedness.

D. End the nation's drug overdose epidemic.

Ending the nation's drug overdose epidemic will require increased physician leadership, a greater emphasis on overdose prevention and treatment, and better coordination and amplification of the efforts and best practices already occurring across the country.

1. Educate physicians on overdose prevention, substance use treatment, and pain management.

The AMA makes education available to physicians on this topic via the AMA Ed Hub™ to help physicians gain critical knowledge around acute and chronic pain management, substance use treatment, overdose prevention, and pain treatment. Courses are both developed by AMA as well as by other partners. The AMA is also a member of the Providers Clinical Support System (PCSS), which is made up of a coalition of major health care organizations all dedicated to addressing this health care crisis and is led by the American Academy of Addiction Psychiatry. PCSS provides

evidence-based training and resources to give health care providers the skills and knowledge they need to treat patients with opioid use disorders and chronic pain.[xxxviii]

2. Promote consistency in overdose-related outcome data and increase awareness for the need of standardized state-level data.

The AMA has also developed an End the Epidemic Dashboard which compiles state-level data for several indicators, including overdose mortality, non-fatal overdoses, opioid prescriptions, and prescription drug monitoring program queries.[xxxix] The dashboard also highlights which states are missing data for any of the indicators. The goal of this dashboard is to continue to promote consistency in overdose-related outcome data and increase awareness for the need of standardized state-level data.

3. Convene the AMA Substance Use and Pain Care Task Force to advance evidence-based recommendations for policymakers and physicians, including harm reduction strategies.

In 2015, the American Medical Association convened more than 25 national, state, specialty and other health care associations to develop industry-wide recommendations for physicians to help end the nation's opioid epidemic. In 2019, the AMA Pain Care Task Force highlighted efforts needed to help patients with pain. In 2021, the AMA joined the two task forces to address the changing—and worsening—drug overdose epidemic, emphasizing tangible actions needed to increase access to evidence-based care for patients. The task force, under the leadership of Bobby Mukkamala, MD, Immediate Past Chair of the AMA Board of Trustees, continues to advance evidence-based recommendations for policymakers and physicians to help end the nation's drug-related overdose epidemic. The task force recommendations are largely focused in the health care sector, addressing access to treatment.[xl] Recommendation 4 is focused on public health and harm reduction.

- Recommendation 1: Support patients with pain, mental illness or a substance use disorder (SUD) by building an evidence-based, sustainable and resilient infrastructure and health care workforce.
- Recommendation 2: Remove barriers to evidence-based treatment for SUDs, cooccurring mental illness and pain.
- Recommendation 3: Support coverage for, access to, and payment of comprehensive, multi-disciplinary, multi-modal evidence-based treatment for patients with pain, a substance use disorder or mental illness.
- Recommendation 4: Broaden public health and harm reduction strategies to save lives from overdose, limit the spread of infectious disease, eliminate stigma and reduce harms for people who use drugs and other substances.
- Recommendation 5: Improve stakeholder and multi-sector collaboration in an effort to ensure that the patients, policymakers, employers, and communities benefit from evidence-based decisions.

The AMA develops on annual report on the overdose epidemic outlining accomplishments and what still needs to be done.[xli]

4. Collaborate with external stakeholders to address the opioid addiction crisis.

The AMA is a member of the National Academy of Medicine (NAM) Action Collaborative on Countering the U.S. Opioid Epidemic. The Action Collaborative was formed in 2018 as a public-

private partnership to foster greater coordination and collective action across the health system and beyond in addressing the opioid addiction crisis.[xlii] The Action Collaborative uses a systems approach to convene and catalyze public, private, and non-profit stakeholders to develop, curate, and disseminate multi-sector solutions designed to reduce opioid misuse, and improve outcomes for individuals, families, and communities affected by the opioid crisis.

The Action Collaborative conducts its work around four core priority areas: Health Professional Education and Training; Pain Management Guidelines and Evidence Standards; Prevention, Treatment, and Recovery Services; and Research, Data, and Metrics Needs. The Action Collaborative produces discussion papers to advance the field and accelerate action where the evidence dictates; conducts outreach; and leads convenings, webinars, and other special events to accelerate the translation of the most promising opportunities to reverse the opioid crisis.

3. Strengthen the health system through improved collaboration between medicine and public health.

A. Strengthen physician and trainee knowledge of public health and social determinants of health.

The AMA makes education on public health and health equity available on the AMA Ed Hub™ to empower individuals and organizations, in health care and beyond, in advancing health equity and the betterment of public health. The Ed Hub contains curated education from trusted sources on a wide range of public health issues. The AMA's Center for Health Equity has developed educational content to empower individuals and organizations, in health care and beyond, in advancing racial justice and equity.[xliii]

The AMA is transforming medical education across the continuum and collaborating with undergraduate and graduate medical education institutions to create a system that trains physicians to meet the needs of today's patients and anticipate future changes. This includes working with schools to implement instruction in health systems science (HSS), the third pillar of medical education, along with the basic and clinical sciences. The HSS curriculum includes issues related to how social determinants of health affect the entire population and the improvement strategies at the population health level to address gaps in care such as the organized assessment, monitoring or measurement of key health metrics necessary to improve health outcomes for a group of individuals.[xliv]

B. Maintain AMA relationships with national public health organizations.

The Association of State and Territorial Health Officials (ASTHO), National Association of City and County Health Officials (NACCHO), and the American Public Health Association (APHA) are all designated liaisons to the Council on Science and Public Health. AMA staff are engaged in regular discussions to understand their perspectives and opportunities for collaboration.

C. Collaborate with leading health care organizations to strengthen the interface between public health and health care.

A new health care industry consortium has agreed to work together, in partnership with public health, to focus on strengthening the interface between public health and health care. The consortium includes some of the most prominent and influential organizations from the health care sector. Core membership organizations will include: AHIP (formerly America's Health Insurance Plans), Alliance of Community Health Plans (ACHP), American Hospital Association (AHA), American Medical Association (AMA), and Kaiser Permanente (KP).

The consortium, which will be governed by senior leaders from each of the core member organizations and staffed by independent policy analysts and other experts, will focus on areas where there is significant opportunity for consensus building and where health care partners are uniquely positioned to play a significant role in advancing the work. The consortium has agreed to focus its initial work on four specific priorities and will work over the coming months to further define concrete, pragmatic, and tangible actions to advance these priorities.

Priority Actions Areas will include.

1) Formalizing agreements and supporting coordinated efforts between public health and health care with clear communication of goals, roles, responsibilities, tasks, and deliverables.
2) Evolving and supporting robust scalable emergency preparedness programs.
3) Establishing national standards, processes and use cases for stratifying public health and health care data by sociodemographic variables to identify disproportionate health impacts and outcomes at the community level.
4) Modernizing and integrating an infectious disease surveillance system that unifies data across sectors, agencies, and data systems, including novel data sources (e.g., social media) and advanced analysis methods.

4. Combat the spread of misinformation and disinformation.

At the 2022 Annual Meeting of the HOD, the Board's report on, "Addressing Public Health Disinformation Disseminated by Health Professionals" was adopted. AMA Policy, D-440.914, "Addressing Public Health Disinformation Disseminated by Health Professionals," outlines a comprehensive strategy to address health-related disinformation disseminated by health professionals. Aspects most relevant to public health include the following:

A. Maintaining AMA as a trusted source of evidence-based information for physicians and patients.

While the public's trust in many institutions has waned during the COVID-19 pandemic, people generally still trust their doctors. In his November 12, 2021, address to the AMA House of Delegates, AMA CEO/EVP James Madara, MD, noted that, "[t]he AMA exists to benefit the public, but we do so in a very particular way—by being the physicians' powerful ally in patient care. We serve the public by serving those who care for the public. Supporting physicians and improving our nation's health has been our focus since 1847."[xlv]

B. Combat public health mis- and disinformation that undermines public health initiatives.

The AMA has continued to issue press statements, noting the harm of mis- and disinformation and has urged the CEOs of six leading social media and e-commerce companies to assist the effort by combatting misinformation and disinformation on their platforms. The AMA has remained a source of trusted information providing physicians with up-to-date information on public health issues.

C. Collaborate with stakeholders to ensure all patients have equitable access to and confidence in accurate, understandable, and relevant information necessary to make health decisions.

The AMA has engaged in several collaborates to address mis- and disinformation. The recently announced Coalition for Trust in Health and Science brings together reputable associations representing academics, researchers, scientists, doctors, nurses, pharmacists, drug and insurance

companies, consumer advocates, and public health professionals.[xlvi] The coalition will support efforts to advance people's scientific and health literacy, earn public trust and improve health outcomes and health equity as well as to correct misinformation and counter disinformation that threatens health and well-being. The AMA has also been engaged with the work led by NAM, WHO, and the Council of Medical Specialty Societies on a project focused on identifying credible sources of health information in social media.[xlvii]

CONCLUSION

The strategy outlined provides an overview of the work the AMA is doing in public health and indicates our current priorities. While much of this work resides in Health, Science and Ethics, other business units lead portions of this work including Improving Health Outcomes, the Center for Health Equity and Medical Education. Advocacy, Communications, the Ed Hub team, Marketing and Member Experience are also vital to advancing these efforts. Many of the public health crises being addressed by the AMA are not going to be solved by our organization alone. Collaboration is going to be critical, and the AMA has taken steps to engage other organizations in this work where it makes sense. While there are many areas where the AMA is asked to engage, the areas outlined above represent our focus in advancing the AMA's mission towards the betterment of public health.

RECOMMENDATION

The Board of Trustees recommends that the following be adopted in lieu of Resolution 605-A-22 and the remainder of the report be filed.

1. Our AMA will distribute evidence-based information on the relationship between climate change and human health through existing platforms and communications channels, identify advocacy and leadership opportunities to elevate the voices of physicians on the public health crisis of climate change, and centralize our AMA's efforts towards environmental justice and an equitable transition to a net-zero carbon society by 2050. (New HOD Policy)

REPORT 04 OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH (A-23)
School Resource Officer Violence De-escalation Training and Certification
(Reference Committee D)

EXECUTIVE SUMMARY

INTRODUCTION. Resolution 416-A-22, referred for study by the House of Delegates, asked that our American Medical Association study the efficacy of School Resource Officer violence de-escalation training and certification.

METHODS. English language articles were selected from searches of PubMed and Google Scholar using the search terms “school resource officer”, “school-based law enforcement,” and “school resource officers AND training”. Additional articles were identified by manual review of the reference lists of pertinent publications. Web sites managed by government agencies; applicable organizations were also reviewed for relevant information.

BACKGROUND. A school resource officer (SRO) is a carefully selected, specifically trained, and properly equipped full-time law enforcement officer, trained in school-based law enforcement and crisis response, assigned to work in the school using community-oriented policing concepts. Recently, the number of SROs has skyrocketed. Opponents to SROs argue that they damage school climate, criminalize relatively trivial student behavior, and fuel the school-to-prison pipeline. While proponents argue that SROs promote school safety, respond quickly to emergencies, and serve as mentors, role models, and law-related educators for students.

SRO officers may receive training in, among other things, mental health awareness, adolescent development and communication, implicit bias, trauma-informed care, conflict de-escalation, crisis intervention, cultural competence, and school-specific topics. However, within school systems, trainings vary in content and delivery. One intervention, which has limited support in the research literature, is the use of de-escalation techniques and training for educational entities to mitigate the impact of peer aggression and promote the safety of the school environment.

CONCLUSION. This report recognizes that SROs are part of the school staff at large and should not be considered a separate entity from school counselors, social workers, school psychologists, nurses, and schoolteachers. The recommendations support the need for their roles to be defined within the team structure of the school and also supports the use of community-based policing practices to ensure that the community plays a role in prioritizing and addressing public safety. The current evidence is inconclusive on the effectiveness of de-escalation training for SROs. However, research shows that multi-faceted interventions are more likely to be effective, especially in school settings. Further, the recommendations support establishing an agreed-upon operating protocol or memorandum of understanding (MOU) that includes provisions addressing daily interactions between students and school personnel with SROs.

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 04-A-23

Subject: School Resource Officer Violence De-escalation Training and Certification

Presented by: Noel Deep, MD, Chair

Referred to: Reference Committee D

Resolution 416-A-22, referred for study by the House of Delegates, asked that our American Medical Association study the efficacy of School Resource Officer violence de-escalation training and certification.

BACKGROUND

A school resource officer (SRO) is a carefully selected, specifically trained, and properly equipped full-time law enforcement officer, trained in school-based law enforcement and crisis response, assigned to work in the school using community-oriented policing concepts.[1] Recently, the number of SROs has skyrocketed. An estimated 14,000 to 20,000 SROs now work in schools, and the number continues to grow.[2] Opponents argue that SROs damage school climate, criminalize relatively trivial student behavior, and fuel the school-to-prison pipeline.[3] Proponents argue that SROs promote school safety, respond quickly to emergencies, and serve as mentors, role models, and law-related educators for students. One report concluded that for every dollar invested in the program, a minimum of $11.13 of social and economic value was created.[4]

SRO officers may receive training in, among other things, mental health awareness, adolescent development and communication, implicit bias, trauma-informed care, conflict de-escalation, crisis intervention, cultural competence, and school-specific topics.[5] However, within school systems, trainings vary in content and delivery. For example, some training courses include information on evaluation of the de-escalation and crisis response (e.g., support for staff and students after an incident). Further, some training may be a stand-alone curriculum, whereas others may include de-escalation as a topic within other training topics (e.g., classroom management, discipline policy, academic planning).

One main intervention, which has limited support in the research literature, is the use of de-escalation techniques and trainings for educational entities to mitigate the impact of peer aggression and promote the safety of the school environment.[6] Across various professional fields, such as public health and education, de-escalation training involves learning strategies for the prevention and the management of aggression and violence. De-escalation may include training in early intervention practices, communication methods (i.e., verbal and non-verbal styles), appropriate responses in potentially violent situations, and the correct use of physical intervention techniques (e.g., restraint techniques, protection). The training is intended to reduce conflict, aggression, and harm. In an educational setting, de-escalation can be defined as a range of interconnected interventions that include verbal and non-verbal communication, self-regulation assessment, and actions taken while maintaining the safety of the those in the school.

METHODS

English language articles were selected from searches of PubMed and Google Scholar using the search terms "school resource officer", "school-based law enforcement," and "school resource officers AND training". Additional articles were identified by manual review of the reference lists of pertinent publications. Websites managed by government agencies; applicable organizations were also reviewed for relevant information.

DISCUSSION

What are SROs?

The only definition of SRO in current federal law appears under the authorizing legislation for the Office of Community Oriented Policing Services (COPS Office), which is a component of the U.S. Department of Justice responsible for advancing the practice of community policing primarily through grant resources. This statute defines an SRO as "a career law enforcement officer, with sworn authority, deployed in community-oriented policing, and assigned by the employing police department or agency to work in collaboration with schools and community-based organizations."[7] Although specific responsibilities and functions of SROs vary from place to place, the "triad" concept of school-based policing divides SRO responsibilities into three main areas of: teacher, informal counselor, and law enforcement officer.[8]

History of SROs

Since the 1900s, U.S. public schools have employed a growing number of SROs. In 1975, only 1 percent of schools reported having police officers on site, but by 2018, approximately 58 percent of schools had at least one sworn law enforcement official present during the school week.[9] In response to school shootings in the 1990s, federal and state legislation spurred this rapid proliferation of SROs.

The first use of SROs in schools is reported to have been in Flint, Michigan, in the early 1950s.[10] While police have had a presence in schools since then, it has only been over the past 20 years that the practice of assigning police officers to schools on a full-time basis has become more widespread. The number of SROs expanded significantly beginning in the 1990s due to legislative initiatives in response to concerns over a series of school shootings including the Columbine tragedy. The 1994 reauthorization of the Elementary and Secondary Education Act (ESEA) included provisions that established school safety as a core focus for the U.S. Department of Education (U.S. DOE).[11] It also included the Safe and Drug-Free Schools and Communities Act, which authorized federal support for police in schools via a grant program wherein local education agencies could use funds to hire and train SROs.[7,12] Between 1994 and 2009, up to 40 percent of federal funding for this act could be used to hire and train school police and support other security measures.[13] Overall, since 1998, the federal government has invested over $1 billion to explicitly increase police presence in schools, and over $14 billion to advance community policing, which can include SROs.[10,14]

In recent years, federal funding and support for SROs has increased following tragic school shootings. Despite their concerns about the unintended negative consequences of SROs, the Obama Administration renewed funding to increase the number of SROs across the country after the 2012 shooting at Sandy Hook Elementary School in Newtown, Connecticut.[15] Following the 2018

shooting at Marjory Stoneman Douglas High School in Parkland, Florida, the Trump Administration prioritized SRO positions in selecting COPS grants recipients.[16]

Federal Policy on SROs

Despite their growth and the substantial federal funding, there is very little federal policy explicitly defining the role of SROs. The absence of SROs from federal educational policy is in part due to the Obama administration's concerns over unintended negative consequences of police presence in schools.[17] The vagueness of federal law has led to large variation in the role, expectations, and accountability of police in schools. Moreover, federal-level data collection on SROs is also severely lacking. SROs are not required to register with any national database, police departments are not required to report how many of their officers work as SROs, and school systems are not required to report how many SROs they employ.[1] Since 2013-2014, the U.S. Department of Education has collected survey data every other year that details the number of student referrals and arrests made by school police (including SROs) in public schools, and which students are most affected.[18] The data also include the number of counselors, social workers, school psychologists, and nurses that are in a school compared to the number of SROs.[19] Given this overall lack of descriptive data there is little information on the roles of SROs nationally or how, if at all, SROs are trained. By failing to collect these data, it is difficult to monitor and evaluate the work of SROs and their impact.

State Policy on SROs

Federal policy and accompanied funding initiatives fueled the growth of SROs programs which are now operated in all 50 states.[14,19] Yet, the lack of federal law on SROs has led to a patchwork of state policy. Out of all 50 states and Washington D.C., only 26 jurisdictions specifically define SRO in state statutes or regulations.[19] These state-level definitions do not specify the role of SROs in schools. Most states encourage schools or districts to enter into a Memorandum of Understanding (MOU) with local law enforcement if they provide an SRO. For example, Connecticut, Massachusetts, Ohio, and South Carolina require MOUs to outline the role of the SRO.[20]

The National Association of School Resource Officers (NASRO) suggests SROs receive at least 40 hours of specialized training in school policing prior to being assigned.[20] NASRO's Basic SRO training is set up as a 5- day, 40-hour block of instruction and outlines evidence-based best practices for SRO programs.[20] This training covers the following topics: constitutional and state law, armed response, crime prevention and mitigation, interview and interrogation techniques, investigations, crime prevention through environmental school design, patrol operations, advocacy within the juvenile justice system, and mandatory reporting.[20] Twenty-eight state statutes or regulations include language regarding training requirements for SROs, but these also vary widely and laws in only two states specify a required length of training.[21] In several states, the training is simply what is required of traditional law enforcement, including firearm or active shooter training.[22] Instruction regarding how to effectively interact with youth averages around four to six hours across all states.[22] Training in sixteen states includes what is required of traditional law enforcement in addition to school-specific training. Few states explicitly require training in de-escalation or conflict resolution, mental health, youth development, or school climate.[22] Only Maryland and Utah explicitly include provisions for training in "implicit bias and disability and diversity awareness with specific attention to racial and ethnic disparities" and "cultural awareness," respectively.[22] Therefore, across states there is wide variation in expectations regarding SRO training. Additionally, training is primarily standard police training, with little education on working in school settings and with youth.

Illinois is an example of this heterogeneity of approach. Illinois state law requires SROs to complete training within one year of assignment.[23] This training must cover juvenile developmental issues, youth mental health, how to prevent child abuse and exploitation, and various educational administrative issues. Illinois does not explicitly require implicit bias, disability training, or de-escalation training.

School District Policy on SROs

SRO training and duties vary across school districts. In general, SROs must enforce school rules and the law, as well as be visible authority figures in schools. They can also participate in mentorship programs, provide students with training on safety and violence, and promote a positive school environment.[24] SROs usually patrol school halls to discourage students from misbehaving, and when a student is caught breaking a school rule or the law, SROs step in to investigate and assist with student discipline. Certain school districts require SROs to follow zero tolerance polices when students are caught with drugs, meaning the SRO has zero discretion in how to respond. Other school districts allow SROs to use discretion to decide a disciplinary course of action.[22]

Benefits of School Resource Officers

School resource officers can provide a variety of benefits not only to schools, but to individual students and local police departments. These benefits include promoting school safety, addressing the root causes of student misbehavior, and decreasing juvenile delinquency petitions where SROs are properly utilized.[25] Further, SROs can improve relationships between students and law enforcement, serve as protectors for victimized students, and reduce the burden on local law enforcement. Although there has been limited research, it is hypothesized that SROs can promote safety in schools by deterring criminal activity at schools, specifically more serious crimes including possession of a weapon and assault.[26] SROs can also aid in reducing the amount of fighting and bullying on campus through hallway patrols, which can allow SROs to intervene rather quickly when there is a fight.[26] Students may be less likely to break the rules or pick a fight when SROs are patrolling school grounds because of the increased probability of being caught.

Some districts have found that SROs can use their positions to identify the root cause of school misbehavior and help students address it. When SROs are properly utilized, they can potentially help offset the school-to-prison pipeline. For example, SROs in Franklin County, Virginia, often impose alternative methods of punishment to delinquency petitions, such as community service, school service, or mediation.[26] Once a student has completed his act of service, they are often encouraged to participate in afterschool extracurricular activities in order to create structure and prevent a second offense. In Franklin County, SROs only send a request for a delinquency petition to the state's attorney after all other avenues have been explored. A study of schools in this county that utilize this approach found a 64 percent decrease in potential delinquency petitions.[27]

Research also reveals that SRO programs can improve relationships and build trust between students and law enforcement. A 2016 study that surveyed students from various schools in one southeastern U.S. school district analyzed how students' attitudes towards SROs change with increased interaction.[26] Overall, more student-SRO interactions were positively correlated with favorable feelings towards SROs. Other research shows that this improved trust can later help uncover previously unknown issues of abuse and neglect, because victims may feel more comfortable reporting the issue to law enforcement.[27] Additionally, SROs can sometimes serve as protectors for students, which can make students feel more comfortable asking for help. This is especially true for students who are victims of various crimes, abuse, and bullying, and who may feel safer attending school knowing an SRO is available to protect them.[27] SROs have the unique

ability to immediately intervene if a juvenile offender violates any court ordered condition, thereby increasing a victim's sense of safety at school. Finally, SROs can reduce the burden on law enforcement outside of the school. When officers are stationed at schools, the school often no longer needs to call 911 when a dangerous situation arises because it simply informs the SRO. This gives the school a quick response time while allowing patrol officers to focus on issues outside of schools. Overall, some of the benefits of SROs include:

- Increasing feelings of safety among students, teachers, and administrators,
- Deterring aggressive behavior, and empowering staff to maintain order and address behavioral issues in a timely fashion,
- Diminishing classroom time spent on discipline and behavioral disruptions,
- Improving school safety and reducing school-based crime,
- Increasing the likelihood that students report witnessing a crime, and help reduce community-wide criminality, and
- Improving relationships between law enforcement and youth.

Impacts on Safety for Marginalized Youth

In the triad model concept advanced by NASRO, in addition to their law enforcement role, SROs will act as another mentor, educator, or counselor. However, this assumption ignores the fact that Black youth, Latinx youth, immigrant youth, indigenous youth, and youth living in poverty often come to school with harmful experiences with police that may perpetuate racial inequalities in educational, health, and social outcomes.[28] By placing SROs in schools, these traumatic issues can be exacerbated. SROs are more likely to reproduce broader patterns of police targeting and criminalizing Black, Indigenous, Latinx, and students of color.[29]

Further, SROs are disproportionately placed in schools serving predominantly students of color, as opposed to schools serving predominantly white populations.[30] Among middle and high schools where more than 75 percent of students were Black, 54.1 percent had at least one SRO or security officer on campus.[31,32] By comparison, among middle and high schools where over 75 percent of students were white, only 32 percent had SROs.[32,33]

SROs Are Associated with Higher Rates of Exclusionary Discipline and Criminalization

Additionally, numerous studies show that the presence of SROs in schools is associated with higher rates of exclusionary discipline (suspensions and expulsions) which increases the risk of students being pushed into the "school to prison pipeline." [33] Students of color across the nation are disproportionately subject to these exclusionary discipline practices.[34] For example, in Connecticut, suspension and expulsion rates for Black and Latino male students are two to three times that of their white counterparts.[35] The suspension rate for Black female students is around five times that of their white counterparts.[36]

Additionally, SROs create the potential to escalate school disciplinary issues, even minor ones, into arrestable offenses.[36] In one survey of SROs, 77 percent reported that they had arrested a student to calm them down and 55 percent reported arresting students for minor offenses because the teacher wanted the student to be arrested.[37] The majority of school-based arrests are for non-violent offenses, such as disruptive behavior.[39] Further, studies show that the presence of an SRO increases the number of arrests for "disorderly conduct" – an often ambiguous, and subjective characterization of behavior.[38] Overall, research suggests that SROs' potential to escalate conflicts puts students at risk.[39] For example, schools that employed police had an arrest rate 3.5 times that

of schools without police.[40] As with exclusionary discipline, students of color are disproportionately subject to school arrests.[42]

This pipeline extends further for undocumented students, as contact with SROs can put them at risk of detention and deportation.[41] This risk is heightened in communities where local law enforcement is contracted with Immigration and Customs Enforcement under 287(g) agreements – which allows the Department of Homeland Security to deputize selected state and local law enforcement officers to enforce federal immigration law.[42] Since 2013, COPS Grants have required recipients to sign a 287(g) agreement in order to receive funds. There are several documented cases of SROs putting immigrant students at risk of "school-to-deportation pipelines.[43,44]

Interference with Education

The presence of SROs and exclusionary discipline negatively impacts students' academic achievement and can accelerate future misbehavior, truancy, and drop-out rates.[47] Students who have contact with the criminal legal system through arrests and searches experience worse schooling outcomes than those who do not. Arresting students doubles their risk of dropping out.[45] The consequences of a school arrest extend far beyond a youths' public-school outcomes and include the loss of access to higher education and funding, job eligibility, access to public housing, and increasing both the likelihood and consequence of future law enforcement contact.[46] Further, trauma and anxiety symptoms can increase with the frequency of police contact, regardless of where that contact occurs. For many students of color, police presence in schools can cause re-traumatization given their negative experiences with law enforcement in their communities.[50]

The presence of SROs can shift the focus from learning and supporting students to over-disciplining and criminalizing them. Regular police contact, even if this contact is in passing, affects how Black and Latinx youth perceive themselves, their school, and law enforcement.[47] Students of color have reported feeling the police are there to protect the school from them.[41] Further, other research shows that the presence of SROs reduced students' feelings of school connectedness – the belief that adults and peers in the school care about them as humans.[26,48] School connectedness is an important protective factor – young people who feel connected to their school are less likely to engage in behaviors that are harmful to themselves or others and are more likely to have better academic achievement, attendance, and persistence.[50] Research also demonstrates that racial and ethnic disparities in discipline are not the consequence of differences in rates or types of misbehavior by students of color and white students but rather racial and cultural biases.[44]

Lastly, the focus on SROs has also diverted attention and funds from other areas of education that could support students. Between 1999 and 2015, the percentage of students who reported security guards or assigned police officers in their schools increased from 54 percent to 70 percent while the number of school counselors increased by only 5 percent, after adjusting for the growth in student enrollment.[42] There are also more sworn law enforcement officers than social workers in schools across the U.S., with many states employing two-to-three times as many police officers in than social workers in schools.[49] Over 4,800 schools reported employing more school police and security than school-based mental health providers.[53] Across the country 1.7 million students are in schools with police but no counselors; 3 million are in schools with police but no nurses; 6 million students are in schools with police but no school psychologists; 10 million students are in schools with police but no social workers.[42] Compared to white students, Latinx, Asian, and Black students are more likely to attend schools where the districts chose SROs over counselors.[50]

Impact of SROs on School Shootings

There is limited evidence supporting the role of SROs in preventing school shootings.[51] Research on averted school shootings – incidents planned by students and then prevented – suggests that the key is having trusted adults whom other students can inform.[52] One study found that students are much more likely to report a planned shooting to school staff members; they rarely report this to a member of law enforcement.[56] There is also limited evidence on whether SROs can stop an active shooter or lower deaths or injuries when a school shooting happens. A recent study found that among all schools that experienced a school shooting between 1999 and 2018, the number of injuries and deaths was about 2.5 times higher in schools that had an SRO.[53] However, in at least one instance a school shooter deliberately selected an elementary school with no security personnel instead of the middle school they attended because their middle school had an armed security officer.[54] Further, one study found in one-quarter of the studied cases with an active shooter, the officer or SRO was able to make it to the scene of the attack within one minute. In three of the attacks (7 percent), it took between one and five minutes for the officer to respond, and for two attacks (5 percent), it took between five and ten minutes.[55] In sum, further research is needed to understand the role SRO's have in deterring school shooters.

Maximizing the Benefits of SRO Programs

Although there has been interest in encouraging the expansion of SRO programs to promote school safety, some are concerned about the negative effects SROs could have on the school environment. While research on the efficacy of particular program models or characteristics is limited, the COPS Office, has identified several elements of a successful SRO program.[56] First, the COPS guide suggests that all schools should develop a comprehensive school safety plan based on their school safety goals and a thorough analysis of the problem(s) the school is facing before determining if it is necessary to employ an SRO.[59] In some instances, school safety plans might not require the deployment of an SRO. However, if after composing a school safety plan the school decides to use an SRO, there should be clear goals for the program. SROs should engage in problem-solving policing activities that directly relate to school safety goals and address identified needs, and data should be collected to determine whether the program is achieving its goals.

Second, the COPS guide suggests that schools and the law enforcement agencies that SROs work for should be aware of any pitfalls before agreeing to establish an SRO program.[59] There may be philosophical differences between school administrators and law enforcement agencies about the role of the SRO. Law enforcement agencies focus on public safety while schools focus on educating students. Establishing an agreed-upon operating protocol or MOU is considered a critical element of an effective school-police partnership. The MOU should clearly state the roles and responsibilities of SROs involved in the program.[59] However, most schools employing SROs do not enter into a MOU. Further, MOUs are not publicly available on school websites. This means that key stakeholders such as students and families lack easy access to information regarding their rights in relation to interacting with police in schools.[69]

Third, the COPS guide suggests that selecting officers who are likely to succeed in a school environment—such as officers who can effectively work with students, parents, and school administrators; have an understanding of child development and psychology; and have public speaking and teaching skills—and properly training those officers are important components of a successful SRO program.[59] While it is possible to recruit officers with some of the skills necessary to be effective SROs, it is also important to provide training so officers can hone skills they already have or develop new skills that can make them more effective. The Police Foundation, for instance, recommends that training for SROs focus on the following:

- child and adolescent development, with an emphasis on the effect of trauma on student behavior, health, and learning,
- subconscious (or implicit) bias that can disproportionately affect youth of color and youth with disabilities or mental health issues,
- crisis intervention for youth,
- alternatives to detention and incarceration, such as peer courts, restorative justice, etc., and
- legal issues like special protections for students with disabilities.[57]

Further, one study that surveyed educators, students, officers, and community members suggests that successful SRO programs can do the following:

- Increase feelings of safety among students, teachers, and administrators,
- Deter aggressive behavior, and empower staff to maintain order and address behavioral issues in a timely fashion,
- Diminish classroom time spent on discipline and behavioral disruptions,
- Improve school safety and reduce school-based crime,
- Increase the likelihood that students report witnessing a crime, and help reduce community-wide criminality, and
- Improve relationships between law enforcement and youth.[58]

EXISTING AMA POLICY

AMA policy H-60.902, "School Resource Officer Qualifications and Training" encourages an evaluation of existing national standards to have qualifications through training and certification that includes child psychology and development, restorative justice, conflict resolution, crime awareness, implicit/explicit biases, diversity inclusion, cultural humility, and individual and institutional safety and others deemed necessary for school resource officers. It also encourages the development of policies that foster the best environment for learning through protecting the health and safety of those in school, including students, teachers, staff, and visitors.

CONCLUSIONS

Police stationed within K-12 schools, known as SROs, are a common feature of American schools. According to federal data, about half of schools had an SRO on school grounds at least once a week during the 2017-2018 school year.[59] In the same year, a national survey found that 80 percent of parents supported having police officers in schools, and some states, like Maryland, passed new laws mandating adequate law enforcement at all schools as a result of school shootings.[60,61] However, since George Floyd's death in 2020, the U.S. has experienced an intensified debate about the proper role of police in communities, including schools. As a result, school districts, including Chicago and Los Angeles, have significantly cut their budgets for school policing.[62]

Opponents of SROs often cite specific incidents of police violence against Black students in schools and link SROs to the broader concept of a school-to-prison pipeline, in which students' early experiences with school discipline and/or police in schools may directly or indirectly influence their lifetime involvement with the criminal justice system.[62] Critics of SROs fear that having a police officer within a school makes it easier for a student to be formally arrested or referred to juvenile justice for minor acts of misconduct that would otherwise be handled through school discipline.[63] This criminalization of school misconduct disproportionally impacts students of color, as evidenced in the existing racial disparities in arrest and incarceration.[40]

Proponents state that school districts often view SROs as the first line of defense against school shootings and other acts of school violence. SROs also aim to act as a specialized form of community policing, a model of policing designed to assign officers to permanent beats, involve students in decision-making, and problem-solve using non-criminal justice techniques such as mentoring and informal sanctions.[64] Consistent with this logic, research has shown that SROs may improve student attitudes toward the police and improve student and staff perceptions of school safety.[26]

The current evidence is inconclusive on the effectiveness of de-escalation training for SROs. However, multi-faceted interventions are more likely to be effective, especially in school settings. Examples of evidence-based best practices include training on restorative justice, transformative justice, and trauma-sensitive or trauma-informed schooling.[65] At the center of each of these approaches is the development of: healthy relationships; processes that support the healing of harm and transformation of conflict; and just and equitable learning environments that confront oppressive structures and systems.[69]

Further, establishing an agreed-upon operating protocol or MOU is considered a critical element of an effective school-police partnership. The MOU should include provisions addressing daily interactions between students and school personnel with school resource officers.[66] MOUs are widely considered important tools to clarify how SROs should operate in an educational environment.[67] However, most school districts employing SROs do not have a MOU in place. Research shows that an upfront MOU agreement can result in fewer court referrals, fewer violent offenses, and higher graduation rates.[68]

It is also important to recognize that SROs are part of the school staff at large and shouldn't be considered a separate entity from school counselors, social workers, school psychologists, nurses, and schoolteachers. Their roles should therefore be defined within the team structure of the school. Finally, community-based policing practices ensure that the community plays a role in prioritizing and addressing public safety problems.[69] SRO programs employing these practices can be used to accomplish two interrelated goals of developing solutions to problems through collaborative problem solving and improving public trust.

RECOMMENDATIONS

The Council on Science and Public Health recommends that the following be adopted, and the remainder of the report be filed.

1. That our AMA amend Policy H-60.902, "School Resource Officer Qualifications and Training" as follows:
    1. Our AMA encourages: (1) an evaluation of existing national standards (and legislation, if necessary) to have qualifications by virtue of training and certification that includes child and adolescent psychology and development, trauma-informed care, restorative justice, peer mediation, conflict resolution, crime awareness, implicit/explicit biases, how to work with children with disabilities and special needs, diversity inclusion, cultural ~~humility~~ competence of the distinct cultural groups represented at schools, de-escalation training, and individual and institutional safety and others deemed necessary for school resource officers; and (2) the development of policies that foster the best environment for learning through protecting the health and safety of those in school, including students, teachers, staff and visitors. (Modify HOD Policy)

2. That our AMA encourage: (1) school districts initiating SROs develop and those with existing SROs maintain an up-to-date Memorandum of Understanding (MOU) that clearly outlines processes for officer selection and assessment, defines roles and responsibilities of SROs and their scope relative to school personnel, identifies data to be collected, and establishes a mechanism for program evaluation and oversight; (2) SROs to have access to local public health resources; (3) schools with SRO programs to collect and report data to help evaluate the impact of SROs in schools; and (4) federal and state grant programs which provide funding for SRO programs, require collection and reporting of data to inform policymaking on these programs. (New HOD Policy)

3. That our AMA acknowledges: (1) SROs are part of the school staff at large and their responsibilities should be defined within the team; and (2) community-based policing practices are essential for a successful SRO program. (New HOD Policy)

Fiscal Note: less than $1,000

REPORT 05 OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH (A-23)
Increasing Public Umbilical Cord Blood Donation in Transplant Centers
(Reference Committee D)

EXECUTIVE SUMMARY

INTRODUCTION. The first Resolve of Resolution 001-A-22, "Increasing Public Umbilical Cord Blood-Donations in Transplant Centers," which was referred by the House of Delegates, asked that our American Medical Association (AMA) "encourage all hospitals with obstetrics programs to make available to patients and reduce barriers to public (altruistic) umbilical cord blood donation."

METHODS. English language articles were selected from searches of PubMed and Google Scholar using the search terms "umbilical cord blood donation," "public umbilical cord blood donation," and "umbilical cord blood AND transplantation." Additional articles were identified by manual review of the reference lists of pertinent publications. Web sites managed by government agencies and applicable organizations will also be reviewed for relevant information.

DISCUSSION. Historically, umbilical cord blood (UCB) had no identified value and was disposed of with the placenta. When used in hematopoietic stem cell transplantation, umbilical cord blood offers several distinct advantages compared with bone marrow or peripheral stem cells. Biologically, a greater degree of human leukocyte antigen (HLA) mismatch is tolerated by the recipient and the incidence of acute graft-versus-host reaction is decreased when umbilical cord blood is used compared with unrelated donor bone marrow. The predominant disadvantage of umbilical cord blood use is that there is often a low yield of stem cells acquired per unit. In general, UCB can be donated to a private or public bank. A private umbilical cord blood bank is a for-profit company that allows storage of umbilical cord blood for personal use. In contrast, public umbilical cord blood banks offer gratuitous cord blood banking for individuals who meet the donation requirements. This report examines the benefits and limitations of public versus private umbilical cord blood banking.

CONCLUSION. Cord blood banking has been developed to the point that around 800,000 units are being stored in public banks and over 4 million units in private banks worldwide. Although UCB units are not the answer for every patient needing a bone marrow transplant, their availability is crucial for hundreds of patients every year who have no alternative treatment modality. Despite the benefits of UCB donations, multiple barriers exist for cord blood collection. One notable barrier is that public UCB banks are required to process, and store collected units within 48 hours of collection. This limits the collection sites to proximally located hospitals. This provides a barrier for hospitals that lack the appropriate resources or infrastructure to UCB donations. This, coupled with the lack of funding for efforts to improve recruitment and education of expectant parents, leads to insufficient UCB donations and availability for transplant. The recommendations aim to address these barriers to improve and expand the current UCB donations and banking. This report also studies the financial costs of setting up public UCB banks and the long-term financial outlook for maintaining public UCB banks.

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 05-A-23

Subject: Increasing Public Umbilical Cord Blood Donation in Transplant Centers

Presented by: Noel Deep, MD, Chair

Referred to: Reference Committee D

INTRODUCTION

The first Resolve of Resolution 001-A-22, "Increasing Public Umbilical Cord Blood-Donations in Transplant Centers," which was referred by the House of Delegates, asked that our American Medical Association (AMA) "encourage all hospitals with obstetrics programs to make available to patients and reduce barriers to public (altruistic) umbilical cord blood donation."

BACKGROUND

Historically, umbilical cord blood (UCB) had no identified value and was disposed of with the placenta. UCB is now known to contain hematopoietic stem cells that have potential life-saving benefits. When used in hematopoietic stem cell transplantation, umbilical cord blood offers several distinct advantages compared with bone marrow or peripheral stem cells. Biologically, a greater degree of human leukocyte antigen (HLA) mismatch is tolerated by the recipient and the incidence of acute graft-versus-host reaction is decreased when umbilical cord blood is used compared with unrelated donor bone marrow.[1] The predominant disadvantage of umbilical cord blood use is that there is often a low yield of stem cells acquired per unit. Only 8–12 percent of umbilical cord blood units have sufficient cell volume for transplant to a person weighing 80 kg (176 lb).[2] In general, a private UCB bank is a for-profit company that allows storage of UCB for personal use. In contrast, public UCB banks offer gratuitous cord blood banking for individuals who meet the donation requirements. The benefits and limitations of public versus private UCB banking should be reviewed with the patient individually because they serve different purposes.

METHODS

English language articles were selected from searches of PubMed and Google Scholar using the search terms "umbilical cord blood donation," "public umbilical cord blood donation," and "umbilical cord blood AND transplantation." Additional articles were identified by manual review of the reference lists of pertinent publications. Web sites managed by government agencies and applicable organizations were also reviewed for relevant information.

DISCUSSION

Umbilical Cord Blood

UCB is the blood left over in the umbilical cord and placenta after delivery. Typically, the umbilical cord and placenta are thrown away as medical waste. UCB blood is similar to other sources of blood because it contains red and white blood cells, platelets and plasma. It also contains

a special type of stem cell known as hematopoietic stem cells (HSCs) that can mature or grow into different types of blood cells such as red blood cells, white blood cells, or platelets. Billions of stem cells reside in just a few ounces of cord blood, which is collected painlessly from the umbilical cord after birth. HSCs are used in treating life-threatening malignant and non-malignant diseases of the blood and immune system.[3] Researchers have found cord blood is effective in treating up to 80 conditions.[4] Moreover, clinical studies have proved the pluripotent nature of cord blood cells, highlighting a wide range of possible clinical applications in neonatology, regenerative medicine, and immune modulation.

Umbilical Cord Blood Banking

UCB banking has grown significantly in the past two decades. The option to bank UCB was first made available in the 1990s following the discovery that cord blood is a rich source of stem cells.[5] UCB banking consists of the collection and storage of the UCB from the placenta and umbilical cord, soon after childbirth.[6]

Three types of UCB banks currently exist: public, private, and hybrid. Public banks store UCB units received altruistically from donors, which are then listed on the Be The Match® Registry (The Registry) and made available for any potential recipient if they are an adequate HLA match.[7] There is no cost to donate the baby's cord blood to a public bank. Public banks follow strict quality assurance and FDA regulations and will only bank cord blood if it is sterile and contains enough stem cells to use in treatment. However, public cord blood banks do not allow directed storage. In contrast, private banks, also referred to as family banks, store UCB for exclusive future use either by the donor or a matched relative. When a baby's cord blood is stored in a private cord blood bank, the donor pays collection and ongoing storage fees and the UCB is reserved for the donor's use only. As the cord blood is being saved for personal use, private banks are not required to follow the same quality and sterility guidelines as a public bank.[8] Hybrid banks offer combined public and private UCB storage solutions. In this scenario, either the private bank offers a public donation, or the public bank offers a private storage option.

Recruitment and Donor Education

Public UCB banks are required to process, and store collected units within 48 hours of collection. Therefore, collection tends to occur in geographically proximate hospitals, which is available in a limited number of hospitals in the United States.[9] This, coupled with the lack of funding for marketing campaigns, means that recruitment and education of expectant parents provided by public UCB banks is minimal, mostly consisting of websites to provide education and guidance to expectant parents who want to donate their baby's cord blood. Most public UCB banks rely on the voluntary participation of physicians, prenatal class instructors, and labor and delivery nurses to encourage expectant parents to donate, provide information about donation, and to collect the cord blood at the time of delivery. Some public UCBs maintain their own staff in collection hospitals to provide information and education about cord blood donation or consent-and-obtain information for the maternal questionnaire. Further, many states have laws requiring obstetricians to inform their patients about cord blood banking.[10] However, most legislation does not specify whether public or private donation should be discussed.

Cord Blood Collection, Processing, and Storage

Families who decide to donate their newborn's cord blood to a public UCB bank must provide a maternal health history and a maternal blood sample for infectious disease screening prior to delivery. Collected cord blood is then packed, stored, and transported, typically in a temperature

monitored environment, to a cell-processing laboratory. While in transit from the collection site to the processing and storage site, time and temperature affect the viability of the cord blood: One study reported a 1-percent drop in cell viability for every 4-hour increase in transit time.[11] After collection, but before further testing or processing, many public UCB banks perform an initial assessment of the collected unit to determine its weight and volume. Low weight or volume units are usually discarded or donated to research since they are unlikely to meet minimum cell count requirements for banking and use in transplants.[12]

At any point in the process, a cord blood unit may be identified as unsuitable for storage for any number of reasons, including low volume (i.e., not enough stem cells to use in a transplant), poor viability (i.e., there may be stem cells, but they may not be alive or appropriately functioning), poor results from infectious disease testing, or negative findings from the maternal health questionnaire. Some studies have demonstrated that for every one-hundred births eligible for cord blood donation in which cord blood collection is attempted, approximately forty-five are sent for processing and approximately ten are ultimately stored.[13]

Cord Blood Inventory Management and Withdrawal

Most cord blood stored in public banks in the United States are listed with the National Marrow Donation Program (NMDP), which runs The Registry and serves as a central site for patients seeking HSC transplants of all kinds.[14] Many international banks' cord blood is also available through The Registry. Some public UCB banks may also offer units that do not meet qualifications for being listed on The Registry but may still have value to potential recipients (i.e., they may have lower cell counts, but represent rare HLA types). These are not available through The Registry, but rather are obtained directly through established relationships with UCB banks.

When a patient has a condition that necessitates treatment using an allogeneic HSC transplant, the patient's physician, whether in the United States or abroad, can search existing registries, including The Registry, for a potential match. More than 90 percent of UCB units distributed for transplant in the United States are distributed through The Registry.[15]

UMBILICAL CORD BLOOD REGULATION AND GOVERNMENT POLICIES

Federal Policies and Programs

In 1987, the National Bone Marrow Donor Registry (NBMDR) was initiated through a congressionally directed grant from the U.S. Department of the Navy and formally established in 1990 as a responsibility of the U.S. Department of Health and Human Services (HHS), with oversight initially by the National Institutes of Health (National Heart, Lung, and Blood Institute) and, since 1994, by the Health Resources and Services Administration (HRSA).[16] In December 2005, Congress passed the Stem Cell Therapeutic and Research Act (Stem Cell Act 2005).[17] The Stem Cell Act 2005 amended the Public Health Service Act and required the HHS Secretary, through HRSA, to rewrite the provisions that established and maintained the NBMDR. The provisions were rewritten to establish and maintain the C.W. Bill Young Cell Transplantation Program (CWBYCTP), the successor to the NBMDR.

The Stem Cell Acts of 2005, 2010, 2015, 2021 authorized the following:

- The Stem Cell Therapeutic and Research Act of 2005 established the CWBYCTP to replace the NBMDR. In so doing, the Act expanded on the previous requirements of the NBMDR to increase the numbers of marrow donors and cord blood units and continued to

serve patients who need a bone marrow or umbilical cord blood transplant. The CWBYCTP also established an outcomes database to collect data and perform research, as well as offer patient and donor advocacy services, case management services, data collection on transplant outcomes, and educational activities.

- National Cord Blood Inventory (NCBI). The NCBI program contracts with cord blood banks to meet the statutory goal of building a public inventory of at least 150,000 new, high-quality, and genetically diverse UCB units.[18] These UCB units are available for transplantation through the CWBYCTP. The Stem Cell Therapeutic and Research Reauthorization Acts of 2010 also required the U.S. Government Accountability Office to report on efforts to increase cord blood unit collection for the NCBI.
- Advisory Council on Blood Stem Cell Transplantation (ACBSCT). The goal of the ACBSCT is to advise, assist, consult with, and make recommendations to the Secretary of Health and Human Services and the Administrator of HRSA on matters carried out by both CWBYCTP and the NCBI Program.[19]

HRSA

HRSA administers the CWBYCTP and manages its various components. HRSA provides funding for the collection of diverse cord blood units for NCBI through contracts to cord blood banks. There are 13 NCBI contractors who bid to provide a certain number of cord blood units of specified types (i.e., racial/ethnic groups).[20] Once NCBI-eligible cord blood units are listed on The Registry, public cord blood banks receive a subsidy for cord blood collection, processing, and storage. This subsidy does not cover the entire costs borne by cord blood banks for collection, processing, and storage, but it does help defray some of those costs.

National Marrow Donor Program (NMDP)

The NMDP provides the link between HRSA, UCB banks, and physicians for obtaining stem cells and, specifically, cord blood. The NMDP also acts as the financial intermediary between individual UCB banks and hospitals and provides education for patients and clinicians.[21]

FDA Oversight

The FDA regulates cord blood in a variety of ways, depending on the source, the processing, and the intended use. Cord blood stored in private banks (i.e., for autologous use or use in first- or second-degree relatives) does not need to go through FDA licensure because it is used on the individual from whom it was collected, or on a related individual. In contrast, public UBC banks store UCB units intended for use by a patient unrelated to the donor (i.e., for allogeneic use). Therefore, this use meets the legal definitions of both a "drug" and a "biological product," which means that public UBC banks must adhere to additional requirements.[22,23] Public banks are required to comply with good tissue practice regulations, conduct specific donor screening and infectious disease testing, conduct standardized testing on UCB units, and maintain international cellular therapy accreditation. Further, public UCB banks are required to hold licensure from the FDA. The costs and timeline for achieving FDA licensure are reportedly high, with many public UCB banks reporting a 12-to-24-month timeline, initial costs of approximately $1 million, and ongoing annual costs of more than $100,000.[24,25]

It is also important to note that individual UCB units are licensed, not the UCB bank itself. Most public UCB banks in the United States were in operation before the FDA licensure mandate—the FDA issued guidelines for licensure in 2009 and issued the first license in 2011.[26] Licensed UBC units meet FDA standards, and unlicensed UBC units are collected and processed

prelicensure or are post-licensure collections that do not meet the requirements specified by the FDA. Public UCB banks that have not achieved FDA licensure will produce only unlicensed UCBs. Finally, UCB units from international banks are also unlicensed. The use of an unlicensed UBC unit must go through the process of an Investigational New Drug (IND) application.[27] An IND may be submitted by the UCB bank, the transplant physician, the transplant center, a national or international cord blood registry involved in coordinating the distribution, or another qualified sponsor.[27] INDs are granted only for specific uses.[26]

State Legislation

To date, 28 states have passed some form of cord blood education legislation, which represents 78 percent of the total annual US births.[10] Several other states are in various stages of developing similar legislation to help inform health care professionals and expectant parents of all medically appropriate options for preserving cord blood stem cells.

ADVANTAGES AND DISADVANTAGES OF USING CORD BLOOD STEM CELLS

Advantages of Using Cord Blood Stem Cells Over Other Sources for Stem Cells

Physicians and patients balance trade-offs when choosing a suitable stem cell donation for transplant. In some cases, the urgency to perform the transplant makes cord blood stem cells the preferred choice because they are usually available for overnight transport once a suitable match is identified.[28] Other factors to consider include time to acquire the donation and quality of the potential stem cell sources, as well as the patient's age and disease. One major advantage to using cord blood stem cells is the fact that they are less differentiated than stem cells from adult sources (i.e., bone marrow or peripheral blood), and therefore are better able to develop into various cell types as they mature. This quality is an asset for transplantation because cord blood stem cells require less-stringent donor-recipient matching than adult stem cells and carry a lower risk for rejection by the recipient's body. Another advantage is that this less-strict matching also implicitly increases access to stem cells as a treatment source for those unable to find suitable matches among other sources.[29] This is especially important for racial and ethnic minorities who often have a hard time finding a suitable donor.

Bone marrow and peripheral blood stem cell collection also have disadvantages. Preparations for collection of bone marrow or peripheral blood, such as donor-recipient matching to minimize the chance of rejection, can take several weeks to complete. Collection itself requires the donor to undergo a procedure requiring sedation, typically done in an operating room, or take medication to stimulate stem cell production, both of which can be painful and can require recovery in the hospital.[30]

Summary of Advantages for Patients

For certain patients, there may be advantages to using donor cord blood stem cells instead of donor peripheral blood or donor marrow stem cells. Some potential advantages include:

Availability. Cord blood stored in a public cord blood bank has been prescreened, tested and frozen and is ready to use. They are usually available for overnight transport once a suitable match is identified.[31]

Human Leukocyte Antigen (HLA) Matching. The outcomes of related and unrelated donor stem cell transplants are strongly affected by the degree of HLA matching between the transplant

recipient and the donor cord blood. HLA matching plays an important role in successful engraftment, severity of graft-versus-host disease (GVHD) and overall survival. A close match between the patient and the cord blood unit can improve a patient's outcome after transplantation.[31]

Graft-Versus-Host Disease. Studies have found that after a cord blood stem cell transplant, fewer patients got GVHD and, among those patients who did develop GVHD, the complication tended to be less severe than it was in patients who had bone marrow or peripheral blood transplants. GVHD is a serious and sometimes fatal complication of allogeneic stem cell transplantation.[31]

Diversity. As a result of extending collection efforts to hospitals where births from diverse ethnic backgrounds are well represented, donated cord blood units have the potential to provide a source of stem cells that reflect racial and ethnic diversity.[31]

Infectious Disease Transmission. Cord blood stem cell transplants carry a lower risk of transmission of blood-borne infectious diseases compared with stem cells from the peripheral blood or marrow of related or unrelated donors.[31]

Disadvantages of Using Cord Blood Stem Cells Over Other Sources for Stem Cells

Although the U.S. government started a federal cord blood program in 2005 to help create a nationwide inventory of high quality and genetically diverse units of cord blood, the proportion of cord blood stem cell transplants relative to transplants using other types of stem cells, such as those from bone marrow, has been falling in recent years.[32] The declining demand and increasing costs has led to some of the public UBC banks to struggle to operate financially.

One significant disadvantage to using cord blood stem cells is that the volume of collectible blood is small in comparison to that from an adult donor's bone marrow or peripheral blood. Fewer stem cells means that it takes approximately 10–15 days longer than other sources for the stem cells to establish themselves when introduced in the recipient's bone marrow.[33] This means longer recovery time in the hospital for the recipient. Since bone marrow and peripheral blood can provide more stem cells per donation, the cells usually engraft more quickly in the recipient's bone marrow, so the recipient typically has a shorter recovery period. Further, bone marrow or other peripheral blood stem cells are not required to be licensed.

Summary of Disadvantages for Patients

Clinical Data. Cord blood stem cell transplantation is almost two decades old yet is a relatively new procedure in comparison to transplantation of peripheral blood or marrow stem cells. It is possible that genetic diseases may be present but not apparent at the time of birth and could be transplanted to a patient via donor cord blood stem cells. Procedures to track this possibility require follow-up until the donor infant is months or even years old, but such follow-up has proven difficult. A future approach to address this may be genetic testing for diseases that affect the blood and immune system and for certain metabolic diseases that might be transplantable.[31]

Storage. It is not known how long cord blood can be frozen and stored before it loses its effectiveness. Cord blood samples have been preserved for as long as 10 years and have still been successfully transplanted.[31]

Engraftment. The number of cells required to give a transplant patient the best chance for engraftment and for surviving the transplant is based on his or her weight, age and disease status. A cord blood unit might contain too few stem cells for the recipient's size. Due to the smaller number

of stem cells in the cord blood unit, cord blood stem cell transplants engraft more slowly than stem cells from marrow or peripheral blood. Until engraftment occurs, patients are at risk of developing life-threatening infections due to immunosuppression from chemotherapy and/or radiation intended to prepare the recipient for the transplant. Thus, cord blood transplant recipients may be vulnerable to infections for an average of up to one to two months longer than marrow and peripheral blood stem cell recipients. [31]

CURRENT DEMAND FOR CORD BLOOD UNITS

Overall, stem cell transplants have been on the rise for several years. However, the number of transplants using cord blood has declined over time, from about 12 percent of all HSC transplants to about 8 percent from 2010 to 2015.[34] As of 2020, more than three-quarters (77%) of the unrelated transplants and three-quarters (80%) of related transplants were performed using peripheral blood.[35] One-seventh (14%) of unrelated transplants used bone marrow and 7% used cord blood units.[35] Other factors may contribute to the declining demand for cord blood, such as higher procurement and treatment costs or provider preferences. Over the short term, treatment costs are clearly higher for cord blood transplants relative to other stem cell transplants. This is primarily driven by longer engraftment periods, which translate into longer hospital stays. Research is still needed to determine whether cord blood recipients stay healthier over the long term than recipients of other stem cell types. Further, differences in collection costs are also unclear, as previous studies have tended to ignore the cost of harvesting adult stem cell sources, which can be significant.[34]

Competition among public banks has increased as the net supply of cord blood units has grown. Private banks, in which individuals store cord blood for their own family use, also provide some competition because their units may not be released to the national inventory, keeping that segment of the market off-limits for most patients. In addition, international cord blood banks now supply about 24 percent of units used in the United States, up from 13 percent in 2004.[36] The fee that a bank charges a transplant center for a cord blood unit tends to be the same (about $36,000) regardless of the unit's TNC count or genetic rarity.[34] The current market environment for public banks makes it difficult to break even. Costs for public banks include processing, testing, and storage costs; licensure by the U.S. Food and Drug Administration; and overhead costs. The total expenses vary widely, ranging from $1 million to $6 million, depending on the size of the operation.[37] Further, revenue primarily comes from fees, but also from the NCBI subsidies for registered units, donations, grants, or in-kind donations of services. Banks collect, on average, 8,500 units annually but ultimately store only 5 to 40 percent of those collections.[38] Among units that have been banked, a low–TNC-count unit has only about a 0.1-percent chance of being used in a given year, as opposed to a 3-percent chance for larger units.[37] Because banks collect fees only on units that are used, banks that store low–TNC-count units are more likely to lose money.

EQUITY CONSIDERATIONS

In the U.S., racial minorities are much less likely to find a suitable blood stem cell donor than White Americans. For example, a Black person has a 29 percent chance of finding a matched donor in the registry, while a white person has a 79 percent chance.[39] People who are American Indian and Alaska Native have a 60 percent chance of finding a registry match, Asian and Pacific Islander patients 47 percent, and Hispanic or Latino patients 48 percent.[39] People of color make up a small percentage of all donors, making it difficult to find matches for people with cancer who are not white or who are of mixed race and ethnicity.

HSCs from UCB offer the advantage of requiring less stringent HLA-matching criteria (i.e., six loci, rather than 10 as is the case for bone marrow derived HSCs). In addition, since these cells can be cryopreserved, this provides an off-the-shelf solution to patients in urgent need of transplantation. These factors are particularly advantageous for patients from non-Caucasian racial and ethnic groups, especially since this offers access to a worldwide inventory and increased the likelihood of finding a match.[40,41]

As discussed above, one disadvantage of using UCB is the low yield of HSCs when compared to bone marrow or peripheral blood. Use of a suboptimal HSC cell dose results in delayed recovery, higher graft failure rates and risk of infection.[45,42] This results in increased hospitalization times and a consequent increase in treatment costs. Double UCB transplantation is often employed to overcome this, causing significant financial burdens to the transplant recipient. The cost factor is particularly pertinent in the context of allogeneic UCB transplantation, when one considers that obtaining a single UCB unit can cost up to $36,000.[43] The costs of double UCB unit transplantation and further manipulations can therefore be prohibitively expensive.

POTENTIAL COST CONSIDERATIONS

Limited information is available about the costs to set up an UCB donation systems in health care settings where a program currently does not exist. As noted above, public UCB banks are required to process, and store collected units within 48 hours of collection. This is essential to maintain the viability of the collected cells. Therefore, this may only be feasible when a public UCB bank is geographically proximate to the hospital. There are significant costs for hospitals to set up public UCB donation centers on site. One example of the potential fiscal cost comes from Connecticut which aimed to establish a public UCB bank between the Department of Public Health (DPH) and the University of Connecticut Health Center (UCHC).[44] The estimated costs were $1.9 million, with ongoing annual operating costs of $2.38 million for the subsequent years.[43] These estimates assumed a volume of 1,440 specimens to be collected and stored per year and included costs for personnel, equipment, training, accreditation, reagents, rent, vehicles for transport, freezers, testing, courier services, and computer maintenance.[43]

Public UCB banks with donation systems in place incur both variable and fixed costs. Variable costs include costs of collection, testing, processing, storing, and distributing the unit.[37] Fixed costs include obtaining FDA licensure and overhead costs, such as rent.[37] Collection costs include costs of recruiting donors, collection kit supplies, and labor costs. These costs may vary based on the recruitment efforts conducted, as well as whether the bank uses volunteer CBU collectors, or whether it employs its own CBU collectors. There are also significant costs at the processing stage, including separation of the CBU components and HLA-typing to prepare the units for storage.[37] Further, the costs banks typically incur to obtain the FDA license are not publicly available. Therefore, average annual overhead costs—which consist of equipment costs, maintenance, rent, utilities, office supplies, and other related expenses—total from $1.2 million to $4.5 million, depending on the size and setup of the UCB bank.[37]

Revenue comes primarily from fees, but also from the NCBI subsidies for registered units, donations, grants, or in-kind donations of services. Banks collect, on average, 8,500 units annually but ultimately store only 5 to 40 percent of those collections.[34] Because banks collect fees only on units that are used, banks that store low–TNC-count units are more likely to lose money. Banks have had to get creative with how they structure their businesses to remain viable. Some banks have adopted hybrid models, offering private family banking to cross-subsidize the nonprofit public banking operations under NCBI.[34] Some have also improved their financial situation by selling their processing or testing services to private banks.[34] Others are part of larger

organizations, such as whole blood centers or hospitals, which can offer cheaper transportation and lab work.[34] Despite the current financial limitations, one study calculated that the average annual value of having a national public bank system range from $883 million to $1.7 billion, far outweighing the aggregate industry operational costs of $60 million to $70 million to maintain the current system.[34]

Other limitations to collecting UCB include the lack of delivery rooms, licensed obstetric nurses, and the need for more extended opening hours at the local public cord blood bank.[45] This highlights the other potential cost considerations that might increase UCB donations at current hospitals with existing systems set up.

FEDERATION OF MEDICINE POLICY

The American College of Obstetricians and Gynecologists support public UCB donations and state that public banking is the recommended method of obtaining cord blood. They further state that the routine use of private cord blood banking is not supported by available data.[46] In addition, the importance of contributions from all ethnicities and races to public banks is highlighted. The American Academy of Pediatrics also supports the use of public cord blood banking, and further state that it is the preferred method of collecting, processing, and using cord blood cells for use in transplantation in infants and children with fatal diseases, such as malignancies, blood disorders, immune deficiencies, and metabolic disorders.[47]

Existing AMA Policy

The AMA has policy addressing the use of cord blood for transplantation. Code of Medical Ethics 6.1.5 “Umbilical Cord Blood Banking” states that cord blood is a potential source of stem and progenitor cells with possible therapeutic applications. Further it states that “physicians who provide obstetrical care should be prepared to inform pregnant women of the various options regarding cord blood donation or storage and the potential uses of donated samples.” It also encourages donation to a public bank. The Code of Medical Ethics 7.3.8 “Research with Stem Cells” urges physicians who conduct research using stem cells obtained from any source (established tissue, umbilical cord blood, or embryos) to adhere to institutional review board (IRB) requirements, ensure that the research is carried out with appropriate oversight and monitoring, ensure that the research is carried out with appropriate informed consent.

AMA Policy H-370.970 “Umbilical Cord Blood Transplantation: The Current Scientific Understanding” urges physicians to recognize the viability of UCB transplantation as an alternative to bone marrow transplantation. It also encourages the education of physicians and the public on UCB donation. Finally, AMA Policy H-370.956 “Increasing Public Umbilical Cord Blood-Donations in Transplant Centers” encourages the availability of altruistic cord blood donations in all states and access to public cord banking and the creation of public cord blood banks to support altruistic cord blood donation.

CONCLUSION

The UCB field has come a long way after 30 years of biomedical and clinical research supported by public and private cord blood banking. Over 40,000 UCB transplants have been performed, both in children and in adults, for the treatment of around 80 different medical disorders. Cord blood banking has been developed to the point that around 800,000 units are being stored in public banks and over 4 million units in private banks worldwide. Although UCB units are not the answer for every patient needing a bone marrow transplant, their availability is crucial for hundreds of patients

every year who have no alternative treatment modality. Particularly, cord blood transplants can be critical for pediatric and minority populations. Although sometimes there are alternatives to cord blood, patients often have no appropriate alternative HSC source. In addition, the importance of getting treatment quickly for some patients can make UCB units the best choice compared with other HSC sources that require greater lead time.

Changes in technology or new research findings related to the use of HSCs might increase or decrease the future use of cord blood. Although clinical trials using cord blood typically address rare diseases, research efforts are underway studying new cord blood applications to treat diabetes, traumatic brain injury, stroke, cerebral palsy, and autism. Any new medical applications for cord blood could increase demand for UCB units. There is also research on HSC expansion and related technologies that could increase the utility of small CBUs.

Despite the benefits of UCB donations, multiple barriers exist for cord blood collection. One notable barrier is that public UCB banks are required to process, and store collected units within 48 hours of collection. This limits the collection sites to proximally located hospitals. This provides a barrier for hospitals that lack the appropriate resources or infrastructure to UCB donations. This, coupled with the lack of funding for efforts to improve recruitment and education of expectant parents, leads to insufficient UCB donations and availability for transplant. Most public UCB banks rely on voluntary participation of staff to encourage expectant parents to donate, provide information about donation, and to collect the cord blood at the time of delivery. It should be noted that time of delivery is not optimal for appropriate consent, adding another limitation to umbilical cord blood donation. Further, some public UCBs maintain their own staff in collection hospitals with collection sites to provide information and education about cord blood donation.

RECOMMENDATIONS.

The Council on Science and Public Health recommends the following be adopted, and the remainder of the report be filed.

1. That our AMA amend Policy H-370.956 “Increasing Public Umbilical Cord Blood-Donations in Transplant Centers” as follows:
    1. Our AMA encourages: (1) the availability of altruistic cord blood donations in all states; ~~and~~ (2) access to public cord banking and the creation of public cord blood banks to support altruistic cord blood donation~~.~~; (3) all hospitals that provide obstetrics services work to provide access to public (altruistic) umbilical cord blood donation; (4) that when available, to reduce barriers through education of patients about altruistic umbilical cord donation; and (5) that hospitals providing obstetrics services and umbilical cord blood banking facilities work together to create networks to expand access to and increase efficiency of altruistic umbilical cord donations.
    2. Our AMA supports federal funding efforts to increase knowledge sharing across banks and mentoring for centers, physicians, and staff with minimal experience in cord blood collection.
    3. AMA advocates for increased federal and state funding for public UCB banks to create networks to expand access to and increase efficiency of altruistic umbilical cord donations in areas lacking the appropriate infrastructure to effectively collect umbilical cord blood donations.
    4. Our AMA supports efforts to educate physicians about best practices in collecting public umbilical cord blood donations.

5. Our AMA encourages efforts to increase the diversity of the national inventory of umbilical cord blood through funding that supports banks to add collection sites where more racial and ethnic minority cord blood units can be collected. (Modify Current HOD Policy)

Fiscal Note: less than $1,000

REPORT 06 OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH (A-23)
Study of Best Practices for Acute Care of Patients in the Custody of Law Enforcement or Corrections
(Reference Committee D)

EXECUTIVE SUMMARY

INTRODUCTION. AMA Policy D-430.993, "Study of Best Practices for Acute Care of Patients in the Custody of Law Enforcement or Corrections," as adopted by the House of Delegates (HOD), asked that our American Medical Association (AMA) study best practices for interactions between hospitals, other acute care facilities, clinicians, and members of law enforcement or correctional agencies to ensure that patients in custody are provided the autonomy and privacy protections afforded to them by law and report its findings to the AMA House of Delegates by the 2023 Annual Meeting.

METHODS. English language articles were selected from searches of PubMed and Google Scholar using the search terms "acute care of patients in custody", "acute care AND corrections," and "acute care AND incarceration." Additional articles were identified by manual review of the reference lists of pertinent publications. Web sites managed by government agencies and applicable organizations were also reviewed for relevant information.

BACKGROUND. The U.S. has the highest incarceration rate in the world with 1.9 million people incarcerated nationwide. Incarcerated individuals typically have high rates of psychiatric conditions, communicable diseases, substance use disorders, and chronic diseases. Federal law mandates basic health care for individuals who are incarcerated. Few states have stand-alone hospitals for incarcerated patients, and in some counties, health departments offer expanded on-site services in their jails, including urgent care facilities. However, when medical care required by an individual who is incarcerated exceeds the capabilities of the correctional facility's health care services, that individual is transferred to a contracted hospital or, in emergent cases, to the nearest health care institution. Health care professionals practicing outside of correctional facilities receive little dedicated training in the care of incarcerated patients, are unaware of guidelines for the treatment of patients in custody, and face unique medical, legal, and ethical issues.

This report primarily focuses on acute care for patients who interact with law enforcement. It outlines the constitutional rights to health care for incarcerated individuals and the rights for privacy of health information, as well as when that health information may be disclosed. The report also provides recommendations in support of developing standardized best practices and provides best practices should ensure security measures do not interfere with the capacity to provide care for incarcerated individuals.

CONCLUSION. Information on best practices and management of medical conditions among hospitalized patients who are incarcerated or interact with law enforcement is limited and primarily focuses on the care of pregnant individuals. The National Commission on Correctional Health Care remains the only national organization dedicated solely to improving correctional health care quality. This is done by establishing rigorous standards for health services in correctional facilities, operating a voluntary accreditation program for institutions that meet those standards, offering certification for correctional health professionals, conducting educational conferences and webinars, and producing industry-specific publications and other resources.

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 06 -A-23

Subject: Study of Best Practices for Acute Care of Patients in the Custody of Law Enforcement or Corrections

Presented by: Noel Deep, MD, Chair

Referred to: Reference Committee D

American Medical Association (AMA) Policy D-430.993, "Study of Best Practices for Acute Care of Patients in the Custody of Law Enforcement or Corrections," as adopted by the House of Delegates (HOD), asked that our AMA study best practices for interactions between hospitals, other acute care facilities, clinicians, and members of law enforcement or correctional agencies to ensure that patients in custody of such law enforcement or correctional agencies (including patients without decision-making capacity), their surrogates, and the clinicians caring for them are provided the autonomy and privacy protections afforded to them by law and in concordance with professional ethical standards and report its findings to the AMA House of Delegates by the 2023 Annual Meeting.

BACKGROUND

The U.S. has the highest incarceration rate in the world with 1.9 million people incarcerated nationwide.[1] People of color are incarcerated at higher rates in jails and prisons across the country, which causes disproportionate economic, health, and social harms.[2]

Incarcerated individuals typically have high rates of psychiatric conditions, communicable diseases, substance use disorders, and chronic diseases. Federal law mandates basic health care for individuals who are incarcerated. Correctional facilities offer a range of health care services from primary care to hospital-level care. Few states have stand-alone hospitals for incarcerated patients, and in some counties, health departments offer expanded on-site services in their jails, including urgent care facilities. However, when medical care required by an individual who is incarcerated exceeds the capabilities of the correctional facility's health care services, that individual is transferred to a contracted hospital or, in emergent cases, to the nearest health care institution. Health care professionals practicing outside of correctional facilities receive little dedicated training in the care of incarcerated patients, are unaware of guidelines for the treatment of patients in custody, and face unique medical, legal, and ethical issues.

This report is specifically focused on acute care of patients in custody. Acute care is defined as a patient who is treated for a brief but severe episode of illness, for conditions that are the result of disease or trauma, and during recovery from surgery.[3] Acute care is generally provided in a hospital by a variety of clinical personnel using technical equipment, pharmaceuticals, and medical supplies to provide diagnosis, care and treatment of a wide range of acute conditions, including injuries.[4]

METHODS

English language articles were selected from searches of PubMed and Google Scholar using the search terms “acute care of patients in custody”, “acute care AND corrections,” and “acute care AND incarceration.” Additional articles were identified by manual review of the reference lists of pertinent publications. Web sites managed by government agencies and applicable organizations were also reviewed for relevant information.

DISCUSSION

Health of incarcerated populations

Compared to the general population, individuals with a history of incarceration have worse mental and physical health; they are more likely to have high blood pressure, asthma, cancer, arthritis, and infectious diseases, such as tuberculosis, hepatitis C, and HIV.[4,5] Several factors contribute to the prevalence of mortality due to illness and disease in this population. The incarcerated population is largely drawn from the most disadvantaged segments of society, with significant health care needs but limited access to regular care.[6] As a result, many incarcerated individuals arrive at correctional facilities in poor health with conditions that were previously undiagnosed.

Once incarcerated, the conditions of confinement often have a negative impact on health. Stress associated with institutional life, overcrowding, inadequate access to exercise, improper diet, exposure to infectious diseases, and poor sanitation and ventilation can all contribute to mortality. Further, while incarcerated individuals have a constitutional right to health care, the access to and the quality of the care in correctional facilities are variable.[7] Insufficient resources play a key role here, especially limited budgets and regulations that require correctional facilities to prioritize treating certain diseases over others. Some facilities tend to focus on those medical conditions that have immediate and broad impact within the facility, such as HIV and tuberculosis, but also have the potential to spill over into the general population. As a result, treatment of other chronic conditions, such as diabetes and heart or kidney problems, may drop in priority.[8] With few exceptions, nearly all chronic health conditions are more prevalent among incarcerated individuals than the general population. Finally, a major need is increased medical capacity in correctional facilities. Mortality could be reduced if facilities were better equipped to detect acute chronic conditions, such as elevated blood pressure, and respond with adequate care.[9]

Women with a history of incarceration face a greater burden of disease than men with a history of incarceration.[10,11] For example, female offenders with a history of drug misuse were more likely than their male counterparts to suffer from conditions such as tuberculosis, hepatitis, and high blood pressure.[21,22] Women with a history of incarceration are also at greater risk for HIV/AIDS, HPV, and other sexually transmitted diseases.[21,22] Women with a history of incarceration are also more likely to have experienced childhood trauma and physical and sexual abuse than women who are not involved in the criminal justice system, potentially explaining high levels of physical and mental health problems among women who are incarcerated.[22]

The number of older adults (ages 50 years and above) in U.S. prisons is growing.[12,13] Many correctional facilities, however, are not equipped to address the special health needs of these individuals.[23] While incarcerated, some older adults do not receive adequate treatment for their ailments, particularly mental health conditions.[23,14] For example, one study found that only 18 percent of older adults who are incarcerated were prescribed medication to treat their mental health conditions.[25]

Constitutional right to correctional health care

Incarcerated individuals oftentimes need medical attention for ailments, injuries, and diseases. However, there can be misconceptions about an incarcerated individuals' medical rights among physicians, medical administrators, prison and jail staff, and law enforcement officials. There have been several landmark rulings regarding health care and incarceration. Two of the major cases are *Estelle v. Gamble*, (1976) and *Farmer v. Brennan*, (1994).[15,16] In Estelle, the U.S. Supreme Court held that failure to provide adequate medical care to incarcerated people as a result of deliberate indifference violates the Eighth Amendment's prohibition against cruel and unusual punishment.[5] The Supreme Court's decision in Farmer held that a prison official's deliberate indifference to a substantial risk to a prisoner violated the Eighth Amendment and resulted in cruel and unusual punishment.[6] These two cases provide guidance regarding the legal standards for access to health care and deliberate indifference under the Eighth Amendment, but did not define the minimum standards of for medical care in prisons and jails, or a prisoner-patient's rights in medical decision-making.[5,6] In practice, the standard for establishing an Eighth Amendment violation is very challenging to meet. Federal courts have stated that to constitute deliberate indifference, "treatment must be so grossly incompetent, inadequate, or excessive as to shock the conscience or to be intolerable to fundamental fairness."[17]

Clinical best practices

Best practices and management of medical conditions among hospitalized patients who are incarcerated or interact with law enforcement is limited and primarily focuses on the care of pregnant individuals. This demonstrates the need to create evidence-based guidelines in the acute care setting for individuals who are incarcerated or who interact with law enforcement, and these guidelines should balance the rights of the patient, the needs of the clinician, and the safety of the institution and law enforcement. Multiple agencies at federal, state, and local levels possess authority over correctional health care. The Federal Bureau of Prisons (BOP) oversees the provision of medical, dental, and mental health services in federal prisons. The vast majority of the incarcerated, however, are held in state prisons and county jails, where standards vary by state and by county. Some facilities are accredited by private organizations, but this accreditation process remains entirely voluntary, leaving the correctional health care system without a uniform set of standards.

National Commission on Correctional Health Care (NCCHC)

Several professional organizations, including the American Medical Association, the American Public Health Association, and later, the National Commission on Correctional Health Care (NCCHC), have since established national standards for correctional health care.[27] NCCHC's origins date to the early 1970s, when an American Medical Association study of jails found inadequate, disorganized health services and a lack of national standards. In collaboration with other organizations, the AMA established a program that in 1983 became the NCCHC, an independent, 501(c)(3) nonprofit organization.[18] Forty years later, NCCHC remains dedicated to improving correctional health care quality. This is done by establishing rigorous standards for health services in correctional facilities, operating a voluntary accreditation program for institutions that meet those standards, offering certification for correctional health professionals, conducting educational conferences and webinars, and producing industry-specific publications and other resources.[18]

NCCHC's standards have provided uniquely valuable guidance to help correctional health professionals and administrators improve the health of their incarcerated populations (and the

communities to which they return), increase efficiency of health services delivery, strengthen organizational effectiveness, and reduce the risk of adverse legal judgments.[18] Established by health, mental health, legal, and corrections professions, NCCHC's standards cover the areas of patient care and treatment, governance and administration, personnel and training, safety and disease prevention, special needs and services, and medical-legal issues.[18] The NCCHC is impartial, unbiased, and dedicated only to recognizing and fostering quality in correctional health care. NCCHC is the only accrediting body authorized by the Substance Abuse and Mental Health Services Administration that focuses on corrections.[18]

Medicaid Inmate Exclusion Policy

The Medicaid Inmate Exclusion Policy, established in the 1965 Social Security Amendments, almost completely prohibits the use of federal Medicaid funding to care for incarcerated patients. As a result, there is no incentive for correctional facilities that seek accreditation, and voluntary accreditation rates remain low.[19] Facilities often cite staff shortages and monetary and time costs as barriers to accreditation.[20] CMS has approved a first-of-its-kind Section 1115 demonstration amendment allowing Medicaid to fund limited services for people incarcerated in California state prisons, jails, and juvenile detention centers up to 90 days before their release.[21] Under the amendment, the state will seek to increase coverage, continuity of care, and service uptake in carceral settings. Ten other states have applied for similar waivers, and bills in Congress seek to provide a pathway to Medicaid coverage for all incarcerated individuals approaching release.

Health care privacy

The year 1996, marked the enactment of the Health Insurance Portability and Accountability Act (HIPAA) which would later be amended to provide clear guidelines regarding the privacy of a patient's medical records.[1] A main purpose of the Act was the protection of patient health information (PHI) when it was electronically received, handled or shared among health care-related agencies and individuals. HIPAA specifies that certain entities that engaged in those processes are "covered entities."[22] In general, a covered entity is defined as an agency that 1) electronically transmits health care information for the purpose of reporting; 2) requests to review PHI in order to secure authorization for the care of patients; and 3) electronically transmits PHI for the benefit of payment and claims from a public or private entity.[23] However, there is confusion regarding the privacy rights of incarcerated patients that needed clarification.

The unique circumstances of incarceration required a separate section under the Act. That section, titled "Correctional institutions and other law enforcement custodial situations," addresses permitted disclosures of PHI for prisoners.[24] The language in the section is very broad to permit disclosure in many circumstances. Covered entities may disclose the PHI of inmates without their authorization to correctional institutions or law enforcement officials who have lawful custody of an inmate for the purpose of providing health care to the inmate or for the health and safety of the inmate, other inmates, the officers and employees of the institution and others at the facility, and those responsible for inmate transfer.[25] Covered entities may also disclose the PHI of inmates without authorization for law enforcement purposes on the premises of an institution and for the administration and maintenance of the safety, security, and good order of the institution.[9] These provisions apply only to the release of the PHI of current inmates.[9]

Situations where information may be released include:

- Court-Ordered Subpoenas, Warrants, or Summons: A hospital may release patient information in response to a warrant or subpoena issued or ordered by a court, or a

summons issued by a judicial officer. The hospital may disclose only that information specifically described in the subpoena, warrant, or summons.[17]

- Grand Jury Subpoenas: A hospital also may disclose patient information in response to a subpoena issued by a grand jury. Only information specifically described in the subpoena may be disclosed.[17]
- Administrative Requests, Subpoenas, or Summons: An administrative request, subpoena, or summons is one that is issued by a federal or state agency or law enforcement official, rather than a court of law.[17]
- Disclosures for Identification and Location Purposes: In response to a request by a law enforcement official, a hospital may release certain limited information to the official for purposes of identification and location of a suspect, fugitive, material witness, or missing person.[17]
- Victims of a Crime: In response to a request by a law enforcement official, a hospital may disclose information to the official about a patient who may have been the victim of a crime, if the patient agrees to the disclosure. Such agreement may be oral but should be documented.[17]
- Custodial Situations: A hospital may disclose to a correctional institution or a law enforcement official having lawful custody of an inmate or other individual information about such inmate or individual if the institution or official represents that such information is necessary for the health and safety of the individual.[17]

When inmates are released, they have the same privacy rights under HIPAA as all other individuals. Additionally, exclusions exist for safely transporting prisoners to and from medical facilities. Further, HIPAA also includes provisions regarding inmates' ability to exercise protections otherwise granted in the rule. Inmates are excluded from the right to receive notice of possible uses and disclosures of PHI and of their rights and a covered entity's duties with respect to PHI. HIPAA's notice requirement does not apply at all to correctional institutions that qualify as covered entities.[26] Inmates have no right to notice regarding PHI created during incarceration, and correctional institutions are not required to send notices to inmates after release.

Medical Decision-Making

All patients, including people who are incarcerated, have the right to make their own health care decisions, including the right to refuse medical care. They also have the right to designate who should make their medical decisions if they become incompetent or incapacitated.[27] All patients and their appointed surrogate medical decision-makers, have the right to be properly informed of medical conditions, prognosis, diagnosis, risk and treatment alternatives through the process of informed consent. Wardens, guards, sheriffs, and police officers are not court-appointed legal guardians and therefore cannot make medical decisions on behalf of incarcerated patients.[12]

Incarcerated individuals can appoint a surrogate medical decision-maker through a written advance directive, medical power of attorney, or an oral order.[12] Upon intake into a prison or jail, the incarcerated individual should be asked to list a medical decision-maker. If not asked by officials, the individual can request that such a decision-maker be listed in their medical records.[12] Physicians and medical staff have an ethical and legal duty to adhere to the patient's decisions, including through a surrogate decision-maker. Often, there is a misunderstanding among health care professionals, jail and prison administrators, and law enforcement officials that health care decisions can be made by wardens, sheriffs, guards, or police officers if an incarcerated patient is incapacitated. Under medical ethics and most state laws, those officials do not have medical decision-making authority for incapacitated prisoners.

An area of frequent confusion in medical decision-making for people who are incarcerated involves a legally eligible or appointed surrogate decision-maker that is neither known and/or available.[28] This can be problematic when people are experiencing housing insecurity or are under the influence of drugs or alcohol when arrested. In cases when doctors and corrections officials do not know a legally eligible or appointed medical decision-maker, states have codified the legal hierarchy of medical-decision making through various statutes.[13] Many states recognize that medical decisions for an incapacitated patient, without an appointed medical surrogate or proxy, should be made on a familial basis. If a legal appointed medical decision-maker cannot be located, then a court must appoint one on behalf of the patient through the legal guardianship process.

In the event of a medical emergency, any contact, advance directive or guardianship information that corrections or law enforcement officials have for a prisoner-patient should be given to medical staff at the prison or jail infirmary or local hospital.[29] Prison and law enforcement officials must refrain from making medical treatment decisions on behalf of incarcerated patients, and doctors must refrain from following treatment decisions made by such officials. It may even be necessary for the hospital to use various means to attempt to determine the medical decision-maker if no information is available from the patient, such as requesting their prison or jail medical records or intake information.[14] Regardless, physicians cannot delegate to prison and law enforcement officials a prisoner-patient's medical decision-making authority. Those officials can make recommendations regarding the safety of patients or physicians either in the prison or jail infirmary or local hospital, but such recommendations should not interfere with the patient's treatment protocol.[14] If information is not available through an advance directive, appointed decision-making surrogate or lineage, the healthcare staff will have to default to the best medical interest standard for the prisoner-patient's care.

Forcible Medical Procedures

Several alarming cases of forced medical procedures performed on prisoners, in the form of surgery or body cavity searches, have been reported. In *Sanchez v. Pereira-Costillo*, the First Circuit Court of Appeals agreed with the plaintiff, that a surgical procedure conducted by doctors at the direction of corrections officials in Puerto Rico had violated his rights.[30] Prison staff thought that the plaintiff had a cell phone hidden in his rectum. Despite X-rays and bowel movements indicating there was no phone, staff at the Río Piedras Medical Center performed exploratory surgery at the request of prison officials. The Court of Appeals noted in its opinion that "the exploratory surgery of his abdomen" violated the plaintiff's rights under the Fourth Amendment.[15] Furthermore, one issue that affects prisoners with respect to forced treatment, involuntary body cavity searches and medical decision-making is a doctor's dual loyalties, which can be problematic in correctional health care.[31] Physicians may work as employees or contractors at prisons and jails, and sometimes have conflicts of interest between their patients and employer.

Shackling

Shackling refers to a form of restraint using a physical or mechanical device to control the movement of an incarcerated individuals' body or limbs.[32] It has been highlighted those conditions in which the limitations are imposed by shackling, such as the increased risk of thrombosis from reduced mobility, or related to the shackle itself could predispose patients to unnecessary harm.[31,33] In addition to physical harm or discomfort, one study demonstrated that patient shackling was negatively associated with health care professional empathy toward patients who were incarcerated.[34] In the United States, particular attention has been focused on the shackling of incarcerated pregnant persons. The FIRST STEP Act of 2018 banned shackling of pregnant women in federal custody from the date on which pregnancy is confirmed until their postpartum

recovery.[35] The majority of women, however, are incarcerated in state prisons.[36] Currently, 22 states and the District of Columbia prohibit or limit shackling of pregnant women. States vary in legislation, with some banning shackles during transport, childbirth, and postpartum, whereas other states ban shackles only during labor and birth.[37]

Shackling policies for patients in custody should be differentiated from hospital restraint policies for patients who are agitated or combative. Since shackles are often placed for nonmedical reasons, the treating clinician should determine whether appropriate care can be delivered with shackles in place.[38] Custody officials are then responsible for determining an alternative manner to safely secure, or not secure, a patient who is incarcerated that allows for standards of medical care to be met.

Discharge Prescribing

Physicians may also be concerned that medications prescribed on discharge will be misused by patients in the correctional system, causing physicians to restrict or reconsider certain classes of medication in the hospital or on discharge.[39] Commonly diverted medications in the correctional setting include opioids, benzodiazepines, stimulants, antipsychotics, and γ-aminobutyric acid agonists.[40] A study of incarcerated individuals found that 51.5 percent of participants reported using illicit substances during incarceration, most commonly alcohol (35 percent) and cannabis (37.9 percent), followed by narcotics (14.6 percent).[41] A variety of psychotropic medications are also misused in the correctional setting, although prescription medications lag behind more common substances, such as alcohol and cannabis. Another study examining opioid agonist therapies at a large jail, found that the medications for only 6 percent of patients were discontinued during a month because of diversion concerns.[42] Further, there is no evidence that rates of diversion are increased among patients who are incarcerated relative to those in a community setting, and the monitored correctional environment may provide a safer setting for medications with diversion risk.[43]

EXISTING AMA POLICY

AMA policy D-430.997 "Support for Health Care Services to Incarcerated Persons" supports NCCHC standards that improve the quality of health care services, including mental health services, delivered to the nation's correctional facilities; encourages all correctional systems to support NCCHC accreditation; and encourages the NCCHC and its AMA representative to work with departments of corrections and public officials to find cost effective and efficient methods to increase correctional health services funding. This policy also calls on the AMA to work with an accrediting organization, such as NCCHC in developing a strategy to accredit all correctional, detention and juvenile facilities and will advocate that all correctional, detention and juvenile facilities be accredited by the NCCHC no later than 2025.

AMA policy H-315.975 "Police, Payer, and Government Access to Patient Health Information" advocates for protection of PHI but notably advocates "with respect to the final privacy rule or other privacy legislation that no government agency, including law enforcement agencies, be permitted access to medical records or individually identifiable health information (except for any discretionary or mandatory disclosures made by physicians and other health care providers pursuant to ethical guidelines or to comply with applicable state or federal reporting laws) without the express written consent of the patient, or a court order or warrant permitting such access."

Further, AMA policy H-430.980 "Compassionate Release for Incarcerated Patients" supports policies that facilitate compassionate release for incarcerated patients based on serious medical

conditions and advanced age. The Board of Trustees previously presented a report to the House of Delegates on compassionate release for incarcerated individuals.[44]

CONCLUSION

The U.S. has the highest incarceration rate in the world. Compared to the general population, individuals with a history of incarceration are in worse mental and physical health. Incarcerated individuals typically have high rates of psychiatric conditions, communicable diseases, substance use disorders, and chronic diseases. The U.S. Supreme Court has indicated that failure to provide adequate medical care to incarcerated people as a result of deliberate indifference violates the Eighth Amendment's prohibition against cruel and unusual punishment. However, in practice, federal courts have stated that to constitute "deliberate indifference," treatment must be so grossly incompetent, inadequate, or excessive as to shock the conscience or to be intolerable to fundamental fairness.

The principles of privacy and confidentiality apply to all patients, including those who are incarcerated. HIPAA also equally applies to incarcerated individuals unless PHI disclosure is necessary for the provision of health care or safety of the patient, or other individuals in the facility.[8] Hospital security policies may contravene this principle of confidentiality. The policy at many institutions requires that officers be permitted to always remain with a patient in custody, and although it is suggested that conversations be conducted out of hearing range, the officers must be allowed to remain within direct sight of the patient.[45]

Information on best practices and management of medical conditions among hospitalized patients who are incarcerated or interact with law enforcement is limited and primarily focuses on the care of pregnant individuals. NCCHC remains the only national organization dedicated solely to improving correctional health care quality. This is done by establishing rigorous standards for health services in correctional facilities, operating a voluntary accreditation program for institutions that meet those standards, offering certification for correctional health professionals, conducting educational conferences and webinars, and producing industry-specific publications and other resources. AMA policy supports NCCHC standards. However, there is a need to incentivize correctional facilities to pursue accreditation.

RECOMMENDATIONS

The Council on Science and Public Health recommends that the following be adopted, and the remainder of the report be filed.

1. That our AMA amend policy D-430.993, "Study of Best Practices for Acute Care of Patients in the Custody of Law Enforcement or Corrections" to read as follows:

~~1. Our AMA will study best practices for interactions between hospitals, other acute care facilities, clinicians, and members of law enforcement or correctional agencies to ensure that patients in custody of such law enforcement or correctional agencies (including patients without decision-making capacity), their surrogates, and the clinicians caring for them are provided the autonomy and privacy protections afforded to them by law and in concordance with professional ethical standards and report its findings to the AMA House of Delegates by the 2023 Annual Meeting.~~

1. Our AMA supports the development of: (1) best practices for acute care of patients in the custody of law enforcement or corrections, (2) clearly defined and consistently

implemented processes between health care professionals and law enforcement that (a) can best protect patient confidentiality, privacy, and dignity while meeting the needs of patients, health professionals, and law enforcement and (b) ensures security measures do not interfere with the capacity to provide medical, mental health, pregnancy, end of life/palliative, and substance use care, especially in emergency situations, and (3) a hospital or health system-based health care professional and law enforcement liaison team, that includes, but is not limited to, clinicians, members of the ethics committee, hospital security, and legal services to serve as an immediate resource when questions or conflicts arise. (Amend Current HOD Policy)

2. That our AMA affirms that: (1) the adoption of best practices in the acute care of patients in the custody of law enforcement or corrections is an important effort in achieving overall health equity for the U.S. as a whole, and (2) it is the responsibility of the medical staff to ensure quality and safe delivery of care for incarcerated patients. (New HOD Policy)

3. That our AMA reaffirm Policy D-430.997 "Support for Health Care Services to Incarcerated Persons" and Policy H-420.957 "Shackling of Pregnant Women in Labor." (Reaffirm HOD Policy)

Fiscal Note: less than $1,000

REPORT 07 OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH (A-23)
Support Removal of BMI as a Standard Measure in Medicine and Recognizing Culturally-Diverse and Varied Presentations of Eating Disorders and Indications for Metabolic and Bariatric Surgery (Reference Committee D)

EXECUTIVE SUMMARY

INTRODUCTION. Resolution 407-A-22, referred by the House of Delegates, asked our American Medical Association to study the significant limitations and potential harms associated with the widespread use of body mass index (BMI) in clinical settings and study other validated, easily obtained alternatives to BMI for estimating risk of weight-related disease, and report its findings and report its findings to the AMA House of Delegates by the 2023 Annual Meeting. While this report was in development, the HOD also referred Resolution 937-I-22, "Indications for Metabolic and Bariatric Surgery" for consideration within this report. That resolution asked that our AMA acknowledge and accept the new American Society for Metabolic and Bariatric Surgery and International Federation for the Surgery of Obesity and Metabolic Disorders indications for metabolic and bariatric surgery.

METHODS. English language articles were selected from searches of PubMed and Google Scholar using the search terms "Body Mass Index (BMI)," "alternatives to BMI," "BMI and Eating Disorders," "Bariatric Surgery," and "BMI AND culturally diverse." Additional articles were identified by manual review of the reference lists of pertinent publications. Web sites managed by government agencies; applicable organizations were also reviewed for relevant information.

BACKGROUND. Body mass index (BMI) is easy to measure, is inexpensive, has standardized cutoff points for overweight and obesity, and is strongly correlated with body fat levels as measured by the most accurate methods. BMI is not a perfect measure, because it does not directly assess body fat. The current BMI classification system is also misleading regarding the effects of body fat mass on mortality rates. Numerous comorbidities, lifestyle issues, gender, ethnicities, medically significant familial-determined mortality effectors, duration of time one spends in certain BMI categories, and the expected accumulation of fat with aging are likely to significantly affect interpretation of BMI data, particularly in regard to morbidity and mortality rates. Other methods to measure body fat are not always readily available, and they are either expensive or need to be conducted by highly trained personnel. Furthermore, many of these methods can be difficult to standardize across observers or machines, complicating comparisons across studies and time periods. Further, the use of BMI is problematic when used to diagnose and treat individuals with eating disorders, because it does not capture the full range of abnormal eating disorders.

CONCLUSION. This report evaluates the problematic history of BMI and explores other alternatives to BMI. It outlines the harms and benefits to using BMI and points out that BMI is inaccurate in measuring body fat in multiple groups because it does not account for the heterogeneity across race/ethnic groups, sexes, and age-span. The recommendations recognize the issues with the use of BMI clinically, and highlights the need to use other methods. This report also acknowledges that AMA did not participate in the development of the "Indications for Metabolic and Bariatric Surgery" guidelines and therefore cannot endorse these guidelines.

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 07-A-23

Subject: Support Removal of BMI as a Standard Measure in Medicine and Recognizing Culturally-Diverse and Varied Presentations of Eating Disorders and Indications for Metabolic and Bariatric Surgery

Presented by: Noel Deep, MD, Chair

Referred to: Reference Committee D

Resolution 407-A-22, referred by the House of Delegates (HOD), asked that our American Medical Association (AMA):

recognize the significant limitations and potential harms associated with the widespread use of body mass index (BMI) in clinical settings and supports its use only in a limited screening capacity when used in conjunction with other more valid measures of health and wellness; and

support the use of validated, easily obtained alternatives to BMI (such as relative fat mass, body adiposity index, and the body volume index) for estimating risk of weight-related disease; and

amend policy H-440.866, "The Clinical Utility of Measuring Body Mass Index and Waist Circumference in the Diagnosis and Management of Adult Overweight and Obesity," by addition and deletion to read as follows:

The Clinical Utility of Measuring Body Mass Index Weight, Adiposity, and Waist Circumference in the Diagnosis and Management of Adult Overweight and Obesity, H-440.866
Our AMA supports:
(1) greater emphasis in physician educational programs on the risk differences ~~among ethnic and age~~ within and between demographic groups at varying weights and levels of adiposity ~~BMI~~ and the importance of monitoring waist circumference in all individuals ~~with BMIs below 35 kg/m2~~;
(2) additional research on the efficacy of screening for overweight and obesity, using different indicators, in improving various clinical outcomes across populations, including morbidity, mortality, mental health, and prevention of further weight gain; and
(3) more research on the efficacy of screening and interventions by physicians to promote healthy lifestyle behaviors, including healthy diets and regular physical activity, in all of their patients to improve health and minimize disease risks. (Modify Current HOD Policy); and
amend policy H-150.965, by addition to read as follows in order to support increased recognition of disordered eating behaviors in minority populations and culturally appropriate interventions:

H-150.965 – Eating Disorders
The AMA (1) adopts the position that overemphasis of bodily thinness is as deleterious to one's physical and mental health as obesity; (2) asks its members to help their patients avoid

obsessions with dieting and to develop balanced, individualized approaches to finding the body weight that is best for each of them; (3) encourages training of all school-based physicians, counselors, coaches, trainers, teachers and nurses to recognize unhealthy eating, binge-eating, dieting, and weight restrictive behaviors in adolescents and to offer education and appropriate referral of adolescents and their families for culturally-informed interventional counseling; and (4) participates in this effort by consulting with appropriate and culturally informed educational and counseling materials pertaining to unhealthy eating, binge-eating, dieting, and weight restrictive behaviors. (Modify Current HOD Policy)

While this report was in development, the HOD also referred Resolution 937-I-22, "Indications for Metabolic and Bariatric Surgery" for consideration within this report. That resolution asked that our AMA:

acknowledge and accept the new American Society for Metabolic and Bariatric Surgery and International Federation for the Surgery of Obesity and Metabolic Disorders indications for metabolic and bariatric surgery; immediately call for full acceptance of these guidelines by insurance providers, hospital systems, policy makers, and government healthcare delivery entities; and work with all interested parties to lobby the legislative and executive branches of government to affect public health insurance coverage to ensure alignment with these new guidelines.

BACKGROUND

Body mass index (BMI) is the ratio of weight to height, calculated as weight (kg)/height (m2), or weight (lb)/height (in2) multiplied by 703.[1] BMI is easy to measure, is inexpensive, has standardized cutoff points for overweight and obesity, and is strongly correlated with body fat levels as measured by the most accurate methods. However, BMI is an indirect and imperfect measurement as it does not distinguish between body fat and lean body mass. It is not as accurate of a predictor of body fat in the elderly and at the same BMI women on average have more body fat than men and Asians have more body fat than whites.[1] Further, when combined with measuring waist circumference, patients may be screened for possible health risks that come with being overweight and having obesity. If most of the fat is around the waist rather than at the hips, an individual is at a higher risk for heart disease and type 2 diabetes.[1] This risk goes up with a waist size that is greater than 35 inches for women or greater than 40 inches for men.

BMI is used because it is an inexpensive and easy tool. Research has shown that BMI is strongly correlated with the gold-standard method for measuring body fat known as dual-energy x-ray absorptiometry (DXA), and it is an easy way for clinicians to screen who might be at greater risk of health problems due to their weight.[2] Other methods to measure body fat include skinfold thickness measurements (with calipers), underwater weighing, bioelectrical impedance, and isotope dilution.[2] However, these methods are not always readily available, and they are either expensive or need to be conducted by highly trained personnel. Furthermore, many of these methods can be difficult to standardize across observers or machines, complicating comparisons across studies and time periods.

BMI is just one of several considerations to help determine a more specific and individualized course of action for patients. Some researchers are advocating for a new kind of classification system based on the concept of Adiposity-Based Chronic Disease (ABCD) — focusing more on the health issues associated with obesity rather than body size alone.[3] The diagnostic term reflects both the pathophysiology and clinical impact of obesity as a chronic disease. The proposed coding system has four domains: pathophysiology, body mass index (BMI) classification, complications,

and complication severity; and incorporates disease staging, specific complications that impact health, the basis for clinical intervention, individualized treatment goals and a personalized medicine approach.

METHODS

English language articles were selected from searches of PubMed and Google Scholar using the search terms "Body Mass Index (BMI)," "alternatives to BMI," "BMI and Eating Disorders," "Bariatric Surgery," and "BMI AND culturally diverse." Additional articles were identified by manual review of the reference lists of pertinent publications. Web sites managed by government agencies; applicable organizations were also reviewed for relevant information.

DISCUSSION

Prevalence of obesity in the U.S.

In 2021, the CDC Adult Obesity Prevalence Map shows that obesity remains high. Nineteen states and two territories currently have an obesity prevalence at or above 35 percent, more than doubling from 2018.[4] Adults with obesity are at increased risk for many other serious health conditions such as heart disease, stroke, type 2 diabetes, some cancers, and poorer mental health. Obesity also disproportionately impacts some racial and ethnic minority groups.[4] Non-Hispanic Black adults had the highest prevalence of self-reported obesity (41.7 percent), followed by non-Hispanic American Indian or Alaska Native adults (38.4 percent), Hispanic adults (36.1 percent), non-Hispanic White adults (31.0 percent), and non-Hispanic Asian adults (11.7 percent).[4]

Childhood obesity is a serious problem in the United States that puts children and adolescents at risk for poor health outcomes. From 2017-2020, the prevalence of obesity was 19.7 percent and affected about 14.7 million children and adolescents.[5] Obesity prevalence was 12.7 percent among 2- to 5-year-olds, 20.7 percent among 6- to 11-year-olds, and 22.2 percent among 12- to 19-year-olds. Obesity prevalence was 26.2 percent among Hispanic children, 24.8 percent among non-Hispanic Black children, 16.6 percent among non-Hispanic White children, and 9.0 percent among non-Hispanic Asian children.[5] Obesity-related conditions include high blood pressure, high cholesterol, type 2 diabetes, breathing problems such as asthma and sleep apnea, and joint problems.[5]

History of measures to calculate body weight (Body Build Index)

The concept of body fat as a major population-based medical issue gained popularity only shortly before 1900. Life insurance data accumulated at that time and subsequently indicated that body weight, adjusted for height (Wt/Ht), was an independent determinant of life expectancy, and in 1910, the effects of being overweight were noted to be greater for younger people than for the elderly.[6] The Metropolitan Life Insurance Company in 1959 published tables of average body weights for heights (Wt/Ht), also known as body build, by gender and at different ages.[7] This was based on data from 1935 to 1953 from more than 4 million adults, mostly men, insured by 26 different insurance companies. The risk for development of certain diseases as well as mortality data related to Wt/Ht differences also were analyzed and reported in the 1960 Statistical Bulletin of the Metropolitan Life Insurance Co.[8]

The Wt/Ht tables were used for many years as a reference for population-based studies. If a person's Wt/Ht was 20 percent above or below the mean for that height category, they were considered to be overweight or underweight, respectively.[14] The insurance data also indicated the

ratios of weights for heights at which mortality was lowest in adults. The latter was referred to as the "ideal" or later the "desirable" weight. From 1959 to 1983, the weight/height representing the lowest mortality had increased.[9,10] However, a "desirable body" weight for height was invariably lower than the average weight for height in the insured population.[15,16]

Challenges with the wt/ht (body build) index

Early on it was recognized that taller people had a lower death rate than shorter people with the same Wt/Ht ratio.[11] It also was recognized that a person's height in general and leg length could affect the calculated body mass adjusted for height. A person's bone mass could also affect the interpretation of this ratio. In general, it reflected whether one was narrowly or broadly built. Thus, efforts were made to eliminate lower limb length and frame size as variables.[13] The strategy was to develop representations of body build, that is, charts of weight/height that were independent of these variables. The overall goal was to have the same distribution of Wt/Ht at each level of height.

Although not stated, the implicit goal in developing these tables was to define a person's fat mass as a proportion of their total mass, irrespective of their height or frame size.[12] Efforts were made to adjust for frame size (nonfat mass) by categorizing people as those with a small, medium, or large frame. Estimation of frame size was attempted using several measurements including shoulder width, elbow width, knee width, ankle width, and so on.[13] None of these were widely adopted. Further, frame size based on elbow width was included in the Metropolitan Life weight/height tables, even though it was never validated.[13]

Adoption of the BMI as an index of obesity

In 1972, the validity of Metropolitan Life Insurance published data was criticized.[14] Critics supported the use of the better documented weight for height data, which then popularized what is known as the Quetelet Index. The Quetelet Index was later known as an individual's body mass index (BMI). However, it was noted that even BMI rather poorly represents a person's percent of body fat.[20] Despite all the criticisms, the Metropolitan Life Tables criteria for defining obesity were widely used in the United States until the early 1990s.[15,16] At about that time, the World Health Organization (WHO) classification of body weight for height, based on the BMI, was published, and later it was widely adopted.[17,18] The distribution of BMIs in adult American men and women was determined in 1923 in 1026 individuals.[19] The median BMI was 24, but the mean BMI was 25. The distribution curve indicated a skewing toward an increase in BMI, and this trend has continued.[24]

WHO and the categorization of BMIs into quartiles

In 1993, the WHO assembled an Expert Consultation Group with a charge of developing uniform categories of the BMI. The results were published as a technical report in 1995.[20] Four categories were established: underweight, normal, overweight, and obese. An individual would be considered underweight if their BMI was in the range of 15 to 19.9, normal weight if the BMI was 20 to 24.9, overweight if the BMI was 25 to 29.9, and obese if it was 30 to 35 or greater.[26]

At the time that the WHO classification was published, the National Institutes of Health (NIH) in the United States classified people with a BMI of 27.8 (men) and 27.3 (women) or greater as being overweight. If they were below this BMI, they were considered to be "normal." This was based on an 85 percent cutoff point of people examined in the National Health and Nutrition Examination Study (NHANES) II.[21] Subsequently, in 1998, the cutoff point between normal and overweight was reduced to a BMI of 25 to bring it into line with the 4 categories in the WHO guidelines.[22] This

then changed the categorization of millions of Americans from being "normal weight" to being "overweight."

In Western population-based studies, the mean or median BMI was about 24 to 27.[23,24] Therefore, the consequence of adopting the WHO classification resulted in approximately 50 percent or more of the general adult population being classified as overweight and obese. Indeed, the term "overweight" or particularly "preobesity" is prejudicial since people in this category were a major part of the expected normal distribution of BMI in the general population.

Advantages of BMI

A significant advantage of BMI is the availability of extensive national reference data and its established relationships with levels of body fatness, morbidity, and mortality in adults.[26] BMI is particularly useful in monitoring the treatment of obesity, with a weight change of about 3.5 kg needed to produce a unit change in BMI. In adults, BMI levels above 25 are associated with an increased risk of morbidity and mortality, with BMI levels of 30 and greater indicating obesity.[25] In children, BMI is not a straightforward index because of growth. However, high BMI percentile levels based on Centers for Disease Control and Prevention (CDC) BMI growth charts and changes in parameters of BMI curves in children are linked to significant levels of risk for adult obesity at corresponding high percentile levels.[26] Further, BMI is readily available, inexpensive, can be administered easily, and is understood easily by patients.[27] BMI can also be used as an initial screening tool to identify those at an elevated health risk because of excess body weight and poor distribution of fat mass.

Disadvantages of BMI

BMI as a determinant of body fat mass. BMI does not differentiate between body lean mass and body fat mass; a person can have a high BMI but still have a very low-fat mass and vice versa.[28,29] From an anatomical and metabolic perspective, it has been proposed that the term obesity should refer to an excessive accumulation of body fat (triacylglycerols). The accuracy of the BMI as a determinant of body fat mass has been repeatedly questioned because it has limitations in this regard.[30,31] Gender, age, ethnicity, and leg length are important variables not considered by BMI.[32,33] It should also be noted that in population-based studies women generally have a BMI that is lower than that in men, even though their fat mass relative to their body build or BMI is considerably greater.

The relatively poor correlation between percent of body fat mass and BMI has been shown more recently in the NHANES III database in which bioelectrical impedance was used to estimate the fat component of body composition.[39] In subjects with a BMI of 25 kg/m2, the percent of body fat in men varied between 14 percent and 35 percent, and in women it varied between 26 percent and 43 percent. Therefore, using the NIH criteria based on percent of body fat to define obesity, subjects with a BMI of 25, a group that would be considered "normal," were associated with a body fat mass that varied between "low normal" to "obese."

In addition, a recent study in individuals with or without diabetes in which the loss of lean body mass with aging was reported, the mean BMI in those without diabetes was 26.8. In those with diabetes, the BMI was 29.1. However, the percent of lean body mass was the same and therefore the increased BMI in those with diabetes was not due only to an excessive accumulation of fat.[34] Overall, although the correlation between the BMI and body fatness is strong, two people might have the same BMI, but the level of body fatness may differ.[35] Some examples of this include:

- Women tend to have more body fat than men,

- The amount of body fat may be higher or lower depending on the racial/ethnic group,[36]
- Older people, on average, tend to have more body fat than younger adults, and
- Athletes have less body fat than do non-athletes.

BMI does not account for body fat location. BMI does not capture body fat location information, which is an important variable in assessing the metabolic as well as mortality consequences of excessive fat accumulation. This was first recognized in France by Dr Jon Vague in the 1940-1950s.[37] He noted that accumulation of fat in the upper part of the body versus the lower part of the body was associated with an increased risk for coronary heart disease, diabetes, and also gallstones and gout. Men tend to accumulate fat in the abdominal (upper body) area, whereas women tend to accumulate it in the peripelvic (gluteal) area and the thighs. A substitute for this information has been to determine the abdominal circumference or an abdominal/hip circumference ratio. Subsequent data indicate that the risk for development of diabetes as well as coronary heart disease, is more strongly related to the accumulation of upper body fat than lower body fat in both sexes.[38]

More specifically, both visceral fat accumulation and an expanded girth have been associated with development of insulin resistance, diabetes, and risk for coronary heart disease and hypertension.[39] Accumulation of fat in the abdominal area appears to correlate best with triacylglycerols accumulating in the liver and skeletal muscle. Further, the relatively small accumulation of fat in these organs would not be detectible by BMI determinations, and they do not correlate with total body fat mass.[40]

BMI does not account for the life cycle and location of accumulated fat caused by hormones. Girls tend to accumulate relatively large amounts of fat during and after puberty, particularly in the peripelvic and thigh region; boys do not. During and after puberty, boys accumulate a relatively large amount of lean mass (bone and muscle) but not fat mass. In both sexes, these changes are reflected in an increased BMI. With aging, both sexes tend to develop fat in the upper part of the body.[41] The reason for these changes in amount and distribution is not completely understood. Generally, it is considered to be caused by hormonal changes. Further, a study noted BMI cutoffs fail to capture most postmenopausal women whose actual body fat percentage would classify them as obese.[42] As women age, they tend to lose bone and muscle mass, which are heavier than fat. So even if a 65-year-old woman weighs the same as she did at 25 years of age, fat accounts for a larger share of her weight. The study suggested that to improve the sensitivity of BMI in identifying postmenopausal women at risk of obesity-related diseases, the obesity cutoff might need to be set to 24.9, which is currently the top of the normal BMI range for the general adult population.[42]

BMI as a predictor of morbidity and mortality. The BMI classification system currently is being widely used in population-based studies to assess the risk for mortality in the different categories of BMI. Even when some comorbidities are considered, the correlation of mortality rates with BMI often does not take into consideration such factors as family history of diabetes, hypertension, coronary heart disease, metabolic syndrome, dyslipidemias, familial longevity or the family prevalence of carcinomas, and other genetic factors. For example, it has been reported that more than 50 percent of susceptibility to coronary artery disease is accounted for by genetic variants.[43]

Frequently, when correlations are made, they also do not take into consideration a past as well as a current history of smoking, excessive alcohol use, serious and persistent mental illness or the duration of obesity, when in the life cycle it appeared, and whether the body weight is relatively stable or rapidly progressive. In most population-based studies, only the initial weight and/or BMI are given, even though weight as well as fat stores are known to increase and height to decrease with aging. In addition, the rate of weight gain varies among individuals, as does the loss of muscle

mass.[44] Muscle mass has been correlated negatively with insulin resistance and prediabetes.[45] Lastly, population-based studies do not take into consideration the present and past history of a person's occupation, medication-induced obesity, and how comorbidities are being treated.

BMI does not appropriately represent racial and ethnic minorities. The rise in obesity prevalence rates has disproportionately affected U.S. minority populations. For example, one longitudinal study of healthy women found that at the same BMI, Asians had more than double the risk of developing type 2 diabetes than whites; Hispanics and blacks also had higher risks of diabetes than whites, but to a lesser degree.[46] Increases in weight over time were more harmful in Asians than in the other ethnic groups: For every 11 pounds Asians gained during adulthood, they had an 84 percent increase in their risk of type 2 diabetes; Hispanics, blacks, and whites who gained weight also had higher diabetes risks, but again, to a much lesser degree than Asians.[46] Several other studies have found that at the same BMI, Asians have higher risks of hypertension and cardiovascular disease than their white European counterparts, and a higher risk of dying early from cardiovascular disease or any cause.[47,48]

Researchers are still assessing why Asians have higher weight-related disease risks at lower BMIs. One possible explanation is body fat. When compared to white Europeans of the same BMI, Asians have 3 to 5 percent higher total body fat.[49] South Asians, in particular, have especially high levels of body fat and are more prone to developing abdominal obesity, which may account for their very high risk of type 2 diabetes and cardiovascular disease.[50] In contrast, some studies have found that blacks have lower body fat and higher lean muscle mass than whites at the same BMI, and therefore, at the same BMI, may be at lower risk of obesity-related diseases.[51] While genetic differences may be at the root of these different body fat patterns in Asians and other ethnic groups, environmental factors seem to be a much stronger force. For example, research suggests that under-nutrition during fetal life, such as during the Chinese famine of 1954 to 1964, raises the risk of diabetes in adulthood, especially when individuals live in nutritionally rich environments later in life.[52]

BMI AND EATING DISORDERS

Eating disorders are behavioral conditions characterized by severe and persistent disturbance in eating behaviors and associated distressing thoughts and emotion. Types of eating disorders include anorexia nervosa, bulimia nervosa, binge eating disorder, avoidant restrictive food intake disorder, other specified feeding and eating disorders, pica and rumination disorder. Eating disorders affect up to 5 percent of the population, and most often develop in adolescence and young adulthood.[53] Evidence suggests that genes and heritability also play a part in why some people are at higher risk for an eating disorder.[53]

Anorexia nervosa is an eating disorder characterized by self-starvation and weight loss resulting in low weight for height and age.[53] BMI is used to diagnose an individual with anorexia nervosa and is determined by an individual having a BMI of 18.5 or less.[53] Although BMI is used to diagnose anorexia nervosa, BMI does not accurately capture individuals with bulimia nervosa. Individuals with bulimia nervosa can be slightly underweight, normal weight, overweight or even obese.[53] Further, BMI is inaccurate in capturing individuals with other specified feeding and eating disorders. These include eating disorders or disturbances of eating behavior that cause distress and impair family, social or work function but do not fit the other categories. In some cases, this is because the frequency of the behavior does not meet the diagnostic threshold (i.e., the frequency of binges in bulimia or binge eating disorder) or the weight criteria for the diagnosis of anorexia nervosa are not met.[53] An example of another specified feeding and eating disorder is "atypical anorexia nervosa". This category includes individuals who may have lost a lot of weight and whose

behaviors and preoccupation with weight or shape concerns and fear of fatness is consistent with anorexia nervosa, but who are not yet considered underweight based on their BMI because their baseline weight was above average.[53] Therefore, utilizing BMI can lead to substandard treatment, typically due to the use of BMI by insurance companies to cover inpatient treatment.[54] Further, as mentioned above, BMI is an inaccurate measure of obesity especially in children and adolescents and can therefore hinder access to eating disorder treatments.[41]

OTHER DIAGNOSTIC MEASURES FOR DIAGNOSING OBESITY

Abdominal Circumference

Obesity is commonly associated with increased amounts of intra-abdominal fat. A centralized fat pattern is associated with the deposition of both intra-abdominal and subcutaneous abdominal adipose tissue.[55] It should be noted that abdominal circumference is an imperfect indicator of intra-abdominal adipose tissue, as it also includes subcutaneous fat deposition, as well as visceral adipose tissue. This does not preclude its usefulness, as it is associated with specific health risks.[56] Persons in the upper percentiles for abdominal circumference are considered to have obesity and at increased risk for morbidity, specifically type 2 diabetes and the metabolic syndrome, and mortality.[57] The ratio of abdominal circumference (often referred to incorrectly as "waist" circumference) to hip circumference is a rudimentary index for describing adipose tissue distribution or fat patterning.[58] Abdomen-to-hip ratios greater than 0.85 represent a centralized distribution of fat. Most men with a ratio greater than 1.0 and women with a ratio greater than 0.85 are at increased risk for cardiovascular disease, diabetes, and cancers.[59]

Skinfold Measurement

Skinfold measurements are used to characterize subcutaneous fat thickness at various regions of the body, but it should be noted that they have limited utility in people who are considered overweight or have obesity. The primary limitation is that most skinfold calipers have an upper measurement limit of 45 to 55 mm, which restricts their use to subjects who are moderately overweight or thinner.[2] A few skinfold calipers take large measurements, but this is not a significant improvement because of the difficulty of grasping and holding a large skinfold while reading the caliper dial. The majority of national reference data available are for skinfolds at the triceps and subscapular locations. The triceps skinfold varies considerably by sex and can reflect changes in the underlying triceps muscle rather than an actual change in body fatness. The statistical relationships between skinfolds and percent or total body fat in children and adults are often not as strong as that of BMI.[60] Further, the upper distribution of subcutaneous fat measurements remains unknown because most children and adults who have obesity have not had their skinfolds measured.

Waist-to-hip Ratio

The waist-to-hip ratio is often considered a better measurement than waist circumference alone in predicting disease risk. To calculate the waist-to-hip ratio, a measuring tape is used to measure waist circumference and hip circumference at its widest part. Observational studies have demonstrated that people with "apple-shaped" bodies, (who carry more weight around the waist) have greater risks for chronic disease than those with "pear-shaped" bodies, (who carry more weight around the hips). A study with more than twenty-seven thousand participants from fifty-two countries concluded that the waist-to-hip ratio is highly correlated with heart attack risk worldwide and is a better predictor of heart attacks than BMI.[61] Abdominal obesity is defined by the World Health Organization (WHO) as having a waist-to-hip ratio above 0.90 for males and above 0.85 for females.

Visceral Adiposity Index (VAI)

The Visceral Adiposity Index (VAI) is an empirical-mathematical model, gender-specific, based on simple anthropometric (BMI and WC) and functional parameters (triglycerides (TG) and HDL cholesterol (HDL)), and indicative of fat distribution and function.[62] It is an empirical-mathematical model that does not originate from theoretical assumptions, but from observation in a healthy normal/overweight population of a linear relationship between BMI and CV, from which a linear equation has been extrapolated. The main strength to consider is that the VAI is an indicator of early cardiometabolic risk in all borderline conditions in which overt metabolic syndrome is not present. This is explained by the fact that three of the variables making up the VAI (WC, TG, and HDL) are all expressed in the criteria for metabolic syndrome. An important limitation to consider is the application of the VAI in non-Caucasian populations and in patients aged less than 16 years.[58] This is because the mathematical modelling process was done on healthy Caucasian men and women, aged between 19 and 83 years.[58] A study which evaluated the VAI in children, found that the VAI should be extrapolated with caution in this age range.[63] Therefore, VAI is a useful measurement in the following populations: healthy or apparently healthy population with BMI < 40 kg/m2, patients with one or two of the 5 components of the metabolic syndrome, women with PCOS, and patients with endocrine disorders (i.e., acromegaly, adult GH deficiency, hypogonadism, hyperprolactinemia, or abnormal thyroid function).[58]

Relative Fat Mass (RFM)

Relative fat mass (RFM) is a simple linear equation based on height-to-waist ratio, and has promise as a potential alternative tool to estimate whole-body fat percentage in women and men 20 years of age and older. One study performed using nationally representative samples of the US adult population which allowed evaluation of the performance of RFM among Mexican Americans, European Americans, and African Americans.[64] The performance of RFM to estimate body fat percentage was overall more consistent than that of BMI among women and men, across ethnic groups, young, middle-age and older adults, and across quintiles of body fat percentage, although the accuracy of RFM was lower among individuals with lower body fatness.[60]

Hydrostatic weighing (densitometry)

Hydrostatic weighing (underwater weighing), or densitometry, is the difference of the body weight in air and water is used to compute the body's density.[65] Assuming a two-component model with different densities for fat mass and fat-free mass and correcting for the air volume in the lungs, the total body fat percentage can be estimated. This technique, however, cannot give any measurements of the distribution of adipose tissue or lean tissue (LT).

Air displacement plethysmography (ADP)

ADP, also known under its commercial brand name as BOD POD, measures the overall body density, total body fat and lean tissue but not their distributions.[66] By putting the body in an enclosed chamber and changing the chamber's volume, the volume of the displaced air (i.e., the volume of the body) can be determined from the changes in air pressure.[60] Since ADP is based on the same two-component model as hydrostatic weighing, it is also affected by the same confounders, mainly variations in bone mineral content and hydration. Therefore, ADP, as well as hydrostatic weighing, is limited to gross body composition analysis, and not estimates of regional fat or muscles.

Bioelectrical impedance analysis (BIA)

BIA uses the electrical properties of the body to estimate the total body weight and from that the body fat mass.[67] The body is modeled as five cylindrical lean tissue compartments; the trunk and the four limbs, while fat is considered to be an insulator. The impedance is assumed to be proportional to the height and inversely proportional to the cross-sectional area of each compartment. BIA requires different model parameters to be used depending on age, gender, level of physical activity, amount of body fat, and ethnicity in order to be reliable.[68]

Dual-energy X-ray absorptiometry (DXA)

DXA is a two-dimensional imaging technique that uses X-rays with two different energies. By using two different energy levels, the images can be separated into two components (i.e., bone and soft tissue). DXA is mainly used for bone mineral density measurements, where it is considered as the gold standard, but it can also be used to estimate total and regional body fat and lean tissue mass.[69] DXA has been found to be more accurate than density- based methods for estimating total body fat.[70] Due to its ability to estimate regional fat and measure lean tissue, in combination with relatively high availability, DXA has been used for body composition analysis in a wide range of clinical applications and is considered the gold standard for measuring body fat.[71]

Computed Tomography (CT) Scan

CT gives a three-dimensional high-resolution image volume of the complete or selected parts of the body, computed from a large number of X-ray projections of the body from different angles. As opposed to the previously described techniques, CT can accurately determine fat in skeletal muscle tissue and in the liver.[72] In practice, however, CT-based body composition analysis is in most cases limited to two-dimensional analysis of one or a limited number of axial slices of the body. This approach, however, limits its precision since the exact locations of slices, in relation to internal organs, cannot be determined and will vary between scans. Regardless, CT, together with MRI, is today considered the gold standard for body composition analysis, which assessed the proportion of fat to fat-free mass in your body.

Magnetic resonance imaging (MRI)

MRI uses the different magnetic properties of the nuclei of certain chemical elements (normally hydrogen in water and fat) in the cells to produce images of soft tissue in the body. Several MRI-based methods for quantification of adipose tissue and muscles have been developed and implemented.[73] MRI is used to obtain precise measurements of regional adipose tissue and lean tissue, as well as diffuse fat infiltration in other organs. However, due to several undeterminable factors affecting the MR signal, an MR image is not calibrated on an absolute scale and therefore cannot be quantitative. But by using different postprocessing techniques, the image can be calibrated to quantitatively measure fat or adipose tissue.[69]

CALCULATING OBESITY IN CHILDREN AND ADOLESCENTS

In the United States, obesity and severe obesity in children and adolescents are defined using threshold values from the 2000 CDC sex-specific body mass index-for-age growth charts.[74] In addition to defining obesity, BMI z-scores and percentiles are used to monitor children's weight status over time and to evaluate obesity treatments in research settings. Percentiles near the upper limit of 100 percent become less useful for detecting meaningful differences, and therefore percentiles can be converted to z-scores that indicate the number of standard deviations of a value from the mean. However, BMI z-scores (BMIz) and percentiles based on the 2000 BMI-for-age

CDC growth charts (BMIz and BMI percentiles) were never meant to be used to monitor children with extremely high BMI values, and significant limitations exist when they are used to monitor children with severe obesity.[75] Specifically, BMIz values corresponding to extremely high BMI values are compressed into a very narrow range. Studies on obesity prevalence, its impact, and the availability of effective treatment have highlighted the need for meaningful standardized measures to track extremely high values of BMI in clinical and research settings.

As a result of needing more standardized measures the CDC studied alternative BMI metrics which include:

- BMI (untransformed),
- BMI z-scores and percentiles (modified),
- BMI z-scores and percentiles (extended),
- Percent of 95th percentile BMI units or percent from median, and
- Adjusted BMI units or percent from median.[76]

None of these metrics had the problem of compression at extremely high BMI values, but all had limitations, especially when applied across the weight status spectrum and a wide range of ages. The report however concluded that the extended method for calculating z-scores and percentiles stands out among the alternatives.[72] First, the extended method improves the characterization of BMI distributions at very high values using nationally representative data, but all other BMI metrics that refer to a reference population (all alternative metrics except untransformed BMI) rely on extrapolating beyond this reference population.[72] Second, below the 95th percentile, extended BMI z-scores and percentiles preserve CDC 2000 z-scores and percentiles that are currently in use, which allows seamless transitions from the current CDC z-scores and percentiles below the 95th percentile to extended z-scores and percentiles above the 95th percentile.[72] Alternative BMI metrics other than extended BMIz and percentiles may be appropriate for use in certain scenarios, such as during adolescence when differences among the metrics are less pronounced, when transitions to or from obesity are minimal, or for monitoring BMI changes over short periods when adjusting for expected growth and development is less critical.

INDICATIONS FOR METABOLIC AND BARIATRIC SURGERY

During the HOD Interim meeting in 2022, Resolution 937 “Indications for Metabolic and Bariatric Surgery,” was introduced by the American Society for Metabolic and Bariatric Surgery, Society of American Gastrointestinal and Endoscopic Surgeons . This resolution called for adoption of the new American Society for Metabolic and Bariatric Surgery and International Federation for the Surgery of Obesity and Metabolic Disorders indications for metabolic and bariatric surgery. Given that these guidelines depend on BMI, they were referred for consideration in this report.

The American Society for Metabolic and Bariatric Surgery (ASMBS) and the International Federation for the Surgery of Obesity and Metabolic Disorders (IFSO) have convened to produce a joint statement on the current available scientific information on metabolic and bariatric surgery and its indications recommending the following updates:

- Metabolic and bariatric surgery (MBS) is recommended for individuals with a body mass index (BMI) ≥35 kg/m2, regardless of presence, absence, or severity of co-morbidities.
- MBS should be considered for individuals with metabolic disease and BMI of 30-34.9 kg/m2.
- BMI thresholds should be adjusted in the Asian population such that a BMI ≥25 kg/m2 suggests clinical obesity, and individuals with BMI ≥27.5 kg/m2 should be offered MBS.

- Long-term results of MBS consistently demonstrate safety and efficacy.
- Appropriately selected children and adolescents should be considered for MBS. [77]

It should be noted that the AMA did not participate in the development of these guidelines and therefore cannot endorse these guidelines. AMA policies are also adopted for a period of 10 years with the option of renewal through the Sunset process, therefore it is important to not reference specific guidelines in policy which may change over time.

EXISTING AMA POLICY

Under existing AMA Policy H-440.866, "The Clinical Utility of Measuring Body Mass Index and Waist Circumference in the Diagnosis and Management of Adult Overweight and Obesity" the AMA supports: (1) greater emphasis in physician educational programs on the risk differences among ethnic and age groups at varying levels of BMI and the importance of monitoring waist circumference in individuals with BMIs below 35 kg/m2; (2) additional research on the efficacy of screening for overweight and obesity, using different indicators, in improving various clinical outcomes across populations, including morbidity, mortality, mental health, and prevention of further weight gain; and (3) more research on the efficacy of screening and interventions by physicians to promote healthy lifestyle behaviors, including healthy diets and regular physical activity, in all of their patients to improve health and minimize disease risks.

Policy H-150.928, "Eating Disorders and Promotion of Healthy Body Image," supports increased funding for research on the epidemiology, etiology, diagnosis, prevention, and treatment of eating disorders, including research on the effectiveness of school-based primary prevention programs for pre-adolescent children and their parents, in order to prevent the onset of eating disorders and other behaviors associated with a negative body image.

Policy H-150.965, "Eating Disorders" notes that the AMA (1) adopts the position that overemphasis of bodily thinness is as deleterious to one's physical and mental health as is obesity; (2) asks its members to help their patients avoid obsessions with dieting and to develop balanced, individualized approaches to finding the body weight that is best for each of them; (3) encourages training of all school-based physicians, counselors, coaches, trainers, teachers and nurses to recognize unhealthy eating, dieting, and weight restrictive behaviors in adolescents and to offer education and appropriate referral of adolescents and their families for interventional counseling; and (4) participates in this effort by consulting with appropriate specialty societies and by assisting in the dissemination of appropriate educational and counseling materials pertaining to unhealthy eating, dieting, and weight restrictive behaviors.

CONCLUSIONS

The most basic definition of obesity is having too much body fat, so much so that it presents a risk to health.[78] A reliable way to determine whether a person has too much body fat is to calculate the ratio of their weight to their height squared. This ratio, called the body mass index (BMI), accounts for the fact that taller people have more tissue than shorter people, and so they tend to weigh more. BMI is not a perfect measure, because it does not directly assess body fat. Muscle and bone are denser than fat, so an athlete or muscular person may have a high BMI, yet not have too much fat. Risk of developing health problems, including several chronic diseases such as heart disease and diabetes, rises progressively for BMIs above 21. There's also evidence that at a given BMI, the risk of disease is higher in some ethnic groups than others.

Critics of BMI note that body fat location is also important and could be a better indicator of disease risk than the amount body fat.[79] Fat that accumulates around the waist and chest (what is called abdominal adiposity) may be more dangerous for long-term health than fat that accumulates around the hips and thighs. Some researchers have further argued that BMI should be discarded in favor of measures such as waist circumference.[75] However, this is unlikely to happen given that BMI is easier to measure and has a long history of use. In adults, measuring both BMI and waist circumference may be a better way to predict someone's weight-related risk. In children, however, there is no good reference data for waist circumference, so BMI-for-age is currently the gold standard. Overall, BMI does not describe body fat distribution, so additional anthropometric parameters should be used to assess enhanced accumulation of visceral adipose tissue.

Further, the current BMI classification system is misleading regarding the effects of body fat mass on mortality rates. The role of fat distribution in the prediction of medically significant morbidities as well as for mortality risk is not captured by use of the BMI. Also, numerous comorbidities, lifestyle issues, gender, ethnicities, medically significant familial-determined mortality effectors, duration of time one spends in certain BMI categories, and the expected accumulation of fat with aging are likely to significantly affect interpretation of BMI data, particularly in regard to morbidity and mortality rates. Such confounders as well as the known clustering of obesity in families, the strong role of genetic factors in the development of obesity, the location in which excessive fat accumulates, its role in the development of type 2 diabetes and hypertension, and so on, need to be considered before promulgation of public health policies that are designed to apply to the general population and are based on BMI data alone. Further, the use of BMI is problematic when used to diagnose and treat individuals with eating disorders, because it does not capture the full range of abnormal eating disorders. It should also be noted that the recent increase in fat transfer procedures may complicate BMI measurements and should be further studied.

RECOMMENDATIONS

The Council on Science and Public Health recommends that the following be adopted, and the remainder of the report be filed.

1. Our AMA recognizes:
    1. the issues with using body mass index (BMI) as a measurement because: (a) of the eugenics behind the history of BMI, (b) of the use of BMI for racist exclusion, and (c) BMI cutoffs are based on the imagined ideal Caucasian and does not consider a person's gender or ethnicity.
    2. the significant limitations associated with the widespread use of BMI in clinical settings and suggests its use be in a conjunction with other valid measures of risk such as, but not limited to, measurements of: (a) visceral fat, (b) body adiposity index, (c) body composition, (d) relative fat mass, (e) waist circumference and (f) genetic/metabolic factors.
    3. that BMI is significantly correlated with the amount of fat mass in the general population but loses predictability when applied on the individual level.
    4. that relative body shape and composition heterogeneity across race/ethnic groups, sexes, and age-span is essential to consider when applying BMI as a measure of adiposity.
    5. that in some diagnostic circumstances, the use of BMI should not be used as a sole criterion for appropriate insurance reimbursement. (New HOD Policy)

2. Our AMA supports further research on the application of the extended BMI percentiles and z-scores and its association with other anthropometric measurements, risk factors, and health outcomes. (New HOD Policy)

3. Our AMA supports efforts to educate physicians on the issues with BMI and alternative measures for diagnosing obesity. (New HOD Policy)

4. That our AMA amend policy H-440.866, "The Clinical Utility of Measuring Body Mass Index and Waist Circumference in the Diagnosis and Management of Adult Overweight and Obesity," to read as follows:
The Clinical Utility of Measuring Body Mass Index, Body Composition, Adiposity, and Waist Circumference in the Diagnosis and Management of Adult Overweight and Obesity, H-440.866
Our AMA supports:(1) greater emphasis in physician educational programs on the risk differences ~~among ethnic and age~~ within and between demographic groups at varying levels of adiposity, BMI, body composition, and waist circumference and the importance of monitoring these ~~waist circumference~~ in all individuals ~~with BMIs below 35 kg/m2~~; (2) additional research on the efficacy of screening for overweight and obesity, using different indicators, in improving various clinical outcomes across populations, including morbidity, mortality, mental health, and prevention of further weight gain; and (3) more research on the efficacy of screening and interventions by physicians to promote healthy lifestyle behaviors, including healthy diets and regular physical activity, in all of their patients to improve health and minimize disease risks. (Modify Current HOD Policy).

5. That our AMA amend policy H-150.965, "Eating Disorders" to read as follows: The AMA (1) adopts the position that overemphasis of bodily thinness is as deleterious to one's physical and mental health as obesity; (2) asks its members to help their patients avoid obsessions with dieting and to develop balanced, individualized approaches to finding the body weight that is best for each of them; (3) encourages training of all school-based physicians, counselors, coaches, trainers, teachers and nurses to recognize ~~unhealthy~~ abnormal eating behaviors, dieting, and weight restrictive behaviors in adolescents and to offer education and appropriate referral of adolescents and their families for evidence-based and culturally-informed interventional counseling; and (4) participates in this effort by consulting with appropriate, culturally-informed educational and counseling materials pertaining to ~~unhealthy~~ abnormal eating behaviors, dieting, and weight restrictive behaviors. (Modify Current HOD Policy)

6. That our AMA not adopt Resolution 937-I-22, "Indications for Metabolic and Bariatric Surgery."

Fiscal Note: less than $1,000

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 08-A-23

Subject: Council on Science and Public Health Sunset Review of 2013 House Policies

Presented by: Noel Deep, MD, Chair

Referred to: Reference Committee D

Policy G-600.110, "Sunset Mechanism for AMA Policy," calls for the decennial review of American Medical Association (AMA) policies to ensure that our AMA's policy database is current, coherent, and relevant. This policy reads as follows, laying out the parameters for review and specifying the needed procedures:

1. As the House of Delegates adopts policies, a maximum ten-year time horizon shall exist. A policy will typically sunset after ten years unless action is taken by the House of Delegates to retain it. Any action of our AMA House that reaffirms or amends an existing policy position shall reset the sunset "clock," making the reaffirmed or amended policy viable for another 10 years.

2. In the implementation and ongoing operation of our AMA policy sunset mechanism, the following procedures shall be followed: (a) Each year, the Speakers shall provide a list of policies that are subject to review under the policy sunset mechanism; (b) Such policies shall be assigned to the appropriate AMA councils for review; (c) Each AMA council that has been asked to review policies shall develop and submit a report to the House of Delegates identifying policies that are scheduled to sunset; (d) For each policy under review, the reviewing council can recommend one of the following actions: (i) retain the policy; (ii) sunset the policy; (iii) retain part of the policy; or (iv) reconcile the policy with more recent and like policy; (e) For each recommendation that it makes to retain a policy in any fashion, the reviewing council shall provide a succinct, but cogent justification (f) The Speakers shall determine the best way for the House of Delegates to handle the sunset reports.

3. Nothing in this policy shall prohibit a report to the HOD or resolution to sunset a policy earlier than its 10-year horizon if it is no longer relevant, has been superseded by a more current policy, or has been accomplished.

4. The AMA councils and the House of Delegates should conform to the following guidelines for sunset: (a) when a policy is no longer relevant or necessary; (b) when a policy or directive has been accomplished; or (c) when the policy or directive is part of an established AMA practice that is transparent to the House and codified elsewhere such as the AMA Bylaws or the AMA House of Delegates Reference Manual: Procedures, Policies and Practices.

5. The most recent policy shall be deemed to supersede contradictory past AMA policies.

6. Sunset policies will be retained in the AMA historical archives.

RECOMMENDATION

The Council on Science and Public Health recommends that the House of Delegates policies listed in the appendix to this report be acted upon in the manner indicated and the remainder of this report be filed. (Directive to Take Action)

Fiscal Note: $1,000.

APPENDIX: RECOMMENDED ACTIONS

Policy Number	Title	Text	Recommendation
D-135.974	Support Stricter OSHA Silica Permissible Exposure Limit Standard	Our AMA: (1) supports the Department of Labor's Occupational Safety and Health Administration's (OSHA's) proposed rule to establish a stricter permissible exposure limit (PEL) for respirable crystalline silica; (2) supports OSHA's proposed rule to establish a stricter standard of exposure assessment and medical surveillance requirements to identify adverse health effects in exposed populations of workers; and (3) will submit comments, in collaboration with respiratory and occupational health medical societies, in support of a stricter silica PEL. (Res. 916, I-13)	Rescind; completed. OSHA updated silica standards for industry, maritime, and construction settings in 2016.
D-135.975	Monitoring for Radiation in Seafood	Our AMA calls for the United States government to continue to monitor and fully report the radioactivity levels of edible ocean species sold in the United States. (Res. 414, A-13)	Retain; change to H-policy
D-135.980	Gulf Oil Spill Health Risks and Effects	Our AMA supports efforts by ~~will encourage~~ the National Institute of Environmental Health Sciences and the Natural Resource Damage Assessment program to: (1) continue to monitor health effects (including mental health effects) and public health surveillance activities related to the Gulf oil spill, and provide relevant information and resources as they become available; and (2) monitor the results of studies examining the health effects of the Gulf oil spill and report back as appropriate. (CSAPH Rep. 3, I-10; Modified: CSAPH Rep. 5, A-13)	Retain as amended; change to H-policy.
D-150.981	The Health Effects of High Fructose Syrup	Our AMA: (1) recognizes that at the present time, insufficient evidence exists to specifically restrict use of high fructose corn syrup (HFCS) or other fructose-containing sweeteners in the food supply or to require the use of warning labels on products containing HFCS; (2) encourages independent research (including epidemiological studies) on the health effects of HFCS and other added sugars ~~sweeteners~~, and evaluation of the mechanism of action and relationship between fructose dose and response; and (3) in concert with the Dietary Guidelines for Americans, recommends that consumers limit the amount of added sugars ~~caloric sweeteners~~ in their diet. (CSAPH Rep. 3, A-08; Reaffirmation A-13)	Retain as amended and change to H policy. "Added sugars" is a more encompassing term for caloric sweeteners/sweeteners. The current Dietary Guidelines for American also references added sugars and not caloric sweeteners.
D-150.985	Folic Acid Fortification of Grain Products	Our AMA ~~will~~: (1) urges the Food and Drug Administration to recommend folic acid fortification of all grains marketed for human consumption, including grains not carrying the "enriched" label; and (2) ~~write letters to~~ supports domestic and international producers of corn grain products, including masa, nixtamal,	Retain as amended; change to H-policy.

		maize, and pozole, ~~to advocate~~ advocating for folic acid fortification of such products. (CSAPH Rep. 6, A-06; Reaffirmed: CSAPH Rep. 1, I-13)	
D-150.987	Addition of Alternatives to Soft Drinks in Schools	Our AMA will seek to promote the consumption and availability of nutritious beverages as a healthy alternative to high-calorie, low nutritional-content beverages (such as carbonated sodas and sugar-added juices) in schools. (Res. 413, A-05; Reaffirmation A-07; Reaffirmation A-12; Reaffirmation A-13)	Retain; still relevant.
D-20.992	Routine HIV Screening	Our AMA: (1) supports HIV screening policies which include: (a) routine HIV screening of adolescents and adults ages ~~13-64~~ 15-65, ~~and s~~exually active adolescents under age 15 and adults over 65 at increased risk of infection should also be screened;~~,~~ (b) patients receive an HIV test as a part of General Medical Consent for medical care with option to specifically decline the test, and (c) patients who test positive for HIV receive prompt counseling and treatment as a vital part of screening; (2) supports that the frequency of repeat HIV screening be determined based on physician clinical judgment and consideration of identified risks and prevalent community experience; (3) ~~supports the Centers for Disease Control and Prevention's (CDC) 2006 Revised Recommendations for HIV Testing of Adults, Adolescents and Pregnant Women in Health Care Settings; (4) will~~ continues to work with the CDC to implement ~~the revised~~ recommendations for HIV testing of adults, adolescents and pregnant people ~~women~~ in health care settings, including exploring the publication of a guide on the use of rapid HIV testing in primary care settings; (~~5~~4) will identify legal and funding barriers to the implementation of the CDC's HIV testing recommendations and develop strategies to overcome these barriers; (~~6~~5) will publicize ~~its newly adopted~~ HIV screening policies via its existing ~~professional electronic and print~~ publications and to the public via news releases and commentaries to major media outlets; and (~~7~~6) will formally request all public and private insurance plans ~~to~~ pay the cost of routine HIV screening testing of all insured individuals who receive routine HIV testing in accordance with ~~new~~ recommendations. (CSAPH Rep. 2, I-06; Modified: Res. 927, I-10; Reaffirmation I-13)	Retain as amended to align with updated evidence-based guidelines.
D-220.970	Joint Commission Accreditation Standard for Pain Assessment	Our AMA ~~urges~~ supports efforts by The Joint Commission to continuously reevaluate its accreditation standard for pain assessment, including evidence on whether the standard improves pain management practices, in order to ensure that the standard supports physician's abilities to select the most appropriate treatment options for their patients. (Sub. Res. 915, I-13)	Retain as amended; change to H-policy.

D-35.981	AMA Response to Pharmacy Intrusion Into Medical Practice	1. Our AMA deems inappropriate inquiries from pharmacies to verify the medical rationale behind prescriptions, diagnoses and treatment plans to be an interference with the practice of medicine and unwarranted. ~~2. Our AMA will work with pharmacy associations such as the National Association of Chain Drug Stores to engage with the Drug Enforcement Administration, the federal Department of Justice, and other involved federal regulators and stakeholders, for the benefit of patients, to develop appropriate policy for pharmacists to work with physicians in order to reduce the incidence of drug diversion and inappropriate dispensing.~~ ~~3. If the inappropriate pharmacist prescription verification requirements and inquiry issues are not resolved promptly, our AMA will advocate for legislative and regulatory solutions to prohibit pharmacies and pharmacists from denying medically necessary and legitimate therapeutic treatments to patients.~~ (Res. 218, A-13)	Retain as amended; change to H-policy.
D-440.935	Strategies to Increase Diabetes Awareness	Our AMA will organize a series of activities for the public in collaboration with health care workers and community organizations to bring awareness to the severity of diabetes and measures to decrease its incidence. (Res. 412, A-13)	Rescind; completed. Launched programs with the YMCA to provide screenings and awareness around diabetes prevention and supported referral of patients to Diabetes Prevention Programs, a lifestyle modification program designed to reduce the risk of developing type 2 diabetes.
D-455.998	Ionizing Radiation Exposure in the Medical Setting	Our AMA will: (1) ~~collaborate with~~ Support appropriate specialty medical societies and other interested stakeholders to ~~convene a meeting~~ collaborate (a) ~~to examine the~~ for feasibility of monitoring and quantifying the cumulative radiation exposure sustained by individual patients in medical settings; and (b) ~~to discuss methods to~~ continue to educate physicians and the public on the appropriate use and risks of low linear energy transfer radiation in order to reduce unnecessary patient exposure in the medical setting; (2) continue to monitor the National Academy of Sciences' ongoing efforts to study the impact of low levels of low linear energy transfer radiation on human health; (3) support education and standards for all providers and medical personnel using ionizing and non-ionizing radiation that includes awareness of, and methods to avoid, patient over-radiation; (4) support policies that promote the safe use of medical imaging devices, informed clinical decision-	Retain as amended; change to H-policy.

		making regarding the use of procedures that use radiation, and patient awareness of medical radiation exposure; and (5) encourage the continued development and use of standardized electronic medical record systems that will help physicians track the number of imaging procedures a patient is receiving, in both the in-patient and out-patient settings, which will help physicians discuss the potential dangers of high level of radiation exposure with patients. CSAPH Rep. 2, A-06; Appended: Res. 921, I-11; Reaffirmation A-13	
D-455.999	Monitoring Patient Exposure to Ionizing Radiation	1. Our American Medical Association will ~~work with the~~ support public health, radiology and radiation oncology specialty societies and all other interested parties to ~~study~~ monitor the issue of radiation exposure ~~by~~ to the American public and develop a plan, if appropriate, to allow the ongoing monitoring and quantification of radiation exposure sustained by individual patients in medical settings. ~~2. Our AMA: (a) will work with the American College of Radiology, the Radiological Society of North America, and other appropriate specialty medical societies and stakeholders to develop recommendations for a common format for monitoring, quantifying, documenting, and communicating the cumulative radiation exposure sustained by individual patients in medical settings that could be incorporated into a patient's personal health record and present their findings to industry; (b) recommends dissemination and use of the Physician Consortium for Performance Improvement (PCPI) 2007 Radiology Performance Improvement Measures that pertain to radiation exposure monitoring for CT scanning and fluoroscopy, and that the PCPI continue to incorporate radiation exposure issues in future performance measurement sets; and (c) supports physician and patient education on the appropriate use and risks of radiation in the medical setting.~~ Res. 521, A-05; Appended: BOT Rep. 12, I-09; Reaffirmation A-13	Retain as amended; change to H-policy. Part two of the resolution is complete.
D-460.983	Translating Biomedical Research to the Bedside	Our AMA will: (1) give high priority to bringing promising biomedical research to the bedside; and (2) advocate for the elimination of unreasonable barriers to bedside care using new research. (Res. 812, I-03; Modified: CSAPH Rep. 1, A-13)	Retain; change to H policy.
D-490.983	Annual Tobacco Report 2003	Our AMA will continue to produce the Annual Tobacco Report. (BOT Rep. 7, I-03; Reaffirmed: CSAPH Rep. 1, A-13)	Retain; still relevant.
D-515.985	Elder Mistreatment	Our AMA: 1. Encourages all physicians caring for the elderly to become more proactive in recognizing and treating vulnerable elders who may be victims of mistreatment through prevention and early identification of risk factors in all care settings. Encourage physicians to participate in medical case management and APS teams	Retain; change to H policy.

		and assume greater roles as medical advisors to APS services. 2. Promotes collaboration with the Liaison Committee on Medical Education and the Association of American Medical Colleges, as well as the Commission on Osteopathic College Accreditation and American Association of Colleges of Osteopathic Medicine, in establishing training in elder mistreatment for all medical students; such training could be accomplished by local arrangements with the state APS teams to provide student rotations on their teams. Physician responsibility in cases of elder mistreatment could be part of the educational curriculum on professionalism and incorporated into questions on the US Medical Licensing Examination and Comprehensive Osteopathic Medical Licensing Examination. 3. Encourages the development of curricula at the residency level and collaboration with residency review committees, the Accreditation Council for Graduate Medical Education, specialty boards, and Maintenance of Certification programs on the recognition of elder mistreatment and appropriate referrals and treatment. 4. Encourages substantially more research in the area of elder mistreatment. 5. Encourages the US Department of Health and Human Services, Office of Human Research Protections, which provides oversight for institutional review boards, and the Association for the Accreditation of Human Research Protection Programs to collaborate on establishing guidelines and protocols to address the issue of vulnerable subjects and research subject surrogates, so that research in the area of elder mistreatment can proceed. 6. Encourages a national effort to reach consensus on elder mistreatment definitions and rigorous objective measurements so that interventions and outcomes of treatment can be evaluated. 7. Encourages adoption of legislation, such as the Elder Justice Act, that promotes clinical, research, and educational programs in the prevention, detection, treatment, and intervention of elder abuse, neglect, and exploitation. (CSAPH Rep. 7, A-08; Reaffirmed: CMS Rep. 8, I-13)	
D-55.998	Encourage Appropriate Colorectal Cancer Screening	Our AMA, in conjunction with interested organizations and societies, ~~will~~ supports educational and public awareness programs to assure that physicians actively encourage their patients to be screened for colon cancer and precursor lesions, and to improve patient awareness of appropriate guidelines, particularly within minority populations and for all high risk groups. (Res. 510, A-03; Modified: CSAPH Rep. 1, A-13)	Retain as amended; change to H policy.
H-10.966	Prevention of Fires Related to Cigarette Smoking	The AMA (1) supports studies to determine the feasibility and practicality of establishing a standard for self-extinguishing cigarettes and requiring cigarette manufacturers to meet that standard; (2) supports the concept of self-extinguishing cigarettes for the purpose	Retain; still relevant.

		of reducing fire related deaths, injuries and loss of property; and (3) reiterates its opposition to all smoking. (Sub. Res. 6, A-82; Reaffirmed: CLRPD Rep. A, I-92; Reaffirmed: CSA Rep. 8, A-03; Reaffirmed: CSAPH Rep. 1, A-13)	
H-10.981	Prohibition on the Public Sale of Fireworks	Our AMA (1) encourages accurate reporting of fireworks related injuries, deaths, and fires; (2) supports all efforts designed to prohibit the public sale, including those by mail order, of all fireworks; (3) supports existing efforts to educate physicians, parents, children, and community leaders about the dangers of fireworks; and (4) encourages the adoption of federal legislation prohibiting the sale of fireworks and their use, with the exception of those used for professional displays. (Res. 419, A-92; Reaffirmed: CSA Rep. 8, A-03; Modified: CSAPH Rep. 1, A-13)	Retain; still relevant.
H-10.995	Use of Technology to Prevent Explosions	The AMA encourages manufacturers of automobiles, boats, and other vehicles, as well as makers of containers of volatile liquids and gases, to incorporate appropriate safety technology into the development of their products. (Res. 59, A-82; Reaffirmed: CLRPD Rep. A, I-92; Reaffirmed: CSA Rep. 8, A-03; Modified: CSAPH Rep. 1, A-13)	Retain; still relevant.
H-100.976	Benzodiazepine Education	Our AMA encourages physicians interested in the addictive nature of benzodiazepines and their rational use to seek information from appropriate sources. (CSA Rep. E, A-92; Amended: CSA Rep. 8, A-03; Modified: CSAPH Rep. 1, A-13)	Retain; still relevant.
H-130.992	Proposed Crisis Relocation and Shelter Plans	Patients must be treated regardless of how they are injured, and planning for treatment is an important part of good medicine. The AMA, therefore, is committed to working with the federal government to provide advice concerning development of sound medical planning for disasters and catastrophes of any and all magnitude. (BOT Rep. I, I-82; Reaffirmed: Res. 34, A-83; Reaffirmed: CLRPD Rep. A, I-92; Reaffirmed: CSA Rep. 8, A-03; Reaffirmed: CSAPH Rep. 1, A-13)	Rescind; duplicative of more comprehensive policy (H-130.942, D-130-972, and D-130.974).
H-130.993	Use of Emergency Medical Information Aids	The AMA (1) ~~endorses and~~ encourages the use of effective medical information aids by which appropriate individual medical information can be brought to the attention of emergency personnel; and (2) supports continued review of existing medical information aids to determine appropriate steps to encourage greater use of those information aids which are considered effective. (Res. 57, I-82; Reaffirmed: CLRPD Rep. A, I-92; Reaffirmed: CSA Rep. 8, A-03; Reaffirmed: CSAPH Rep. 1, A-13)	Retain as amended.
H-135.948	Toxicity of Computers and Electronics Waste	Our AMA (1) encourages its members and US health institutions to adopt purchasing or leasing contracts only with electronics manufacturers and distributors who are committed to safely handling the products at the end of life, meaning that they reuse and recycle to the greatest extent possible, do not export hazardous	Retain; still relevant.

		electronic waste to developing countries and safely dispose of the waste that cannot be reused or recycled; (2) encourages its members and US health institutions to provide purchasing/leasing preferences to electronics manufacturers that minimize the use of toxic and hazardous constituents, use recycled content and design products that can be easily recycled in order to minimize the adverse public health impacts from electronic waste; and (3) supports policies that hold electronics manufacturers and distributors responsible for taking back their products at the end of life, with the objective of redesigning their products for longevity and reduction of harmful materials. (Res. 423, A-03; Reaffirmed: CSAPH Rep. 1, A-13)	
H-135.961	Risks of a High-Level Radioactive Waste Repository	The AMA (1) strongly encourages the U.S. Nuclear Regulatory Commission and the Nuclear Waste Technical Review Board of the National Research Council to include representatives of the appropriate state medical societies/associations, the AMA, and appropriate medical specialty groups with expertise in the field to advise and/or act as consultants to those entities; and (2) urges the U.S. Congress to establish a site for a high-level radioactive waste repository. (BOT Rep. A, I-92; Amended: CSA Rep. 8, A-03; Modified: CSAPH Rep. 1, A-13)	Retain; still relevant.
H-145.978	~~Gun~~ Firearm Safety	Our AMA: (1) recommends and promotes the use of trigger locks and locked ~~gun~~ firearm cabinets as safety precautions; and (2) ~~endorses~~ supports standards for firearm construction reducing the likelihood of accidental discharge when a gun is dropped and that standardized drop tests be developed. (Res. 425, I-98; Reaffirmed: Res. 409, A-00; Reaffirmed: CSAPH Rep. 1, A-10; Reaffirmation A-13)	Retain as amended; still relevant. Terminology updated for consistency.
H-145.988	AMA Campaign to Reduce Firearm Deaths	The AMA supports educating the public regarding methods to reduce death and injury due to keeping firearms ~~guns~~, ammunition and other explosives in the home. (Res. 410, A-93; Reaffirmed: CLRPD Rep. 5, A-03; Reaffirmation A-13; Modified: CSAPH Rep. 1, A-13)	Retain as amended; still relevant. Terminology updated for consistency.
H-15.954	Older Driver Safety	(1) Our AMA recognizes that the safety of older drivers is a growing public health concern that is best addressed through multi-sector efforts to optimize vehicle design, the driving environment, and the individual's driving capabilities, and: (a) believes that because physicians play an essential role in helping patients slow their rate of functional decline, physicians should increase their awareness of the medical conditions, medications, and functional deficits that may impair an individual's driving performance, and counsel and manage their patients accordingly; (b) encourages physicians to familiarize themselves with driver assessment and rehabilitation options, refer their patients to such programs whenever appropriate, and defer recommendations on permanent driving cessation until establishing that a patient's driving	Retain; still relevant.

		safety cannot be maintained through medical interventions or driver rehabilitation; © urges physicians to know and adhere to their state's reporting statutes for medically at-risk drivers; and (d) encourages continued scientific investigation into strategies for the assessment and management of driving safety in the clinical setting. (2) Our AMA encourages physicians to use the Physician's Guide to Assessing and Counseling Older Drivers as an educational tool to assist them in helping their patients. (CSA Rep. 6, A-03; Reaffirmed: CSAPH Rep. 1, A-13)	
H-15.964	Police Chases and Chase-Related Injuries	The AMA encourages (1) communities, aided by government officials and medical scientists, to develop and implement guidelines on the use of police vehicles that indicate when, how, and how long pursuits should be carried out and to address other key aspects of police pursuit; and (2) responsible government agencies to develop, test, and use instruments and techniques with advanced technologies, for example, coding and tracking devices, to discourage, eliminate, or replace high-speed chases. (CSA Rep. C, A-92; Reaffirmed: CSA Rep. 8, A-03; Modified: CSAPH Rep. 1, A-13)	Retain as amended. In 2015, a model policy was created by the International Association of Chiefs of Police. In it, the policy states, "Pursuit is authorized only if the officer has a reasonable belief that the suspect, if allowed to flee, would present a danger to human life or cause serious injury. In general, pursuits for minor violations are discouraged"
H-150.966	FDA Regulations Regarding the Inclusion of Added L-Glutamic Acid Content on Food Labels	Until such time as L-glutamic acid in any form has been shown to pose a significant public health hazard or until biological non-equivalence of monosodium glutamate and L-glutamate has been demonstrated, the AMA supports the exclusion of L-glutamic acid released from hydrolyzed protein from food product labeling requirements. (CSA Rep. D, A-92; Reaffirmed: CSA Rep. 8, A-03; Reaffirmed: CSAPH Rep. 1, A-13)	Retain; still relevant.
H-170.965	Education on Condom Use	Our AMA: (1) Supports joining with appropriate medical and public health organizations and federal agencies in endorsing the use of condoms in reducing the risk of HIV/AIDS and other sexually transmissible diseases among the population; (2) Encourages the production of condom education materials that meet standards of accuracy, completeness, social appropriateness, clarity, and simplicity; (3) Supports cooperating with other medical societies, the public health community, government agencies, and the media to develop standards for public service announcements regarding condom use in prevention of HIV/AIDS and other sexually transmissible diseases; and (4) In cooperation with state, county, and specialty medical societies, encourages physicians to educate their patients about the role of condom use in reducing the risk of sexually transmissible diseases, including HIV	Retain; still relevant.

		disease. While such counseling may not be appropriate for all patients, physicians should be encouraged to provide this information to any patient who may benefit from being more aware of the risks of sexually transmissible diseases. (CSA Rep. 4, A-03; Modified: CSAPH Rep. 1, A-13)	
H-170.966	Human Sexuality Education	Our AMA encourages physicians to assist parents in providing human sexuality education to children and adolescents. (CSA Rep. 4, A-03; Reaffirmed: CSAPH Rep. 1, A-13)	Rescind; Duplicative of policy H-170.968
H-170.967	Rehabilitative Programs, Mental Health, and Educational Services for Girls in the Juvenile Detention System	Our AMA supports comprehensive health education for female delinquents, including information on responsible sexual behavior, the prevention of sexually transmissible diseases and HIV/AIDS, and also supports the availability of intervention programs for girls who have been victimized. (Res. 411, A-03; Reaffirmed: CSAPH Rep. 1, A-13)	Rescind; more recent policy exists including D-60.994, D-430.997, and H-515.981.
H-175.992	Deceptive Health Care Advertising	Our AMA (1) encourages and assists all physicians and medical societies to monitor and report to the appropriate state and federal agencies any health care advertising for which there is a reasonable, good-faith basis for believing that said advertising is false and/or deceptive in a material fact, together with the basis for such belief; and (2) encourages medical societies to keep the Association advised as to their actions relating to medical advertising. (Sub. Res. 102, A-87; Reaffirmed: Sunset Report, I-97; Reaffirmed: BOT Rep. 13, I-01; Reaffirmed: CSAPH Rep. 1, A-11; Reaffirmed in lieu of Res. 6, A-13)	Retain; still relevant.
H-20.899	HIV Testing	Our AMA endorses routine HIV screening/testing for individuals on admission to the hospital, visit to the emergency room or doctor's office as deemed appropriate by the attending physician. It is AMA policy that: (1) this testing should be a voluntary program in which patients may opt out if they desire not to be tested; (2) HIV screening permission be incorporated into general health care consent forms and that separate written consent is not recommended; (3) prevention counseling should not be a requirement for this testing program; (4) when tests are positive, appropriate public health measures be instituted for surveillance, prevention of transmission and dissemination of the virus; and (5) when positive HIV patients are identified, appropriate linkage to HIV care be established. (Res. 2, A-07; Reaffirmation I-13)	Rescind; Duplicative of H-20.920
H-20.903	HIV/AIDS and Substance ~~Abu~~Use	Our AMA: (1) urges federal, state, and local governments to increase funding for drug treatment so that people who use drugs ~~abusers~~ have immediate access to appropriate care, regardless of ability to pay. Experts in the field agree that this is the most important step that can be taken to reduce the spread of HIV infection among persons who inject drugs ~~intravenous drug abusers~~; (2) advocates development of regulations and incentives to encourage retention of HIV-positive	Retain as amended; updating language.

		and AIDS-symptomatic patients in drug treatment programs so long as such placement is clinically appropriate; (3) encourages the availability of opioid maintenance for persons addicted to opioids. Federal and state regulations governing opioid maintenance and treatment of drug dependent persons should be reevaluated to determine whether they meet the special needs of persons who inject drugs ~~intravenous drug abusers~~, ~~particularly those who are HIV infected or AIDS symptomatic~~. Federal and state regulations that are based on incomplete or inaccurate scientific and medical data that restrict or inhibit opioid maintenance therapy should be removed; and (4) urges development of educational, medical, and social support programs for persons who inject drugs ~~intravenous drug abusers~~ and their sexual or needle-sharing partners to reduce risk of HIV infection, as well as risk of other bloodborne and sexually transmissible diseases. Such efforts must target (a) pregnant people who inject drugs ~~intravenous drug abusers~~ and those who may become pregnant to address the current and future health care needs of both mothers and newborns and (b) adolescent substance ~~abusers~~ users, especially homeless, runaway, and detained adolescents who are living with HIV ~~seropositive or AIDS symptomatic~~ and those ~~whose lifestyles~~ with risk factors ~~place them at risk~~ for ~~contracting~~ HIV infection. (CSA Rep. 4, A-03; Modified: CSAPH Rep. 1, A-13)	
H-20.907	Financing Care for HIV/AIDS Patients	Our AMA: (1) Believes that current private insurance and existing public programs, coupled with a significant expansion of state risk pools, provide the best approach to assuring adequate access to health expense coverage for HIV-infected persons and persons with AIDS. ~~However, as the disease patterns and costs become more defined, it may be necessary to reevaluate this conclusion. Continued study of this issue is imperative~~; (2) Supports the development of a clinical staging system based on severity of HIV disease as a replacement for the AIDS diagnosis as a basis for determining health, disability, and other benefits; (3) Supports increased funding for reimbursement and other incentives by public and private payers to encourage (a) expanded availability for therapies and interventions widely accepted by physicians as medically appropriate for the prevention and control of HIV disease and (b) for alternatives to in-patient care of persons with HIV disease, including intermediate care facilities, skilled nursing facilities, home care, residential hospice, home hospice, and other support systems; (4) Supports government funding of all medical services that are deemed appropriate by both the patient and physician for pregnant seropositive women lacking other sources of funding;	Retain as amended; still relevant.

		(5) Supports broad improvements in and expansion of the Medicaid program as a means of providing increased coverage and financial protection for low-income AIDS patients; (6) Supports, and favors considering introduction of, legislation to modify the Medicaid program to provide for a yearly dollar increase in the federal share of payments made by states for care of all patients in proportion to the amount of increase in costs incurred by each state program for care of HIV-positive individuals and patients with AIDS over the preceding year; (7) Encourages the appropriate state medical societies to seek establishment in their jurisdictions of programs to pay the private insurance premiums from state and federal funds for needy persons with HIV and AIDS; and strongly supports full appropriation of the amounts authorized under the Ryan White CARE Act ~~of 2000~~; (8) Supports consideration of an award recognition program for physicians who donate a portion of their professional time to testing and counseling HIV-infected patients who could not otherwise afford these services. (CSA Rep. 4, A-03; Reaffirmation I-11; Reaffirmation I-13)	
H-20.910	HIV-Infected Children	Our AMA: (1) Supports day-care, preschool, and school attendance of HIV-infected children; (2) Encourages the physician responsible for care of an HIV-infected child in a day-care, preschool, or school setting to receive information from the school on other infectious diseases in the environment and temporarily remove the HIV-infected child from a setting that might pose a threat to his/her health; (3) Encourages that HIV-infected children who are adopted or placed in a foster-care setting have access to special health care benefits to encourage adoption or foster-care. (CSA Rep. 4, A-03; Reaffirmed: CSAPH Rep. 1, A-13)	Retain; still relevant.
H-20.916	Breastfeeding and HIV Seropositive ~~Women~~ People	Our AMA believes that, where safe and alternative nutrition is widely available, HIV seropositive ~~women~~ people should be counseled not to breastfeed and not to donate breast milk. HIV testing of all human milk donors should be mandatory, and milk from HIV-infected donors should not be used for human consumption. (CSA Rep. 4, A-03; Reaffirmed: CSAPH Rep. 1, A-13)	Retain as amended to include gender-neutral language.
H-20.917	Neonatal Screening for HIV Infection	Our AMA: (1) urges ~~the U.S. Public Health Service, other~~ appropriate federal agencies, private researchers, and health care industries to continue to pursue research, development, and implementation of diagnostic tests and procedures for more accurate demonstration of HIV infection in the newborn; and supports the widespread use of such tests in early diagnosis; (2) favors giving consideration to rapid HIV testing of newborns, with maternal consent of the	Retain as amended.

		gestational parent, when the ~~maternal~~ individual's HIV status has not been determined during pregnancy or labor; and (3) supports mandatory HIV testing of all newborns in high prevalence areas. (CSA Rep. 4, A-03; Modified: CSAPH Rep. 1, A-13)	
H-20.919	Patient Disclosure of HIV Seropositivity	Our AMA encourages patients who are HIV seropositive to make their condition known to their physicians and other appropriate health care providers. (CSA Rep. 4, A-03; Reaffirmed: CSAPH Rep. 1, A-13)	Retain; still relevant.
H-245.983	Baby Walkers	The AMA ~~strengthens its policy on baby walkers by urging~~ urges the Consumer Product Safety Commission to ban infant walkers as a mechanical hazard. (Res. 403, I-92; Reaffirmed: CSA Rep. 8, A-03; Reaffirmed: CSAPH Rep. 1, A-13)	Retain as amended; still relevant.
H-245.985	Mandatory Labeling for Waterbeds and Beanbag Furniture	The AMA urges the Consumer Product Safety Commission to require waterbed manufacturers and manufacturers of similar type furnishings to affix a permanent label and to distribute warning materials on each waterbed and other furnishings sold concerning the risks of leaving an infant or handicapped child, who lacks the ability to roll over, unattended on a waterbed or beanbag. (Res. 414, A-92; Reaffirmed: CSA Rep. 8, A-03; Modified: CSAPH Rep. 1, A-13)	Retain; still relevant.
H-280.958	Pain Control in Long-Term Care	Our AMA will work: (1) to promote ~~promulgate~~ clinical practice guidelines for pain control in long term care settings and support educational efforts and research in pain management in long term care; and (2) to reduce regulatory barriers to adequate pain control at the federal and state levels for long term care patients. (Res. 715. A-98; Reaffirmed: CSAPH Rep. 2, A-08; Reaffirmed in lieu of Res. 518, A-12; Reaffirmation A-13)	Retain as amended to clarify the AMA's role in clinical practice guidelines.
H-365.996	Regulation of Occupational Carcinogens	The AMA ~~endorses the principle of~~ supports using the best available scientific data, including data derived from animal models, as a basis for regulation of occupational carcinogens. (Sub. Res. 81, I-82; Reaffirmed: CLRPD Rep. A, I-92; Reaffirmed: CSA Rep. 8, A-03; Reaffirmed: CSAPH Rep. 1, A-13)	Retain as amended; still relevant.
H-370.984	Organ Donation Education	Our AMA encourages all states and local organ procurement organizations to provide educational materials to driver education and safety classes. (Res. 504, I-91; Reaffirmed: Sunset Report, I-01; Reaffirmed: CSA Rep. 4, I-02; Reaffirmed: CSAPH Rep. 1, A-12; Modified: Res. 3, A-13)	Retain; still relevant.
H-420.991	Fetal Effects of Maternal Alcohol Use	The AMA believes that (1) The evidence is clear that a ~~woman~~ person who drinks heavily during pregnancy places ~~her~~ their unborn child at substantial risk for fetal damage and physical and mental deficiencies in infancy. Physicians should be alert to signs of possible alcohol ~~abuse~~ use and ~~alcoholism~~ alcohol use disorder in their ~~female~~ patients of child-bearing age, not only those who are pregnant, and institute appropriate diagnostic and therapeutic measures as early as	Retain as amended; still relevant.

		possible. Prompt intervention may prevent adverse fetal consequences from occurring in this high-risk group. (2) The fetal risks involved in moderate or minimal alcohol consumption have not been established through research to date, nor has a safe level of ~~maternal~~ gestational alcohol use been established. One of the objectives of future research should be to determine whether there is a level of ~~maternal~~ gestational alcohol consumption below which embryotoxic and teratogenic effects attributable to alcohol are virtually non-existent. (3) Until such a determination is made, physicians should inform their patients as to what the research to date does and does not show and should encourage them to decide about drinking in light of the evidence and their own situations. Physicians should be explicit in reinforcing the concept that, with several aspects of the issue still in doubt, the safest course is abstinence. (4) Long-term longitudinal studies should be undertaken to give a clearer perception of the nature and duration of alcohol-related birth defects. Cooperative projects should be designed with uniform means of assessing the quantity and extent of alcohol intake. (5) To enhance public education efforts, schools, hospitals, and community organizations should become involved in programs conducted by governmental agencies and professional associations. (6) Physicians should take an active part in education campaigns. In so doing, they should emphasize the often overlooked consequences of ~~maternal~~ gestational drinking that are less dramatic and pronounced than are features of the fetal alcohol syndrome, consequences that are at least indicated, if not sharply delineated, by some of the research that has been conducted in several parts of the world with diverse populations. (CSA Rep. E, A-82; Reaffirmed: CLRPD Rep. A, I-92; Reaffirmed: CSA Rep. 8, A-03; Reaffirmed: CSAPH Rep. 1, A-13)	
H-425.971	Celiac Disease Screening	Our AMA: (1) recognizes undiagnosed celiac disease as a public health problem; and (2) supports the formal establishment of evidence-based celiac disease screening recommendations and high-risk population definitions for general and pediatric populations by appropriate stakeholders. (Res. 419, A-13)	Retain; still relevant.
H-430.988	Prevention and Control of HIV/AIDS and Tuberculosis in Correctional Facilities	(1) Medical Testing and Care of Inmates ~~Prisoners~~ a) Federal and state correctional systems should provide comprehensive medical management for all entrants, which includes voluntary testing for HIV infection and mandatory testing for tuberculosis followed by appropriate treatment for those infected; b) During incarceration, ~~prisoners~~ inmates should be tested for HIV infection as medically indicated or on their request; c) All inmates and staff should be screened for tuberculosis infection and retested at least annually. If an increase in cases of tuberculosis or HIV infection is noted, more frequent retesting may be indicated; d)	Retain as amended; updating language to be consistent with current policy.

		Correctional institutions should assure that informed consent, counseling, and confidentiality procedures are in place to protect the patient, when HIV testing is appropriate; e) During their post-test counseling procedures, HIV-infected inmates should be encouraged to confidentially notify their sexual or needle-sharing partners; and f) Correctional medical care must, as a minimum, meet the prevailing standards of care for HIV-infected persons in the outside community at large. ~~Prisoners~~ Inmates should have access to approved therapeutic drugs and generally employed treatment strategies. (2) HIV/AIDS Education and Prevention Our AMA: a) Encourages the inclusion of HIV-prevention information as a regular part of correctional staff and inmate education. AIDS education in state and federal prisons should stress abstinence from drug use and high-risk sexual practices, as well as the proper use of condoms as one way of decreasing the spread of HIV; b) Will pursue legislation that encourages state, local, and federal correctional institutions to make condoms available to inmates; and c) Urges medical personnel in correctional institutions to work closely with state and local health department personnel to control the spread of HIV/AIDS, tuberculosis, and other serious infectious diseases within and outside these facilities. (3) Prison-based HIV Partner Notification Program Our AMA: a) Urges state health departments to take steps to initiate with state departments of correctional services the development of prison-based HIV Partner Notification Programs for inmates convicted of drug-related crimes and their regular sexual partners; and b) Believes that all parties should recognize that maximum effectiveness in an HIV Partner Notification Program will depend on the truly voluntary participation of inmates and the strict observance of confidentiality at all levels. (CSA Rep. 4, A-03; Modified: CSAPH Rep. 1, A-13)	
H-440.842	Recognition of Obesity as a Disease	Our AMA recognizes obesity as a disease state with multiple pathophysiological aspects requiring a range of interventions to advance obesity treatment and prevention. (Res. 420, A-13)	Retain; still relevant.
H-440.843	Health Risks of Sitting	Our AMA recognizes that there are potential risks of prolonged sitting, encourages efforts by employers, employees, and others to make available alternatives such as standing work stations and isometric balls, and encourages educational efforts regarding ways to minimize this risk. (Res. 413, A-13)	Retain; still relevant
H-440.866	The Clinical Utility of Measuring Body Mass Index and Waist Circumference in the Diagnosis and Management of Adult Overweight and Obesity	Our AMA supports: (1) greater emphasis in physician educational programs on the risk differences among ethnic and age groups at varying levels of BMI and the importance of monitoring waist circumference in individuals with BMIs below 35 kg/m2; (2) additional research on the efficacy of screening for overweight and obesity, using different indicators, in	Retain; still relevant.

		improving various clinical outcomes across populations, including morbidity, mortality, mental health, and prevention of further weight gain; and (3) more research on the efficacy of screening and interventions by physicians to promote healthy lifestyle behaviors, including healthy diets and regular physical activity, in all of their patients to improve health and minimize disease risks. (CSAPH Rep. 1, A-08; Reaffirmed: CSAPH Rep. 3, A-13)	
H-440.898	Recommendations on Folic Acid Supplementation	Our AMA will: (1) encourage the Centers for Disease Control and Prevention (CDC) to continue to conduct surveys to monitor nutritional intake and the incidence of neural tube defects (NTD); (2) continue to encourage broad-based public educational programs about the need for women of child-bearing potential to consume adequate folic acid through nutrition, food fortification, and vitamin supplementation to reduce the risk of NTD; (3) encourage the CDC and the National Institutes of Health to fund basic and epidemiological studies and clinical trials to determine causal and metabolic relationships among homocysteine, vitamins B12 and B6, and folic acid, so as to reduce the risks for and incidence of associated diseases and deficiency states; (4) encourage research efforts to identify and monitor those populations potentially at risk for masking vitamin B12 deficiency through routine folic acid supplementation of enriched food products; (5) urge the Food and Drug Administration to increase folic acid fortification to 350 µg per 100 g of enriched cereal grain; and (6) encourage the FDA to require food, food supplement, and vitamin labeling to specify milligram content, as well as RDA levels, for critical nutrients, which vary by age, gender, and hormonal status (including anticipated pregnancy); and (7) encourage the FDA to recommend the folic acid fortification of all refined grains marketed for human consumption, including grains not carrying the "enriched" label. (CSA Rep. 8, A-99; Modified: CSAPH Rep. 6, A-06; Reaffirmed: CSAPH Rep. 1, I-13)	Retain; still relevant.
H-440.931	Update on Tuberculosis	It is the policy of the AMA that: (1) All ~~prison~~ inmates should be tuberculin skin-tested upon arrival and annually thereafter. Those who are positive should be managed as medically appropriate, contact tracing performed, and provisions made for the continued treatment and follow-up of those who are released prior to the completion of their therapy. (2) Staff of both prisons and jails should be tuberculin-tested upon employment and annually thereafter. Those who are positive should be managed as medically appropriate and contact tracing performed. (3) Both public and health care worker education about TB, its	Retain as amended; updating language.

		transmission, and the necessity for preventive as well as therapeutic treatment should be increased. (4) Current CDC guidelines for the prevention of tuberculosis in congregate settings should be fully implemented. The protection of persons who are immunocompromised needs to be addressed especially by treatment centers housing such persons. (5) While powered air-purification respirators may be useful for the protection of HIV-infected and other immunocompromised health care workers who care for patients with infectious TB, their routine use for the prevention of the nosocomial transmission of TB is uncalled for in health care facilities where CDC guidelines are fully implemented. (6) States should review their TB control laws using current CDC recommendations and recent legal and ethical publications as guidelines. Where necessary to further protect the public health from the disease, existing laws should be modified and/or new ones added. (BOT Rep. JJ, A-93; Reaffirmed: CSA Rep. 8, A-03; Modified: CSAPH Rep. 1, A-13)	
H-440.934	Adequacy of Sterilization in Commercial Enterprises	The AMA requests that state health departments ensure the adequacy of sterilization of instruments used in commercial enterprises (tattoo parlors, beauty salons, barbers, manicurists, etc.) because of the danger of exchange of infected blood-contaminated fluids. (Sub. Res. 409, I-92; Reaffirmed: CSA Rep. 8, A-03; Modified: CSAPH Rep. 1, A-13)	Retain; still relevant.
H-440.966	Elimination of Tuberculosis as a Public Health Problem	The AMA (1) endorses the Strategic Plan for the Elimination of Tuberculosis, as developed by the CDC Division of Tuberculosis Elimination ~~Advisory Committee for the Elimination of Tuberculosis~~; (2) supports cooperative efforts with other national medical and public health organizations to help implement the policies of the Strategic Plan for the Elimination of Tuberculosis; (3) supports the promulgation of information on the appropriate methods for evaluating, diagnosing, treating, and preventing tuberculosis; (4) encourages and assists state and county medical associations to work with state, county and city health officials to achieve the long-range objective of reducing the incidence of active tuberculosis in the United States to one case per million ~~before the year 2010~~; and (5) supports use of a tuberculosis risk assessment questionnaire in US school aged children when appropriate, with follow-up TB testing based on the results of that TB risk assessment. (Res. 75, A-88; Reaffirmed: Sunset Report, I-98; Modified and Reaffirmed: CSAPH Rep. 2, A-08; Appended: Res. 515, A-13)	Retain as amended; updated language to be consistent with the current goals.
H-455.980	National Biomedical Tracer Facility	The AMA supports the establishment of a National Biomedical Tracer Facility with federal funding to serve as a national resource for clinical medicine, research and education. (Res. 513, I-92; Reaffirmed: CSA Rep. 8, A-03; Reaffirmed: CSAPH Rep. 1, A-13)	Retain; still relevant.

H-455.994	Risks of Nuclear Energy and Low-Level Ionizing Radiation	Our AMA supports the following policy on nuclear energy and low-level ionizing radiation: (1) Usefulness of Nuclear Energy: Energy produced by nuclear reactors makes an important contribution to the generation of electricity in the US at present, and it will continue to do so in the foreseeable future. Investigation and research should continue in order to develop improved safety and efficiency of nuclear reactors, and to explore the potential of competing methods for generating electricity. The research should include attention to occupational and public health hazards as well as to the environmental problems of waste disposal and atmospheric pollution. (2) Research on Health Effects of Low Level Radiation: There should be a continuing emphasis on research that is capable of determining more precisely the health effects of low level ionizing radiation. (3) Uranium Mill Tailings: Uranium mill tailings should be buried or otherwise covered. (4) Radioactive Waste Disposal: There should be acceleration of pilot projects to evaluate techniques for the disposal of high-level radioactive wastes. The decommissioning of nuclear reactors is a source of nuclear waste which requires accelerated technological investigation and planning. ~~Local laws should be modified to allow the disposal of low-level radioactive waste materials in accordance with AMA model state legislation~~. (5) Occupational Safety: The philosophy of maintaining exposures of workers at levels "as low as reasonably achievable (ALARA)" is commended. The present federal standards for occupational exposure to ionizing radiation are adequate. The responsibilities of the various federal agencies regarding workers in the nuclear energy industry should be clarified; these agencies include the Departments of Energy, Defense, HHS, Labor and Transportation; and the NRC, VA and EPA. (6) Minimizing Exposures to Radiation: Each physician should attempt to minimize exposures of patients to ionizing radiation in accord with good medical practice. (7) Radiation Exposure Standards: The present standards for exposure of populations to ionizing radiation are adequate for the protection of the public. (8) Emergencies and Governmental Readiness: Government agencies at all levels should be prepared to respond to nuclear energy-related emergencies. There is need for improved public planning by the several federal agencies involved, including the Federal Emergency Management Agency (FEMA) and the agencies of state and local governments. Responsible officials should develop skills and undergo periodic retraining in order to be able to act appropriately during major radiation emergencies. Because emergency planning is a complex task involving aspects of health as well as problems related to utilities, state and local	Retain as amended; still relevant.

		governments and the federal government (FEMA) would benefit from the cooperation of physicians and others in the health sciences. (9) Federal Radiation Emergency Planning Responsibilities: Federal groups such as the NRC and FEMA must work together closely to fulfill responsibilities in radiological emergency preparedness and in crisis management. There is a need for NRC and FEMA to define better the roles of community hospitals and of physicians. (10) Reactor Operators and Radiation Inspectors: There is a need for better training of operating personnel with regard to prevention and management of untoward reactor operating conditions. Selection, training, and ongoing performance evaluation of operating personnel, and of radiation inspectors, are key elements in the safety of reactor workers and of the public. Physicians should help develop methods of selecting and evaluating personnel in the nuclear power industry. (11) Radiation Training for Physicians: Physicians should be prepared to answer the questions of their patients about ionizing radiation, especially if there is a radiation emergency. Each hospital should have adequately trained physicians and a plan and protocol for receiving and caring for radiation victims. (12) Radiation Education for the Public: Further education of the public about ionizing radiation is recommended. (13) Location of Nuclear Reactors: All nuclear reactors built in the future should be placed in areas of low population density; present reactors located in low density areas should be managed so that the populations surrounding them remain small. (14) Multiple Sources of Power Generation: AMA recommends the use of a diverse set of electricity generating methods and a continuing emphasis on the conservation of energy. (15) X-Ray Security Scanners: Our AMA: (1) believes that as of June 2013, no data exist to suggest that individuals, including those who are especially sensitive to ionizing radiation, should avoid backscatter security scanners due to associated health risks; and (2) supports the adoption of routine inspection, maintenance, calibration, survey, and officer training procedures meant to ensure that backscatter security scanners operate as intended. (CSA Rep. A, A-81; Reaffirmed: CLRPD Rep. F, I-91; Reaffirmed: Sunset Report, I-01; Reaffirmed: CSAPH Rep. 1, A-11; Appended: CSAPH Rep. 4, A-13)	
H-460.903	Commercialized Medical Screening	Our AMA supports the funding of well-designed, large-scale clinical trials aimed at determining the safety, value, and cost-effectiveness of screening imaging procedures. (CSA Rep. 10, A-03; Modified: CSAPH Rep. 1, A-13)	Retain; still relevant.
H-460.915	Cloning and Stem Cell Research	Our AMA: (1) supports biomedical research on multipotent stem cells (including adult and cord blood	Retain; still relevant.

		stem cells); (2) supports the use of somatic cell nuclear transfer technology in biomedical research (therapeutic cloning); (3) opposes the use of somatic cell nuclear transfer technology for the specific purpose of producing a human child (reproductive cloning); (4) encourages strong public support of federal funding for research involving human pluripotent stem cells; and (5) will continue to monitor developments in stem cell research and the use of somatic cell nuclear transfer technology. (CSA Rep. 5, A-03; Reaffirmed: CSAPH Rep. 1, A-13)	
H-470.972	Medical and Nonmedical Uses of Anabolic-Androgenic Steroids	Our AMA (1) reaffirms its concern over the nonmedical use of drugs among athletes, its belief that drug use to enhance or sustain athletic performance is inappropriate, its commitment to cooperate with various other concerned organizations, and its support of appropriate education and rehabilitation programs; (2) actively encourages further research on short- and long-term health effects, and encourages reporting of suspected adverse effects to the FDA; and (3) supports continued efforts to work with sports organizations to increase understanding of health effects and to discourage use of steroids on this basis. (CSA Rep. A, I-89; Reaffirmed: Sunset Report, A-00; Reaffirmed: Res. 501, A-01; Modified: CSA Rep. 9, A-03; Modified: CSAPH Rep. 1, A-13)	Retain; still relevant.
H-480.956	Commercialized Medical Screening	AMA policy is that relevant specialty societies continue to evaluate the validity and clinical use of screening imaging procedures that are advertised directly to the public and make available to the broader physician community unbiased evaluations to help primary care physicians advise their patients of the risks and benefits of these procedures. (CSA Rep. 10, A-03; Reaffirmed: CSAPH Rep. 1, A-13)	Retain; still relevant.
H-480.966	Multiplex DNA Testing for Genetic Conditions	Policy of the AMA is that: (1) tests for more than one genetic condition should be ordered only when clinically relevant and after the patient or parent/guardian has had full counseling and has given informed consent; (2) efforts should be made to educate clinicians and society about genetic testing; and (3) before genetic testing, patients should be counseled on the familial implications of genetic test results, including the importance of sharing results in instances where there is a high likelihood that a relative is at risk of serious harm, and where the relative could benefit from early monitoring or from treatment. (CEJA Rep. 1, I-96; Appended: BOT Rep. 16, I-99; Modified: CSA Rep. 3, A-03; Modified: CSAPH Rep. 1, A-13)	Retain; still relevant.
H-480.978	Medical Innovations	It is the policy of the AMA to continue to publicly support adequate funding for the development and implementation of medical innovations, and that the reasoning behind this position be communicated to physicians, the public, and appropriate policymakers.	Retain; still relevant.

		(Sub. Res. 508, I-92; Reaffirmed: CSA Rep. 8, A-03; Modified: CSAPH Rep. 1, A-13)	
H-485.995	TV Violence	The AMA reaffirms its vigorous opposition to television violence and its support for efforts designed to increase the awareness of physicians and patients that television violence is a risk factor threatening the health of young people. (Res. 19, I-82; Reaffirmed: CLRPD Rep. A, I-92; Reaffirmed: CSA Rep. 8, A-03; Reaffirmation A-13; Reaffirmed: CSAPH Rep. 1, A-13)	Retain, still relevant.
H-490.906	Enhanced Education for Abrupt Cessation of Smoking	Our AMA encourages research and evaluation on promising smoking cessation protocols that promote abrupt cessation of smoking without reliance on pharmaceuticals. (Res. 408, A-13)	Retain; still relevant.
H-490.914	Tobacco Prevention and Youth	(1) (a) urges the medical community, related groups, educational institutions, and government agencies to demonstrate more effectively the health hazards inherent in the use of tobacco products (including but not limited to, cigarettes, smokeless tobacco, chewing tobacco, and hookah/water pipe tobacco); (b) encourages state and local medical societies to actively advise municipalities and school districts against use of health education material sponsored or distributed by the tobacco industry; and (c) publicly rejects the tobacco industry as a credible source of health education material; (2) opposes the use of tobacco products of any kind in day care centers or other establishments where pre-school children attend for educational or childcare purposes; (3) advises public and private schools about the very early smoking habits observed in children and encourages appropriate school authorities to prohibit the use of all tobacco products in elementary through senior high school by anyone during the school day and during other school-related activities; (4) (a) supports the concept that a comprehensive health education program stressing health maintenance be part of the required curriculum through 12th grade to: (i) help pre-teens, adolescents, and young adults avoid the use of tobacco products, including smokeless tobacco; and (ii) emphasize the benefits of remaining free of the use of tobacco products; (b) will work with other public and private parties to actively identify and promote tobacco prevention programs for minors and encourages the development, evaluation, and incorporation of appropriate intervention programs, including smoking cessation programs, that are tailored to the needs of children; and (c) recommends that student councils and student leaders be encouraged to join in an anti-smoking campaign. (5) urges state medical societies to promote the use of appropriate educational films and educational programs that reduce tobacco use by young people;	Retain as amended; still relevant.

		(6) (a) favors providing financial support to promising behavioral research into why people, especially youth, begin smoking, why they continue, and why and how they quit; (b) encourages research into further reducing the risks of cigarette smoking; and (c) continues to support research and education programs, funded through general revenues and private sources, that are concerned with health problems associated with tobacco and alcohol use; (7) opposes the practice of tobacco companies using the names and distinctive hallmarks of well-known organizations and celebrities, such as fashion designers, in marketing their products, as youth are particularly susceptible; (8) supports working with appropriate organizations to develop a list of physicians and others recommended as speakers for local radio and television to discuss the harmful effects of tobacco usage and to advocate a tobacco-free society; and (9) commends the following entities for their exemplary efforts to inform the Congress, state legislatures, education officials and the public of the health hazards of tobacco use: American Cancer Society, American Lung Association, American Heart Association, Action on Smoking and Health, Inc., Groups Against Smoker's Pollution, National Congress of Parents and Teachers, National Cancer Institute, and National Clearinghouse on Smoking (HEW). (CSA Rep. 3, A-04; Modified: Res. 402, A-13)	
H-495.985	Smokeless Tobacco	Given that the use of smokeless tobacco (snuff and chewing tobacco) is associated with health risks, our AMA: (1) supports publicizing the increasing evidence that the use of snuff or chewing tobacco is associated with adverse health effects and encourages ongoing research to further define the health risks associated with snuff and chewing tobacco, including the risk of developing cardiovascular disease, and the effectiveness of cessation and prevention programs; (2) objects strongly to the introduction of "smokeless" cigarettes; (3) opposes the use of smokeless tobacco products by persons of all ages; (4) urges that the same requirements and taxes placed on cigarette sales and advertising be applied to smokeless tobacco products; (5) supports legislation to prohibit the sale of smokeless tobacco products to minors and encourages states to enforce strictly the prohibition on purchasing and distributing all tobacco products to individuals under the age of 21 years; (6) supports public and school educational programs on the health effects of smokeless tobacco products; (7) urges the commissioners of professional athletic organizations to discourage the open use of smokeless tobacco by professional athletes and recommends that	Retain; still relevant.

		professional athletes participate in media programs that would discourage the youth of America from engaging in this harmful habit; and (8) is committed to exerting its influence to limit exposure of young children and teenagers to advertising for smokeless tobacco and look-alike products, and urges that manufacturers take steps to diminish the appeal of snuff and chewing tobacco to young persons. (CSA Rep. 3, A-04; Reaffirmation A-13)	
H-5.985	Fetal Tissue Research	The AMA supports the use of fetal tissue obtained from induced abortion for scientific research. (Res. 540, A-92; Reaffirmed: CSA Rep. 8, A-03; Modified: CSAPH Rep. 1, A-13)	Retain; still relevant.
H-50.975	Safety of Blood Donations and Transfusions	Our AMA: (1) Supports working with blood banking organizations to educate prospective donors about the safety of blood donation and blood transfusion; (2) Supports the use of its publications to help physicians inform patients that donating blood does not expose the donor to the risk of HIV/AIDS; (3) Encourages physicians to inform high-risk patients of the value of self-deferral from blood and blood product donations; and (4) Supports providing educational information to physicians on alternatives to transfusion. (CSA Rep. 4, A-03; Reaffirmed: CSAPH Rep. 1, A-13)	Retain; still relevant.
H-50.976	Blood Bank Look-Back Programs	Our AMA supports the concept of blood bank look-back recipient notification programs as a means of protecting patients and reducing the possible spread of infections. (CSA Rep. 4, A-03; Reaffirmed: CSAPH Rep. 1, A-13)	Retain; still relevant.
H-50.977	Blood Donor Recruitment	Our AMA: (1) supports the establishment of a national volunteer blood donor education and recruitment campaign to assure an adequate and readily available blood supply; and (2) supports scientifically-based policies that ensure the safety of the nation's blood supply. (Sub. Res. 401, A-02; Modified: CSAPH Rep. 1, A-13)	Retain; still relevant.
H-50.982	Autologous Blood Transfusions	The AMA (1) supports the collection of autologous blood from candidates for elective surgery who are without contraindications to phlebotomy and when such donations are medically indicated because transfusion is likely to be needed; and (2) supports efforts to remove economic barriers to the collection and use of autologous blood for transfusion, in order to promote its wider use. (CSA Rep. A, I-92; Modified: CSA Rep. 8, A-03; Reaffirmed: CSAPH Rep. 1, A-13)	Retain; still relevant.
H-515.981	Family Violence-Adolescents as Victims and Perpetrators	The AMA (1) (a) encourages physicians to screen adolescents about a current or prior history of maltreatment. Special attention should be paid to screening adolescents with a history of alcohol and drug misuse, irresponsible sexual behavior, eating disorders, running away, suicidal behaviors, conduct disorders, or psychiatric disorders for prior occurrences of maltreatment; and (b) urges physicians to consider	Retain; still relevant.

		issues unique to adolescents when screening youths for abuse or neglect. (2) encourages state medical society violence prevention committees to work with child protective service agencies to develop specialized services for maltreated adolescents, including better access to health services, improved foster care, expanded shelter and independent living facilities, and treatment programs. (3) will investigate research and resources on effective parenting of adolescents to identify ways in which physicians can promote parenting styles that reduce stress and promote optimal development. (4) will alert the national school organizations to the increasing incidence of adolescent maltreatment and the need for training of school staff to identify and refer victims of maltreatment. (5) urges youth correctional facilities to screen incarcerated youth for a current or prior history of abuse or neglect and to refer maltreated youth to appropriate medical or mental health treatment programs. (6) encourages the National Institutes of Health and other organizations to expand continued research on adolescent initiation of violence and abuse to promote understanding of how to prevent future maltreatment and family violence. (CSA Rep. I, A-92; Reaffirmed: CSA Rep. 8, A-03; Modified: CSAPH Rep. 1, A-13)	
H-515.982	Violent Acts Against Physicians	Our AMA (1) condemns acts of violence against physicians involved in the legal practice of medicine; (2) will continue to take an active interest in the apprehension and prosecution of those persons committing assaults on physicians as a result of the physician's acting in a professional capacity; (3) will continue to monitor state legislative efforts on increased criminal penalties for assaults against health care providers; and (4) will continue to work with interested state and national medical specialty societies through all appropriate avenues, including state legislatures, when issues related to workplace violence inside and outside of the emergency department arise. (Res. 605, A-92; Reaffirmation I-99; Reaffirmed: CSAPH Rep. 1, A-09; Reaffirmed in lieu of Res. 608, A-12; Modified: BOT Rep. 2, I-12; Reaffirmed in lieu of Res. 423, A-13)	Retain; still relevant.
H-60.925	Effects of Alcohol on the Brains of Underage Drinkers	Our AMA supports creating a higher level of awareness about the harmful consequences of underage drinking. (CSA Rep. 11, A-03; Modified: CSAPH Rep. 1, A-13)	Retain; still relevant.
H-60.926	Prevention of Falls Through Windows	Our AMA: (1) supports the use of window guards and devices that prevent children from falling through windows; and (2) supports public education regarding the risks of children falling through windows. (Res. 415, A-13)	Retain; still relevant.
H-60.941	Effects of Alcohol on the Brains of Underage Drinkers	Our AMA encourages increased medical and policy research on the harmful effects of alcohol on adolescents and young adults and on the design and implementation of environmental strategies to reduce youth access to, and high consumption of, alcohol.	Retain as amended; still relevant.

		(CSA Rep. 11, A-03; Reaffirmed: CSAPH Rep. 1, A-13)	
H-60.945	Neonatal Male Circumcision	1. Our AMA: (a) encourages training programs for pediatricians, obstetricians, and family physicians to incorporate information on the use of local pain control techniques for neonatal circumcision; (b) ~~supports the general principles of the 2012 Circumcision Policy Statement of the American Academy of Pediatrics, which reads as follows: "~~Evaluation of current evidence indicates that the health benefits of newborn male circumcision outweigh the risks and that the procedure's benefits justify access to this procedure for families who choose it. Specific benefits identified included prevention of urinary tract infections, penile cancer, and transmission of some sexually transmitted infections, including HIV.~~"~~ and (c) urges that as part of the informed consent discussion, the risks and benefits of pain control techniques for circumcision be thoroughly discussed to aid parents in making their decisions. 2. Our AMA encourages state Medicaid reimbursement of neonatal male circumcision. (CSA Rep. 10, I-99; Reaffirmed: CSAPH Rep. 1, A-09; Modified: Res. 503, A-13)	Retain as amended; still relevant.
H-60.963	Preventable Airway Obstructions in Children	The AMA supports educational programs to apprise the public of the dangers of airway obstruction hazards in children and on methods to prevent these hazards. (Res. 412, A-92; Reaffirmed: CSA Rep. 8, A-03; Modified: CSAPH Rep. 1, A-13)	Retain; still relevant.
H-60.973	Provision of Health Care and Parenting Classes to Adolescent Parents	1. It is the policy of the AMA (A) to encourage state medical and specialty societies to seek to increase the number of adolescent parenting programs within school settings which provide health care for infant and mother, and child development classes in addition to current high school courses and (B) to support programs directed toward increasing high school graduation rates, improving parenting skills and decreasing future social service dependence of teenage parents. 2. Our AMA will actively provide information underscoring the increased risk of poverty after adolescent pregnancy without marriage when combined with failure to complete high school. (Res. 422, I-91; Reaffirmed: Sunset Report, I-01; Reaffirmed: CSAPH Rep. 1, A-11; Appended: Res. 422, A-13)	Retain; still relevant.
H-60.975	Political Influence and the NIH	Our AMA (1) reaffirms its support for the long standing, uniformly accepted and merit-based scientific peer review system utilized by federal research agencies, including the National Institutes of Health; and (2) deplores the use of political influence to override decisions to support research proposals when those decisions were derived from scientific peer review. (Res. 526, I-91; Modified: Sunset Report, I-01; Reaffirmed: Res. 725, I-03; Modified: CSAPH Rep. 1, A-13)	Retain; still relevant.

H-75.994	Contraception and Sexually Transmitted ~~Diseases~~ Infections	Our AMA, in cooperation with state, county, and specialty medical societies, encourages physicians to educate their patients about sexually transmitted ~~diseases~~ infections, including HIV disease, and condom use. While such counseling may not be appropriate for all contraception patients, physicians should be encouraged to provide this information to any contraception patient who may benefit from being more aware of the risks of sexually transmitted ~~diseases~~ infections. (BOT Rep. E, A-89; Reaffirmation A-99; Reaffirmed and Title Change: CSA Rep. 4, A-03; Reaffirmed: CSAPH Rep. 1, A-13)	Retain as amended; still relevant.
H-90.977	Impairment and Disability Evaluations	It is the policy of the AMA: (1) that in settings where impairment and disability evaluations are required, physicians should determine medical impairment and their functional consequences, including those associated with HIV infection, using medically established and approved guidelines; and (2) to encourage physicians to contribute their medical expertise to disability determinations. (CSA Rep. 8, I-99; Reaffirmed and Title Change: CSA Rep. 4, A-03; Reaffirmed: CSAPH Rep. 1, A-13)	Retain; still relevant.
H-95.954	The Reduction of Medical and Public Health Consequences of Drug Use ~~Abuse~~	Our AMA: (1) encourages national policy-makers to pursue an approach to the problem of drug misuse ~~abuse~~ aimed at preventing the initiation of drug use, aiding those who wish to cease drug use, and diminishing the adverse consequences of drug use; (2) encourages policy-makers to recognize the importance of screening for alcohol and other drug use in a variety of settings, and to broaden their concept of addiction treatment to embrace a continuum of modalities and goals, including appropriate measures of harm reduction, which can be made available and accessible to enhance positive treatment outcomes for patients and society; (3) encourages the expansion of opioid maintenance programs so that opioid maintenance therapy can be available for any individual who applies and for whom the treatment is suitable. Training must be available so that an adequate number of physicians are prepared to provide treatment. Program regulations should be strengthened so that treatment is driven by patient needs, medical judgment, and drug rehabilitation concerns. Treatment goals should acknowledge the benefits of abstinence from drug use, or degrees of relative drug use reduction; (4) encourages the extensive application of needle and syringe exchange and distribution programs and the modification of restrictive laws and regulations concerning the sale and possession of needles and syringes to maximize the availability of sterile syringes and needles, while ensuring continued reimbursement for medically necessary needles and syringes. The need for such programs and modification of laws and regulations is urgent, considering the contribution of injection drug use to the epidemic of HIV infection; (5)	Retain as amended; still relevant.

		encourages a comprehensive review of the risks and benefits of U.S. state-based drug legalization initiatives, and that until the findings of such reviews can be adequately assessed, the AMA reaffirm its opposition to drug legalization; (6) strongly supports the ability of physicians to prescribe syringes and needles to patients who inject drugs ~~with injection drug addiction~~ in conjunction with addiction counseling in order to help prevent the transmission of contagious diseases; and (7) encourages state medical associations to work with state regulators to remove any remaining barriers to permit physicians to prescribe needles for patients. Res. 416, A-00; Reaffirmation I-00; Reaffirmed: CSAPH Rep. 1, A-10; Modified: CSAPH Rep. 2, I-13)	
H-95.956	Harm Reduction Through Addiction Treatment	The AMA ~~endorses~~ supports the concept of prompt access to treatment for chemically dependent patients, regardless of the type of addiction, and the AMA will work toward the implementation of such an approach nationwide. The AMA affirms that addiction treatment is a demonstrably viable and efficient method of reducing the harmful personal and social consequences of the inappropriate use of alcohol and other psychoactive drugs and urges the Administration and Congress to provide significantly increased funding for treatment of alcohol use disorders ~~alcoholism~~ and other ~~drug dependencies~~ substance use disorders and support of basic and clinical research so that the causes, mechanisms of action and development of addiction can continue to be elucidated to enhance treatment efficacy. (Res. 411, A-95; Appended: Res. 405, I-97; Reaffirmation I-03; Reaffirmed: CSAPH Rep. 1, A-13)	Retain as amended; still relevant.
H-95.961	Policy on ~~Illegal~~ Illicit Drug Use	The AMA discourages and condemns ~~illegal~~ illicit drug use, and encourages physicians to do all in their power to discourage the use of ~~illegal~~ illicit drugs in their communities and to refuse to assist anyone in obtaining drugs for non-medical use. (Res. 523, A-92; Reaffirmed: CSA Rep. 8, A-03; Reaffirmed: CSAPH Rep. 1, A-13)	Rescind based on stigmatizing language and discordance with more recent policy.
H-95.984	Issues in Employee Drug Testing	The AMA (1) reaffirms its commitment to educate physicians and the public about the scientific issues of drug testing; (2) supports monitoring the evolving legal issues in drug testing of employee groups, especially the issues of positive drug tests as a measure of health status and potential employment discrimination resulting therefrom; (3) takes the position that urine alcohol and other drug testing of employees should be limited to (a) preemployment examinations of those persons whose jobs affect the health and safety of others, (b) situations in which there is reasonable suspicion that an employee's (or physician's) job performance is impaired by alcohol and/or other drug use, (c) monitoring as part of a comprehensive program of treatment and rehabilitation of substance use disorders, and (d) urine, alcohol and other drug testing of all physicians and appropriate employees of health	Retain; still relevant.

		care institutions may be appropriate under these same conditions; and (4) urges employers who choose to establish alcohol and other drug testing programs to use confirmed, positive test results in employees primarily to motivate those employees to seek appropriate assistance with their alcohol or other drug problems, preferably through employee assistance programs. (CSA Rep. A, A-87; Reaffirmed: Sub. Res. 39, A-90, CSA Rep. D, I-90; BOT Rep. I, A-90; CSA Rep. 2, I-95; Reaffirmed: BOT Rep. 17, I-99; Modified and Reaffirmed: CSAPH Rep. 1, A-09; Reaffirmed: Res. 817, I-13)	
H-95.997	Cannabis Intoxication as a Criminal Defense	Our AMA believes a plea of cannabis intoxication not be a defense in any criminal proceedings. (BOT Rep. J, A-72; Reaffirmed: CLRPD Rep. C, A-89; Reaffirmed: Sunset Report, A-00; Reaffirmed: CSAPH Rep. 1, A-10; Modified: CSAPH Rep. 2, I-13)	Retain; still relevant.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 401
(A-23)

Introduced by: Washington

Subject: Metered Dose Inhalers and Greenhouse Gas Emissions

Referred to: Reference Committee D

Whereas, Climate change is a risk multiplier that threatens to unravel decades of development gains; and

Whereas, Nearly 10% of all US greenhouse gas emissions are from health care; and

Whereas, The house of medicine has a responsibility to limit its contribution to climate change because of its impact on human health; and

Whereas, The use of hydrofluorocarbons is a known contributor to climate change; and

Whereas, Metered-dose inhalers (MDIs) use hydrofluorocarbons as a propellant, making a significant contribution to the health care sector's greenhouse gas emissions; and

Whereas, MDIs remain an important part of asthma and COPD care and need to still be available, as dry-powdered inhalers are not the best option for everyone, dry-powdered inhalers nonetheless have been shown to have equal or superior efficacy and tolerability to MDIs, and thus should be developed and made available; therefore be it

RESOLVED, That our American Medical Association study the climate effects of metered-dose inhalers, options for reducing hydrofluorocarbon use in the medical sector, and strategies for encouraging the development of alternative inhalers with equal efficacy and less adverse effect on our climate. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 2/14/23

RELEVANT AMA POLICY

Global Climate Change and Human Health H-135.938

Our AMA: 1. Supports scientific consensus that the Earth is undergoing adverse global climate change and that anthropogenic contributions are significant. These climate changes have adversely affected the physical and mental health of people. We recognize that minoritized and marginalized populations, children, pregnant people, the elderly, rural communities, and those who are economically disadvantaged will suffer disproportionate harm from climate change.
2. Supports educating the medical community on the adverse public health effects of global climate change and incorporating the health implications of climate change into the spectrum of medical education, including topics such as population displacement, heat waves and drought, flooding, infectious and vector-borne diseases, and potable water supplies.
3. (a) Recognizes the importance of physician involvement in policymaking at the state, national, and global level and supports efforts to search for novel, comprehensive, and economically sensitive approaches to mitigating climate change to protect the health of the public; and (b) recognizes that whatever the etiology of global climate change, policymakers should work to reduce human contributions to such changes.
4. Encourages physicians to assist in educating patients and the public on the physical and mental health effects of climate change and on environmentally sustainable practices, and to serve as role models for promoting environmental sustainability.
5. Encourages physicians to work with local and state health departments to strengthen the public health infrastructure to ensure that the global health effects of climate change can be anticipated and responded to more efficiently, and that adaptation interventions are equitable and prioritize the needs of the populations most at risk.
6. Supports epidemiological, translational, clinical and basic science research necessary for evidence-based global climate change policy decisions related to health care and treatment.
7. Encourages physicians to assess for environmental determinants of health in patient history-taking and encourages the incorporation of assessment for environmental determinants of health in patient history-taking into physician training.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 402
(A-23)

Introduced by: Young Physicians Section

Subject: Encouraging Discussion of Family Planning Counseling as Part of Recommended Routine Health Maintenance

Referred to: Reference Committee D

Whereas, According to several organizations, for couples in which the female partner is under 35 years of age, "infertility is a disease historically defined by the failure to achieve a successful pregnancy after 12 months or more of regular, unprotected sexual intercourse"[1]; and

Whereas, Infertility affects 10-15% of couples,[2] but affects approximately 25% of female physicians, with the rate of female physicians seeking fertility evaluation and treatment at six times higher than that of the general population[3, 4, 5]; and

Whereas, Women of advanced maternal age have increased risks of adverse pregnancy outcomes, including lower chances of live birth and increased risks of miscarriage and birth defects[6]; and

Whereas, The peak child-bearing years unfortunately correspond to the peak career-building years for many; and

Whereas, According to the American College of Obstetricians and Gynecologists and the American Society for Reproductive Medicine, "the goal of pre-pregnancy care is to reduce the risk of adverse health effects for the woman, fetus, and neonate by working with the woman to optimize health, address modifiable risk factors, and provide education about healthy pregnancy"[7]; and

Whereas, "Pre-pregnancy counseling is appropriate whether the reproductive-aged patient is currently using contraception or planning pregnancy. Because health status and risk factors can change over time, pre-pregnancy counseling should occur several times during a woman's reproductive lifespan, increasing her opportunity for education and potentially maximizing her reproductive and pregnancy outcomes"[7]; and

Whereas, "Many chronic medical conditions such as diabetes, hypertension, psychiatric illness, and thyroid disease have implications for pregnancy outcomes, and should be optimally managed before pregnancy"[7]; and

Whereas, "Male infertility may occasionally be the presenting manifestation of an underlying life-threatening condition," and so the evaluation of the infertile male includes identification of "life- or health-threatening conditions that may underlie… fertility or associated medical comorbidities that require medical attention"[8]; and

Whereas, "The burden of infertility includes psychological, social and physical suffering. Documented consequences include: anxiety, depression, lowered life satisfaction, grief, fear, guilt, helplessness, reduced job performance, marital duress, dissolution and abandonment;

economic hardship, loss of social status, social stigma, social isolation and alienation, community ostracism, and physical violence"[9, 10, 11, 12]; and

Whereas, The consequences of unwanted childlessness can "vary considerably, from an almost universal decrease in well-being in infertile individuals, to significant emotional and psychological effects, disruption in social relationships and, at the severe end of the spectrum, death due to domestic violence, suicide or starvation and disease exacerbated by neglect"[9, 10.] ; and

Whereas, "It is often argued that public resources should not be used to help infertile couples reproduce when the planet is already home to a huge (and growing) population which may not be able to be sustainably supported," but this overpopulation argument "denies the importance of reproductive autonomy and distributes social responsibility for population pressures unfairly on the infertile"[9,10]; and

Whereas, "Infertility is often denied classification as a public health issue because of concerns over the cost of treatment," but cost-effective and creative solutions to infertility (such as preventing STIs) are potentially available, and infertility treatment should be considered part of international efforts to promote women's reproductive health[10]; and

Whereas, The discipline of public health can should be used to address infertility, by raising awareness of the scope and significance of unwanted childlessness, improving collection and surveillance of health data, generating informed public debate, and developing public policies on infertility and its treatment; and

Whereas, The U.S. Preventive Services Task Force[13] works to improve the health of people nationwide by making evidence-based recommendations about clinical preventive services; therefore be it

RESOLVED, That our American Medical Association work with other stakeholders to encourage discussion of family planning counseling with all individuals with reproductive potential as part of routine health maintenance. (Directive to Take Action)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Preconception Care H-425.976

1. Our AMA supports the 10 recommendations developed by the Centers for Disease Control and Prevention for improving **preconception** health **care** that state:
(1) Individual responsibility across the lifespan--each woman, man, and couple should be encouraged to have a reproductive life plan;
(2) Consumer awareness--increase public awareness of the importance of **preconception** health behaviors and **preconception care** services by using information and tools appropriate across various ages; literacy, including health literacy; and cultural/linguistic contexts;
(3) Preventive visits--as a part of primary **care** visits, provide risk assessment and educational and health promotion counseling to all women of childbearing age to reduce reproductive risks and improve pregnancy outcomes;
(4) Interventions for identified risks--increase the proportion of women who receive interventions as follow-up to **preconception** risk screening, focusing on high priority interventions (i.e., those with evidence of effectiveness and greatest potential impact);
(5) Inter-conception **care**--use the inter-conception period to provide additional intensive interventions to women who have had a previous pregnancy that ended in an adverse outcome (i.e., infant death, fetal loss, birth defects, low birth weight, or preterm birth);
(6) Pre-pregnancy checkup--offer, as a component of maternity **care**, one pre-pregnancy visit for couples and persons planning pregnancy;
(7) Health insurance coverage for women with low incomes--increase public and private health insurance coverage for women with low incomes to improve access to preventive women's health and pre-conception and inter-conception **care**;
(8) Public health programs and strategies--integrate components of pre-conception health into existing local public health and related programs, including emphasis on inter-conception interventions for women with previous adverse outcomes;
(9) Research--increase the evidence base and promote the use of the evidence to

improve **preconception** health; and
(10) Monitoring improvements--maximize public health surveillance and related research mechanisms to monitor **preconception** health.
2. Our AMA supports the education of physicians and the public about the importance of **preconception care** as a vital component of a woman's reproductive health.
3. Our AMA supports the use of pregnancy intention screening and contraceptive screening in appropriate women and men as part of routine well-**care** and recommend it be appropriately documented in the medical record.
Citation: Res. 414, A-06Reaffirmation I-07Reaffirmed: CSAPH Rep. 01, A-17Appended: Res. 401, A-19

Recognition of Infertility as a Disease H-420.952
Our AMA supports the World Health Organization's designation of infertility as a disease state with multiple etiologies requiring a range of interventions to advance fertility treatment and prevention.
Citation: Res. 518, A-17

Resident and Fellow Access to Fertility Preservation H-310.902
Our AMA: (1) encourages insurance coverage for fertility preservation and infertility treatment within health insurance benefits for residents and fellows offered through graduate medical education programs; and (2) supports the accommodation of residents and fellows who elect to pursue fertility preservation and infertility treatment, including but not limited to, the need to attend medical visits to complete the gamete preservation process and to administer medications in a time-sensitive fashion.
Citation: Res. 302, A-22;

E-4.2.1 Assisted Reproductive Technology
Assisted reproduction offers hope to patients who want children but are unable to have a child without medical assistance. In many cases, patients who seek assistance have been repeatedly frustrated in their attempts to have a child and are psychologically very vulnerable. Patients whose health insurance does not cover **assisted reproductive** services may also be financially vulnerable. Candor and respect are thus essential for ethical practice.

"**Assisted reproductive technology**" is understood as all treatments or procedures that include the handling of human oocytes or embryos. It encompasses an increasingly complex range of interventions—such as therapeutic donor insemination, ovarian stimulation, ova and sperm retrieval, in vitro fertilization, gamete intrafallopian transfer—and may involve multiple participants.

Physicians should increase their awareness of infertility treatments and options for their patients. Physicians who offer **assisted reproductive** services should:
(a) Value the well-being of the patient and potential offspring as paramount.
(b) Ensure that all advertising for services and promotional materials are accurate and not misleading.
(c) Provide patients with all of the information they need to make an informed decision, including investigational techniques to be used (if any); risks, benefits, and limitations of treatment options and alternatives, for the patient and potential offspring; accurate, clinic-specific success rates; and costs.
(d) Provide patients with psychological assessment, support and counseling or a referral to such services.
(e) Base fees on the value of the service provided. Physicians may enter into agreements with patients to refund all or a portion of fees if the patient does not conceive where such agreements are legally permitted.
(f) Not discriminate against patients who have difficult-to-treat conditions, whose infertility has multiple causes, or on the basis of race, socioeconomic status, or sexual orientation or gender identity.
(g) Participate in the development of peer-established guidelines and self-regulation.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 403
(A-23)

Introduced by: Medical Student Section

Subject: Denouncing the Use of Solitary Confinement in Correctional Facilities and Detention Centers

Referred to: Reference Committee D

Whereas, Correctional facilities, which include prisons and jails, are facilities that house people who have been accused and/or convicted of a crime[1]; and

Whereas, Detention centers refer to facilities that hold undocumented immigrants, refugees, people awaiting trial or sentence, or young offenders for short periods of time[2]; and

Whereas, Solitary confinement is the physical and social isolation of an incarcerated individual confined to a cell for 22-24 hours per day, routinely used as a punishment for disciplinary violations in correctional facilities and detention centers[3]; and

Whereas, Solitary confinement is used as punishment for minor nonviolent infractions, such as not standing up for headcount or not returning a food tray[3,4]; and

Whereas, Recent whistleblower accounts describe the use of solitary confinement as a means of reprisal for reporting unsafe and unsanitary conditions[5,6]; and

Whereas, Solitary confinement is distinguished from medical isolation and quarantine because solitary confinement is used punitively while medical isolation is used to reduce the spread of infectious disease[7]; and

Whereas, Solitary confinement consists of extended lengths of social separation, sensory deprivation, and the revocation of prison privileges, while medical isolation is a temporary measure overseen by medical professionals who treat prisoners with compassion and provide prisoners resources to aid their recovery[7]; and

Whereas, In the United States, approximately 4.5% of incarcerated individuals, or around 60,000 people, currently reside in some form of solitary confinement[8]; and

Whereas, A year in solitary confinement costs three times as much per prisoner, or an average of $75,000 per prisoner per year[9]; and

Whereas, Individuals in solitary confinement often suffer from sensory deprivation and are offered few or no educational, vocational, or rehabilitative programs[10]; and

Whereas, Chronic social isolation stress, as perpetuated by solitary confinement, is associated with a higher risk of cognitive deterioration, learning deficits, anxiety, depression, post-traumatic stress disorder, and psychosomatic behavior changes[11-13]; and

Whereas, There is a strong association between solitary confinement and self-harm, for instance, one *JAMA* study found persons that held in solitary confinement had a 78% higher suicide rate within the first year after release and another study analyzing over 240,000 incarcerations found that prisoners who experienced solitary confinement accounted for over 50% of self-harm incidents despite accounting for only 7.3% of prison admissions[4,13,14]; and

Whereas, Individuals who spend time in solitary confinement are 127% more likely to die of an opioid overdose in the first two weeks after release and 24% more likely to die from any cause in the first year after release, even after controlling for potential confounding factors, including substance use and mental health disorders[14]; and

Whereas, Formerly incarcerated individuals who spend time in solitary confinement have a higher overall 5-year mortality than those who do not[15]; and

Whereas, A United States Department of Justice study indicates that inmates with mental illnesses are more likely to be put in solitary confinement and that solitary confinement further exacerbates their mental illnesses[16]; and

Whereas, Solitary confinement increases the likeliness of episodes of psychosis and long-term neurobiological consequences, increasing mentally ill prisoners' need for psychiatric services[12,13]; and

Whereas, Prisoners who spend any amount of time in solitary confinement have higher rates of homelessness and unemployment after release, in part due to the lasting psychological stress of confinement[17]; and

Whereas, Spending any amount of time in solitary confinement is associated with two times the risk of being reincarcerated within two weeks of release and other studies found a 10-25% increased overall risk of recidivism[14,18-20]; and

Whereas, Parolees released from solitary confinement commit new crimes in their community 35% more than parolees released from the general prison population, threatening community safety[19]; and

Whereas, Transitioning prisoners from solitary confinement to the general prison population prior to release reduces recidivism rates[20]; and

Whereas, A 2018 nationwide survey of correctional facilities found that, in most jurisdictions, certain racial minorities are disproportionately more likely to be placed in solitary confinement while white prisoners are 14% less likely to be placed in solitary confinement[8]; and

Whereas, A study of over 100,000 prisoners found that the odds that gay and bisexual men will be placed in solitary confinement are 80% greater than heterosexual men and the odds are 190% greater that lesbian and bisexual women will be placed in solitary confinement than heterosexual women[21]; and

Whereas, The United Nations and The International Convention on the Rights of the Child prohibit the solitary confinement of anyone under the age of 18[22,23]; and

Whereas, In 2015 the United Nations General Assembly adopted "The Standard Minimum Rules for the Treatment of Prisoners," also known as the "Mandela Rules," which condemn the

use of solitary confinement for prisoners with mental or physical disabilities when their conditions would be exacerbated by such measures[23]; and

Whereas, The same rules call for the prohibition of prolonged solitary confinement, longer than 15 days, because it is "cruel, inhuman or degrading treatment or punishment"[23]; and

Whereas, The Mandela Rules further state that "solitary confinement shall be used only in exceptional cases as a last resort, for as short a time as possible and subject to independent review"[23]; and

Whereas, Solitary confinement is a risk for self-harm and predisposes to a multitude of physical and psychological health issues, and should be considered cruel and unusual punishment and a human rights violation[24]; and

Whereas, At least some United States correctional facilities have managed to reform and reduce their use of solitary confinement in order to better respect the dignity and human rights of inmates while still maintaining the safety of correctional officers and inmates in jails and prisons[18]; and

Whereas, In Colorado, state prisons have reduced their use of solitary confinement by 85% without any other interventions and have seen a concurrent drop in the rate of prisoner on staff violence[18]; and

Whereas, In Mississippi, when correctional facilities reduced their solitary confinement population, violent incidents also dropped by nearly 70%[19]; and

Whereas, A 2015 study found that placing male inmates who were violent in solitary confinement did not effectively deter or alter the probability, timing, or development of future misconduct or violence[25]; and

Whereas, Some correctional facilities have created special units to protect vulnerable groups together with similar access to privileges and programs available to the general population without using solitary confinement as a means of protection[18]; and

Whereas, Alternatives to solitary confinement exist for individuals with mental illness and for sexual minorities, such as the Clinical Alternative to Punitive Segregation (CAPS) unit in New York City[26]; and

Whereas, American Medical Association policy H-60.922 opposes the use of solitary confinement of juveniles for disciplinary purposes in correctional facilities; therefore be it

RESOLVED, That our American Medical Association policy H-430.983 be amended by addition and deletion to read as follows:

~~Reducing~~ Opposing the Use of Restrictive Housing ~~in~~ for Prisoners ~~with Mental Illness~~ H-430.983

Our AMA will: (1) ~~support limiting~~ oppose the use of solitary confinement of any length~~, with rare exceptions,~~ for incarcerated persons ~~with mental illness~~, in ~~adult~~ correctional facilities and detention centers, except for medical isolation or to protect individuals who are actively being harmed or will be immediately harmed by a physically violent individual, in which cases

confinement may be used for as short a time as possible; ~~and~~ (2) while solitary confinement practices are still in place, support efforts to ensure that the mental and physical health of all individuals placed in solitary confinement are regularly monitored by health professionals; and (3) encourage appropriate stakeholders to develop and implement safe, humane, and ethical alternatives to solitary confinement for incarcerated persons in all correctional facilities.; ~~and (3) encourage appropriate stakeholders to develop and implement alternatives to solitary confinement for incarcerated persons in all correctional facilities.~~ (Modify Current Policy)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Reducing the Use of Restrictive Housing in Prisoners with Mental Illness H-430.983
Our AMA will: (1) support limiting the use of solitary confinement of any length, with rare exceptions, for incarcerated persons with mental illness, in adult correctional facilities; (2) support efforts to ensure that the mental and physical health of all individuals placed in solitary confinement are regularly monitored by health professionals; and (3) encourage appropriate stakeholders to develop and implement alternatives to solitary confinement for incarcerated persons in all correctional facilities.
Citation: Res. 412, A-18;

Solitary Confinement of Juveniles in Legal Custody H-60.922
Our AMA: (1) opposes the use of solitary confinement in juvenile correction facilities except for extraordinary circumstances when a juvenile is at acute risk of harm to self or others; (2) opposes the use of solitary confinement of juveniles for disciplinary purposes in correctional facilities; and (3) supports that isolation of juveniles for clinical or therapeutic purposes must be conducted under the supervision of a physician.
Citation: Res. 3, I-14; Reaffirmed: CSAPH Rep. 08, A-16; Reaffirmed: Res. 917, I-16;

Discriminatory Policies that Create Inequities in Health Care H-65.963
Our AMA will: (1) speak against policies that are discriminatory and create even greater health disparities in medicine; and (2) be a voice for our most vulnerable populations, including sexual, gender, racial and ethnic minorities, who will suffer the most under such policies, further widening the gaps that exist in health and wellness in our nation.
Citation: Res. 001, A-18;

Support of Human Rights and Freedom H-65.965
Our AMA: (1) continues to support the dignity of the individual, human rights and the sanctity of human life, (2) reaffirms its long-standing policy that there is no basis for the denial to any human being of equal rights, privileges and responsibilities commensurate with his or her individual capabilities and ethical character because of an individual's sex, sexual orientation, gender, gender identity or transgender status, race, religion, disability, ethnic origin, national origin or age; (3) opposes any discrimination based on an individual's sex, sexual orientation, gender identity, race, appearance, religion, disability, ethnic origin, national origin or age and any other such reprehensible policies; (4) recognizes that hate crimes pose a significant threat to the public health and social welfare of the citizens of the United States, urges expedient passage for appropriate hate crimes prevention legislation in accordance with our AMA's policy through letters to members of Congress; and registers support for hate crimes prevention legislation, via letter, to the President of the United States.
Citation: CCB/CLRPD Rep. 3, A-14; Reaffirmed in lieu of: Res. 001, I-16; Reaffirmation: A-17; Modified: Res. 013, A-22; Reaffirmed: BOT Rep. 5, I-22;

Human Rights and Health Professionals H-65.981
The AMA opposes torture in any country for any reason; urges appropriate support for victims of torture; condemns the persecution of physicians and other health care personnel who treat torture victims.
Citation: (Sub. Res. 615, A-97; Reaffirmed: Sub. Res. 12, A-04; Reaffirmed: Sub. Res. 10, A-05; Reaffirmed: CEJA Rep. 5, A-15)

Human Rights H-65.997
Our AMA endorses the World Medical Association's Declaration of Tokyo which are guidelines for medical doctors concerning torture and other cruel, inhuman or degrading treatment or punishment in relation to detention and imprisonment.
Citation: (BOT Rep. M, I-78; Reaffirmed: CLRPD Rep. C, A-89; Reaffirmed: Sunset Report, A-00; Reaffirmed: Sub. Res. 12, A-04; Reaffirmed: CEJA Rep. 8, A-14)

Appropriate Placement of Transgender Prisoners H-430.982
1. Our AMA supports the ability of transgender prisoners to be placed in facilities, if they so choose, that are reflective of their affirmed gender status, regardless of the prisoners genitalia, chromosomal make-up, hormonal treatment, or non-, pre-, or post-operative status.
2. Our AMA supports that the facilities housing transgender prisoners shall not be a form of administrative segregation or solitary confinement.
Citation: BOT Rep. 24, A-18;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 404
(A-23)

Introduced by: Medical Student Section

Subject: Additional Interventions to Prevent Human Papillomavirus (HPV) infection and HPV-Associated Cancers

Referred to: Reference Committee D

Whereas, Human papillomavirus (HPV) is the most common sexually transmitted infection and is known to cause cervical, vulvar, vaginal, penile, anal, and oropharyngeal cancer[1]; and

Whereas, Smoking, immunosuppression, a history of Chlamydia infection, long term oral contraceptive use, and an increased number of sexual partners is associated with higher risk of developing cervical cancer[1,2]; and

Whereas, No current screening test exists to detect HPV infection in people who have penises[4]; and

Whereas, No current screening test exists to detect HPV infection in the oropharynx[4]; and

Whereas, From 1995-2012, the proportion of oropharyngeal squamous cell carcinomas driven by HPV infection increased substantially in people with penises (36% to 72%) and people with cervixes (29% to 77%)[5]; and

Whereas, The nine-valent HPV vaccination is efficacious against HPV strains known to cause anogenital warts, cervical, vulvar, vaginal, penile, anal, and oropharyngeal cancers[1,8]; and

Whereas, HPV vaccination programs in the United States have been expanded beyond female-only programs to prevent HPV infection in all people[6]; and

Whereas, HPV vaccination is now FDA approved up to 46 years of age for all people, and is recommended routinely for individuals aged 11-26 and may be recommended in 27-45 year-olds after discussion with their clinician[9]; and

Whereas, Carceral facilities have limited history of providing HPV vaccinations, while incarcerated individuals have low self-reported vaccination rates compared to the non-incarcerated population[10,11]; and

Whereas, Most incarcerated women between 18-26 years of age have not received HPV immunization but would be willing to if offered[11]; and

Whereas, People with criminal-legal histories are five times more likely to develop cervical cancer in their lifetimes than the general population[10]; and

Whereas, The Federal Bureau of Prisons' Clinical Guidelines support routine cervical cancer screening in carceral facilities as a means of cervical cancer prevention[6]; and

Whereas, Many carceral facilities under state and federal jurisdiction are not equipped to provide basic gynecological medical care including gynecologic testing and procedures that require specialized diagnostic equipment[7]; and

Whereas, Some carceral facility administrators and local health departments have demonstrated an interest in providing HPV vaccination to people who are incarcerated[12,13]; and

Whereas, Successful HPV vaccination programs have been introduced through collaborations between carceral facilities and health departments[12,13]; and

Whereas, Between 32% and 42% of formerly incarcerated individuals were medically insured eight to ten months after release from their carceral facility[14]; and

Whereas, Uninsured and underinsured individuals are unlikely to have access to routine and preventive medical care, including HPV immunization and cervical dysplasia treatment[15]; and

Whereas, A 2019 analysis from the US National Health Interview Survey guideline-concordant cervical cancer screening showed disparities in cervical cancer screening by race, sexual orientation, and rural residency[16]; and

Whereas, These disparities resulted in a lack of timely diagnosis and treatment for cervical pre-cancers, leading to worse outcomes and disparities in mortality from cervical cancer[17,18]; and

Whereas, Black women had a 19% increase in mortality risk compared to white women despite controlling for age, stage, histology, and treatment[17]; and

Whereas, Barriers to screening include personal and structural barriers such as distrust in the healthcare system, transportation, cost, time off work, and lack of access to facilities equipped for cervical cancer screening[17,18]; and

Whereas, Screening for HPV commonly consists of so-called “primary screening” for high risk HPV (hrHPV) DNA in samples from a patient’s cervix using polymerase chain reaction (PCR), and cytology wherein cervical samples are microscopically examined for presence of dysplasia or neoplasia[19]; and

Whereas, Co-testing refers to screening with both primary screening and cytology[19]; and

Whereas, The use of a liquid-based, thin layer preparation technique for HPV cytology over conventional preparation techniques allows for dual testing of HPV to gather further information about cervical cancer risk[20]; and

Whereas, Self-sampling is a type of primary screening where patients collect a vaginal sample using various collection methods including tampon, brush, swag, lavage, or vaginal patch either at home or at a clinic and then send those samples out to a third party for analysis[10]; and

Whereas, Self-sampling for HPV screening is not currently approved by the US Food and Drug Administration (FDA)[21]; and

Whereas, In a systematic review of over 40 studies in the literature, a recent meta-analysis found that pooled estimated sensitivity measuring cervical intraepithelial neoplasia (CIN) 2+ of primary HPV testing, conventional cytology testing alone, or liquid-based cytology alone was

89.9%, 62.5%, and 72.9%, respectively, while the pooled specificity of the tests were 89.9%, 96.6%, and 90.3%, respectively[22]; and

Whereas, The same study found that for detection of higher-grade CIN 3+, a comparison of primary testing compared to conventional cytology found a relative sensitivity of 1.46 (95% CI: 1.12 to 1.91) and a relative specificity of 0.95 (95% CI, 0.93 to 0.97), while comparison of primary hrHPV testing to liquid-based cytology in measuring CIN 3+ was found to have a relativity sensitivity of 1.17 (95% CI, 1.07 to 1.28) and a relative specificity of 0.96 (95% CI: 0.95 to 0.97)[22]; and

Whereas, In a meta-analysis of 36 studies, HPV testing on self-samples had a pooled sensitivity of 76% (85%, CI 69-82) for CIN 2+ and 84% (95% CI, 72-92) for CIN 3+, while the pooled specificity was 86% (95%, 83-89) and 87% (95%, 84-90) to exclude CIN 2+ and CIN 3+, respectively[23]; and

Whereas, Self-testing was found to have lower sensitivity and specificity in a comparison of clinician-taken samples, with a ratio of 0.88 (95% CI, 0.85-0.91) for CIN 2+ and a ratio of 0.96 (95% CI, 0.95-0.97) for CIN 2+[23]; and

Whereas, Studies have shown conflicting results regarding the sensitivity/specificity of self-sampling compared to clinician-collected samples for HPV testing[21,23,24]; and

Whereas, Primary HPV testing has been shown in several analyses to cause an increase in detection of HPV and a decrease in cost burden to the healthcare system, and may be more cost-effective than co-testing[25-30]; and

Whereas, Emerging international evidence, particularly from the United Kingdom, suggests, that self-sampling for HPV may be a cost-effective approach for cervical cancer screening[31-33]; and

Whereas, Compared to physician-administered testing, HPV self-sampling has been shown to increase equity in cervical cancer screening by offering a greater reach to ethnic minority women, sexual minority women, as well as women from lower socioeconomic backgrounds, therefore helping to reduce disparities in cervical cancer screening[34-37]; and

Whereas, Traditional Medicaid includes mandatory family planning service benefits for individuals of childbearing age, though it provides no formal definition for “family planning,” leading to state-to-state variation in the services covered by this benefit[38]; and

Whereas, While all states provide Medicaid coverage or public assistance programs for cervical cancer screening, the Affordable Care Act (ACA) expanded Medicaid and in so doing creating a new eligibility category which has federally-specified coverage requirements for family planning (including screening services), but these new requirements do not apply to states with a traditional Medicaid program only who have not expanded Medicaid[38]; and

Whereas, For US citizens not eligible for Medicaid, the CDC also operates the National Breast and Cervical Cancer Early Detection Program (AKA the Early Detection Program) to provide cancer screening and diagnostic services to people who are low-income, uninsured, or underinsured[39]; and

Whereas, Medicare covers all possible screening options currently recommended by the AAFP, ACS, ACOG, and USPSTF with the exception of primary HPV testing[40]; and

Whereas, In their 2015 decision memo covering co-testing, the Center for Medicare and Medicaid Services (CMS) acknowledged that ongoing studies were evaluating HPV for primary, stand alone screening[41]; and

Whereas, AMA policy H-430.986 supports programs and staff training necessary to provide gynecologic care for incarcerated women and adolescent females; and

Whereas, AMA policy H-440.872 supports HPV vaccination and cervical cancer prevention worldwide and AMA Policy D-440.955 advocates for "the development of vaccine assistance programs to meet HPV vaccination needs of uninsured and underinsured populations"; therefore be it

RESOLVED, That our American Medical Association amend Policy H-440.872, HPV Vaccine and Cervical Cancer Prevention Worldwide, by addition to read as follows:

HPV Vaccine and Cervical Cancer Prevention Worldwide H-440.872

1. Our AMA (a) urges physicians to educate themselves and their patients about HPV and associated diseases, HPV vaccination, as well as routine HPV related cancer screening; and (b) encourages the development and funding of programs targeted at HPV vaccine introduction and HPV related cancer screening in countries without organized HPV related cancer screening programs.
2. Our AMA will intensify efforts to improve awareness and understanding about HPV and associated diseases in all individuals, regardless of sex, such as, but not limited to, cervical cancer, head and neck cancer, anal cancer, and genital cancer, the availability and efficacy of HPV vaccinations, and the need for routine HPV related cancer screening in the general public.
3. Our AMA:
(a) encourages the integration of HPV vaccination and routine cervical cancer screening into all appropriate health care settings and visits,
(b) supports the availability of the HPV vaccine and routine cervical cancer screening to appropriate patient groups that benefit most from preventive measures, including but not limited to low-income and pre-sexually active populations,
(c) recommends HPV vaccination for all groups for whom the federal Advisory Committee on Immunization Practices recommends HPV vaccination.
4. Our AMA will encourage appropriate stakeholders to investigate means to increase HPV vaccination rates by facilitating administration of HPV vaccinations in community-based settings including school settings.
5. Our AMA will study requiring HPV vaccination for school attendance.
6. Our AMA encourages collaboration with stakeholders to provide human papillomavirus vaccination to people who are incarcerated for the prevention of HPV-associated cancers. (Modify Current HOD Policy); and be it further

RESOLVED, That our AMA amend policy H-55.971, "Screening and Treatment for Breast and Cervical Cancer Risk Reduction", by addition and deletion to read as follows:

Screening and Treatment for Breast and Cervical Cancer Risk Reduction H-55.971

1. Our AMA supports programs to screen all ~~women~~ individuals with relevant anatomy for breast and cervical cancer and that government funded programs be available for low income ~~women~~ individuals; the development of public information and educational programs with the goal of informing all ~~women~~ individuals with relevant anatomy about routine cancer screening in order to reduce their risk of dying from cancer; and increased funding for comprehensive programs to screen low income ~~women~~ individuals for breast and cervical cancer and to assure access to definitive treatment.
2. Our AMA encourages state and local medical societies to monitor local public health screening programs to ensure that they are linked to treatment resources in the public or private sector.
3. Our AMA encourages efforts by the Centers for Medicare and Medicaid Services to evaluate and review their current cervical cancer screening policies in an effort to expand coverage for HPV testing including but not limited to in-office primary HPV testing.

(Modify Current HOD Policy); and be it further

RESOLVED, That our AMA support further research by relevant stakeholders of HPV self-sampling in the United States to determine whether it can decrease health care disparities in cervical cancer screening. (New HOD Policy)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 3/27/23

RELEVANT AMA POLICY

HPV Vaccine and Cervical Cancer Prevention Worldwide H-440.872
HPV Vaccine and Cervical Cancer Prevention Worldwide, H-440.872
1. Our AMA (a) urges physicians to educate themselves and their patients about HPV and associated diseases, HPV vaccination, as well as routine HPV related cancer screening; and (b) encourages the development and funding of programs targeted at HPV vaccine introduction and HPV related cancer screening in countries without organized HPV related cancer screening programs.
2. Our AMA will intensify efforts to improve awareness and understanding about HPV and associated diseases in all individuals, regardless of sex, such as, but not limited to, cervical cancer, head and neck cancer, anal cancer, and genital cancer, the availability and efficacy of HPV vaccinations, and the need for routine HPV related cancer screening in the general public.
3. Our AMA:
(a) encourages the integration of HPV vaccination and routine cervical cancer screening into all appropriate health care settings and visits,
(b) supports the availability of the HPV vaccine and routine cervical cancer screening to appropriate patient groups that benefit most from preventive measures, including but not limited to low-income and pre-sexually active populations,
(c) recommends HPV vaccination for all groups for whom the federal Advisory Committee on Immunization Practices recommends HPV vaccination.
4. Our AMA will encourage appropriate stakeholders to investigate means to increase HPV vaccination rates by facilitating administration of HPV vaccinations in community-based settings including school settings.
5. Our AMA will study requiring HPV vaccination for school attendance.
Citation: Res. 503, A-07; Appended: Res. 6, A-12; Reaffirmed: CSAPH Rep. 1, A-22; Reaffirmation: A-22; Modified: Res. 916, I-22;

Screening for HPV-Related Anal Cancer H-460.913
Our AMA supports: (1) continued research on the diagnosis and treatment of anal cancer and its precursor lesions, including the evaluation of the anal pap smear as a screening tool for anal cancer; (2) advocacy efforts to implement screening for anal cancer for high-risk populations; and (3) national medical specialty organizations and other stakeholders in developing guidelines for interpretation, follow up, and management of anal cancer screening results.
Citation: Res. 512, A-04; Reaffirmed: CSAPH Rep. 1, A-14; Appended: Res. 421, A-22;

Insurance Coverage for HPV Vaccine D-440.955
Our AMA:
(1) supports the use and administration of Human Papillomavirus vaccine as recommended by the Advisory Committee on Immunization Practices;
(2) encourages insurance carriers and other payers to appropriately cover and adequately reimburse the HPV vaccine as a standard policy benefit for medically eligible patients; and
(3) will advocate for the development of vaccine assistance programs to meet HPV vaccination needs of uninsured and underinsured populations.
Citation: Res. 818, I-06; Reaffirmed: CMS Rep. 01, A-16;

Health Care While Incarcerated H-430.986
1. Our AMA advocates for adequate payment to health care providers, including primary care and mental health, and addiction treatment professionals, to encourage improved access to comprehensive physical and behavioral health care services to juveniles and adults throughout the incarceration process from intake to re-entry into the community.
2. Our AMA advocates and requires a smooth transition including partnerships and information sharing

between correctional systems, community health systems and state insurance programs to provide access to a continuum of health care services for juveniles and adults in the correctional system.
3. Our AMA encourages state Medicaid agencies to accept and process Medicaid applications from juveniles and adults who are incarcerated.
4. Our AMA encourages state Medicaid agencies to work with their local departments of corrections, prisons, and jails to assist incarcerated juveniles and adults who may not have been enrolled in Medicaid at the time of their incarceration to apply and receive an eligibility determination for Medicaid.
5. Our AMA advocates for states to suspend rather than terminate Medicaid eligibility of juveniles and adults upon intake into the criminal legal system and throughout the incarceration process, and to reinstate coverage when the individual transitions back into the community.
6. Our AMA advocates for Congress to repeal the “inmate exclusion” of the 1965 Social Security Act that bars the use of federal Medicaid matching funds from covering healthcare services in jails and prisons.
7.Our AMA advocates for Congress and the Centers for Medicare & Medicaid Services (CMS) to revise the Medicare statute and rescind related regulations that prevent payment for medical care furnished to a Medicare beneficiary who is incarcerated or in custody at the time the services are delivered.
8. Our AMA advocates for necessary programs and staff training to address the distinctive health care needs of women and adolescent females who are incarcerated, including gynecological care and obstetrics care for individuals who are pregnant or postpartum.
9. Our AMA will collaborate with state medical societies, relevant medical specialty societies, and federal regulators to emphasize the importance of hygiene and health literacy information sessions, as well as information sessions on the science of addiction, evidence-based addiction treatment including medications, and related stigma reduction, for both individuals who are incarcerated and staff in correctional facilities.
10. Our AMA supports: (a) linkage of those incarcerated to community clinics upon release in order to accelerate access to comprehensive health care, including mental health and substance use disorder services, and improve health outcomes among this vulnerable patient population, as well as adequate funding; (b) the collaboration of correctional health workers and community health care providers for those transitioning from a correctional institution to the community; (c) the provision of longitudinal care from state supported social workers, to perform foundational check-ins that not only assess mental health but also develop lifestyle plans with newly released people; and (d) collaboration with community-based organizations and integrated models of care that support formerly incarcerated people with regard to their health care, safety, and social determinant of health needs, including employment, education, and housing.
11. Our AMA advocates for the continuation of federal funding for health insurance benefits, including Medicaid, Medicare, and the Children’s Health Insurance Program, for otherwise eligible individuals in pre-trial detention.
12. Our AMA advocates for the prohibition of the use of co-payments to access healthcare services in correctional facilities.
Citation: CMS Rep. 02, I-16; Appended: Res. 417, A-19; Appended: Res. 420, A-19; Modified: Res. 216, I-19; Modified: Res. 503, A-21; Reaffirmed: Res. 229, A-21; Modified: Res. 127, A-22;

Support for Health Care Services to Incarcerated Persons D-430.997
Our AMA will:
(1) express its support of the National Commission on Correctional Health Care Standards that improve the quality of health care services, including mental health services, delivered to the nation's correctional facilities;
(2) encourage all correctional systems to support NCCHC accreditation;
(3) encourage the NCCHC and its AMA representative to work with departments of corrections and public officials to find cost effective and efficient methods to increase correctional health services funding;
(4) continue support for the programs and goals of the NCCHC through continued support for the travel expenses of the AMA representative to the NCCHC, with this decision to be reconsidered every two years in light of other AMA financial commitments, organizational memberships, and programmatic priorities;
(5) work with an accrediting organization, such as National Commission on Correctional Health Care (NCCHC) in developing a strategy to accredit all correctional, detention and juvenile facilities and will advocate that all correctional, detention and juvenile facilities be accredited by the NCCHC no later than 2025 and will support funding for correctional facilities to assist in this effort; and

(6) support an incarcerated person's right to: (a) accessible, comprehensive, evidence-based contraception education; (b) access to reversible contraceptive methods; and (c) autonomy over the decision-making process without coercion.
Citation: Res. 440, A-04; Amended: BOT Action in response to referred for decision Res. 602, A-00; Reaffirmation I-09; Reaffirmation A-11; Reaffirmed: CSAPH Rep. 08, A-16; Reaffirmed: CMS Rep, 02, I-16; Appended: Res. 421, A-19; Appended: Res. 426, A-19;

Sexually Transmitted Infections Among Adolescents, Including Incarcerated Juveniles D-60.994
Our AMA will increase its efforts to work with the National Commission on Correctional Health Care to ensure that juveniles in correctional facilities receive comprehensive screening and treatment for sexually transmitted infections and sexual abuse.
Citation: Res. 401, A-01; Modified: CSAPH Rep. 1, A-11; Reaffirmed: CSAPH Rep. 1, A-21;

Screening and Treatment for Breast and Cervical Cancer Risk Reduction H-55.971
1. Our AMA supports programs to screen all women for breast and cervical cancer and that government funded programs be available for low income women; the development of public information and educational programs with the goal of informing all women about routine cancer screening in order to reduce their risk of dying from cancer; and increased funding for comprehensive programs to screen low income women for breast and cervical cancer and to assure access to definitive treatment.
2. Our AMA encourages state and local medical societies to monitor local public health screening programs to ensure that they are linked to treatment resources in the public or private sector.
Citation: (CCB/CLRPD Rep. 3, A-14)

Screening for HPV-Related Anal Cancer H-460.913
Our AMA supports: (1) continued research on the diagnosis and treatment of anal cancer and its precursor lesions, including the evaluation of the anal pap smear as a screening tool for anal cancer; (2) advocacy efforts to implement screening for anal cancer for high-risk populations; and (3) national medical specialty organizations and other stakeholders in developing guidelines for interpretation, follow up, and management of anal cancer screening results.
Citation: Res. 512, A-04; Reaffirmed: CSAPH Rep. 1, A-14; Appended: Res. 421, A-22;

Cancer and Health Care Disparities Among Minority Women D-55.997
Our AMA encourages research and funding directed at addressing racial and ethnic disparities in minority women pertaining to cancer screening, diagnosis, and treatment.
Citation: Res. 509, A-08; Modified: CSAPH Rep. 01, A-18;

Quality of Pap Smear Analysis H-525.994
The AMA reaffirms its long-standing support of the Pap smear as an effective screening method for the detection of cervical cancer.
Citation: Res. 92, I-87; Reaffirmed: Sunset Report, I-97; Reaffirmed: CSAPH Rep. 3, A-07; Reaffirmed: CSAPH Rep. 01, A-17;

Support Public Health Approaches for the Prevention and Management of Contagious Diseases in Correctional and Detention Facilities H-430.979
1. Our AMA, in collaboration with state and national medical specialty societies and other relevant stakeholders, will advocate for the improvement of conditions of incarceration in all correctional and immigrant detention facilities to allow for the implementation of evidence-based COVID-19 infection prevention and control guidance.
2. Our AMA will advocate for adequate access to personal protective equipment and SARS-CoV-2 testing kits, sanitizing and disinfecting equipment for correctional and detention facilities.
3. Our AMA will advocate for humane and safe quarantine protocols for individuals who are incarcerated or detained that test positive for or are exposed to SARS-CoV-2, or other contagious respiratory pathogens.
4. Our AMA supports expanded data reporting, to include testing rates and demographic breakdown for SARS-CoV-2 and other contagious infectious disease cases and deaths in correctional and detention facilities.
5. Our AMA recognizes that detention center and correctional workers, incarcerated persons, and detained immigrants are at high-risk for COVID-19 infection and therefore should be prioritized in

receiving access to safe, effective COVID-19 vaccine in the initial phases of distribution, and that this policy will be shared with the Advisory Committee on Immunization Practices for consideration in making their final recommendations on COVID-19 vaccine allocation.

6. Our AMA will advocate: (a) for all employees working in a correctional facility or detention center to be up to date with vaccinations against COVID-19, unless there is a valid medical contraindication; (b) for all employees working in a correctional facility or detention center, not up to date with vaccination for COVID-19 to be COVID rapid tested each time they enter a correctional facility or detention center, as consistent with Centers for Disease Control and Prevention (CDC) or local public health guidelines; (c) for correctional facility or detention center policies that require non-employed, non-residents (e.g. visitors, contractors, etc.) to either show evidence of being up to date for COVID-19 vaccines or show proof of a negative COVID test when they enter a correctional facility or detention center as consistent with CDC or local public health guidelines, at no cost to the visitor; (d) that all people inside a correctional facility or detention center wear an appropriate mask at all times, except while eating or drinking or at a 6 ft. distance from anyone else if local transmission rate is above low risk as determined by the CDC; and (e) that correctional facilities or detention centers be able to request and receive all necessary funding for COVID-19 vaccination and testing, according to CDC or local public health guidelines.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 405
(A-23)

Introduced by:	Medical Student Section
Subject:	Amendment to AMA Policy "Firearms and High-Risk Individuals H-145.972" to Include Medical Professionals as a Party Who Can Petition the Court
Referred to:	Reference Committee D

Whereas, Extreme Risk Protection Order (ERPO) laws and Red Flag laws stipulate that parties such as law enforcement, family or household members, and/or intimate partners can petition the court to temporarily remove firearms from a high risk individual through due process[1]; and

Whereas, An extreme risk individual is defined as an individual with severe mental illness and/or who is at risk of harming themselves or others[1,2]; and

Whereas, The Bipartisan Safer Communities Act passed by Congress in June 2022 allows for Justice Assistance Grant (JAG) funding to be available to states who pass new ERPO laws or improve existing ERPO laws[3]; and

Whereas,19 states currently have ERPO/Red Flag laws; and in a White House meeting in August 2022 representatives from Kentucky, Louisiana, Minnesota, New Hampshire, North Carolina, Pennsylvania, and Texas shared plans for advancing new ERPO legislation following the passage of the Bipartisan Safer Communities Act[1,4]; and

Whereas, A study by Kivisto et al. (2018) showed that ERPO laws reduced suicide rates by 13.7% in Connecticut and 7.5% in Indiana; further Wintemute et al. (2019) evaluated 159 uses of California's ERPO law and found 21 cases in which an ERPO was initiated after an individual with access to firearms threatened a mass shooting, none of the threatened shootings took place[5,6]; and

Whereas, Only Hawaii, Maryland, Connecticut, New York and Washington, DC currently include medical professionals as parties who can utilize ERPO laws, with Connecticut and New York updating their ERPO laws to include this in June 2021 and June 2022 respectively[1,7-10]; and

Whereas, In ERPO laws, "medical professionals" generally refers to licensed physicians, physician assistants, advanced practice registered nurses, psychologists, counselors, and social workers who have examined the individual[9,11]; and

Whereas, In a Maryland study, surveyed physicians identified lack of knowledge about ERPO laws as a barrier to physicians utilizing ERPO, and these same physicians asserted that this barrier may be mitigated by increased training about ERPO laws[12]; and

Whereas, Since 2014, the ever-growing firearm epidemic has worsened, with the number of mass shootings increasing from 273 per year in 2014 to 691 per year in 2021, the number of

deaths due to gun violence has increased from 12,418 people per year in 2014 to 19,411 people per year in 2020[13]; and

Whereas, The shooter in Buffalo New York in May 2022 was released without treatment, law enforcement follow-up, or enactment of an ERPO following an evaluation by mental health professionals, and following the shooting, New York updated its law to now include medical professionals as a party able to file an ERPO[7,14-16]; and

Whereas, Many states have mandatory or permissive Duty to Protect or Duty to Warn laws for mental health professionals to report threats of imminent physical harm to other persons[17,18]; and

Whereas, Physicians, specifically those that treat persons at risk for suicide and intimate partner violence, are highly trained to identify high-risk individuals based on symptoms, behavioral patterns, and screening[19-22]; and

Whereas, Medical professionals are encouraged to ask about firearm access during routine patient visits which can help allow them to identify at risk individuals who may have access to firearms[22]; and

Whereas, HIPAA does not explicitly define firearm ownership as protected health information (PHI), permitting disclosure in cases of public interest and benefit; and further in June 2021 the United States Department of Justice stated that disclosures of PHI are allowed in compliance with ERPO laws when necessary to prevent imminent threats to the health and safety of an individual and/or the public[23,24]; and

Whereas, AMA policy H-145.972, Firearms and High Risk Individuals, describes the function and process of ERPO/Red Flag laws but does not currently include medical professionals as a party who can petition the court; and

Whereas, AMA policy H-145.976 supports creating state-specific guidance for physicians about how to assess and act on risk of gun violence with patients within the scope of current state law, but does not call for legislative change in those states; and

Whereas, AMA policy H-145.975 encourages physicians to work with families to reduce patient access to lethal means when there is suicide risk but does not call for the passage of laws to allow for physicians to act to reduce patient access to lethal means directly; therefore be it

RESOLVED, That our American Medical Association work with relevant stakeholders to develop state-specific training programs for medical professionals on how to use Extreme Risk Protection Order/Red Flag Laws (Directive to Take Action); and be it further

RESOLVED, That our AMA work with relevant stakeholders to update medical curricula with training surrounding how to approach conversations about Extreme Risk Protection Order/Red Flag laws with patients and families (Directive to Take Action); and be it further

RESOLVED, That our AMA support amending policy “Firearms and High-Risk Individuals H-145.972” by addition to read as follows:

Firearms and High-Risk Individuals H-145.972

Our AMA supports: (1) the establishment of laws allowing family members, intimate partners, household members, and state, federal, and tribal law enforcement personnel to petition a court for the removal of a firearm when there is a high or imminent risk for violence; (2) the establishment of laws and procedures through which physicians and other medical professionals can, in partnership with appropriate stakeholders, contribute to the inception and development of such petitions; ~~(2)~~(3) prohibiting persons who are under domestic violence restraining orders, convicted of misdemeanor domestic violence crimes or stalking, from possessing or purchasing firearms; ~~(3)~~(4) expanding domestic violence restraining orders to include dating partners; ~~(4)~~(5) requiring states to have protocols or processes in place for requiring the removal of firearms by prohibited persons; ~~(5)~~(6) requiring domestic violence restraining orders and gun violence restraining orders to be entered into the National Instant Criminal Background Check System; and ~~(6)~~(7) efforts to ensure the public is aware of the existence of laws that allow for the removal of firearms from high-risk individuals. (Modify Current HOD Policy)

Fiscal Note: Minimal - less than $1,000

Received: 3/27/23

RELEVANT AMA POLICY

Firearms and High-Risk Individuals H-145.972

Our AMA supports: (1) the establishment of laws allowing family members, intimate partners, household members, and law enforcement personnel to petition a court for the removal of a firearm when there is a high or imminent risk for violence; (2) prohibiting persons who are under domestic violence restraining orders, convicted of misdemeanor domestic violence crimes or stalking, from possessing or purchasing firearms; (3) expanding domestic violence restraining orders to include dating partners; (4) requiring states to have protocols or processes in place for requiring the removal of firearms by prohibited persons; (5) requiring domestic violence restraining orders and gun violence restraining orders to be entered into the National Instant Criminal Background Check System; and (6) efforts to ensure the public is aware of the existence of laws that allow for the removal of firearms from high-risk individuals.

Firearm Safety Counseling in Physician-Led Health Care Teams H-145.976

1. Our AMA: (a) will oppose any restrictions on physicians' and other members of the physician-led health care team's ability to inquire and talk about firearm safety issues and risks with their patients; (b) will oppose any law restricting physicians' and other members of the physician-led health care team's discussions with patients and their families about firearms as an intrusion into medical privacy; and (c) encourages dissemination of educational materials related to firearm safety to be used in undergraduate medical education.
2. Our AMA will work with appropriate stakeholders to develop state-specific guidance for physicians on how to counsel patients to reduce their risk for firearm-related injury or death, including guidance on when and how to ask sensitive questions about firearm ownership, access, and use, and clarification on the circumstances under which physicians are permitted or may be required to disclose the content of such conversations to family members, law enforcement, or other third parties.
3. Our AMA will support the development of reimbursement structures that incentivize physicians to counsel patients on firearm-related injury risk and prevention.
4. Our AMA supports the inclusion of firearm-related violence and suicide epidemiology, as well as evidence-based firearm-related injury prevention education in undergraduate and graduate medical education training programs, where appropriate.

Citation: Res. 219, I-11; Reaffirmation A-13; Modified: Res. 903, I-13; Appended: Res. 419, A-17; Reaffirmed: CSAPH Rep. 04, A-18; Reaffirmed: CSAPH Rep. 3, I-21; Modified: Res. 436, A-22;

Firearm Safety and Research, Reduction in Firearm Violence, and Enhancing Access to Mental Health Care H-145.975

1. Our AMA supports: a) federal and state research on firearm-related injuries and deaths; b) increased funding for and the use of state and national firearms injury databases, including the expansion of the National Violent Death Reporting System to all 50 states and U.S. territories, to inform state and federal health policy; c) encouraging physicians to access evidence-based data regarding firearm safety to educate and counsel patients about firearm safety; d) the rights of physicians to have free and open communication with their patients regarding firearm safety and the use of gun locks in their homes; e) encouraging local projects to facilitate the low-cost distribution of gun locks in homes; f) encouraging physicians to become involved in local firearm safety classes as a means of promoting injury prevention and the public health; and g) encouraging CME providers to consider, as appropriate, inclusion of presentations about the prevention of gun violence in national, state, and local continuing medical education programs.
2. Our AMA supports initiatives to enhance access to mental and cognitive health care, with greater focus on the diagnosis and management of mental illness and concurrent substance use disorders, and work with state and specialty medical societies and other interested stakeholders to identify and develop standardized approaches to mental health assessment for potential violent behavior.
3. Our AMA (a) recognizes the role of firearms in suicides, (b) encourages the development of curricula and training for physicians with a focus on suicide risk assessment and prevention as well as lethal means safety counseling, and (c) encourages physicians, as a part of their suicide prevention strategy, to discuss lethal means safety and work with families to reduce access to lethal means of suicide.
4. Our AMA and other organizations will develop and disseminate a formal educational program to enable clinicians to effectively and efficiently address suicides with an emphasis on seniors and other high-risk populations.
5. Our AMA will develop with other interested organizations a toolkit for clinicians to use addressing Extreme Risk Protection Orders in their individual states.
6. Our AMA will partner with other groups interested in firearm safety to raise public awareness of the magnitude of suicide in seniors and other high-risk populations, and interventions available for suicide prevention.
7. Our AMA and all interested medical societies will: (a) educate physicians about firearm epidemiology, anticipatory guidance, and lethal means screening for and exploring potential restrictions to access to high-lethality means of suicide such as firearms. Health care clinicians, including trainees, should be provided training on the importance of anticipatory guidance and lethal means counseling to decrease firearm injuries and deaths and be provided training introducing evidence-based techniques, skills and strategies for having these discussions with patients and families; (b) educate physicians about lethal means counseling in health care settings and intervention options to remove lethal means, either permanently or temporarily from the home.
Citation: Sub. Res. 221, A-13; Appended: Res. 416, A-14; Reaffirmed: Res. 426, A-16; Reaffirmed: BOT Rep. 28, A-18; Reaffirmation: A-18; Modified: CSAPH Rep. 04, A-18; Reaffirmation: I-18; Reaffirmed: CSAPH Rep. 3, A-21; Reaffirmed: Res. 907, I-22; Appended: Res. 909, I-22;

Firearm Availability H-145.996

1. Our AMA: (a) advocates a waiting period and background check for all firearm purchasers; (b) encourages legislation that enforces a waiting period and background check for all firearm purchasers; and (c) urges legislation to prohibit the manufacture, sale or import of lethal and non-lethal guns made of plastic, ceramics, or other non-metallic materials that cannot be detected by airport and weapon detection devices.
2. Our AMA supports requiring the licensing/permitting of firearms-owners and purchasers, including the completion of a required safety course, and registration of all firearms.
3. Our AMA supports “gun violence restraining orders” for individuals arrested or convicted of domestic violence or stalking, and supports extreme risk protection orders, commonly known as “red-flag” laws, for individuals who have demonstrated significant signs of potential violence. In supporting restraining orders and “red-flag” laws, we also support the importance of due process so that individuals can petition for their rights to be restored.

Gun Violence as a Public Health Crisis D-145.995
Our AMA: (1) will immediately make a public statement that gun violence represents a public health crisis which requires a comprehensive public health response and solution; and
(2) will actively lobby Congress to lift the gun violence research ban.
Citation: Res. 1011, A-16; Reaffirmation: A-18; Reaffirmation: I-18; Reaffirmed: Res. 921, I-22;

Physicians and the Public Health Issues of Gun Safety D-145.997
Our AMA will request that the US Surgeon General develop a report and campaign aimed at reducing gun-related injuries and deaths.
Citation: (Res. 410, A-13)

Waiting Period Before Gun Purchase H-145.992
The AMA supports legislation calling for a waiting period of at least one week before purchasing any form of firearm in the U.S.
Citation: Res. 171, A-89; Reaffirmed: BOT Rep.50, I-93; Reaffirmed: CSA Rep. 8, A-05; Reaffirmation A-07; Reaffirmed: BOT Rep. 22, A-17; Reaffirmation: A-18;

Gun Regulation H-145.999
Our AMA supports stricter enforcement of present federal and state gun legislation and the imposition of mandated penalties by the judiciary for crimes committed with the use of a firearm, including the illegal possession of a firearm.
Citation: Sub. Res. 31, I-81; Reaffirmed: CLRPD Rep. F, I-91; Amended: BOT Rep. I-93-50; Reaffirmed: Res. 409, A-00; Reaffirmation A-07; Reaffirmed: BOT Rep. 22, A-17; Modified: Res. 401, A-17; Reaffirmation: I-18;

Firearm Related Injury and Death: Adopt a Call to Action H-145.973
Our AMA endorses the specific recommendations made by an interdisciplinary, inter-professional group of leaders from the American Academy of Family Physicians, American Academy of Pediatrics, American College of Emergency Physicians, American College of Obstetricians and Gynecologists, American College of Physicians, American College of Surgeons, American Psychiatric Association, American Public Health Association, and the American Bar Association in the publication "Firearm-Related Injury and Death in the United States: A Call to Action From 8 Health Professional Organizations and the American Bar Association," which is aimed at reducing the health and public health consequences of firearms and lobby for their adoption.
Citation: Res. 214, I-16;

Firearms as a Public Health Problem in the United States - Injuries and Death H-145.997
1. Our AMA recognizes that uncontrolled ownership and use of firearms, especially handguns, is a serious threat to the public's health inasmuch as the weapons are one of the main causes of intentional and unintentional injuries and deaths.
Therefore, the AMA:
(A) encourages and endorses the development and presentation of safety education programs that will engender more responsible use and storage of firearms;
(B) urges that government agencies, the CDC in particular, enlarge their efforts in the study of firearm-related injuries and in the development of ways and means of reducing such injuries and deaths;
(C) urges Congress to enact needed legislation to regulate more effectively the importation and interstate traffic of all handguns;
(D) urges the Congress to support recent legislative efforts to ban the manufacture and importation of nonmetallic, not readily detectable weapons, which also resemble toy guns; (5) encourages the improvement or modification of firearms so as to make them as safe as humanly possible;
(E) encourages nongovernmental organizations to develop and test new, less hazardous designs for firearms;
(F) urges that a significant portion of any funds recovered from firearms manufacturers and dealers through legal proceedings be used for gun safety education and gun-violence prevention; and

(G) strongly urges US legislators to fund further research into the epidemiology of risks related to gun violence on a national level.
2. Our AMA will advocate for firearm safety features, including but not limited to mechanical or smart technology, to reduce accidental discharge of a firearm or misappropriation of the weapon by a non-registered user; and support legislation and regulation to standardize the use of these firearm safety features on weapons sold for non-military and non-peace officer use within the U.S.; with the aim of establishing manufacturer liability for the absence of safety features on newly manufactured firearms.
3. Our AMA will support research examining the major sources of illegally possessed firearms, as well as possible methods of decreasing their proliferation in the United States.
4. Our AMA will work with key stakeholders including, but not limited to, firearm manufacturers, firearm advocacy groups, law enforcement agencies, public health agencies, firearm injury victims advocacy groups, healthcare providers, and state and federal government agencies to develop evidence-informed public health recommendations to mitigate the effects of violence committed with firearms.
5. Our AMA will collaborate with key stakeholders and advocate for national public forums including, but not limited to, online venues, national radio, and televised/streamed in-person town halls, that bring together key stakeholders and members of the general public to focus on finding common ground, non-partisan measures to mitigate the effects of firearms in our firearm injury public health crisis.

I-93-50; Appended: Res. 403, I-99; Reaffirmation A-07; Reaffirmation A-13; Appended: Res. 921, I-13; Reaffirmed: CSAPH Rep. 04, A-18; Reaffirmation: A-18; Reaffirmation: I-18; Appended: Res. 405, A-19; Appended: Res. 907, I-22; Reaffirmed: Res. 921, I-22

Mental Health Crisis D-345.972
1. Our AMA will work expediently with all interested national medical organizations, national mental health organizations, and appropriate federal government entities to convene a federally-sponsored blue ribbon panel and develop a widely disseminated report on mental health treatment availability and suicide prevention in order to:
a) Improve suicide prevention efforts, through support, payment and insurance coverage for mental and behavioral health and suicide prevention services, including, but not limited to, the National Suicide Prevention Lifeline;
b) Increase access to affordable and effective mental health care through expanding and diversifying the mental and behavioral health workforce;
c) Expand research into the disparities in youth suicide prevention;
d) Address inequities in suicide risk and rate through education, policies and development of suicide prevention programs that are culturally and linguistically appropriate;
e) Develop and support resources and programs that foster and strengthen healthy mental health development; and
f) Develop best practices for minimizing emergency department delays in obtaining appropriate mental health care for patients who are in mental health crisis.
2. Our AMA supports physician acquisition of emergency mental health response skills by promoting education courses for physicians, fellows, residents, and medical students including, but not limited to, mental health first aid training.
Citation: Res. 425, A-22;

Youth and Young Adult Suicide in the United States H-60.937
Our AMA:
(1) Recognizes youth and young adult suicide as a serious health concern in the US;
(2) Encourages the development and dissemination of educational resources and tools for physicians, especially those more likely to encounter youth or young adult patients, addressing effective suicide prevention, including screening tools, methods to identify risk factors and acuity, safety planning, and appropriate follow-up care including treatment and linkages to appropriate counseling resources;
(3) Supports collaboration with federal agencies, relevant state and specialty medical societies, schools, public health agencies, community organizations, and other stakeholders to enhance awareness of the increase in youth and young adult suicide and to promote protective factors, raise awareness of risk factors, support evidence-based prevention strategies and interventions, encourage awareness of community mental health resources, and improve care for youth and young adults at risk of suicide;
(4) Encourages efforts to provide youth and young adults better and more equitable access to treatment and care for depression, substance use disorder, and other disorders that contribute to suicide risk;
(5) Encourages continued research to better understand suicide risk and effective prevention efforts in

youth and young adults, especially in higher risk sub-populations such as Black, LGBTQ+, Hispanic/Latinx, Indigenous/Native Alaskan youth and young adult populations, and among youth and young adults with disabilities;
(6) Supports the development of novel technologies and therapeutics, along with improved utilization of existing medications to address acute suicidality and underlying risk factors in youth and young adults;
(7) Supports research to identify evidence-based universal and targeted suicide prevention programs for implementation in middle schools and high schools;
(8) Will publicly call attention to the escalating crisis in children and adolescent mental health in this country in the wake of the COVID-19 pandemic;
(9) Will advocate at the state and national level for policies to prioritize children's mental, emotional and behavioral health;
(10) Will advocate for a comprehensive system of care including prevention, management and crisis care to address mental and behavioral health needs for infants, children and adolescents; and
(11) Will advocate for a comprehensive approach to the child and adolescent mental and behavioral health crisis when such initiatives and opportunities are consistent with AMA policy.

Senior Suicide H-25.992
It is the policy of the AMA to (1) educate physicians to be aware of the increased rates of suicide among the elderly and to encourage seniors to consult their physicians regarding depression and loneliness; and (2) to encourage local, regional, state, and national cooperation between physicians and advocacy agencies for these endangered seniors.

Reducing Suicide Risk Among Lesbian, Gay, Bisexual, Transgender, and Questioning Youth Through Collaboration with Allied Organizations H-60.927
Our AMA will partner with public and private organizations dedicated to public health and public policy to reduce lesbian, gay, bisexual, transgender, and questioning (LGBTQ) youth suicide and improve health among LGBTQ youth.
Citation: Res. 402, A-12; Reaffirmed: CSAPH Rep. 1, A-22;

HIPAA Law And Regulations D-190.989
Our AMA shall: (1) continue to aggressively pursue modification of the Health Insurance Portability and Accountability Act (HIPAA) Privacy Rule to remove burdensome regulations that could interfere with efficient patient care; and (2) continue to work with the appropriate parties and trade groups to explore ways to help offset the costs associated with HIPAA compliance so as to reduce the fiscal burden on physicians.
Citation: Sub. Res. 207, A-02; Reaffirmed: CCB/CLRPD Rep. 4, A-12; Reaffirmation: A-22; Modified: BOT Rep. 9, A-22;

Protection of Health Care Providers from Unintended Legal Consequences of HIPAA D-190.983
Our AMA will: (1) take appropriate legislative, regulatory, and/or legal action to assure that the unanticipated negative consequences of the Health Insurance Portability and Accountability Act privacy regulations, affecting the patient/doctor relationship and exposing health care providers to legal action, are corrected; and (2) initiate necessary legislative, regulatory, and/or legal action to assure that HIPAA violations that are not malicious in intent and are not directly related to any alleged act of medical negligence may not be attached to such litigation.
Citation: (Res. 204, A-03; Reaffirmed: BOT Rep. 28, A-13)

Confidentiality and Privacy Protections Ensuring Care Coordination and the Patient-Physician Relationship H-315.964
Our AMA supports: (1) the alignment of federal privacy law and regulations (42 CFR Part 2) with the Health Insurance Portability and Accountability Act (HIPAA) and applicable state law for the purposes of treatment, payment and health care operations, while ensuring protections are in place against the use of "Part 2" substance use disorder records in criminal proceedings; and (2) the sharing of substance use

disorder patient records as required by the HIPAA Privacy Rule and as applies to state law for uses and disclosures of protected health information for treatment, payment and health care operations to improve patient safety and enhance the quality and coordination of care.
Citation: Res. 220, A-19;

Police, Payer and Government Access to Patient Health Information D-315.992
Our AMA will: (1) widely publicize to our patients and others, the risk of uses and disclosures of individually identifiable health information by payers and health plans, without patient consent or authorization, permitted under the final Health Insurance Portability and Accountability Act "privacy" rule; and (2) continue to aggressively advocate to Congress, and the Administration, physician's concerns with the administrative simplification provisions of HIPAA and that the AMA seek changes, including legislative relief if necessary, to reduce the administrative and cost burdens on physicians.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 406
(A-23)

Introduced by: Medical Student Section

Subject: Increase Employment Services Funding for People with Disabilities

Referred to: Reference Committee D

Whereas, The American Disabilities Act defines “disability” as “a physical or mental impairment that substantially limits one or more major life activities of such individual, a record of such an impairment, or being regarded as having such an impairment”[1]; and

Whereas, Adults with disabilities experience health disparities related to social determinants of health, as they are less likely to have jobs with competitive wages, more likely to live in poverty, and more likely to experience mental health issues[2]; and

Whereas, People with disabilities have been disproportionately affected by the COVID-19 pandemic, in terms of both health outcomes and economically, with unemployment rates that are nearly double the unemployment rates of nondisabled people[3-5]; and

Whereas, One in five people with disabilities, or approximately one million people in the US, lost their job during the COVID-19 pandemic, compared to one in seven people in the general population[6]; and

Whereas, Between 2019 and 2020, the percentage of people with disabilities who were employed fell from 19.2% to 17.9%, whereas non-disabled people saw a decrease in employment from 66.3% to 61.8%[7]; and

Whereas, Almost half of unemployed disabled individuals endure barriers to employment, while less than 10% of individuals with disabilities have been able to use career assistance programs[8]; and

Whereas, Existing literature demonstrates that employment training programs are highly beneficial for students with disabilities to gain competitive employment, and many have success rates of 100% employment for their students[2,9]; and

Whereas, The Workforce Innovation and Opportunity Act of 2014 (WIOA) provides state grants through the Department of Labor for employment and training services for people with disabilities, serving over 46,000 adults with disabilities and 26,000 youth with disabilities in 2018[10,11]; and

Whereas, WIOA reserves 15% of its budget for Vocational Rehabilitation programs to assist students with disabilities through a transition from school to employment[10]; and

Whereas, In order to sustain the services provided to the community, Centers for Independent Living (CIL) programs developed by the WIOA independently raised six times the federal appropriation of funds in 2019, contributing to a 27% increase in utilization of resources to assist with transition from youth to adult life[2]; and

Whereas, Lack of funding has been increasingly detrimental during the COVID-19 pandemic, with community programs through WIOA reporting over 30% of employment service programming closed due to COVID-19[12]; and

Whereas, The Arc, an organization that trains and employs thousands of individuals with disabilities nationally, reported that employment programs have struggled during the COVID-19 pandemic due to funding concerns, and 44% of agencies through The Arc had to lay-off or furlough staff[13,14]; and

Whereas, Section 188 of WIOA requires that employment services provide equal opportunities for individuals with disabilities to participate in services and receive appropriate accommodations; however, the COVID-19 pandemic has created disparities in receiving these accommodations[15]; and

Whereas, AMA Policy H-90.967 encourages government agencies and other organizations to provide psychosocial support for people with disabilities, but do not include employment benefits; and

Whereas, As employment and socioeconomic status are social determinants of health closely linked to health outcomes, increased resources for employment support programs would provide equitable solutions for the drastic disparities that the COVID-19 pandemic has created for people with disabilities[16]; therefore be it

RESOLVED, That our American Medical Association support increased resources for employment services to reduce health disparities for people with disabilities. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Support for Persons with Intellectual Disabilities H-90.967
Our AMA encourages appropriate government agencies, non-profit organizations, and specialty societies to develop and implement policy guidelines to provide adequate psychosocial resources for persons with intellectual disabilities, with the goal of independent function when possible.
Citation: Res. 01, A-16;

Preserving Protections of the Americans with Disabilities Act of 1990 D-90.992
1. Our AMA supports legislative changes to the Americans with Disabilities Act of 1990, to educate state and local government officials and property owners on strategies for promoting access to persons with a disability.
2. Our AMA opposes legislation amending the Americans with Disabilities Act of 1990, that would increase barriers for disabled persons attempting to file suit to challenge a violation of their civil rights.
3. Our AMA will develop educational tools and strategies to help physicians make their offices more accessible to persons with disabilities, consistent with the Americans With Disabilities Act as well as any applicable state laws.
Citation: Res. 220, I-17;

Enhancing Accommodations for People with Disabilities H-90.971
Our AMA encourages physicians to make their offices accessible to patients with disabilities, consistent with the Americans with Disabilities Act (ADA) guidelines.
Citation: (Res. 705, A-13)

Early Intervention for Individuals with Developmental Delay H-90.969
(1) Our AMA will continue to work with appropriate medical specialty societies to educate and enable physicians to identify children with developmental delay, autism and other developmental disabilities, and to urge physicians to assist parents in obtaining access to appropriate individualized early intervention services. (2) Our AMA supports a simplified process across appropriate government agencies to designate individuals with intellectual disabilities as a medically underserved population.
Citation: CCB/CLRPD Rep. 3, A-14; Reaffirmed: Res. 315, A-17;

SSI Benefits for Children with Disabilities H-90.986
The AMA will use all appropriate means to inform members about national outreach efforts to find and refer children who may qualify for Supplemental Security Income benefits to the Social Security Administration and promote and publicize the new rules for determining disability.
Citation: (Res. 420, A-92; Reaffirmed: CMS Rep. 10, A-03; Reaffirmed: CMS Rep. 4, A-13)

Support for Housing Modification Policies H-160.890
Our AMA supports improved access to housing modification benefits for populations that require modifications in order to mitigate preventable health conditions, including but not limited to the elderly, the disabled and other persons with physical and/or mental disabilities.

Citation: Res. 806, I-19;

Federal Legislation on Access to Community-Based Services for People with Disabilities H-290.970
Our AMA strongly supports reform of the Medicaid program established under title XIX of the Social Security Act (42 U.S.C. 1396) to provide services in the most appropriate settings based upon the individual's needs, and to provide equal access to community-based attendant services and supports.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 407
(A-23)

Introduced by: Medical Student Section

Subject: Addressing Inequity in Onsite Wastewater Treatment

Referred to: Reference Committee D

Whereas, 'Wastewater' refers to any water that has been used for human activity, and is most commonly produced through the everyday use of water by homes and businesses and is contaminated with feces, urine, soaps, industrial wastes, and other organic matter, making it unsuitable for reintroduction into the natural water supply[1]; and

Whereas, In the United States, wastewater is often piped to centralized treatment facilities where bulk products are strained, smaller pollutants are filtered or degraded, and biological pollutants are disinfected, after which resultant water is fed into local watersheds[2]; and

Whereas, Exposure to inadequately treated wastewater may occur through occupational exposure, breathing in wastewater-contaminated soil particles, or repeated ingestion of wastewater-contaminated foods, and can lead to various illnesses including diarrheal illnesses, helminth and trematode infections, and various skin disorders[3-10]; and

Whereas, Wastewater can also contain heavy metals like arsenic, mercury, lead, and cadmium that can lead to diseases like cancer, cardiovascular disease, developmental disorders, renal dysfunction, and osteoporosis, among others[10-17]; and

Whereas, There are clear disparities in access to adequate wastewater management systems, with Tribal communities, communities of color, lower income communities, and rural communities disproportionately having insufficient wastewater management systems[18-22]; and

Whereas, In the United States, approximately 25% of residents do not have access to underground sanitary sewers, which amounts to ~80 million people who must rely on onsite wastewater treatment systems, otherwise known as septic tanks[23]; and

Whereas, Because septic tanks are complex and expensive to install and require permitting from the Environmental Protection Agency (EPA), houses and businesses in many poor rural communities resort to using "straight pipe" sanitation systems wherein untreated toxic wastewater is released directly into the environment[23-26]; and

Whereas, The prevalence of straight pipe sanitation systems means that hundreds of thousands to millions of homes across the country are utilizing dangerous sewage systems and could be releasing dangerous wastewater into nearby soil, lakes, or streams, disproportionately in marginalized communities[27-29]; and

Whereas, Despite recent investment in wastewater management systems in the Bipartisan Infrastructure Act of 2021, systemic underinvestment in wastewater management from federal, state, and local governments has led to a projected deficit of $1 trillion in funding by 2035[30,31]; and

Whereas, Targeted research and investment by state governments into wastewater treatment has yielded dividends, with efforts to implement improved agricultural and stormwater management practices and build wastewater infrastructure from 2005 to 2013 in North Carolina improved water quality in four stream segments by 2014, while price changes and sewage system physical improvements such as pipe replacement and high-quality, durable material usage led to a 12% decline in in-county sewage and a 41% decline in out-of-county sewage in northern Georgia[18,22,32]; and

Whereas, The Clean Water Act establishes the structure for regulating pollutant discharge and maintaining water quality standards and requires that to discharge pollutants into a point source, a person must obtain a permit through the National Pollutant Discharge Elimination System (NPDES) and are subject to "a fine of not less than $5,000 nor more than $50,000 per day of violation, or by imprisonment for not more than three years, or both" for permit violations[33]; and

Whereas, Homes and businesses that use public "sanitary sewage" systems, including straight pipe sanitation systems, do not need an NPDES permit and are regulated by their local municipalities instead of by the EPA, indicating hundreds of thousands in the United States use water treatment systems that are not regulated by the EPA and thus may be releasing toxic wastewater into the environment[24-26,33]; and

Whereas, Many state laws do not comprehensively address on-site wastewater management, and those that do lack the flexible framework needed to support diverse communities[34]; and

Whereas, Some states have provided local jurisdictions with additional regulatory power to correct straight-pipe systems, such as a Minnesota law that allows municipalities to charge $500 per month to the owners of all straight-pipe systems not corrected after ten months of non-compliance[35]; and

Whereas, Some states have enacted programs to modernize and correct failed sewage systems, but these programs are often underfunded, which the EPA has concluded leads to continued contamination of local water systems[36,37]; and

Whereas, When not paired with adequate funding to assist municipalities to transition to safer wastewater management systems, punitive actions often fail to incentivize investments in improved wastewater management, and instead place an undue burden on what are often already struggling communities[23,25]; and

Whereas, Innovative legislation like the Decentralized Wastewater Grant Act of 2020 which established a grant program to allow low-income households to connect their homes to existing wastewater infrastructures can provide communities affordable paths to make necessary transitions to safer and more effective wastewater management systems, but are insufficiently funded[38,39]; therefore be it

RESOLVED, That our American Medical Association support that federal, state, and local governments abate individual financial and criminal penalties for insufficient wastewater management, especially those placed on underserved communities and American Indian reservations due to environmental racism and socioeconomic disparities (New HOD Policy); and be it further

RESOLVED, That our AMA support research by federal, state, and local governments to develop strategies to reduce insufficient wastewater management and eliminate detrimental health effects due to inadequate wastewater systems. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Increasing Detection of Mental Illness and Encouraging Education D-345.994

1. Our AMA will work with: (A) mental health organizations, state, specialty, and local medical societies and public health groups to encourage patients to discuss mental health concerns with their physicians; and (B) the Department of Education and state education boards and encourage them to adopt basic mental health education designed specifically for preschool through high school students, as well as for their parents, caregivers and teachers.

2. Our AMA will encourage the National Institute of Mental Health and local health departments to examine national and regional variations in psychiatric illnesses among immigrant, minority, and refugee populations in order to increase access to care and appropriate treatment.
Citation: Res. 412, A-06; Appended: Res. 907, I-12; Reaffirmed in lieu of: Res. 001, I-16; Reaffirmed: Res. 425, A-22;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 408
(A-23)

Introduced by: Medical Student Section

Subject: School-to-Prison Pipeline

Referred to: Reference Committee D

Whereas, The School-to-Prison Pipeline is a term used to describe the biased application of harsh disciplinary measures imposed on students which increases their likelihood of entering the juvenile justice system[1,2]; and

Whereas, The school-to-prison pipeline is a major public health issue that disproportionately affects students of color, students from low-income household, and other vulnerable student sub-groups, with Black students being suspended and expelled at a rate three times greater than white students[3,4,5]; and

Whereas, Male children who have moderate to severe food insecurity have an 11-fold increase in suspension or expulsion, suggesting that the school-to-prison pipeline may be the result of systematic health inequities rather than inherent behavioral issues with an individual child[6]; and

Whereas, Mixed-effects longitudinal models demonstrate that when controlling for socioeconomic status, the odds of incarceration were 3.88 times greater for those who have ever received a suspension as compared to those who have not[7]; and

Whereas, Zero tolerance policies historically stem from strict criminal punishments to tackle the war on drugs in the 1980s and 1990s, but have now expanded into the education system with intentions to reduce school disruptions[1,2,8,9]; and

Whereas, The implementation of zero tolerances policies have resulted in an increased presence of police in school, who may lack training in adolescent development, ultimately leading to increases in the number of students arrested[1,2,8,9]; and

Whereas, Students that are the victims of the discriminatory application of these policies are at a greater risk for poor educational and health outcomes[10-12]; and

Whereas, Not addressing the underlying traumatic stress from these discriminatory practices can perpetuate cycles of abuse, trauma, and incarceration, necessitating trauma-informed physicians to mitigate these effects[13-15]; and

Whereas, The shift from a punitive system to a therapeutic, restorative, and individualized approach has been recognized as the key towards ending the school-to-prison pipeline[13,16-20,]; and

Whereas, Implementing school-based restorative justice, which addresses student misconduct through a positive and proactive systematic approach to underlying community issues, has resulted in lower rates of absences and better academic outcomes[13,17-19,21]; and

Whereas, Though our American Medical Association recently passed Student-Centered Approaches for Reforming School Disciplinary Policies (H-60.900), it does not fully address the causes and effects of the school-to-prison pipeline; therefore be it

RESOLVED, That our American Medical Association amend H-60.900 by addition to read as follows:

Student-Centered Approaches for Reforming School Disciplinary Policies H-60.900

Our AMA supports:

(1) evidence-based frameworks in K-12 schools that focus on school-wide prevention and intervention strategies for student misbehavior; ~~and~~

(2) the consultation with school-based mental health professionals in the student discipline process.~~;~~

(3) efforts to address physical and mental trauma experienced by children in K-12 education by reducing disproportionate punitive disciplinary actions and the involvement of law enforcement in student discipline;

(4) transitions to restorative approaches that individually address students' medical, social, and educational needs;

(5) ensuring that any law enforcement presence in K-12 schools focuses on maintaining student and staff safety and not on disciplining students; and

(6) limiting the presence of law enforcement patrolling in schools to only those settings and times where student and staff safety is at active risk. (Modify Current HOD Policy)

Fiscal Note: Minimal - less than $1,000

Received: 4/3/23

RELEVANT AMA POLICY

Support Public Health Approaches for the Prevention and Management of Contagious Diseases in Correctional and Detention Facilities H-430.979

1. Our AMA, in collaboration with state and national medical specialty societies and other relevant stakeholders, will advocate for the improvement of conditions of incarceration in all correctional and immigrant detention facilities to allow for the implementation of evidence-based COVID-19 infection prevention and control guidance.
2. Our AMA will advocate for adequate access to personal protective equipment and SARS-CoV-2 testing kits, sanitizing and disinfecting equipment for correctional and detention facilities.
3. Our AMA will advocate for humane and safe quarantine protocols for individuals who are incarcerated or detained that test positive for or are exposed to SARS-CoV-2, or other contagious respiratory pathogens.
4. Our AMA supports expanded data reporting, to include testing rates and demographic breakdown for SARS-CoV-2 and other contagious infectious disease cases and deaths in correctional and detention facilities.
5. Our AMA recognizes that detention center and correctional workers, incarcerated persons, and detained immigrants are at high-risk for COVID-19 infection and therefore should be prioritized in receiving access to safe, effective COVID-19 vaccine in the initial phases of distribution, and that this policy will be shared with the Advisory Committee on Immunization Practices for consideration in making their final recommendations on COVID-19 vaccine allocation.
6. Our AMA will advocate: (a) for all employees working in a correctional facility or detention center to be up to date with vaccinations against COVID-19, unless there is a valid medical contraindication; (b) for all employees working in a correctional facility or detention center, not up to date with vaccination for COVID-19 to be COVID rapid tested each time they enter a correctional facility or detention center, as consistent with Centers for Disease Control and Prevention (CDC) or local public health guidelines; (c) for correctional facility or detention center policies that require non-employed, non-residents (e.g. visitors, contractors, etc.) to either show evidence of being up to date for COVID-19 vaccines or show proof of a negative COVID test when they enter a correctional facility or detention center as consistent with CDC or local public health guidelines, at no cost to the visitor; (d) that all people inside a correctional facility or detention center wear an appropriate mask at all times, except while eating or drinking or at a 6 ft. distance from anyone else if local transmission rate is above low risk as determined by the CDC; and (e) that correctional facilities or detention centers be able to request and receive all necessary funding for COVID-19 vaccination and testing, according to CDC or local public health guidelines.
Citation: Alt. Res. 404, I-20; Appended: Res. 406, A-22;

Student-Centered Approaches for Reforming School Disciplinary Policies H-60.900

Our AMA supports: (1) evidence-based frameworks in K-12 schools that focus on school-wide prevention and intervention strategies for student misbehavior; and (2) the consultation with school-based mental health professionals in the student discipline process.
Citation: Res. 008, A-22;

Support for Standardized Diagnosis and Treatment of Hepatitis C Virus in the Population of Incarcerated Persons H-430.985
Our AMA: (1) supports the implementation of routine screening for Hepatitis C virus (HCV) in prisons; (2) will advocate for the initiation of treatment for HCV when determined to be appropriate by the treating physician in incarcerated patients with the infection who are seeking treatment; and (3) supports negotiation for affordable pricing for therapies to treat and cure HCV among correctional facility health care providers, correctional facility health care payors, and drug companies to maximize access to these disease-altering medications.
Citation: Res. 404, A-17;

Health Care While Incarcerated H-430.986
1. Our AMA advocates for adequate payment to health care providers, including primary care and mental health, and addiction treatment professionals, to encourage improved access to comprehensive physical and behavioral health care services to juveniles and adults throughout the incarceration process from intake to re-entry into the community.
2. Our AMA advocates and requires a smooth transition including partnerships and information sharing between correctional systems, community health systems and state insurance programs to provide access to a continuum of health care services for juveniles and adults in the correctional system.
3. Our AMA encourages state Medicaid agencies to accept and process Medicaid applications from juveniles and adults who are incarcerated.
4. Our AMA encourages state Medicaid agencies to work with their local departments of corrections, prisons, and jails to assist incarcerated juveniles and adults who may not have been enrolled in Medicaid at the time of their incarceration to apply and receive an eligibility determination for Medicaid.
5. Our AMA advocates for states to suspend rather than terminate Medicaid eligibility of juveniles and adults upon intake into the criminal legal system and throughout the incarceration process, and to reinstate coverage when the individual transitions back into the community.
6. Our AMA advocates for Congress to repeal the “inmate exclusion” of the 1965 Social Security Act that bars the use of federal Medicaid matching funds from covering healthcare services in jails and prisons.
7.Our AMA advocates for Congress and the Centers for Medicare & Medicaid Services (CMS) to revise the Medicare statute and rescind related regulations that prevent payment for medical care furnished to a Medicare beneficiary who is incarcerated or in custody at the time the services are delivered.
8. Our AMA advocates for necessary programs and staff training to address the distinctive health care needs of women and adolescent females who are incarcerated, including gynecological care and obstetrics care for individuals who are pregnant or postpartum.
9. Our AMA will collaborate with state medical societies, relevant medical specialty societies, and federal regulators to emphasize the importance of hygiene and health literacy information sessions, as well as information sessions on the science of addiction, evidence-based addiction treatment including medications, and related stigma reduction, for both individuals who are incarcerated and staff in correctional facilities.
10. Our AMA supports: (a) linkage of those incarcerated to community clinics upon release in order to accelerate access to comprehensive health care, including mental health and substance use disorder services, and improve health outcomes among this vulnerable patient population, as well as adequate funding; (b) the collaboration of correctional health workers and community health care providers for those transitioning from a correctional institution to the community; (c) the provision of longitudinal care from state supported social workers, to perform foundational check-ins that not only assess mental health but also develop lifestyle plans with newly released people; and (d) collaboration with community-based organizations and integrated models of care that support formerly incarcerated people with regard to their health care, safety, and social determinant of health needs, including employment, education, and housing.
11. Our AMA advocates for the continuation of federal funding for health insurance benefits, including Medicaid, Medicare, and the Children’s Health Insurance Program, for otherwise eligible individuals in pre-trial detention.
12. Our AMA advocates for the prohibition of the use of co-payments to access healthcare services in correctional facilities.
Citation: CMS Rep. 02, I-16; Appended: Res. 417, A-19; Appended: Res. 420, A-19; Modified: Res. 216, I-19; Modified: Res. 503, A-21; Reaffirmed: Res. 229, A-21; Modified: Res. 127, A-22;

Medications for Opioid Use Disorder in Correctional Facilities H-430.987
1. Our AMA endorses: (a) the medical treatment model of employing medications for opioid use disorder (OUD) as the standard of care for persons with OUD who are incarcerated; and (b) medications for persons with OUD who are incarcerated, an endorsement in collaboration with relevant organizations including but not limited to the American Society of Addiction Medicine and the American Academy of Addiction Psychiatry.
2. Our AMA advocates for legislation, standards, policies and funding that require correctional facilities to increase access to evidence-based treatment of OUD, including initiation and continuation of medications for OUD, in conjunction with psychosocial treatment when desired by the person with OUD, in correctional facilities within the United States and that this apply to all individuals who are incarcerated, including individuals who are pregnant, postpartum, or parenting.
3. Our AMA advocates for legislation, standards, policies, and funding that require correctional facilities within the United States to work in ongoing collaboration with addiction treatment physician-led teams, case managers, social workers, and pharmacies in the communities where patients, including individuals who are pregnant, postpartum, or parenting, are released to offer post-incarceration treatment plans for OUD, including education, medication for addiction treatment and counseling, and medication for preventing overdose deaths, including naloxone (or any other medication that is approved by the United States Food and Drug Administration for the treatment of an opioid overdose), and help ensure post-incarceration medical coverage and accessibility to mental health and substance use disorder treatments, that include medication and behavioral health and social supports for addiction treatment.
4. Our AMA advocates for all correctional facilities to use a validated screening tool to identify opioid withdrawal and take steps to determine potential need for treatment for OUD and opioid withdrawal syndrome for all persons upon entry.
Citation: Res. 443, A-05; Reaffirmed: CSAPH Rep. 1, A-15; Appended: Res. 223, I-17; Modified: Res. 503, A-21;

Prevention and Control of HIV/AIDS and Tuberculosis in Correctional Facilities H-430.988
(1) Medical Testing and Care of Prisoners a) Federal and state correctional systems should provide comprehensive medical management for all entrants, which includes voluntary testing for HIV infection and mandatory testing for tuberculosis followed by appropriate treatment for those infected; b) During incarceration, prisoners should be tested for HIV infection as medically indicated or on their request; c) All inmates and staff should be screened for tuberculosis infection and retested at least annually. If an increase in cases of tuberculosis or HIV infection is noted, more frequent retesting may be indicated; d) Correctional institutions should assure that informed consent, counseling, and confidentiality procedures are in place to protect the patient, when HIV testing is appropriate; e) During their post-test counseling procedures, HIV-infected inmates should be encouraged to confidentially notify their sexual or needle-sharing partners; and f) Correctional medical care must, as a minimum, meet the prevailing standards of care for HIV-infected persons in the outside community at large. Prisoners should have access to approved therapeutic drugs and generally employed treatment strategies. (2) HIV/AIDS Education and Prevention Our AMA: a) Encourages the inclusion of HIV-prevention information as a regular part of correctional staff and inmate education. AIDS education in state and federal prisons should stress abstinence from drug use and high-risk sexual practices, as well as the proper use of condoms as one way of decreasing the spread of HIV; b) Will pursue legislation that encourages state, local, and federal correctional institutions to make condoms available to inmates; and c) Urges medical personnel in correctional institutions to work closely with state and local health department personnel to control the spread of HIV/AIDS, tuberculosis, and other serious infectious diseases within and outside these facilities. (3) Prison-based HIV Partner Notification Program Our AMA: a) Urges state health departments to take steps to initiate with state departments of correctional services the development of prison-based HIV Partner Notification Programs for inmates convicted of drug-related crimes and their regular sexual partners; and b) Believes that all parties should recognize that maximum effectiveness in an HIV Partner Notification Program will depend on the truly voluntary participation of inmates and the strict observance of confidentiality at all levels.
Citation: (CSA Rep. 4, A-03; Modified: CSAPH Rep. 1, A-13)

Disease Prevention and Health Promotion in Correctional Institutions H-430.989
Our AMA urges state and local health departments to develop plans that would foster closer working relations between the criminal justice, medical, and public health systems toward the prevention and control of HIV/AIDS, substance abuse, tuberculosis, hepatitis, and other infectious diseases. Some of

these plans should have as their objectives: (a) an increase in collaborative efforts between parole officers and drug treatment center staff in case management aimed at helping patients to continue in treatment and to remain drug free; (b) an increase in direct referral by correctional systems of parolees with a recent, active history of intravenous drug use to drug treatment centers; and (c) consideration by judicial authorities of assigning individuals to drug treatment programs as a sentence or in connection with sentencing.
Citation: CSA Rep. 4, A-03; Modified: CSAPH Rep. 1, A-13; Modified: Alt. Res. 404, I-20;

Update on Tuberculosis H-440.931
It is the policy of the AMA that: (1) All prison inmates should be tuberculin skin-tested upon arrival and annually thereafter. Those who are positive should be managed as medically appropriate, contact tracing performed, and provisions made for the continued treatment and follow-up of those who are released prior to the completion of their therapy. (2) Staff of both prisons and jails should be tuberculin-tested upon employment and annually thereafter. Those who are positive should be managed as medically appropriate and contact tracing performed. (3) Both public and health care worker education about TB, its transmission, and the necessity for preventive as well as therapeutic treatment should be increased. (4) Current CDC guidelines for the prevention of tuberculosis in congregate settings should be fully implemented. The protection of persons who are immunocompromised needs to be addressed especially by treatment centers housing such persons. (5) While powered air-purification respirators may be useful for the protection of HIV-infected and other immunocompromised health care workers who care for patients with infectious TB, their routine use for the prevention of the nosocomial transmission of TB is uncalled for in health care facilities where CDC guidelines are fully implemented. (6) States should review their TB control laws using current CDC recommendations and recent legal and ethical publications as guidelines. Where necessary to further protect the public health from the disease, existing laws should be modified and/or new ones added.
Citation: (BOT Rep. JJ, A-93; Reaffirmed: CSA Rep. 8, A-03; Modified: CSAPH Rep. 1, A-13)

Health Status of Detained and Incarcerated Youth H-60.986
Our AMA (1) encourages state and county medical societies to become involved in the provision of adolescent health care within detention and correctional facilities and to work to ensure that these facilities meet minimum national accreditation standards for health care as established by the National Commission on Correctional Health Care;

(2) encourages state and county medical societies to work with the administrators of juvenile correctional facilities and with the public officials responsible for these facilities to discourage the following inappropriate practices: (a) the detention and incarceration of youth for reasons related to mental illness; (b) the detention and incarceration of children and youth in adult jails; and (c) the use of experimental therapies, not supported by scientific evidence, to alter behavior.

(3) encourages state medical and psychiatric societies and other mental health professionals to work with the state chapters of the American Academy of Pediatrics and other interested groups to survey the juvenile correctional facilities within their state in order to determine the availability and quality of medical services provided.

(4) advocates for increased availability of educational programs by the National Commission on Correctional Health Care and other community organizations to educate adolescents about sexually transmitted diseases, including juveniles in the justice system.

Reducing Racial and Ethnic Disparities in Health Care D-350.995
Our AMA's initiative on reducing racial and ethnic disparities in health care will include the following recommendations:
(1) Studying health system opportunities and barriers to eliminating racial and ethnic disparities in health care.
(2) Working with public health and other appropriate agencies to increase medical student, resident physician, and practicing physician awareness of racial and ethnic disparities in health care and the role of professionalism and professional obligations in efforts to reduce health care disparities.

(3) Promoting diversity within the profession by encouraging publication of successful outreach programs that increase minority applicants to medical schools, and take appropriate action to support such programs, for example, by expanding the "Doctors Back to School" program into secondary schools in minority communities.

Ending Money Bail to Decrease Burden on Lower Income Communities H-80.993
Our AMA: (1) recognizes the adverse health effects of pretrial detention; and (2) will support legislation that promotes the use of non-financial release options for individuals charged with nonviolent crimes.
Citation: Res. 408, A-18; Reaffirmed: Res. 234, A-22;

Use of all Appropriate Medical Forensic Techniques in the Criminal Justice System H-80.994
Our AMA supports the availability and use of all appropriate medical forensic techniques in the criminal justice system.
Citation: Sub. Res. 4, A-00; Reaffirmed: CSAPH Rep. 1, A-10; Reaffirmed: CSAPH Rep. 01, A-20;

Racism as a Public Health Threat H-65.952
1. Our AMA acknowledges that, although the primary drivers of racial health inequity are systemic and structural racism, racism and unconscious bias within medical research and health care delivery have caused and continue to cause harm to marginalized communities and society as a whole.
2. Our AMA recognizes racism, in its systemic, cultural, interpersonal, and other forms, as a serious threat to public health, to the advancement of health equity, and a barrier to appropriate medical care.
3. Our AMA encourages the development, implementation, and evaluation of undergraduate, graduate, and continuing medical education programs and curricula that engender greater understanding of: (a) the causes, influences, and effects of systemic, cultural, institutional, and interpersonal racism; and (b) how to prevent and ameliorate the health effects of racism.
4. Our AMA: (a) supports the development of policy to combat racism and its effects; and (b) encourages governmental agencies and nongovernmental organizations to increase funding for research into the epidemiology of risks and damages related to racism and how to prevent or repair them.
5. Our AMA will work to prevent and combat the influences of racism and bias in innovative health technologies.
Citation: Res. 5, I-20; Reaffirmed: Res. 013, A-22; Modified: Speakers Rep., A-22;

Policing Reform H-65.954
Our AMA: (1) recognizes police brutality as a manifestation of structural racism which disproportionately impacts Black, Indigenous, and other people of color; (2) will work with interested national, state, and local medical societies in a public health effort to support the elimination of excessive use of force by law enforcement officers; (3) will advocate against the utilization of racial and discriminatory profiling by law enforcement through appropriate anti-bias training, individual monitoring, and other measures; and (4) will advocate for legislation and regulations which promote trauma-informed, community-based safety practices.
Citation: Res. 410, I-20; Reaffirmed: CSAPH Rep. 2, A-21; Reaffirmed: BOT Rep. 2, I-21;

AMA Support for Justice Reinvestment Initiatives H-95.931
Our AMA supports justice reinvestment initiatives aimed at improving risk assessment tools for screening and assessing individuals for substance use disorders and mental health issues, expanding jail diversion and jail alternative programs, and increasing access to reentry and treatment programs.
Citation: Res. 205, A-16;

Preventing Assault and Rape of Inmates by Custodial Staff H-430.981
Our AMA urges: (1) that all states have legislation that protects prisoners from sexual misconduct and assault; and (2) physicians who work within prisons to ensure procedures are followed for preventing sexual misconduct and assault of prisoners by staff and appropriately managing prisoners if abuse or assault does occur; the investigation of sexual misconduct should be confidential with information disclosed only to those individuals involved in the process.
Citation: CSAPH Rep. 01, A-20;

Use of the Choke and Sleeper Hold in Prisons H-430.998
The AMA (1) does not regard the choke and sleeper holds as casually applied and easily reversible tranquilizers, but as the use of deadly force with the potential to kill; and (2) advocates that with all incidents involving the application of choke and sleeper holds there should be timely medical surveillance of the inmate.
Citation: (Res. 3, I-83; Reaffirmed: CLRPD Rep. 1, I-93; Reaffirmed: CSA Rep. 8, A-05; Reaffirmed: CSAPH Rep. 1, A-15)

Research the Effects of Physical or Verbal Violence Between Law Enforcement Officers and Public Citizens on Public Health Outcomes H-515.955
Our AMA:
1. Encourages the National Academies of Sciences, Engineering, and Medicine and other interested parties to study the public health effects of physical or verbal violence between law enforcement officers and public citizens, particularly within ethnic and racial minority communities.
2. Affirms that physical and verbal violence between law enforcement officers and public citizens, particularly within racial and ethnic minority populations, is a social determinant of health.
3. Encourages the Centers for Disease Control and Prevention as well as state and local public health agencies to research the nature and public health implications of violence involving law enforcement.
4. Encourages states to require the reporting of legal intervention deaths and law enforcement officer homicides to public health agencies.
5. Encourages appropriate stakeholders, including, but not limited to the law enforcement and public health communities, to define “serious injuries” for the purpose of systematically collecting data on law enforcement-related non-fatal injuries among civilians and officers.
Citation: Res. 406, A-16; Modified: BOT Rep. 28, A-18; Reaffirmed: BOT Rep. 2, I-21;

Police Chases and Chase-Related Injuries H-15.964
The AMA encourages (1) communities, aided by government officials and medical scientists, to develop guidelines on the use of police vehicles that indicate when, how, and how long pursuits should be carried out and to address other key aspects of police pursuit; and (2) responsible government agencies to develop, test, and use instruments and techniques with advanced technologies, for example, coding and tracking devices, to discourage, eliminate, or replace high-speed chases.
Citation: (CSA Rep. C, A-92; Reaffirmed: CSA Rep. 8, A-03; Modified: CSAPH Rep. 1, A-13)

Mental Health Crisis Interventions H-345.972
Our AMA: (1) continues to support jail diversion and community based treatment options for mental illness; (2) supports implementation of law enforcement-based crisis intervention training programs for assisting those individuals with a mental illness, such as the Crisis Intervention Team model programs; (3) supports federal funding to encourage increased community and law enforcement participation in crisis intervention training programs; (4) supports legislation and federal funding for evidence-based training programs by qualified mental health professionals aimed at educating corrections officers in effectively interacting with people with mental health and other behavioral issues in all detention and correction facilities; and (5) supports: (a) increased research on non-violent de-escalation tactics for law enforcement encounters with people who have mental illness and/or developmental disabilities; and (b) research of fatal encounters with law enforcement and the prevention thereof.
Citation: Res. 923, I-15; Appended: Res. 220, I-18; Reaffirmed: CSAPH Rep. 2, A-21; Reaffirmed: BOT Rep. 2, I-21; Appended: Res. 408, A-22;

Increased Use of Body-Worn Cameras by Law Enforcement Officers D-160.919
Our AMA: (1) will work with interested state and national medical specialty societies to support state legislation and/or regulation addressing implementation of body-worn camera programs for law enforcement officers, including funding for the purchase of body-worn cameras, training for officers and technical assistance for law enforcement agencies; (2) will continue to monitor privacy issues raised by body-worn cameras in health care settings; and (3) recommends that law enforcement policies governing the use of body-worn cameras in health care settings be developed and evaluated with input from physicians and others in the medical community and not interfere with the patient-physician relationship.
Citation: BOT Rep. 18, A-19;

Use of Conducted Electrical Devices by Law Enforcement Agencies H-145.977
Our AMA: (1) recommends that law enforcement departments and agencies should have in place specific guidelines, rigorous training, and an accountability system for the use of conducted electrical devices (CEDs) that is modeled after available national guidelines; (2) encourages additional independent research involving actual field deployment of CEDs to better understand the risks and benefits under conditions of actual use. Federal, state, and local agencies should accurately report and analyze the parameters of CED use in field applications; and (3) policy is that law enforcement departments and agencies have a standardized protocol developed with the input of the medical community for the evaluation, management and post-exposure monitoring of subjects exposed to CEDs
Citation: (CSAPH Rep. 6, A-09; Modified: Res. 501, A-14)

School Resource Officer Qualifications and Training H-60.902
Our AMA encourages: (1) an evaluation of existing national standards (and legislation, if necessary) to have qualifications by virtue of training and certification that includes child psychology and development, restorative justice, conflict resolution, crime awareness, implicit/explicit biases, diversity inclusion, cultural humility, and individual and institutional safety and others deemed necessary for school resource officers; and (2) the development of policies that foster the best environment for learning through protecting the health and safety of those in school, including students, teachers, staff and visitors.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 409
(A-23)

Introduced by: Medical Student Section

Subject: Expanding Inclusion of Diverse Mannequins Used in CPR and AED Training

Referred to: Reference Committee D

Whereas, Out-of-hospital cardiac arrest (OHCA) results from a sudden circulatory collapse and it is fatal without rapid cardiopulmonary resuscitation (CPR) and/or defibrillation[1]; and

Whereas, Bystander CPR is performed by a person who is not within the organized emergency-response system, and has been identified as a necessary intervention to improve out-of-hospital cardiac arrest survival[2]; and

Whereas, Every minute of delay in CPR results in a 10% decrease in survival rate, with OHCA being responsible for over 350,000 deaths per year in the United States with an estimated overall survival of 10%[3-5]; and

Whereas, Key strategies to improve survival include early recognition and activation of the Emergency Response System, early CPR, rapid defibrillation and an increase in rates of bystander CPR[5,6]; and

Whereas, The American Heart Association (AHA) and supporting research recognize that women are less likely than men to receive CPR or AED application from a bystander, and even emergency medical services (EMS) are less likely to resuscitate women[7-9]; and

Whereas, Although OHCA rates are similar across genders, women have overall lower survival rates following CPR intervention or hospital discharge, which may be due to bystander hesitance to remove clothing items[8,10,11]; and

Whereas, Concerns regarding accusations of sexual harassment or inappropriate touching, discomfort with breasts, and fears of injuring women are commonly cited by the public, particularly men, as reasons why women are less likely to receive bystander CPR in instances of OHCA, though delays in CPR intervention have been found to be more costly than concerns related to performing CPR[12,13]; and

Whereas, While factors impacting CPR quality, such as clothing removal and hand placement, are impacted by the sex of the CPR mannequin utilized in training, 98.4% of almost 900 online CPR instructional videos use a male patient or mannequin without female anatomy, and none discussed female-specific barriers to CPR or defibrillation[10,14]; and

Whereas, A study of the diversity of mannequins used across North and Latin America found only 12% were non-white, 6% represented women, <1% represented a non-lean body habitus, and 1% represented pregnant individuals[15]; and

Whereas, While CPR intervention during pregnancy does not differ from standard CPR intervention other than manual left uterine displacement, studies show higher maternal

mortality rates due to hesitancy of performing CPR due to concerns of inflicting harm on the patient[16]; and

Whereas, In a 2022 study performed in Australia, provider confidence for performing CPR on individuals with physical disabilities or abnormal chest shape was significantly improved by a supplemental training course[17]; and

Whereas, Though The International Liaison Committee on Resuscitation (ILCOR) recommends a depth of between 5cm and 6cm for adult chest compressions, the optimal chest compression depth recommended by ILCOR is unlikely to be sufficient when performing CPR on a patient with obesity[18-20]; and

Whereas, Patients with body mass index classifications of “obese” or “underweight” are associated with higher rates of in-hospital mortality following out of hospital cardiac arrest[24]; and

Whereas, There are still health disparities in OHCA survival rates due to a lack of competency in CPR and AED delivery for women, pregnant people, people with physical disabilities, and people with obesity[8,10,11,16,17,21]; and

Whereas, Options for increasing diversity of CPR mannequins include the utilization of different skin colors, body types, and genders, or purchasing kits which can add breasts to a “male” chested mannequin on which a bra can be attached[15]; and

Whereas, Current cost-effective methods to diversify primarily male CPR mannequins include the Womanikin, an open-source design, or low-cost female accessory packs to add breasts to existing mannequins, indicating that existing mannequins can be modified to address current differences in OHCA survival following CPR intervention[22,23]; and

Whereas, Options for CPR mannequins representing pregnant persons or persons with physical disabilities are not widely available; and

Whereas, While 2020 American Heart Association guidelines for CPR and emergency cardiovascular care states that it is reasonable to address barriers to bystander CPR for female victims through educational training and public awareness efforts, it is clear additional action needs to be taken in order to address the disparities noted in OHCA CPR intervention[24]; and

Whereas, Teaching materials used in American Heart Association Advanced Certified Life Support (ACLS) training have previously been found to insufficiently reflect races and gender at risk of requiring CPR[25]; and

Whereas, AMA policy H-130.938 outlines guidelines for CPR training for the American public, but it fails to address key healthcare inequities that exist in CPR education and intervention among minority groups; therefore be it

RESOLVED, That our American Medical Association support use of diverse mannequins in CPR and AED training, including, but not limited to, mannequins with breasts, mannequins representing pregnant persons, mannequins representing persons with disabilities, and mannequins of varying body sizes (New HOD Policy); and be it further

RESOLVED, That our AMA support the efforts of relevant stakeholders to develop diverse mannequins or modify current mannequins to reflect diverse patient populations, including, but not limited to, those representing pregnant persons or persons with physical disabilities (New HOD Policy); and be it further

RESOLVED, That our AMA collaborate with relevant stakeholders to increase accessibility of CPR and AED training equipment representing diverse gender and body types in basic life support and advanced certified life support programs nationwide to ensure optimal competency for trainees of all education levels. (Directive to Taker Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Cardiopulmonary Resuscitation (CPR) and Defibrillators H-130.938
Our AMA:
(1) supports publicizing the importance of teaching CPR, including the use of automated external defibrillation;
(2) strongly recommends the incorporation of CPR classes as a voluntary part of secondary school programs;
(3) encourages the American public to become trained in CPR and the use of automated external defibrillators;
(4) advocates the widespread placement of automated external defibrillators, including on all grade K-12 school campuses and locations at which school events are held;
(5) encourages all grade K-12 schools to develop an emergency action plan for sudden cardiac events;
(6) supports increasing government and industry funding for the purchase of automated external defibrillator devices;
(7) endorses increased funding for cardiopulmonary resuscitation and defibrillation training of community organization and school personnel;
(8) supports the development and use of universal connectivity for all defibrillators;
(9) supports legislation that would encourage high school students be trained in cardiopulmonary resuscitation and automated external defibrillator use;
(10) will update its policy on cardiopulmonary resuscitation and automated external defibrillators (AEDs) by endorsing efforts to promote the importance of AED use and public awareness of AED locations, by using solutions such as integrating AED sites into widely accessible mobile maps and applications;
(11) urges AED vendors to remove labeling from AED stations that stipulate that only trained medical professionals can use the defibrillators; and
(12) supports consistent and uniform legislation across states for the legal protection of those who use AEDs in the course of attempting to aid a sudden cardiac arrest victim.
Citation: CCB/CLRPD Rep. 3, A-14; Appended: Res. 211, I-14; Modified: Res. 919, I-15; Appended: Res. 211, I-18;

Proficiency of Physicians in Basic and Advanced Cardiac Life Support H-300.945
Our AMA: (1) believes that all licensed physicians should become proficient in basic CPR and in advanced cardiac life support commensurate with their responsibilities in critical care areas; (2) recommends to state and county medical associations that programs be undertaken to make the entire physician population, regardless of specialty or subspecialty interests, proficient in basic CPR; and (3) encourages training of cardiopulmonary resuscitation and basic life support be funded by medical schools and provided to first-year medical students, preferably during the first term or prior to clinical clerkships.

E-8.5 Disparities in Health Care
Stereotypes, prejudice, or bias based on gender expectations and other arbitrary evaluations of any individual can manifest in a variety of subtle ways. Differences in treatment that are not directly related to differences in individual patients' clinical needs or preferences constitute inappropriate variations in health care. Such variations may contribute to health outcomes that are considerably worse in members of some populations than those of members of majority populations.
This represents a significant challenge for physicians, who ethically are called on to provide the same quality of care to all patients without regard to medically irrelevant personal characteristics.
To fulfill this professional obligation in their individual practices physicians should:
(a) Provide care that meets patient needs and respects patient preferences.
(b) Avoid stereotyping patients.
(c) Examine their own practices to ensure that inappropriate considerations about race, gender identify, sexual orientation, sociodemographic factors, or other nonclinical factors, do not affect clinical judgment.
(d) Work to eliminate biased behavior toward patients by other health care professionals and staff who come into contact with patients.
(e) Encourage shared decision making.
(f) Cultivate effective communication and trust by seeking to better understand factors that can influence patients' health care decisions, such as cultural traditions, health beliefs and health literacy, language or other barriers to communication and fears or misperceptions about the health care system.
The medical profession has an ethical responsibility to:
(g) Help increase awareness of health care disparities.
(h) Strive to increase the diversity of the physician workforce as a step toward reducing health care disparities.
(i) Support research that examines health care disparities, including research on the unique health needs of all genders, ethnic groups, and medically disadvantaged populations, and the development of quality measures and resources to help reduce disparities.
Issued: 2016

Inclusion of Women in Clinical Trials H-525.991
Our AMA: (1) encourages the inclusion of women, including pregnant women when appropriate, in all research on human subjects, except in those cases for which it would be scientifically irrational, in numbers sufficient to ensure that results of such research will benefit both men and women alike; (2) supports the National Institutes of Health policy requiring investigators to account for the possible role of sex as a biological variable in vertebrate animal and human studies; and (3) encourages translation of important research results into practice.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 410
(A-23)

Introduced by:	Medical Student Section
Subject:	Formal Transitional Care Program for Children and Youth with Special Health Care Needs
Referred to:	Reference Committee D

Whereas, Children and youth with special health care needs (CYSHCN) are those whose health care needs are more complex and require specialized care for their physical, behavioral, or emotional development beyond that required by children generally[1]; and

Whereas, "Special health care needs" include any chronic conditions, such as cystic fibrosis, cerebral palsy, congenital defects/conditions, type 1 diabetes and other similar health conditions[1,2]; and

Whereas, Almost 20% of children between 12 and 18 years of age have a special health care need[3]; and

Whereas, People with disabilities are described as having an activity limitation or who use assistance or perceive themselves as having a disability[4]; and

Whereas, Most of CYSHCN do not fall under the formal definition of "disabled"[4]; and

Whereas, 90% of CYSHCN, who previously faced high rates of childhood mortality, now increasingly survive to adulthood due to advances in medicine and therefore need the appropriate care they received as children and young adults[5]; and

Whereas, Pediatric practices do not routinely start planning for transition to adult care until the patient is around 18 years of age, and many pediatric practices do not have the available policies, plans, or educational materials for a proper transition[6]; and

Whereas, Adult clinicians often do not have the specific infrastructure, education, and training to care for young adults with pediatric-onset conditions[7]; and

Whereas, Research demonstrates that CYSHCN currently are inadequately supported during the transition from pediatric to adult health care[6-9]; and

Whereas, Transitioning from pediatric to adult services, particularly for CYSHCN, is associated with decreased medication adherence, decreased patient engagement, increased avoidable hospitalization, and other health risks like permanent end-organ damage and even early death[8, 10]; and

Whereas, The transition to adult services occurs during a developmental period marked by increased risky behavior, emphasizing the need for stability and clear planning to promote good outcomes and continued treatment adherence[11]; and

Whereas, The ability of pediatricians and adult clinicians to communicate effectively during the transition to adult care results in better health outcomes for the individual[12]; and

Whereas, The American Academy of Pediatrics, the American Academy of Family Physicians, and the American College of Physicians have released and reaffirmed a consensus statement supporting high-quality, planned transitions of care for all youth, especially CYSHCN[13]; and

Whereas, The American Academy of Pediatrics has published a clinical report that establishes an algorithm and set of guidelines (the "Transitional Clinical Report and Algorithm") to support the transition from adolescence to adulthood in the clinical home[13]; and

Whereas, After nearly 10 years of effort and research since the Transitional Clinical Report and Algorithm was published, some effective models of transition systems were made by reputable organizations, like National Standards for CYSHCN, but none have been nationally established[13,14]; and

Whereas, Current AMA policy encourages physicians to establish transitional care programs for children with disabilities (H-60.974), but existing language is not inclusive of all children with special health care needs[16]; therefore be it

RESOLVED, That our American Medical Association amend policy H-60.974, *Children and Youth with Disabilities,* by addition and deletion to read as follows, to strengthen our AMA policy and to include a population of patients that do not fall under "disability" but also need extra care, especially when transitioning to adult health care, that they are currently not receiving due to a gap:

> **Children and Youth with Disabilities and with Special Healthcare Need H-60.974**
> It is the policy of the AMA: (1) to inform physicians of the special health care needs of children and youth with disabilities and children and youth with special healthcare needs (CYSHCN);
> (2) to encourage physicians to pay special attention during the preschool physical examination to identify physical, emotional, or developmental disabilities that have not been previously noted;
> (3) to encourage physicians to provide services to children and youth with disabilities and CYSHCN that are family-centered, community-based, and coordinated among the various individual providers and programs serving the child;
> (4) to encourage physicians to provide schools with medical information to ensure that children and youth with disabilities and CYSHCN receive appropriate school health services;
> (5) to encourage physicians to establish formal transition programs or activities that help adolescents with disabilities, ~~and~~ CYSHCN, and their families to plan and make the transition to the adult medical care system;
> (6) to inform physicians of available educational and other local resources, as well as various manuals that would help prepare them to provide family-centered health care; and

(7) to encourage physicians to make their offices accessible to patients with disabilities and CYSHCN, especially when doing office construction and renovations. (Modify Current HOD Policy)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Children and Youth With Disabilities H-60.974
It is the policy of the AMA: (1) to inform physicians of the special health care needs of children and youth with disabilities;
(2) to encourage physicians to pay special attention during the preschool physical examination to identify physical, emotional, or developmental disabilities that have not been previously noted;
(3) to encourage physicians to provide services to children and youth with disabilities that are family-centered, community-based, and coordinated among the various individual providers and programs serving the child;
(4) to encourage physicians to provide schools with medical information to ensure that children and youth with disabilities receive appropriate school health services;
(5) to encourage physicians to establish formal transition programs or activities that help adolescents with disabilities and their families to plan and make the transition to the adult medical care system;
(6) to inform physicians of available educational and other local resources, as well as various manuals that would help prepare them to provide family-centered health care; and
(7) to encourage physicians to make their offices accessible to patients with disabilities, especially when doing office construction and renovations.
Citation: CSA Rep. J, I-91; Modified: Sunset Report, I-01; Modified: CSAPH Rep. 1, A-11; Reaffirmed: CSAPH Rep. 1, A-21;

Evidence-Based Principles of Discharge and Discharge Criteria H-160.942
(1) The AMA defines discharge criteria as organized, evidence-based guidelines that protect patients' interests in the discharge process by following the principle that the needs of patients must be matched to settings with the ability to meet those needs.
(2) The AMA calls on physicians, specialty societies, insurers, and other involved parties to join in developing, promoting, and using evidence-based discharge criteria that are sensitive to the physiological, psychological, social, and functional needs of patients and that are flexible to meet advances in medical and surgical therapies and adapt to local and regional variations in health care settings and services.
(3) The AMA encourages incorporation of discharge criteria into practice parameters, clinical guidelines, and critical pathways that involve hospitalization.
(4) The AMA promotes the local development, adaption and implementation of discharge criteria.
(5) The AMA promotes training in the use of discharge criteria to assist in planning for patient care at all levels of medical education. Use of discharge criteria will improve understanding of the pathophysiology of disease processes, the continuum of care and therapeutic interventions, the use of health care resources and alternative sites of care, the importance of patient education, safety, outcomes measurements, and collaboration with allied health professionals.
(6) The AMA encourages research in the following areas: clinical outcomes after care in different health care settings; the utilization of resources in different care settings; the actual costs of care from onset of illness to recovery; and reliable and valid ways of assessing the discharge needs of patients.
(7) The AMA endorses the following principles in the development of evidence-based discharge criteria and an organized discharge process:
(a) As tools for planning patients' transition from one care setting to another and for determining whether patients are ready for the transition, discharge criteria are intended to match patients' care needs to the setting in which their needs can best be met.
(b) Discharge criteria consist of, but are not limited to: (i) Objective and subjective assessments of physiologic and symptomatic stability that are matched to the ability of the discharge setting to monitor and provide care. (ii) The patient's care needs that are matched with the patient's, family's, or caregiving staff's independent understanding, willingness, and demonstrated performance prior to discharge of processes and procedures of self care, patient care, or care of dependents. (iii) The patient's functional status and impairments that are matched with the ability of the care givers and setting to adequately supplement the patients' function. (iv) The needs for medical follow-up that are matched with the likelihood that the patient will participate in the follow-up. Follow-up is time-, setting-, and service-dependent. Special considerations must be taken to ensure follow-up in vulnerable populations whose access to health care is limited.
(c) The discharge process includes, but is not limited to: (i) Planning: Planning for transition/discharge must be based on a comprehensive assessment of the patient's physiological, psychological, social, and

functional needs. The discharge planning process should begin early in the course of treatment for illness or injury (prehospitalization for elective cases) with involvement of patient, family and physician from the beginning. (ii) Teamwork: Discharge planning can best be done with a team consisting of the patient, the family, the physician with primary responsibility for continuing care of the patient, and other appropriate health care professionals as needed. (iii) Contingency Plans/Access to Medical Care: Contingency plans for unexpected adverse events must be in place before transition to settings with more limited resources. Patients and caregivers must be aware of signs and symptoms to report and have a clearly defined pathway to get information directly to the physician, and to receive instructions from the physician in a timely fashion. (iv) Responsibility/Accountability: Responsibility/accountability for an appropriate transition from one setting to another rests with the attending physician. If that physician will not be following the patient in the new setting, he or she is responsible for contacting the physician who will be accepting the care of the patient before transfer and ensuring that the new physician is fully informed about the patient's illness, course, prognosis, and needs for continuing care. If there is no physician able and willing to care for the patient in the new setting, the patient should not be discharged. Notwithstanding the attending physician's responsibility for continuity of patient care, the health care setting in which the patient is receiving care is also responsible for evaluating the patient's needs and assuring that those needs can be met in the setting to which the patient is to be transferred. (v) Communication: Transfer of all pertinent information about the patient (such as the history and physical, record of course of treatment in hospital, laboratory tests, medication lists, advanced directives, functional, psychological, social, and other assessments), and the discharge summary should be completed before or at the time of transfer of the patient to another setting. Patients should not be accepted by the new setting without a copy of this patient information and complete instructions for continued care. (8) The AMA supports the position that the care of the patient treated and discharged from a treating facility is done through mutual consent of the patient and the physician; and (9) Policy programs by Congress regarding patient discharge timing for specific types of treatment or procedures be discouraged.
Citation: CSA Rep. 4, A-96; Reaffirmation I-96; Modified by Res. 216, A-97; Reaffirmed: CSAPH Rep. 2, A-08; Reaffirmed: BOT Rep. 1, A-08; Reaffirmed: CMS Rep. 07, I-16; Reaffirmed: BOT Rep. 16, A-19;

Increasing Coverage for Children H-165.877
Our AMA: (1) supports appropriate legislation that will provide health coverage for the greatest number of children, adolescents, and pregnant women; (2) recognizes incremental levels of coverage for different groups of the uninsured, consistent with finite resources, as a necessary interim step toward universal access; (3) places particular emphasis on advocating policies and proposals designed to expand the extent of health expense coverage protection for presently uninsured children and recommends that the funding for this coverage should preferably be used to allow these children, by their parents or legal guardians, to select private insurance rather than being placed in Medicaid programs; (4) supports, and encourages state medical associations to support, a requirement by all states that all insurers in that jurisdiction make available for purchase individual and group health expense coverage solely for children up to age 18; (5) encourages state medical associations to support study by their states of the need to extend coverage under such children's policies to the age of 23; (6) seeks to have introduced or support federal legislation prohibiting employers from conditioning their provision of group coverage including children on the availability of individual coverage for this age group for direct purchase by families; (7) advocates that, in order to be eligible for any federal or state premium subsidies or assistance, the private children's coverage offered in each state should be no less than the benefits provided under Medicaid in that state and allow states flexibility in the basic benefits package; (8) advocates that state and/or federal legislative proposals to provide premium assistance for private children's coverage provide for an appropriately graduated subsidy of premium costs for insurance benefits; (9) supports an increase in the federal and/or state sales tax on tobacco products, with the increased revenue earmarked for an income-related premium subsidy for purchase of private children's coverage; (10) advocates consideration by Congress, and encourage consideration by states, of other sources of financing premium subsidies for children's private coverage; (11) supports and encourages state medical associations and local medical societies to support, the use of school districts as one possible risk pooling mechanism for purchase of children's health insurance coverage, with inclusion of children from birth through school age in the insured group; (12) supports and encourages state medical associations to support, study by states of the actuarial feasibility of requiring pure community rating in the geographic areas or insurance markets in which policies are made available for children; and (13) encourages state medical associations, county medical societies, hospitals, emergency departments, clinics and individual physicians to assist in

identifying and encouraging enrollment in Medicaid of the estimated three million children currently eligible for but not covered under this program.
Citation: Sub. Res. 208, A-97; CMS Rep. 7, A-97; Reaffirmation A-99; Reaffirmed: CMS Rep. 5, I-99; Reaffirmed: Res. 238 and Reaffirmation A-00; Reaffirmation A-02; Reaffirmation A-05; Consolidated: CMS Rep. 7, I-05; Reaffirmation A-07; Reaffirmation A-08; Modified: Speakers Rep. 2, I-14; Reaffirmed: CMS Rep. 01, A-18;

Transforming Medicaid and Long-Term Care and Improving Access to Care for the Uninsured H-290.982
AMA policy is that our AMA: (1) urges that Medicaid reform not be undertaken in isolation, but rather in conjunction with broader health insurance reform, in order to ensure that the delivery and financing of care results in appropriate access and level of services for low-income patients;
(2) encourages physicians to participate in efforts to enroll children in adequately funded Medicaid and State Children's Health Insurance Programs using the mechanism of "presumptive eligibility," whereby a child presumed to be eligible may be enrolled for coverage of the initial physician visit, whether or not the child is subsequently found to be, in fact, eligible.
(3) encourages states to ensure that within their Medicaid programs there is a pluralistic approach to health care financing delivery including a choice of primary care case management, partial capitation models, fee-for-service, medical savings accounts, benefit payment schedules and other approaches;
(4) calls for states to create mechanisms for traditional Medicaid providers to continue to participate in Medicaid managed care and in State Children's Health Insurance Programs;
(5) calls for states to streamline the enrollment process within their Medicaid programs and State Children's Health Insurance Programs by, for example, allowing mail-in applications, developing shorter application forms, coordinating their Medicaid and welfare (TANF) application processes, and placing eligibility workers in locations where potential beneficiaries work, go to school, attend day care, play, pray, and receive medical care;
(6) urges states to administer their Medicaid and SCHIP programs through a single state agency;
(7) strongly urges states to undertake, and encourages state medical associations, county medical societies, specialty societies, and individual physicians to take part in, educational and outreach activities aimed at Medicaid-eligible and SCHIP-eligible children. Such efforts should be designed to ensure that children do not go without needed and available services for which they are eligible due to administrative barriers or lack of understanding of the programs;
(8) supports requiring states to reinvest savings achieved in Medicaid programs into expanding coverage for uninsured individuals, particularly children. Mechanisms for expanding coverage may include additional funding for the SCHIP earmarked to enroll children to higher percentages of the poverty level; Medicaid expansions; providing premium subsidies or a buy-in option for individuals in families with income between their state's Medicaid income eligibility level and a specified percentage of the poverty level; providing some form of refundable, advanceable tax credits inversely related to income; providing vouchers for recipients to use to choose their own health plans; using Medicaid funds to purchase private health insurance coverage; or expansion of Maternal and Child Health Programs. Such expansions must be implemented to coordinate with the Medicaid and SCHIP programs in order to achieve a seamless health care delivery system, and be sufficiently funded to provide incentive for families to obtain adequate insurance coverage for their children;
(9) advocates consideration of various funding options for expanding coverage including, but not limited to: increases in sales tax on tobacco products; funds made available through for-profit conversions of health plans and/or facilities; and the application of prospective payment or other cost or utilization management techniques to hospital outpatient services, nursing home services, and home health care services;
(10) supports modest co-pays or income-adjusted premium shares for non-emergent, non-preventive services as a means of expanding access to coverage for currently uninsured individuals;
(11) calls for CMS to develop better measurement, monitoring, and accountability systems and indices within the Medicaid program in order to assess the effectiveness of the program, particularly under managed care, in meeting the needs of patients. Such standards and measures should be linked to health outcomes and access to care;
(12) supports innovative methods of increasing physician participation in the Medicaid program and thereby increasing access, such as plans of deferred compensation for Medicaid providers. Such plans allow individual physicians (with an individual Medicaid number) to tax defer a specified percentage of their Medicaid income;

(13) supports increasing public and private investments in home and community-based care, such as adult day care, assisted living facilities, congregate living facilities, social health maintenance organizations, and respite care;
(14) supports allowing states to use long-term care eligibility criteria which distinguish between persons who can be served in a home or community-based setting and those who can only be served safely and cost-effectively in a nursing facility. Such criteria should include measures of functional impairment which take into account impairments caused by cognitive and mental disorders and measures of medically related long-term care needs;
(15) supports buy-ins for home and community-based care for persons with incomes and assets above Medicaid eligibility limits; and providing grants to states to develop new long-term care infrastructures and to encourage expansion of long-term care financing to middle-income families who need assistance;
(16) supports efforts to assess the needs of individuals with intellectual disabilities and, as appropriate, shift them from institutional care in the direction of community living;
(17) supports case management and disease management approaches to the coordination of care, in the managed care and the fee-for-service environments;
(18) urges CMS to require states to use its simplified four-page combination Medicaid / Children's Health Insurance Program (CHIP) application form for enrollment in these programs, unless states can indicate they have a comparable or simpler form; and
(19) urges CMS to ensure that Medicaid and CHIP outreach efforts are appropriately sensitive to cultural and language diversities in state or localities with large uninsured ethnic populations.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 411
(A-23)

Introduced by: Medical Student Section

Subject: Protecting Workers During Catastrophes

Referred to: Reference Committee D

Whereas, Catastrophes are defined as critical situations, including but not limited to natural disasters such as hurricanes, droughts, earthquakes, as well as pandemics and acts of war, that endanger the lives, health, and/or safety of the population[1,2]; and

Whereas, Natural disasters have injured more than 2 million people in the last 10 years[3]; and

Whereas, From 1992 to 2006, an estimated 72 occupational deaths in the United States were associated with hurricanes and 62 deaths were associated with non-hurricane floods[4]; and

Whereas, In 2019, nearly 3.5 million workers across all industries had work-related injuries and illnesses that were reported by employers, with 2.8 million injuries and illnesses reported in private industry[5]; and

Whereas, The 2019 Workplace Safety Index estimated the cost of the most disabling workplace injuries to employers at more than $55 billion a year[6]; and

Whereas, Research shows that work-related injuries and illnesses are largely underreported[7-9]; and

Whereas, Between 2014 to 2017, Occupational Safety and Health Administration (OSHA) investigated only a quarter of reported occupational deaths[10]; and

Whereas, Marginalized essential workers may be at increased risk of illness or injury during a critical situation such as a pandemic due to the failure of their employer to provide basic health safety protections[11]; and

Whereas, Employer failure of enforcing safety precautions was exemplified on December 10, 2021, when Amazon workers were not sent home before a tornado struck the warehouse, despite hours of notice that severe weather was imminent, which ultimately killed six people and injured many others[12]; and

Whereas, While the tragedy was multifactorial, some of the causes included Amazon telling employees they could not leave, not telling workers to stay home, and failing to provide workers with adequate emergency training in preparation for natural disasters such as tornadoes[13]; and

Whereas, Amazon not only has a history of discouraging workers from taking time off during national disasters, but also as having policies that prohibit workers from carrying their phones on warehouse floors, requiring them to leave them in vehicles or employee lockers before passing through security checks that included metal detectors[14]; and

Whereas, The OSHA requires most businesses to have Emergency Action Plans, which include evacuation procedures, but US law leaves it up to employers to decide whether to send employees home in response to natural disasters[15]; and

Whereas, Even when there are OSHA violations but no violation of law, the penalty for companies are on the order of thousands of dollars, which is an insignificant cost to multi-billion dollar companies[16]; and

Whereas, Many of the federal workplace standards for emergency response and preparedness are decades out of date, are not comprehensive, and do not consider the effects of climate change[14]; and

Whereas, OSHA does not have requirements for hospitals to develop evacuation plans in case of a hurricane or other extreme weather event even though OSHA has been "considering updating these standards" since at least 2014[4,17]; and

Whereas, Employees who refused to drive to work when conditions were potentially unsafe but their employers did not deem conditions to be dangerous are not federally protected, including under the National Labor Relations Act[4]; and

Whereas, The Environmental Protection Agency has projected that climate change will continue to disproportionately impact underserved communities, affecting many who cannot afford the threat of losing their jobs[18]; and

Whereas, Many states do not provide full protection of workers against retaliation or threat of retaliation during public health emergencies resulting in employees to attend their place of employment out of fear of termination[19]; and

Whereas, Current AMA policy around catastrophe preparedness revolves around the medical field response (D-130.972 and H-130.992) and the effects of climate change on natural disasters and affected communities (D-130.966, H-135.938 and H-135.973); and

Whereas, Our American Medical Association has limited policy advocating for the safety of workers mainly focusing on heat exposure, with existing resolutions stating that the AMA will work with United States Department of Labor, OSHA, and other appropriate federal stakeholders to develop and enforce evidence-based policies, guidelines, and protections against heat injury for workers (D-135.967); and

Whereas, Current AMA policy: 1. Does not address its support for protecting all forms of workers during various catastrophes, especially regarding workers who are penalized for taking appropriate safety precautions, 2. Does not address working with stakeholders to develop policies about workers traveling during catastrophes (D-135.967); and

Whereas, The Occupational Safety and Health (OSH) Act requires employers to ensure a safe workplace as outlined by a "duty of care" to protect their employees against an unreasonable risk of harm; however, this policy is applied variably as evidenced by how many workplace injuries and deaths are caused by catastrophes[4,20,21]; therefore be it

RESOLVED, That our American Medical Association advocate for legislation that creates federal standards of safety and protection of workers during natural or man-made catastrophes (Directive to Take Action); and be it further

RESOLVED, That our AMA advocate that the United States Department of Labor, the Occupational Safety and Health Administration (OSHA), and other appropriate stakeholders develop and enforce evidence-based policies, guidelines, and protections for workers at their place of employment and traveling to and from their place of employment during catastrophes. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 4/3/23

RELEVANT AMA POLICY

All Hazards Disaster Preparedness and Response D-130.972
Our AMA will work with: (1) subject matter experts at the national level to quickly produce a provider manual on state licensure and medical liability coverage for physicians during disasters; (2) appropriate medical, public health, disaster response and relief organizations to improve plans, protocols, and policies regarding the provision of health care in mass evacuation shelters; and (3) appropriate state and local organizations to develop templates for private practice/office continuity plans in CD-ROM or web-based format that can be stored in state medical association offices on a server in the event of a disaster.
Citation: (Res. 426, A-06; Reaffirmed in lieu of Res. 218, I-15)

Proposed Crisis Relocation and Shelter Plans H-130.992
Patients must be treated regardless of how they are injured, and planning for treatment is an important part of good medicine. The AMA, therefore, is committed to working with the federal government to provide advice concerning development of sound medical planning for disasters and catastrophes of any and all magnitude.
Citation: (BOT Rep. I, I-82; Reaffirmed: Res. 34, A-83; Reaffirmed: CLRPD Rep. A, I-92; Reaffirmed: CSA Rep. 8, A-03; Reaffirmed: CSAPH Rep. 1, A-13)

Workers' Compensation H-365.981
Our AMA:
(1) will promote the development of practice parameters, when appropriate, for use in the treatment of injured workers and encourages those experienced in the care of injured workers to participate in such development.
(2) will investigate support for appropriate utilization review guidelines for referrals, appropriate procedures and tests, and ancillary services as a method of containing costs and curbing overutilization and fraud in the workers' compensation system. Any such utilization review should be based on open and consistent review criteria that are acceptable to and have been developed in concert with the medical profession. Physicians with background appropriate to the care under review should have the ultimate responsibility for determining quality and necessity of care.
(3) encourages the use of the Guides to the Evaluation of Permanent Impairment. The correct use of the Guides can facilitate prompt dispute resolution by providing a single, scientifically developed, uniform, and objective means of evaluating medical impairment.
(4) encourages physicians to participate in the development of workplace health and safety programs. Physician input into healthy lifestyle programs (the risks associated with alcohol and drug use, nutrition information, the benefits of exercise, for example) could be particularly helpful and appropriate.
(5) encourages the use of uniform claim forms (CMS 1500, UB04), electronic billing (with appropriate mechanisms to protect the confidentiality of patient information), and familiar diagnostic coding guidelines (ICD-9-CM, CPT; ICD-10-CM, CPT), when appropriate, to facilitate prompt reporting and payment of workers' compensation claims.
(6) will evaluate the concept of Independent Medical Examinations (IME) and make recommendations concerning IME's (i) effectiveness; (ii) process for identifying and credentialing independent medical examiners; and (iii) requirements for continuing medical education for examiners.
(7) encourages state medical societies to support strong legislative efforts to prevent fraud in workers' compensation.
(8) will continue to monitor and evaluate state and federal health system reform proposals which propose some form of 24-hour coverage.
(9) will continue to evaluate these and other medical care aspects of workers' compensation and make timely recommendations as appropriate.
(10) will continue activities to develop a unified body of policy addressing the medical care issues

associated with workers' compensation, disseminate information developed to date to the Federation and provide updates to the Federation as additional relevant information on workers' compensation becomes available.
Citation: BOT Rep. X, A-93; Reaffirmed CMS Rep. 10, I-97; Reaffirmed: CMS Rep. 9, A-07; Modified: CMS na, A-17;Modified: CMS Rep. 01, A-17;

Advocating for Heat Exposure Protections for All Workers D-135.967
Our AMA: (1) will advocate for all workers to have access to preventive cool-down rest periods in shaded, ventilated, and/or cooled areas for prevention of injury from sun exposure and heat injury as well as appropriate access to emergency services when signs and symptoms of heat exposure injury; (2) will advocate for legislation that creates federal standards for protections against heat stress and sun exposure specific to the hazards of the workplace; (3) supports policy change at the federal level via legislation or administrative rule changes by the Occupational Safety and Health Administration (OSHA) that would require that workers receive health educational materials about prevention and recognition of heat exhaustion and heat exposure injury that is in the worker's primary language: (4) will work with the United States Department of Labor, OSHA, and other appropriate federal stakeholders to develop and enforce evidence-based policies, guidelines, and protections against heat injury for workers independent of legal status; and (5) recognizes there are particular medical conditions and medications, including but not limited to psychotropics, which increase an individual’s vulnerability to the negative impacts of heat and sun exposure and advocate for recognition of this, as well as additional protections as part of any guidelines, legislation or other policies.
Citation: Res. 502, I-21;

Development of a Federal Public Health Disaster Intervention Team H-130.942
1. Our AMA supports government efforts to: (a) coordinate and integrate federal medical and public health disaster response entities such as the Medical Reserve Corps, National Disaster Medical System, Public Health Services Commissioned Corps (PHSCC), as well as state-to-state sponsored Emergency Management Compact Systems, to strengthen health system infrastructure and surge capacity for catastrophic disasters (Incidents of National Significance) as defined by the Department of Homeland Security's (DHS) National Response Plan (NRP); and (b) place all federal medical and public health disaster response assets (with the exception of the Department of Defense) under authority of the Secretary of the Department of Health and Human Services (DHHS) to prevent significant delays and ensure coordination during a catastrophic disaster (Incident of National Significance).
2. Our AMA, through its Center for Public Health Preparedness and Disaster Response, will work with the DHHS, PHSCC, DHS, and other relevant government agencies to provide comprehensive disaster education and training for all federal medical and public health employees and volunteers through the National Disaster Life Support and other appropriate programs. Such training should address the medical and mental health needs of all populations, including children, the elderly, and other vulnerable groups.
3. Our AMA, through its Center for Public Health Preparedness and Disaster Response, will monitor progress in strengthening federal disaster medical and public health response capacity for deployment anywhere in the nation on short notice, and report back as appropriate.

Fund for Public Health Emergency Response H-440.825
Our AMA supports the reauthorization and appropriation of sufficient funds to a public health emergency fund within the Department of Health and Human Services to facilitate adequate responses to public health emergencies without redistributing funds from established public health accounts.
Citation: Res. 420, A-16;

Domestic Disaster Relief Funding D-130.966
1. Our American Medical Association lobby Congress to a) reassess its policy for expedited release of funding to disaster areas; b) define areas of disaster with disproportionate indirect and direct consequences of disaster as "public health emergencies"; and c) explore a separate, less bureaucratic process for providing funding and resources to these areas in an effort to reduce morbidity and mortality post-disaster.
2. Our AMA will lobby actively for the recommendations outlined in the AMA/APHA Linkages Leadership Summit including: a) appropriate funding and protection of public health and health care systems as critical infrastructures for responding to day-to-day emergencies and mass causality events; b) full

integration and interoperable public health and health care disaster preparedness and response systems at all government levels; c) adequate legal protection in a disaster for public health and healthcare responders and d) incorporation of disaster preparedness and response competency-based education and training in undergraduate, graduate, post-graduate, and continuing education programs.
Citation: (Res. 421, A-11; Reaffirmation A-15)

Heat-Related Illness H-130.951
The AMA recognizes the significant public health threat imposed by heat-related emergencies, and provides the following policy: (1) Physicians should identify patients at risk for extreme heat-related illness such as the elderly, children, individuals with physical or mental disabilities, alcoholics, the chronically ill, and the socially isolated. Patients, family members, friends, and caretakers should be counseled about prevention strategies to avoid such illness. Physicians should provide patients at risk with information about cooling centers and encourage their use during heat emergencies. (2) The AMA encourages patients at risk for heat-related illness to consider wearing appropriate medical identification.
Citation: CSA Rep. 10, A-97; Reaffirmed: CSAPH Rep. 3, A-07; Reaffirmed: CSAPH Rep. 01, A-17;

Bolstering Public Health Preparedness H-440.892
Our AMA: (1) supports the concept that enhancement of surveillance, response, and leadership capabilities of state and local public health agencies be specifically targeted as among our nation's highest priorities; (2) supports, in principle, the funding of research into the determinants of quality performance by public health agencies, including but not limited to the roles of Boards of Health and how they can most effectively help meet community needs for public health leadership, public health programming, and response to public health emergencies; (3) encourages hospitals and other entities that collect patient encounter data to report syndromic (i.e., symptoms that appear together and characterize a disease or medical condition) data to public health departments in order to facilitate syndromic surveillance, assess risks of local populations for disease, and develop comprehensive plans with stakeholders to enact actions for mitigation, preparedness, response, and recovery; (4) supports flexible funding in public health for unexpected infectious disease to improve timely response to emerging outbreaks and build public health infrastructure at the local level with attention to medically underserved areas; and (5) encourages health departments to develop public health messaging to provide education on unexpected infectious disease.
Citation: Sub. Res. 407, I-01; Reaffirmed: CSAPH Rep. 1, A-11; Appended: Res. 912, I-19;

National Disaster Medical System H-130.979
The AMA endorses the U.S. Department of Homeland Security's National Disaster Medical System, which was designed to fulfill three main objectives: (1) to provide medical assistance to a disaster area in the form of medical teams, supplies and equipment; (2) to evacuate patients who cannot be cared for in the affected area to designated locations elsewhere in the nation; and (3) to provide hospitalization in a national network of hospitals that have agreed to accept patients in the event of a national emergency.
Citation: BOT Rep. Q, I-86; Reaffirmed: Sunset Report, I-96; Reaffirmed and Modified: CSAPH Rep. 3, A-06; Reaffirmed: CSAPH Rep. 01, A-16;

Farm-Related Injuries H-10.984
Our AMA (1) emphasizes the need for more complete data on farm-related and other types of traumatic and occupational injuries;
(2) reaffirms its support of regional medical facilities and programs having well-trained medical personnel and emergency care facilities capable of responding effectively to farm-related and other types of injuries. Physicians in rural areas should assume leadership roles in developing these facilities;
(3) advises manufacturers to improve machinery and farm implements so they are less likely to injure operators and others. Safety instructions should accompany each sale of a machine such as a power auger or tractor. Hazard warnings should be part of each power implement;
(4) encourages parents, teachers, physicians, agricultural extension agencies, voluntary farm groups, manufacturers, and other sectors of society to inform children and others about the risks of agricultural injuries and about approaches to their prevention;
(5) endorses the concept of making injury surveillance and prevention programs ongoing activities of state and local departments of public health; and

(6) encourages the inclusion of farm-related injury issues as part of the training program for medical students and residents involved in a rural health experience.
Citation: BOT Rep. U, A-91; Reaffirmed: Sunset Report, I-01; Reaffirmed: CSAPH Rep. 1, A-11; Reaffirmed: CSAPH Rep. 1, A-21;

Global Climate Change and Human Health H-135.938
Our AMA: 1. Supports scientific consensus that the Earth is undergoing adverse global climate change and that anthropogenic contributions are significant. These climate changes have adversely affected the physical and mental health of people. We recognize that minoritized and marginalized populations, children, pregnant people, the elderly, rural communities, and those who are economically disadvantaged will suffer disproportionate harm from climate change.
2. Supports educating the medical community on the adverse public health effects of global climate change and incorporating the health implications of climate change into the spectrum of medical education, including topics such as population displacement, heat waves and drought, flooding, infectious and vector-borne diseases, and potable water supplies.
3. (a) Recognizes the importance of physician involvement in policymaking at the state, national, and global level and supports efforts to search for novel, comprehensive, and economically sensitive approaches to mitigating climate change to protect the health of the public; and (b) recognizes that whatever the etiology of global climate change, policymakers should work to reduce human contributions to such changes.
4. Encourages physicians to assist in educating patients and the public on the physical and mental health effects of climate change and on environmentally sustainable practices, and to serve as role models for promoting environmental sustainability.
5. Encourages physicians to work with local and state health departments to strengthen the public health infrastructure to ensure that the global health effects of climate change can be anticipated and responded to more efficiently, and that adaptation interventions are equitable and prioritize the needs of the populations most at risk.
6. Supports epidemiological, translational, clinical and basic science research necessary for evidence-based global climate change policy decisions related to health care and treatment.
7. Encourages physicians to assess for environmental determinants of health in patient history-taking and encourages the incorporation of assessment for environmental determinants of health in patient history-taking into physician training.
Citation: CSAPH Rep. 3, I-08; Reaffirmation A-14; Reaffirmed: CSAPH Rep. 04, A-19; Reaffirmation: I-19; Modified: Res. 424, A-22; Modified: CSAPH Rep. 2, I-22;

Stewardship of the Environment H-135.973
The AMA: (1) encourages physicians to be spokespersons for environmental stewardship, including the discussion of these issues when appropriate with patients; (2) encourages the medical community to cooperate in reducing or recycling waste; (3) encourages physicians and the rest of the medical community to dispose of its medical waste in a safe and properly prescribed manner; (4) supports enhancing the role of physicians and other scientists in environmental education; (5) endorses legislation such as the National Environmental Education Act to increase public understanding of environmental degradation and its prevention; (6) encourages research efforts at ascertaining the physiological and psychological effects of abrupt as well as chronic environmental changes; (7) encourages international exchange of information relating to environmental degradation and the adverse human health effects resulting from environmental degradation; (8) encourages and helps support physicians who participate actively in international planning and development conventions associated with improving the environment; (9) encourages educational programs for worldwide family planning and control of population growth; (10) encourages research and development programs for safer, more effective, and less expensive means of preventing unwanted pregnancy; (11) encourages programs to prevent or reduce the human and environmental health impact from global climate change and environmental degradation.(12) encourages economic development programs for all nations that will be sustainable and yet nondestructive to the environment; (13) encourages physicians and environmental scientists in the United States to continue to incorporate concerns for human health into current environmental research and public policy initiatives; (14) encourages physician educators in medical schools, residency programs, and continuing medical education sessions to devote more attention to environmental health issues; (15) will strengthen its liaison with appropriate environmental health agencies, including the National Institute of Environmental Health Sciences (NIEHS); (16) encourages expanded funding for

environmental research by the federal government; and (17) encourages family planning through national and international support.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 412
(A-23)

Introduced by: Medical Student Section

Subject: Waste Receptacles in All Restroom Stalls for Menstrual Product Disposal

Referred to: Reference Committee D

Whereas, In-stall waste receptacles are a key feature in women's restrooms across the United States and are widely recognized to be an important part of maintaining a sanitary public facility[12]; and

Whereas, Lack of in-stall waste receptacles is a significant barrier to managing menstruation safely and accessibly for transgender and nonbinary people[10]; and

Whereas, Thirty-one percent of transgender people who are out in places of public accommodation experience negative treatment due to their gender identity, and some transmasculine people fear changing their menstrual products in a public restroom may out them[2,6,10]; and

Whereas, Some transmasculine individuals' physical appearance makes using the women's restroom more dangerous than using the men's restroom in which menstrual product receptacles are not universally available[10]; and

Whereas, Two-thirds of transmasculine people feel unsafe using the men's restroom during menstruation[1]; and

Whereas, Fifty-nine percent of transgender people sometimes avoid public restrooms for fear of confrontation and discrimination[4]; and

Whereas, Twelve percent of transgender people are verbally harassed in public restrooms and one percent of transgender people are physically or sexually assaulted in public restrooms[4]; and

Whereas, Nearly one-third of trans people have limited the amount they ate or drank in order to avoid using the restroom[6]; and

Whereas, Poor menstrual hygiene has been linked to an increase in urinary and reproductive tract infections and a long-term increase in infertility, and eight percent of transgender people fight a urinary tract infection, kidney infection, or another kidney-related problem due to avoiding restrooms[5,6]; and

Whereas, Menstruating trans and nonbinary people sometimes hide used menstrual products in their sleeves or pockets to avoid disposing of them in public and risking outing themselves[10]; and

Whereas, Menstruation, gendered association with menstruation, and use of menstrual products are sources of distress for many transgender people; and being forced to carry a

used menstrual product is dehumanizing and worsens the gender dysphoria and social stigma that contributes to the forty-one percent suicide attempt rate for transgender people[1,3,9,13]; and

Whereas, Non-lined sanitary receptacles yield ten times more microbial contamination than other bathroom surfaces, and thus hiding used menstrual products in pockets poses a serious health threat[8]; and

Whereas, Non-hygienic handling of used menstrual products poses a serious health risk of Hepatitis B and C exposure; and thus the U.S. Occupational Safety and Health Administration (OSHA) requires sanitary disposal bins be lined by a plastic or wax bag and workers be provided gloves to prevent physical contact with used menstrual products[7,8]; and

Whereas, Transgender people may still be accommodated within existing binary restrooms in places that lack gender-neutral restrooms for such reasons as cost-prohibitiveness and building structure[10]; and

Whereas, The American Medical Association has a history of advocating for people to use the restroom that aligns with their gender identity[11]; and

Whereas, AMA Policy H-65.964 advocates for policies that promote safe access to public facilities, including restrooms, for transgender individuals, but does not include support for interventions to make exclusionary binary restroom facilities more inclusive; therefore be it

RESOLVED, That our American Medical Association amend H-65.964 “Access to Basic Human Services for Transgender Individuals” by addition and deletion to read as follows:

> **Access to Basic Human Services for Transgender Individuals H-65.964**
> Our AMA (1) opposes policies preventing transgender individuals from accessing basic human services and public facilities in line with one’s gender identity, including, but not limited to, the use of restrooms; ~~and~~ (2) will advocate for the creation of policies that promote social equality and safe access to basic human services and public facilities for transgender individuals according to one’s gender identity, and (3) will advocate for the inclusion of waste receptacles in all restrooms, including male designated stalls, for safe and discreet disposal of used menstrual products by people who menstruate. (Modify Current HOD Policy)

RELEVANT AMA POLICY

Access to Basic Human Services for Transgender Individuals H-65.964
Our AMA: (1) opposes policies preventing transgender individuals from accessing basic human services and public facilities in line with ones gender identity, including, but not limited to, the use of restrooms; and (2) will advocate for the creation of policies that promote social equality and safe access to basic human services and public facilities for transgender individuals according to ones gender identity.
Citation: Res. 010, A-17;

Health Care Needs of Lesbian, Gay, Bisexual, Transgender and Queer Populations H-160.991
1. Our AMA: (a) believes that the physician's nonjudgmental recognition of patients' sexual orientations, sexual behaviors, and gender identities enhances the ability to render optimal patient care in health as well as in illness. In the case of lesbian, gay, bisexual, transgender, queer/questioning, and other (LGBTQ) patients, this recognition is especially important to address the specific health care needs of people who are or may be LGBTQ; (b) is committed to taking a leadership role in: (i) educating physicians on the current state of research in and knowledge of LGBTQ Health and the need to elicit relevant gender and sexuality information from our patients; these efforts should start in medical school, but must also be a part of continuing medical education; (ii) educating physicians to recognize the physical and psychological needs of LGBTQ patients; (iii) encouraging the development of educational programs in LGBTQ Health; (iv) encouraging physicians to seek out local or national experts in the health care needs of LGBTQ people so that all physicians will achieve a better understanding of the medical needs of these populations; and (v) working with LGBTQ communities to offer physicians the opportunity to better understand the medical needs of LGBTQ patients; and (c) opposes, the use of "reparative" or "conversion" therapy for sexual orientation or gender identity.
2. Our AMA will collaborate with our partner organizations to educate physicians regarding: (i) the need for sexual and gender minority individuals to undergo regular cancer and sexually transmitted infection screenings based on anatomy due to their comparable or elevated risk for these conditions; and (ii) the need for comprehensive screening for sexually transmitted diseases in men who have sex with men; (iii) appropriate safe sex techniques to avoid the risk for sexually transmitted diseases; and (iv) that individuals who identify as a sexual and/or gender minority (lesbian, gay, bisexual, transgender, queer/questioning individuals) experience intimate partner violence, and how sexual and gender minorities present with intimate partner violence differs from their cisgender, heterosexual peers and may have unique complicating factors.

3. Our AMA will continue to work alongside our partner organizations, including GLMA, to increase physician competency on LGBTQ health issues.
4. Our AMA will continue to explore opportunities to collaborate with other organizations, focusing on issues of mutual concern in order to provide the most comprehensive and up-to-date education and information to enable the provision of high quality and culturally competent care to LGBTQ people.

F, I-91; CSA Rep. 8 - I-94; Appended: Res. 506, A-00; Modified and Reaffirmed: Res. 501, A-07; Modified: CSAPH Rep. 9, A-08; Reaffirmation A-12; Modified: Res. 08, A-16; Modified: Res. 903, I-17; Modified: Res. 904, I-17; Res. 16, A-18; Reaffirmed: CSAPH Rep. 01, I-18;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 413
(A-23)

Introduced by: Medical Student Section

Subject: Supporting Intimate Partner and Sexual Violence Safe Leave

Referred to: Reference Committee D

Whereas, Intimate partner violence (IPV) is defined as any preventable form of physical, sexual, or psychological aggression committed by current or former partners, including but not limited to stalking, sexual harassment, or sexual coercion[1,2]; and

Whereas, 1 in 3 women and 1 in 4 men in the United States have experienced some form of IPV, with increased rates of injury and rape reported in sexual and ethnic minority populations[3,4]; and

Whereas, Up to 61.1% of lesbian and bisexual cisgender women and 37.3% of gay and bisexual cisgender men report experiencing IPV compared to 35% and 29% of heterosexual cisgender women and men, respectively[5]; and

Whereas, Transgender individuals disclose instances of physical and sexual IPV at 2.5 and 3.4 times more frequently than individuals who do not self-identify with a sexual minority group[5]; and

Whereas, National survey data from the Centers for Disease Control state that 53.8% of multiracial women, 46% of American Indian women, and 43.7% of Black women have experienced IPV, compared to 34.6% of non-Hispanic white women[6]; and

Whereas, Individuals who experience IPV are also more likely to become victims of other forms of sexual violence and abuse such as stalking, workplace harassment, rape, and trafficking[7,8]; and

Whereas, A surge in case numbers of IPV has been recorded, largely due to increased levels of societal stress, panic, and financial and emotional strain resulting from the COVID-19 pandemic[9]; and

Whereas, IPV has acute effects on physical and mental health, including injury, unintended pregnancy, low fetal birth weight, preterm birth, disorders secondary to trauma, development of substance use disorders, and death by homicide[10,11]; and

Whereas, Individuals who experience IPV have a 60% increased risk for asthma, 70% increased risk for heart disease, and 80% increased risk for stroke[12]; and

Whereas, The healthcare-related costs due to IPV are estimated to be $104,000 per female victim and $23,000 per male victim, totaling to $5.8 billion annually[13,14]; and

Whereas, Lifetime economic burden from IPV for all survivors in the U.S. totals nearly $3.6 trillion, which includes direct medical costs, lost productivity, the financing of criminal justice proceedings, and replacement of lost or damaged property[13]; and

Whereas, Survivors of IPV require sufficient funds to pay for frequent hospital and clinic visits, long-term treatment of physical and emotional injuries, mental health conditions, and substance use disorders, legal proceedings, childcare, and finding safety[15]; and

Whereas, Job loss in the setting of IPV can propagate the cycle of violence, precipitating further reliance on the abuser for living expenses, childcare, and additional resources[3,9,16]; and

Whereas, Close to 60% of IPV survivors report employment instability and job loss due to violence-related reasons, including but not limited to stigma, workplace discrimination due to negative physical and mental effects of IPV, propensity for recurrence of abuse, decreased productivity, and frequent absences[3,16]; and

Whereas, 67% of those who have experienced or are experiencing IPV state that interactions with an abusive partner limited their ability to complete education or job training for future career growth, resulting in over 17% leaving the workforce[3]; and

Whereas, On average, 83% of IPV survivors experience 7.2 days of lost productivity per month at work, totaling in 8 million days each year, thereby decreasing their chances of earning raises or promotions[3,14]; and

Whereas, This loss in productivity and workforce attrition translates to an annual cost of over $9.3 billion to the United States[14]; and

Whereas, 55% of companies do not have, publicize, or provide training for a workplace violence prevention policy offering protections in the event of IPV[17]; and

Whereas, 33% of private sector jobs do not offer paid sick leave, and only 13% of jobs have paid family and medical leave[18]; and

Whereas, The Family and Medical Leave Act of 1993 provides only eligible federal workers unpaid leave for medical needs and does not include regulations for private-sector employers[19]; and

Whereas, A lack of access to paid leave causes employers and workers to lose $22.5 billion annually in wages and profits[20]; and

Whereas, Those who have experienced IPV remain more vulnerable to the detrimental consequences of lost wages from limited opportunities for paid leave, due to inability to afford daily costs of living and medical expenses[18,20]; and

Whereas,11 states, including the District of Columbia, have enacted legislation offering “safe time provisions” that protect employees who are victims of IPV[21,22]; and

Whereas, “Safe time provisions” encompass a list of employee rights emerging in the context of experienced violence, including but not limited to safe leave, protection from wrongful termination, and legal assistance stipends in the event of court proceedings[21]; and

Whereas, Safe leave is defined as a period of paid or unpaid time allotted for physical, mental, and social healing from trauma relating to any form of violence, particularly IPV, stalking, and sexual harassment by non-partners[22]; and

Whereas, Violence-related safe leave is distinct from personal medical or family leave in that it includes extended time for ensuring personal and familial safety from threat of abuse, protection from premature or wrongful termination of employment, stipends for legal aid, and connection to social work or supportive agencies that facilitate physical, mental, and social recovery[22,23]; and

Whereas, States, districts, and cities that have instituted paid or unpaid safe leave or paid family and medical leave policies inclusive of safe time provisions, including Sonoma, Seattle, New York, and Philadelphia, have not found negative economic effects, subsequent decreases in pay for other employees, or increases in unemployment[18,21,22]; and

Whereas, Over $1.1 billion could be saved in emergency department visits through paid safe leave since implementation increases job and financial security of those experiencing IPV while decreasing dependence on the abuser[20]; and

Whereas, The implementation of paid safe leave decreased turnover of employees and healthcare costs for preventable conditions, simultaneously improving productivity and economic growth[20,24]; and

Whereas, Survivors of IPV who had access to paid leave were better able to connect to family court, had increased job security, and retained greater protection against recurrence of any harassment or abuse by current, former, or non-partners[1,25]; and

Whereas, Our AMA has policy (H-515.965) encouraging physicians to campaign against IPV and violence in all forms; and

Whereas, Though our AMA has individual policies on family, medical, and sick leave (H-420.979, H-440.823), it lacks policy supportive of providing adequate time for the physical, emotional, and psychiatric healing required following an experience of IPV or non-partner sexual violence; therefore be it

RESOLVED, That our American Medical Association recognize the positive impact of paid safe leave on public health outcomes and support legislation that offers safe leave (New HOD Policy); and be it further

RESOLVED, That our AMA amend the existing policy H-420.979, “AMA Statement on Family and Medical Leave to promote inclusivity” by addition to read as follows:

AMA Statement on Family and Medical Leave, H-420.979

Our AMA supports policies that provide employees with reasonable job security and continued availability of health plan benefits in the event leave by an employee becomes necessary due to documented medical conditions and/or concerns for safety. Such policies should provide for reasonable periods of paid or unpaid: (1) medical leave for the employee, including pregnancy; (2) maternity leave for the employee-mother; (3) leave if medically appropriate to care for a member of the employee's immediate family, i.e., a spouse or children; ~~and~~ (4) leave for adoption or for foster care leading to adoption; and (5) safe leave provisions for those experiencing any instances of violence, including but not

limited to intimate partner violence, sexual violence or coercion, and stalking. Such periods of leave may differ with respect to each of the foregoing classifications, and may vary with reasonable categories of employers. Such policies should encourage voluntary programs by employers and may provide for appropriate legislation (with or without financial assistance from government). Any legislative proposals will be reviewed through the Association's normal legislative process for appropriateness, taking into consideration all elements therein, including classifications of employees and employers, reasons for the leave, periods of leave recognized (whether paid or unpaid), obligations on return from leave, and other factors involved in order to achieve reasonable objectives recognizing the legitimate needs of employees and employers. (Modify Current HOD Policy)

RELEVANT AMA POLICY

Family and Intimate Partner Violence H-515.965
(1) Our AMA believes that all forms of family and intimate partner violence (IPV) are major public health issues and urges the profession, both individually and collectively, to work with other interested parties to prevent such violence and to address the needs of survivors. Physicians have a major role in lessening the prevalence, scope and severity of child maltreatment, intimate partner violence, and elder abuse, all of which fall under the rubric of family violence. To suppor physicians in practice, our AMA will continue to campaign against family violence and remains open to working with all interested parties to address violence in US society.
(2) Our AMA believes that all physicians should be trained in issues of family and intimate partner violence through undergraduate and graduate medical education as well as continuing professional development. The AMA, working with state, county and specialty medical societies as well as academic medical centers and other appropriate groups such as the Association of American Medical Colleges, should develop and disseminate model curricula on violence for incorporation into undergraduate and graduate medical education, and all parties should work for the rapid distribution and adoption of such curricula. These curricula should include coverage of the diagnosis, treatment, and reporting of child maltreatment, intimate partner violence, and elder abuse and provide training on interviewing techniques, risk assessment, safety planning, and procedures for linking with resources to assist survivors. Our AMA supports the inclusion of questions on family violence issues on licensure and certification tests.
(3) The prevalence of family violence is sufficiently high and its ongoing character is such that physicians, particularly physicians providing primary care, will encounter survivors on a regular basis. Persons in clinical settings are more likely to have experienced intimate partner and family violence than non-clinical populations. Thus, to improve clinical services as well as the public health, our AMA encourages physicians to: (a) Routinely inquire about the family violence histories of their patients as this knowledge is essential for effective diagnosis and care; (b) Upon identifying patients currently experiencing abuse or threats from intimates, assess and discuss safety issues with the patient before he or she leaves the office, working with the patient to develop a safety or exit plan for use in an emergency situation and making appropriate referrals to address intervention and safety needs as a matter of course; (c) After diagnosing a violence-related problem, refer patients to appropriate medical or health care professionals and/or community-based trauma-specific resources as soon as possible; (d) Have written lists of resources available for survivors of violence, providing information on such matters as emergency shelter, medical assistance, mental health services, protective services and legal aid; (e) Screen patients for psychiatric sequelae of violence and make appropriate referrals for these conditions upon identifying a history of family or other interpersonal violence; (f) Become aware of local resources and referral sources that have expertise in dealing with trauma from IPV; (g) Be alert to men presenting with injuries suffered as a result of intimate violence because these men may require intervention as either survivors or abusers themselves; (h) Give due validation to the experience of IPV and of observed symptomatology as possible sequelae; (i) Record a patient's IPV history, observed traumata potentially linked to IPV, and referrals made; (j) Become involved in appropriate local programs designed to prevent violence and its effects at the community level.
(4) Within the larger community, our AMA:

(a) Urges hospitals, community mental health agencies, and other helping professions to develop appropriate interventions for all survivors of intimate violence. Such interventions might include individual and group counseling efforts, support groups, and shelters.
(b) Believes it is critically important that programs be available for survivors and perpetrators of intimate violence.
(c) Believes that state and county medical societies should convene or join state and local health departments, criminal justice and social service agencies, and local school boards to collaborate in the development and support of violence control and prevention activities.
(5) With respect to issues of reporting, our AMA strongly supports mandatory reporting of suspected or actual child maltreatment and urges state societies to support legislation mandating physician reporting of elderly abuse in states where such legislation does not currently exist. At the same time, our AMA oppose the adoption of mandatory reporting laws for physicians treating competent, non-elderly adult survivors of intimate partner violence if the required reports identify survivors. Such laws violate basic tenets of medical ethics. If and where mandatory reporting statutes dealing with competent adults are adopted, the AMA believes the laws must incorporate provisions that: (a) do not require the inclusion of survivors' identities; (b) allow competent adult survivors to opt out of the reporting system if identifiers are required; (c) provide that reports be made to public health agencies for surveillance purposes only; (d) contain a sunset mechanism; and (e) evaluate the efficacy of those laws. State societies are encouraged to ensure that all mandatory reporting laws contain adequate protections for the reporting physician and to educate physicians on the particulars of the laws in their states.
(6) Substance abuse and family violence are clearly connected. For this reason, our AMA believes that:
(a) Given the association between alcohol and family violence, physicians should be alert for the presence of one behavior given a diagnosis of the other. Thus, a physician with patients with alcohol problems should screen for family violence, while physicians with patients presenting with problems of physical or sexual abuse should screen for alcohol use.
(b) Physicians should avoid the assumption that if they treat the problem of alcohol or substance use and abuse they also will be treating and possibly preventing family violence.
(c) Physicians should be alert to the association, especially among female patients, between current alcohol or drug problems and a history of physical, emotional, or sexual abuse. The association is strong enough to warrant complete screening for past or present physical, emotional, or sexual abuse among patients who present with alcohol or drug problems.
(d) Physicians should be informed about the possible pharmacological link between amphetamine use and human violent behavior. The suggestive evidence about barbiturates and amphetamines and violence should be followed up with more research on the possible causal connection between these drugs and violent behavior.
(e) The notion that alcohol and controlled drugs cause violent behavior is pervasive among physicians and other health care providers. Training programs for physicians should be developed that are based on empirical data and sound theoretical formulations about the relationships among alcohol, drug use, and violence.

AMA Statement on Family and Medical Leave H-420.979
Our AMA supports policies that provide employees with reasonable job security and continued availability of health plan benefits in the event leave by an employee becomes necessary due to documented medical conditions. Such policies should provide for reasonable periods of paid or unpaid:
(1) medical leave for the employee, including pregnancy, abortion, and stillbirth;
(2) maternity leave for the employee-mother;
(3) leave if medically appropriate to care for a member of the employee's immediate family, i.e., a spouse or children; and
(4) leave for adoption or for foster care leading to adoption. Such periods of leave may differ with respect to each of the foregoing classifications, and may vary with reasonable categories of employers. Such policies should encourage voluntary programs by employers and may provide for appropriate legislation (with or without financial assistance from government). Any legislative proposals will be reviewed through the Association's normal legislative process for appropriateness, taking into consideration all elements therein, including classifications of employees and employers, reasons for the leave, periods of leave recognized (whether paid or unpaid), obligations on return from leave, and other factors involved in order to achieve reasonable objectives recognizing the legitimate needs of employees and employers.

Citation: BOT Rep. A, A-88; Reaffirmed: Sunset Report, I-98; Reaffirmed: CLRPD Rep. 1, A-08; Reaffirmation A-12; ; Reaffirmed: CMS Rep. 03, A-16; Modified: Res. 302, I-22;

Paid Sick Leave H-440.823
Our AMA: (1) recognizes the public health benefits of paid sick leave and other discretionary paid time off; (2) supports employer policies that allow employees to accrue paid time off and to use such time to care for themselves or a family member; and (3) supports employer policies that provide employees with unpaid sick days to use to care for themselves or a family member where providing paid leave is overly burdensome.
Citation: CMS Rep. 03, A-16; Reaffirmed: BOT Rep. 11, A-19;

Parental Leave H-405.954
1. Our AMA encourages the study of the health implications among patients if the United States were to modify one or more of the following aspects of the Family and Medical Leave Act (FMLA): a reduction in the number of employees from 50 employees; an increase in the number of covered weeks from 12 weeks; and creating a new benefit of paid parental leave.
2. Our AMA will study the effects of FMLA expansion on physicians in varied practice environments.
3. Our AMA: (a) encourages employers to offer and/or expand paid parental leave policies; (b) encourages state medical associations to work with their state legislatures to establish and promote paid parental leave policies; (c) advocates for improved social and economic support for paid family leave to care for newborns, infants and young children; and (d) advocates for federal tax incentives to support early child care and unpaid child care by extended family members.
4. Our AMA: (a) encourages key stakeholders to implement policies and programs that help protect against parental discrimination and promote work-life integration for physician parents, which should encompass prenatal parental care, equal parental leave for birthing and non-birthing parents, and flexibility for childcare; and (b) urges key stakeholders to include physicians and frontline workers in legislation that provides protections and considerations for paid parental leave for issues of health and childcare.

Policies for Parental, Family and Medical Necessity Leave H-405.960
AMA adopts as policy the following guidelines for, and encourages the implementation of, Parental, Family and Medical Necessity Leave for Medical Students and Physicians:
1. Our AMA urges residency training programs, medical specialty boards, the Accreditation Council for Graduate Medical Education, and medical group practices to incorporate and/or encourage development of leave policies, including parental, family, and medical leave policies, as part of the physician's standard benefit agreement.
2. Recommended components of parental leave policies for physicians include: (a) duration of leave allowed before and after delivery; (b) category of leave credited; (c) whether leave is paid or unpaid; (d) whether provision is made for continuation of insurance benefits during leave, and who pays the premium; (e) whether sick leave and vacation time may be accrued from year to year or used in advance; (f) how much time must be made up in order to be considered board eligible; (g) whether make-up time will be paid; (h) whether schedule accommodations are allowed; and (i) leave policy for adoption.
3. AMA policy is expanded to include physicians in practice, reading as follows: (a) residency program directors and group practice administrators should review federal law concerning maternity leave for guidance in developing policies to assure that pregnant physicians are allowed the same sick leave or disability benefits as those physicians who are ill or disabled; (b) staffing levels and scheduling are encouraged to be flexible enough to allow for coverage without creating intolerable increases in other physicians' workloads, particularly in residency programs; and (c) physicians should be able to return to their practices or training programs after taking parental leave without the loss of status.
4. Our AMA will study the impact on and feasibility of medical schools, residency programs, specialty boards, and medical group practices incorporating into their parental leave policies a 12-week minimum leave allowance, with the understanding that no parent be required to take a minimum leave.
5. Our AMA recommends that medical practices, departments and training programs strive to provide 12 weeks of paid parental, family and medical necessity leave in a 12-month period for their attending and trainee physicians as needed.
6. Residency program directors should review federal and state law for guidance in developing policies for parental, family, and medical leave.

7. Medical students and physicians who are unable to work because of pregnancy, childbirth, abortion or stillbirth, and other related medical conditions should be entitled to such leave and other benefits on the same basis as other physicians who are temporarily unable to work for other medical reasons.
8. Residency programs should develop written policies on leave for physicians. Such written policies should include the following elements: (a) leave policy for birth or adoption; (b) duration of leave allowed before and after delivery; (c) duration of leave allowed after abortion or stillbirth; (d) category of leave credited (e.g., sick, vacation, parental, unpaid leave, short term disability); (e) whether leave is paid or unpaid; (f) whether provision is made for continuation of insurance benefits during leave and who pays for premiums; (g) whether sick leave and vacation time may be accrued from year to year or used in advance; (h) extended leave for resident physicians with extraordinary and long-term personal or family medical tragedies for periods of up to one year, without loss of previously accepted residency positions, for devastating conditions such as terminal illness, permanent disability, or complications of pregnancy that threaten maternal or fetal life; (i) how time can be made up in order for a resident physician to be considered board eligible; (j) what period of leave would result in a resident physician being required to complete an extra or delayed year of training; (k) whether time spent in making up a leave will be paid; and (l) whether schedule accommodations are allowed, such as reduced hours, no night call, modified rotation schedules, and permanent part-time scheduling.
9. Medical schools should develop written policies on parental leave, family leave, and medical leave for medical students. Such written policies should include the following elements: (a) leave policy for birth or adoption; (b) duration of leave allowed before and after delivery; (c) extended leave for medical students with extraordinary and long-term personal or family medical tragedies, without loss of previously accepted medical school seats, for devastating conditions such as terminal illness, permanent disability, or complications of pregnancy that threaten maternal or fetal life; (d) how time can be made up in order for a medical students to be eligible for graduation with minimal or no delays; (e) what period of leave would result in a medical student being required to complete an extra or delayed year of training; and (f) whether schedule accommodations are allowed, such as modified rotation schedules, no night duties, and flexibility with academic testing schedules.
10. Our AMA endorses the concept of equal parental leave for birth and adoption as a benefit for resident physicians, medical students, and physicians in practice regardless of gender or gender identity.
11. Staffing levels and scheduling are encouraged to be flexible enough to allow for coverage without creating intolerable increases in the workloads of other physicians, particularly those in residency programs.
12. Physicians should be able to return to their practices or training programs after taking parental leave, family leave, or medical leave without the loss of status.
13. Residency program directors must assist residents in identifying their specific requirements (for example, the number of months to be made up) because of leave for eligibility for board certification and must notify residents on leave if they are in danger of falling below minimal requirements for board eligibility. Program directors must give these residents a complete list of requirements to be completed in order to retain board eligibility.
14. Our AMA encourages flexibility in residency programs and medical schools incorporating parental leave and alternative schedules for pregnant trainees.
15. In order to accommodate leave protected by the federal Family and Medical Leave Act, our AMA encourages all specialties within the American Board of Medical Specialties to allow graduating residents to extend training up to 12 weeks after the traditional residency completion date while still maintaining board eligibility in that year.
16. Our AMA will work with appropriate stakeholders to encourage that residency programs annually publish and share with FREIDA and other appropriate stakeholders, self-identified and other demographic data, including but not limited to the composition of their program over the last 5 years by age; historically marginalized, minoritized, or excluded status; sexual orientation and gender identity.
17. Our AMA will encourage the Accreditation Council for Graduate Medical Education and other relevant stakeholders to annually collect data on childbirth and parenthood from all accredited US residency programs and publish this data with disaggregation by gender identity and specialty.
18. These policies as above should be freely available online through FREIDA and in writing to all current trainees and applicants to medical school, residency or fellowship.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 414
(A-23)

Introduced by: Medical Student Section

Subject: Increased Access to HIV Treatment and Supportive Services in the Unstably Housed and Homeless Population

Referred to: Reference Committee D

Whereas, Over three percent of people experiencing homelessness in the United States are considered HIV--positive, compared to 1.8% of the stably housed population[1]; and

Whereas, The San Francisco AIDS Foundation reported in 2017 that less than thirty-five percent of HIV patients experiencing homelessness are considered to be virally suppressed, and an observational study from 2014-2019 found that in Tennessee, patients who were homeless were half as likely to achieve viral suppression compared to those who had a permanent/stable home[2-4]; and

Whereas, According to an interventional study of HIV positive patients, lack of viral suppression in homeless populations leads to a 63% increase in viral load and decreased CD4 count, increased progression to AIDS, and increased HIV-related deaths[5]; and

Whereas, According to the Centers for Disease Control, viral suppression through the use of antiretroviral therapy decreases an HIV-positive individual's viral load, improves immune function against HIV, and prevents viral transmission to others through mechanisms such as sexual exposure or sharing of syringes[6,7]; and

Whereas, Increased viral suppression can reduce the transmission of HIV by more than 96% while improving immune function and lowering the risk of AIDS- and non-AIDS-defining complications[1]; and

Whereas, Longitudinal studies identify lack of housing as a predictor of decreased continuity of treatment among HIV-seropositive patients[1,2]; and

Whereas, Lack of stable access to clean water, refrigeration, and proper nutrition can impair adherence to antiretroviral treatments that require daily regimen[8,9]; and

Whereas, The AIDS Drug Assistance Program (ADAP) provides FDA-approved medications annually to half a million people with HIV who have limited or no health insurance[10,11]; and

Whereas, According the ADAP directory, there are only thirty-two AIDS drug assistance program locations nationwide, primarily in densely populated regions[12]; and

Whereas, Information about ADAP locations is accessible to the public via an online directory, which may not be easily accessible to people experiencing homelessness due to lack of stable internet access[10-12]; and

Whereas, Housing Opportunities for Persons With AIDS (HOPWA) is the only federal program that provides housing opportunities for low income and homeless patients with HIV/AIDS[12]; and

Whereas, According to the HOPWA eligibility requirements, HOPWA considers itself a competitive program,[14]; and

Whereas, While individuals experiencing homelessness are able to apply for HOPWA grants, the majority of grants are given to city or state governments with priority given to large metropolitan areas[14]; and

Whereas, HOPWA's focus on increasing housing in metropolitan areas limits housing opportunities for people experiencing homelessness in rural locations across the nation[13,14]; and

Whereas, A 2016-2017 CDC analysis stated that Alabama, Arkansas, Kentucky, Mississippi, Missouri, Oklahoma, and South Carolina have higher burdens of HIV cases in counties that are considered rural[15]; and

Whereas, Stable housing provides HIV patients with increased access to care and consistency of treatment regimens, increasing the likelihood of achieving viral suppression[2,8,11,13]; and

Whereas, Existing AMA policy seeks to combat the HIV epidemic by encouraging the development of educational interventions regarding HIV transmission (H-20.903), recognizing the need for interventional measures that limit the transmission of HIV (H-20.922), supporting a strategy to increase HIV testing, prophylaxis, and prevention (H-20.896), recognizing the urgent need to reduce the transmission of HIV (H-20.907), and supporting increased financial care for HIV patients (H-20.907), though no such policy exists to specifically address the need for increased access to antiretroviral therapy and stable housing opportunities for people experiencing homelessness; therefore be it

RESOLVED, That our American Medical Association support the development of regulations and incentives to encourage retention of homeless patients in HIV/AIDS treatment programs (New HOD Policy); and be it further

RESOLVED, That our AMA recognize that stable housing promotes adherence to HIV treatment (New HOD Policy); and be it further

RESOLVED, That our AMA amend current policy H-20.922, "HIV/AIDS as a Global Public Health Priority" by addition and deletion to read as follows:

HIV/AIDS as a Global Public Health Priority H-20.922
In view of the urgent need to curtail the transmission of HIV infection in every segment of the population, our AMA:
(1) Strongly urges, as a public health priority, that federal agencies (in cooperation with medical and public health associations and state governments) develop and implement effective programs and strategies for the prevention and control of the HIV/AIDS epidemic;
(2) Supports adequate public and private funding for all aspects of the HIV/AIDS epidemic, including research, education, ~~and~~ patient care, and access to stable housing for the full spectrum of the disease. Public and private sector prevention and care efforts should be proportionate to the best available statistics on HIV incidence and prevalence rates;

(3) Will join national and international campaigns for the prevention of HIV disease and care of persons with this disease;
(4) Encourages cooperative efforts between state and local health agencies, with involvement of state and local medical societies, in the planning and delivery of state and community efforts directed at HIV testing, counseling, prevention, and care;
(5) Encourages community-centered HIV/AIDS prevention planning and programs as essential complements to less targeted media communication efforts;
(6) In coordination with appropriate medical specialty societies, supports addressing the special issues of heterosexual HIV infection, the role of intravenous drugs and HIV infection in women, and initiatives to prevent the spread of HIV infection through the exchange of sex for money or goods;
(7) Supports working with concerned groups to establish appropriate and uniform policies for neonates, school children, and pregnant adolescents with HIV/AIDS and AIDS-related conditions;
(8) Supports increased availability of antiretroviral drugs and drugs to prevent active tuberculosis infection to countries where HIV/AIDS is pandemic; and be it further; and
(9) Supports programs raising physician awareness of the benefits of early treatment of HIV and of "treatment as prevention," and the need for linkage of newly HIV-positive persons to clinical care and partner services. (Modify Current HOD Policy)

Fiscal Note: Minimal - less than $1,000

Received: 4/3/23

RELEVANT AMA POLICY

HIV/AIDS and Substance Abuse H-20.903
Our AMA: (1) urges federal, state, and local governments to increase funding for drug treatment so that drug abusers have immediate access to appropriate care, regardless of ability to pay. Experts in the field agree that this is the most important step that can be taken to reduce the spread of HIV infection among intravenous drug abusers; (2) advocates development of regulations and incentives to encourage retention of HIV-positive and AIDS-symptomatic patients in drug treatment programs so long as such placement is clinically appropriate; (3) encourages the availability of opioid maintenance for persons addicted to opioids. Federal and state regulations governing opioid maintenance and treatment of drug dependent persons should be reevaluated to determine whether they meet the special needs of intravenous drug abusers, particularly those who are HIV infected or AIDS symptomatic. Federal and state regulations that are based on incomplete or inaccurate scientific and medical data that restrict or inhibit opioid maintenance therapy should be removed; and (4) urges development of educational, medical, and social support programs for intravenous drug abusers and their sexual or needle-sharing partners to reduce risk of HIV infection, as well as risk of other bloodborne and sexually transmissible diseases. Such efforts must target (a) pregnant intravenous drug abusers and those who may become pregnant to address the current and future health care needs of both mothers and newborns and (b) adolescent substance abusers, especially homeless, runaway, and detained adolescents who are seropositive or AIDS symptomatic and those whose lifestyles place them at risk for contracting HIV infection.

Eradicating Homelessness H-160.903
Our AMA:
(1) supports improving the health outcomes and decreasing the health care costs of treating the chronically homeless through clinically proven, high quality, and cost effective approaches which recognize the positive impact of stable and affordable housing coupled with social services;
(2) recognizes that stable, affordable housing as a first priority, without mandated therapy or services compliance, is effective in improving housing stability and quality of life among individuals who are chronically-homeless;
(3) recognizes adaptive strategies based on regional variations, community characteristics and state and local resources are necessary to address this societal problem on a long-term basis;
(4) supports the use of physician-led, team-based street medicine programs, which travel to individuals who are unhoused or unsheltered and provide healthcare and social services, as well as funds, including Medicaid and other public insurance reimbursement, for their maintenance;
(5) recognizes the need for an effective, evidence-based national plan to eradicate homelessness;
(6) encourages the National Health Care for the Homeless Council to study the funding, implementation, and standardized evaluation of Medical Respite Care for homeless persons;
(7) will partner with relevant stakeholders to educate physicians about the unique healthcare and social needs of homeless patients and the importance of holistic, cost-effective, evidence-based discharge planning, and physicians' role therein, in addressing these needs;
(8) encourages the development of holistic, cost-effective, evidence-based discharge plans for homeless patients who present to the emergency department but are not admitted to the hospital;
(9) encourages the collaborative efforts of communities, physicians, hospitals, health systems, insurers, social service organizations, government, and other stakeholders to develop comprehensive homelessness policies and plans that address the healthcare and social needs of homeless patients;
(10) (a) supports laws protecting the civil and human rights of individuals experiencing homelessness, and (b) opposes laws and policies that criminalize individuals experiencing homelessness for carrying out life-sustaining activities conducted in public spaces that would otherwise be considered non-criminal activity (i.e., eating, sitting, or sleeping) when there is no alternative private space available; and
(11) recognizes that stable, affordable housing is essential to the health of individuals, families, and communities, and supports policies that preserve and expand affordable housing across all neighborhoods;
(12) (a) supports training to understand the needs of housing insecure individuals for those who encounter this vulnerable population through their professional duties; (b) supports the establishment of multidisciplinary mobile homeless outreach teams trained in issues specific to housing insecure individuals; and (c) will make available existing educational resources from federal agencies and other

stakeholders related to the needs of housing-insecure individuals.
(13) encourages medical schools to implement physician-led, team-based Street Medicine programs with student involvement.

HIV/AIDS as a Global Public Health Priority H-20.922
In view of the urgent need to curtail the transmission of HIV infection in every segment of the population, our AMA:
(1) Strongly urges, as a public health priority, that federal agencies (in cooperation with medical and public health associations and state governments) develop and implement effective programs and strategies for the prevention and control of the HIV/AIDS epidemic;
(2) Supports adequate public and private funding for all aspects of the HIV/AIDS epidemic, including research, education, and patient care for the full spectrum of the disease. Public and private sector prevention and care efforts should be proportionate to the best available statistics on HIV incidence and prevalence rates;
(3) Will join national and international campaigns for the prevention of HIV disease and care of persons with this disease;
(4) Encourages cooperative efforts between state and local health agencies, with involvement of state and local medical societies, in the planning and delivery of state and community efforts directed at HIV testing, counseling, prevention, and care;
(5) Encourages community-centered HIV/AIDS prevention planning and programs as essential complements to less targeted media communication efforts;
(6) In coordination with appropriate medical specialty societies, supports addressing the special issues of heterosexual HIV infection, the role of intravenous drugs and HIV infection in women, and initiatives to prevent the spread of HIV infection through the exchange of sex for money or goods;
(7) Supports working with concerned groups to establish appropriate and uniform policies for neonates, school children, and pregnant adolescents with HIV/AIDS and AIDS-related conditions;
(8) Supports increased availability of anti-retroviral drugs and drugs to prevent active tuberculosis infection to countries where HIV/AIDS is pandemic; and
(9) Supports programs raising physician awareness of the benefits of early treatment of HIV and of "treatment as prevention," and the need for linkage of newly HIV-positive persons to clinical care and partner services.

Support of a National HIV/AIDS Strategy H-20.896
1. Our AMA supports the creation of a National HIV/AIDS strategy, and will work with relevant stakeholders to update and implement the National HIV/AIDS strategy.
2. Our AMA supports and will strongly advocate for the funding of plans to end the HIV epidemic that focus on: (a) diagnosing individuals with HIV infection as early as possible; (b) treating HIV infection to achieve sustained viral suppression; (c) preventing at-risk individuals from acquiring HIV infection, including through the use of pre-exposure prophylaxis; and (d) rapidly detecting and responding to emerging clusters of HIV infection to prevent transmission.

Financing Care for HIV/AIDS Patients H-20.907
Our AMA:
(1) Believes that current private insurance and existing public programs, coupled with a significant expansion of state risk pools, provide the best approach to assuring adequate access to health expense coverage for HIV-infected persons and persons with AIDS. However, as the disease patterns and costs become more defined, it may be necessary to reevaluate this conclusion. Continued study of this issue is imperative;
(2) Supports the development of a clinical staging system based on severity of HIV disease as a replacement for the AIDS diagnosis as a basis for determining health, disability, and other benefits;
(3) Supports increased funding for reimbursement and other incentives by public and private payers to encourage (a) expanded availability for therapies and interventions widely accepted by physicians as medically appropriate for the prevention and control of HIV disease and (b) for alternatives to in-patient

care of persons with HIV disease, including intermediate care facilities, skilled nursing facilities, home care, residential hospice, home hospice, and other support systems;
(4) Supports government funding of all medical services that are deemed appropriate by both the patient and physician for pregnant seropositive women lacking other sources of funding;
(5) Supports broad improvements in and expansion of the Medicaid program as a means of providing increased coverage and financial protection for low-income AIDS patients;
(6) Supports, and favors considering introduction of, legislation to modify the Medicaid program to provide for a yearly dollar increase in the federal share of payments made by states for care of all patients in proportion to the amount of increase in costs incurred by each state program for care of HIV-positive individuals and patients with AIDS over the preceding year;
(7) Encourages the appropriate state medical societies to seek establishment in their jurisdictions of programs to pay the private insurance premiums from state and federal funds for needy persons with HIV and AIDS; and strongly supports full appropriation of the amounts authorized under the Ryan White CARE Act of 2000;
(8) Supports consideration of an award recognition program for physicians who donate a portion of their professional time to testing and counseling HIV-infected patients who could not otherwise afford these services.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 415
(A-23)

Introduced by: Medical Student Section

Subject: Environmental Health Equity in Federally Subsidized Housing

Referred to: Reference Committee D

Whereas, In the 1980s, the government passed legislation known as the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA) to assist the Environmental Protection Agency (EPA) in identifying and remediating the country's most dangerously contaminated sites by setting aside a 'Superfund' of money[1]; and

Whereas, The Superfund set aside by CERCLA went bankrupt in 2003 leaving cleanup and remediation projects, with estimated costs of $15-100 million, to be funded solely through tax revenue[2]; and

Whereas, Supreme Court rulings starting in 2008 with *Burlington Northern v. the United States* have severely reduced the financial liability of polluters, stalling funding for the Superfund program[2]; and

Whereas, CERCLA defines hazardous substances as elements and compounds which present an imminent and substantial danger to the public health and welfare of living creatures and waterfronts[1]; and

Whereas, Hazardous substances defined by CERCLA include but are not limited to lead, hexavalent chromium, radium, and polychlorinated biphenyl chemicals (PCBs), are known hazards to human health, causing intellectual and behavioral delays, anemia, lung disease, inflammatory diseases, cancers, adverse effects on fertility, and prenatal development[3-6]; and

Whereas, The geographic areas identified through CERCLA contaminated with known hazardous substances are commonly referred to as Superfund sites[1]; and

Whereas, As of 2020, 73 million people (22% of the US population) lives within 3 miles of a Superfund site[7]; and

Whereas, Proximity to environmental hazards increases the risk for lifelong chronic mental and physical illnesses, including but not limited to cancer, congenital disabilities, and developmental disabilities[9]; and

Whereas, In Texas, East Houston's Fifth Ward, a community with proximity to three Superfund sites, there is a pediatric and adult cancer cluster with 43 percent of households reporting a cancer diagnosis[10]; and

Whereas, According to an evaluation performed by the Office of Inspector General in 2019, 18,158 properties owned, subsidized, or managed by the Department of Housing and Urban Development (HUD) are located within one mile of Superfund sites[11]; and

Whereas, The majority of people living in federally subsidized housing belong to racial and ethnic minority groups, subjecting these groups to a disproportionate amount of environmental hazards exposure leading to inequitable health outcomes[8]; and

Whereas, Neither the EPA, the Department of Housing and Urban Development, states, cities, nor realtors are obligated to disclose proximity to Superfund sites upon purchase or lease agreement leaving citizens unaware of the health hazards they and their children face until they are grappling with long-term consequences[12]; and

Whereas, Those who rent their home are significantly less likely than homeowners to know that they live in close proximity to Superfund sites[13]; and

Whereas, There is often a disconnect between environmental protection organizations and community members near superfund sites, with residents of nearby communities often lacking adequate knowledge to assess the environmental hazards around them[14]; and

Whereas, A potential strategy for mitigating the lack of community knowledge of environmental exposures is to put communication processes in place to anticipate the potential for disconnect and seek regular feedback from community members[14]; and

Whereas, The Residential Lead-Based Paint Hazard Reduction Act of 1992 establishes guidelines to “educate the public concerning the hazards and sources of lead-based paint poisoning and steps to reduce and eliminate such hazards”, demonstrating that the precedent for hazardous substance disclosure has already been established[15]; and

Whereas, The disclosures described in the Residential Lead-Based Paint Hazard Reduction Act of 1992, which include the explicit disclosure of lead-based paint in the property, a warning statement signed by both purchaser and seller, and a lead hazard information packet, do not extend to other environmental hazards which may be present at each site[15]; and

Whereas, The “right to know” principle applied to public health ethics allows for individual autonomy in decision making with respect to awareness of environmental hazard exposure[16]; and

Whereas, Disclosure of known environmental health risks would promote informed decision-making supporting individual autonomy[16]; and

Whereas, Environmental health-related care includes but is not limited to blood hazardous substance screening, fertility, and prenatal testing, pediatric cognitive and behavioral delays screening, and prescriptions for heavy metal chelating drugs[3-5,9]; and

Whereas, Planning and execution of a Superfund site cleanup may take years to decades as evidenced by the over 1,800 Superfund sites, as of January 4, 2022, that have been marked for clean-up for decades without completed remediation[12,17]; and

Whereas, Communities residing on or near Superfund sites may have to wait years even after a clean-up project has been initiated for the toxin levels in their environment to reach levels acceptable for residential use[17]; and

Whereas, Although the EPA and community organizations work to remediate the Superfund sites fully, the EPA admits some sites may never reach environmental toxin levels safe for residential use[18]; and

Whereas, Under CERCLA, the EPA maintains the right to establish Alternate Concentration Limits (CLs) for use in Superfund cleanups that may fall below the standards of widely used pollutant limits[18]; and

Whereas, The EPA maintains the right to waive violations of other state and federal regulations on toxin levels due to "technical infeasibility" in order to approve a Superfund cleanup[18]; and

Whereas, The current HUD-EPA agreement only requests yearly status reports on contaminant levels and environmental indicators at active Superfund sites, subject to the availability of the agency's funding and manpower, and EPA guidelines suggest no follow-up or follow-up monitoring only every five years at deleted Superfund sites[12,19]; and

Whereas, Environmental justice is defined as the principle that all people and communities regardless of race, color, national origin, or income, are entitled to equal protection by environmental and public health laws and regulations, while environmental injustice describes environmental laws, regulations and policies that overly affect a group of people resulting in greater exposure to environmental hazards[20]; and

Whereas, Environmental racism refers to a type of environmental injustice in which the racial and ethnic contexts of environmental regulations and policies, exposures, support structures, and health outcomes cause inequitable environmental hazards for some racial groups[21,22]; and

Whereas, Low-income and minoritized communities are burdened by environmental injustice in that they reside in areas with higher environmental exposures, reduced preventive measures, and limited medical intervention, further exacerbating health outcome disparities[23-27]; and

Whereas, The enactment of exclusionary housing policies, including zoning ordinances, restrictive covenants, blockbusting, steering, and redlining, purposefully created racial segregation, exposed Black communities to environmental pollutants and targeting for construction of toxin-releasing facilities, isolated them from essential health resources such as healthy food options, hospitals, and green spaces, and permitted health inequities to concentrate in disadvantaged low-income neighborhoods[28-32]; and

Whereas, The environmental justice and fair housing collaboration between the Environmental Protection Agency (EPA) and U.S. Department of Housing and Urban Development (HUD) remains inadequate due to insufficient action to provide non-discriminatory and affordable housing units in locations without risk of environmental health exposures[33]; and

Whereas, A combination of inequitable land-use policies, lack of environmental regulation and enforcement, and market forces in petrochemical and heavy metal industries have contributed to the perpetuation of poverty and worse health outcomes in minoritized populations[34]; and

Whereas, Proximity to and exposure to hazards from the oil and gas, plastics, animal production, chemical manufacturing, endocrine-disrupting chemicals, and metal industries have been strongly linked to at least one of the following: neural tube defects, preterm birth, low-birth weight, diffuse interstitial lung fibrosis, chronic bronchitis, asthma exacerbation, diabetes, hypertension secondary to chronic inflammation, pneumonia, reduced child cognition from heavy metal exposure, neurologic diseases, cancers, hyperlipidemia, and thyroid disease[35-44]; and

Whereas, Closures of industrial sites and reductions in pollution have been linked to improved fertility and reduced preterm births and respiratory hospitalizations[45-47]; and

Whereas, The health of American Indian tribes depends on essential natural resources that have either been depleted and/or contaminated by mining and oil corporations, leading to adverse health outcomes[48-51]; and

Whereas, Government agencies have failed to act on current policy and integrate current environmental science research or expertise into ongoing environmental regulations and public health initiatives, resulting in continued and amplified environmental hazards and failing to protect people, especially in Black and American Indian communities, from known and predictable environmental health dangers[52-59]; and

Whereas, Our AMA policy H-135.996 addresses the existence of environmental pollution and supports research into its threat to human health; and

Whereas, Our AMA policy H-135.996 supports efforts to alert the American people to the dangers of general environmental pollution, however, it does not go far enough to ask for mandated disclosure to residents in known areas of environmental risk; and

Whereas, Our AMA policy H-135.996 does not directly address the need for expansion of federally funded health insurance coverage of services to specifically address the health risk associated with residing in or near polluted environments; and

Whereas, Our AMA recognizes that racism, in all its forms, is an urgent public health threat, and has pledged to work to combat the adverse health effects of racism (H-65.952); therefore be it

RESOLVED, That our American Medical Association acknowledge the potential adverse health impacts of living in close proximity to a Superfund site (New HOD Policy); and be it further

RESOLVED, That our AMA advocate for mandated disclosure of Superfund site proximity to those purchasing, leasing, or currently residing in housing in close proximity to Superfund sites (Directive to Take Action); and be it further

RESOLVED, That our AMA support efforts of public agencies to study the safety of proposed public housing expansions with respect to pollutant exposure and to expand construction of new public and publicly subsidized housing properties on lands without demonstrated unsafe levels of hazardous pollutants (New HOD Policy); and be it further

RESOLVED, That our AMA amend Policy D-135.997, "Research into the Environmental Contributors to Disease," by addition and deletion to read as follows:

D-135.997 – ~~RESEARCH INTO THE~~ ENVIRONMENTAL CONTRIBUTORS TO DISEASE AND ADVOCATING FOR ENVIRONMENTAL JUSTICE

Our AMA will (1) advocate for the greater public and private funding for research into the environment causes of disease, and urge the National Academy of Sciences to undertake an authoritative analysis of environmental causes of disease; (2) ask the steering committee of the Medicine and Public Health Initiative Coalition to consider environmental contributors to disease and environmental racism as ~~a~~ priority public health issues; (3) encourage federal, state, and local agencies to address and remediate environmental injustice, environmental racism, and all other environmental conditions that are adversely impacting health, especially in marginalized communities; and (~~3~~4) lobby Congress to support ongoing initiatives that include reproductive health outcomes and development particularly in minority populations in Environmental Protection Agency Environmental Justice policies. (Modify Current HOD Policy)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 4/3/23

RELEVANT AMA POLICY

Pollution Control and Environmental Health H-135.996
Our AMA supports (1) efforts to alert the American people to health hazards of environmental pollution and the need for research and control measures in this area; and (2) its present activities in pollution control and improvement of environmental health.
Citation: Sub. Res. 40, A-70; Reaffirmed: CLRPD Rep. C, A-89; Reaffirmed: Sunset Report, A-00; Modified: CSAPH Rep. 1, A-10; Reaffirmed: CSAPH Rep. 01, A-20;

Modern Chemicals Policies H-135.942
Our AMA supports: (1) the restructuring of the Toxic Substances Control Act to serve as a vehicle to help federal and state agencies to assess efficiently the human and environmental health hazards of industrial chemicals and reduce the use of those of greatest concern; and (2) the Strategic Approach to International Chemicals (SAICM) process leading to the sound management of chemicals throughout their life-cycle so that, by 2020, chemicals are used and produced in ways that minimize adverse effects on human health and the environment.
Citation: Sub. Res. 404, A-08; Reaffirmation A-10; Reaffirmed: CSAPH Rep. 5, A-11; Reaffirmation I-16; Reaffirmed in lieu of: Res. 505, A-19;

Research into the Environmental Contributors to Disease D-135.997
Our AMA will (1) advocate for greater public and private funding for research into the environmental causes of disease, and urge the National Academy of Sciences to undertake an authoritative analysis of environmental causes of disease; (2) ask the steering committee of the Medicine and Public Health Initiative Coalition to consider environmental contributors to disease as a priority public health issue; and (3) lobby Congress to support ongoing initiatives that include reproductive health outcomes and development particularly in minority populations in Environmental Protection Agency Environmental Justice policies.
Citation: Res. 402, A-03; Appended: Res. 927, I-11; Reaffirmed in lieu of: Res. 505, A-19;

Racism as a Public Health Threat H-65.952
1. Our AMA acknowledges that, although the primary drivers of racial health inequity are systemic and structural racism, racism and unconscious bias within medical research and health care delivery have caused and continue to cause harm to marginalized communities and society as a whole.
2. Our AMA recognizes racism, in its systemic, cultural, interpersonal, and other forms, as a serious threat to public health, to the advancement of health equity, and a barrier to appropriate medical care.

3. Our AMA encourages the development, implementation, and evaluation of undergraduate, graduate, and continuing medical education programs and curricula that engender greater understanding of: (a) the causes, influences, and effects of systemic, cultural, institutional, and interpersonal racism; and (b) how to prevent and ameliorate the health effects of racism.
4. Our AMA: (a) supports the development of policy to combat racism and its effects; and (b) encourages governmental agencies and nongovernmental organizations to increase funding for research into the epidemiology of risks and damages related to racism and how to prevent or repair them.
5. Our AMA will work to prevent and combat the influences of racism and bias in innovative health technologies.
Citation: Res. 5, I-20; Reaffirmed: Res. 013, A-22; Modified: Speakers Rep., A-22;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 416
(A-23)

Introduced by: Medical Student Section

Subject: New Policies to Respond to the Gun Violence Public Health Crisis

Referred to: Reference Committee D

Whereas, Gun violence is a major public health crisis in the United States with the Centers for Disease Control and Prevention (CDC) most recently reporting 45,222 gun-related deaths in 2020—a 14% increase from 2019, and the most on record at the time and[1-3]; and

Whereas, The CDC reported that gun-related injuries were one of the five leading causes of death for people aged 1 to 44 in the U.S. in 2020[3-4]; and

Whereas, A May 2022 letter in *The New England Journal of Medicine* based on 2020 CDC data suggests that gun-related injuries have surpassed motor vehicle crashes to now become the leading cause of death for children and young adults aged 1 to 19[3-4]; and

Whereas, According to 2020 CDC data, over 40% of gun-related deaths were homicides (19,384 deaths, or 79% of all homicides) and over 50% of gun deaths were suicides (24,292 deaths, or 53% of all suicides), accounting for 124 deaths a day[3]; and

Whereas, The Gun Violence Archive, an independent data research group that tracks gun-related incidents and defines a mass shooting using a statistical threshold as an event where four or more people are shot, reported 692 mass shootings in 2021 and 610 in 2020[5-6]; and

Whereas, The Gun Violence Archive reported that 246 mass shootings took place in the first five months of 2022[6]; and

Whereas, On May 24, 2022, 21 children and teachers were killed and 18 injured at Robb Elementary School in Uvalde, Texas, the second deadliest school shooting on record, ten years after 26 students and educators were killed in the Sandy Hook Elementary shooting[7]; and

Whereas, On June 1, 2022, two physicians, a patient, and another healthcare worker were killed and several injured in a mass shooting at the St. Francis Hospital in Tulsa, Oklahoma[8]; and

Whereas, Advocacy to address the gun violence public health crisis is crucial to support the AMA's goals of promoting racial justice and health equity, as CDC data shows that Black, American Indian and Alaska Native, and Hispanic people are disproportionately affected by gun homicides compared to white individuals[9]; and

Whereas, Multiple countries, including the United Kingdom, New Zealand, Norway, and Australia, quickly introduced and have adopted successful national legislation to ban semi-automatic and automatic weapons after just a single mass shooting[10]; and

Whereas, Approximately 20-25% of all handguns recovered at crime scenes were originally purchased as part of a multiple sale, which is the purchase of more than one gun within 5 business days[11]; and

Whereas, Handguns sold in multiple sales are up to 64% more likely to be used in crime scenes than handguns sold individually[12]; and

Whereas, Many jurisdictions do not require background checks for the purchase of ammunition; however, research predicts that background checks for ammunition purchases would cut gun-related death rates by 81%[13]; and

Whereas, Waiting period laws that delay the purchase of firearms by a few days reduce gun homicides by roughly 17%[14];and

Whereas, States have different firearm inheritance laws where it may be easier in some states for individuals to obtain a firearm, such as some states require the firearm to be registered while other states don't require a permit to own a firearm[15,16]; and

Whereas, In 2020, our AMA announced a partnership with West Side United to invest $6 million in community infrastructure programs in Chicago's west side neighborhoods to address issues relating to health inequities and economic vitality based on community needs, including affordable housing, access to healthy foods, financing local business projects, and supporting job creation efforts and educational programs[17]; and

Whereas, In the wake of the Pulse Orlando mass shooting in 2016, our AMA declared gun violence as a public health crisis "requiring a comprehensive public health response and solution" yet the number of gun deaths have only continued to rise (D-145.995)[18]; and

Whereas, Our AMA has adopted numerous policies to reduce gun trauma, injury and death, including H-145.996, H-145.975, H-145.997, D-145.996, H-145.983, H-145.978, H-145.984, H-145.979, H-145.985, H-145.990, H-145.992, H-145.993, H-145.999, H-515.971, and 145.001MSS, but as this crisis continues to escalate, further advocacy is needed; therefore be it

RESOLVED, That our American Medical Association advocate for federal and state policies that prevent inheritance, gifting, or transfer of ownership of firearms without adhering to all federal and state requirements for background checks, waiting periods, and licensure (Directive to Take Action); and be it further

RESOLVED, That our AMA advocate for federal and state policies to prevent "multiple sales" of firearms, defined as the sale of multiple firearms to the same purchaser within five business days (Directive to Take Action); and be it further

RESOLVED, That our AMA advocate for federal and state policies implementing background checks for ammunition purchases. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 4/5/23

RELEVANT AMA POLICY

Gun Violence as a Public Health Crisis D-145.995
Our AMA: (1) will immediately make a public statement that gun violence represents a public health crisis which requires a comprehensive public health response and solution; and
(2) will actively lobby Congress to lift the gun violence research ban.
Citation: Res. 1011, A-16; Reaffirmation: A-18; Reaffirmation: I-18; Reaffirmed: Res. 921, I-22;

Preventing Firearm-Related Injury and Morbidity in Youth D-145.996
Our American Medical Association will identify and support the distribution of firearm safety materials that are appropriate for the clinical setting.
Citation: (Res. 216, A-15)

Physicians and the Public Health Issues of Gun Safety D-145.997
Our AMA will request that the US Surgeon General develop a report and campaign aimed at reducing gun-related injuries and deaths.
Citation: (Res. 410, A-13)

Epidemiology of Firearm Injuries D-145.999
Our AMA will: (1) strongly urge the Administration and Congress to encourage the Centers for Disease Control and Prevention to conduct an epidemiological analysis of the data of firearm-related injuries and deaths; (2) urge Congress to provide sufficient resources to enable the CDC to collect and analyze

firearm-related injury data and report to Congress and the nation via a broadly disseminated document, so that physicians and other health care providers, law enforcement and society at large may be able to prevent injury, death and the other costs to society resulting from firearms, (3) advocate for improvements to the quality, comparability, and timeliness of data on firearm injuries and deaths, and (4) advocate for repeal of laws which prohibit the release of firearm tracing data for research.
Citation: Res. 424, A-03; Reaffirmation A-13; Modified: CSAPH Rep. 1, A-13; Reaffirmation: A-18; Reaffirmed: Res. 907, I-22; Appended: Res. 921, I-22;

Physician Involvement in State Regulations of Motor Vehicle Operation and/or Firearm Use by Individuals with Cognitive Deficits Due to Traumatic Brain Surgery H-10.960
Our AMA encourages the National Institutes of Health and other funders to expand research on cognitive impairment, including traumatic brain injury (TBI), as a risk factor for harm to self or others that may impact driving and/or firearm ownership, and the role of the physicians in policy advocacy and counseling patients so as to decrease the risk of morbidity and mortality.
Citation: CSAPH Rep. 3, I-21;

Less-Lethal Weapons and Crowd Control H-145.969
Our AMA: (1) supports prohibiting the use of rubber bullets, including rubber or plastic-coated metal bullets and those with composites of metal and plastic, by law enforcement for the purposes of crowd control and management in the United States; (2) supports prohibiting the use of chemical irritants and kinetic impact projectiles to control crowds that do not pose an immediate threat; (3) recommends that law enforcement agencies have in place specific guidelines, rigorous training, and an accountability system, including the collection and reporting of data on injuries, for the use of kinetic impact projectiles and chemical irritants; (4) encourages guidelines on the use of kinetic impact projectiles and chemical irritants to include considerations such as the proximity of non-violent individuals and bystanders; for kinetic impact projectiles, a safe shooting distance and avoidance of vital organs (head, neck, chest, and abdomen), and for all less-lethal weapons, the issuance of a warning followed by sufficient time for compliance with the order prior to discharge; (5) recommends that law enforcement personnel use appropriate de-escalation techniques to minimize the risk of violence in crowd control and provide transparency about less-lethal weapons in use and the criteria for their use; and (6) encourages relevant stakeholders including, but not limited to manufacturers and government agencies to develop and test crowd-control techniques which pose a more limited risk of physical harm.
Citation: BOT Rep. 10, A-21; Reaffirmed: BOT Rep. 2, I-21;

Violence Prevention H-145.970
Our AMA: (1) encourages the enactment of state laws requiring the reporting of all classes of prohibited individuals, as defined by state and federal law, to the National Instant Criminal Background Check System (NICS); (2) supports federal funding to provide grants to states to improve NICS reporting; and (3) encourages states to automate the reporting of relevant information to NICS to improve the quality and timeliness of the data.
Citation: BOT Rep. 11, I-18; Reaffirmed: CSAPH Rep. 3, I-21;

Development and Implementation of Recommendations for Responsible Media Coverage of Mass Shootings H-145.971
Our AMA encourages the Centers for Disease Control and Prevention, in collaboration with other public and private organizations, to develop recommendations and/or best practices for media coverage of mass shootings, including informed discussion of the limited data on the relationship between mental illness and gun violence, recognizing the potential for exacerbating stigma against individuals with mental illness.
Citation: Res. 212, I-18; Modified: Res. 934, I-19;

Firearms and High-Risk Individuals H-145.972
Our AMA supports: (1) the establishment of laws allowing family members, intimate partners, household members, and law enforcement personnel to petition a court for the removal of a firearm when there is a high or imminent risk for violence; (2) prohibiting persons who are under domestic violence restraining orders, convicted of misdemeanor domestic violence crimes or stalking, from possessing or purchasing firearms; (3) expanding domestic violence restraining orders to include dating partners; (4) requiring states to have protocols or processes in place for requiring the removal of firearms by prohibited persons;

(5) requiring domestic violence restraining orders and gun violence restraining orders to be entered into the National Instant Criminal Background Check System; and (6) efforts to ensure the public is aware of the existence of laws that allow for the removal of firearms from high-risk individuals.
Citation: CSAPH Rep. 04, A-18; Reaffirmed: BOT Rep. 11, I-18; Reaffirmed: CSAPH Rep. 3, I-21;

Firearm Related Injury and Death: Adopt a Call to Action H-145.973
Our AMA endorses the specific recommendations made by an interdisciplinary, inter-professional group of leaders from the American Academy of Family Physicians, American Academy of Pediatrics, American College of Emergency Physicians, American College of Obstetricians and Gynecologists, American College of Physicians, American College of Surgeons, American Psychiatric Association, American Public Health Association, and the American Bar Association in the publication "Firearm-Related Injury and Death in the United States: A Call to Action From 8 Health Professional Organizations and the American Bar Association," which is aimed at reducing the health and public health consequences of firearms and lobby for their adoption.
Citation: Res. 214, I-16;

Increasing Toy Gun Safety H-145.974
Our American Medical Association (1) encourages toy gun manufacturers to take further steps beyond the addition of an orange tip on the gun to reduce the similarity of toy guns with real guns, and (2) encourages parents to increase their awareness of toy gun ownership risks.
Citation: (Res. 406, A-15)

Firearm Safety and Research, Reduction in Firearm Violence, and Enhancing Access to Mental Health Care H-145.975
1. Our AMA supports: a) federal and state research on firearm-related injuries and deaths; b) increased funding for and the use of state and national firearms injury databases, including the expansion of the National Violent Death Reporting System to all 50 states and U.S. territories, to inform state and federal health policy; c) encouraging physicians to access evidence-based data regarding firearm safety to educate and counsel patients about firearm safety; d) the rights of physicians to have free and open communication with their patients regarding firearm safety and the use of gun locks in their homes; e) encouraging local projects to facilitate the low-cost distribution of gun locks in homes; f) encouraging physicians to become involved in local firearm safety classes as a means of promoting injury prevention and the public health; and g) encouraging CME providers to consider, as appropriate, inclusion of presentations about the prevention of gun violence in national, state, and local continuing medical education programs.
2. Our AMA supports initiatives to enhance access to mental and cognitive health care, with greater focus on the diagnosis and management of mental illness and concurrent substance use disorders, and work with state and specialty medical societies and other interested stakeholders to identify and develop standardized approaches to mental health assessment for potential violent behavior.
3. Our AMA (a) recognizes the role of firearms in suicides, (b) encourages the development of curricula and training for physicians with a focus on suicide risk assessment and prevention as well as lethal means safety counseling, and (c) encourages physicians, as a part of their suicide prevention strategy, to discuss lethal means safety and work with families to reduce access to lethal means of suicide.
4. Our AMA and other organizations will develop and disseminate a formal educational program to enable clinicians to effectively and efficiently address suicides with an emphasis on seniors and other high-risk populations.
5. Our AMA will develop with other interested organizations a toolkit for clinicians to use addressing Extreme Risk Protection Orders in their individual states.
6. Our AMA will partner with other groups interested in firearm safety to raise public awareness of the magnitude of suicide in seniors and other high-risk populations, and interventions available for suicide prevention.
7. Our AMA and all interested medical societies will: (a) educate physicians about firearm epidemiology, anticipatory guidance, and lethal means screening for and exploring potential restrictions to access to high-lethality means of suicide such as firearms. Health care clinicians, including trainees, should be provided training on the importance of anticipatory guidance and lethal means counseling to decrease firearm injuries and deaths and be provided training introducing evidence-based techniques, skills and strategies for having these discussions with patients and families; (b) educate physicians about lethal

means counseling in health care settings and intervention options to remove lethal means, either permanently or temporarily from the home.
Citation: Sub. Res. 221, A-13; Appended: Res. 416, A-14; Reaffirmed: Res. 426, A-16; Reaffirmed: BOT Rep. 28, A-18; Reaffirmation: A-18; Modified: CSAPH Rep. 04, A-18; Reaffirmation: I-18; Reaffirmed: CSAPH Rep. 3, A-21; Reaffirmed: Res. 907, I-22; Appended: Res. 909, I-22;

Firearm Safety Counseling in Physician-Led Health Care Teams H-145.976
1. Our AMA: (a) will oppose any restrictions on physicians' and other members of the physician-led health care team's ability to inquire and talk about firearm safety issues and risks with their patients; (b) will oppose any law restricting physicians' and other members of the physician-led health care team's discussions with patients and their families about firearms as an intrusion into medical privacy; and (c) encourages dissemination of educational materials related to firearm safety to be used in undergraduate medical education.
2. Our AMA will work with appropriate stakeholders to develop state-specific guidance for physicians on how to counsel patients to reduce their risk for firearm-related injury or death, including guidance on when and how to ask sensitive questions about firearm ownership, access, and use, and clarification on the circumstances under which physicians are permitted or may be required to disclose the content of such conversations to family members, law enforcement, or other third parties.
3. Our AMA will support the development of reimbursement structures that incentivize physicians to counsel patients on firearm-related injury risk and prevention.
4. Our AMA supports the inclusion of firearm-related violence and suicide epidemiology, as well as evidence-based firearm-related injury prevention education in undergraduate and graduate medical education training programs, where appropriate.
Citation: Res. 219, I-11; Reaffirmation A-13; Modified: Res. 903, I-13; Appended: Res. 419, A-17; Reaffirmed: CSAPH Rep. 04, A-18; Reaffirmed: CSAPH Rep. 3, I-21; Modified: Res. 436, A-22;

Use of Conducted Electrical Devices by Law Enforcement Agencies H-145.977
Our AMA: (1) recommends that law enforcement departments and agencies should have in place specific guidelines, rigorous training, and an accountability system for the use of conducted electrical devices (CEDs) that is modeled after available national guidelines; (2) encourages additional independent research involving actual field deployment of CEDs to better understand the risks and benefits under conditions of actual use. Federal, state, and local agencies should accurately report and analyze the parameters of CED use in field applications; and (3) policy is that law enforcement departments and agencies have a standardized protocol developed with the input of the medical community for the evaluation, management and post-exposure monitoring of subjects exposed to CEDs
Citation: (CSAPH Rep. 6, A-09; Modified: Res. 501, A-14)

Gun Safety H-145.978
Our AMA: (1) recommends and promotes the use of trigger locks and locked gun cabinets as safety precautions; and (2) endorses standards for firearm construction reducing the likelihood of accidental discharge when a gun is dropped and that standardized drop tests be developed.
Citation: (Res. 425, I-98; Reaffirmed: Res. 409, A-00; Reaffirmed: CSAPH Rep. 1, A-10; Reaffirmation A-13)

Prevention of Unintentional Shooting Deaths Among Children H-145.979
Our AMA supports legislation at the federal and state levels making gun owners legally responsible for injury or death caused by a child gaining unsupervised access to a gun, unless it can be shown that reasonable measures to prevent child access to the gun were taken by the gun owner, and that the specifics, including the nature of "reasonable measures," be determined by the individual constituencies affected by the law.
Citation: Res. 204, I-98; Reaffirmed: BOT Rep. 23, A-09; Reaffirmed: CSAPH Rep. 01, A-19;

Prevention of Ocular Injuries from BB and Air Guns H-145.982
The AMA encourages businesses that sell BB and air guns to make appropriate and safe protective eye wear available and encourages its use to their customers and to distribute educational materials on the safe use of non-powder guns.
Citation: Res. 416, I-96; Reaffirmed: CSAPH Rep. 3, A-06; Reaffirmed: CSAPH Rep. 01, A-16;

School Violence H-145.983
Our AMA: (1) encourages states to adopt legislation enabling schools to limit and control the possession and storage of weapons or potential weapons on school property; (2) advocates for schools to remain gun-free zones except for school-sanctioned activities and professional law enforcement officers; and (3) opposes requirements or incentives of teachers to carry weapons.
Citation: Sub. Res. 402, I-95; Reaffirmed: CSA Rep. 8, A-05; Reaffirmed: CSAPH Rep. 1, A-15; Appended: Res. 402, A-18;

Data on Firearm Deaths and Injuries H-145.984
The AMA supports legislation or regulatory action that: (1) requires questions in the National Health Interview Survey about firearm related injury as was done prior to 1972; (2) mandates that the Centers for Disease Control and Prevention develop a national firearm fatality reporting system; and (3) expands activities to begin tracking by the National Electronic Injury Surveillance System.
Citation: Res. 811, I-94; Reaffirmed: CSA Rep. 6, A-04; Reaffirmation A-13; Reaffirmed: Res. 907, I-22;

Ban on Handguns and Automatic Repeating Weapons H-145.985
It is the policy of the AMA to:
(1) Support interventions pertaining to firearm control, especially those that occur early in the life of the weapon (e.g., at the time of manufacture or importation, as opposed to those involving possession or use). Such interventions should include but not be limited to:
(a) mandatory inclusion of safety devices on all firearms, whether manufactured or imported into the United States, including built-in locks, loading indicators, safety locks on triggers, and increases in the minimum pressure required to pull triggers;
(b) bans on the possession and use of firearms and ammunition by unsupervised youths under the age of 21;
(c) bans of sales of firearms and ammunition from licensed and unlicensed dealers to those under the age of 21 (excluding certain categories of individuals, such as military and law enforcement personnel);
(d) the imposition of significant licensing fees for firearms dealers;
(e) the imposition of federal and state surtaxes on manufacturers, dealers and purchasers of handguns and semiautomatic repeating weapons along with the ammunition used in such firearms, with the attending revenue earmarked as additional revenue for health and law enforcement activities that are directly related to the prevention and control of violence in U.S. society; and
(f) mandatory destruction of any weapons obtained in local buy-back programs.
(2) Support legislation outlawing the Black Talon and other similarly constructed bullets.
(3) Support the right of local jurisdictions to enact firearm regulations that are stricter than those that exist in state statutes and encourage state and local medical societies to evaluate and support local efforts to enact useful controls.
(4) Oppose “concealed carry reciprocity” federal legislation that would require all states to recognize concealed carry firearm permits granted by other states and that would allow citizens with concealed gun carry permits in one state to carry guns across state lines into states that have stricter laws.
(5) Support the concept of gun buyback programs as well as research to determine the effectiveness of the programs in reducing firearm injuries and deaths.
Citation: BOT Rep. 50, I-93; Reaffirmed: CSA Rep. 8, A-05; Reaffirmation A-14; Appended: Res. 427, A-18; Reaffirmation: A-18; Modified: Res. 244, A-18; Reaffirmation: I-22;

AMA Campaign to Reduce Firearm Deaths H-145.988
The AMA supports educating the public regarding methods to reduce death and injury due to keeping guns, ammunition and other explosives in the home.
Citation: (Res. 410, A-93; Reaffirmed: CLRPD Rep. 5, A-03; Reaffirmation A-13; Modified: CSAPH Rep. 1, A-13)

Safety of Nonpowder (Gas-Loaded/Spring-Loaded) Guns H-145.989
It is the policy of the AMA to encourage the development of appropriate educational materials designed to enhance physician and general public awareness of the safe use of as well as the dangers inherent in the unsafe use of nonpowder (gas-loaded/spring-loaded) guns.
Citation: Res. 423, I-91; Modified: Sunset Report, I-01; Modified: CSAPH Rep. 1, A-11; Reaffirmed: CSAPH Rep. 1, A-21;

Prevention of Firearm Accidents in Children H-145.990
1) Our AMA (a) supports increasing efforts to reduce pediatric firearm morbidity and mortality by encouraging its members to (i) inquire as to the presence of household firearms as a part of childproofing the home; (ii) educate patients to the dangers of firearms to children; (iii) encourage patients to educate their children and neighbors as to the dangers of firearms; and (iv) routinely remind patients to obtain firearm safety locks, to store firearms under lock and key, and to store ammunition separately from firearms;(b) encourages state medical societies to work with other organizations to increase public education about firearm safety; (c) encourages organized medical staffs and other physician organizations, including state and local medical societies, to recommend programs for teaching firearm safety to children; and (d) supports enactment of Child Access Prevention laws that are consistent with AMA policy.
2) Our AMA and all interested medical societies wil (a) educate the public about: (b) best practices for firearm storage safety; (c) misconceptions families have regarding child response to encountering a firearm in the home; and (c) the need to ask other families with whom the child interacts regarding the presence and storage of firearms in other homes the child may enter.
Citation: Res. 165, I-89; Reaffirmed: Sunset Report and Appended: Sub. Res. 401, A-00; Reaffirmed: CSAPH Rep. 1, A-10; Reaffirmation A-13; Reaffirmed: CSAPH Rep. 04, A-18; Reaffirmation: I-18; Modified: BOT Rep. 11, I-18; Appended: Res. 923, I-22;

Waiting Periods for Firearm Purchases H-145.991
The AMA supports using its influence in matters of health to effect passage of legislation in the Congress of the U.S. mandating a national waiting period that allows for a police background and positive identification check for anyone who wants to purchase a handgun from a gun dealer anywhere in our country.
Citation: Sub. Res. 34, I-89; Reaffirmed: BOT Rep. 8, I-93; Reaffirmed: BOT Rep. 50, I-93; Reaffirmed: CSA Rep. 8, A-05; Reaffirmation A-07; Reaffirmed: BOT Rep. 22, A-17; Modified: Res. 401, A-17; Reaffirmation: A-18; Reaffirmation: I-18;

Waiting Period Before Gun Purchase H-145.992
The AMA supports legislation calling for a waiting period of at least one week before purchasing any form of firearm in the U.S.
Citation: Res. 171, A-89; Reaffirmed: BOT Rep.50, I-93; Reaffirmed: CSA Rep. 8, A-05; Reaffirmation A-07; Reaffirmed: BOT Rep. 22, A-17; Reaffirmation: A-18;

Restriction of Assault Weapons H-145.993
Our AMA supports appropriate legislation that would restrict the sale and private ownership of inexpensive handguns commonly referred to as "Saturday night specials," and large clip, high-rate-of-fire automatic and semi-automatic firearms, or any weapon that is modified or redesigned to operate as a large clip, high-rate-of-fire automatic or semi-automatic weapon and ban the sale and ownership to the public of all assault-type weapons, bump stocks and related devices, high capacity magazines and armor piercing bullets.
Citation: Sub. Res. 264, A-89; Reaffirmed: BOT Rep. 50, I-93; Amended: Res.215, I-94; Reaffirmed: CSA Rep. 6, A-04; Reaffirmation A-07; Reaffirmed: BOT Rep. 22, A-17; Modified: Res. 433, A-18; Reaffirmation: A-18;

Control of Non-Detectable Firearms H-145.994
Our AMA supports a ban on the (1) manufacture, importation, and sale of any firearm which cannot be detected by ordinary airport screening devices, including 3D printed firearms and (2) production and distribution of 3D firearm digital blueprints.
Citation: Sub. Res. 79, A-88; Reaffirmed: Sunset Report, I-98; Reaffirmed: CLRPD Rep. 1, A-08; Reaffirmed: CSAPH Rep. 01, A-18; Modified: BOT Rep. 11, I-18; Modified: Res. 907, I-22;

Ban Realistic Toy Guns H-145.995
The AMA supports (1) working with civic groups and other interested parties to ban the production, sale, and distribution of realistic toy guns; and (2) taking a public stand on banning realistic toy guns by various public appeal methods.
Citation: Sub. Res. 140, A-88; Reaffirmed: Sunset Report, I-98; Reaffirmed: CLRPD Rep. 1, A-08; Reaffirmed: CSAPH Rep. 01, A-18;

Firearm Availability H-145.996
1. Our AMA: (a) advocates a waiting period and background check for all firearm purchasers; (b) encourages legislation that enforces a waiting period and background check for all firearm purchasers; and (c) urges legislation to prohibit the manufacture, sale or import of lethal and non-lethal guns made of plastic, ceramics, or other non-metallic materials that cannot be detected by airport and weapon detection devices.
2. Our AMA supports requiring the licensing/permitting of firearms-owners and purchasers, including the completion of a required safety course, and registration of all firearms.
3. Our AMA supports “gun violence restraining orders” for individuals arrested or convicted of domestic violence or stalking, and supports extreme risk protection orders, commonly known as “red-flag” laws, for individuals who have demonstrated significant signs of potential violence. In supporting restraining orders and “red-flag” laws, we also support the importance of due process so that individuals can petition for their rights to be restored.
Citation: Res. 140, I-87; Reaffirmed: BOT Rep. 8, I-93; Reaffirmed: BOT Rep. 50, I-93; Reaffirmed: CSA Rep. 8, A-05; Reaffirmed: CSAPH Rep. 1, A-15; Modified: BOT Rep. 12, A-16; Appended: Res. 433, A-18; Reaffirmation: I-18; Modified: BOT Rep. 11, I-18;

Firearms as a Public Health Problem in the United States - Injuries and Death H-145.997
1. Our AMA recognizes that uncontrolled ownership and use of firearms, especially handguns, is a serious threat to the public's health inasmuch as the weapons are one of the main causes of intentional and unintentional injuries and deaths.
Therefore, the AMA:
(A) encourages and endorses the development and presentation of safety education programs that will engender more responsible use and storage of firearms;
(B) urges that government agencies, the CDC in particular, enlarge their efforts in the study of firearm-related injuries and in the development of ways and means of reducing such injuries and deaths;
(C) urges Congress to enact needed legislation to regulate more effectively the importation and interstate traffic of all handguns;
(D) urges the Congress to support recent legislative efforts to ban the manufacture and importation of nonmetallic, not readily detectable weapons, which also resemble toy guns; (5) encourages the improvement or modification of firearms so as to make them as safe as humanly possible;
(E) encourages nongovernmental organizations to develop and test new, less hazardous designs for firearms;
(F) urges that a significant portion of any funds recovered from firearms manufacturers and dealers through legal proceedings be used for gun safety education and gun-violence prevention; and
(G) strongly urges US legislators to fund further research into the epidemiology of risks related to gun violence on a national level.
2. Our AMA will advocate for firearm safety features, including but not limited to mechanical or smart technology, to reduce accidental discharge of a firearm or misappropriation of the weapon by a non-registered user; and support legislation and regulation to standardize the use of these firearm safety features on weapons sold for non-military and non-peace officer use within the U.S.; with the aim of establishing manufacturer liability for the absence of safety features on newly manufactured firearms.
3. Our AMA will support research examining the major sources of illegally possessed firearms, as well as possible methods of decreasing their proliferation in the United States.
4. Our AMA will work with key stakeholders including, but not limited to, firearm manufacturers, firearm advocacy groups, law enforcement agencies, public health agencies, firearm injury victims advocacy groups, healthcare providers, and state and federal government agencies to develop evidence-informed public health recommendations to mitigate the effects of violence committed with firearms.
5. Our AMA will collaborate with key stakeholders and advocate for national public forums including, but not limited to, online venues, national radio, and televised/streamed in-person town halls, that bring together key stakeholders and members of the general public to focus on finding common ground, non-partisan measures to mitigate the effects of firearms in our firearm injury public health crisis.

I-93-50; Appended: Res. 403, I-99; Reaffirmation A-07; Reaffirmation A-13; Appended: Res. 921, I-13; Reaffirmed: CSAPH Rep. 04, A-18; Reaffirmation: A-18; Reaffirmation: I-18; Appended: Res. 405, A-19; Appended: Res. 907, I-22; Reaffirmed: Res. 921, I-22

Gun Regulation H-145.999
Our AMA supports stricter enforcement of present federal and state gun legislation and the imposition of mandated penalties by the judiciary for crimes committed with the use of a firearm, including the illegal possession of a firearm.
Citation: Sub. Res. 31, I-81; Reaffirmed: CLRPD Rep. F, I-91; Amended: BOT Rep. I-93-50; Reaffirmed: Res. 409, A-00; Reaffirmation A-07; Reaffirmed: BOT Rep. 22, A-17; Modified: Res. 401, A-17; Reaffirmation: I-18;

Guns in Hospitals H-215.977
1. The policy of the AMA is to encourage hospitals to incorporate, within their security policies, specific provisions on the presence of firearms in the hospital. The AMA believes the following points merit attention:
A. Given that security needs stem from local conditions, firearm policies must be developed with the cooperation and collaboration of the medical staff, the hospital security staff, the hospital administration, other hospital staff representatives, legal counsel, and local law enforcement officials. Consultation with outside experts, including state and federal law enforcement agencies, or patient advocates may be warranted.
B. The development of these policies should begin with a careful needs assessment that addresses past issues as well as future needs.
C. Policies should, at minimum, address the following issues: a means of identification for all staff and visitors; restrictions on access to the hospital or units within the hospital, including the means of ingress and egress; changes in the physical layout of the facility that would improve security; the possible use of metal detectors; the use of monitoring equipment such as closed circuit television; the development of an emergency signaling system; signage for the facility regarding the possession of weapons; procedures to be followed when a weapon is discovered; and the means for securing or controlling weapons that may be brought into the facility, particularly those considered contraband but also those carried in by law enforcement personnel.
D. Once policies are developed, training should be provided to all members of the staff, with the level and type of training being related to the perceived risks of various units within the facility. Training to recognize and defuse potentially violent situations should be included.
E. Policies should undergo periodic reassessment and evaluation.
F. Firearm policies should incorporate a clear protocol for situations in which weapons are brought into the hospital.
2. Our AMA will advocate that hospitals and other healthcare delivery settings limit guns and conducted electrical weapons in units where patients suffering from mental illness are present.
3. Our AMA will: (a) advocate that physicians not be required to carry or use weapons in correctional facilities where they provide clinical care; and (b) work with appropriate stakeholders to make evidence-based recommendations regarding the presence of weapons in correctional healthcare facilities.
Citation: BOT Rep. 23, I-94; Reaffirmation I-03; Reaffirmed: CSA Rep. 6, A-04; Reaffirmed: CSAPH Rep. 2, I-10; Appended: Res. 426, A-16; Appended: Res. 404, A-22;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 417
(A-23)

Introduced by: Senior Physicians Section

Subject: Treating Social Isolation and Loneliness as a Social Driver of Health

Referred to: Reference Committee D

Whereas, Social isolation and loneliness have been recognized as significant public health concerns, with adverse impacts on physical and mental well-being, and quality of life[1]; and

Whereas, Social isolation and loneliness are not only experienced by older adults but also affect individuals across the lifespan, including young people, single parents, immigrants, and individuals with disabilities; and

Whereas, Social isolation and loneliness are linked to a wide range of chronic diseases, including cardiovascular disease, dementia, depression, and anxiety, and are associated with increased morbidity and mortality; and

Whereas, Social isolation and loneliness can result from social and economic factors, including poverty, inadequate housing, discrimination, and lack of access to healthcare and other services, and can be exacerbated by emergencies and disasters such as pandemics[2]; and

Whereas, Social isolation and loneliness are shaped by structural factors that affect other social determinants of health, including employment, education, and social policies that impact housing, transportation, and community resources; therefore be it

RESOLVED, That our American Medical Association develop educational programs for healthcare professionals and the lay public regarding the significance of social isolation and loneliness to include promoting social connections through community-based programs and encouraging social participation through volunteering, civic engagement, and community service (Directive to Take Action); and be it further

RESOLVED, That our AMA promote enhancing access, including transportation, to health and social services (Directive to Take Action); and be it further

RESOLVED, That our AMA encourage research to assess how forming networks earlier in life helps to reduce loneliness and social isolation for adults, with a special focus on marginalized populations and communities with limited access to resources (New HOD Policy); and be it further

RESOLVED, That our AMA develop toolkits to help clinicians identify and address social isolation and loneliness as a social driver of health (Directive to Take Action); and be it further

RESOLVED, That our AMA work collaboratively with state medical societies, community-based organizations, social service agencies, and public health departments to promote social connections and enhance social support for patients. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 4/26/23

RELEVANT AMA POLICY

Expanding Access to Screening Tools for Social Determinants of Health/Social Determinants of Health in Payment Models H-160.896
1. Our AMA supports payment reform policy proposals that incentivize screening for social determinants of health and referral to community support systems.
2. Our AMA: (a) will advocate for data interoperability between physicians' practices, public health, vaccine registries, community-based organizations, and other related social care organizations to promote coordination across the spectrum of care, while maintaining appropriate patient privacy; (b) adopts the position that electronic health records should integrate and display information on social determinants of health and social risk so that such information is actionable by physicians to intervene and mitigate the impacts of social factors on health outcomes; (c) will advocate for adequate standards and capabilities for electronic health records to effectively tag and protect sensitive data before it can be shared or reshared; and (d) supports ongoing monitoring and data collection regarding unintended harm to patients from sharing information on social determinants of health and social risk.
Citation: BOT Rep. 39, A-18; Reaffirmed: CMS Rep. 10, A-19; Appended: Res. 440, A-22;

Recognizing Loneliness as a Public Health Issue D-440.913
Our AMA: (1) will release a statement identifying loneliness as a public health issue with consequences for physical and mental health; and (2) supports evidence-based efforts to combat loneliness.
Citation: Res. 432, A-22;

Senior Suicide H-25.992
It is the policy of the AMA to (1) educate physicians to be aware of the increased rates of suicide among the elderly and to encourage seniors to consult their physicians regarding depression and loneliness; and (2) to encourage local, regional, state, and national cooperation between physicians and advocacy agencies for these endangered seniors.
Citation: Res. 107, I-90; Reaffirmed: Sunset Report, I-00; Reaffirmed: CSAPH Rep. 1, A-10; Reaffirmed: CSAPH Rep. 01, A-20;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 418
(A-23)

Introduced by: Medical Student Section

Subject: Increasing the Availability of Automated External Defibrillators

Referred to: Reference Committee D

Whereas, 18.8% of sudden cardiac arrests outside of the hospital occur in public spaces, and 70% of those sudden cardiac arrests in public spaces occur in residential complexes[1]; and

Whereas, Laypersons witness 38.3% of cardiac arrest episodes that occur outside of the hospital, and therefore they play a critical role in helping first responders address a cardiac arrest[1]; and

Whereas, Patients receiving an Automated External Defibrillator (AED) shock prior to emergency medical service arrival resulted in 38% survival versus 9% survival in those who only received cardiopulmonary resuscitation[2]; and

Whereas, When dispatchers instruct a bystander to locate an AED that is nearby, they are seldom within obvious view, which can severely limit the application of the AED[3]; and

Whereas, The lack of AED accessibility is known as a major contributing factor to worse health outcomes and is a barrier to increasing survival for out-of-hospital cardiac arrests (OHCA)[4]; and

Whereas, One study in Howard County, Maryland reported a weak correlation between AED location and witnessed OHCA sites, indicating that AEDs were not registered at sites with the most OHCA occurrences[5]; and

Whereas, A study in Phoenix, Arizona found a weak correlation between sites where incidents of OHCA took place and the number of AEDs available[6]; and

Whereas, AED-related disparate health outcomes present disproportionately in Black neighborhoods, as shown by the fact that there was a positive correlation between cardiac arrests in AED-unavailable public locations with higher numbers of Black residents[7]; and

Whereas, Black men and women in America have an incidence of out-of-hospital sudden cardiac death at 2.8% and 2.3% compared to their White counterparts at 1.4% and 0.7%, respectively[8]; and

Whereas, Currently our American Medical Association advocates for the widespread placement of AED devices (H-130.938), but does not reference doing so in a targeted and equitable manner that is necessary to speak to existing issues and disparities that a generalized widespread distribution does not address; and

Whereas, Methodologies that take into account spatial and temporal data are needed to determine placement of AEDs in areas that suffer from increased frequency of OHCA[9]; and

Whereas, Targeted placement of AEDs in areas with a high likelihood of sudden cardiac arrest events has been shown to be cost effective, decrease time to defibrillation, and increase odds of survival[10-11]; and

Whereas, Optimizing the placement of AEDs in the public resulted in increased coverage of OHCA in areas with greater disparities similarly to the way that doubling the amount of AEDs would have done[12]; and

Whereas, Studies that utilized computational approaches to targeted placement of AEDs provided an additional modality that confirms the optimization of AED access, improves coverage and usage of AED devices, as well as increases survival in OHCA episodes[13-14]; therefore be it

RESOLVED, That our American Medical Association amend Policy H-130.938, "Cardiopulmonary Resuscitation (CPR) and Defibrillators,**"** by addition to read as follows:

Cardiopulmonary Resuscitation (CPR) and Defibrillators H-130.938
Our AMA:
(1) supports publicizing the importance of teaching CPR, including the use of automated external defibrillation;
(2) strongly recommends the incorporation of CPR classes as a voluntary part of secondary school programs;
(3) encourages the American public to become trained in CPR and the use of automated external defibrillators;
(4) advocates the widespread placement of automated external defibrillators, including on all grade K-12 school campuses and locations at which school events are held;
(5) encourages all grade K-12 schools to develop an emergency action plan for sudden cardiac events;
(6) supports increasing government and industry funding for the purchase of automated external defibrillator devices;
(7) endorses increased funding for cardiopulmonary resuscitation and defibrillation training of community organization and school personnel;
(8) supports the development and use of universal connectivity for all defibrillators;
(9) supports legislation that would encourage high school students be trained in cardiopulmonary resuscitation and automated external defibrillator use;
(10) will update its policy on cardiopulmonary resuscitation and automated external defibrillators (AEDs) by endorsing efforts to promote the importance of AED use and public awareness of AED locations, by using solutions such as integrating AED sites into widely accessible mobile maps and applications;
(11) urges AED vendors to remove labeling from AED stations that stipulate that only trained medical professionals can use the defibrillators; ~~and~~
(12) supports consistent and uniform legislation across states for the legal protection of those who use AEDs in the course of attempting to aid a sudden cardiac arrest victim; and~~.~~

(13) encourages the distribution of Automated External Defibrillators in an equitable manner through the utilization of targeted placement strategies in order to increase availability and decrease disparities in areas where disproportionate rates of out-of-hospital cardiac arrest episodes exist. (Modify Current HOD Policy)

Fiscal Note: Minimal - less than $1,000

Implementation of Automated External Defibrillators in High-School and College Sports Programs D-470.992
Our AMA supports state legislation and/or state educational policies encouraging: (1) each high school and college that participates in interscholastic and/or intercollegiate athletic programs to have an automated external defibrillator and trained personnel on its premises; and (2) athletic coaches, sports medicine personnel, and student athletes to be trained and certified in cardiovascular-pulmonary resuscitation (CPR), automated external defibrillators (AED), basic life support, and recognizing the signs of sudden cardiac arrest.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 419
(A-23)

Introduced by: American Academy of Pediatrics

Subject: Increased Suicide Risk for Children, Youths, and Young Adults in the Welfare System

Referred to: Reference Committee D

Whereas, Child, youth, and young adult suicide is the leading cause of death in this age group; and

Whereas, Additional research has identified children, youths, and young adults within the welfare system to be at higher risk of suicide than other age/race matched peers; and

Whereas, Our American Medical Association has policy regarding research into higher risk individuals (H-60.937, *Youth and Young Adult Suicide in the United States*); therefore be it

RESOLVED, That our American Medical Association amend policy H-60.937, *Youth and Young Adult Suicide in the United States,* by addition and deletion to read as follows:

Youth and Young Adult Suicide in the United States H-60.937

Our AMA:

1) Recognizes child, youth and young adult suicide as a serious health concern in the US;
2) Encourages the development and dissemination of educational resources and tools for physicians, especially those more likely to encounter child, youth or young adult patients, addressing effective suicide prevention, including screening tools, methods to identify risk factors and acuity, safety planning, and appropriate follow-up care including treatment and linkages to appropriate counseling resources;
3) Supports collaboration with federal agencies, relevant state and specialty societies, schools, public health agencies, community organizations, and other stakeholders to enhance awareness of the increase in child, youth and young adult suicide and to promote protective factors, raise awareness of risk factors, support evidence-based prevention strategies and interventions, encourage awareness of community mental health resources, and improve care for children, youth and young adults at risk of suicide;
4) Encourages efforts to provide children, youth and young adults better and more equitable access to treatment and care for depression, substance use disorder, and other disorders that contribute to suicide risk;
5) Encourages continued research to better understand suicide risk and effective prevention efforts in children, youth and young adults, especially in higher risk sub-populations such as those with a history of childhood trauma and adversity, Black, LGBTQ+, Hispanic/Latinx, Indigenous/Native Alaskan youth and young adult populations, and children in the welfare system;
6) Supports the development of novel technologies and therapeutics, along with improved utilization of existing medications to address acute suicidality and underlying risk factors in children, youth and young adults;

7) Supports research to identify evidence-based universal and targeted suicide prevention programs for implementation in middle schools and high schools;
8) Will publicly call attention to the escalating crisis in children, youth and young adult ~~and adolescent~~ mental health in this country in the wake of the Covid-19 pandemic;
9) Will advocate at the state and national level for policies to prioritize children's, youth's, and young adult's mental, emotional, and behavioral health;
10) Will advocate for comprehensive system of care including prevention, management, and crisis care to address mental and behavioral health needs for ~~infants~~, children, youth, and young adult ~~and adolescents~~; and
11) Will advocate for a comprehensive approach to the child youth, and young adult ~~and adolescent~~ mental and behavioral health crisis when such initiatives and opportunities are consistent with AMA policy. (Modify Current HOD Policy)

Fiscal Note: Minimal - less than $1,000

Received: 5/2/23

RELEVANT AMA POLICY

Youth and Young Adult Suicide in the United States H-60.937
Our AMA:
(1) Recognizes youth and young adult suicide as a serious health concern in the US;
(2) Encourages the development and dissemination of educational resources and tools for physicians, especially those more likely to encounter youth or young adult patients, addressing effective suicide prevention, including screening tools, methods to identify risk factors and acuity, safety planning, and appropriate follow-up care including treatment and linkages to appropriate counseling resources;
(3) Supports collaboration with federal agencies, relevant state and specialty medical societies, schools, public health agencies, community organizations, and other stakeholders to enhance awareness of the increase in youth and young adult suicide and to promote protective factors, raise awareness of risk factors, support evidence-based prevention strategies and interventions, encourage awareness of community mental health resources, and improve care for youth and young adults at risk of suicide;
(4) Encourages efforts to provide youth and young adults better and more equitable access to treatment and care for depression, substance use disorder, and other disorders that contribute to suicide risk;
(5) Encourages continued research to better understand suicide risk and effective prevention efforts in youth and young adults, especially in higher risk sub-populations such as Black, LGBTQ+, Hispanic/Latinx, Indigenous/Native Alaskan youth and young adult populations, and among youth and young adults with disabilities;
(6) Supports the development of novel technologies and therapeutics, along with improved utilization of existing medications to address acute suicidality and underlying risk factors in youth and young adults;
(7) Supports research to identify evidence-based universal and targeted suicide prevention programs for implementation in middle schools and high schools;
(8) Will publicly call attention to the escalating crisis in children and adolescent mental health in this country in the wake of the COVID-19 pandemic;
(9) Will advocate at the state and national level for policies to prioritize children's mental, emotional and behavioral health;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 420
(A-23)

Introduced by: American Academy of Pediatrics

Subject: Foster Health Care

Referred to: Reference Committee D

Whereas, Our American Medical Association has established policy H-60.910, *Addressing Healthcare Needs of Children in Foster Care,* delineating health care for children within the foster care system; and

Whereas, Our understanding of the health care needs of children within the foster care system has increased through evidence-based research; therefore be it

RESOLVED, That our American Medical Association amend policy H-60.910, *Addressing Healthcare Needs of Children in Foster Care*, by addition and deletion to read as follows:

Addressing Healthcare Needs of Children in Foster Care H-60.910
Our AMA advocates for comprehensive, ~~and~~ evidence-based, trauma-informed ~~-~~care that addresses the specific mental, developmental, and physical health care needs of children in foster care. (Directive to Take Action)

Fiscal Note: Minimal - less than $1,000

Received: 5/2/23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 421
(A-23)

Introduced by: American Academy of Child and Adolescent Psychiatry, American Academy of Psychiatry and the Law, American Association for Geriatric Psychiatry, American Psychiatric Association

Subject: Prescribing Guided Physical Activity for Depression and Anxiety

Referred to: Reference Committee D

Whereas, Depression and anxiety are medical conditions with neurophysiological basis[1;] and

Whereas, Depression and anxiety cause accelerated aging and put patients at risk for further chronic medical conditions[2]; and

Whereas, People with mental health conditions have lower life expectancy than the general population of 12–15 years, are at higher risk of developing chronic illnesses such as diabetes and heart disease, both of which are impacted by exercise[6,7]; and

Whereas, Traditionally physical therapy is only recommended or covered by insurances for traditionally “medical” diagnoses, not for diagnoses such as depression and anxiety which also have a physical and medical component; and

Whereas, Due to increasing polypharmacy and patients experiencing side effects from psychotropic medications[5] nonpharmacologic approaches to management of depression and anxiety should be studied and promoted; and

Whereas, A meta-analysis of 33 RCT showed that resistance exercise training significantly reduced depressive symptoms[3]; and

Whereas, Recent meta-analysis on structured exercise programs conclude that exercise has a moderate to large antidepressant effect[8,9]; and

Whereas, A meta-analysis of six prospective studies involving 26,473 participants and found a significantly decreased risk of depression symptoms among participants with strong handgrip strength (RR=0.74)[4]; and

Whereas, Preventative health measures can not only help alleviate suffering and improve quality of life for our patients, they can also cost the healthcare system less money in the long run[10]; therefore be it

RESOLVED, That our American Medical Association study evidence of the efficacy of physical activity interventions (e.g. group fitness, personal training, or physical therapy) on behavioral activation and outcomes on depressive symptoms. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Reducing Polypharmacy as a Significant Contributor to Senior Morbidity D-120.928

1. Our AMA will work with other organizations e.g., AARP, other medical specialty societies, PhRMA, and pharmacists to educate patients about the significant effects of all medications and most supplements, and to encourage physicians to teach patients to bring all medications and supplements or accurate, updated lists including current dosage to each encounter.
2. Our AMA along with other appropriate organizations encourages physicians and ancillary staff if available to initiate discussions with patients on improving their medical care through the use of only the minimal number of medications (including prescribed or over-the-counter, including vitamins and supplements) needed to optimize their health.
3. Our AMA will work with other stakeholders and EHR vendors to address the continuing problem of inaccuracies in medication reconciliation and propagation of such inaccuracies in electronic health records.
4. Our AMA will work with other stakeholders and EHR vendors to include non-prescription medicines and supplements in medication lists and compatibility screens.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 422
(A-23)

Introduced by: American Academy of Child and Adolescent Psychiatry, American Academy of Psychiatry and the Law, American Association for Geriatric Psychiatry, American Psychiatric Association

Subject: National Emergency for Children

Referred to: Reference Committee D

Whereas, During March–October 2020, the proportion of mental health-related visits in emergency departments increased by 24% among U.S. children aged 5–11 years and 31% among adolescents aged 12–17 years, compared with 2019; and

Whereas, Visits for overall mental health conditions among all children and adolescents accounted for a larger proportion of all pediatric visits during 2020, 2021, and January 2022 than during 2019, with variation by age group and mental health condition; and

Whereas, Suicide is the second leading cause of death for youth ages 10-18 in the United States; and

Whereas, Suicide rates for American Indian or Alaska Native, Asian, Black, Hispanic, and multiracial youth increased dramatically between 2018 and 2021 with the highest rate of increase among non-Hispanic Black youth at 36.6%; and

Whereas, 20.1% of youth ages 12-17 had a major depressive episode in the past years, compared to 15.7% of youth in 2019; and

Whereas, In 2021, 42% of high school students reported feeling persistently sad or hopeless and 29% reported experiencing poor mental health; and

Whereas, Nearly half of all youth with mental health disorders do not receive treatment; and

Whereas, The American Academy of Child and Adolescent Psychiatry, the American Academy of Pediatrics, and the Children's Hospital Association declared a National State of Emergency in Children's Mental Health in 2021; therefore be it

RESOLVED, That our American Medical Association declare a national state of emergency in children's mental health. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 423
(A-23)

Introduced by: Connecticut; Maine; Massachusetts; New Hampshire; Rhode Island; Vermont

Subject: Reducing Sodium Intake to Improve Public Health

Referred to: Reference Committee D

Whereas, Sodium is an essential nutrient necessary for maintenance of health and whole-body function and excess sodium is linked to adverse health outcomes, including increased blood pressure. The primary contributors to dietary sodium consumption depend on the cultural context and dietary habits of a population. Nine out of 10 U.S. men and women will develop hypertension at some point in their lives[1]; and

Whereas, The main source of sodium in our diet is salt, sodium can be found naturally in foods such as milk, meat, and shellfish as well as in common condiments, such as soy sauce and sodium glutamate. Sodium is often found in high amounts in processed foods. These foods are often more affordable and available to the general public resulting in higher consumption of sodium; and

Whereas, On average people consume 9-12 grams of salt per day, or around twice the recommended maximum level of intake. Salt intake of less than 5 grams per day for adults helps to reduce blood pressure and risk of cardiovascular disease, stroke, and coronary heart attack. The principal benefit of lowering salt intake is a corresponding reduction in high blood pressure. Researchers estimate that reducing the average daily sodium intake in the U.S. to 2,300 milligrams (about 1 teaspoon of salt) per day would prevent 11 million cases of hypertension and would save $18 billion in health care costs each year[3]. An estimated 2.5 million deaths could be prevented each year if global salt consumption were reduced to the recommended level; and

Whereas, World Health Organization (WHO) Member States have agreed to reduce the global population's intake of salt by a relative 30% by 2025. Reducing salt intake has been identified as one of the most cost-effective measures countries can take to improve population health outcomes. Key salt reduction measures will generate an extra year of healthy life for a cost that falls below the average annual income or gross domestic product per person; and

Whereas, The U.S. Food & Drug Administration (FDA) released new voluntary guidance on October 13, 2021, encouraging the food industry to gradually reduce sodium in commercially processed, packaged, and prepared foods over the next two and a half years—with the aim of helping Americans reduce their average levels of sodium from 3,400 to 3,000 mg/day; and

Whereas, In 2013, the World Health Assembly (WHA) agreed to global voluntary prevention targets including a relative reduction in the intake of salt by 2025. The "Global Action Plan for the Prevention and Control of Noncommunicable Diseases 2013-2020" gives guidance and a menu of policy options for Member States, WHO and other UN agencies to achieve the targets; and

Whereas, Some manufacturers have voluntarily agreed to cut back on sodium as part of New York City's National Salt Reduction Initiative[6]. The aim of this initiative is to guide a voluntary reduction of salt levels in packaged and restaurant foods, with the primary goal of cutting the salt in packaged and restaurant foods by 25% over five years – which would reduce the nation's salt intake by 20% and prevent thousands of deaths; and

Whereas, Finland and the United Kingdom have led successful sodium reduction efforts. In Finland, a government-led program of education, salt-labeling legislation, and pressure on the food industry has led to a 30 percent reduction in salt intake, from 12,000 milligrams a day to around 9,000 milligrams today[7]; therefore be it

RESOLVED, That our American Medical Association work with all relevant stakeholders to advocate and advise salt reduction through public outreach that may include, but not be limited to, policy changes, ad campaigns, educational programs, including those starting in schools, and food labeling (Directive to Take Action); and be it further

RESOLVED, That our AMA study and report back at the 2024 Annual Meeting the effectiveness and feasibility of salt reduction strategies with specific interventions such as:

1. Consumer awareness and empowerment of populations through social marketing and mobilization to raise awareness of salt alternatives and the need to reduce salt intake
2. Government policies, including appropriate fiscal policies and regulation, to ensure food manufacturers produce healthier affordable low-sodium foods and retailers make such products available
3. Integrating salt reduction strategies and alternatives into the training curriculum of food handlers
4. Removing opportunistic use of saltshakers
5. Introducing and regulating "High in Sodium" (or similar) front-of-pack product labels or prominent shelf labels
6. Automating targeted sodium dietary advice to people visiting health facilities
7. Advocating for people to limit their intake of products high in salt and advocating that they reduce the amount of salt used for cooking
8. Educating and providing a supportive environment for children to encourage early adoption of low salt diets
9. Reducing salt in food served by restaurants and catering outlets, and labelling the sodium content of this food. (Directive to Take Action)

Fiscal Note: Not yet determined.

Received: 5/2/23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 424
(A-23)

Introduced by: American Academy of Pediatrics

Subject: Job Security Related to Leave for Caregiver When a Child in Foster Care is Placed in Their Home

Referred to: Reference Committee D

Whereas, Our American Medical Association has established policy H-420.979, *AMA Statement on Family and Medical Leave,* regarding employment leave with reasonable job security and health benefit security; and

Whereas, Our AMA policy H-420.979 also includes leave for adoption or for foster child placement leading to adoption; and

Whereas, There are over 600,000 children in 2021 who were in the foster care system in our country; and

Whereas, Current research indicates that children who are removed from their homes and enter the foster care system have better outcomes if they are placed in a home environment as opposed to a residential setting; and

Whereas, There is a current shortage of adults who serve as foster parents for children in the foster care system; and

Whereas, Incorporating a new child into a foster home is a critical time in both the child's and foster parent's lives in order to develop a successful placement for both; and

Whereas, Protected leave from work as needed for foster placement, not necessarily leading to adoption only, would provide for improved successful placement; therefore be it

RESOLVED, That our American Medical Association amend H-420.979, *AMA Statement on Family and Medical Leave,* by addition and deletion to read as follows:

AMA Statement on Family and Medical Leave H-420.979
Our AMA supports policies that provide employees with reasonable job security and continued availability of health plan benefits in the event leave by an employee becomes necessary due to documented medical conditions. Such policies should provide for reasonable periods of paid or unpaid:

1) Medical leave for the employee, including pregnancy, abortion, and stillbirth;
2) Maternity leave for the employee-mother;
3) Leave if medically appropriate to care for a member of the employee's immediate family, i.e., a spouse or children; and
4) Leave for adoption or for ~~foster~~ placement of a child in foster care in the home ~~leading to adoption~~. Such periods of leave may differ with respect to each of the foregoing classifications and may vary with reasonable categories of employers. Such policies

should encourage voluntary programs by employers and may provide for appropriate legislation (with or without financial assistance from government). Any legislative proposals will be reviewed through the Association's normal legislative process for appropriateness, taking into consideration all elements therein, including classifications of employees and employers, reasons for the leave, periods of leave recognized (whether paid or unpaid), obligations on return from leave, and other factors involved in order to achieve reasonable objectives recognizing the legitimate needs of employees and employers. (Modify Current HOD Policy)

Fiscal Note: Minimal - less than $1,000

Received: 5/2/23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 425
(A-23)

Introduced by: Minnesota

Subject: Examining Policing Through a Public Health Lens

Referred to: Reference Committee D

Whereas, Police brutality and negative police interactions many times are products of structural racism; and

Whereas, Black, Indigenous, and Hispanic/Latino individuals are significantly more likely to be killed or injured by police than White individuals; and

Whereas, Being killed by police is the sixth leading cause of death for young Black men; and

Whereas, Both Black women and Indigenous women are about 1.5 times more likely to be killed by police than White women; and

Whereas, Police surveillance, police stops, and verbal harassment can have large and disproportionate public health impacts, even absent physical violence by police; and

Whereas, Policing has shown to have a detrimental effect on the mental, physical and economic health of Black, Indigenous, Hispanic/Latino and other communities of color; and

Whereas, Systems need to be put in place to address the adverse health outcomes that are occurring as a result of policing policies that are influenced by structural racism; and

Whereas, Given the recent public and media interest of deaths in custody, these deaths have the potential to be publicly scrutinized not just for how the situation was handled by law enforcement, but also for how the case was managed by the medical examiner, forensic pathologist, or coroner; and

Whereas, “Death in custody" refer to those deaths in which the death happens while the decedent is in either direct or indirect contact with law enforcement, whether during an initial confrontation with law enforcement authorities, during the process of arrest, during transport to a facility, or during incarceration; and

Whereas, Deaths in custody are complex issues that require medical examiners, forensic pathologists, or coroners to be knowledgeable and deliberative about their diagnoses; and

Whereas, It is critical that medical examiners, forensic pathologists, or coroners manage investigations/evaluations of deaths in custody using a consistent and uniform approach; and

Whereas, The U.S. Standard Certificate of Death does not have a standard way of capturing a death in custody; and

Whereas, It is up to the discretion of the medical examiner, forensic pathologist, or coroner to communicate the circumstances of deaths in custody by using the "How Injury Occurred" and "Place of Death" sections contained within the death certificate, a practice that may miss many deaths if they are not correctly noted; and

Whereas, To assist in the accurate accounting of deaths in custody, an appropriate mechanism needs to be added to the U.S. Standard Certificate of Death to record deaths in custody; therefore be it

RESOLVED, That our American Medical Association advocate for research to be conducted that examines the public health consequences of negative police interactions (Directive to Take Action); and be it further

RESOLVED, That our AMA advocate for a change to the U.S. Standard Certificate of Death to include a "check box" that would categorize deaths in custody and would create a new statistical grouping with explanations of the range of causes, manner and circumstances of death, within the spectrum of police custody, corrections custody, and legal custody. (Directive to Take Action)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Policing Reform D-65.987
Our AMA: (1) will advocate for efforts to implement evidence-based policing and the creation of evidence-based standards for law enforcement; (2) will advocate for sentinel event reviews in the criminal justice system following an adverse event, such as an in-custody death; (3) encourages further research by subject matter experts on the issues related to the transfer of military equipment to law enforcement agencies, including the impact on communities, particularly those in minoritized and marginalized communities; and (4) supports greater police accountability, procedurally just policing models, and greater community involvement in policing policies and practices.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 426
(A-23)

Introduced by: Dr. Thomas W. Eppes, MD, Delegate

Subject: Accurate Abortion Reporting with Demographics by the Center for Disease Control

Referred to: Reference Committee D

Whereas, The Center for Disease Control (CDC) is the government's premier analytics body for healthcare trends and data collection; and

Whereas, The CDC has been collecting voluntary data on abortions since Roe v Wade; and

Whereas, That current data does not contain data points that allow full understanding of the consistent demographics that would allow full understanding of numbers, complications, and demographics that would allow wise policy decisions; therefore be it

RESOLVED, That our American Medical Association call upon the Center for Disease Control (CDC) to develop and mandate collection of abortion statistics from each state that at minimum include the following data:

1) Age of the woman.
2) Race of the woman.
3) Facility [Hospital, Ambulatory Surgery Center, Private Center meeting ASC standards, Private Center not meeting ASC standards.
4) Gestational age of pregnancy.
5) The abortion procedure or medication chosen.
6) Reason for abortion [life of the mother, rape, incest, choice].
7) Miles traveled to obtain the abortion and whether the woman had to go out of state due to state laws prohibiting abortion care.

(Directive to Take Action)

Fiscal Note: Minimal - less than $1,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 427
(A-23)

Introduced by: Delaware

Subject: Minimizing the Influence of Social Media on Gun Violence

Referred to: Reference Committee D

Whereas, More Americans died of gun-related injuries in 2021 (the most recent year for which complete data is available) than in any other year on record totaling 48,830, which includes gun murders, gun suicides, accidental death, deaths involving law enforcement, and those whose circumstances could not be determined[1]; and

Whereas, Suicides have long accounted for the majority of US gun deaths, with 54% of all gun-related deaths in the US in 2021 being suicides (26,328)[1]; and

Whereas, 43% of all gun-related deaths in the US in 2021 were murders (20,958)[1]; and

Whereas, Approximately eight-in-ten US murders in 2021 (81%) involved a firearm, marking the highest percentage since at least 1968[1]; and

Whereas, Since the beginning of the pandemic, there was a significant increase in gun deaths among children and teens under the age of 18[1]; and

Whereas, A number of social media sites such as Facebook, Instagram, Yubo, Twitter, Tumblr, YouTube, Pinterest, Flickr, TikTok, and Reddit are popular sites for many young people and others to communicate and share ideas[2]; and

Whereas, Studies have suggested that social media has contributed to the rise and proliferation of gun violence by encouraging imitative behaviors, provoking retaliative actions, and offering "bragging rights" in some online communities[3]; and

Whereas, Mental health illness may instill a sense of low self-worth that may lead to suicidal tendencies that can be fueled by social media postings; and

Whereas, As social networks refine their policies and update algorithms for detecting extremism, they overlook a major source of the proliferation of hateful content relating to the use of gun violence[4,5]; and

Whereas, Social media sites have an obligation to perform ongoing surveillance of their sites to detect inappropriate and unlawful postings, videos, messaging, and more[4-7]; and

Whereas, Social media sites have not been aggressive enough in controlling postings on their site and taking down such postings that glorify guns and gun violence, as well as removing users that post such information indefinitely[4-10]; and

Whereas, Fear of retribution may be a significant reason why social media sites cannot control their content on guns and gun violence adequately; and

Whereas, Criticism from gun lobbies, politicians, and Second Amendment advocates hamper control of guns and gun violence on social media[4]; and

Whereas, Social media can be used to provide useful content to combat gun violence [9,11-13]; therefore be it

RESOLVED, That our American Medical Association call upon all social media sites and all others that allow posting of videos, photographs, and written online comments encouraging and glorifying the use of guns and gun violence to vigorously and aggressively remove such postings (Directive to Take Action); and be it further

RESOLVED, That our AMA strongly recommend social media sites continuously update and monitor their algorithms in order to detect and eliminate any information that discusses and displays guns and gun violence in a way that encourages viewers to act violently (New HOD Policy); and be it further

RESOLVED, That our AMA work with social media sites to provide educational content on the use of guns, inherent dangers, and gun safety in an effort to end the ongoing and devastating effects of gun violence in our communities. (Directive to Take Action)

Fiscal Note: Developing educational content - $50,070.

RELEVANT AMA POLICY

Firearms as a Public Health Problem in the United States - Injuries and Death H-145.997
1. Our AMA recognizes that uncontrolled ownership and use of firearms, especially handguns, is a serious threat to the public's health inasmuch as the weapons are one of the main causes of intentional and unintentional injuries and deaths.
Therefore, the AMA:
(A) encourages and endorses the development and presentation of safety education programs that will engender more responsible use and storage of firearms;
(B) urges that government agencies, the CDC in particular, enlarge their efforts in the study of firearm-related injuries and in the development of ways and means of reducing such injuries and deaths;
(C) urges Congress to enact needed legislation to regulate more effectively the importation and interstate traffic of all handguns;
(D) urges the Congress to support recent legislative efforts to ban the manufacture and importation of nonmetallic, not readily detectable weapons, which also resemble toy guns; (5) encourages the improvement or modification of firearms so as to make them as safe as humanly possible;
(E) encourages nongovernmental organizations to develop and test new, less hazardous designs for firearms;
(F) urges that a significant portion of any funds recovered from firearms manufacturers and dealers through legal proceedings be used for gun safety education and gun-violence prevention; and
(G) strongly urges US legislators to fund further research into the epidemiology of risks related to gun violence on a national level.
2. Our AMA will advocate for firearm safety features, including but not limited to mechanical or smart technology, to reduce accidental discharge of a firearm or misappropriation of the weapon by a non-registered user; and support legislation and regulation to standardize the use of these firearm safety features on weapons sold for non-military and non-peace officer use within the U.S.; with the aim of establishing manufacturer liability for the absence of safety features on newly manufactured firearms.
3. Our AMA will support research examining the major sources of illegally possessed firearms, as well as possible methods of decreasing their proliferation in the United States.
4. Our AMA will work with key stakeholders including, but not limited to, firearm manufacturers, firearm advocacy groups, law enforcement agencies, public health agencies, firearm injury victims advocacy groups, healthcare providers, and state and federal government agencies to develop evidence-informed public health recommendations to mitigate the effects of violence committed with firearms.
5. Our AMA will collaborate with key stakeholders and advocate for national public forums including, but not limited to, online venues, national radio, and televised/streamed in-person town halls, that bring together key stakeholders and members of the general public to focus on finding common ground, non-partisan measures to mitigate the effects of firearms in our firearm injury public health crisis.

I-93-50; Appended: Res. 403, I-99; Reaffirmation A-07; Reaffirmation A-13; Appended: Res. 921, I-13; Reaffirmed: CSAPH Rep. 04, A-18; Reaffirmation: A-18; Reaffirmation: I-18; Appended: Res. 405, A-19; Appended: Res. 907, I-22; Reaffirmed: Res. 921, I-22

Firearm Safety and Research, Reduction in Firearm Violence, and Enhancing Access to Mental Health Care H-145.975
1. Our AMA supports: a) federal and state research on firearm-related injuries and deaths; b) increased funding for and the use of state and national firearms injury databases, including the expansion of the National Violent Death Reporting System to all 50 states and U.S. territories, to inform state and federal health policy; c) encouraging physicians to access evidence-based data regarding firearm safety to educate and counsel patients about firearm safety; d) the rights of physicians to have free and open communication with their patients regarding firearm safety and the use of gun locks in their homes; e) encouraging local projects to facilitate the low-cost distribution of gun locks in homes; f) encouraging physicians to become involved in local firearm safety classes as a means of promoting injury prevention and the public health; and g) encouraging CME providers to consider, as appropriate, inclusion of presentations about the prevention of gun violence in national, state, and local continuing medical education programs.
2. Our AMA supports initiatives to enhance access to mental and cognitive health care, with greater focus on the diagnosis and management of mental illness and concurrent substance use disorders, and work with state and specialty medical societies and other interested stakeholders to identify and develop standardized approaches to mental health assessment for potential violent behavior.

3. Our AMA (a) recognizes the role of firearms in suicides, (b) encourages the development of curricula and training for physicians with a focus on suicide risk assessment and prevention as well as lethal means safety counseling, and (c) encourages physicians, as a part of their suicide prevention strategy, to discuss lethal means safety and work with families to reduce access to lethal means of suicide.
4. Our AMA and other organizations will develop and disseminate a formal educational program to enable clinicians to effectively and efficiently address suicides with an emphasis on seniors and other high-risk populations.
5. Our AMA will develop with other interested organizations a toolkit for clinicians to use addressing Extreme Risk Protection Orders in their individual states.
6. Our AMA will partner with other groups interested in firearm safety to raise public awareness of the magnitude of suicide in seniors and other high-risk populations, and interventions available for suicide prevention.
7. Our AMA and all interested medical societies will: (a) educate physicians about firearm epidemiology, anticipatory guidance, and lethal means screening for and exploring potential restrictions to access to high-lethality means of suicide such as firearms. Health care clinicians, including trainees, should be provided training on the importance of anticipatory guidance and lethal means counseling to decrease firearm injuries and deaths and be provided training introducing evidence-based techniques, skills and strategies for having these discussions with patients and families; (b) educate physicians about lethal means counseling in health care settings and intervention options to remove lethal means, either permanently or temporarily from the home.

Addressing Social Media and Social Networking Usage and its Impacts on Mental Health D-478.965
Our AMA: (1) will collaborate with relevant professional organizations to: (a) support the development of continuing education programs to enhance physicians' knowledge of the health impacts of social media and social networking usage; and (b) support the development of effective clinical tools and protocols for the identification, treatment, and referral of children, adolescents, and adults at risk for and experiencing health sequelae of social media and social networking usage; (2) advocates for schools to provide safe and effective educational programs by which students can learn to identify and mitigate the onset of mental health sequelae of social media and social networking usage; (3) affirms that use of social media and social networking has the potential to positively or negatively impact the physical and mental health of individuals, especially adolescents and those with preexisting psychosocial conditions; (4) advocates for and support media and social networking services addressing and developing safeguards for users; and (5) advocates for the study of the positive and negative biological, psychological, and social effects of social media and social networking services use.
Citation: Res. 905, I-17; Modified: Res. 420, A-21;

Medical and Public Health Misinformation in the Age of Social Media D-440.915
Our AMA: (1) encourages social media companies and organizations to further strengthen their content moderation policies related to medical and public health misinformation, including, but not limited to enhanced content monitoring, augmentation of recommendation engines focused on false information, and stronger integration of verified health information; (2) encourages social media companies and organizations to recognize the spread of medical and public health misinformation over dissemination networks and collaborate with relevant stakeholders to address this problem as appropriate, including but not limited to altering underlying network dynamics or redesigning platform algorithms; (3) will continue to support the dissemination of accurate medical and public health information by public health organizations and health policy experts; and (4) will work with public health agencies in an effort to establish relationships with journalists and news agencies to enhance the public reach in disseminating accurate medical and public health information.
Citation: Res. 421, A-21; Reaffirmed: BOT Rep. 15, A-22;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 428
(A-23)

Introduced by: Organized Medical Staff Section

Subject: Mattress Safety in the Hospital Setting

Referred to: Reference Committee D

Whereas, It is the responsibility of the organized medical staff to oversee the safety of patients in the hospital setting; and

Whereas, Covering hospital safety includes working to mitigate and overall decrease infections; and

Whereas, Materials in the patients' room such as the hospital bed and matters can be a causative agent of infection spread; and

Whereas, Proper care of the hospital bed and mattress comes under the purview of the organized medical staff as well as accrediting bodies; and

Whereas, The U.S. Food and Drug Administration and hospital bed/mattress manufacturers have specific instructions on the care and maintenance of hospital beds and mattresses; therefore be it

RESOLVED, That our American Medical Association work with the accrediting bodies and interested stakeholders to make sure all possible appropriate care and maintenance measures be undertaken to mitigate infection related to hospital bed and mattress use (Directive to Take Action).

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/9/23

RELEVANT AMA POLICY

Responsibility for Infection Control (H-235.969)
AMA policy states that: (1) the hospital medical staff should have a multidisciplinary committee to oversee the surveillance, prevention and control of infection; (2) the infection control committee should report to the hospital medical staff executive committee; and (3) the medical staff's role, responsibility and authority in the infection control activities should be included in the medical staff bylaws.
Citation: Sub. Res. 802, A-95; Reaffirmed: CSA Rep. 8, A-05; Reaffirmed: CSAPH Rep. 1, A-15

Hospital Dress Codes for the Reduction of Health Care-Associated Infection Transmission of Disease (H-440.856)
Our AMA encourages: (1) research in textile transmission of health care-associated infections (HAI); (2) testing and validation of research results before advocating for adoption of dress code policies that may not achieve reduction of HAIs; (3) all clinicians to assume "antimicrobial stewardship," i.e., adherence to evidence-based solutions and best practices to reduce of HAIs and HAI infection rates; and (4) all clinicians when seeing patients to wear attire that is clean, unsoiled, and appropriate to the setting of care.
Citation: BOT Rep. 3, A-10; Reaffirmed: A-15

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 429
(A-23)

Introduced by: American Association of Public Health Physicians

Subject: Promoting the Highest Quality of Healthcare and Oversight for Those Involved in the Criminal Justice System

Referred to: Reference Committee D

Whereas, The US has the highest incarceration rate in the world; and

Whereas, Evidence indicates that Black Americans are incarcerated in local jails and prisons at four times the rate of white Americans; and

Whereas, The Supreme Court held all prisoners have the right to adequate medical care while incarcerated; and

Whereas, The standard of health care treatment within correctional facilities is the same as in the community at large; and

Whereas, Studies have shown that compared to the general population, individuals in jail and prisons have are more likely to have high blood pressure, asthma, cancer, arthritis, and infectious diseases such as tuberculosis, hepatitis C, and HIV; and

Whereas, Individuals who are incarcerated are vulnerable to the spread of COVID-19 infection due to their close confined quarters; and

Whereas, Individuals who are incarcerated have a high chronic disease burden, increasing their risk for morbidity and mortality related to COVID-19; and

Whereas, According to the UCLA Law COVID-19 Behind Bars Project, more than 412,000 people incarcerated in prisons have had confirmed cases of COVID-19 and over 2,700 people have died from COVID-19 while incarcerated; and

Whereas, The case and death rates in US prisons substantially exceeded national rates; and

Whereas, As of April 2, 2021, 394,066 COVID-19 cases and 2,555 deaths due to COVID-19 had been reported among the US prison population, with a standardized mortality rate of 199.6 deaths for the prison population and 80.9 deaths for the US population; and

Whereas, There were 296 federal inmate deaths attributed to COVID-19 infections; and

Whereas, The reported number of deaths may be underestimated secondary to delay in reporting and due to inadequate availability of testing at the start of the COVID-19 pandemic; and

Whereas, The current qualifications for national and local administrators within Bureau of Prisons do not include medical credentials or clinical experience; and

Whereas, Administrators without clinical experience in medicine, nursing, public health, or health service administration are regularly promoted to positions where they supervise physicians and other clinical staff; and

Whereas, Administrators direct the process and procedures of routine and acute clinical care as well as managing public health crises such as the COVID-19 pandemic; and

Whereas, Individuals who are confined to correctional facilities do not have a right to request health care outside of the correctional facilities; therefore be it

RESOLVED, That our American Medical Association support the following qualifications for the Director and Assistant Director of the Federal Bureau of Prisons positions and other administrators supervising physicians and other clinical staff within its facilities:

1. MD or DO, MBSS, degree with at least five years of clinical experience at a Bureau of Prisons medical facility or a community clinical setting.
2. Knowledge of health disparities among Black, Indigenous, and people of color, including the pathophysiological basis of the disease process and the social determinants of health that affect disparities.
3. Knowledge of the health disparities among individuals who are involved with the criminal justice system (New HOD Policy); and be it further

RESOLVED, That our AMA initiate a public health campaign or appropriate effort to promote the highest quality of healthcare and oversight for those who are involved in the criminal justice system by advocating for health administrators and executive staff to possess credentials and experience comparable to individuals in the community in similar professional roles. (Directive to Take Action)

Fiscal Note: Initiating a public health campaign - $43,166.

Received: 5/10/23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 430
(A-23)

Introduced by: Albert L. Hsu, MD, Delegate

Subject: Teens and Social Media

Referred to: Reference Committee D

Whereas, American Medical Association policy H-60.934, *Internet Pornography: Protecting Children and Youth Who Use the Internet and Social Media,* addresses "Protecting Children and Youth Who Use the Internet and Social Media"; and

Whereas, According to one report, "nearly 3 in 5 US teen girls felt persistently sad or hopeless in 2021 – the highest level reported over the past decade"[1]; and

Whereas, In a recent health advisory, the American Psychological Association (APA) recommends that "3. in early adolescence (i.e., typically 10-14 years), adult monitoring is advised for most youths' social media use…"[2]; and

Whereas, APA also recommends that "4.To reduce the risks of psychological harm, adolescents' exposure to content on social media that depicts illegal or psychologically maladaptive behavior, including content that instructs or encourages youth to engage in health-risk behaviors, such as self-harm (e.g., cutting, suicide), harm to others, or those that encourage eating-disordered behavior (e.g., restrictive eating, purging, excessive exercise) should be minimized, reported, and removed; moreover, technology should not drive users to this content. …" [2]; and

Whereas, APA also recommends that "5. To minimize psychological harm, adolescents' exposure to "cyberhate" including online discrimination, prejudice, hate, or cyberbullying especially directed toward a marginalized group (e.g., racial, ethnic, gender, sexual, religious, ability status), 22 or toward an individual because of their identity or allyship with a marginalized group should be minimized"[2]; and

Whereas, APA also recommends that "6. Adolescents should be routinely screened for signs of "problematic social media use" that can impair their ability to engage in daily roles and routines, and may present risk for more serious psychological harms over time"[2]; and

Whereas, The state of Utah recently passed social media regulations that (1) require age verification prior to opening a social media account, (2) require parental consent before minors in Utah may maintain or open a social media account, (3) require social media accounts for minors in Utah to: (a) not display advertising, (b) not collect, share, or use personal information from that account, (c) not target or suggest ads, accounts, or content, and (d) limit hours of access; and

Whereas, There are age limits for driver's licenses, tobacco use, alcohol use, and renting vehicles in the United States; therefore be it

RESOLVED, That our American Medical Association study and make recommendations for age limits on teenage use of social media, including proposing model state and federal legislation as needed, with a report back at the 2024 Annual Meeting. (Directive to Take Action)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Internet Pornography: Protecting Children and Youth Who Use the Internet and Social Media H-60.934
Our AMA:
(1) Recognizes the positive role of the Internet in providing health information to children and youth.
(2) Recognizes the negative role of the Internet in connecting children and youth to predators and exposing them to pornography.
(3) Supports federal legislation that restricts Internet access to pornographic materials in designated public institutions where children and youth may use the Internet.
(4) Encourages physicians to continue efforts to raise parent/guardian awareness about the importance of educating their children about safe Internet and social media use.
(5) Supports school-based media literacy programs that teach effective thinking, learning, and safety skills related to Internet and social media use.
(6) Actively support legislation that would strengthen child-centric content protection by internet service providers and/or search engines in order to limit the access of pornography to minors on the internet and mobile applications.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 431
(A-23)

Introduced by: Minority Affairs Section, National Medical Association

Subject: Qualified Immunity Reform

Referred to: Reference Committee D

Whereas, Historically marginalized and minoritized groups in the United States including people with psychiatric or substance use disorders, people who are undomiciled, people who identify as LGBTQ+, people with lower socioeconomic status, and people from racial and ethnic minority groups (DeVylder et al 2022), shoulder the unfair, unjust, and disproportionate burden of police violence, experiencing higher levels of mortality, morbidity, inequity, and intergenerational trauma, such that. police violence is a leading cause of death for young men in the United States, and 1 in 1000 Black men die as a result of police violence[1]; and

Whereas, Black Americans are three times more likely than white Americans to be killed by police and account for over 40% of victims of police killings nationwide[5]; and

Whereas, Police violence and incarceration cause significant long-term far reaching negative effects on the mental, physical and economic health of impacted individuals, their loved ones, and their communities[6-19]; and

Whereas, In a national survey of police officers, while about 75% believed it is unacceptable to use more force than necessary, about 25% believed that it is ok to use more force than necessary to control someone who assaulted an officer and; 84% stated that officers in their department used more force than necessary at times when making an arrest; over 62% reported that officers in their department responded to verbal abuse with physical force; over 67% reported that officers in their department faced negative consequences if they reported misconduct[20]; and

Whereas, In that same survey of police officers, 49% reported that someone is more likely to be arrested if the officer believes they displayed a “bad attitude;” 47% reported that officers treat white people better than Black people; over 11% believe that officers are more likely to use physical force against Black or other minority people in similar situations; 14% believe that officers are more likely to use force against poor people than middle class people in similar situations; <12% of white officers believed that officers were more likely to use force against Black or other minority people but over 53% of Black officers believe officers were more likely to use force against Black or other minority people[20]; and

Whereas, Excessive use of force is harmful to law enforcement officers because law enforcement officers themselves experience high rates of traumatic stress, depression, anxiety and moral injury when they participate in or witness violence against the citizens they are sworn to protect[21-23]; and

Whereas, The criminal justice system has not proven to be an effective avenue for justice for people wrongfully injured or their survivors when someone is wrongfully killed by police, such that 12.9% of white people and 16.8% of Black people killed by police are unarmed, yet only 4%

of law enforcement officers who have killed someone are charged with a crime and only 25% of those charged (or 1% overall) are convicted[2, 24]; and

Whereas, Qualified immunity is a federal legal doctrine in the United States that protects law enforcement officers from civil litigation, including in cases in which they use excessive force, intended to protect officers who make mistakes in high-stress, high-paced situation[22, 27]; and

Whereas, In 2009, the Supreme Court ruling Pearson v. Callahan allowed judges to ignore the question of whether excessive force was used and decide only whether the officer's conduct was "clearly established as unlawful" and violated "clearly established" rights, a requirement that is hardly ever met in lower courts due to the need for the plaintiff to identify a previously decided case involving the exact same "specific context" and "particular conduct"[28-29]; and

Whereas, Lawyers are highly disincentivized from taking on a case against law enforcement's use of excessive force, since plaintiffs in cases dismissed on the basis of qualified immunity cannot recover fees or be appropriately compensated[28-29]; and

Whereas, Despite good intentions, qualified immunity protects the majority of law enforcement officers from ever going to trial even in cases of egregious excessive force and makes it increasingly difficult for citizens to win these cases, to the extent that 12.9% of white people and 16.8% of Black people killed by police are unarmed, but only 4% of law enforcement officers who kill people are ever charged of a crime and only 1% are ever convicted[28]; and

Whereas, Cases that have been dropped due to qualified immunity include a mistaken identity in which the victim was shot 17 times; an unarmed victim being smashed into a car for having a cracked windshield; and a 14-year-old boy being shot after dropping a pellet gun and raising his hands in the air, among many others[28]; and

Whereas, While some argue qualified immunity is necessary to protect officers from the burden of litigation, personal financial responsibilities, and potential bankruptcy, a study of more than 80 state and local law enforcement agencies across the country found that in instances of misconduct, the municipality or union, rather than individual officers, almost always paid, and another study of over 1,000 lawsuits against law enforcement officers found qualified immunity is rarely applied early enough in proceedings to protect officers from civil discovery (only 0.6 percent of the cases)[29-31]; and

Whereas, Qualified immunity has thus created a justice system that perpetuates violence as law enforcement officers who commit brutality and harassment—and the governments that employ them—have little incentive to improve their practices and follow the law given the lack of consequences; and

Whereas, Since June 2020 both Colorado and Connecticut have passed legislation to eliminate qualified immunity and federal legislation has been introduced into congress; therefore be it

RESOLVED, That our American Medical Association recognize the way we police our communities is a social determinant of health (New HOD Policy); and be it further

RESOLVED, That our AMA advocate for the reform of qualified immunity and other measures that shield law enforcement officers from consequences of misconduct to further address systemic racism in policing and mitigate use of excessive force. (Directive to Take Action)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Policing Reform H-65.954
Our AMA: (1) recognizes police brutality as a manifestation of structural racism which disproportionately impacts Black, Indigenous, and other people of color; (2) will work with interested national, state, and local medical societies in a public health effort to support the elimination of excessive use of force by law enforcement officers; (3) will advocate against the utilization of racial and discriminatory profiling by law enforcement through appropriate anti-bias training, individual monitoring, and other measures; and (4) will advocate for legislation and regulations which promote trauma-informed, community-based safety practices.

Policing Reform D-65.987
Our AMA: (1) will advocate for efforts to implement evidence-based policing and the creation of evidence-based standards for law enforcement; (2) will advocate for sentinel event reviews in the criminal justice system following an adverse event, such as an in-custody death; (3) encourages further research by subject matter experts on the issues related to the transfer of military equipment to law enforcement agencies, including the impact on communities, particularly those in minoritized and marginalized communities; and (4) supports greater police accountability, procedurally just policing models, and greater community involvement in policing policies and practices.

Police Chases and Chase-Related Injuries H-15.964
The AMA encourages (1) communities, aided by government officials and medical scientists, to develop guidelines on the use of police vehicles that indicate when, how, and how long pursuits should be carried out and to address other key aspects of police pursuit; and (2) responsible government agencies to develop, test, and use instruments and techniques with advanced technologies, for example, coding and tracking devices, to discourage, eliminate, or replace high-speed chases.

School Resource Officer Qualifications and Training H-60.902
Our AMA encourages: (1) an evaluation of existing national standards (and legislation, if necessary) to have qualifications by virtue of training and certification that includes child psychology and development, restorative justice, conflict resolution, crime awareness, implicit/explicit biases, diversity inclusion, cultural humility, and individual and institutional safety and others deemed necessary for school resource officers; and (2) the development of policies that foster the best environment for learning through protecting the health and safety of those in school, including students, teachers, staff and visitors.

Health, In All Its Dimensions, Is a Basic Right H-65.960
Our AMA acknowledges: (1) that enjoyment of the highest attainable standard of health, in all its dimensions, including health care is a basic human right; and (2) that the provision of health care services as well as optimizing the social determinants of health is an ethical obligation of a civil society.

Support of Human Rights and Freedom H-65.965
Our AMA: (1) continues to support the dignity of the individual, human rights and the sanctity of human life, (2) reaffirms its long-standing policy that there is no basis for the denial to any human being of equal rights, privileges, and responsibilities commensurate with his or her individual capabilities and ethical character because of an individual's sex, sexual orientation, gender, gender identity, or transgender status, race, religion, disability, ethnic origin, national origin, or age; (3) opposes any discrimination based on an individual's sex, sexual orientation, gender identity, race, religion, disability, ethnic origin, national origin or age and any other such reprehensible policies; (4) recognizes that hate crimes pose a significant threat to the public health and social welfare of the citizens of the United States, urges expedient passage of appropriate hate crimes prevention legislation in accordance with our AMA's policy through letters to members of Congress; and registers support for hate crimes prevention legislation, via letter, to the President of the United States.

Human Rights and Health Professionals H-65.981
The AMA opposes torture in any country for any reason; urges appropriate support for victims of torture; condemns the persecution of physicians and other health care personnel who treat torture victims.

Human Rights H-65.997
Our AMA endorses the World Medical Association's Declaration of Tokyo which are guidelines for medical doctors concerning torture and other cruel, inhuman or degrading treatment or punishment in relation to detention and imprisonment.

Use of Conducted Electrical Devices by Law Enforcement Agencies H-145.977
Our AMA: (1) recommends that law enforcement departments and agencies should have in place specific guidelines, rigorous training, and an accountability system for the use of conducted electrical devices (CEDs) that is modeled after available national guidelines; (2) encourages additional independent research involving actual field deployment of CEDs to better understand the risks and benefits under conditions of actual use. Federal, state, and local agencies should accurately report and analyze the parameters of CED use in field applications; and (3) policy is that law enforcement departments and agencies have a standardized protocol developed with the input of the medical community for the evaluation, management and post-exposure monitoring of subjects exposed to CEDs.

Increased Use of Body-Worn Cameras by Law Enforcement Officers D-160.919
Our AMA: (1) will work with interested state and national medical specialty societies to support state legislation and/or regulation addressing implementation of body-worn camera programs for law enforcement officers, including funding for the purchase of body-worn cameras, training for officers and technical assistance for law enforcement agencies; (2) will continue to monitor privacy issues raised by body-worn cameras in health care settings; and (3) recommends that law enforcement policies governing the use of body-worn cameras in health care settings be developed and evaluated with input from physicians and others in the medical community and not interfere with the patient-physician relationship.

Mental Health Crisis Interventions H-345.972
Our AMA: (1) continues to support jail diversion and community based treatment options for mental illness; (2) supports implementation of law enforcement-based crisis intervention training programs for assisting those individuals with a mental illness, such as the Crisis Intervention Team model programs; (3) supports federal funding to encourage increased community and law enforcement participation in crisis intervention training programs; and (4) supports legislation and federal funding for evidence-based training programs by qualified mental health professionals aimed at educating corrections officers in effectively interacting with people with mental health and other behavioral issues in all detention and correction facilities.

Racial and Ethnic Disparities in Health Care H-350.974
1. Our AMA recognizes racial and ethnic health disparities as a major public health problem in the United States and as a barrier to effective medical diagnosis and treatment. The AMA maintains a position of zero tolerance toward racially or culturally based disparities in care; encourages individuals to report physicians to local medical societies where racial or ethnic discrimination is suspected; and will continue to support physician cultural awareness initiatives and related consumer education activities. The elimination of racial and ethnic disparities in health care an issue of highest priority for the American Medical Association.
2. The AMA emphasizes three approaches that it believes should be given high priority:
A. Greater access - the need for ensuring that black Americans without adequate health care insurance are given the means for access to necessary health care. In particular, it is urgent that Congress address the need for Medicaid reform. B. Greater awareness - racial disparities may be occurring despite the lack of any intent or purposeful efforts to treat patients differently on the basis of race. The AMA encourages physicians to examine their own practices to ensure that inappropriate considerations do not affect their clinical judgment. In addition, the profession should help increase the awareness of its members of racial disparities in medical treatment decisions by engaging in open and broad discussions about the issue. Such discussions should take place in medical school curriculum, in medical journals, at professional conferences, and as part of professional peer review activities. C. Practice parameters - the racial disparities in access to treatment indicate that inappropriate
considerations may enter the decision making process. The efforts of the specialty societies, with the coordination and assistance of our AMA, to develop practice parameters, should include criteria that would preclude or diminish racial disparities

3. Our AMA encourages the development of evidence-based performance measures that adequately identify socioeconomic and racial/ethnic disparities in quality. Furthermore, our AMA supports the use of evidence-based guidelines to promote the consistency and equity of care for all persons.
4. Our AMA: (a) actively supports the development and implementation of training regarding implicit bias, diversity and inclusion in all medical schools and residency programs; (b) will identify and publicize effective strategies for educating residents in all specialties about disparities in their fields related to race, ethnicity, and all populations at increased risk, with particular regard to access to care and health outcomes, as well as effective strategies for educating residents about managing the implicit biases of patients and their caregivers; and (c) supports research to identify the most effective strategies for educating physicians on how to eliminate disparities in health outcomes in all at-risk populations.

Preventing Assault and Rape of Inmates by Custodial Staff H-430.981
Our AMA urges: (1) that all states have legislation that protects prisoners from sexual misconduct and assault; and (2) physicians who work within prisons to ensure procedures are followed for preventing sexual misconduct and assault of prisoners by staff and appropriately managing prisoners if abuse or assault does occur; the investigation of sexual misconduct should be confidential with information disclosed only to those individuals involved in the process.

Use of the Choke and Sleeper Hold in Prisons H-430.998
The AMA (1) does not regard the choke and sleeper holds as casually applied and easily reversible tranquilizers, but as the use of deadly force with the potential to kill; and (2) advocates that with all incidents involving the application of choke and sleeper holds there should be timely medical surveillance of the inmate.

Research the Effects of Physical or Verbal Violence Between Law Enforcement Officers and Public Citizens on Public Health Outcomes H-515.955
Our AMA:
1. Encourages the National Academies of Sciences, Engineering, and Medicine and other interested parties to study the public health effects of physical or verbal violence between law enforcement officers and public citizens, particularly within ethnic and racial minority communities.
2. Affirms that physical and verbal violence between law enforcement officers and public citizens, particularly within racial and ethnic minority populations, is a social determinant of health.
3. Encourages the Centers for Disease Control and Prevention as well as state and local public health agencies to research the nature and public health implications of violence involving law enforcement.
4. Encourages states to require the reporting of legal intervention deaths and law enforcement officer homicides to public health agencies.
5. Encourages appropriate stakeholders, including, but not limited to the law enforcement and public health communities, to define “serious injuries” for the purpose of systematically collecting data on law enforcement-related non-fatal injuries among civilians and officers.

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 01-A-23

Subject: Oppose Scheduling of Gabapentin

Presented by: Noel Deep, MD, Chair

Referred to: Reference Committee E

American Medical Association (AMA) Policy D-120.927, "Oppose Scheduling of Gabapentin," calls for the study of off-label use and potential risks and benefits of gabapentin to the general population as well as to those individuals with substance use disorders. This report investigates the evidence base for off-label prescribing of gabapentin, the regulatory landscape of gabapentin for maximizing patient access and minimizing stigma, and adverse events during the ongoing overdose crisis.

BACKGROUND

In February 2022, the U.S. Food and Drug Administration (FDA) received a petition from a consumer advocacy group requesting that gabapentin and gabapentin enacarbil be designated as schedule V under the Controlled Substances Act of 1970. In June 2022, Resolution 514-A-22 (now policy D-120.927) was adopted by the House of Delegates which called upon the AMA to oppose this petition and any other efforts to schedule gabapentin and its salts pending review of the risk and benefits of gabapentin use in the general public and those with substance use disorders.

METHODS

English language articles were selected from searches of PubMed, Cochrane Library and Google Scholar using the search terms "gabapentin OR neurontin", "gabapentin AND off-label", "gabapentin AND controlled substance", "gabapentin AND substance use disorder" and "gabapentin AND opioids". Additional articles were identified by manual review of the reference lists of pertinent publications. Web sites managed by government agencies and applicable organizations were also reviewed for relevant information.

DISCUSSION

History of Gabapentin

Gabapentin, a gabapentinoid originally marketed under the trade name Neurontin by Parke-Davis, is an analog of the neurotransmitter gamma-aminobutryic acid. While the exact mechanism of action for gabapentin is not known, it is generally accepted that it binds to the α2δ subunit of calcium-activated ion channels.[1] It is hypothesized that this then further modulates neurotransmitter release, which may affect the dopaminergic pathways associated with reward-seeking behavior and substance use disorders.

Neurontin (gabapentin) was initially approved by the FDA in 1993 for adjunctive therapy of partial onset seizures in patients aged 12 or older.[2] In 2000, that indication was expanded by the FDA for

pediatric patients over the age of three. In 2002, a second indication for post-herpetic neuralgia was approved by the FDA. It is currently available as a generic medication. Despite the relatively narrow scope of approved indications, Neurontin (gabapentin) was marketed by its manufacturer, Parke-Davis, for a variety of off-label indications such as neuropathic pain, epilepsy monotherapy, bipolar disorder, migraine, and attention-deficit disorder, due to data which showed improved outcomes in these disease states.[3] It was estimated that prior to generic competition becoming available in 2004, Neurontin (gabapentin) products were grossing over $3 billion a year in sales.

To maximize market penetration, Parke-Davis was accused of pursuing illegal strategies like the ethically dubious *quid pro quo* solicitation of ghost-written, pro-Neurontin editorials.[4] As a result, Parke-Davis's parent organization Warner-Lambert (and ultimately Pfizer, after it acquired the company in 2000) pleaded guilty to two counts of violating the Food, Drug & Cosmetics Act and was required to pay $430 million in both civil and criminal damages.[5] A separate lawsuit for these marketing practices from Blue Cross Blue Shield of Louisiana, was settled for $325 million, and a third lawsuit regarding anti-trust activity to prevent generic gabapentin off the market, was settled in 2014 for $190 million.[6] Pfizer did not admit wrongdoing in the latter two settlements.

It is critical to understand the history of Neurontin advertising when assessing the perception of off-label prescribing of gabapentin. A portion of off-label gabapentin prescriptions could be due to misleading marketing information. However, it should be noted that these were unethical and illegal *business* practices, and should be viewed separately from issues of safety, efficacy, or overall utility in patient care.

Gabapentin and its salts are FDA-approved to treat postherpetic neuralgia and adjunctive treatment of epilepsy with partial onset seizures, yet one study found that up to 95 percent of gabapentin prescriptions were for off-label uses such as fibromyalgia, bipolar affective disorder, and alcohol use disorder.[7] Another study found that amongst 160 commonly prescribed drugs, gabapentin had the highest off-label prescription rate, and that 80 percent of the time, its off-label usage had little-to-no scientific support.[8] As of a 2020 survey, seven states have made gabapentin a schedule V controlled substance, and 13 states have added it to their prescription drug monitoring programs (PDMP). At least three other states have considered scheduling or otherwise monitoring prescriptions of gabapentin.

Evidence for Off-Label Uses of Gabapentin

A title search for the term "gabapentin" of Cochrane Library reveals seven systematic reviews or meta-analyses of gabapentin uses, and over 1,700 individual trials. Gabapentin is currently only FDA approved for postherpetic neuralgia and adjunctive therapy in epilepsy, but trials have been conducted to evaluate gabapentin for a plethora of other indications. To give a sense of the sheer breadth of applications for which gabapentin has been investigated, a sample of the 1700 trials include, but are not limited to: diabetic neuropathy, restless leg syndrome (RLS), sleep, smoking cessation, alcohol use disorder, cocaine use disorder, cannabis use disorder, fibromyalgia, tinnitus, social phobia, carpal tunnel syndrome, post-surgery pain, uremic pruritis, radicular pain, migraine, bipolar disorder, delirium, surgery pretreatment, topical anti-itching, post-operative nausea, phantom limb pain, acute mania, hot flashes and postural tachycardia syndrome.

Due to the volume of studied off-label uses of gabapentin and the varying range of study quality, it is impossible to synthesize the evidence base for each indication. Table One, presented below, attempts to capture some of the most common off-label uses of gabapentin and the current understanding of the evidence for its use.

The current evidence shows that gabapentin may have some useful off-label applications primarily in the fields of pain management and mental health, such as diabetic neuropathy[9], post-operative pain[10], and conditional anxiety.[11] For some applications, such as fibromyalgia[12] or migraine prophylaxis[13], the current evidence base is less compelling. This report should not be construed as clinical instructions or an endorsement of the off-label usage of gabapentin. Prescribers should utilize evidence-based decision-making when prescribing any medication for off-label uses.

Gabapentin and the Ongoing Overdose Epidemic

Proponents of scheduling gabapentin raise concerns over potential misuse, morbidity, and mortality associated with gabapentin.[14] Overdoses solely attributed to gabapentin are described in the literature as "rare".[15] However, approximately 9.7 percent of overdose deaths examined in the United States between 2019-2020 detected gabapentin.[16] Of those overdose deaths, almost 90 percent had at least one opioid (prescription or illicit) present in conjunction with gabapentin. Similar results were observed in a study of fatalities associated with gabapentin in England – of 913 deaths in which gabapentin was detected, opioids were co-detected in 91 percent.[17] In 25 percent of cases in which gabapentin and an opioid (including methadone and buprenorphine) were present, the two medications were co-prescribed. Finally, they found that only one of 913 deaths could be attributed solely to gabapentin toxicity. Gabapentin is recognized as a 'cutting' agent for heroin.[18] As such, gabapentin's role appears to potentiate additional respiratory depression when used concomitantly with other drugs known to cause respiratory depression, such as opioids. In a 2019 warning from the FDA, they indicated that "[t]here is less evidence supporting the risk of serious breathing difficulties in healthy individuals taking gabapentinoids alone."[19]

Gabapentin monotherapy misuse is less documented. Individuals may use high doses of gabapentin to induce euphoria but many, if not all, of these cases are observed in individuals with a history of substance use disorders.[20] In Germany (a country with a significantly lower overdose mortality rate than the United States), a survey of addiction medicine specialists placed gabapentin in a similar risk category as medications without misuse risk, such as non-steroidal anti-inflammatory drugs.[21]

It is difficult to assess the extent of gabapentin misuse. Online marketing surveys from the United Kingdom estimate that gabapentin misuse across the general population is as high as 1 percent.[22] However, this number does not appear to be corroborated by clinical data, which found that there were only 576 reported cases of gabapentin misuse to the FDA's Adverse Events Reporting System across a 5-year period during which there were approximately 200 million prescriptions of gabapentin filled in the United States.[23]

Rather, gabapentin misuse is often reported in the context of potentiating other substances, such as individuals under routine drug screens who potentiate buprenorphrine and/or naloxone with gabapentin to induce euphoria while testing negative for opioids. Approximately 9 percent of individuals seeking treatment for opioid use disorders self-reported misuse of gabapentin upon entry into opioid use treatment clinics in the United States from 2019-2020.[24] Systematic reviews have found that the largest risk factor for gabapentin misuse is an opioid use disorder.[25]

The growing rates of use of gabapentin and subsequent perception of its misuse are tied to the ongoing drug-related overdose epidemic. Based on the Centers for Disease Control and Prevention Clinical Practice Guidelines for Prescribing Opioids for Pain, utilization of multimodal pain management approaches is critical to supporting effective care[26]. As such, gabapentin has seen increases in prescribing as a key component of this multimodal approach, particularly in patients who have comorbidities that limit the use of other pain management medications.[27] In parallel to

concerns with increased opioid use, despite clear evidence for improved outcomes, stigmatizing language of diversion and criminal activity is emerging surrounding gabapentinoid products. The AMA has significant policy, advocacy, and ongoing work supporting evidence-based decision making regarding the proper care of patients with pain and/or opioid use disorders. Research has shown repeatedly that the best outcomes are those which are patient-centric, recognizing that opioid use disorder is a medical diagnosis requiring treatment, not a criminal issue requiring incarceration.[28,29]

REGULATING GABAPENTIN

Only a small number of states have chosen to pursue statutory or regulatory strategies specific to gabapentin. This includes classifying the medication as a schedule V controlled substance and requiring use of the PDMP; or requiring use of the PDMP without scheduling gabapentin. The Drug Enforcement Administration (DEA), with authority from the Controlled Substances Act, maintains a list of substances which are placed under increased regulatory scrutiny, including registration, production quotas, restrictions on research, and criminal or civil penalties for possession.[30] Substances are placed in different categories, or schedules, based on three factors: potential for misuse, whether there are accepted medical uses, and the potential for addiction. Schedule V is the lowest risk category, and are generally used for antidiarrheal, antitussive, and analgesic medications. Examples of schedule V drugs include Lomotil, Motofen, Parepectolin, and Lyrica (a gabapentinoid).

When the original resolution regarding gabapentin scheduling was presented at the House of Delegates at the 2022 Annual Meeting, testimony provided anecdotal evidence towards concerning patterns of misuse in non-prescribed gabapentin usage, particularly in incarcerated populations. Since potential for misuse is a key criterion for DEA scheduling, it is important to appreciate the magnitude of misuse. However, published literature on misuse of gabapentin is limited, and primarily in populations co-using with opioids. For example, in one study of individuals seeking inpatient opioid detoxification, 71 percent of respondents indicated that they were using gabapentin without a prescription for the purpose of reducing opioid withdrawal symptoms, and 58 percent reported they used gabapentin without a prescription to reduce their cravings for opioids.[31] At the population-level, one study of law enforcement found 407 cases of diverted gabapentin between the years of 2002 to 2015, with a peak rate of 0.027 cases per 100,000 population.[32] Another study found that 3 percent of commercially insured patients requested 3 or more prescription claims above the established dosage thresholds if they were seeking gabapentin on its own.[33] This number rose to 24 percent if they were seeking gabapentin co-prescribed with opioids. Due to the interconnectivity of gabapentin misuse with opioid use disorders – including instances which are intended to reduce opioid use – it is difficult to assess the true misuse risk of gabapentin.

Currently, gabapentin is not scheduled as a controlled substance by the DEA, but seven states (Alabama, Kentucky, Michigan, North Dakota, Tennessee, Virginia and West Virginia) have classified gabapentin as a schedule V controlled substance.[3] While schedule V is the lowest risk categorization of the Controlled Substances Act of 1970 (although states may have different definitions under their own controlled substance regulations), it still requires physicians and other health care professionals who prescribe or dispense controlled substances to register with the DEA. Schedule V controlled substances are subject to restrictions on storage, security, and the amount, timing and frequency of refills.[34] A sub-population of patients particularly sensitive to changes in regulations are those within the carceral system, where prescribing of gabapentin is already heavily scrutinized, and the stigma and criminalization of pain treatment is highest.[35]

There are 13 states, including Connecticut, Indiana, Louisiana, Ohio, Oregon, and Utah, that have required reporting of gabapentin prescriptions into their PDMPs. These requirements are meant, in part, to allow physicians, pharmacists and other health care professionals to view recent prescriptions and prescription patterns of gabapentin and other controlled substances, such as opioids and benzodiazepines, to support evidence-based prescribing decisions. The AMA and many others have long supported using PDMPs as part of the clinical decision-making process, but emphasized that information in a PDMP is only one of many factors a physician should consider when determining whether to prescribe controlled substances[36].

With respect to the question whether to add gabapentin as a Schedule V Controlled Substance, the role of the PDMP needs additional consideration. When PDMP requirements first came into vogue, the general argument for mandating their use was the potential to reduce opioid-related misuse and opioid-related mortality. There is some evidence showing use of PDMPs increased the ability of physicians and pharmacists to identify multiple prescriber events, that is, when an individual received three or more opioid prescriptions from three or more different prescribers or dispensers within a short time frame, typically 30 days.[37] Many states have reported reductions in these multiple prescription events, but as detailed in AMA Board of Trustees Report 3-I-16, merely identifying a multiple prescriber event is not sufficient to know whether a patient is engaging in aberrant behavior, someone who has uncoordinated care, or is pursuing illegal prescriptions. Thus, while reductions in multiple prescriber events are likely positive, it is not clear whether the reductions have led to improved patient outcomes. In addition, there has been no reduction in opioid-related mortality as PDMP use has increased. In 2022, physicians and other health care professionals used PDMPs more than 1.1 billion times while the overdose epidemic grew to more than 107,000 fatalities.[38] Furthermore, there is no compelling evidence suggesting that PDMPs helped improve outcomes for patients with pain. There also continues to be confusion about how to optimize PDMPs in clinical practice.[39]

It is important to note that PDMPs have limitations. While different PDMP platforms claim to allow for interstate access of patient information, such retrieval is not always reliable if the user has not set the PDMP up to view all states—or even all neighboring states. There also continue to be challenges in reporting intervals from when a prescription is dispensed to when data is uploaded to the PDMP. Physicians and other health care professionals also continue to report frustration with PDMP-induced disruptions or poor interoperability with electronic health records.[40,41] Given the absence of data suggesting that a PDMP reduces drug-related misuse or other harms, along with a clear-eyed view of PDMP limitations, it is unlikely that having gabapentin in the PDMP—by virtue of it being a Schedule V Controlled Substance—will improve outcomes, increase meaningfully available information, or improve patient outcomes.

In comparing states which designated gabapentin as a schedule V controlled substance and states which required gabapentin reporting to the PDMP alone, states that designated gabapentin a controlled substance (which includes automatic registration in the state PDMP), saw a significant decrease in the number of gabapentin prescriptions.[42] By contrast, states which implemented a PDMP reporting-only approach saw little change in the number of gabapentin prescriptions.[43] This is not surprising as the requirements for prescribing a Schedule V controlled substance are greater than for a non-controlled substance.

Proponents of scheduling gabapentin as a controlled substance use this evidence, that designating gabapentin as a schedule V controlled substance reduces prescriptions, as a surrogate for decreasing patient harm.[44] The literature regarding scheduling gabapentin as a controlled substance lacks information regarding indication for use or patient oriented outcomes, such as pain control, increased functioning, prevalence of adverse events or evidence of decreases in misuse. Stigma and

prescribing barriers have the potential to impede access to care, particularly pain management. When strategies simply aim to decrease the overall number of prescriptions, marginalized and/or underserved patients will often be turned away first. Black patients are at highest risk for receiving inadequate pain treatment and are up to 36 percent less likely to receive *any* analgesic pharmacotherapy compared to white patients.[45,46] In the event that they do present with a substance use disorder, Black patients covered by Medicaid have a 50 percent lower rate of prescribing buprenorphine compared to white patients when controlled against other clinical and demographic factors.[47] There are many reasons for this inequity, but at its core, the implicit bias and associations made between Black patients, pain medication, and criminal behavior is difficult to ignore.[48] It is likely that further stigmatization of gabapentin prescribing and emphasis on misuse and diversion could result in similar inequities.

In addition, the nation's overdose epidemic and its intense focus on reducing opioid prescriptions provide a useful point of comparison. In 2012-2013, physicians began to reduce opioid prescriptions in response to growing concerns about misuse. Between 2012-2021, opioid prescriptions have declined in every state—46.4 percent nationwide.[49] As noted above, this reduction has not led to reduced drug-related overdose or death. The inverse actually has occurred. This is not to say that reduction in opioid prescribing were not warranted in certain circumstances, but as noted by the AMA in comments to the CDC and others, the focus should always have been on ensuring patients with pain received the right care at the right time, which may include opioid therapy[50]. The AMA supports continued efforts to enhance medical education and training, including those focused on medications that may be misused or used without a prescription. The AMA further supports efforts, including research and medical society collaboration to support effective pain care. These efforts could be interpreted to include gabapentin, but are certainly not limited to one medication and its potential uses, as noted above. These efforts already occur without having to increase the barriers to gabapentin by making it a Schedule V controlled substance. An end goal of simply reducing prescriptions is shortsighted and inappropriate.

Beyond regulatory solutions, best practices for prescribing gabapentin continue to evolve. The FDA is the appropriate agency to continue to evaluate drug safety. The AMA and organized medicine are the appropriate entities to support and encourage enhanced education about prescribing practices, including gabapentin.[51]

CONCLUSION

With the longevity of gabapentin on the market, combined with the incredibly wide range of trials, and the low incidence of adverse events, there is not a compelling reason to designate gabapentin as a controlled substance. The available evidence does not demonstrate that the benefits of scheduling gabapentin outweigh the risk of patient harm. Instead, strategies to increase prescriber awareness of gabapentin's potentiator effect and more thoughtful prescribing, particularly in groups at high-risk for overdose, will target increases in medication safety. The recognition of stigma and bias is critical for continued evidence-based decision-making and increased access to those in need.

RECOMMENDATIONS

The Council on Science and Public Health recommends that the following be adopted and the remainder of the report be filed.

1. That Policy D-120.927, "Oppose Scheduling of Gabapentin" be amended by addition and deletion to read as follows with recognition that several aspects of this directive have been accomplished:

Our AMA will:

1. actively oppose the placement of (a) gabapentin ~~(2-[1-(aminomethyl) cyclohexyl] acetic acid)~~, including its salts, and all products containing gabapentin ~~(including the brand name products Gralise and Neurontin)~~ and (b) gabapentin enacarbil ~~(1-{[({(1RS)-1-[(2-methylpropanoyl)oxy]ethoxy}carbonyl)amino]methyl}cyclohexyl) acetic acid)~~, including its salts, ~~(including the brand name product Horizant)~~ into schedule V or other restricted class of the Controlled Substances Act;

~~2. submit a timely letter to the Commissioner of Food and Drug for the proceedings assigned docket number FDA-2022-P-0149 in opposition to placement of gabapentin and gabapentin enacarbil into the schedule V of the Controlled Substance Act; and~~

~~3. study the off-label use and potential risks and benefits of gabapentin to the general population as well as to those individuals with substance use disorders.~~

2. affirm that given currently available data, the FDA and DEA have used the appropriate process for evaluating the safety, efficacy, and risk of misuse and dependency for gabapentin and its salts;

3. support the promotion of gabapentin-related research and education, particularly the risk of gabapentinoids when taken concomitantly with opioids, including in current clinical practice and undergraduate, graduate and post-graduate education. (Modify Current AMA Policy)

2. That our AMA reaffirm Policies H-120.988, "Patient Access to Treatments Prescribed by Their Physicians", H-120.922, "Improved Access and Coverage to Non-Opioid Modalities to Address Pain", and H-95.922, "Substance Use and Substance Use Disorders." (Reaffirm Current AMA Policy)

Fiscal Note: less than $1,000

TABLE 1: SELECT STUDIES EVALUATING OFF-LABEL GABAPENTIN USES

Indication	# of Participants	Total Daily Dose Range (mg)	Clinical Measures Evaluated[a]	Favors Gabapentin Usage Over Risk of Use?	Reference
Diabetic neuropathy	5914	>1200	Substantial (>50%) or moderate (>30%) reduction in pain	Yes	9
Postoperative pain	370	250-500	Summed pain intensity difference	Yes	10
Conditional anxiety	934	300-1200	State-Trait Anxiety Inventory	Yes	11
Bipolar disorder	282	600-4800	Young Mania Rating Scale	No	11
Panic disorder	103	600-3600	Panic and Agoraphobia Scale	No	11
Depression	28	300-1800	Clinical Global Impressions-Severity Scale	Yes	11
Fibromyalgia	150	2400	50% reduction in pain	No	12
Migraine prophylaxis	1009	900-2400	Headache frequency	No	13
Sleep	4684	600-3600	Pittsburgh sleep quality index score	Yes	52
Cocaine use disorder	235	1600-2400	Report or evidence of use	No	53
Alcohol use disorder	269	600-1500	Report of heavy alcohol use	Yes	54
Hot flashes	600	1800	Frequency and severity of hot flashes	Yes	55
Restless leg syndrome	87	200	RLS rating scale and sleep quality	Yes	56
Chronic pelvic pain (women)	60	300-2700	Difference in pain score (vs. placebo)	Yes	57
Carpal tunnel syndrome	140	900	Global symptom score	No	58

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 02-A-23

Subject:	Improving Research Standards, Approval Processes, and Post-Market Surveillance Standards for Medical Devices
Presented by:	Noel Deep, MD, Chair
Referred to:	Reference Committee E

Resolution 523-A-22, "Improving Research Standards, Approval Processes, and Post-Market Surveillance Standards for Medical Devices" was referred by the House of Delegates (HOD). This report serves as the Council on Science and Public Health's (CSAPH) findings and recommendations regarding medical device regulation.

METHODS

English language articles were selected from searches of PubMed and Google Scholar using the search terms "medical device AND 510(k)" and "medical device AND post-market surveillance". Additional articles were identified by manual review of the reference lists of pertinent publications. Web sites managed by government agencies and applicable organizations were also reviewed for relevant information.

BACKGROUND

In the context of regulatory oversight by the Food and Drug Administration (FDA), a medical device has a broad definition. According to the Food, Drug and Cosmetic Act:

> a device is: an instrument, apparatus, implement, machine, contrivance, implant, in vitro reagent, or other similar or related article, including a component part, or accessory which is:
> […]
> (B) intended for use in the diagnosis of disease or other conditions, or in the cure, mitigation, treatment, or prevention of disease, in man or other animals, or
> (C) intended to affect the structure or any function of the body of man or other animals, and which does not achieve its primary intended purposes through chemical action within or on the body of man or other animals and which does not achieve its primary intended purposes through chemical action within or on the body of man or other animals and which is not dependent upon being metabolized for the achievement of its primary intended purposes.

As such, the breadth of items captured within this regulatory framework is expansive, ranging from tongue depressors and eyeglasses to x-ray machines and hip replacements. In addition to physical objects used as medical devices, software and algorithms are also captured within this definition. As such, the FDA classifies software into two broad categories: software *in* a medical device and software *as* a medical device (SaMD). CSAPH recognizes that software, particularly SaMD, is rapidly becoming a large part of medical care and may warrant further examination beyond the

findings and recommendations of this report, which are intended to be generalizable to all medical devices.

DISCUSSION

The 510(k) Regulatory Pathway

When applying for a new medical device, the device is first evaluated for risk category: I (lowest risk), II (medium risk) or III (highest risk). Risk category is determined by a variety of factors, such as by comparing the device to a similar, known, device. If a device is found to be like a device already approved by the FDA, it may be classified as low (class I) or medium (class II) risk. Examples of devices commonly found to be class I include electric toothbrushes, tongue depressors, bandages, hospital beds, and non-electric wheelchairs. Examples of devices commonly found to be class II include catheters, pregnancy test kits, syringes, contact lenses, and surgical gloves. Examples of devices commonly found to be class III include breast implants, pacemakers, defibrillators, and cochlear implants. Approximately 1% of all new medical device applications from 2003 to 2017 were evaluated as high risk (class III).[i,ii]

If a medical device is found to be class I they are typically exempt from normal testing. If deemed a class II risk, manufacturers may submit a 510(k) application as pre-market notification (PMN) to the FDA. Class II risk devices are subjected to an equivalence evaluation comparing this product to one currently on the market through these 510(k) processes. 510(k) applications are processed within 90 days and once approved, the device is eligible for market. By contrast, class III devices must undergo pre-market approval (PMA) which requires two large clinical trials. According to a 2010 industry survey, pursuing pre-market approval in the United States takes on average 54 months to complete compared to 11 months in European countries.[iii]

Medical device market approval differs from drug approval in a few critical ways, which may help illustrate why the 510(k) pathway is so desirable for medical device manufacturers. Table 1 in the appendix of this report highlights some of these differences. Clinical trial design for medical devices can be extremely difficult, and in some cases unethical. For example, a placebo control for a medical device could require a high-risk sham surgery. As such, subjecting all new medical devices to undergo clinical trials may substantially hinder innovation, particularly from physicians seeking small tweaks or customizations to products they use routinely.

But on the other hand, if a medical device does cause harm to a patient, one cannot simply discontinue having an implanted device without significant intervention unlike if they were experiencing adverse events to a new medication that could be quickly stopped. As such, the 510(k) pathway has been subject to intense public scrutiny, both in the media and by elected officials.[iv] Many recalls of medical devices are voluntarily initiated by the manufacturer due to liability concerns or public perception decreasing sales rather than by official FDA action.

The FDA has recently begun piloting a new program within the 510(k) framework, called the Safety and Performance Based Pathway. This pathway provides an alternative to the current equivalence evaluation for a small subset of devices that are highly studied and well-known. In the Safety and Performance Based Pathway, the FDA sets forth explicit benchmarks that medical devices must satisfy to demonstrate safety and efficacy to gain 510(k) approval.[v] For example, if a resorbable surgical sutures manufacturer wished to market a new design, the FDA has guidance for the appropriate diameter, needle attachment, tensile strength, sterilization, shelf life and resorption profile for new suture designs to meet to receive 510(k) classification.[vi] This pathway provides

added safety and efficacy requirements to this moderate risk class. However, participation in the Safety and Performance Based Pathway is currently optional.

Device Equivalence

To be eligible for the 510(k) approval, a manufacturer must first establish that their device is "substantially equivalent" to a previously known, FDA-approved predicate device.[vii] For the purposes of regulatory approval, the FDA considers both safety and functionality when determining equivalence. First, they investigate whether the device is to be used for the same primary purpose, and they then evaluate whether the device is expected to have a similar safety profile. For example, if a device were to change its power source (such as hardwired vs. rechargeable) with no other modifications, it would likely be deemed substantially equivalent. Similarly, if the material of the device were to change to another material known to be safe to the FDA, it is likely to be found substantially equivalent. A flowchart of the FDA decision making process has been included in the Appendix of this report.

However, there is a flaw with the approach of substantial equivalence. If a device is found to be unsafe after receiving market approval and then subjected to a recall, any *subsequent* devices which used the original, now-unsafe device as their predicate, are not subjected to any increased scrutiny or recalls. Recent analysis found that between the period of 2017 and 2021, the FDA initiated recalls of 156 devices using their highest risk categorization – devices with a reasonable probability to cause severe morbidity and mortality. Of those 156 devices recalled, 44.1 percent of them had received 510(k) approval using substantial equivalence to a device that had also been the subject of a recall.[viii] Further, 48.1 percent of devices recalled within the studied period have themselves been used as the predicate for another device's 510(k) approval. This post marketing safety information and related devices draw significant attention to potential problems with the current 510(k) approval process with a lack of criterion for granting approval for devices outside the most well-studied and well-understood.

Post-Market Surveillance

It should be noted that the study described above only studied a cohort of devices which were the subject of FDA-initiated recalls. There are likely a non-trivial number of devices that are still being used as comparators for substantial equivalence that have been found to be unsafe and then production halted or voluntarily recalled by the manufacturer. However, there is limited publicly available information to monitor this risk. This scenario highlights the importance of rigorous post-market surveillance for devices that have been approved using the 510(k) pathway.

Among the post-market surveillance activities required by the FDA is the reporting of adverse events. Under Medical Device Reporting regulations (Title 21 Code of Federal Regulations part 803), manufacturers, importers, and device user facilities (such as a hospital, nursing home or outpatient treatment facilities) are mandatory reporters to the FDA regarding serious device malfunction, including death. Reports are made to the device manufacturer (if known) and the FDA. Health care professionals, patients, and caregivers are able to report suspected adverse events for medical devices using the FDA's MedWatch portal.

Adverse events are viewable to health care professionals and the public using the FDA's Manufacturer and User Facility Device Experience (MAUDE) portal.[ix] However, a 2019 exposé found that over 5 million incidents of reported adverse events were being kept from public view using an internal "alternative summary reporting" repository rather than the publicly available MAUDE database.[x] Not only did this practice prevent physicians and patients from knowing the

real risks of currently approved medical devices, it also prevented manufacturers of new devices from knowing the risk profile of substantially similar predicate devices they were using for 510(k) approval. The FDA has stated that it has since abandoned this practice of internal incident report storage.[xi]

Health Equity Considerations

It should also be noted that implicit in the 510(k) substantial equivalence method of approval is that it tends to maintain the status quo. For example, most, if not all, pulse oximeters currently used in the United States are approved via the 510(k) pathway.[xii] Pulse oximeters estimate blood oxygen saturation by shining light through the skin, typically on a fingertip or an ear lobe. Oxygenated blood absorbs red light more efficiently than de-oxygenated blood, thus allowing for estimates of oxygenation by simply measuring the amount of red light that passes through a tissue. However, oxygenated blood is not the only thing that absorbs red light – melanin, melanosomes, and melanocytes (ie, skin pigmentation), also absorb or scatter red light. A retrospective study found that practitioners missed hypoxemia diagnoses in 11.7 percent of Black patients compared to 3.6 percent of white patients due to pulse oximetry overestimating blood oxygenation.[xiii]

In the context of the COVID-19 pandemic, that suggests that excluding other factors, Black patients would be nearly 4-times less likely to receive oxygenation therapy such as a ventilator, which could prevent progression to acute respiratory distress syndrome.[xiv] As a result of these findings, the FDA released a safety communication indicating oximeters may be less accurate in darker skin tones.[xv] The failure of pulse oximeters to accurately measure oxygen saturation in all skin tones is a clear example of how inequity enters the health care system from many sources and can cascade. For example, even if a provider wished to start a patient on oxygenation therapy, Medicare reimbursement for supplemental oxygen therapy is only approved if a patient has a blood oxygenation reading less than or equal to 89 percent, which is less likely in Black patients if a pulse oximeter is used.[xvi] In November 2022, the FDA hosted an advisory committee meeting to discuss concerns of pulse oximeters and skin pigmentation. Dr. Jesse Ehrenfeld, president-elect of the AMA, was a participant of this meeting and delivered comments and recommendations on behalf of the AMA.

It is important to assess whether approving a new pulse oximeter design that reaches the same level of performance as a predicate device is appropriate as our appreciation of inequity grows and some categories of devices no longer match the values we wish to uphold.

Off-Label Use of Medical Devices

While the FDA has attempted to pilot programs, such as the Safety and Performance Based Pathway, that would improve the balance of fostering innovation and patient safety, they may not have the legislative authority or resources available to make these new programs mandatory. Without authority to pursue reforms to medical device regulation, there are concerns that the FDA may become more and more likely to begin regulating the practice of medicine to achieve similar goals.

The FDA has the authority to ban medical devices if they present a substantial deception to patients about the benefits or an unreasonable and substantial risk of injury. However, there are recent concerns of misuse of the banning process. In 2020, the FDA published a rule banning the use of electrical stimulation devices (ESD) for the treatment of self-injurious and/or aggressive behavior.[xvii] The FDA reported that the use of ESDs for this indication was unsafe and could lead to significant physical and psychological harm. ESDs were still approved for other indications such

as smoking cessation.[xviii] The approval of devices for specific indications while banning the same device for others is, per AMA policy, the FDA regulating the practice of medicine. The AMA has extensive policy and significant history defending the rights of physicians to practice medicine and protect off-label prescribing of pharmaceutics and devices.

Within the text of the FDA's rule on banning ESDs for aggressive behavior, they cite the 510(k) pathway as part of their justification for the banning of a specific indication, as they evaluate risk of a device based on its intended function, not on all potential functionalities. For example, daily wear vs. extended wear for gas permeable contact lenses are two separate risk categories. Evaluation of "substantially similar" for the purposes of 510(k) approval includes analysis of similar function. In 2021, the D.C. Circuit Court of Appeals overturned the ban, finding that the FDA was in fact regulating the practice of medicine, per the holdings of *Judge Rotenberg Educational Center v. United States Food and Drug Administration*.[xix]

CONCLUSION

While the FDA has made strides in improving the 510(k) process for medical device approval, such as through the Safety and Performance Based Pathway, recent data have shown serious safety concerns. These safety concerns denote the need for the process to be re-examined to support the purpose and benefits of accelerated pathways along with providing the FDA with the statutory authority to address the larger, systemic issues without impeding on the practice of medicine.

RECOMMENDATIONS

The Council on Science and Public Health recommends the following be adopted, and the remainder of the report be filed:

1. Our AMA believes that to support innovation while protecting patient safety, approval pathways for medical devices should incorporate the following principles:
    a. Evidence-based, measurable performance benchmarks, such as those used in the Safety and Performance Based Pathway, should be used wherever possible for classes of known, well-studied medical devices; and
    b. For a subset of higher risk devices receiving approval but have not completed clinical trials, time-limited approvals may be appropriate, after which the manufacturer may be required to provide post-market data to support full device approval; and
    c. Medical devices with known safety concerns should not be usable as predicate devices for the purposes of proving substantial equivalence. In the event safety concerns of predicate devices arise after approval has been granted, additional due diligence should be initiated as appropriate; and
    d. Approval for medical devices should include criteria for adequate performance in racialized, minoritized, or otherwise historically excluded groups; and
    e. Reports of adverse events for medical devices should always be available in a publicly accessible, searchable database such as the Manufacturer and User Facility Device Experience. (New HOD Policy)

2. That Policy H-120.988, “Patient Access to Treatments Prescribed by Their Physicians”, supporting a physician’s right to prescribe medical devices off-label, be reaffirmed. (Reaffirm Current HOD Policy)

REPORT OF THE COUNCIL ON SCIENCE AND PUBLIC HEALTH

CSAPH Report 03-A-23

Subject: Regulation and Control of Self-Service Labs

Presented by: Noel Deep, MD, Chair

Referred to: Reference Committee E

At the 2022 Annual Meeting of the American Medical Association (AMA), the House of Delegates adopted Policy D-260.992, "Regulation and Control of Self-Service Labs." That directive called for a study into "patient-directed self-service testing, including the accreditation and licensing of laboratories that sell self-ordered tests and physician liability related to non-physician-ordered tests". This report serves as the Council on Science and Public Health's (CSAPH) findings and recommendations regarding self-service testing, also known as direct access testing (DAT) or direct-to-consumer (DTC) testing. The Council has previously studied DTC genetic testing which shares many issues with DAT. For the purposes of this report, DAT refers solely to non-genetic, non-imaging based diagnostic testing.

METHODS

English language articles were selected from searches of PubMed and Google Scholar using the search terms "direct access testing", "self-service laboratory", "direct to consumer laboratory", and "self-service laboratory AND liability". Additional articles were identified by manual review of the reference lists of pertinent publications. Web sites managed by government agencies and applicable organizations were also reviewed for relevant information.

BACKGROUND

Patient-directed testing has existed in the United States for decades, such as over-the-counter glucose testing kits available since the early 1980s. Currently, pharmacies sell a variety of at-home tests for pregnancy, illicit drug use, or other biomarkers. However, starting in the late 2010s, diagnostic companies began to offer a compilation of blood-based DATs such as hormone panels, electrolytes, heavy metal screening, metabolic panels, and prostate specific antigen (PSA). According to one estimate, the market for DAT in the United States currently exceeds $350 million per year, up from just $15 million per year in 2010.[1] Another source estimates that the DTC genetic and DAT lab services markets combined will exceed $2.4 billion per year by 2025.[2] For the purposes of this report, DAT will refer to medical tests that are not available as over-the-counter kits and are performed by a laboratory after being purchased by an individual without a prescription.

The DAT business model removes the health care professional, often the primary care physician, from the care decision-making and allows an individual to directly purchase their test from the laboratory. Overall, there is limited literature on DAT, the model, and outcomes for patients and their care. According to the Frequently Asked Questions webpage of one DAT company, orders for these tests are provided by a licensed clinician upon demand, but these tests are not reimbursed by insurance as they are not the treating health care professional and they do not provide CPT codes.[3]

While the process may vary from company to company, they generally follow similar steps. First, a patient is presented with a menu of available testing options. They then select the test(s) they would like performed, and then pay up-front for the test. A licensed clinician then orders the test, which the companies claim does not constitute a patient-physician relationship. The patient then visits a nearby facility for their sample(s) to be taken, and they receive their results within a few days. Results are often reported in the same manner as they would from a prescribed test in the usual course of care– a single value with solely the reference range as context. Unlike tests that come from a prescribing physician within a health-system, DAT companies do not provide any diagnostic assessment, counseling, or guidance on laboratory results. Patients are encouraged to share their results with their physicians, but it is unclear if or how any DAT facilities enter results into the electronic medical record or otherwise to alert a health care professional that a test has been performed.

DISCUSSION

Patient Safety

The most obvious concern around DAT is patient safety. Assuming the patient identifies an appropriate test to measure the biomarker of interest, patients often receive a single numerical value and a reference range for their test results with no additional description or suggested next steps. However, interpreting medical tests is more than simply seeing if a number is within the reference range. Physicians have years of training and experience to incorporate the quantitative information of medical tests with the qualitative information collected from the patient, including past medical history or signs and symptoms. Take for example the measurement of thyroid stimulating hormone (TSH), which typically has a reference range listed of 1 to 4.5 mlU/L, depending on the assay. A non-trained individual may receive a result of 4.3 mlU/L, see that it is within the provided reference range, and assume they have healthy thyroid function. However, a trained physician may recognize that in combination with presenting symptoms or other risk factors, that this individual may have early hypothyroidism and can begin intervention.[4]

Risk assessment is a critical factor for interpreting and acting upon medical test results, but it is also a key consideration for prescribing the test in the first place. For example, for PSA screening the USPSTF recommends a shared decision-making model, in which men aged 55 to 69 should be informed of the potential risks and benefits of PSA screening before making the decision with their physician.[5] PSA levels could be elevated from several non-cancer sources, such as benign prostatic hyperplasia or prostatitis, and that the risk of dying from prostate cancer was approximately 2.5 percent. Studies have found that approximately 80 percent of men who pursued aggressive clinical action such as brachytherapy due to elevated PSA levels experienced erectile dysfunction or incontinence as a result of treatment.[6] In recommending a screening one needs to consider the risks of false positives and over-diagnosis of benign, non-fatal prostate cancers outweighed that may outweigh benefits of early detection. USPSTF has found that PSA testing outside of a very specific risk category offers poor or even negative value to the patient.[7] This crucial risk-benefit analysis and discussion is missing when an individual can simply order a PSA test from a DAT website and may lead to unwanted outcomes. DAT companies do not follow any clinical guidelines for any test provided. They do not limit test offerings to those in the appropriate risk categories.

Legal Landscape

While the definition varies from state to state, the practice of medicine is typically defined as diagnosing, treating, or advising a patient on their symptoms or disease. It appears that DAT

companies are pursuing a loophole – if they explicitly do not advise a patient on what their test results mean, or use a biomarker to diagnose, they contend it is not practicing medicine. Currently 37 states allow DAT with varying levels of restriction. It should be noted that depending on the state, DAT companies might utilize a dentist, nurse practitioner, physician assistant, naturopathic doctor, licensed acupuncturist, or chiropractor to order tests.

There are also concerns about the duty of the physician when a patient presents with DAT results and requests their physician take clinical action. While the Council does not intend to offer clinical guidance, it cannot identify any scenario in which the action by the physician, if they choose to act at all, can be anything but re-ordering the test through appropriate channels. This is especially true in instances where the patient may have ordered a test the physician is inexperienced with – how can they be expected to act upon, and be liable for, a test they would not have ordered themselves? Current AMA policy and the Code of Medical Ethics regarding direct-to-consumer diagnostic imaging services states that any physician ordering a test is the responsible party for diagnosis and subsequent patient counseling.[8]

Finally, there are also concerns about the regulations of the laboratories performing the tests. There are two main ways in which clinical testing is regulated in the United States. First, if a test is fully self-contained (ie, a test kit), then it is reviewed for medical claims by the Food and Drug Administration (FDA) as an in vitro medical device. For all other medical testing, such as laboratory developed tests, laboratories are regulated, inspected, and certified by the Centers for Medicare and Medicaid Services (CMS) under the Clinical Laboratory Improvements Amendment (CLIA). The FDA categorizes laboratory tests based on complexity, which CMS then uses to develop regulations. Depending on the categorization of test complexity, CLIA may require quality standards for facility administration, laboratory systems, personnel qualifications, quality assessment, and quality control. CLIA certification is provided by CMS-approved accrediting bodies, such as the Joint Commission or the College of American Pathologists. Studies have found that the introduction of CLIA resulted in an increase in laboratory quality and customer satisfaction.[9]

There have been reports that some companies offering DAT skirt the CLIA certification process by claiming that since they only provide a context-free biomarker value, they are providing "health information" rather than a medical test.[10] Ensuring that these tests are performed in CLIA-certified laboratories is critical for maintaining the accuracy of the results while also making sure patients' samples and data are secure and stored appropriately.

Examining the Appeal

When assessing issues of DAT regulations, it is also important to understand the use-cases and surrounding ecosystem that has caused the market for DATs to flourish. DAT marketing often emphasizes a few key points: it is faster, the cost is upfront and known (ie, there is no unknown co-pay that will be administered later), and that an individual will be able to take control over their health. The first two claims are interconnected and point to the role health insurance companies play in reimbursement for testing. For example, studies have shown that when individuals enroll in a high deductible insurance plan, they are approximately 10 percent less likely to receive laboratory tests due to the financial disincentive.[11] It is also important to recognize that an insurance provider may require prior authorization, and then ultimately decline coverage, for outpatient laboratory testing which adds significant delays and cost uncertainty for a patient.

Additionally, there are several tests offered by DAT companies for conditions which unfortunately carry high levels of social stigma – particularly infectious diseases such as sexually transmitted

infections or hepatitis. In these instances, availability of a test which can be ordered online and without an uncomfortable conversation with their physician may be attractive to many patients. Tests for influenza or other respiratory viruses that can be ordered for home sample collection may also reduce the risk of transmission in a hospital or clinic setting. However, those instances in which DATs may be an appealing option further underscore the need for ensuring DAT facilities are CLIA-certified and responsible for the appropriate patient counseling on result interpretation and any necessary lifestyle changes.

Finally, DATs are often marketed to the individual who is seeking to better understand and control their health. For example, DAT companies may offer cholesterol panel testing, which would be appealing to someone who has changed their diet or exercise routine and is eager to see results. While those goals should be applauded, there are multiple risks associated with this approach. First, if the test is inaccurate, the individual will be given a false understanding of changes in their health. Second, the individual may not properly understand the time it may take for their changes to have an impact on a clinical biomarker, nor may they appreciate the healthy fluctuation the biomarker levels may have from day-to-day, or the size of impact their lifestyle changes may have on the biomarker. In some instances, an individual could discontinue medication or other treatments if they are given inaccurate test results devoid of context. Again, this highlights the critical importance of physician counseling in health management, as none of this information is currently communicated to patients utilizing DAT companies.

CONCLUSION

In a system of complex insurance reimbursement and high out-of-pocket plans, DATs may appear appealing for patients. However, current DAT practices appear to skirt regulatory requirements, could easily be misinterpreted by patients, and lack appropriate diagnostic and counseling practices by a physician. Potential utilization of DAT may be warranted in the realm of infectious disease when immediate testing would be beneficial for public health; however, test results should still be carefully communicated to the patient and monitored by a physician who is responsible for the patient's care.

RECOMMENDATIONS

The Council on Science and Public Health recommends the following recommendations be adopted, and the remainder of the report be filed:

1. Direct access testing, in which patients may order a diagnostic laboratory test on demand, should only be provided by teams which are physician-led, and performed in facilities that are CLIA-certified.

2. Health care professionals who offer direct access testing services, for which a patient does not have a referral, recognize that agreeing to perform direct-to-consumer testing on request:
    a. establishes a patient relationship, with all the ethical and professional obligations such relationship entails; and
    b. assumes responsibility for relevant clinical evaluation, including pre- and post-test counseling about the test, its results, and indicated follow-up. Health care professionals may choose to refer the patient for post-test counseling to an appropriate provider who accepts the patient, but they maintain ethical and professional responsibility until the patient has been seen by that provider; and

shall report all required findings to relevant oversight entities, such as state public health agencies, even if the patient and the laboratory are not co-localized in the same jurisdiction. (New HOD Policy)

3. That Policy H-480.941, "Direct-to-Consumer Laboratory Testing," calling for regulation of direct-to-consumer testing and education of patients of risks and benefits, be reaffirmed. (Reaffirmation of Current AMA Policy)

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 501
(A-23)

Introduced by: Medical Student Section

Subject: AMA Study of Chemical Castration in Incarceration

Referred to: Reference Committee E

Whereas, Chemical castration is defined as the use of pharmacologic agents, including anti-antagonists and gonadotropin-releasing hormone agonists, to reduce serum testosterone levels and quell libido in individuals diagnosed with a paraphilic disorder and other individuals who commit sexual offenses, in an effort to reduce the occurrence of sexual offenses[1,2]; and

Whereas, 4,984 people are currently incarcerated for sexual offenses in federal prisons[3,4]; and

Whereas, Several states have passed or debated statutes requiring chemical castration for individuals who commit sexual offenses as a sentence and/or as a requirement for parole, most recently Alabama in 2019, where offenders are required to pay for their own treatment, and in Tennessee in 2020[1,5-8]; and

Whereas, Diagnostic and Statistical Manual of Mental Disorders (DSM)-V defines “paraphilic disorder” as “recurrent and intense sexual arousal over a period of at least 6 months with nonconsenting victims through voyeurism, exhibitionism, frotteurism, sexual sadism, and pedophilia” and estimated lifetime prevalences are 12% for males and 4% for females[9]; and

Whereas, Chemical castration can be traced to the 1900s eugenics movement where people with developmental delays and psychiatric diagnoses were forcibly sterilized, including up to 60,000 incarcerated women diagnosed with and intellectual disability[1]; and

Whereas, Chemical castration via injection with Depo-Provera (medroxyprogesterone acetate) and surgical sterilization have historically disproportionately targeted Black individuals in the United States, including the deceptive, experimental testing of Depo-Provera as a method of birth control on young Black females in the 1960s[10,11]; and

Whereas, The current method of chemical castration for incarcerated males who committed sex offenses in several states, including California and Florida, is via injection with Depo-Provera, although no medication, including Depo-Provera, is currently FDA-approved for chemical castration[12]; and

Whereas, Limited evidence exists for the effectiveness of chemical castration, with several studies noting that chemical castration does not address the core psychological impulses relating to sexually aberrant behavior[12,13]; and

Whereas, When chemical castration is a requirement for parole, judges, not medical doctors, are charged with deciding whether or not a prisoner receives chemical castration therapy, suggesting that chemical castration constitutes punishment instead of rehabilitative therapy[12]; and

Whereas, The Association for the Treatment of Sexual Abusers (ATSA) published a 2012 statement on the use of chemical castration for individuals with paraphilic disorders and individuals who commit sexual offenses, concluding that chemical castration may be effective for certain patients when combined with other non-pharmacologic interventions such as psychotherapy[14]; and

Whereas, The issue of chemical castration is rife with ethical quandaries and valid arguments may exist both in support of and in opposition to this practice[15]; and

Whereas, In situations where chemical castration is a requirement for parole, some may argue that this requirement unjustly coerces an individual to agree to a medical procedure, while others may argue that if chemical castration was not required, an individual may never be allowed the possibility of parole at all and may remain incarcerated[15]; and

Whereas, Scientific research, medical information, and expert opinions from physicians on the issue of chemical castration for individuals who commit sexual offenses, especially in the last 5 years, are difficult to find most likely since the population affected by chemical castration have not been the subject of much retrospective research; and

Whereas, The American Psychiatric Association raised concerns in July 2021 about the use of chemical castration as a condition for parole, citing ethical concerns over the minimal to absent involvement of physicians and calling the "court-driven, one-size-fits-all approach to anti-androgen treatment inconsistent with contemporary medical practice"[16]; and

Whereas, Our American Medical Association previously adopted Policy 140.955, "Court-Ordered Castration," which stated that "The AMA opposes physician participation in castration and other surgical or medical treatments initiated solely for criminal punishment," but this policy was later rescinded due to being considered duplicative of Code of Medical Ethics Opinion 9.7.2, "Court-Initiated Medical Treatment in Criminal Cases"[17-18]; and

Whereas, While the AMA Code of Medical Ethics Opinion 9.7.2 states that "physicians who provide care under court order should: (a) Participate only if the procedure being mandated is therapeutically efficacious and is therefore undoubtedly not a form of punishment or solely a mechanism of social control," the morality of chemical castration under this Code is unclear, including its use as efficacious treatment, as a mechanism for social control, as a tool for public safety, and as an alternative to incarceration[1,5-8,15,18]; therefore be it

RESOLVED, That our American Medical Association study the use of chemical castration in the treatment of incarcerated individuals with paraphilic disorders and for other individuals who commit sexual offenses, including ethical concerns over coercion in its use as an alternative to incarceration and in probation and parole proceedings. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Court-Initiated Medical Treatment in Criminal Cases, E-9.7.2

Court-initiated medical treatments raise important questions as to the rights of prisoners, the powers of judges, and the ethical obligations of physicians. Although convicted criminals have fewer rights and protections than other citizens, being convicted of a crime does not deprive an offender of all protections under the law. Court-ordered medical treatments raise the question whether professional ethics permits physicians to cooperate in administering and overseeing such treatment. Physicians have civic duties, but medical ethics do not require a physician to carry out civic duties that contradict fundamental principles of medical ethics, such as the duty to avoid doing harm.

In limited circumstances physicians can ethically participate in court-initiated medical treatments. Individual physicians who provide care under court order should:

(a) Participate only if the procedure being mandated is therapeutically efficacious and is therefore undoubtedly not a form of punishment or solely a mechanism of social control.

(b) Treat patients based on sound medical diagnoses, not court-defined behaviors. While a court has the authority to identify criminal behavior, a court does not have the ability to make a medical diagnosis or to determine the type of treatment that will be administered. When the treatment involves in-patient therapy, surgical intervention, or pharmacological treatment, the physician's diagnosis must be confirmed by an

independent physician or a panel of physicians not responsible to the state. A second opinion is not necessary in cases of court-ordered counseling or referrals for psychiatric evaluations.
(c) Decline to provide treatment that is not scientifically validated and consistent with nationally accepted guidelines for clinical practice.
(d) Be able to conclude, in good conscience and to the best of his or her professional judgment, that to the extent possible the patient voluntarily gave his or her informed consent, recognizing that an element of coercion that is inevitably present. When treatment involves in-patient therapy, surgical intervention, or pharmacological treatment, an independent physician or a panel of physicians not responsible to the state should confirm that voluntary consent was given.
Issued: 2016

Informed Consent, E-2.1.1
Informed consent to medical treatment is fundamental in both ethics and law. Patients have the right to receive information and ask questions about recommended treatments so that they can make well-considered decisions about care. Successful communication in the patient-physician relationship fosters trust and supports shared decision making.
The process of informed consent occurs when communication between a patient and physician results in the patient's authorization or agreement to undergo a specific medical intervention. In seeking a patient's informed consent (or the consent of the patient's surrogate if the patient lacks decision-making capacity or declines to participate in making decisions), physicians should:
(a) Assess the patient's ability to understand relevant medical information and the implications of treatment alternatives and to make an independent, voluntary decision.
(b) Present relevant information accurately and sensitively, in keeping with the patient's preferences for receiving medical information. The physician should include information about:
(i) the diagnosis (when known);
(ii) the nature and purpose of recommended interventions;
(iii) the burdens, risks, and expected benefits of all options, including forgoing treatment.
(c) Document the informed consent conversation and the patient's (or surrogate's) decision in the medical record in some manner. When the patient/surrogate has provided specific written consent, the consent form should be included in the record.
In emergencies, when a decision must be made urgently, the patient is not able to participate in decision making, and the patient's surrogate is not available, physicians may initiate treatment without prior informed consent. In such situations, the physician should inform the patient/surrogate at the earliest opportunity and obtain consent for ongoing treatment in keeping with these guidelines.
Issued: 2016

Patient-Physician Relationships, E-1.1.1
The practice of medicine, and its embodiment in the clinical encounter between a patient and a physician, is fundamentally a moral activity that arises from the imperative to care for patients and to alleviate suffering. The relationship between a patient and a physician is based on trust, which gives rise to physicians' ethical responsibility to place patients' welfare above the physician's own self-interest or obligations to others, to use sound medical judgment on patients' behalf, and to advocate for their patients' welfare.
A patient-physician relationship exists when a physician serves a patient's medical needs. Generally, the relationship is entered into by mutual consent between physician and patient (or surrogate).
However, in certain circumstances a limited patient-physician relationship may be created without the patient's (or surrogate's) explicit agreement. Such circumstances include:
(a) When a physician provides emergency care or provides care at the request of the patient's treating physician. In these circumstances, the patient's (or surrogate's) agreement to the relationship is implicit.
(b) When a physician provides medically appropriate care for a prisoner under court order, in keeping with ethics guidance on court-initiated treatment.
(c) When a physician examines a patient in the context of an independent medical examination, in keeping with ethics guidance. In such situations, a limited patient-physician relationship exists.
Issued: 2016

Standards of Care for Inmates of Correctional Facilities H-430.997
Our AMA believes that correctional and detention facilities should provide medical, psychiatric, and substance use disorder care that meets prevailing community standards, including appropriate referrals for ongoing care upon release from the correctional facility in order to prevent recidivism.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 502
(A-23)

Introduced by: Medial Student Section

Subject: Pain Management for Long-Acting Reversible Contraception and other Gynecological Procedures

Referred to: Reference Committee E

Whereas, A U.S.-based prospective study of over 9,256 women known as the Contraceptive CHOICE Project showed that increasing access to long-acting reversible contraceptives (LARC) will lead to a decrease in both unintended pregnancies and annual healthcare costs[1]; and

Whereas, AMA policy H-75.987 supports a national goal of reducing unintended pregnancies via counseling women of children bearing age on family planning and LARC use; and

Whereas, Intrauterine devices (IUDs) are between 99.6% and 99.9% effective as long-acting reversible contraceptives and 99.9% effective as emergency contraceptives[2,3]; and

Whereas, The 2017-2019 National Survey of Family Growth states that 10.4% of women age 15-49 in the United States use long-acting reversible contraceptives and use of LARCs has risen five-fold in the last decade among women aged 15-44[4,5]; and

Whereas, Without the use of analgesics or anesthesia, nearly 89% of women report moderate to severe pain during placement of a tenaculum, which precedes insertion of an intrauterine device (IUD), removal of lost IUDs, as well as endometrial biopsy, uterine aspiration, colposcopy, and hysteroscopy[6]; and

Whereas, A 2014 study found that, on a scale of 100, the mean patient maximum pain upon IUD insertion was 64.8 compared to 35.3 rated by the physician, highlighting a discrepancy between patients' experienced pain and providers' assumption of pain[7]; and

Whereas, Studies report that physicians often underestimate female pain and treat female pain less extensively than male pain; consequently, physicians are less likely to recommend analgesics and are more likely to recommend psychological treatment for female pain than for male pain[8-13]; and

Whereas, In addition to LARC insertion procedures, a substantial portion of other gynecologic procedures are routinely performed in offices and in clinics, including colposcopy with biopsy, loop electrosurgical excision procedure (LEEP), endometrial biopsy, uterine aspiration, dilation and evacuation (D&E), saline infusion sonogram, and hysterosalpingogram, among others under circumstances with limited validated options for analgesia[14]; and

Whereas, Local anesthesia, general anesthesia, and oral or intravenous sedation is commonly used in vasectomy procedures for pain control and clear guidelines regarding use of sedation or anesthesia for vasectomies are explicitly outlined in American Urological Association clinical guidelines[15]; and

Whereas, Studies have shown that medical professionals hold false beliefs about Black people feeling less pain, so that Black women stand to face compounded effects of racism and sexism when seeking appropriate treatment for pain[16]; and

Whereas, Current research suggests that anticipated pain is correlated with increased perceived pain throughout the duration of IUD insertion, especially in marginalized populations[17]; and

Whereas, While studies have shown LARCs to be associated with high rates of satisfaction following insertion, this level of satisfaction is negatively impacted by pain experienced during the procedure[18]; and

Whereas, Negative experiences related to gynecologic procedures may lead to patients delaying otherwise routine gynecologic care, which can lead to preventable healthcare inequities surrounding undiagnosed gynecological cancers, endometriosis, infections, thereby impacting a patient's quality of life and potentially resulting in preventable death[19]; and

Whereas, Multiple analgesic treatment regimens, including prophylactic NSAIDs, cervical ripening, and topical cervical lidocaine, have been shown to prove inadequate analgesia prior to IUD insertion, while intracervical lidocaine block and ketorolac injection have demonstrated potential analgesic efficacy around the time of IUD insertion[20-23]; and

Whereas, Adequate management of postoperative pain after gynecologic procedures has been associated with fewer postoperative hospital admissions[24]; and

Whereas, The American College of Obstetricians and Gynecologists (ACOG) acknowledges that, of the patients that undergo IUD insertion, “many report moderate to severe pain” and that more research is needed to identify effective options to reduce pain for IUD insertion[25]; and

Whereas, ACOG specifically recommends that physicians consider analgesia or sedation for women who are at higher risk for increased pain during IUD insertion, such as nulliparous women, patients requiring cervical dilation, or patients who have had a past painful insertion experience[25]; and

Whereas, Our American Medical Association endorses training physicians on adequate pain control and urges for informed consent for other in-office procedures such as policy H-69.945 “Neonatal Male Circumcision”, but does not have a policy that explicitly discusses pain management for gynecological procedures; therefore be it

RESOLVED, That our American Medical Association recognize the disparity in pain management in gynecological procedures compared to procedures of similarly reported pain and encourages discussion of pain control options, risks, and benefits with patients as a part of the shared decision making process (New HOD Policy); and be it further

RESOLVED, That our AMA support further research into evidence-based anesthetic and anxiolytic medication options for long-acting reversible contraception procedures and other gynecological procedures, including but not limited to colposcopy, endometrial biopsy, and LEEP procedures. (New HOD Policy)

RELEVANT AMA POLICY

Reducing Unintended Pregnancy H-75.987
Our AMA: (1) urges health care professionals to provide care for women of reproductive age, to assist them in planning for pregnancy and support age-appropriate education in esteem building, decision-making and family life in an effort to introduce the concept of planning for childbearing in the educational process; (2) supports reducing unintended pregnancies as a national goal; and (3) supports the training of all primary care physicians and relevant allied health professionals in the area of preconception counseling, including the recognition of long-acting reversible contraceptives as efficacious and economical forms of contraception.
Citation: Res. 512, A-97; Reaffirmed: CSAPH Rep. 3, A-07; Reaffirmation A-15; Appended: Res. 502, A-15; Reaffirmation I-16;

Pain Management H-410.950
Our AMA adopts the following guidelines on Invasive Pain Management Procedures for the Treatment of Chronic Pain, Including Procedures Using Fluoroscopy:

Interventional chronic pain management means the diagnosis and treatment of pain-related disorders with the application of interventional techniques in managing sub-acute, chronic, persistent, and intractable pain. The practice of pain management includes comprehensive assessment of the patient, diagnosis of the cause of the patient's pain, evaluation of alternative treatment options, selection of appropriate treatment options, termination of prescribed treatment options when appropriate, follow-up care, the diagnosis and management of complications, and collaboration with other health care providers.

Invasive pain management procedures include interventions throughout the course of diagnosing or treating pain which is chronic, persistent and intractable, or occurs outside of a surgical, obstetrical, or post- operative course of care. Invasive pain management techniques include:

1. ablation of targeted nerves;
2. procedures involving any portion of the spine, spinal cord, sympathetic nerves or block of major peripheral nerves, including percutaneous precision needle placement within the spinal column with placement of drugs such as local anesthetics, steroids, and analgesics, in the spinal column under fluoroscopic guidance or any other radiographic or imaging modality; and
3. surgical techniques, such as laser or endoscopic diskectomy, or placement of intrathecal infusion pumps, and/or spinal cord stimulators.

At present, invasive pain management procedures do not include major joint injections (except sacroiliac injections), soft tissue injections or epidurals for surgical anesthesia or labor analgesia.

When used for interventional pain management purposes such invasive pain management procedures do not consist solely of administration of anesthesia; rather, they are interactive procedures in which the physician is called upon to make continuing adjustments based on medical inference and judgments. In such instances, it is not the procedure itself, but the purpose and manner in which such procedures are utilized, that demand the ongoing application of direct and immediate medical judgment. These procedures are therefore within the practice of medicine, and should be performed only by physicians with appropriate training and credentialing.

Invasive pain management procedures require physician-level training. However, certain technical aspects of invasive pain management procedures may be delegated to appropriately trained, licensed or certified, credentialed non-physicians under direct and/or personal supervision of a physician who possesses appropriate training and privileges in the performance of the procedure being supervised, and

in compliance with local, state, and federal regulations. Invasive pain management procedures employing radiologic imaging are within the practice of medicine and should be performed only by physicians with appropriate training and credentialing.
Citation: (BOT Rep. 16, A-13)

Coverage of Contraceptives by Insurance H-180.958
1. Our AMA supports federal and state efforts to require that every prescription drug benefit plan include coverage of prescription contraceptives.
2. Our AMA supports full coverage, without patient cost-sharing, of all contraception without regard to prescription or over-the-counter utilization because all contraception is essential preventive health care.
Citation: Res. 221, A-98; Reaffirmation A-04; Reaffirmed: CMS Rep. 1, A-14; Reaffirmation: I-17; Modified: BOT Rep. 10, A-18;

Preconception Care H-425.976
1. Our AMA supports the 10 recommendations developed by the Centers for Disease Control and Prevention for improving preconception health care that state:

(1) Individual responsibility across the lifespan--each woman, man, and couple should be encouraged to have a reproductive life plan;
(2) Consumer awareness--increase public awareness of the importance of preconception health behaviors and preconception care services by using information and tools appropriate across various ages; literacy, including health literacy; and cultural/linguistic contexts;
(3) Preventive visits--as a part of primary care visits, provide risk assessment and educational and health promotion counseling to all women of childbearing age to reduce reproductive risks and improve pregnancy outcomes;
(4) Interventions for identified risks--increase the proportion of women who receive interventions as follow-up to preconception risk screening, focusing on high priority interventions (i.e., those with evidence of effectiveness and greatest potential impact);
(5) Inter-conception care--use the inter-conception period to provide additional intensive interventions to women who have had a previous pregnancy that ended in an adverse outcome (i.e., infant death, fetal loss, birth defects, low birth weight, or preterm birth);
(6) Pre-pregnancy checkup--offer, as a component of maternity care, one pre-pregnancy visit for couples and persons planning pregnancy;
(7) Health insurance coverage for women with low incomes--increase public and private health insurance coverage for women with low incomes to improve access to preventive women's health and pre-conception and inter-conception care;
(8) Public health programs and strategies--integrate components of pre-conception health into existing local public health and related programs, including emphasis on inter-conception interventions for women with previous adverse outcomes;
(9) Research--increase the evidence base and promote the use of the evidence to improve preconception health; and
(10) Monitoring improvements--maximize public health surveillance and related research mechanisms to monitor preconception health.

2. Our AMA supports the education of physicians and the public about the importance of preconception care as a vital component of a woman's reproductive health.
3. Our AMA supports the use of pregnancy intention screening and contraceptive screening in appropriate women and men as part of routine well-care and recommend it be appropriately documented in the medical record.
Citation: Res. 414, A-06; Reaffirmation I-07; Reaffirmed: CSAPH Rep. 01, A-17; Appended: Res. 401, A-19;

Neonatal Male Circumcision H-60.945
1. Our AMA: (a) encourages training programs for pediatricians, obstetricians, and family physicians to incorporate information on the use of local pain control techniques for neonatal circumcision; (b) supports the general principles of the 2012 Circumcision Policy Statement of the American Academy of Pediatrics, which reads as follows: "Evaluation of current evidence indicates that the health benefits of newborn male circumcision outweigh the risks and that the procedure's benefits justify access to this procedure for

families who choose it. Specific benefits identified included prevention of urinary tract infections, penile cancer, and transmission of some sexually transmitted infections, including HIV." and (c) urges that as part of the informed consent discussion, the risks and benefits of pain control techniques for circumcision be thoroughly discussed to aid parents in making their decisions.
2. Our AMA encourages state Medicaid reimbursement of neonatal male circumcision.
Citation: (CSA Rep. 10, I-99; Reaffirmed: CSAPH Rep. 1, A-09; Modified: Res. 503, A-13)

E2.1.1 Informed Consent
Informed consent to medical treatment is fundamental in both ethics and law. Patients have the right to receive information and ask questions about recommended treatments so that they can make well-considered decisions about care. Successful communication in the patient-physician relationship fosters trust and supports shared decision making.
The process of **informed consent** occurs when communication between a patient and physician results in the patient's authorization or agreement to undergo a specific medical intervention. In seeking a patient's **informed consent** (or the **consent** of the patient's surrogate if the patient lacks decision-making capacity or declines to participate in making decisions), physicians should:
(a) Assess the patient's ability to understand relevant medical information and the implications of treatment alternatives and to make an independent, voluntary decision.
(b) Present relevant information accurately and sensitively, in keeping with the patient's preferences for receiving medical information. The physician should include information about:
(i) the diagnosis (when known);
(ii) the nature and purpose of recommended interventions;
(iii) the burdens, risks, and expected benefits of all options, including forgoing treatment.
(c) Document the **informed consent** conversation and the patient's (or surrogate's) decision in the medical record in some manner. When the patient/surrogate has provided specific written **consent**, the **consent** form should be included in the record.
In emergencies, when a decision must be made urgently, the patient is not able to participate in decision making, and the patient's surrogate is not available, physicians may initiate treatment without prior **informed consent**. In such situations, the physician should inform the patient/surrogate at the earliest opportunity and obtain **consent** for ongoing treatment in keeping with these guidelines.
Issued: 2016

Pain as the Fifth Vital Sign D-450.956
Our AMA will: (1) work with The Joint Commission to promote evidence-based, functional and effective pain assessment and treatment measures for accreditation standards; (2) strongly support timely and appropriate access to non-opioid and non-pharmacologic treatments for pain, including removing barriers to such treatments when they inhibit a patient's access to care; (3) advocate that pain as the fifth vital sign be eliminated from professional standards and usage; and (4) advocate for the removal of the pain management component of patient satisfaction surveys as it pertains to payment and quality metrics.
Citation: BOT Rep. 19, A-16; Reaffirmation: A-19;

H-515.952 Adverse Childhood Experiences and Trauma-Informed Care
Adverse Childhood Experiences and Trauma-Informed Care H-515.952
1. Our AMA recognizes trauma-informed care as a practice that recognizes the widespread impact of trauma on patients, identifies the signs and symptoms of trauma, and treats patients by fully integrating knowledge about trauma into policies, procedures, and practices and seeking to avoid re-traumatization.
2. Our AMA supports:
a. evidence-based primary prevention strategies for Adverse Childhood Experiences (ACEs);
b. evidence-based trauma-informed care in all medical settings that focuses on the prevention of poor health and life outcomes after ACEs or other trauma at any time in life occurs;
c. efforts for data collection, research, and evaluation of cost-effective ACEs screening tools without additional burden for physicians.
d. efforts to educate physicians about the facilitators, barriers and best practices for providers implementing ACEs screening and trauma-informed care approaches into a clinical setting; and
e. funding for schools, behavioral and mental health services, professional groups, community, and government agencies to support patients with ACEs or trauma at any time in life; and
f. increased screening for ACEs in medical settings, in recognition of the intersectionality of ACEs with

significant increased risk for suicide, negative substance use-related outcomes including overdose, and a multitude of downstream negative health outcomes.
3. Our AMA supports the inclusion of ACEs and trauma-informed care into undergraduate and graduate medical education curricula.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 503
(A-23)

Introduced by: Medical Student Section

Subject: Increasing Diversity in Stem Cell Biobanks and Disease Models

Referred to: Reference Committee E

Whereas, Despite racial and ethnic minorities composing almost 40% of the U.S. population, most biomedical and clinical research uses a largely homogenous population that is usually 79.7% White, with 98% of over 10,000 NIH-funded cancer clinical trials not meeting NIH's own criteria and goals for minority participation[1-3]; and

Whereas, A principal component analysis of embryonic stem cell lines from the 1000 Genomes Project discovered 93 percent of 143 sequenced human embryonic stem cell lines clustered with reference samples of European ancestry[4]; and

Whereas, An analysis of 555 completed stem cell clinical trials showed only 45% documented information regarding patients' race and ethnicity, of which, Native American or Alaskan, Black, and Multiracial groups were underrepresented when compared to U.S. population data[5]; and

Whereas, Given that 72.6% of induced pluripotent stem cell lines (iPSCs) are Caucasian in origin, there is limited availability of racially and ethnically diverse iPSC biobanks and patient-derived disease models[5-7]; and

Whereas, The availability of diverse iPSC lines has not kept pace with advances in iPSC disease models and technologies, leading to biased insights on disease mechanisms, disease susceptibility, and drug responses in population-specific genetic variants[7-11]; and

Whereas, The history of research involving minorities has included questionable and harmful actions, such as the 1932 Tuskegee Syphilis Study, resulting in a greater unwillingness among minorities to participate in research studies[12,13]; and

Whereas, Recruitment materials used in U.S. biobanks are predominantly in English and above a fifth-grade reading level, limiting participation by underrepresented populations[14]; and

Whereas, Biobank recruitment strategies are often convenience-based, with hospital-based researchers recruiting patients not representative of those most afflicted by disease[12]; and

Whereas, Exclusion criteria in clinical trials often leads to participants with characteristics that are skewed, and the unnecessary exclusion of participants (e.g. non-English speakers, people with mental and physical disabilities), that better represent the actual demographic after treatment approval[15,16]; and

Whereas, Lack of diverse iPSC models for drug toxicity assessments fails to account for variations in metabolic activity, which leads to higher rates of adverse events in minority populations, resulting in patient harm and waste of resources[9,17]; and

Whereas, Existing studies investigating the diversity of stem cell research encompass only major racial and ethnic groups (e.g. Asian or Latino), despite health disparities existing among specific subgroups (e.g. Cambodian or Colombian)[6,18]; and

Whereas, An initiative by California's Stem Cell Agency addresses gaps in the diversity of stem cell lines through its publicly accessible iPSC Repository, with 2,600 iPSCs lines inclusive of minority populations including African, Hispanic, Native American, and East and South Asian populations[19]; and

Whereas, The NIH-sponsored All of Us Research Program endorses diversity as a core value and aims to build one of the largest diverse biobanks[20]; and

Whereas, Our American Medical Association supports the Diversity Trials Act that strives to ensure clinical trials focus on diseases disproportionately impacting underrepresented populations to discover scientific advances benefiting all communities[21]; and

Whereas, A recent study from the Stanford University Center for Biomedical Ethics (SCBE) recommends that reviewers and editors give priority to manuscripts that have significant minority group representation and to those that replicate prior studies that were primarily focused on White populations[22,23]; and

Whereas, A recent study SCBE recommends that race and/or ethnicity be included as variables in experiments requiring the use of stem cell lines such that potentially variable outcomes of intervention between racial or ethnic groups can be assessed[23,24]; and

Whereas, Our AMA is committed to supporting stem cell research and its diversification through a number of methodologies, as described in H-460.911, H-460.915, H-460.889, H-460.924, and 7.3.8 Research with Stem Cells[24-26]; therefore be it

RESOLVED, That our American Medical Association encourage research institutions and stakeholders to re-evaluate recruitment strategies and materials to encourage participation by underrepresented populations (New HOD Policy); and it be further

RESOLVED, That our AMA amend Policy H-460.915, “Cloning and Stem Cell Research,” by addition to read as follows:

Cloning and Stem Cell Research, H-460.915

Our AMA: (1) supports biomedical research on multipotent stem cells (including adult and cord blood stem cells); (2) urges the use of stem cell lines from different ethnicities in disease models; ~~(2)~~(3) supports the use of somatic cell nuclear transfer technology in biomedical research (therapeutic cloning); ~~(3)~~(4) opposes the use of somatic cell nuclear transfer technology for the specific purpose of producing a human child (reproductive cloning); ~~(4)~~(5) encourages strong public support of federal

funding for research involving human pluripotent stem cells and ~~(5)~~(6) will continue to monitor developments in stem cell research and the use of somatic cell nuclear transfer technology (Modify Current HOD Policy); and be it further

RESOLVED, That our AMA strongly encourage institutional biobanks to collect racially and ethnically diverse samples such that future induced pluripotent stem cell disease models better represent the population. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

Received: 3/31/23

RELEVANT AMA POLICY

Increasing Minority, Female, and other Underrepresented Group Participation in Clinical Research H-460.911

1. Our AMA advocates that:
a. The Food and Drug Administration (FDA) and National Institutes of Health (NIH) conduct annual surveillance of clinical trials by gender, race, and ethnicity, including consideration of pediatric and elderly populations, to determine if proportionate representation of women and minorities is maintained in terms of enrollment and retention. This surveillance effort should be modeled after National Institute of Health guidelines on the inclusion of women and minority populations. b. The FDA have a page on its web site that details the prevalence of minorities and women in its clinical trials and its efforts to increase their enrollment and participation in this research; and c. Resources be provided to community level agencies that work with those minorities, females, and other underrepresented groups who are not proportionately represented in clinical trials to address issues of lack of access, distrust, and lack of patient awareness of the benefits of trials in their health care. These minorities include Black Individuals/African Americans, Hispanics, Asians/Pacific Islanders/Native Hawaiians, and Native Americans.
2. Our AMA recommends the following activities to the FDA in order to ensure proportionate representation of minorities, females, and other underrepresented groups in clinical trials: a. Increased fiscal support for community outreach programs; e.g., culturally relevant community education, community leaders' support, and listening to community's needs; b. Increased outreach to all physicians to encourage recruitment of patients from underrepresented groups in clinical trials; c. Continued education for all physicians and physicians-in-training on clinical trials, subject recruitment, subject safety, and possible expense reimbursements, and that this education encompass discussion of barriers that currently constrain appropriate recruitment of underrepresented groups and methods for increasing trial accessibility for patients; d. Support for the involvement of minority physicians in the development of partnerships between minority communities and research institutions; and e. Fiscal support for minority, female, and other underrepresented groups recruitment efforts and increasing trial accessibility.
3. Our AMA advocates that specific results of outcomes in all clinical trials, both pre- and post-FDA approval, are to be determined for all subgroups of gender, race and ethnicity, including consideration of pediatric and elderly populations; and that these results are included in publication and/or freely distributed, whether or not subgroup differences exist.
Citation: BOT Rep. 4, A-08; Reaffirmed: CSAPH Rep. 01, A-18; Modified: Res. 016, I-22;

Cloning and Stem Cell Research H-460.915

Our AMA: (1) supports biomedical research on multipotent stem cells (including adult and cord blood stem cells); (2) supports the use of somatic cell nuclear transfer technology in biomedical research (therapeutic cloning); (3) opposes the use of somatic cell nuclear transfer technology for the specific purpose of producing a human child (reproductive cloning); (4) encourages strong public support of federal funding for research involving human pluripotent stem cells; and (5) will continue to monitor developments in stem cell research and the use of somatic cell nuclear transfer technology.
Citation: (CSA Rep. 5, A-03; Reaffirmed: CSAPH Rep. 1, A-13)

Support of Embryonic/Pluripotent Stem Cell Research H-460.889
Our AMA will encourage strong public support of federal funding for research involving human pluripotent stem cells.
Citation: CSAPH Rep. 01, A-19;

E-7.3.8 Research with Stem Cells
Human **stem cells** are widely seen as offering a source of potential treatment for a range of diseases and are thus the subject of much **research**. Clinical studies have validated the use of adult **stem cells** in a limited number of therapies, but have yet to confirm the utility of embryonic **stem cells**.

Physicians who conduct **research** using **stem cells** obtained from any source (established tissue, umbilical cord blood, or embryos) must, at a minimum:
(a) Adhere to institutional review board (IRB) requirements.
(b) Ensure that the **research** is carried out **with** appropriate oversight and monitoring.
(c) Ensure that the **research** is carried out **with** appropriate informed consent. In addition to disclosure of **research** risks and potential benefits, at minimum, the consent disclosure should address:
(i) for a donor of **cells** to be used in **stem** cell **research**:
a. the process by which **stem cells** will be obtained;
b. what specifically will be done **with** the **stem cells**;
c. whether an immortal cell line will result; and
d. the primary and anticipated secondary uses of donated embryos and/or derived **stem cells**, including potential commercial uses.
(ii) for a recipient of **stem cells** in clinical **research**:
a. the types of tissue from which the **stem cells** derive (e.g., established tissue, umbilical cord blood, or embryos); and
b. unique risks posed by investigational **stem** cell products (when applicable), such as tumorigenesis, immunological reactions, unpredictable behavior of **cells**, and unknown long-term health effects.

The professional community as well as the public remains divided about the use of embryonic **stem cells** for either **research** or therapeutic purposes. The conflict regarding **research with** embryonic **stem cells** centers on the moral status of embryos, a question that divides ethical opinion and that cannot be resolved by medical science. Regardless whether they are obtained from embryos donated by individuals or couples undergoing in vitro fertilization, or from cloned embryos created by somatic cell nuclear transfer (SCNT), use of embryonic **stem cells** currently requires the destruction of the human embryo from which the **stem cells** derive.

The pluralism of moral visions that underlies this debate must be respected. Participation in **research** involving embryonic **stem cells** requires respect for embryos, **research** participants, donors, and recipients. Embryonic **stem** cell **research** does not violate the ethical standards of the profession. Every physician remains free to decide whether to participate in **stem** cell **research** or to use its products.

Physicians should continue to be guided by their commitment to the welfare of patients and the advancement of medical science.
Physicians who conduct **research** using embryonic **stem cells** should be able to justify greater risks for subjects, and the greater respect due embryos than **stem cells** from other sources, based on expectations that the **research** offers substantial promise of contributing significantly to scientific or therapeutic knowledge.
Issued: 2016

Race and Ethnicity as Variables in Medical Research H-460.924
Our AMA policy is that: (1) race and ethnicity are valuable research variables when used and interpreted appropriately; (2) health data be collected on patients, by race and ethnicity, in hospitals, managed care organizations, independent practice associations, and other large insurance organizations; (3) physicians recognize that race and ethnicity are conceptually distinct; (4) our AMA supports research into the use of methodologies that allow for multiple racial and ethnic self-designations by research participants; (5) our

AMA encourages investigators to recognize the limitations of all current methods for classifying race and ethnic groups in all medical studies by stating explicitly how race and/or ethnic taxonomies were developed or selected; (6) our AMA encourages appropriate organizations to apply the results from studies of race-ethnicity and health to the planning and evaluation of health services; and (7) our AMA continues to monitor developments in the field of racial and ethnic classification so that it can assist physicians in interpreting these findings and their implications for health care for patients.
Citation: CSA Rep. 11, A-98; Appended: Res. 509, A-01; Reaffirmed: CSAPH Rep. 1, A-11; Reaffirmed: CEJA Rep. 01, A-21;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 505
(A-23)

Introduced by:	Medical Student Section
Subject:	Improving Access to Opioid Antagonists for Vulnerable and Underserved Populations
Referred to:	Reference Committee E

Whereas, In the United States, the opioid epidemic is a growing health crisis and has been declared a public health emergency[1]; and

Whereas, Natural opioids are derived from the poppy plant, such as morphine and codeine, while synthetic opioids are artificially synthesized such as fentanyl, carfentanil, and methadone[2]; and

Whereas, Natural and synthetic opioid overdose-related deaths are a significant cause of death in the U.S., contributing to more than 100,000 deaths from April 2020 to April 2021, a 28.5% increase from the year prior[3,4]; and

Whereas, Naloxone is a competitive antagonist with a high affinity for the mu-opioid receptor that can reverse opioid-induced respiratory depression and rescue opioid overdose, with a half-life of 30 to 120 minutes[5]; and

Whereas, The widespread distribution and use of naloxone has been shown to decrease opioid overdose-related deaths without significantly increasing the incidence of opioid use[6-8]; and

Whereas, Naloxone may precipitate withdrawal, which can lead to physical and psychological side effects for the patient, including mood changes, which may adversely affect bystanders or medical staff[9,10]; and

Whereas, The need for large or repeated doses of naloxone to reverse synthetic opioid overdose further complicates medical management, adding to healthcare worker stress, especially in times of shortage[11]; and

Whereas, Patients who overdosed on fentanyl-adulterated opioid tablets who received naloxone had recurrence of respiratory depression beyond the standard observation period for opioid overdose[12]; and

Whereas, Synthetic opioids have an increased potency compared to natural opioids, which frequently necessitates higher initial dosing or additional administrations to rescue respiratory depression in the setting of overdose[13-15]; and

Whereas, It has been estimated that nearly 80% of fatal opioid-related overdose deaths involved synthetic opioids[16]; and

Whereas, Between 2013 and 2019, synthetic opioid overdose-related deaths increased 1,040%, with more than 55,000 deaths related to synthetic opioid overdose in 2020 alone[17-19]; and

Whereas, A multi-agency meeting was held in 2019 to discuss the threat of synthetic opioids and urge the development of drugs aimed at rescuing respiratory depression and overdose caused by synthetic opioids specifically; among those present were representatives from the National Institutes of Health (NIH), the National Institute of Allergy and Infectious Diseases, the National Institute of Drug Abuse, the Food and Drug Administration (FDA), the Chemical Countermeasures Research Program, the Biomedical Advanced Research and Development Authority, and the Defense Threat Reduction Agency[20]; and

Whereas, Respiratory stimulant drugs such as hypothalamic hormones, nicotinic receptor agonists, ampakines, serotonin agonists, antioxidants, and potassium channel blockers have been used in animal studies to reverse opioid-induced respiratory depression as alternatives to naloxone, but require further study before safe clinical use[11,21,22]; and

Whereas, Preliminary studies of nalmefene, a mu-opioid receptor antagonist more potent than narcan, have shown potential reversal of opioid-induced respiratory depression[22]; and

Whereas, Experimental drugs such as methocinnamox, an opioid receptor antagonist, have been shown to prevent respiratory depression following heroin exposure in Rhesus monkeys, but have not yet reached clinical trials[23]; and

Whereas, Approximately 1 in 4 women on Medicaid were prescribed opioids during pregnancy[24]; and

Whereas, This high level of opioid use during pregnancy correlates with increased incidence of neonatal abstinence syndrome (NAS) among babies, which is a group of psychological and neurobehavioral signs of withdrawal that may occur in a newborn exposed to opioids or psychotropic substances in utero that between 50% to 80% of infants exposed to opioids in utero will develop[24,25]; and

Whereas, Barriers to treatment for pregnant women with opioid use disorder (OUD) include legal consequences, shame associated with opioids, and misinformation among healthcare professionals resulting in reluctance to provide care[25]; and

Whereas, The American College of Obstetricians and Gynecologists (ACOG) recommends screening for substance use as a part of comprehensive obstetric care, and further recommends that screening should be done at the first prenatal visit universally for all patients[26]; and

Whereas, The American Academy of Addiction Psychiatry (AAAP) supports voluntary screening of pregnant women for substance use disorders for the purpose of providing prenatal care and treatment to mother and fetus[27]; and

Whereas, Universal screening rather than targeted or risk-based screening, as targeted screening can be influenced by negative stereotyping, and may disproportionately target marginalized communities[29]; and

Whereas, A large systematic review of non-randomized trials found that take-home naloxone programs have led to improved survival rates among program participants and reduced opioid overdose mortality rates in the community, and are accompanied by only a low rate of adverse events[28]; and

Whereas, The rate of opioid overdose-related inpatient stays in rural areas increased 76.3% between 2010 and 2017[30]; and

Whereas, The rate of overdose deaths involving opioids among American Indian and Alaskan Natives increased from 2.2 deaths per 100,000 individuals in 2000 to 13.7 deaths per 100,000 individuals in 2016[31]; and

Whereas, A recent systematic review illustrated the need to manage opioid use disorder (OUD) in rural American Indian / Alaskan Native communities with harm reduction education and medication assisted treatment[32]; and

Whereas, The United States Department of Health and Human Services identifies naloxone distribution as a top harm-reduction strategy for addressing the opioid epidemic[33]; and

Whereas, Recent studies of naloxone access in rural areas have identified common barriers, including cost, distance to clinics and providers, stigma felt by customers asking for naloxone, and unawareness of current state-specific standing-order laws[34–37]; and

Whereas, Medicare Part D, the largest single payer of naloxone prescriptions in the United States, dispensed naloxone at a rate of 4.9 per 1000 enrollees compared to 2.9 per 1000 enrollees in non-metropolitan areas, suggesting a growing disparity in naloxone availability in rural areas[38]; and

Whereas, A CDC's August 2019 *Vital Signs* report noted that the amount of naloxone dispensed is 25 times greater in the highest-dispensing counties compared to the lowest-dispensing counties, and that rural counties in the United States are 3 times more likely to be a low-dispensing county than in metropolitan areas[39]; and

Whereas, A study found Arizona was the only state that had enough naloxone availability to prevent 80% of witnessed overdoses in 2017[40]; and

Whereas, Stigma towards drug use in public pharmacy spaces – including fear of naloxone customers being stereotyped as an "addict" and discomfort of pharmacy staff introducing the subject of naloxone – is a recurrent finding in studies examining challenges of naloxone distribution[37,41–43]; and

Whereas, The stigmatization of purchasing medications may be reduced with telehealth and mail-order options for naloxone prescription and delivery[,44]; and

Whereas, Numerous studies, models, and systematic reviews of the literature have demonstrated take-home naloxone programs reduce opioid overdose mortality[45–51]; and

Whereas, Our American Medical Association supports legal use of naloxone regardless of prescription status (H-95.932); and

Whereas, Our AMA already has clear policy (H-420.950 and H-420.962) addressing the key legal, ethic and social concerns around substance use disorder in pregnancy and perinatal addiction, but lacks policy specifically supporting universal screening for opioid use as a tool to combat substance use disorder in pregnancy; and

Whereas, AMA policy advocates for the prevention of drug-related overdose (D-95.987) and general opioid mitigation (D-95.964), but does not explicitly address the growing concern of synthetic opioids nor the limitations of naloxone; therefore be it

RESOLVED, That our American Medical Association amend Policy H-95.932, "Increasing Availability of Naloxone", by addition to read as follows:

Increasing Availability of Naloxone H-95.932

1. Our AMA supports legislative, regulatory, and national advocacy efforts to increase access to affordable naloxone, including but not limited to collaborative practice agreements with pharmacists and standing orders for pharmacies and, where permitted by law, community-based organizations, law enforcement agencies, correctional settings, schools, and other locations that do not restrict the route of administration for naloxone delivery.
2. Our AMA supports efforts that enable law enforcement agencies to carry and administer naloxone.
3. Our AMA encourages physicians to co-prescribe naloxone to patients at risk of overdose and, where permitted by law, to the friends and family members of such patients.
4. Our AMA encourages private and public payers to include all forms of naloxone on their preferred drug lists and formularies with minimal or no cost sharing.
5. Our AMA supports liability protections for physicians and other healthcare professionals and others who are authorized to prescribe, dispense and/or administer naloxone pursuant to state law.
6. Our AMA supports efforts to encourage individuals who are authorized to administer naloxone to receive appropriate education to enable them to do so effectively.
7. Our AMA encourages manufacturers or other qualified sponsors to pursue the application process for over the counter approval of naloxone with the Food and Drug Administration.
8. Our AMA supports the widespread implementation of easily accessible Naloxone rescue stations (public availability of Naloxone through wall-mounted display/storage units that also include instructions) throughout the country following distribution and legislative edicts similar to those for Automated External Defibrillators.
9. Our AMA supports the legal access to and use of naloxone in all public spaces regardless of whether the individual holds a prescription.
10. Our AMA supports efforts to increase the availability, delivery, possession and use of mail-order naloxone to help

prevent opioid-related overdose, especially in underserved communities and American Indian reservations. (Modify Current HOD Policy)

and be it further

RESOLVED, That our AMA amend Policy H-420.950, "Substance Use Disorders During Pregnancy" by addition to read as follows:

Substance Use Disorders During Pregnancy H-420.950
Our AMA will: (1) oppose any efforts to imply that the diagnosis of substance use disorder during pregnancy represents child abuse; (2) support legislative and other appropriate efforts for the expansion and improved access to evidence-based treatment for substance use disorders during pregnancy; (3) oppose the removal of infants from their mothers solely based on a single positive prenatal drug screen without appropriate evaluation; ~~and~~ (4) advocate for appropriate medical evaluation prior to the removal of a child, which takes into account (a) the desire to preserve the individual's family structure, (b) the patient's treatment status, and (c) current impairment status when substance use is suspected, and (5) support universal opioid use screenings at prenatal care visits with early intervention, comprehensive naloxone use education and distribution for those who screen positive and following overdose-related emergency department visits. (Modify Current HOD Policy)

and be it further

RESOLVED, That our AMA amend D-95.987, "Prevention of Drug-Related Overdose" by addition to read as follows:

Prevention of Drug-Related Overdose D-95.987
1. Our AMA: (a) recognizes the great burden that substance use disorders (SUDs) and drug-related overdoses and death places on patients and society alike and reaffirms its support for the compassionate treatment of patients with a SUD and people who use drugs; (b) urges that community-based programs offering naloxone and other opioid overdose and drug safety and prevention services continue to be implemented in order to further develop best practices in this area; (c) encourages the education of health care workers and people who use drugs about the use of naloxone and other harm reduction measures in preventing opioid and other drug-related overdose fatalities; and (d) will continue to monitor the progress of such initiatives and respond as appropriate.
2.Our AMA will: (a) advocate for the appropriate education of at-risk patients and their caregivers in the signs and symptoms of a drug- related overdose; ~~and~~ (b) support the development of adjuncts and alternatives to naloxone to combat synthetic opioid-induced respiratory depression and overdose; and (c)

encourage the continued study and implementation of appropriate treatments and risk mitigation methods for patients at risk for a drug-related overdose.

3. Our AMA will support the development and implementation of appropriate education programs for persons receiving treatment for a SUD or in recovery from a SUD and their friends/families that address harm reduction measures.

4. Our AMA will advocate for and encourage state and county medical societies to advocate for harm reduction policies that provide civil and criminal immunity for the possession, distribution, and use of "drug paraphernalia" designed for harm reduction from drug use, including but not limited to drug contamination testing and injection drug preparation, use, and disposal supplies.

5. Our AMA will implement an education program for patients with substance use disorder and their family/caregivers to increase understanding of the increased risk of adverse outcomes associated with having a substance use disorder and a serious respiratory illness such as COVID-19.

6. Our AMA supports efforts to increase access to fentanyl test strips and other drug checking supplies for purposes of harm reduction. (Modify Current HOD Policy)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Opioid Mitigation D-95.964
Our AMA: (1) encourages relevant federal agencies to evaluate and report on outcomes and best practices related to federal grants awarded for the creation of Quick Response Teams and other innovative local strategies to address the opioid epidemic, and will share that information with the Federation; and (2) will update model state legislation regarding needle and syringe exchange to state and specialty medical societies.
Citation: BOT Rep. 09, I-19;

Treating Opioid Use Disorder in Hospitals D-95.967
1. Our AMAs Opioid Task Force will work together with the American Hospital Association and other relevant organizations to identify best practices that are being used by hospitals and others to treat opioid use disorder as a chronic disease, including identifying patients with this condition; initiating or providing opioid agonist or partial agonist therapy in inpatient, obstetric and emergency department settings; providing cognitive and behavioral therapy as well as other counseling as appropriate; establishing appropriate discharge plans, including education about opioid use disorder; and participating in community-wide systems of care for patients and families affected by this chronic medical disease.
2. Our AMA will advocate for states to evaluate programs that currently exist or have received federal or state funding to assist physicians, hospitals and their communities to coordinate care for patients with the chronic disease of opioid use disorder.
3. Our AMA will take all necessary steps to seek clarification of interpretations of 21 CFR 1306.07 by the DEA and otherwise seek administrative, statutory and regulatory solutions that will allow for (a) prescribers with the waiver permitting the prescribing of buprenorphine for opioid use disorder to be able to do so, when indicated, for hospitalized inpatients, using a physician order rather than an outpatient prescription, and (b) hospital inpatient pharmacies to be able to fill such authorizations by prescribers without this constituting a violation of federal regulations.
Citation: Res. 223, A-18;

Prevention of Drug-Related Overdose D-95.987
1. Our AMA: (a) recognizes the great burden that substance use disorders (SUDs) and drug-related overdoses and death places on patients and society alike and reaffirms its support for the compassionate treatment of patients with a SUD and people who use drugs; (b) urges that community-based programs offering naloxone and other opioid overdose and drug safety and prevention services continue to be implemented in order to further develop best practices in this area; (c) encourages the education of health care workers and people who use drugs about the use of naloxone and other harm reduction measures in preventing opioid and other drug-related overdose fatalities; and (d) will continue to monitor the progress of such initiatives and respond as appropriate.
2.Our AMA will: (a) advocate for the appropriate education of at-risk patients and their caregivers in the signs and symptoms of a drug-related overdose; and (b) encourage the continued study and implementation of appropriate treatments and risk mitigation methods for patients at risk for a drug-related overdose.

3. Our AMA will support the development and implementation of appropriate education programs for persons receiving treatment for a SUD or in recovery from a SUD and their friends/families that address harm reduction measures.
4. Our AMA will advocate for and encourage state and county medical societies to advocate for harm reduction policies that provide civil and criminal immunity for the possession, distribution, and use of “drug paraphernalia” designed for harm reduction from drug use, including but not limited to drug contamination testing and injection drug preparation, use, and disposal supplies.
5. Our AMA will implement an education program for patients with substance use disorder and their family/caregivers to increase understanding of the increased risk of adverse outcomes associated with having a substance use disorder and a serious respiratory illness such as COVID-19.
6. Our AMA supports efforts to increase access to fentanyl test strips and other drug checking supplies for purposes of harm reduction.
Citation: Res. 526, A-06; Modified in lieu of Res. 503, A-12; Appended: Res. 909, I-12; Reaffirmed: BOT Rep. 22, A-16; Modified: Res. 511, A-18; Reaffirmed: Res. 235, I-18; Modified: Res. 506, I-21; Appended: Res. 513, A-22; Modified: Res. 211, I-22;

Increasing Availability of Naloxone H-95.932
1. Our AMA supports legislative, regulatory, and national advocacy efforts to increase access to affordable naloxone, including but not limited to collaborative practice agreements with pharmacists and standing orders for pharmacies and, where permitted by law, community-based organizations, law enforcement agencies, correctional settings, schools, and other locations that do not restrict the route of administration for naloxone delivery.
2. Our AMA supports efforts that enable law enforcement agencies to carry and administer naloxone.
3. Our AMA encourages physicians to co-prescribe naloxone to patients at risk of overdose and, where permitted by law, to the friends and family members of such patients.
4. Our AMA encourages private and public payers to include all forms of naloxone on their preferred drug lists and formularies with minimal or no cost sharing.
5. Our AMA supports liability protections for physicians and other health care professionals and others who are authorized to prescribe, dispense and/or administer naloxone pursuant to state law.
6. Our AMA supports efforts to encourage individuals who are authorized to administer naloxone to receive appropriate education to enable them to do so effectively.
7. Our AMA encourages manufacturers or other qualified sponsors to pursue the application process for over the counter approval of naloxone with the Food and Drug Administration.
8. Our AMA supports the widespread implementation of easily accessible Naloxone rescue stations (public availability of Naloxone through wall-mounted display/storage units that also include instructions) throughout the country following distribution and legislative edicts similar to those for Automated External Defibrillators.
9. Our AMA supports the legal access to and use of naloxone in all public spaces regardless of whether the individual holds a prescription.
Citation: BOT Rep. 22, A-16; Modified: Res. 231, A-17; Modified: Speakers Rep. 01, A-17; Appended: Res. 909, I-17; Reaffirmed: BOT Rep. 17, A-18; Modified: Res. 524, A-19; Reaffirmed: BOT 09, I-19; Reaffirmed: Res. 219, A-21;

Medications for Opioid Use Disorder in Correctional Facilities H-430.987
1. Our AMA endorses: (a) the medical treatment model of employing medications for opioid use disorder (OUD) as the standard of care for persons with OUD who are incarcerated; and (b) medications for persons with OUD who are incarcerated, an endorsement in collaboration with relevant organizations including but not limited to the American Society of Addiction Medicine and the American Academy of Addiction Psychiatry.
2. Our AMA advocates for legislation, standards, policies and funding that require correctional facilities to increase access to evidence-based treatment of OUD, including initiation and continuation of medications for OUD, in conjunction with psychosocial treatment when desired by the person with OUD, in correctional facilities within the United States and that this apply to all individuals who are incarcerated, including individuals who are pregnant, postpartum, or parenting.
3. Our AMA advocates for legislation, standards, policies, and funding that require correctional facilities within the United States to work in ongoing collaboration with addiction treatment physician-led teams, case managers, social workers, and pharmacies in the communities where patients, including individuals who are pregnant, postpartum, or parenting, are released to offer post-incarceration treatment plans for

OUD, including education, medication for addiction treatment and counseling, and medication for preventing overdose deaths, including naloxone (or any other medication that is approved by the United States Food and Drug Administration for the treatment of an opioid overdose), and help ensure post-incarceration medical coverage and accessibility to mental health and substance use disorder treatments, that include medication and behavioral health and social supports for addiction treatment.
4. Our AMA advocates for all correctional facilities to use a validated screening tool to identify opioid withdrawal and take steps to determine potential need for treatment for OUD and opioid withdrawal syndrome for all persons upon entry.
Citation: Res. 443, A-05; Reaffirmed: CSAPH Rep. 1, A-15; Appended: Res. 223, I-17; Modified: Res. 503, A-21;

Substance Use Disorders During Pregnancy H-420.950
Our AMA will: (1) oppose any efforts to imply that the diagnosis of substance use disorder during pregnancy represents child abuse; (2) support legislative and other appropriate efforts for the expansion and improved access to evidence-based treatment for substance use disorders during pregnancy; (3) oppose the removal of infants from their mothers solely based on a single positive prenatal drug screen without appropriate evaluation; and (4) advocate for appropriate medical evaluation prior to the removal of a child, which takes into account (a) the desire to preserve the individual's family structure, (b) the patient's treatment status, and (c) current impairment status when substance use is suspected.
Citation: Res. 209, A-18; Modified: Res. 520, A-19;

Perinatal Addiction - Issues in Care and Prevention H-420.962
Our AMA: (1) adopts the following statement: Transplacental drug transfer should not be subject to criminal sanctions or civil liability; (2) encourages the federal government to expand the proportion of funds allocated to drug treatment, prevention, and education. In particular, support is crucial for establishing and making broadly available specialized treatment programs for drug-addicted pregnant and breastfeeding women wherever possible; (3) urges the federal government to fund additional research to further knowledge about and effective treatment programs for drug-addicted pregnant and breastfeeding women, encourages also the support of research that provides long-term follow-up data on the developmental consequences of perinatal drug exposure, and identifies appropriate methodologies for early intervention with perinatally exposed children; (4) reaffirms the following statement: Pregnant and breastfeeding patients with substance use disorders should be provided with physician-led, team-based care that is evidence-based and offers the ancillary and supportive services that are necessary to support rehabilitation; and (5) through its communication vehicles, encourages all physicians to increase their knowledge regarding the effects of drug and alcohol use during pregnancy and breastfeeding and to routinely inquire about alcohol and drug use in the course of providing prenatal care.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 507
(A-23)

Introduced by: Medical Student Section

Subject: Recognizing the Burden of Rare Disease

Referred to: Reference Committee E

Whereas, Rare diseases, also known as orphan diseases, are defined as conditions that affect less than 200,000 individuals in the United States (US), categorized into various overlapping disease classes including but not limited to chromosomal disorders, connective tissue diseases, blood diseases, metabolic disorders, skin diseases, and autoimmune conditions[1-3]; and

Whereas, Rare diseases cumulatively affect a significant number of people in the US, estimated to be between 25-30 million individuals[4]; and

Whereas, Congress passed The Orphan Drug Act (ODA) to incentivize drug companies to develop treatments for rare diseases and rapidly deploy novel agents to target conditions affecting fewer than 200,000 persons in the United States, or conditions for which a drug will not be profitable within 7 years following approval by the FDA[5-7]; and

Whereas, Current orphan drug legislation to support biopharmaceutical R&D portfolio diversity, enhance patent exclusivity, and provide distinct FDA designations is not sufficient to promote novel drug development for different rare disease classes as 90% of these patients are without an FDA approved treatment[8-10]; and

Whereas, The Affordable Care Act does not specifically address orphan drugs coverage, and even when new treatment options such as drug prescriptions or medical devices are available for people with rare diseases, 61% of patients are denied or delayed in accessing treatment due to insurance company pre-approval[8,11]; and

Whereas, There are many disparities in rare disease health care including 39% of respondents traveling 60 or more miles for medical care, 17% considering or completing relocation, and 29% being granted access to treatment not approved by FDA[1,8]; and

Whereas, The mean health related quality of life scores of those with orphan diseases were the poorest compared to individuals with common chronic diseases, which may be attributed to diagnostic challenges, decreased access to medical information and treatment, and negative psychological impact such as coping with uncertainty[12]; and

Whereas, In 2019, health care costs associated with orphan diseases may be comparable to heart disease or cancer at $966 billion, accounting for direct, indirect, and non-medical costs associated with diagnosis and amounting to nearly 50% of the total national bill, despite a vastly lower percentage of rare disease within the population[10,13,14]; and

Whereas, The number of documented cases of many rare diseases are only expected to increase given recent advances in genomics and personalized medicine[15]; and

Whereas, There is a lack of reliable epidemiological data for patients with orphan diseases and insufficient knowledge on the pathophysiology of these conditions among health care providers, leading to inadequate access to information on disease prevalence and treatment outcomes[16]; and

Whereas, A lack of knowledge has made treatment options difficult for patients with orphan diseases to access, contributing to difficulty and delay in diagnosis, as shown by a National Organization for Rare Diseases (NORD) 2019 report that found 28% of individuals diagnosed with a rare disease did not receive a diagnosis for seven years or more and 38% of individuals received a misdiagnosis[8,17,18]; and

Whereas, Due to barriers in accessing treatment options, patients with rare diseases have difficulty finding treatment information and patient registries, such as Rare Disease Registries have become a tool for both patients and physicians to be educated on their condition[19]; and

Whereas, Natural history studies and patient registries collecting longitudinal, patient-driven data aided by machine learning help advance our understanding of rare diseases and how they progress over time, facilitating clinical research and the development of novel therapeutics[8,20]; and

Whereas, Recent automated tracking systems, such as RENEW, are being used to gather new global genomic discoveries onto an accessible database for genome sequencing of patients for improved therapeutic outcomes[21]; and

Whereas, Incorporation of genomic research as clinical diagnostic tests can increase large scale sequencing projects of structural variants and sharing of data that shortens the time to diagnosis by producing increased cohort sizes for development of personalized therapeutic options[22]; and

Whereas, With future advances in techniques such as genome-wide pooled CRISPR screening and plasmid-based reporter assays, which can shorten time to diagnosis, precision therapeutics could be used as a targeted and efficient approach in orphan disease treatment[23,24]; and

Whereas, With only 30% of the genome accounted for in the diagnosis of rare disease there is still 75% of phenotypic variations within the genome unaccounted for, in which future novel gene discovery through sequencing efforts can overcome this diagnostic challenge[24]; and

Whereas, AMA policy H-185.963 emphasizes insurance coverage for childhood and congenital diseases, but does not sufficiently include the orphan disease population or specialized genomic research considerations needed for timely diagnosis and treatment; therefore be it

RESOLVED, That our American Medical Association recognize the under-treatment and under-diagnosis of orphan diseases, the burden of costs to health care systems and affected individuals, and the health disparities among patients with orphan diseases (New HOD Policy); and be it further

RESOLVED, That our AMA support efforts to increase awareness of patient registries, to improve diagnostic and genetic tests, and to incentivize drug companies to develop novel therapeutics to better understand and treat orphan diseases. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Genetic Information and Insurance Coverage H-185.972
AMA believes: (1) Health insurance providers should be prohibited from using genetic information, or an individual's request for genetic services, to deny or limit any health benefit coverage or establish eligibility, continuation, enrollment or contribution requirements.
(2) Health insurance providers should be prohibited from establishing differential rates or premium payments based on genetic information or an individual's request for genetic services.
(3) Health insurance providers should be prohibited from requesting or requiring collection or disclosure of genetic information.
(4) Health insurance providers and other holders of genetic information should be prohibited from releasing genetic information without express prior written authorization of the individual. Written authorization should be required for each disclosure and include to whom the disclosure would be made.
Citation: BOT Rep. 15, I-96; Reaffirmed: CMS Rep. 8, A-06; Reaffirmed in lieu of Res. 102, A-10; Reaffirmation: A-17; Reaffirmed: BOT Rep. 12, I-21;

Insurance Coverage for Adults with Childhood Diseases H-185.963
Our AMA: (1) urges public and private third party payers to increase access to health insurance products for adults with congenital and/or childhood diseases that are designed for the unique needs of this population; and
(2) emphasizes that any health insurance product designed for adults with congenital and/or childhood diseases include the availability of specialized treatment options, medical services, medical equipment and pharmaceuticals, as well as the accessibility of an adequate number of physicians specializing in the care of this unique population.
Citation: CMS Rep. 2, I-99; Modified and Reaffirmed: CMS Rep. 5, A-09; Reaffirmed: CMS Rep. 01, A-19;

Coverage of Children's Deformities, Disfigurement and Congenital Defects H-185.967
1. The AMA declares: (a) that treatment of a minor child's congenital or developmental deformity or disorder due to trauma or malignant disease should be covered by all insurers; (b) that such coverage shall include treatment which, in the opinion of the treating physician, is medically necessary to return the patient to a more normal appearance (even if the procedure does not materially affect the function of the body part being treated); and (c) that such insurability should be portable, i.e., not denied as a pre-existing condition if the patient's insurance coverage changes before treatment has been either initiated or completed.
2. Our AMA will advocate for appropriate funding for comprehensive dental coverage (including dental implants) for children with orofacial clefting.
Citation: (Sub. Res. 119, I-97; Reaffirmed, A-03; Reaffirmation A-05; Reaffirmation A-08; Appended: Res. 109, A-13)

Addressing Financial Incentives to Shop for Lower-Cost Health Care H-185.920
1. Our AMA supports the following continuity of care principles for any financial incentive program (FIP):
a. Collaborate with the physician community in the development and implementation of patient incentives.
b. Collaborate with the physician community to identify high-value referral options based on both quality and cost of care.
c. Provide treating physicians with access to patients' FIP benefits information in real-time during patient consultations, allowing patients and physicians to work together to select appropriate referral options.
d. Inform referring and/or primary care physicians when their patients have selected an FIP service prior to the provision of that service.
e. Provide referring and/or primary care physicians with the full record of the service encounter.
f. Never interfere with a patient-physician relationship (eg, by proactively suggesting health care items or services that may or may not become part of a future care plan).
g. Inform patients that only treating physicians can determine whether a lower-cost care option is medically appropriate in their case and encourage patients to consult with their physicians prior to making changes to established care plans.
2. Our AMA supports the following quality and cost principles for any FIP:
a. Remind patients that they can receive care from the physician or facility of their choice consistent with their health plan benefits.
b. Provide publicly available information regarding the metrics used to identify, and quality scores

associated with, lower and higher-cost health care items, services, physicians and facilities.
c. Provide patients and physicians with the quality scores associated with both lower and higher-cost physicians and facilities, as well as information regarding the methods used to determine quality scores. Differences in cost due to specialty or sub-specialty focus should be explicitly stated and clearly explained if data is made public.
d. Respond within a reasonable timeframe to inquiries of whether the physician is among the preferred lower-cost physicians; the physician's quality scores and those of lower-cost physicians; and directions for how to appeal exclusion from lists of preferred lower-cost physicians.
e. Provide a process through which patients and physicians can report unsatisfactory care experiences when referred to lower-cost physicians or facilities. The reporting process should be easily accessible by patients and physicians participating in the program.
f. Provide meaningful transparency of prices and vendors.
g. Inform patients of the health plan cost-sharing and any financial incentives associated with receiving care from FIP-preferred, other in-network, and out-of-network physicians and facilities.
h. Inform patients that pursuing lower-cost and/or incentivized care, including FIP incentives, may require them to undertake some burden, such as traveling to a lower-cost site of service or complying with a more complex dosing regimen for lower-cost prescription drugs.
i. Methods of cost attribution to a physician or facility must be transparent, and the assumptions underlying cost attributions must be publicly available if cost is a factor used to stratify physicians or facilities.
3. Our AMA supports requiring health insurers to indemnify patients for any additional medical expenses resulting from needed services following inadequate FIP-recommended services.
4. Our AMA opposes FIPs that effectively limit patient choice by making alternatives other than the FIP-preferred choice so expensive, onerous and inconvenient that patients effectively must choose the FIP choice.
5. Our AMA encourages state medical associations and national medical specialty societies to apply these principles in seeking opportunities to collaborate in the design and implementation of FIPs, with the goal of empowering physicians and patients to make high-value referral choices.
6. Our AMA encourages objective studies of the impact of FIPs that include data collection on dimensions such as:
a. Patient outcomes/the quality of care provided with shopped services;
b. Patient utilization of shopped services;
c. Patient satisfaction with care for shopped services;
d. Patient choice of health care provider;
e. Impact on physician administrative burden; and
f. Overall/systemic impact on health care costs and care fragmentation.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 508
(A-23)

Introduced by: Medical Student Section

Subject: Development and Implementation of Recommendations for Responsible Media Coverage of Opioid Overdoses

Referred to: Reference Committee E

Whereas, The number of opioid-related overdose deaths in the United States has been steadily increasing since 1999, reaching 80,816 deaths in 2021[1-3]; and

Whereas, The media has the capacity to condition people's perceptions of and attitudes towards disease severity[4]; and

Whereas, By selectively including or excluding content, perspectives, and material, media platforms have a powerful capacity to frame issues, shape community attitudes, and impact political decision making[5]; and

Whereas, Media coverage of the opioid overdose crisis has impacted public attitudes regarding the crisis and the subsequent response[5-7]; and

Whereas, The *Herald Sun* newspaper in Australia effectively put heroin at the forefront of the public agenda by consistently highlighting heroin-related overdose deaths in the 1990s[5]; and

Whereas, In the United States from 2008-2013, the news media used an increasing amount of stigmatizing language, such as referring to victims of addiction as "substance abusers" or "addicts" (appeared in 49% of stories) in lieu of less stigmatizing substitutes such as "person with a substance use disorder" (appeared in 2% of stories), potentially leading to increased stigma regarding opioid addiction among the American public[6]; and

Whereas, In the United States from 1998-2012, coverage of the opioid epidemic focused on criminal justice solutions for the opioid epidemic; this coverage shifted to increasingly emphasize treatment, harm reduction, and prevention from 2013-2017, largely mirroring increased public acceptance that the War on Drugs had failed[7]; and

Whereas, Despite increased coverage of the opioid epidemic in the United States occurring through the framework of prevention and treatment from 2013-2017, many evidence-based solutions were rarely mentioned, including the use of medication for treatment (9% of stories), syringe service programs (5% of stories), and safe injection sites (2% of stories)[7]; and

Whereas, The lack of mention of these evidence-based interventions in the news media is correlated with reduced public acceptance of these approaches for treatment of the opioid epidemic[7-9]; and

Whereas, The stigma surrounding opioid addiction and strategies for harm reduction have significantly hindered the public health response to the opioid epidemic in the United States[10]; and

Whereas, Increased stigma associated with media coverage of the opioid epidemic adversely impacts the ability of patients to seek and receive treatment for opioid addiction, as 25% of individuals report negative impacts on their job or fear of a negative opinion of community members as reasons for not seeking treatment[11]; and

Whereas, News media framing of the opioid epidemic in the context of race has contributed to the differentiation of “white from black (and brown) suffering, white from black culpability, and white from black deservingness” in the public discourse[12]; and

Whereas, Coded language used by the media can also contribute to the framing of issues, for example by establishing “urban” as code for Black or Latino and “suburban”/“rural” as code for White, effectively creating perceived separate spaces for white and Black drug users[12]; and

Whereas, This difference in framing leads to a system where Black and Brown people who use drugs are more likely to be incarcerated and less likely to be offered access to healthcare providers, addiction treatment, and tools to prevent overdose and infection[12]; and

Whereas, News media framing of White victims of the opioid epidemic as innocent and their deaths as shocking or out of the ordinary contrasts with persistent framing of the opioid epidemic in Black or Brown communities as normal, contributing to increased stigma[13]; and

Whereas, Stigmatization and marginalization of victims of opioid addiction are associated with greater support for punitive policies instead of investment in prevention and treatment programs[14]; and

Whereas, Ecological studies have shown a significant tendency for increases in fatal overdoses to follow increased media coverage of opioid-related deaths[15]; and

Whereas, Our American Medical Association supports the development of standards for media coverage of mass shootings to help address the gun violence public health crisis in Policy H-145.971, showing that the precedent exists for the AMA to encourage more thoughtful public engagement with health-related issues; therefore be it

RESOLVED, That our American Medical Association encourage the Centers for Disease Control and Prevention, in collaboration with other public and private organizations, to develop recommendations or best practices for media coverage and portrayal of opioid drug overdoses. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Development and Implementation of Recommendations for Responsible Media Coverage of Mass Shootings H-145.971

Our AMA encourages the Centers for Disease Control and Prevention, in collaboration with other public and private organizations, to develop recommendations and/or best practices for media coverage of mass shootings, including informed discussion of the limited data on the relationship between mental illness and gun violence, recognizing the potential for exacerbating stigma against individuals with mental illness.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 509
(A-23)

Introduced by: Medical Student Section

Subject: Addressing Medical Misinformation Online

Referred to: Reference Committee E

Whereas, Medical misinformation is information contrary to the consensus of the scientific community that may or may not be intended to mislead, while medical disinformation is misinformation that is deliberately spread with intent to mislead[1-3]; and

Whereas, Medical misinformation is spread by many different sources online, such as online forums, advertisements, user comments on news and retail sites, social media, search engines, digital magazines, and products sold by online retailers[1,3,4,5]; and

Whereas, Medical misinformation has a large impact on a wide variety of healthcare topics including smoking, statin use, use of unproven treatments, harassment of health workers, and vaccine hesitancy[5,6]; and

Whereas, It was found that misinformation propagated significantly farther and faster online than did accurate information[5,7,8]; and

Whereas, Misinformation about the Zika virus was three times more likely to be shared than were verified stories as seen on multiple social media sites, with half of the top-10 news stories regarding Zika thought to be misinformation[7,8]; and

Whereas, More than half of the United States population used the internet as their primary source for health information in 2018, indicating a reliance on websites for health information[9]; and

Whereas, Research has shown that exposure to just five online misinformation posts about the COVID-19 vaccine were sufficient to make respondents less likely to want a COVID-19 vaccine[5,10]; and

Whereas, Search engine algorithms provide results based on the user's search history and usage of suggested sites or videos, meaning that if one clicks on a site or video promoting medical misinformation, they will have more misinformation sites or videos promoted to them over accurate information[5,11]; and

Whereas, The likelihood that a person will view a particular website and then trust in that website are influenced by its order of appearance on major search engines[12,13]; and

Whereas, Search engines often fail to ensure that the search results provided are credible or trustworthy[13]; and

Whereas, Search engine algorithms can lead a single (potentially unintentional) click on a medical misinformation link to result in an echo chamber effect where personalized results are heavily in favor of medical misinformation[13]; and

Whereas, Sites or product owners can pay to be promoted on the front page of a search engine and therefore increase their influence, creating a potential source of misinformation if not moderated properly[12]; and

Whereas, Search engines for online retailer sites such as Amazon are biased in favor of misinformative products such as anti-vaccination books, ranking them higher in search results[13]; and

Whereas, Inadequate moderation and verification of user testimonials on both WebMD and online retailers like Amazon have promoted the idea of using apricot seeds as a cancer treatment, leading to a 4.60 out of 5 rating for effectiveness on WebMD despite the site's own description of apricot seeds as "likely unsafe"[1]; and

Whereas, Three measures for quality of information showed that the websites from the first 10 pages of Google searches on COVID-19 were lacking in quality, with only 52.7% of prevention-focused websites mentioning physical distancing, and the number of sites suggesting treatment via oxygen, ventilation and fluids was equal to the number of sites suggesting hydroxychloroquine[14]; and

Whereas, Our AMA endorses efforts to combat medical misinformation in Policy D-440.915, but this policy is currently limited to online medical misinformation from social media, without any regard for any other potential online vectors such as search engines, online retailers, or any other type of website online; therefore be it

RESOLVED, That our American Medical Association policy D-440.915 be amended by addition and deletion to read as follows:

Medical and Public Health Misinformation in the ~~Age of Social Media~~Online D-440.915

Our AMA:

(1) encourages social media companies and organizations, search engine companies, online retail companies, online healthcare companies, and other entities owning websites to further strengthen their content moderation policies related to medical and public health misinformation, including, but not limited to enhanced content monitoring, augmentation of recommendation engines focused on false information, and stronger integration of verified health information;

(2) encourages social media companies and organizations, search engine companies, online retail companies, online healthcare companies, and other entities owning websites to recognize the spread of medical and public health misinformation over dissemination networks and collaborate with relevant stakeholders to address this problem as appropriate, including but not limited to altering underlying network dynamics or redesigning platform algorithms;

(3) will continue to support the dissemination of accurate medical and public health information by public health organizations and health policy experts; and
(4) will work with public health agencies in an effort to establish relationships with journalists and news agencies to enhance the public reach in disseminating accurate medical and public health information.

Fiscal Note: Minimal - less than $1,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 510
(A-23)

Introduced by: Medical Student Section

Subject: Comparative Effectiveness Research

Referred to: Reference Committee E

Whereas, Pharmaceutical companies submit investigational new drug (IND) applications to seek Food and Drug Administration (FDA) approval for new medications and supplemental new drug (NDA) applications to seek FDA approval for additional clinical indications for a previously approved medication[1,2]; and

Whereas, Widespread off-label use of many medications by physicians indicates that pharmaceutical companies do not submit NDAs at a rate that keeps pace with emerging clinical practice[2]; and

Whereas, A study of 197 new drugs that were approved by the FDA and became available as generics between 1997 and 2020 demonstrated that new FDA indications for additional clinical conditions were added for 64 drugs (32%), which occurred almost exclusively while they were still patented even when off-label uses for those drugs emerged afterward, suggesting that generic availability disincentivizes pharmaceutical company trials to seek new indications[3]; and

Whereas, While off-label use of drugs by physicians is common and often beneficial for patient access to treatment, the lack of adequate clinical trials, such as those conducted by pharmaceutical companies, to seek new FDA indications when off-label uses emerge limits the evidence basis for their use and importantly, reimbursement by insurance plans[4]; and

Whereas, Pharmaceutical companies patent, run clinical trials for, and profit from INDs that are structurally, functionally, and therapeutically similar to existing generic medications or natural products that are widely available in other formulations[5,6]; and

Whereas, As a natural product, melatonin is not patentable and can be purchased over the counter as a dietary supplement for 10 cents a tablet[7]; and

Whereas, Ramelteon (brand name Rozerem) is a melatonin derivative which aims to improve sleep by stimulating the melatonin receptor, thus employing the same mechanism of action as the naturally occurring substance melatonin[8,9]; and

Whereas, As a non-natural product, Ramelteon was able to be patented, leading to a cost of approximately 10 dollars per pill, which is 100x the cost of a melatonin dietary supplement pill, despite lack of testing to show a difference in efficacy between Ramelteon and melatonin[9]; and

Whereas, As another example, ketamine, an NMDA receptor antagonist approved by the FDA in 1970 as an anesthetic, demonstrated efficacy as an off-label antidepressant in the early 2000s[10,11]; and

Whereas, Despite ketamine's efficacy as an off-label antidepressant and its wide availability and low cost in generic oral and IV formulations, no pharmaceutical company has attempted to add depression as an FDA indication for oral or IV ketamine, even though FDA indications are often tied to insurance reimbursement[12]; and

Whereas, Experts attribute the lack of a ketamine FDA approval for depression to its 2002 patent expiration, which then allowed the production of generic ketamine, reducing potential profit, and removing the incentive for pharmaceutical companies to conduct expensive clinical trials to add depression as an indication for oral or IV ketamine[12]; and

Whereas, While adding depression as an indication for oral or IV ketamine is not necessary, as these available generic formulations can still be prescribed for depression off-label, Johnson & Johnson proceeded to conduct clinical trials for an IND application for a similar compound that could be patented and sold for higher profits, which resulted in the 2019 FDA approval of esketamine (brand name Spravato) nasal spray[13]; and

Whereas, A cost-effectiveness study of esketamine concluded that its price would need to decrease by nearly half in order to be cost-effective for treatment-resistant depression in the US[14]; and

Whereas, Many of the esketamine clinical trials analyzed for its FDA approval only compared it to placebo and not to existing formulations of the structurally similar oral or IV ketamine, and several studies suggest that differences in antidepressant efficacy between esketamine and ketamine may be negligible or that ketamine may even be superior to esketamine[15]; and

Whereas, Ketamine remains inadequately studied and does not have an FDA indication as an antidepressant, despite its wide availability as a generic, relatively low cost (especially compared to the patented esketamine), and potential clinical benefit to millions of Americans suffering from treatment-resistant depression[12,16,17]; and

Whereas, The AMA "supports programs whose purpose is to contain the rising costs of prescription drugs" (H-110.997); and

Whereas, The AMA supports "autonomous clinical decision-making authority of a physician and that a physician may lawfully use an FDA approved drug product or medical device for an off-label indication when such use is based upon sound scientific evidence" (H-120.988); and

Whereas, Proper comparisons in clinical trials can give physicians the scientific evidence needed to provide the best care for their patients, while simultaneously containing the cost of prescription drugs by avoiding prescribing drugs that have significantly greater cost but show no additional clinical benefit; therefore be it

RESOLVED, That our American Medical Association study the feasibility of including comparative effectiveness studies in various FDA drug regulatory processes, including comparisons with existing standard of care, available generics and biosimilars, and drugs commonly used off-label and over-the-counter (Directive to Take Action); and be it further

RESOLVED, That our AMA ask the National Institutes of Health to support and fund comparative effectiveness research for approved drugs, including comparisons with existing standard of care, available generics and biosimilars, and drugs commonly used off-label and over-the-counter. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

E7.2.3 Patents & Dissemination of Research Products

A patent grants the holder the right, for a limited time, to prevent others from commercializing his or her inventions. By requiring full disclosure of the invention, and thus enabling another trained in the art to replicate it, the patent system protects the holder's discovery, yet also fosters information sharing. Patenting is also thought to encourage private investment into research.

With respect to genetic research, patenting raises unique questions. Arguments have been made that the patenting of human genetic material sets a troubling precedent for the ownership or commodification of human life. However, DNA sequences are not tantamount to human life and it is unclear where and whether qualities uniquely human are found in genetic material. Moreover, while genetic research holds great potential for developing new medical therapies it remains unclear what role patenting will play in ensuring such development.

Physicians who develop medical innovations may ethically patent their discoveries or products but should uphold the following guidelines:
(a) Not use patents (or other means, such as trade secrets or confidentiality agreements) to limit the availability of medical innovations. Patent protection should not hinder the goal of achieving better medical treatments and technologies.

(b) Not allow patents to languish. Physicians who hold patents should negotiate and structure licensing agreements in such a way as to encourage the development of better medical technology.
(c) For patents on genetic materials recognize that:
(i) patents on processes, e.g. to isolate and purify gene sequences, are ethically preferable to patents on the substances themselves;
(ii) patents on purified proteins (substance patents) are ethically preferable to patents on genes or DNA sequences.

Descriptions for (substance) patents on proteins, genes, or genetic sequences should be carefully constructed to ensure that the patent holder does not limit the use of a naturally occurring form of the substance in question.
Issued: 2016

Pharmaceutical Costs H-110.987
1. Our AMA encourages Federal Trade Commission (FTC) actions to limit anticompetitive behavior by pharmaceutical companies attempting to reduce competition from generic manufacturers through manipulation of patent protections and abuse of regulatory exclusivity incentives.
2. Our AMA encourages Congress, the FTC and the Department of Health and Human Services to monitor and evaluate the utilization and impact of controlled distribution channels for prescription pharmaceuticals on patient access and market competition.
3. Our AMA will monitor the impact of mergers and acquisitions in the pharmaceutical industry.
4. Our AMA will continue to monitor and support an appropriate balance between incentives based on appropriate safeguards for innovation on the one hand and efforts to reduce regulatory and statutory barriers to competition as part of the patent system.
5. Our AMA encourages prescription drug price and cost transparency among pharmaceutical companies, pharmacy benefit managers and health insurance companies.
6. Our AMA supports legislation to require generic drug manufacturers to pay an additional rebate to state Medicaid programs if the price of a generic drug rises faster than inflation.
7. Our AMA supports legislation to shorten the exclusivity period for biologics.
8. Our AMA will convene a task force of appropriate AMA Councils, state medical societies and national medical specialty societies to develop principles to guide advocacy and grassroots efforts aimed at addressing pharmaceutical costs and improving patient access and adherence to medically necessary prescription drug regimens.
9. Our AMA will generate an advocacy campaign to engage physicians and patients in local and national advocacy initiatives that bring attention to the rising price of prescription drugs and help to put forward solutions to make prescription drugs more affordable for all patients.
10. Our AMA supports: (a) drug price transparency legislation that requires pharmaceutical manufacturers to provide public notice before increasing the price of any drug (generic, brand, or specialty) by 10% or more each year or per course of treatment and provide justification for the price increase; (b) legislation that authorizes the Attorney General and/or the Federal Trade Commission to take legal action to address price gouging by pharmaceutical manufacturers and increase access to affordable drugs for patients; and (c) the expedited review of generic drug applications and prioritizing review of such applications when there is a drug shortage, no available comparable generic drug, or a price increase of 10% or more each year or per course of treatment.
11. Our AMA advocates for policies that prohibit price gouging on prescription medications when there are no justifiable factors or data to support the price increase.
12. Our AMA will provide assistance upon request to state medical associations in support of state legislative and regulatory efforts addressing drug price and cost transparency.
13. Our AMA supports legislation to shorten the exclusivity period for FDA pharmaceutical products where manufacturers engage in anti-competitive behaviors or unwarranted price escalations.
14. Our AMA supports legislation that limits Medicare annual drug price increases to the rate of inflation.
Citation: CMS Rep. 2, I-15; Reaffirmed in lieu of: Res. 817, I-16; Appended: Res. 201, A-17; Reaffirmed in lieu of: Res. 207, A-17; Modified: Speakers Rep. 01, A-17; Appended: Alt. Res. 806, I-17; Reaffirmed: BOT Rep. 14, A-18; Appended: CMS Rep. 07, A-18; Appended: BOT Rep. 14, A-19; Reaffirmed: Res. 105, A-19; Appended: Res. 113, I-21; Reaffirmed in lieu of: Res. 810, I-22;

FDA H-100.992
1. Our AMA reaffirms its support for the principles that: (a) an FDA decision to approve a new drug, to withdraw a drug's approval, or to change the indications for use of a drug must be based on sound scientific and medical evidence derived from controlled trials, real-world data (RWD) fit for regulatory purpose, and/or postmarket incident reports as provided by statute; (b) this evidence should be evaluated by the FDA, in consultation with its Advisory Committees and expert extramural advisory bodies; and (c) any risk/benefit analysis or relative safety or efficacy judgments should not be grounds for limiting access to or indications for use of a drug unless the weight of the evidence from clinical trials, RWD fit for regulatory purpose, and postmarket reports shows that the drug is unsafe and/or ineffective for its labeled indications.
2. The AMA believes that social and economic concerns and disputes per se should not be permitted to play a significant part in the FDA's decision-making process in the course of FDA devising either general or product specific drug regulation.
3. It is the position of our AMA that the Food and Drug Administration should not permit political considerations or conflicts of interest to overrule scientific evidence in making policy decisions; and our AMA urges the current administration and all future administrations to consider our best and brightest scientists for positions on advisory committees and councils regardless of their political affiliation and voting history.
Citation: Res. 119, A-80; Reaffirmed: CLRPD Rep. B, I-90; Reaffirmed: Sunset Report, I-00; Reaffirmation A-06; Appended: Sub. Res. 509, A-06; Reaffirmation I-07; Reaffirmation I-09; Reaffirmation I-10; Modified: CSAPH Rep. 02, I-18; Modified: CSAPH Rep. 02, I-19; Reaffirmed: BOT Rep. 5, I-20;

Patient Access to Treatments Prescribed by Their Physicians H-120.988
1. Our AMA confirms its strong support for the autonomous clinical decision-making authority of a physician and that a physician may lawfully use an FDA approved drug product or medical device for an off-label indication when such use is based upon sound scientific evidence or sound medical opinion; and affirms the position that, when the prescription of a drug or use of a device represents safe and effective therapy, third party payers, including Medicare, should consider the intervention as clinically appropriate medical care, irrespective of labeling, should fulfill their obligation to their beneficiaries by covering such therapy, and be required to cover appropriate 'off-label' uses of drugs on their formulary.
2. Our AMA strongly supports the important need for physicians to have access to accurate and unbiased information about off-label uses of drugs and devices, while ensuring that manufacturer-sponsored promotions remain under FDA regulation.
3. Our AMA supports the dissemination of generally available information about off-label uses by manufacturers to physicians. Such information should be independently derived, peer reviewed, scientifically sound, and truthful and not misleading. The information should be provided in its entirety, not be edited or altered by the manufacturer, and be clearly distinguished and not appended to manufacturer-sponsored materials. Such information may comprise journal articles, books, book chapters, or clinical practice guidelines. Books or book chapters should not focus on any particular drug. Dissemination of information by manufacturers to physicians about off-label uses should be accompanied by the approved product labeling and disclosures regarding the lack of FDA approval for such uses, and disclosure of the source of any financial support or author financial conflicts.
4. Physicians have the responsibility to interpret and put into context information received from any source, including pharmaceutical manufacturers, before making clinical decisions (e.g., prescribing a drug for an off-label use).
5. Our AMA strongly supports the addition to FDA-approved labeling those uses of drugs for which safety and efficacy have been demonstrated.
6. Our AMA supports the continued authorization, implementation, and coordination of the Best Pharmaceuticals for Children Act and the Pediatric Research Equity Act.

Generic Drugs H-125.984
Our AMA believes that: (1) Physicians should be free to use either the generic or brand name in prescribing drugs for their patients, and physicians should supplement medical judgments with cost considerations in making this choice.
(2) It should be recognized that generic drugs frequently can be less costly alternatives to brand-name products.
(3) Substitution with Food and Drug Administration (FDA) "B"-rated generic drug products (i.e., products with potential or known bioequivalence problems) should be prohibited by law, except when there is prior authorization from the prescribing physician.
(4) Physicians should report serious adverse events that may be related to generic substitution, including the name, dosage form, and the manufacturer, to the FDA's MedWatch program.
(5) The FDA, in conjunction with our AMA and the United States Pharmacopoeia, should explore ways to more effectively inform physicians about the bioequivalence of generic drugs, including decisional criteria used to determine the bioequivalence of individual products.
(6) The FDA should fund or conduct additional research in order to identify the optimum methodology to determine bioequivalence, including the concept of individual bioequivalence, between pharmaceutically equivalent drug products (i.e., products that contain the same active ingredient(s), are of the same dosage form, route of administration, and are identical in strength).
(7) The Congress should provide adequate resources to the FDA to continue to support an effective generic drug approval process.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 511
(A-23)

Introduced by: Medical Student Section

Subject: Regulation of Phthalates in Adult Personal Sexual Products

Referred to: Reference Committee E

Whereas, The American Academy of Pediatrics characterizes phthalates as ubiquitous contaminants in food, indoor air, soils, and sediments[1]; and

Whereas, Typical routes of exposure include transfer from hands to mouth, breathing in phthalates in the air, undergoing medical procedures that use devices or equipment containing di(2-ethylhexyl) phthalate (DEHP), and consuming food containing phthalates as a result of packaging or processing[2]; and

Whereas, In animal studies, phthalates have been shown to cause fetal death, malformations, and reproductive toxicity, and in one systematic review, prenatal phthalate exposure was associated with neurodevelopmental outcomes, including lower IQ and problems with attention and hyperactivity[3]; and

Whereas, It is important to understand the impact of phthalates on health as number of animal studies have primarily shown phthalate exposure can cause harmful reproductive and developmental effects[4]; and

Whereas, Human studies have been observational to link phthalate metabolites in urine to a variety of health outcomes such as an increased risk of type 2 diabetes in some populations of women, delayed puberty in women, and relationships of decreased sperm with increased urinary phthalate concentration[5-7]; and

Whereas, Currently, eight phthalates are banned from children's toys and childcare items by the United States Consumer Product Safety Commission (CPSC) due to harmful health effects, including on reproductive development[10,11]; and

Whereas, Although the data is unclear on the adverse effects of exposure of skin and mucous membranes to DEHP, there are associations between di(2-ethylhexyl) phthalate (DEHP) and adverse health outcomes[13]; and

Whereas, The FDA has recognized the adverse health effects of phthalates in medical devices in indwelling devices and transfusion devices, and has also advised against the use of phthalates in pharmaceuticals regulated by the Center for Drug Evaluation and Research (CDER)[15]; and

Whereas, The United States Consumer Product Safety Commission (US CPSC) published a risk assessment for exposure to phthalates and phthalate alternatives in 2014[16]; and

Whereas, There is little data pertaining to how widespread the negative outcomes for phthalate exposure are in humans and there is also a lack of human studies about phthalate exposure from sex toys specifically; and

Whereas, Given the evidence that phthalates have a possibility of having a negative impact on human health, specifically in the case of DEHP, it would be appropriate for our AMA to take a stance on the use of these compounds in all consumer products, sexual or otherwise; and

Whereas, Our American Medical Association has current policy (H-135.945) that addresses the health risks of DEHP in medical devices; therefore be it

RESOLVED, That our American Medical Association amend policy H-135.945 by addition and deletion to read as follows:

Encouraging Alternatives to PVC/Phthalate ~~DEHP~~ Products in Health H-135.945

Our AMA:
(1) encourages hospitals and physicians to reduce and phase out polyvinyl chloride (PVC) ~~medical device~~ products, especially those containing phthalates such as Di(2-ethylhexyl)phthalate (DEHP), and urge adoption of safe, cost-effective, alternative products where available; ~~and~~
(2) urges expanded manufacturer development of safe, cost-effective alternative products to PVC ~~medical device~~ products, especially those containing phthalates such as DEHP;
(3) encourages the U.S. Consumer Product Safety Commission to conduct a risk assessment of adult personal sexual products as a source of phthalates; and
(4) supports consumer education about the potential for exposure to toxic substances in adult personal sexual products. (Modify Current HOD Policy)

Fiscal Note: Minimal - less than $1,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 512
(A-23)

Introduced by: American Academy of Physical Medicine & Rehabilitation; American Association of Neuromuscular & Electrodiagnostic Medicine

Subject: Wheelchairs on Airplanes

Referred to: Reference Committee E

Whereas, More than five million Americans use a wheelchair for mobility[1]; and

Whereas, The Americans with Disability Act requires all modes of public transportation, except for airlines, to have the capability for wheelchair users to stay in their wheelchairs during transport and be able to enter and exit boats, buses, or trains; and

Whereas, Currently, patients who are unable to walk due to a medical illness or condition and who use a wheelchair for mobility must transfer or be transferred by airline staff to a special airline chair to enter an aircraft and then must transfer or be transferred by airline personnel to a seat in the aircraft, risking injury due to incorrect transfer technique by inexperienced personnel, such as hitting the armrests; and

Whereas, Patients with significant musculoskeletal weakness or spinal or other deformity have wheelchairs with specialized seating to support their bodies in comfortable and safe positions, but airplane seats have no special support, leaving the patients unstable in their seats and at risk of injury during turbulence or unusual landings; and

Whereas, A feasibility study was commissioned by Congress through the Federal Aviation Administration (FAA) Reauthorization Act of 2018 and the results "did not show any issues in this preliminary assessment that seem likely to present design and engineering challenges so formidable that they call into question the technical feasibility of an in-cabin wheelchair securement system and the value of exploring the concept further,"[2]; and

Whereas, New wheelchair securement systems have been tested that exceed the FAA safety requirement of 16 G deceleration forces for airplane seats[2,3]; and

Whereas, Patients who use wheelchairs as their only means of mobility who have traveled on airplanes have experienced lost and broken wheelchairs, leaving them at the airport with no means of mobility and subsequent avoidance of air travel altogether[4]; therefore be it

RESOLVED, That our American Medical Association encourage Congress and the FAA to change the rules for commercial flights so that modifications must be made to planes to allow passengers whose only means of mobility is the wheelchair to stay in their personal wheelchairs during flight and while entering and exiting the plane. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 513
(A-23)

Introduced by:	American Academy of Child and Adolescent Psychiatry, American Academy of Psychiatry and the Law, American Association for Geriatric Psychiatry, American Psychiatric Association, American Academy of Addiction Psychiatry, American Society of Addiction Psychiatry
Subject:	Substance Use History is Medical History
Referred to:	Reference Committee E

Whereas, Addiction is a chronic brain disease[1] and is the most severe form of substance use disorder, a chronic medical illness with potential for both recurrence and remission[2]; and

Whereas, Substance use disorder has been recognized by our American Medical Association as a treatable disease in policy H-95.922, "*Substance Use and Substance Use Disorders"*; and

Whereas, 20.1 million Americans have a substance use disorder and only 6.9% receive treatment[3] and 1 in 7 people in the United States will develop a substance use disorder over the course of their lifetime[2]; and

Whereas, Substance use disorder has historically been viewed as a moral failing and social problem rather than a chronic medical illness, and treatment of substance use disorders has been siloed from mainstream healthcare and patients with substance use disorders have been subjected to discrimination and stigma by the healthcare system and healthcare providers; and

Whereas, Medical schools teach substance use history as part of a patient's social history and not the past medical history; and

Whereas, Electronic health record software is designed to capture substance use history in the social history section and not in the past medical history section of clinical documentation; and

Whereas, Negative attitudes among healthcare professionals regarding patients with substance use disorders are linked with reduced empathy and engagement with patients, reduced delivery of evidence-based treatment services and poorer patient outcomes[4]; and

Whereas, Existing AMA policies D-95.981, *"Improving Medical Practice and Patient/Family Education to Reverse the Epidemic of Nonmedical Prescription Drug Use and Addiction"* and H-95.922 call for our AMA to take a positive stance as the leader in matters concerning substance use disorders, including addiction and to assist in reducing the stigma associated with substance use; and

Whereas, Drugs and alcohol are biologically active substances that upon ingestion alter one's physiological functioning and have a direct impact on health; and

Whereas, History-gathering about substance use and the chronic treatable medical illness of substance use disorder as part of a patient's past medical history would destigmatize substance use and would promote the provision of evidence-based care; therefore be it

RESOLVED, That our American Medical Association support that substance use history is part of the medical history and should be documented in the medical history section of a patient's health record (New HOD Policy); and be it further

RESOLVED, That our AMA support that all medical schools train medical students to take a thorough and nonjudgmental substance use history as part of a patient's medical history (New HOD Policy); and be it further

RESOLVED, That our AMA work with relevant stakeholders to advocate for electronic health record vendors to modify their software to allow for substance use history to be documented in the past medical history and to move the substance use history from the social history section of electronic health record technology. (Directive to Take Action)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Substance Use Disorders as a Public Health Hazard H-95.975
Our AMA: (1) recognizes that substance use disorders are a major public health problem in the United States today and that its solution requires a multifaceted approach;
(2) declares substance use disorders are a public health priority;
(3) supports taking a positive stance as the leader in matters concerning substance use disorders, including addiction;
(4) supports studying innovative approaches to the elimination of substance use disorders and their resultant street crime, including approaches which have been used in other nations; and
(5) opposes the manufacture, distribution, and sale of substances created by chemical alteration of illicit substances, herbal remedies, and over-the-counter drugs with the intent of circumventing laws prohibiting possession or use of such substances.
Citation: Res. 7, I-89; Appended: Sub. Res. 401, Reaffirmed: Sunset Rep., I-99; Reaffirmed: CSAPH Rep. 1, A-09; Modified and Reaffirmed: CSAPH Rep. 1, A-09; Reaffirmed: CSAPH Rep. 01, A-19;

Substance Use and Substance Use Disorders H-95.922
Our AMA:
(1) will continue to seek and participate in partnerships designed to foster awareness and to promote screening, diagnosis, and appropriate treatment of substance misuse and substance use disorders;
(2) will renew efforts to: (a) have substance use disorders addressed across the continuum of medical education; (b) provide tools to assist physicians in screening, diagnosing, intervening, and/or referring patients with substance use disorders so that they have access to treatment; (c) develop partnerships

with other organizations to promote national policies to prevent and treat these illnesses, particularly in adolescents and young adults; and (d) assist physicians in becoming valuable resources for the general public, in order to reduce the stigma and enhance knowledge about substance use disorders and to communicate the fact that substance use disorder is a treatable disease; and
(3) will support appropriate federal and state legislation that would enhance the prevention, diagnosis, and treatment of substance use disorders.
Citation: CSAPH Rep. 01, A-18; Reaffirmed: BOT Rep. 14, I-20;

Improving Medical Practice and Patient/Family Education to Reverse the Epidemic of Nonmedical Prescription Drug Use and Addiction D-95.981
1. Our AMA:
a. will collaborate with relevant medical specialty societies to develop continuing medical education curricula aimed at reducing the epidemic of misuse of and addiction to prescription controlled substances, especially by youth;
b. encourages medical specialty societies to develop practice guidelines and performance measures that would increase the likelihood of safe and effective clinical use of prescription controlled substances, especially psychostimulants, benzodiazepines and benzodiazepines receptor agonists, and opioid analgesics;
c. encourages physicians to become aware of resources on the nonmedical use of prescription controlled substances that can assist in actively engaging patients, and especially parents, on the benefits and risks of such treatment, and the need to safeguard and monitor prescriptions for controlled substances, with the intent of reducing access and diversion by family members and friends;
d. will consult with relevant agencies on potential strategies to actively involve physicians in being "a part of the solution" to the epidemic of unauthorized/nonmedical use of prescription controlled substances; and
e. supports research on: (i) firmly identifying sources of diverted prescription controlled substances so that solutions can be advanced; and (ii) issues relevant to the long-term use of prescription controlled substances.
2. Our AMA, in conjunction with other Federation members, key public and private stakeholders, and pharmaceutical manufacturers, will pursue and intensify collaborative efforts involving a public health approach in order to:
a. reduce harm from the inappropriate use, misuse and diversion of controlled substances, including opioid analgesics and other potentially addictive medications;
b. increase awareness that substance use disorders are chronic diseases and must be treated accordingly; and
c. reduce the stigma associated with patients suffering from persistent pain and/or substance use disorders, including addiction.
Citation: CSAPH Rep. 2, I-08; Appended: Res. 517, A-15; Reaffirmed: BOT Rep. 5, I-15; Reaffirmed: BOT Rep. 09, I-19; Reaffirmed: BOT Rep. 14, I-20

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 514
(A-23)

Introduced by: American Academy of Child and Adolescent Psychiatry, American Academy of Psychiatry and the Law, American Association for Geriatric Psychiatry, American Psychiatric Association, American Society of Addiction Medicine

Subject: Adolescent Hallucinogen-Assisted Therapy Policy

Referred to: Reference Committee E

Whereas, Hallucinogens including but not limited to psilocybin and MDMA (3,4-methylenedioxy-methamphetamine) are designated as drugs with no currently accepted medical use[1]; and

Whereas, There are emerging research findings demonstrating clinically significant reduction of refractory depression and post-traumatic stress disorder (PTSD), respectively, in adult patients[2]; and

Whereas, Additional research is needed to better understand the benefits and harms of psychedelic therapy in pediatric patients; and

Whereas, The majority of the states have pending legislation or ballot initiatives to decriminalize psychedelics and licensure would be provided to prescribe psychedelics or to allow for psychedelic-assisted psychotherapy[3]; and

Whereas, The prevalence of adolescent depression continues to increase and adolescent suicide is the second leading cause of death among people aged 15 to 24, there is a need for more investment in adolescent mental health research, interventions, and treatments[4]; and

Whereas, Clinical treatments should be determined by scientific evidence in accordance with applicable regulatory standards and not by ballot initiatives or popular opinion; therefore be it

RESOLVED, That our American Medical Association advocate against the use of psychedelics to treat any psychiatric disorder except within the context of approved investigational studies (Directive to Take Action); and be it further

RESOLVED, That our AMA advocate for continued research and therapeutic discovery into psychedelic agents with the same scientific integrity and regulatory standards applied to other promising therapies in medicine. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 515
(A-23)

Introduced by: Mississippi

Subject: Regulate Kratom and Ban Over-The-Counter Sales

Referred to: Reference Committee E

Whereas, Kratom is a herbal supplement derived from a tropical tree, Mitragyna speciosa, that has been used for centuries in Southeast Asia to alleviate pain, fatigue, and enhance mood; and

Whereas, Kratom has been marketed in the US as an over-the-counter supplement for similar uses, but there is limited scientific evidence to support its safety and efficacy, and concerns have been raised about its potential for addiction, abuse, and adverse effects, including seizures, liver damage, and death; and

Whereas, Kratom is not currently regulated by the Food and Drug Administration (FDA) and has not undergone clinical trials to determine its safety and effectiveness; and

Whereas, The American Medical Association recognizes the potential for kratom to be used as an alternative treatment for opioid addiction, but also acknowledges the need for further research to determine its safety and effectiveness; and

Whereas, The AMA believes that the regulation of kratom is necessary to ensure the safety and well-being of patients and the general public; therefore be it

RESOLVED, That our American Medical Association recommend the following:

1. Kratom should be regulated by the FDA, and its safety and efficacy should be determined through clinical trials before it can be marketed or prescribed as a treatment for any condition.
2. Over-the-counter sales of kratom should be banned, and kratom should be available only by prescription from a licensed healthcare provider if it is deemed to have a medicinal use after proper research.
3. Individuals who are currently using kratom for pain management or other conditions should have access to appropriate medical care to manage their conditions and withdrawal symptoms, if needed.
4. Criminalization of kratom use should not be the intent of this resolution, and individuals who are using kratom for legitimate medical reasons should not be subject to criminal penalties although if it is banned, this does not exclude criminalization of drug trafficking.
5. The Drug Enforcement Administration should conduct a comprehensive review of the potential for kratom abuse and dependence and consider appropriate scheduling under the Controlled Substances Act. A schedule 3 would make it unavailable over the counter but avoid criminal penalties.
6. Research funding should be made available to study the potential therapeutic uses and risks of kratom, and to develop evidence-based guidelines for its safe use.

7. Education and public awareness campaigns should be launched to inform healthcare providers, patients, and the general public about the potential risks and benefits of kratom and the need for caution in its use. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 516
(A-23)

Introduced by: Senior Physicians Section

Subject: Fasting is Not Required for Lipid Analysis

Referred to: Reference Committee E

Whereas, Our American Medical Association has recognized that cardiovascular morbidity and mortality is an urgent public health concern; and

Whereas, Lipids analysis is one of the most ordered lab tests; and

Whereas, All adult patients should have a lipid analysis for assessment of their cardiovascular risk; and

Whereas, Patients are usually asked to fast for eight hours for lipid analysis; and

Whereas, Studies show that lipids and lipoproteins change only minimally in response to normal food intake[1]; and

Whereas, There is no scientific evidence that fasting is superior to non-fasting in evaluating cardiovascular risk from lipid analysis; and

Whereas, All adult patients with diabetes should have a lipid analysis and fasting may increase risk of hypoglycemia, a risk minimized by non-fasting in patients with diabetes; and

Whereas, Guidelines from relevant medical societies in the United States, United Kingdom, Europe, and elsewhere endorse non-fasting lipid profiles; and

Whereas, Pediatrics does not require fasting blood for lipid analysis in children and adolescents since the sample could be drawn at the same time as their physician visit; and

Whereas, Not fasting would simplify timing of blood draws while avoiding the inconvenience of early morning sampling, additional trips to the lab and a second copay; therefore be it

RESOLVED, That our American Medical Association develop educational programs affirming that fasting is not required for lipid analysis. (Directive to Take Action)

Fiscal Note: Approximately $50k for the development of CME-accredited interactive e-learning including staff costs and external vendor contracting.

Received: 4/26/23

RELEVANT AMA POLICY

Prevention of Coronary Artery Disease H-425.990
The AMA believes that (1) total serum cholesterol should be measured under supervision of a physician, with proper safeguards for quality assurance and (2) when serum cholesterol levels are excessive, appropriate measures should be taken to educate the patient concerning methods to improve serum lipids and thereby reduce the risk of coronary heart disease.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 517
(A-23)

Introduced by: New Jersey

Subject: Genetic Predisposition and Healthcare Disparities, Including Cardiovascular Disease in South Asians Residing in the United States

Referred to: Reference Committee E

Whereas**,** South Asians, individuals with origins in Bangladesh, Bhutan, India, the Maldives, Nepal, Pakistan, and Sri Lanka, comprise nearly 5.4 million people and are a rapidly growing ethnic minority group in the United States; and

Whereas**,** South Asians have a higher risk of cardiovascular disease compared to other ethnic groups, including higher rates of coronary artery disease, stroke, and type 2 diabetes; and

Whereas, The risk factors for cardiovascular disease in South Asians are different from those in other ethnic groups, including higher rates of insulin resistance, low levels of high-density lipoprotein (HDL) cholesterol, and a genetic predisposition to heart disease; and

Whereas, South Asians face unique cultural and linguistic barriers to accessing healthcare services, including lack of knowledge about preventive care, language barriers, and cultural beliefs that may affect health-seeking behaviors; and

Whereas, There is a paucity of data on the populations' unique cardiovascular disease risk profiles, etiologic mechanisms, and effective interventions to address the health disparities affecting South Asians in the United States; therefore be it

RESOLVED**,** That our American Medical Association support and advocate for additional NIH funding to study disparities in population health due to genetic predispositions, which lead to diseases with high morbidity such as cardiovascular disease in South Asian patients (Directive to Take Action); and be if further

RESOLVED**,** That our AMA encourage the development of collaborative partnerships with other organizations, institutions, policymakers, and stakeholders to reduce health disparities arising from genetic predispositions and any accompanying cultural and linguistic barriers, through the creation of educational campaigns and outreach programs. (New HOD Policy)

Fiscal Note: Modest - between $1,000 - $5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 518
(A-23)

Introduced by: American Thoracic Society

Subject: Defending NIH funding of Animal Model Research From Legal Challenges

Referred to: Reference Committee E

Whereas, Our American Medical Association has long supported the ethical use of animals in research to study human diseases; and

Whereas, Our AMA has clearly established policy in support of ethical animal model research; and

Whereas, Animal rights organizations oppose animal model research in all its forms; and

Whereas, People for the Ethical Treatment of Animals (PETA) has filed a suit (PETA v Tabak) in federal court challenging National Institutes of Health's (NIH's) decision to fund 5 grants studying sepsis in rodents; and

Whereas, Sepsis is a serious health condition that results in an estimated 1.7 million cases in the US and approximately 350,000 US deaths annually; and

Whereas, Further research is needed to understand how to prevent sepsis infections and to develop more effective interventions to treat sepsis infections; and

Whereas, If the court rules in favor of the plaintiffs it may establish a precedent that will invite further legal challenges to federal support for animal model research; therefore be it

RESOLVED, That our American Medical Association join other medical professional societies in an amicus brief supporting that National Institutes of Health's decision to fund grants to study sepsis in rodent animal models (Directive to Take Action); and be it further

RESOLVED, That our AMA reaffirm its support of the use of animal model research that abides by National Institutes of Health's ethical guides on the use of animals in research. (New HOD Policy)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/10/23

RELEVANT AMA POLICY

Medical Research Involving Animals H-460.957
The AMA urges state and county medical societies to support the appropriate and humane use of animals in research and to help ensure the continued availability of animals for essential medical education and medical research; and reaffirms its support for the appropriate and compassionate use of animals in biomedical research programs.
Citation: Sub. Res. 94, I-90; Sub. Res. 511, A-96; Reaffirmed: CSAPH Rep. 3, A-06; Reaffirmed: CSAPH Rep. 01, A-16;

Use of Animals in Research H-460.979
(1) Researchers should include in their protocols a commitment to ethical principles that promote high standards of care and humane treatment of all animals used in research. Further, they should provide animal review committees with sufficient information so that effective review can occur. For their part, institutions should strengthen their animal review committees to provide effective review of all research protocols involving animals. (2) The appropriate and humane use of animals in biomedical research should not be unduly restricted. Local and national efforts to inform the public about the importance of the use of animals in research should be supported. (3) The development of suitable alternatives to the use of animals in research should be encouraged among investigators and supported by government and private organizations. The selection of alternatives ultimately must reside with the research investigator.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 519
(A-23)

Introduced by: GLMA: Health Professionals Advancing LGBTQ+ Equality

Subject: Rescheduling or Descheduling Testosterone

Referred to: Reference Committee E

Whereas, An estimated 2.3 million Americans received testosterone therapy in 2013, with one-half of all prescriptions written by primary care clinicians[1]; and

Whereas, Testosterone therapy treats conditions for cisgender men, cisgender women, and can help bring a transgender or gender diverse (TGD) person's physical characteristics in line with their gender identity, significantly reducing negative psychological outcomes such as depression, anxiety and suicidality[2]; and

Whereas, A significant proportion of all testosterone prescriptions are written for TGD people with an estimated 78% of the estimated 480,000 transgender men and non-binary adults in the US seeking hormone therapy[3]; and

Whereas, The United States is the only developed country that treats testosterone as a controlled substance[4]; and

Whereas, In 1990 the US Drug Enforcement Administration (DEA) classified testosterone and other anabolic androgenic steroids (AAS) as Schedule III substances, which have a potential for low or moderate physical dependence or high psychological dependence when misused[5]; and

Whereas, The DEA classification creates barriers to testosterone therapy and subjects patients to criminalization, discrimination, and harassment[6]; and

Whereas, The DEA classification potentially limits the utilization of telemedicine for provision of testosterone therapy[7]; and

Whereas, Rescheduling or descheduling testosterone has the potential to eliminate numerous barriers to access for patients, especially TGD persons[6]; therefore be it

RESOLVED, That our American Medical Association urge the United States Drug Enforcement Administration to reschedule or deschedule testosterone as a Schedule III substance. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

Received: 5/10/23

RELEVANT AMA POLICY

Health Care Needs of Lesbian, Gay, Bisexual, Transgender and Queer Populations H-160.991
1. Our AMA: (a) believes that the physician's nonjudgmental recognition of patients' sexual orientations, sexual behaviors, and gender identities enhances the ability to render optimal patient care in health as well as in illness. In the case of lesbian, gay, bisexual, transgender, queer/questioning, and other (LGBTQ) patients, this recognition is especially important to address the specific health care needs of people who are or may be LGBTQ; (b) is committed to taking a leadership role in: (i) educating physicians on the current state of research in and knowledge of LGBTQ Health and the need to elicit relevant gender and sexuality information from our patients; these efforts should start in medical school, but must also be a part of
continuing medical education; (ii) educating physicians to recognize the physical and psychological needs of LGBTQ patients; (iii) encouraging the development of educational programs in LGBTQ Health; (iv) encouraging physicians to seek out local or national experts in the health care needs of LGBTQ people so that all physicians will achieve a better understanding of the medical needs of these populations; and (v) working with LGBTQ communities to offer physicians the opportunity to better understand the medical needs of LGBTQ patients; and (c) opposes, the use of "reparative" or "conversion" therapy for sexual orientation or gender identity.
2. Our AMA will collaborate with our partner organizations to educate physicians regarding: (i) the need for sexual and gender minority individuals to undergo regular cancer and sexually transmitted infection screenings based on anatomy due to their comparable or elevated risk for these conditions; and (ii) the need for comprehensive screening for sexually transmitted diseases in men who have sex with men; (iii) appropriate safe sex techniques to avoid the risk for sexually transmitted diseases; and (iv) that individuals who identify as a sexual and/or gender minority (lesbian, gay, bisexual, transgender, queer/questioning individuals) experience intimate partner violence, and how sexual and gender minorities present with intimate partner violence differs from their cisgender, heterosexual peers and may have unique complicating
factors.
3. Our AMA will continue to work alongside our partner organizations, including GLMA, to increase physician competency on LGBTQ health issues.
4. Our AMA will continue to explore opportunities to collaborate with other organizations, focusing on issues of mutual concern in order to provide the most comprehensive and up-to-date education and information to enable the provision of high quality and culturally competent care to LGBTQ people.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 520
(A-23)

Introduced by: Illinois

Subject: Supporting Access to At-Home Injectable Contraceptives

Referred to: Reference Committee E

Whereas, Nearly half of all pregnancies in the United States are unplanned; and

Whereas, Costs of unplanned pregnancy within the healthcare system reach over 4.5 billion dollars annually; and

Whereas, Improper contraceptive adherence is cited as the cause of over half of these unplanned pregnancies; and

Whereas, Increased access to reliable methods of contraception would target this failure and therefore decrease the number of unplanned pregnancies; and

Whereas, Injectable contraceptives are more than 99% effective when given on time; and

Whereas, The necessity of clinic visits every three months is a barrier for many women to access this form of contraception; and

Whereas, Other forms of injectable medications have been trusted to patients, such as insulin, migraine medications, and fertility treatments, among others; and

Whereas, Multiple studies have found women prefer to do contraceptive injections themselves as opposed to visiting an office and have maintained similar efficacy as compared to in-office treatment; and

Whereas, There is now a sub-cutaneous form of injectable contraceptive treatment available with the same efficacy as intramuscular injections, allowing easier and less painful use by patients at home; therefore be it

RESOLVED, That our American Medical Association support access to at-home contraceptive injections as a method of birth control for women across the nation. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

Received: 5/5/23

RELEVANT AMA POLICY

Development and Approval of New Contraceptives H-75.990

Our AMA: (1) supports efforts to increase public funding of contraception and fertility research; (2) urges the FDA to consider the special health care needs of Americans who are not adequately served by existing contraceptive products when considering the safety, effectiveness, risk and benefits of new contraception drugs and devices; and (3) encourages contraceptive manufacturers to conduct post-marketing surveillance studies of contraceptive products to document the latter's long-term safety, effectiveness and acceptance, and to share that information with the FDA.

Citation: BOT Rep. O, I-91; Reaffirmed: Sunset Report, I-01; Modified: CSAPH Rep. 1, A-11; Modified: CSAPH Rep. 1, A-21;

Reducing Unintended Pregnancy H-75.987

Our AMA: (1) urges health care professionals to provide care for women of reproductive age, to assist them in planning for pregnancy and support age-appropriate education in esteem building, decision-making and family life in an effort to introduce the concept of planning for childbearing in the educational process; (2) supports reducing unintended pregnancies as a national goal; and (3) supports the training of all primary care physicians and relevant allied health professionals in the area of preconception counseling, including the recognition of long-acting reversible contraceptives as efficacious and economical forms of contraception.

Citation: Res. 512, A-97; Reaffirmed: CSAPH Rep. 3, A-07; Reaffirmation A-15; Appended: Res. 502, A-15; Reaffirmation I-16;

Over-the-Counter Access to Oral Contraceptives D-75.995

Our AMA: (1) encourages the US Food and Drug Administration to approve a switch in status from prescription to over-the-counter for oral contraceptives, without age restriction; (2) encourages the continued study of issues relevant to over-the-counter access for oral contraceptives; and (3) will work with expert stakeholders to advocate for the availability of hormonal contraception as an over-the-counter medication.

Citation: Sub. Res. 507, A-13; Modified: BOT Rep. 10, A-18; Modified: Res. 518, A-22;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 521
(A-23)

Introduced by: Illinois

Subject: Preventing the Elimination of Cannabis from Occupational and Municipal Drug Testing Programs

Referred to: Reference Committee E

Whereas, The Drug-Free Workplace Act of 1988 (41 U.S.C. 81) is an act of the United States which requires some federal contractors and all federal grantees to agree that they will provide drug-free workplaces as a precondition of receiving a contract or grant from a Federal agency; and

Whereas, Virtually all employers and municipalities follow these guidelines for their drug testing protocols even though they may not have any federal ties; and

Whereas, Cannabis metabolite (THC-COOH) analysis has been part of all urine drug testing programs since the inception of 41 U.S.C.81 in November 1988; and

Whereas, The American College of Occupational and Environmental Medicine (ACOEM) recommends that the implications for workplace safety be a primary consideration and that those in safety-sensitive identified positions should be held to a higher standard until a scientifically valid method to identify impairment has been developed; and

Whereas, Cannabis can significantly impair judgment, motor coordination, and reaction time; and

Whereas, It is well documented that persons experiencing impairment from any drug or medication tend to underestimate the severity of their impairment; and

Whereas, In the first year (2020) of legalization of recreational cannabis in Illinois, more than 1100 people were killed in traffic accidents in the state – an astounding 16% increase from 2019 reversing a downward trend of fatalities over the past decade; and

Whereas, Chicago witnessed a far more dramatic spike in traffic fatalities (139 killed) – a 45% increase from 2019; and

Whereas, Traffic accidents and deaths have been documented to increase when cannabis is legalized; and

Whereas, Initiating THC use at a potency of 12% is associated with almost a fivefold higher risk for progression to cannabis use disorder symptom onset within a year; and

Whereas, THC exhibits adverse cardiac, neurological and psychiatric effects that are dose-related and therefore the use of cannabis is deemed inadvisable for persons performing safety-sensitive work; and

Whereas, Cannabis use also can cause violent behavior through increased aggressiveness, paranoia, and personality changes (more suspicious, aggressive, and anger); therefore be it

RESOLVED, That our American Medical Association support the continued inclusion of cannabis metabolite analysis in all urine/hair/oral fluid drug testing analysis performed for occupational and municipal purposes (pre-employment, post-accident, random and for-cause). (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Issues in Employee Drug Testing H-95.984

The AMA (1) reaffirms its commitment to educate physicians and the public about the scientific issues of drug testing; (2) supports monitoring the evolving legal issues in drug testing of employee groups, especially the issues of positive drug tests as a measure of health status and potential employment discrimination resulting therefrom; (3) takes the position that urine alcohol and other drug testing of employees should be limited to (a) preemployment examinations of those persons whose jobs affect the health and safety of others, (b) situations in which there is reasonable suspicion that an employee's (or physician's) job performance is impaired by alcohol and/or other drug use, (c) monitoring as part of a comprehensive program of treatment and rehabilitation of substance use disorders, and (d) urine, alcohol and other drug testing of all physicians and appropriate employees of health care institutions may be appropriate under these same conditions; and (4) urges employers who choose to establish alcohol and other drug testing programs to use confirmed, positive test results in employees primarily to motivate those employees to seek appropriate assistance with their alcohol or other drug problems, preferably through employee assistance programs.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 522
(A-23)

Introduced by: Association for Clinical Oncology

Subject: Approval Authority of the FDA

Referred to: Reference Committee E

Whereas, The Food and Drug Administration (FDA) is the agency in the executive branch charged with reviewing the science provided by the manufacturers of drugs, convening panels of medical experts in the field, reviewing the relevant medical literature, determining the safety and efficacy of drugs and devices, and approving said drugs and devices for use[1]; and

Whereas, The FDA follows a rigorous, evidence-based review process that has administrative safeguards and opportunities for dissenting views to be heard; and

Whereas, A federal district judge without any medical training or expertise has overturned an FDA decision about a drug, mifepristone, which was both deemed to be safe and effective, and the Supreme Court has maintained access to this drug by staying the district court's decision for the time being[2]; and

Whereas, The drug has been on the market for over 20 years and has been proven safe and effective[3]; and

Whereas, This precedent would allow the judicial branch to negate the procedures of the executive branch and put access to future drugs at risk without consideration of science and medical needs; and

Whereas, This precedent could also have a chilling effect on innovation, research and development if every FDA approval is considered subject to review and reversal; and

Whereas, Physicians must be able to depend on the FDA for accurate and unbiased assessments of drugs; therefore be it

RESOLVED, That our American Medical Association consider filing an amicus brief if a mifepristone-access case is formally heard at the Supreme Court to allow the Food and Drug Administration (FDA) to continue its mission of providing safe and effective drugs without political or ideological interference. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/10/23

RELEVANT AMA POLICY

FDA H-100.992

1. Our AMA reaffirms its support for the principles that: (a) an FDA decision to approve a new drug, to withdraw a drug's approval, or to change the indications for use of a drug must be based on sound scientific and medical evidence derived from controlled trials, real-world data (RWD) fit for regulatory purpose, and/or postmarket incident reports as provided by statute; (b) this evidence should be evaluated by the FDA, in consultation with its Advisory Committees and expert extramural advisory bodies; and (c) any risk/benefit analysis or relative safety or efficacy judgments should not be grounds for limiting access to or indications for use of a drug unless the weight of the evidence from clinical trials, RWD fit for regulatory purpose, and postmarket reports shows that the drug is unsafe and/or ineffective for its labeled indications.
2. The AMA believes that social and economic concerns and disputes per se should not be permitted to play a significant part in the FDA's decision-making process in the course of FDA devising either general or product specific drug regulation.
3. It is the position of our AMA that the Food and Drug Administration should not permit political considerations or conflicts of interest to overrule scientific evidence in making policy decisions; and our AMA urges the current administration and all future administrations to consider our best and brightest scientists for positions on advisory committees and councils regardless of their political affiliation and voting history.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 523
(A-23)

Introduced by: Indiana

Subject: Reducing Youth Abuse of Dextromethorphan

Referred to: Reference Committee E

Whereas, Prescription opioids caused nearly 16,500 deaths in 2020; and

Whereas, The U.S. Food and Drug Administration (FDA), overriding the advice of an expert panel, reported in July 2012 that it would not require doctors to have special training before they could prescribe long-acting prescription opioids; and

Whereas, The FDA has said companies that make the drugs would be required to underwrite the cost of voluntary programs aimed at teaching doctors how to best use long-acting prescription opioids; and

Whereas, Dextromethorphan (DXM) is a type of cough suppressant drug, known as an antitussive, that is either prescribed or available over the counter (OTC) to treat pain, coughs, colds, and several other conditions; and

Whereas, DXM is classified as an opioid, though it does not have the same effect on the brain's opioid receptors as other opioids, although when taken in large doses, it does cause depressant or even hallucinogenic effects; and

Whereas, Because DXM is commonly found in OTC medicines, it is rather easy to obtain, especially by minors; therefore be it

RESOLVED, That our American Medical Association seek and support methods to reduce the sale of products containing dextromethorphan to minors. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/10/23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 524
(A-23)

Introduced by: New York

Subject: Ensuring Access to Reproductive Health Services Medications

Referred to: Reference Committee E

Whereas, Mifepristone is one of two drugs used for medication abortion, a protocol that has been approved by the U.S. Food and Drug Administration for two decades; and

Whereas, Mifepristone is used in combination with misoprostol to end an early pregnancy; and

Whereas, Mifepristone has been safely used in the United States more than 5 million times; and

Whereas, Mifepristone is a drug approved by the FDA in 2000 for terminating pregnancies through 49 days gestation; and

Whereas, Medication abortion offers many women a less invasive procedure, and medication abortion regimen is supported by major medical organizations as a safe and effective method; and

Whereas, The Alliance for Hippocratic Medicine v. FDA seeks to constrain the options physicians are able to provide to their patients even in protected states; and

Whereas, A Texas judge on April 7, 2023 revoked the Food and Drug Administration's approval of mifepristone; and

Whereas, Approval of practically every drug in the US could be undermined by a Texas court's recent ruling on mifepristone, threatens the country's entire regulatory structure; and

Whereas, Both these cases represent an egregious interference in the practice of medicine and impacts the patient-physician relationship; and

Whereas, The implications of this case could impact reproductive healthcare services for generations to come; and

Whereas, It is highly likely that state medical associations will be asked to join litigation surrounding these cases; therefore be it

RESOLVED, That our American Medical Association advocate and support the continuation of the Food and Drug Administration’s authority to determine whether drugs are safe and effective (Directive to Take Action); and be it further

RESOLVED, That our AMA support legal efforts to ensure that mifepristone and misoprostol are available to anyone for whom they are prescribed (New HOD Policy); and be it further

RESOLVED, That our AMA support efforts, including joining in an Amicus Brief, to ensure that both these medications continue to be available, and that the FDA retain its regulatory authority. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/10/23

RELEVANT AMA POLICY

Supporting Access to Mifepristone (Mifeprex) H-100.948

Our AMA will support mifepristone availability for reproductive health indications, including via telemedicine, telehealth, and at retail pharmacies and continue efforts urging the Food and Drug Administration to lift the Risk Evaluation and Mitigation Strategy on mifepristone.

Subject: Annual Report

Presented by: Sandra Adamson Fryhofer, MD, Chair

Referred to: Reference Committee F

The Consolidated Financial Statements for the years ended December 31, 2022 and 2021 and the Independent Auditor's report have been included in a separate booklet, titled "2022 Annual Report." This booklet is included in the Handbook mailing to members of the House of Delegates and will be discussed at the Reference Committee F hearing.

AMA
AMERICAN MEDICAL ASSOCIATION

2022 ANNUAL REPORT

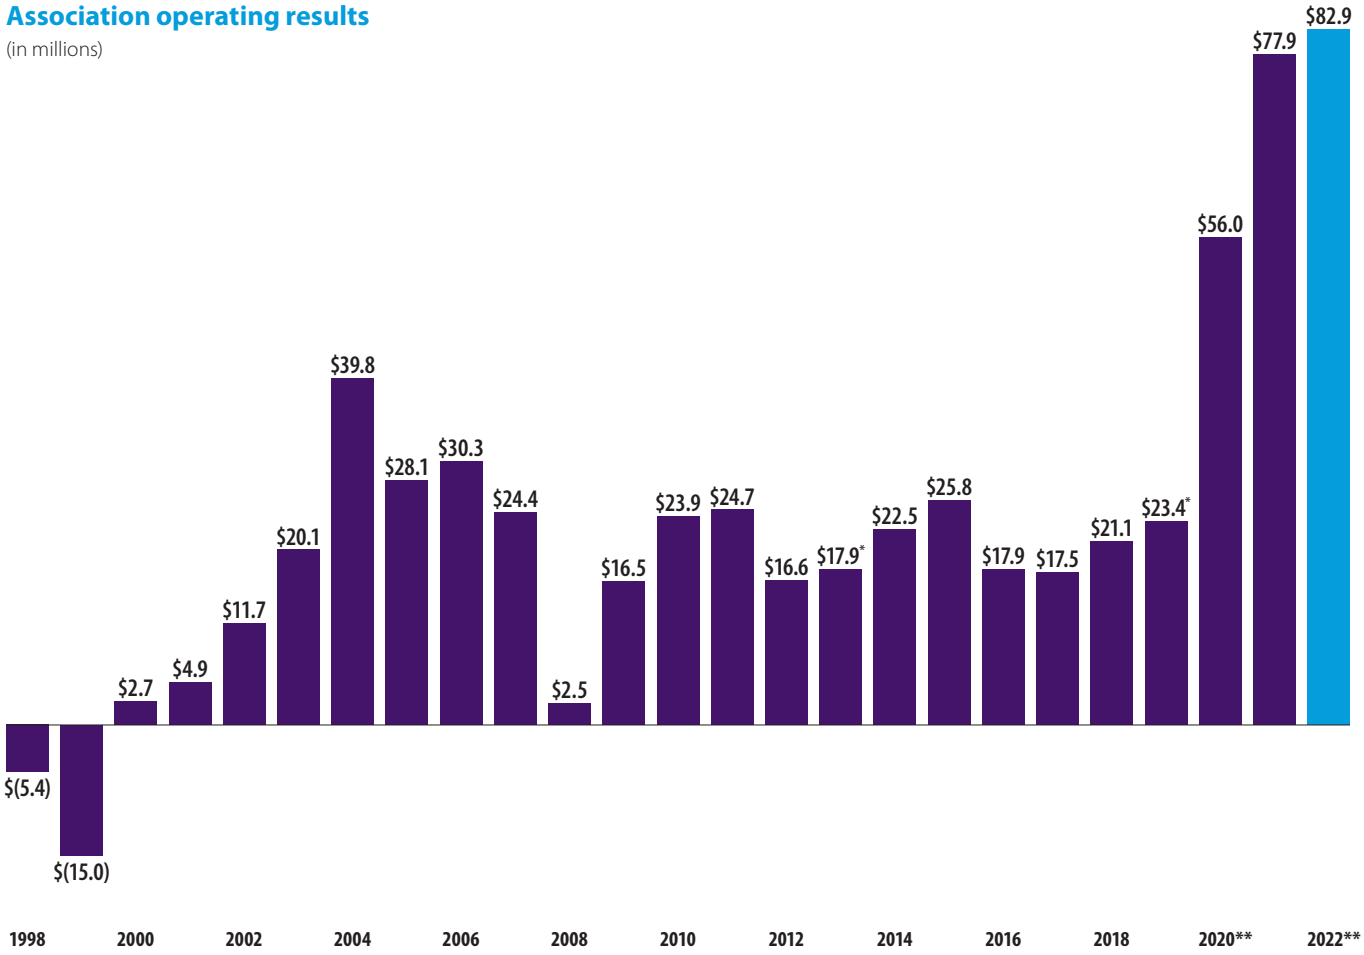
Fighting for physicians

Financial highlights

(Dollars in millions)	2022	2021
Revenues	$ 493.4	$ 459.7
Cost of products sold and selling expense	30.6	25.9
General and administrative expenses	375.5	352.3
Operating results	82.9	77.9
Non-operating items	(117.9)	79.5
Changes in defined benefit postretirement plans, other than periodic expense, net of tax	29.4	5.6
Change in unrestricted equity	(5.6)	163.0
Change in donor restricted equity	0.1	(0.1)
Change in association equity	(5.5)	162.9
Association equity at year-end	$ 889.4	$ 894.9
Employees at year-end	1,267	1,206

Association operating results

(in millions)



** Pro forma operating results: 1) 2013 excludes $33 million in nonrecurring charges relating to AMA's headquarters relocation and 2) 2019 excludes $36.2 million noncash pension termination expense reclassification from non-operating results.*

*** 2020 through 2022 results were impacted by a lack of travel due to the pandemic, as well as a hiring freeze and subsequent tight labor market. These savings are temporary in nature.*

Letter to stakeholders

It's been more than three years since the pandemic took hold of our nation and placed unrelenting pressure upon America's physicians and patients. While the number of deaths slowed and the cases trended downward through much of 2022, the pandemic underscored the urgent need to better support physicians who take care of this nation—and fix what's broken in health care. And the AMA answered.

The AMA met the challenge by introducing its Recovery Plan for America's Physicians. The strategy laid out specific actions needed to strengthen our nation's physician workforce, improve access to necessary care and rebuild our health system to more effectively respond to the next health crisis—whatever it may be.

In its first year the Recovery Plan delivered promising results, as AMA advocacy helped secure significant wins that locked in important telehealth expansions and protected physicians by limiting Medicare payment cuts. But this progress is not nearly enough. Much more is needed in 2023 and beyond to help physicians and their practices recover from the trauma of the pandemic and to help eliminate the pain points that continue to threaten patient care and drive physician dissatisfaction and burnout.

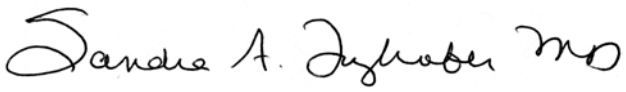
In a year that marked the organization's 175th anniversary, the AMA in 2022 continued to fight relentlessly—through the courts, in the halls of Congress and in state legislatures across the country—on behalf of physicians and patients. We are proud that ours was among the nation's leading nonpartisan voices for science and vaccine efficacy, for advancing health equity, and in cutting through the fog of medical disinformation and misinformation.

And we are equally proud that our voice once again set new standards for physician engagement across multimedia platforms, from content offered on our ever-expanding AMA Ed Hub™ digital education platform to record numbers of media impressions and unique visitors to our flagship website, growth that surpassed the record-high numbers from the pandemic's first year.

Other aspects fundamental to the AMA's mission flourished as well. The AMA released a special edition of its *Code of Medical Ethics*, and the *Journal of the American Medical Association*, under the direction of new Editor-in-Chief Kirsten Bibbins-Domingo, MD, PhD, MAS, maintained its place among the world's preeminent medical journals. All 12 specialty publications from the JAMA Network ranked among the top 10 in Journal Impact, with eight ranking in the top three for their respective specialties. And finally, we expanded the AMA's social impact strategy while helping to improve the lives of residents in our home city with a $3 million multi-year investment in West Side United.

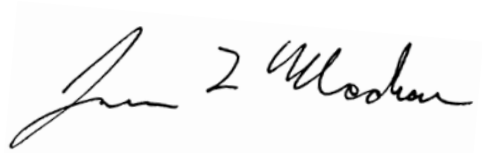
Following 11 consecutive years of membership growth, in 2022 the AMA experienced a small decrease in overall membership (mainly due to a drop in student numbers), but physician membership remained steady. Overall, the organization's advocacy efforts and mission activities were supported by another strong year of financial performance.

With unparalleled advocacy and engagement, strengthened by our industry-leading research, education and tools, the AMA continues to redefine what it means to be the physicians' powerful ally in patient care. Through challenges and change, in times of crisis and calm, the AMA is committed to physicians, patients and advancing medical practice—and we will never back down.

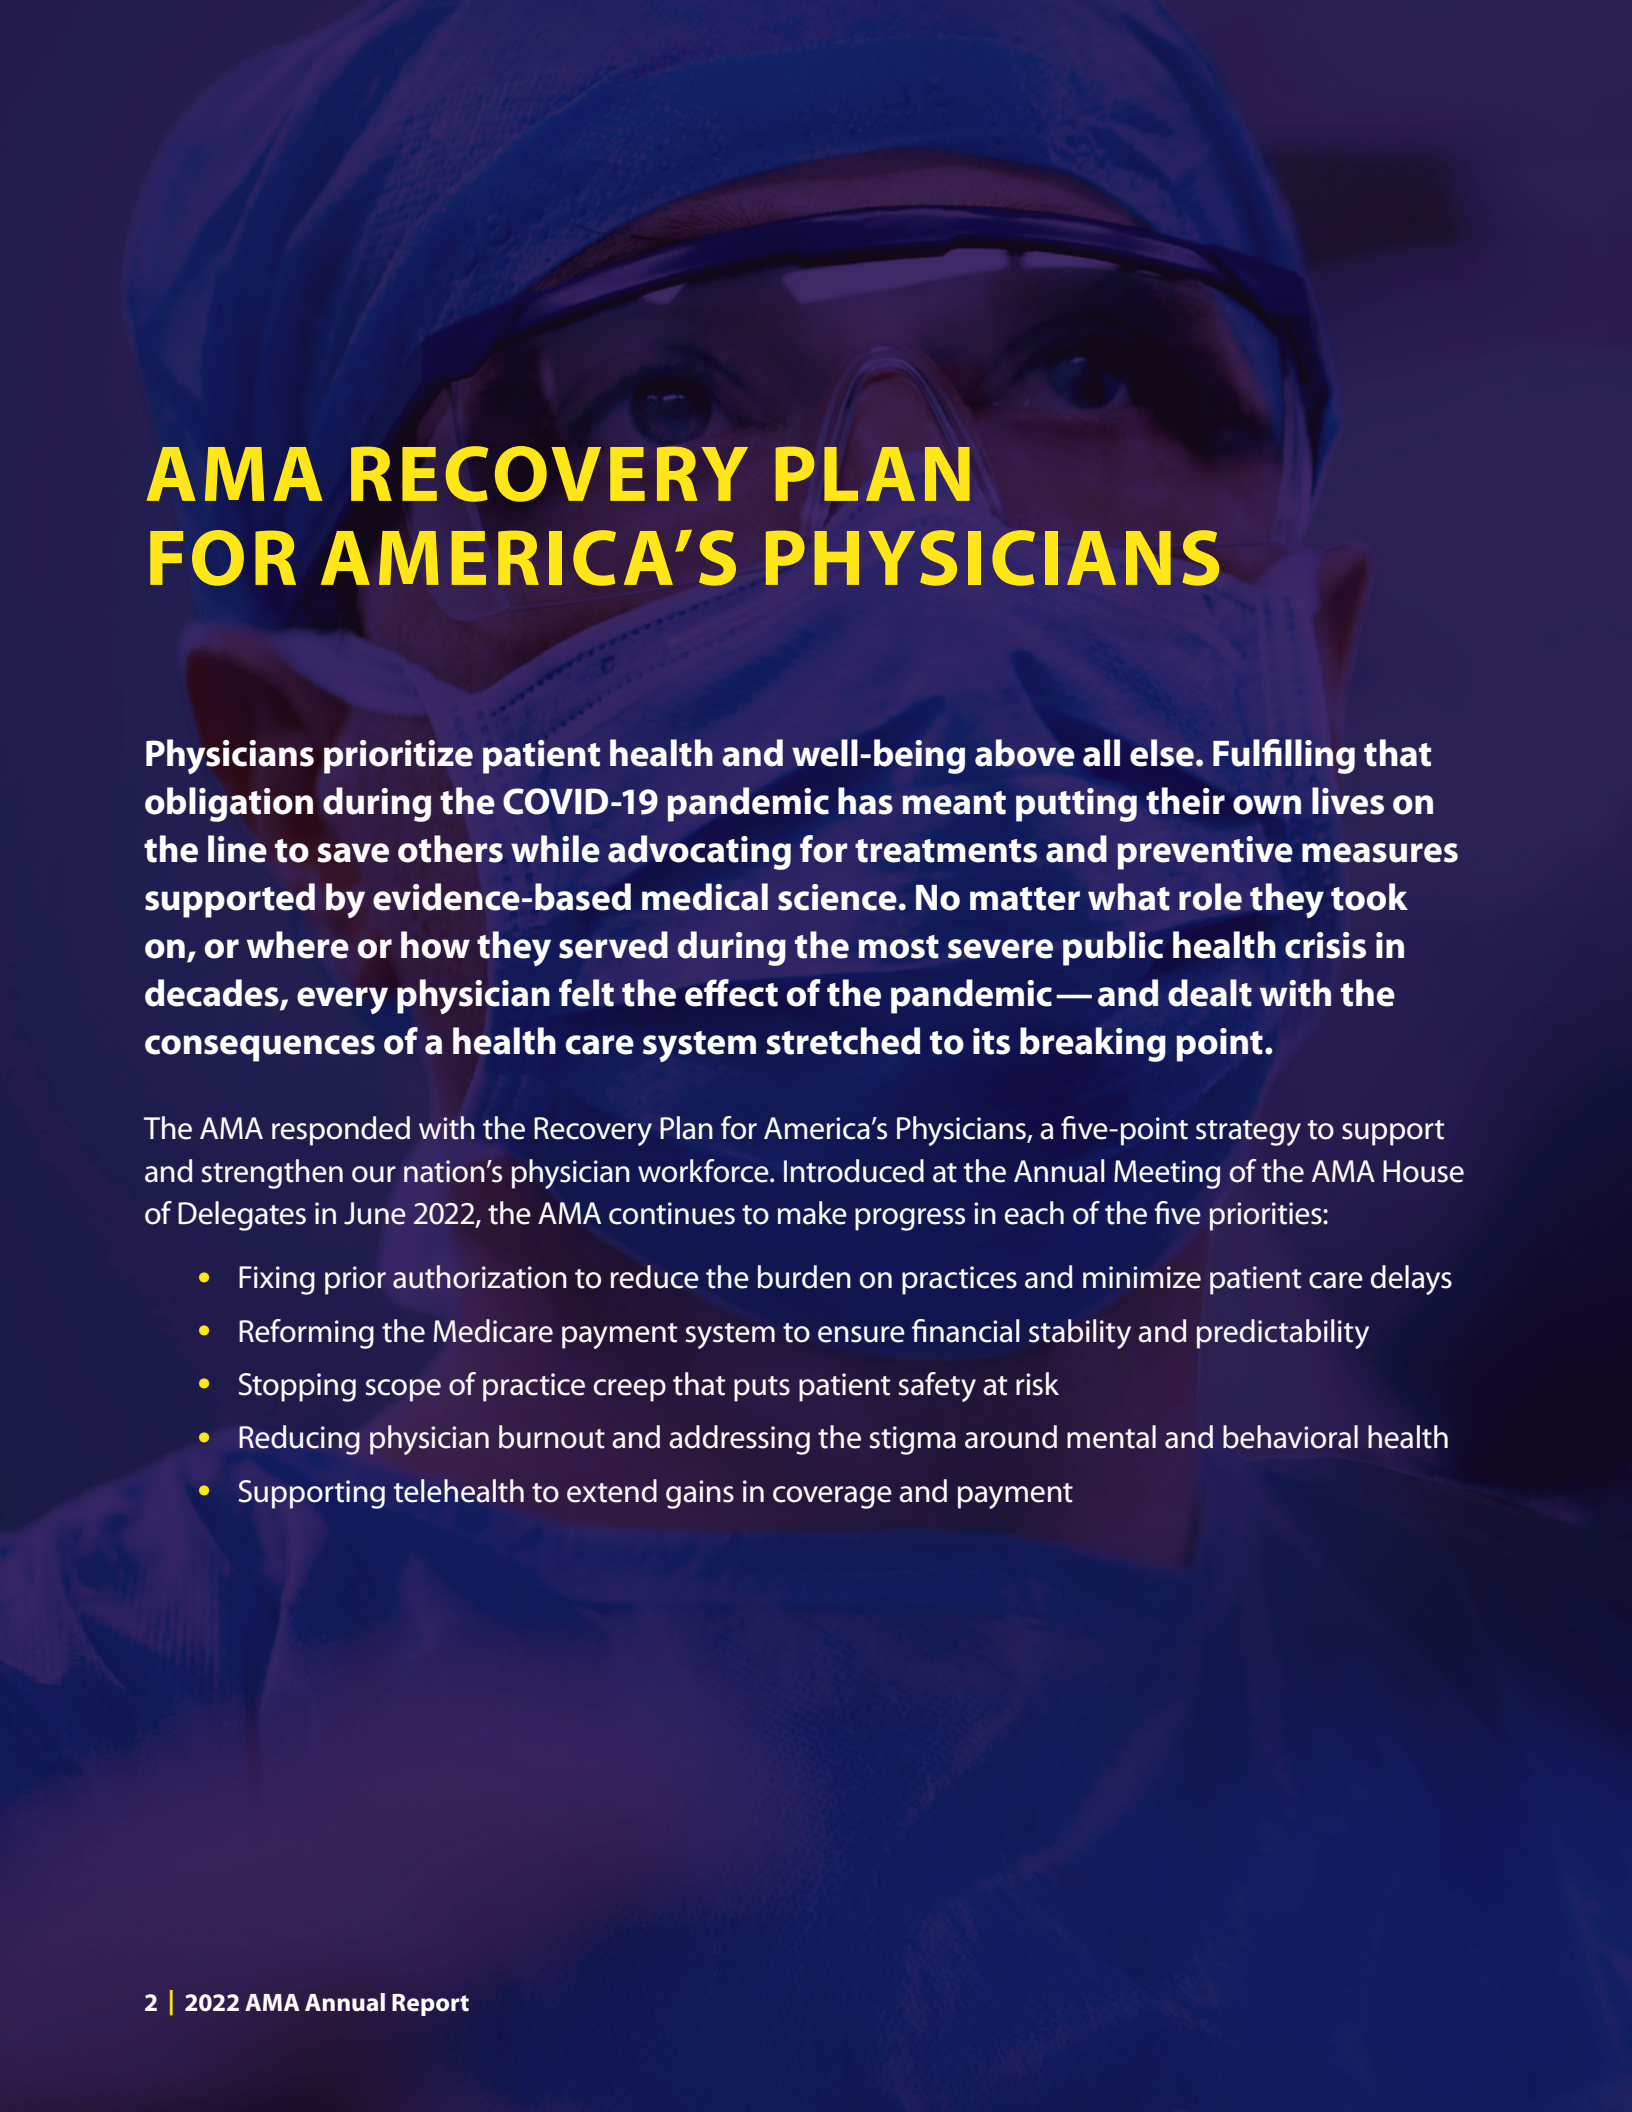


Sandra Adamson Fryhofer, MD
Chair, Board of Trustees

Michael Suk, MD, JD, MPH, MBA
Finance Committee Chair, Board of Trustees



James L. Madara, MD
CEO and Executive Vice President



AMA RECOVERY PLAN FOR AMERICA'S PHYSICIANS

Physicians prioritize patient health and well-being above all else. Fulfilling that obligation during the COVID-19 pandemic has meant putting their own lives on the line to save others while advocating for treatments and preventive measures supported by evidence-based medical science. No matter what role they took on, or where or how they served during the most severe public health crisis in decades, every physician felt the effect of the pandemic—and dealt with the consequences of a health care system stretched to its breaking point.

The AMA responded with the Recovery Plan for America's Physicians, a five-point strategy to support and strengthen our nation's physician workforce. Introduced at the Annual Meeting of the AMA House of Delegates in June 2022, the AMA continues to make progress in each of the five priorities:

- Fixing prior authorization to reduce the burden on practices and minimize patient care delays
- Reforming the Medicare payment system to ensure financial stability and predictability
- Stopping scope of practice creep that puts patient safety at risk
- Reducing physician burnout and addressing the stigma around mental and behavioral health
- Supporting telehealth to extend gains in coverage and payment

The AMA's progress on these goals in 2022 set the stage for even **greater success** in the future.

Fixing prior authorization

The Improving Seniors' Timely Access to Care Act, the bipartisan effort to ease prior authorization burdens under the Medicare Advantage program, garnered 326 co-sponsors before it was passed by the U.S. House of Representatives in September. Its provisions were developed from the consensus statement on prior authorization reform that the AMA helped draft. The AMA represented the interests of physicians in a federal regulatory task force exploring methods to streamline the prior authorization process. The AMA also played a key role in the successful adoption of prior authorization reform laws in five states and laid the groundwork for 2023 reform efforts in dozens more states.

Reforming the Medicare payment system

The AMA has been leading a multiyear effort to bring about Medicare payment models that give physicians greater flexibility in care delivery, minimize administrative burdens that detract from patient care, and improve the financial viability of physician practices. In 2022, we led a robust advocacy campaign that was joined by more than 150 organizations representing more than 1 million physicians that succeeded in minimizing the 8.5% cuts slated for 2023.

The fight is far from over. Although physicians face a 2% reduction in Medicare payment in 2023, AMA advocacy efforts helped secure a two-year postponement of the 4% cuts from the pay-as-you-go sequester tied to the American Rescue Plan Act.

The AMA continues to advocate for comprehensive Medicare payment reform and a rational system that is clinically relevant, less administratively burdensome, provides real opportunities for participation in new payment models, and provides stability and financial viability for large and small, as well as urban and rural, physician practices. Principles developed by the AMA to guide Medicare payment reform were endorsed by more than 120 medical societies.

Fighting scope creep

The AMA scored more than 40 state-level victories by working in partnership with state medical associations and national medical specialty societies. Pressing the fight for patient safety, we stopped bills that would have expanded the scope of practice for nurse practitioners and other APRNs, helped defeat legislation nationwide that would have allowed physician assistants to practice independently without physician oversight, and turned away measures allowing pharmacists to prescribe medications and optometrists to perform surgery.

The AMA continues to aggressively urge the Department of Veterans Affairs to reject the inappropriate scope of practice expansions outlined in the Federal Supremacy Project while advocating as strongly as ever in favor of physician-led teams and against improper scope expansions in all 50 states and the District of Columbia.

Reducing physician burnout

The AMA helped secure enactment of the Dr. Lorna Breen Health Care Provider Protection Act, which enables a broad range of essential physician wellness resources, including evidence-based programs dedicated to improving mental health and resiliency. In addition, the AMA helped build coalitions to strip away stigmatizing questions about mental health and substance abuse disorders on licensure applications. Multiple medical boards and health systems made changes based on AMA recommendations. The AMA also continues to advance strategies organizations can employ to boost professional satisfaction and personal well-being. Finally, the AMA continues to provide tools to address the contributors to burnout in its STEPS Forward series, including a Saving Time Playbook, and a toolkit to address disproportionate impact on patients and physicians called Racial and Health Equity: Concrete STEPS for Health Systems.

Supporting telehealth gains

As evidenced by its tremendous growth during the COVID-19 pandemic, the AMA believes telehealth is a crucial element of effective health care delivery. That's why we continue to work to expand telehealth research, resources and policies while boosting the tools, support and expertise we offer physicians looking to integrate telehealth services into their practices without financial risks or penalties.

The AMA played a key role in securing passage of legislation to extend Medicare telehealth flexibilities through the end of 2024. We also launched model legislation that states can use to advance telehealth coverage and policies, and further supported telehealth expansion by producing curated webinars, hosting interactive information exchanges and virtual discussion sessions, and by expanding our already-impressive library of print and online resources promoting evidence-based telehealth services to now include strategies to advance health equity in virtual care.

AMA highlights

The year 2022 was one of much progress across many meaningful initiatives led by the AMA, from advocacy to education and from health equity to blood pressure management. Here are some highlights of our organization's important work during 2022.

The AMA authored or co-authored a record 27 peer-reviewed journal articles and research reports in 2022 relating to physician burnout and improving professional satisfaction and practice sustainability. And the AMA Steps Forward Program exceeded 1.6 million lifetime users with new training programs that included two more playbooks, two new and 17 updated toolkits, 26 podcasts and four videos.

30 million unique visitors

to our flagship website, a 10% increase from the record-setting performance the previous year.

The AMA expanded its work in promoting physician wellness through its Joy in Medicine™ Health System Recognition Program, honoring nearly 30 health care organizations that represented more than 80,000 physicians.

In the face of a worsening drug-related overdose and death epidemic, the AMA continued to fight to remove barriers to evidence-based care for people with substance use disorders, patients with pain and increase access to harm reduction initiatives. Thanks, in part, to AMA advocacy, Congress removed the federal "X-waiver" requirement to prescribe buprenorphine in-office for treating opioid use disorder; the Centers for Disease Control and Prevention (CDC) eliminated arbitrary, numeric thresholds from its revised 2022 opioid prescribing guidelines; and the U.S. Food and Drug Administration (FDA) removed barriers for harm reduction organizations to directly purchase and distribute naloxone. AMA advocacy also played a role in the National Association of Insurance Commissioners' efforts to increase health insurers' compliance with state and federal mental health and substance use disorder parity laws, as well as new laws being enacted in multiple states that decriminalized fentanyl test strips and other drug testing supplies and equipment.

The industry-leading AMA Ed Hub online education portal continued to expand its programs, affiliations and reach to support live broadcasts and enhance multimedia capabilities. The stable of external education providers grew by 10 to encompass 35 organizations with the addition of the American Board of Pediatrics and the American Academy of Allergy, Asthma and Immunology, among others.

The AMA, led by its Center for Health Equity, strengthened its physician engagement with the launch of seven new educational modules published on the AMA Ed Hub learning platform that focus on strategies to advance equity through quality and safety improvements.

The AMA launched the "In Full Health Learning and Action Community to Advance Equitable Health in Innovation" initiative, building upon the expertise of 17 external collaborations to create three AMA Ed Hub learning modules and the "Equitable Health Innovation Solutions" toolkit.

The AMA developed an mpox resource page to provide physicians with updated information on testing access, vaccines and therapeutics, and worked with the FDA and CDC on a webinar detailing the tecovirimat (TPOXX) antiviral. And the AMA again collaborated on the annual bilingual "Get My Flu Shot/Vacunate Contra la Influenza" campaign, and kept physicians and the public up to date on the latest pandemic developments, including therapeutics and the importance of staying on track with COVID-19 vaccines.

6 million views on our AMA Ed Hub™

digital education platform.

The launch of the AMA's new Current Procedural Terminology (CPT®) Developer Program helped creators of health technology and services convert ideas and leverage AMA-published content into transformative innovations. A new self-service portal gave physicians the ability to license CPT code sets through a simple pay model, including new codes introduced in 2022 relating to the mpox outbreak and ongoing releases for specific COVID-19 vaccines. The AMA also developed revised versions of an initial 20 illustrations for the 2023 CPT PRO Book, reflecting the diversity of our patients.

2.7 million YouTube views

2× the total from 2021.

To close the gap in blood pressure management training within medical schools, the AMA launched a three-part eLearning series, supported by a one-year grant program to monitor the impact of this new training. AMA policy guidance led to four state Medicaid programs increasing access for self-measured blood pressure by covering home-use devices and clinical support services. AMA added four more health care organizations to its growing list of AMA MAP BP™ implementation sites and announced exciting results of one implementation site, Cook County Health on Chicago's West Side, which reported that blood pressure control rates increased by 13 percentage points across 11 practice sites. Additionally, the AMA also trained more than 100 community health workers to help Chicago's West Side residents more accurately measure their blood pressure at home.

The AMA's community support included an additional $3 million multi-year commitment to West Side United, a community-based collaborative that is addressing determinants of health and reshaping economic vitality on Chicago's West Side.

First published in March 2022 as part of the AMA's MedEd Innovation Series, the "Coaching in Medical Education Handbook" quickly sold out. Now in its second printing, this instructor-focused guide outlines a scientific foundation for coaching competency and has ranked in the top 100 of medical education and training books since its release.

The AMA published "Protecting the Education Mission During Sustained Disruption" in 2022, a report that explores organizational strategies to support educators amid extreme stress and which formed the basis of the *Educator Well-Being in Academic Medicine* book published in December.

In cases ranging from COVID-19 standards of care to firearm regulations, the AMA continued to fight for physicians and patients in state and federal courts in 2022. The AMA was a plaintiff in *African American Tobacco Control Leadership Council v. HHS*, which forced the federal government to take the first steps toward banning menthol cigarettes.

The AMA joined an Association of American Medical Colleges-led U.S. Supreme Court amicus brief in the *Students for Fair Admissions v. Harvard* and *Students for Fair Admissions v. University of North Carolina* cases in support of the consideration of race in higher education admissions. Together with the American Academy of Pediatrics, the AMA submitted an amicus brief urging the U.S. Supreme Court to uphold the Indian Child Welfare Act (ICWA) of 1978. And in the wake of the U.S. Supreme Court's *Dobbs v. Jackson Women's Health Organization* decision, the AMA joined numerous briefs promoting access to reproductive care and opposing government interference in the patient-physician relationship.

600,000 AMA podcast downloads

175 billion AMA media impressions

representing $1.6 billion in estimated advertising value to the organization.

The AMA expanded its national Behavioral Health Collaborative with the launch of the Behavioral Health Integration Immersion Program, a 12-month curriculum that provides enhanced technical assistance to physician practices seeking to deliver integrated care to patients. This effort builds on the success of the Overcoming Obstacles series with several new webinars on topics such as assembling a behavioral health integration care team and addressing physician and patient mental health.

The AMA relaunched its popular Physician Innovation Network digital platform, which now has more than 18,000 collaborators and 30 industry partners, to improve user experience and more effectively connect physicians with technology innovators.

Following up on extensive research that identified the benefits physicians valued most in a disability product, AMA Insurance launched two popular enhancements to this line, including a level-rated premium.

Management's discussion and analysis

Management's discussion and analysis

Introduction

The objective of this section is to help American Medical Association (AMA) members and other readers of our financial statements understand management's views on the AMA's financial condition and results of operations. This discussion should be read in conjunction with the audited consolidated financial statements and notes to the consolidated financial statements.

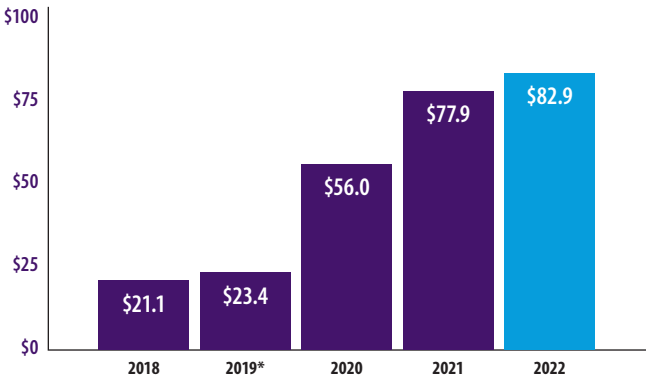
Improving the health of the nation is at the core of the AMA's work. As physicians' powerful ally in patient care, the AMA delivers on this goal by representing physicians with a unified voice in courts and legislative bodies across the nation, removing the largest governmental and private sector obstacles that interfere with optimal patient care, leading the charge to prevent chronic disease and confront public health crises, and driving the future of medicine to tackle the biggest challenges in health care and training the leaders of tomorrow. AMA's strategic arcs are supported by improving health outcomes, lifelong medical education and enhancing physician professional satisfaction and practice sustainability. Our advocacy, health equity and innovation initiatives act as accelerators across all arcs. AMA's foundation is built on science, membership, financial performance, talent and engagement.

2022 accomplishments were led by the launch of the AMA Recovery Plan for America's Physicians, an ambitious roadmap to renewing our country's commitment to physicians—and ensuring their needs are met—so patients can receive the high-quality care they deserve. The plan focuses on five key goals to re-build health care so that it works better for physicians and all those they serve: 1) fixing prior authorization to reduce the burden on practices and minimize care delays for patients; 2) reforming Medicare payment to promote thriving physician practices and innovation; 3) stopping scope creep that threatens patient safety; 4) reducing physician burnout and addressing the stigma around mental health; and 5) supporting telehealth to maintain coverage and payment. Advocacy results included achieving more than 35 state-level scope of practice victories in partnership with the Federation and extending telehealth coverage into 2024, as well as minimizing the impact of the scheduled 8.5 percent Medicare payment cuts. Professional Satisfaction and Practice Sustainability expanded its successful programs to reduce burnout in health systems, based on peer-reviewed studies and research.

The AMA, like all other organizations, recognized in early 2020 that there was substantial uncertainty about the effects and risk of COVID-19 on our funding, financial condition, and results of operations. As a result, AMA took steps to ensure that programmatic activities and employment levels would be protected during a sustained pandemic, knowing the potential for economic uncertainty, including a freeze on hiring and elimination of travel, among other measures. AMA lifted the freeze on hiring in the spring of 2021, but the level of open positions remained high through 2022 due to the very tight job market. The lower staffing levels and limited travel garnered substantial savings. These savings are temporary in nature and drove unusually high operating income for AMA during 2020 through 2022 but are not expected to recur after full return to normal activities in 2023.

Pro forma net operating results

(in millions)



**Excluding the $36.2 million non-cash pension termination charge*

AMA's 2023 budget assumes that these temporary savings will not recur, and coupled with expansion of certain programmatic areas, expenses will increase to normal levels, resulting in operating income at the board-approved policy level.

The AMA is committed to its responsibility of ensuring that the organization focuses its finite resources on core mission activities and strategic arcs while improving the quality and breadth of products and services for physicians and medical students. Our physicians' and medical students' voices are central to AMA's overall success.

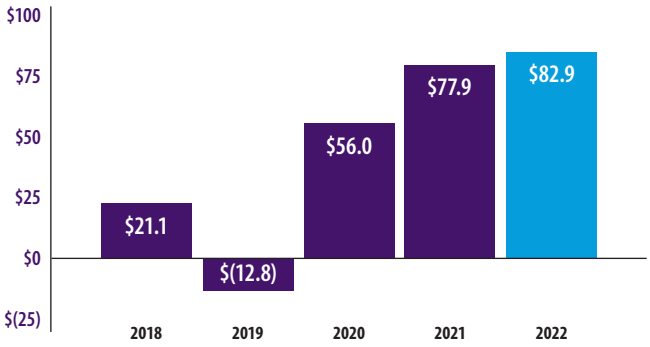
The following pages discuss the 2022 consolidated financial results as compared to 2021. Additional detailed discussion of operating unit results is included in the section titled "Group Operating Results."

Consolidated financial results

Results from operations

Net operating results

(in millions)



As noted above, the unusually tight labor market that adversely impacted hiring and limited travel and in-person meetings in the first half of 2022 were major factors in spending levels running $40 million less than budget. At the same time, recurring revenue rose by approximately $19 million. In addition, the liquidation of a subsidiary and recognition of one-time deferred revenue and costs added $11.6 million to the 2022 net results. Looking ahead to 2023, AMA does not expect to attain the same level of expense savings and future results are expected to be more modest.

In 2019, the AMA finalized termination of its defined benefit pension plan, providing lump sum payments to individuals that elected that option and purchasing a group annuity plan for participants that chose to remain in the plan. AMA recorded a $38.2 million noncash reclassification of prior actuarial losses from non-operating expense to operating expense, titled pension termination expense, as well as reclassifying a $2 million noncash tax benefit to income tax expense that was previously reported as a non-operating credit.

Excluding the $36.2 million noncash pension termination expense (net of the $2 million tax credit), AMA would have reported $23.4 million in net operating income for 2019.

Results discussed below reflect AMA's actual results from operations in 2022 as compared to 2021. Any pro forma charts exclude the impact of the pension termination on 2019 results.

Revenues

In 2022, total revenue improved by $33.7 million over the prior year, due to continued growth in AMA's royalties and a one-time recognition of $14.3 million in deferred revenue from a customer contract in a subsidiary company of Health2047, Inc. (Health2047) upon liquidation of the subsidiary. Most other revenue categories were either slightly down or unchanged for the year.

Consolidated investment income, which is dividend and interest income, net of management fees, increased in 2022, impacted in large part by higher interest rates. Market gains or losses are not included in investment income and are reported as non-operating results.

The number of AMA dues-paying members decreased slightly in 2022 by 0.9 percent, after 11 years of consecutive growth in membership. During that 11-year period, AMA dues-paying membership increased by more than 75,000.

Dues revenue decreased by 2.9 percent as growth in lower dues paying categories such as group memberships and sponsored memberships partially offset the decline in individual direct member categories.

Cost of products sold and selling expenses

All variable expenses related to the production, distribution and sale of periodicals, books, coding products and licensed products are included in the cost of products sold and selling expense categories. Examples include paper, sales commissions, promotional activities, distribution costs and third-party editorial costs.

In 2022, cost of products sold and selling expenses increased $4.7 million from the prior year, of which $2.7 million was for one-time recognition of deferred costs related to the Health2047 subsidiary's recognition of deferred revenue noted above. The remaining increase was largely a function of commodity price and postal rate increases for paper and distribution.

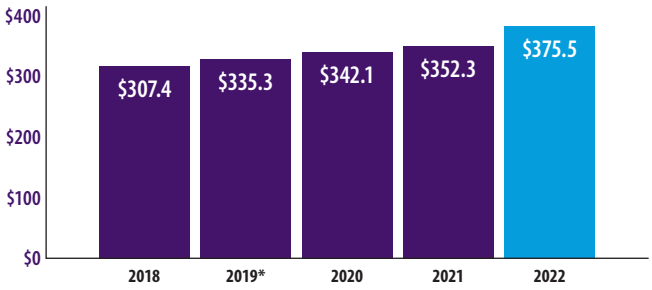
Contribution to general and administrative expenses

Cost of products sold and selling expenses are deducted from revenues to determine the amount of money available for the general and administrative expenses of the organization. Contribution to general and administrative expenses measures the gross margin derived from revenue-producing activities.

The contribution to general and administrative expenses increased $29 million to $462.8 million in 2022, with revenue improvements from royalties and the one-time recognition of the Health2047 subsidiary's deferred revenue and costs accounting for most of the change.

Pro forma general and administrative expenses

(in millions)



**Excluding the $38.2 million non-cash pension termination charge*

General and administrative expenses rose only $23.2 million in 2022, or 6.6 percent, when compared to 2021. This was substantially less than the budgeted increase for 2022, with nonrecurring savings related to staffing, professional services and travel.

Compensation and benefits were largely unchanged in 2022, increasing $1.4 million, or less than one percent. Compensation, including temporary help, was $5.8 million higher in 2022, a 3.6 percent increase which was mainly a function of annual merit increases. Fringe benefit costs increased $2.5 million in total primarily due to higher medical and payroll tax expenses, continuing a post-pandemic trend from 2021. Recruiting costs also increased as an unusually large number of open positions were under recruitment in 2022. Incentive compensation declined $7.8 million, offsetting most of the above increases, as some key performance indicators were not achieved in 2022 and others were met but not exceeded.

Occupancy costs were up slightly as operating costs rose with a return to office in late 2022 as well as the impact of higher property taxes. In late 2022, AMA exercised a contraction option in the main headquarters lease whereby AMA will relinquish one full floor of office space beginning in 2023 upon payment of a termination penalty. The cash savings over the remaining lease period, including operating expenses and property taxes and net of the penalty, are estimated to be in excess of $8 million.

Travel and meeting costs increased by $11.1 million in 2022, as AMA resumed in-person meetings and travel mid-year.

Technology costs were up $1.5 million in 2022, largely related to continued development of the AMA Ed Hub, JAMA Network initiatives and implementation of the Insurance Agency's new policy administration system.

Marketing and promotion costs rose $3.2 million in 2022, mainly for marketing and media costs related to the launch of AMA's Recovery Plan for America's Physicians and membership solicitation.

Outside professional services increased $0.5 million in 2022, due in part to Advocacy conducting a bi-annual Physician Practice Expense survey as well as costs for the "Stop Medicare Cuts" campaign early in 2022.

A $5.2 million increase in other operating expenses was driven by a $2.2 million increase in grants and contributions, of which a $1 million increase is for various grants sponsored by the Center for Health Equity and a $0.7 million increase is for the Accelerating Change in Medical Education (ACE) Consortium grants. Continued growth in the use of online solutions across a number of business units, as well as price increases, resulted in online product subscription costs increasing $1.7 million during 2022.

Operating results before income taxes

The AMA reported $87.3 million in pre-tax operating income in 2022 compared to $81.5 million in 2021. Both years reflect substantially reduced expenses due to pandemic restrictions on travel and meetings, staffing freezes and tight labor markets. A $33.7 million increase in revenue was only partially reduced by cost of products sold and general and administrative expense increases described above.

Income taxes

Taxes increased $0.8 million in 2022 when compared to 2021. The 2021 tax provision included a $1.2 million credit reflecting a reversal of a previously established reserve for taxes deemed unnecessary due to completion of tax audits. The absence of the credit in 2022 was partially offset by the effect of lower taxable income in one of the subsidiaries.

Net operating results

Net operating income was $82.9 million in 2022 compared to $77.9 million in 2021, driven mainly by improved revenues net of expense increases.

Non-operating items

The AMA reported a $115.1 million loss in the fair value of its portfolio during 2022 after an $82.8 million gain in 2021. Additional portfolio performance information is discussed in the group operating results section.

As a result of an accounting standard adopted in 2019 for postretirement benefit plans, non-operating results include $3.5 million and $3.9 million in postretirement plan interest expense and recognized actuarial losses and prior service credits for 2022 and 2021, respectively.

Revenue (less than) in excess of expenses

Expenses exceeded revenues by $35 million in 2022, a combination of $82.9 million in operating income, the $115.1 million loss in fair value in the portfolio and $2.8 million in other non-operating expenses. Revenues exceeded expenses by $157.4 million in 2021, a combination of $77.9 million in operating income, an $82.8 million gain in fair value in the portfolio and $3.3 million in other non-operating expenses.

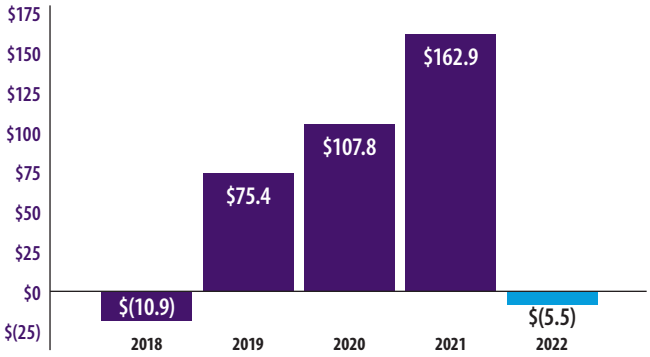
Accounting standards require organizations to recognize deferred actuarial losses and prior service credits or charges for defined benefit postretirement plans as a charge or credit to equity.

In 2022, AMA recorded a $29.4 million credit to equity reflecting an actuarial gain for the postretirement health care plan, net of a reclassification of actuarial losses for the plan to operating expense and income tax. The gain resulted primarily from higher interest rates reducing the present value of plan liabilities.

In 2021, AMA recorded a $5.6 million credit to equity reflecting an actuarial gain for the postretirement health care plan, net of a reclassification of actuarial losses and prior service credits for the plan to operating expense and income tax. The gain resulted from higher interest rates and changes in participants, offset by an increase in baseline claims costs.

Change in total association equity

(in millions)



The AMA reported a $5.5 million decrease in association equity in 2022. This reflects the amount by which expenses exceeded revenues, plus the credit to equity for changes in defined benefit postretirement plans discussed above, as well as a small increase in donor-restricted equity.

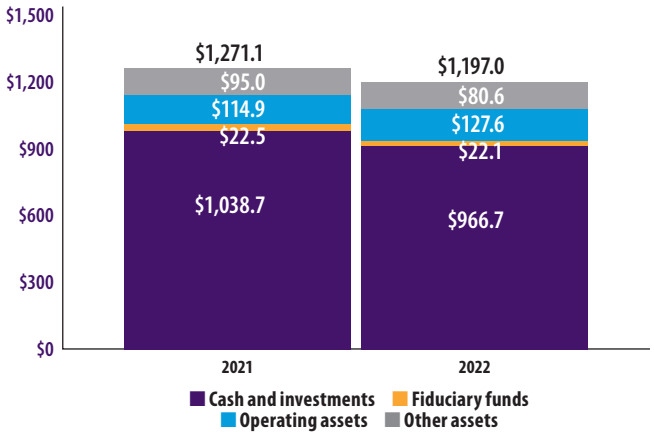
The AMA reported a $162.9 million increase in association equity in 2021. This reflects the amount by which revenues exceeded expenses, plus the credit to equity for changes in defined benefit postretirement plans discussed above, as well as a small decrease in donor-restricted equity.

Financial position and cash flows

The AMA's assets include cash, cash equivalents and investments; operating assets such as accounts receivable, inventory and prepaid expenses; fixed capital such as equipment, computer hardware and software; and other assets. AMA assets are supported by association equity, operating liabilities and deferred revenue.

Assets

(in millions)



The AMA's total assets decreased $74.1 million in 2022. This includes a $72 million decrease in cash and investments resulting from $45.4 million in free cash flow minus a $115.1 million loss in the fair value of investment securities and $2.3 million for investments in affiliates.

Fiduciary funds are premium payments from insurance customers not yet remitted to the carriers and funds held by the AMA for third parties for future use as approved by the third parties. This approximates the offsetting liability titled insurance premiums and other fiduciary funds payable.

Operating assets increased $12.7 million in 2022, primarily due to an increase in accounts receivable and prepaid expenses. Changes in operating assets from year to year are largely due to timing of cash flows.

Other assets includes operating lease right-of-use assets, property and equipment and investments in mutual funds maintained in separate accounts designated for various nonqualified benefit plans that are not available for operations. Operating lease right-of-use assets decreased due to amortization of the asset over the life of the lease as well as the impact from the headquarters' lease contraction noted above. Property and equipment net book value also decreased as new capital spending was exceeded by annual depreciation and amortization of existing capital assets.

Operating liabilities decreased $52.6 million in 2022, led by decreases in the postretirement health care plan liabilities, lease liability and accrued payroll. The postretirement health care plan liability decrease was a function of the impact of higher interest rates on the present value of plan liabilities. The lease liability change includes a $2.3 million reduction in the present value of the headquarters liability resulting from exercising the contraction option noted above.

Deferred revenue represents funds received during the year that will not be recognized as income until the following year or thereafter. These amounts vary, as well as accounts payable and accrued expenses, depending on the timing of cash receipts and payments.

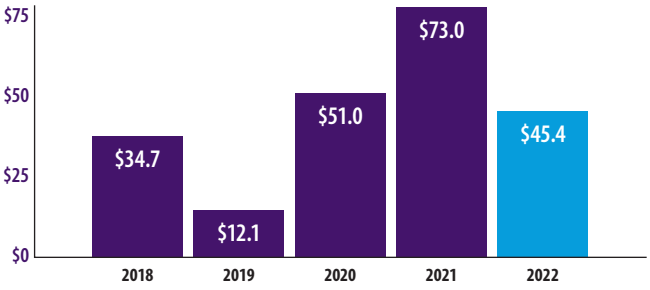
Cash flows

Cash, cash equivalents and donor-restricted cash increased $1.4 million in 2022 and decreased $2.9 million in 2021. This comparison may cause misleading conclusions, as the change in cash and cash equivalents includes reductions for amounts invested in marketable securities, as well as cash inflows from non-operating activities.

Free cash flow measures the AMA's ability to fund operations, capital expenses and major programmatic initiatives from funds generated from operations. This measure excludes non-operating gains and losses.

Free cash

(in millions)

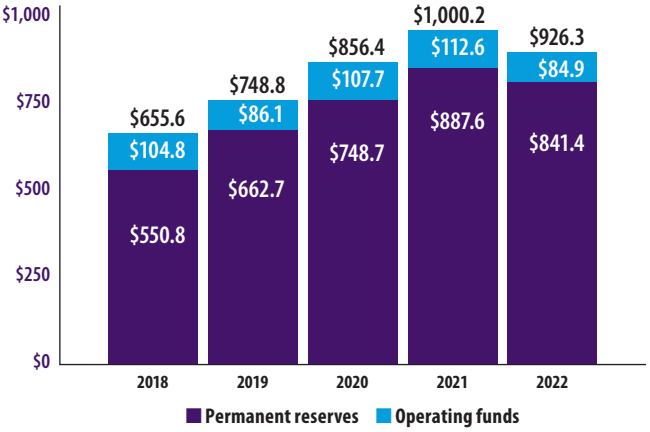


Free cash in 2022 totaled $45.4 million, substantially less than the 2021 results, driven mainly by changes in operating assets and liabilities.

Reserve portfolio

Reserves

(in millions)



The reserves and operating funds above do not include cash and investments in the for-profit subsidiaries and reflect only the not-for-profit entity's cash and investment portfolio values.

As of year-end 2022, the reserve portfolio's value was $841.4 million compared to $887.6 million in 2021, a $46.2 million decrease. That decrease was mainly the result of a $108.1 million loss in the fair value of the reserve portfolio offset by a $61.5 million transfer of 2021 excess operating funds to reserves. Operating funds totaled $84.9 million in 2022, down $27.7 million from 2021.

The AMA has established a required minimum reserve investment portfolio level that is adequate to cover 100 percent of annual general and administrative expenses (excluding grant expenses) plus an amount sufficient to pay long-term postretirement and lease liabilities (net of the right-of-use asset value). Operating funds, coupled with operating assets, are to be maintained at a level that allows payment of all current operating liabilities.

The minimum reserve portfolio level is designed to ensure that the AMA can always meet its long-term obligations, as well as provide that the AMA could continue operations for at least one year in the case of a catastrophic occurrence.

Reserve portfolio funds also provide the AMA with the ability to fund major strategic spending initiatives not within the operating budget. Spending from the reserve funds is limited to the amount by which reserves exceed the minimum requirement. The Board of Trustees must authorize any use of reserves.

Permanent reserves and minimum reserve requirement

(in millions)

Group operating results

The AMA is organized into various operating groups: Membership; Publishing, Health Solutions & Insurance; Strategic Arcs & Core Mission Activities; Administration and Operations; Affiliated Organizations; Unallocated Overhead; and Health2047 (including subsidiaries). Revenues and expenses directly attributed to those units are included in the group operating results. A financial summary of group operating results is presented at the end of this section. Prior year financial results have been restated to be consistent with the current year reported results for each group.

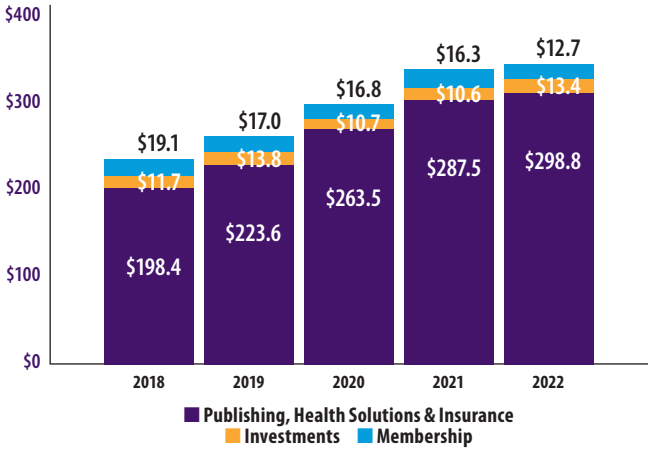
Contribution margin (net expenses)

Contribution margin equals individual group revenues minus cost of products sold, selling expenses, and direct general and administrative expenses such as compensation, occupancy, travel and meetings, technology costs and professional services.

Net expenses equals total spending, net of any revenue produced by the group, such as grants or other fee income. Total contribution margin and net expenses equals consolidated operating results before income taxes. The charts below separate groups with contribution margin from groups with net expenses.

Contribution margin

(in millions)



The contribution margin generated by Membership; Publishing, Health Solutions & Insurance; as well as Investments, provides the funding for all mission-related activities of the AMA as well as funding for all administration and support operations required to run the organization.

Membership

The Membership group's total revenue includes both net membership dues and interest expense on lifetime memberships. Net membership dues include the gross dues revenue collected, reduced by any commissions paid to state societies, and equal the membership dues revenue reported on the statement of activities.

After 11 consecutive years of increases in the number of dues-paying members, AMA experienced a small decrease in total membership in 2022, as the number of dues paying members declined by 0.9 percent. This was driven largely by a drop in student membership which was unfavorably impacted by limitations on in-person recruiting on campuses, while physician membership held steady. Membership continues to focus on expanding use of digital tools to engage physicians and retain them as lifelong members, group membership marketing, and more effectively reaching physicians through expanded programmatic activities.

Dues revenue was $33.8 million, a $1 million decrease from 2021. Although the number of physician memberships remained steady, growth in lower dues paying categories was only partially offset by the decline in individual direct member categories. Interest expense on lifetime memberships was $0.1 million in 2022 and zero in 2021. Membership substantially expanded its marketing and solicitation efforts during 2022, with a $1.9 million increase in marketing costs, accounting for most of the $2.5 million cost increase. Membership's contribution margin decreased $3.6 million in 2022, a combination of the revenue decline and cost increases.

Publishing, Health Solutions & Insurance

Publications in the JAMA Network include the *Journal of the American Medical Association (JAMA)* and the JAMA Network specialty journals. In recent years, the JAMA Network has launched four new journals: *JAMA Oncology* in 2015 and *JAMA Cardiology* in 2016, which are hybrid journals offering open access options for research articles; *JAMA Network Ope*n in 2018, a fully open access journal; and *JAMA Health Forum* in 2021, a peer-reviewed, open-access, online journal focused on health policy, health care systems, and global and public health.

Publishing revenues are derived from advertising, subscriptions, site licensing, reprints, electronic licensing, open access fees and royalties. Publishing revenues decreased $1.8 million in 2022, with declines in most revenue lines except open access fees. The prior year had included two large one-time purchases of reprints and journal backfiles totaling $2.4 million which accounted for most of the decline. Expenses rose $5.2 million during 2022, with approximately $1.3 million related to inflationary cost increases on paper, printing and distribution. The remaining cost increases occurred across most expense categories. The contribution margin thus declined by $7 million to $2.1 million.

Health Solutions includes two major lines: Database Products, and Books and Digital Content.

Database Products includes royalties from licensed data sales and credentialing products revenue. Revenues increased in 2022, up $3.5 million when compared to 2021, driven in large part by a major compliance effort to upgrade existing customer contracts from development contracts to full licenses. Expenses were up $1.1 million driven by higher compensation, increased technology costs and resumption of travel. The resulting contribution margin rose by $2.4 million in 2022 to $54.3 million.

AMA-published books and coding products, such as CPT® books, workshops and licensed data files, make up the Books and Digital Content unit. Revenues in this unit increased by $18.6 million. Royalties and digital content sales drove this increase, as the market for electronic use of digital coding products continues to expand. Phasing in previous pricing model changes was also a factor. Coding book sales declined slightly in 2022 as the move from print products to digital continues to adversely impact print product sales. Expenses were down slightly in 2022, driven by reduced use of outside professional services. The contribution margin increased by $19.4 million to $228.5 million.

The AMA has two active for-profit subsidiaries, the AMA Insurance Agency (Agency) and Health2047. The latter is discussed separately at the end of this discussion and analysis.

The Agency's revenues declined by $1.6 million in 2022, mainly due to a second decrease in commission rates to protect the viability of the plan, which allowed the Agency to avoid charging higher premiums to physician customers. The Agency, as broker, receives a commission on insurance policies sold. Expenses were up $0.6 million mainly due to technology costs related to development of a new customer facing platform. The contribution margin declined to $17.8 million from $20 million in the prior year.

Other business operations net expenses were up $1.3 million in 2022, which included $0.7 million in one-time costs.

In total, Publishing, Health Solutions & Insurance contribution margin was $298.8 million, up $11.3 million from 2021.

Investments (AMA-only)

AMA-only investment income includes dividend and interest earnings on the AMA's portfolio. Investment income in AMA's active subsidiaries is included as part of the group results for Publishing, Health Solutions & Insurance and Health2047.

Investments' revenue was $14.1 million in 2022, a $2.8 million increase over the prior year. Dividend and interest income continued to improve in 2022, impacted in part by higher interest rates. The contribution margin also increased by $2.8 million as expenses were unchanged.

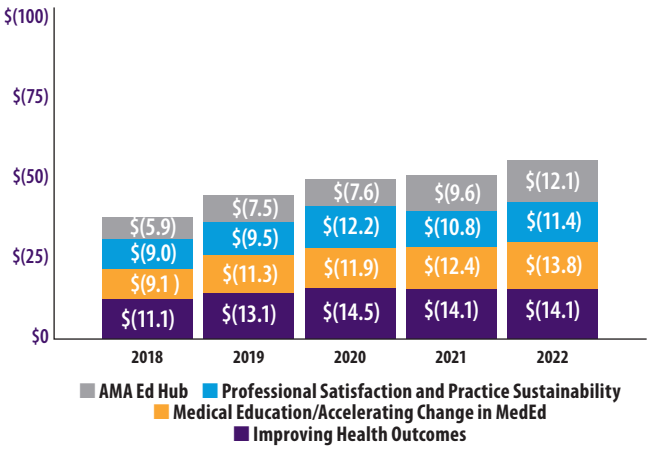
The net gain or loss on the market value of investments is not included in operating results but reported as a non-operating item. This amount is in addition to the investment income discussed above.

In 2022, AMA reported a net loss of $115.1 million, compared to an $82.8 million gain in 2021. The total investment return, including investment income, on the reserve portfolios was negative 10.5 percent, better than the 13.1 percent loss in the composite benchmark index.

Net expenses

Strategic Arcs

(in millions)



The Strategic Arcs include direct costs associated with the groups for Improving Health Outcomes (IHO), Medical Education including Accelerating Change in Medical Education (ACE), the AMA Ed Hub and Professional Satisfaction and Practice Sustainability (PS2).

IHO focuses on confronting two of the nation's most prevalent issues: cardiovascular disease and type-2 diabetes, setting a course of innovation and action aimed at reducing the disease and cost burden associated with these selected conditions.

To help prevent type-2 diabetes, the AMA and the Centers for Disease Control and Prevention (CDC) developed a toolkit to help health care teams screen, test and refer at-risk patients to in-person or online diabetes prevention programs (DPPs). In 2022, the AMA completed a six-year public awareness campaign with the CDC and the Ad Council, reaching 12.5 million individuals who took an online prediabetes risk test.

The AMA has developed online tools and resources using the latest evidence-based information to support physicians to help manage their patients' high blood pressure (BP). In 2022, to improve the identified gap in BP measurement training in medical schools, IHO developed a three-part e-learning series and hosted a grant program to help embed and monitor the success of the training.

The main focus during 2022 was on hypertension outcome goals as progress continues on implementation of cloud-based M.A.P. BP (a three-step program that works to diagnose and manage patients with hypertension) dashboards at health care organizations (HCOs), providing a visual representation of their performance on five key blood pressure metrics, including stratification by ethnicity, race, and gender. Since 2019, the AMA has worked with forty-six HCOs across 20 states to help them implement AMA M.A.P. BP. Additionally, the AMA is currently testing new ways to disseminate M.A.P. BP through population health channel partnerships to help serve health care organizations that care for historically marginalized and minoritized populations. Net expenses were unchanged in 2022.

Advancing Professional Development includes Medical Education/ACE and the AMA Ed Hub.

While the undergraduate medical school consortium grants successfully concluded in 2018, all 32 consortium schools have continued collaboration and new schools have been added to the ACE Consortium each year through focused innovation grants. The consortium of schools has been substantially expanded and now acts as a learning collaborative so that best practices can be developed, shared and implemented in medical schools across the country.

In 2019, the methods and learning from the undergraduate consortium initiative were extended to a new multi-year grant program on graduate medical education, designed to improve the transition from undergraduate to graduate medical education and to maintain and reinforce the positive changes initiated by the undergraduate consortium work.

One of the key outcomes of the ACE Consortium was the development of Health Systems Science, a foundational platform and framework for the study and understanding of how care is delivered, how health professionals work together to deliver that care, and how the health system can improve patient care and health care delivery.

In 2022, Medical Education convened its first Precision Education Summit with a goal of advancing a conceptual model of precision education to optimize lifelong learning for physicians. This will be the next phase of AMA's critical education transformation. Medical Education is also responsible for defining or influencing standards for undergraduate, graduate and continuing medical education and providing support for the Council on Medical Education. Net expenses increased $1.4 million in 2022 reflecting resumption of in-person meetings and travel as well as payment of ACE grants previously deferred during the pandemic.

The AMA Ed Hub, formally launched in 2018, is a platform providing physicians and other health care providers content and educational services that support lifelong professional development. The AMA Ed Hub has unified the AMA education portfolio and has piloted integration of external content providers, launched new content sets and established internal development plans enterprise-wide, including the Health Equity Education Center and the UME Curricular Enrichment Program. The AMA Ed Hub also gives doctors and other health professionals a streamlined way to earn, track and report continuing medical education activities spanning clinical,

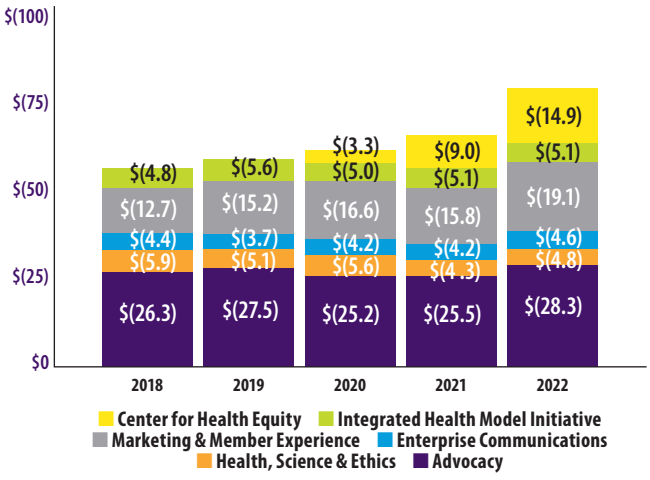
practice transformation and professionalism topics. The number of external education providers on the platform grew by ten organizations to 35 organizations in 2022. Net expenses were up $2.5 million in 2022 due largely to growth in staffing and enhancements to the technology platform, including features to support live broadcasting and advance multi-media, as well as expanding real-time credit submission to four additional medical boards.

PS2 includes three major streams of work: professional satisfaction/practice transformation, practice sustainability, and digital health all designed to improve the day-to-day practice and professional experience of physicians and remove obstacles to care. The goals of this group are to promote successful models in both the public and private sectors. This includes expanding research of credible practice science, creating tools and other solutions to help guide physicians, care teams and health system leaders on developing and implementing strategies to optimize practice efficiencies, reduce burnout and improve professional well-being; ensuring the physician perspective is represented in the design, implementation and evaluation of new health care technologies; and shaping the evolution of payment models for sustainability and satisfaction.

In 2022, 220,000 physicians were the direct beneficiaries of PS2 services/interventions, as measured by the number of physicians within participating HCOs utilizing organizational/burnout assessments; within participating HCOs in collaborative training and/or coaching efforts; and within HCOs recognized by the Joy in Medicine Health System Recognition Program. In addition, PS2 launched the Private Practice Simple Solutions Initiative and also led and funded the Behavioral Health Integration (BHI) Collaborative of Federation members to design and launch the BHI Immersion Program. In 2022, net expenses increased $0.6 million, driven almost entirely by staffing and travel costs.

Core Mission Activities

(in millions)



Core Mission Activities includes six groups: Advocacy; Health, Science & Ethics; Center for Health Equity; Integrated Health Model Initiative (IHMI); Enterprise Communications; and Marketing & Member Experience (MMX).

Advocacy includes federal and state level advocacy to enact laws and advance regulations on issues important to patients and physicians; economic, statistical and market research to support advocacy efforts; political education for physicians; grassroots advocacy; and maintaining relations with the federation of medicine. Advocacy led a campaign (Reforming Medicare Pay) joined by more than 150 other organizations that helped minimize the 8.5 percent in Medicare payment cuts originally slated for 2023, and continuing to urge Congress for long-term, systemic reform through the AMA's coalition. Other major initiatives included: supporting telehealth by extending Medicare telehealth coverage through 2024; fighting scope creep by achieving more than 35 state-level scope of practice victories in strong collaboration with Federation partners; reducing physician burnout by advocating in support of passage of the Dr. Lorna Breen Health Care Provider Protection Act, which provides essential physician wellness resources and by leading a national campaign that enacted multiple state laws, changed licensing and changed credentialing questions; and tackling prior authorization by successfully advocating for unanimous passage of a federal Medicare Advantage prior authorization reform bill in one chamber during the 117th Congress, and helping to enact prior authorization reform laws in Michigan, Georgia and Iowa. In 2022, Advocacy net spending increased $2.8 million, primarily compensation expenses, travel and meeting costs as in-person meetings resumed as well as campaign costs to stop Medicare cuts.

Health, Science & Ethics is involved in developing AMA policies on scientific, public health and ethical issues for the House of Delegates (HOD) providing leadership, subject matter expertise and scientifically sound content and evidence that underpins and informs both current and future AMA initiatives in areas such as infectious disease, drug policy and opioid prescribing; overseeing maintenance of the AMA Code of Medical Ethics and publication of the AMA Journal of Ethics, AMA's online ethics journal; and managing the United States Adopted Names (USAN) program, responsible for selecting generic names for drugs by establishing logical nomenclature classifications based on pharmacological or chemical relationships (reported separately in Group Operating Results). This group continued to lead the AMA's COVID-19 efforts during 2022 by providing subject matter expertise and content, and in conjunction with the Ad Council and CDC, updated and launched the annual campaign to get vaccinated against seasonal flu. Net expenses increased $0.5 million in 2022, due to limited staff expansion and higher costs in the grant administration unit.

The AMA recognized that a key to long-term success in our strategic arcs is increasing our efforts to reduce health and health care disparities. As a result of a 2018 task force report, the AMA sought leadership to embed health equity initiatives as relevant into all strategic priorities and areas of the organization, creating a new group, the Center for Health Equity (CHE). The focus of this group is to elevate AMA's public role and responsibilities to improve health equity. In 2022, CHE expanded its efforts to establish an AMA presence in the health equity research literature with the publication of seven Social Justice Education Ed Hub modules and the continuation of the Prioritizing Equity Series; launched the *In Full Health Learning and Action Community to Advance Equitable Health in Innovation* that prioritizes investment in health innovations developed by, with, and for historically marginalized communities; launched the Peer Network for Advancing Equity through quality and safety in collaboration with Brigham & Women's Hospital and The Joint Commission to help health systems apply an equity lens to all aspects of quality and safety practices; and announced Rise to Health, a national coalition for equity in health care, co-led with the Institute for Healthcare Improvement. CHE also established AMA as an anchor mission partner for a collaborative on Chicago's west side, West Side United, and continued building staff capacity to understand concepts surrounding health equity and to operationalize equity in goal and metric setting and developing structural competency learning tools. The continued planned growth of CHE resulted in a $5.9 million increase in net expenses in 2022.

IHMI brings together experts from patient care, medical terminology, and informatics around a common framework for defining and expressing health data. IHMI has been recognized as a leading authority on clinical content standards and is contributing to the development and use of clinical content through collaboration with Health Level 7 (HL7) Fast Healthcare Interoperability Resources (FHIR), the Gravity Project and others. In 2022, IHMI completed development of a Self-Measured Blood Pressure (SMBP) software and services solution and gathered baseline data from a pilot site related to pilot population. IHMI net expenses were largely unchanged in 2022.

MMX extends the reach and impact of AMA's mission and advocacy initiatives and strengthens the AMA brand. MMX continues to take on increased oversight for managing the quality, timing and relevance of the experience physicians have at each point of interaction through AMA's digital publishing, health system engagement and member programs. MMX creates or packages AMA's content into digital formats and distributes AMA resources and thought leadership to intended audiences through owned and paid channels, raising awareness of AMA initiatives, resources and accomplishments and elevating the voice of AMA and physicians. In 2022, more than 30 million unique individuals accessed AMA's website, a 20 percent increase over the record number of users in the prior year which was driven by AMA's COVID-19 Resource Center and other compelling editorial, video and social content. The launch of AMA's Recovery Plan for America's Physicians alone generated nearly five million website users. Net expenses increased $3.3 million in 2022, largely staffing and media marketing expenses for the recovery plan launch.

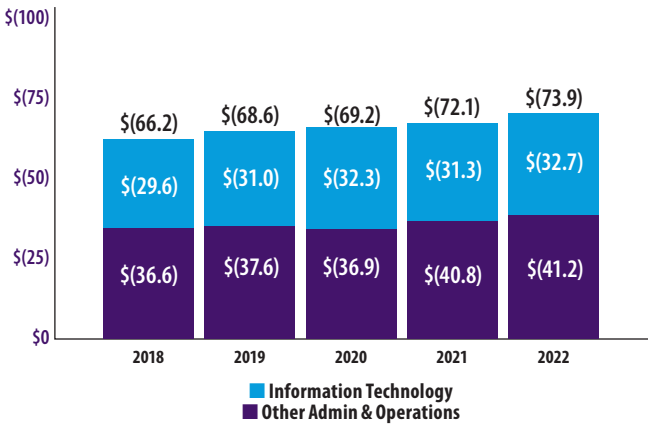
Ongoing responsibilities of the Enterprise Communications area include amplifying the work of individual operating units among their core audiences while providing consistency and alignment with the AMA narrative. Enterprise Communications distinctly communicates AMA's leading voice in science to embed equity, innovation and advocacy across the AMA's strategic work throughout health care. Net expenses were up $0.4 million in 2022, mainly related to activities celebrating AMA's 175th anniversary.

Governance

Governance includes the Board of Trustees and Board Operations, the HOD, Sections and Special Constituencies & International units. The Board of Trustees unit includes costs related to governance activities as well as expenses associated with support of the Strategic Arcs and Core Mission Activities. The HOD, Sections and Special Constituencies & International unit includes costs associated with annual and interim meetings, groups and sections and other HOD activities, as well as costs associated with AMA's involvement in the World Medical Association. In 2022, Governance net spending was up $5.6 million, mainly for resumption of in-person meeting and travel costs.

Administration and Operations

(in millions)



These units provide administrative and operational support for Publishing & Health Solutions, Membership, Strategic Arcs and Core Mission Activities, as well as other operating groups. Net expenses were up slightly in 2022, an increase of $1.8 million, or 2.5 percent, mainly inflationary cost increases.

Affiliated organizations

Affiliated Organizations represent either grant or in-kind service support provided by the AMA to other foundations and societies. In some cases, the AMA is reimbursed for services provided. No net expenses were reported in 2022.

Unallocated overhead

The net expenses in this area include costs not allocated back to operating units such as corporate insurance and actuarial services, employee incentive compensation, valuation allowances or other reserves. In 2022, these expenses totaled $20.5 million, down from $31.1 million in 2021. Lower incentive compensation was the main factor in the decrease.

Health2047 and subsidiaries

AMA owns a business formation and commercialization enterprise designed to enhance AMA's ability to define, create, develop and launch, with partners, a portfolio of products and technologies that will have a profound impact on many aspects of the U.S. health care system and population health, with a central goal of helping physicians in practice. The Board of Trustees approved the use of reserves to establish this subsidiary with plans to use third-party resources to assist in funding spinoffs with commercial potential in future years.

Health2047 funds initial projects and moves those that demonstrate commercial appeal into separate companies, along with necessary seed funding for the new companies. After the initial stage, it is expected that these companies should command additional investment from third parties to begin commercialization of the product, either through debt or equity financing. At some point in the future, the spinoffs will be sold or liquidated, at which time, AMA could expect to receive a financial return.

Since 2017, Health2047 has spun off or invested in 11 companies: Akiri, Inc. (Akiri), First Mile Care, Inc. (FMC), HXSquare, Inc. (HXS), Zing Health Enterprises, LP (Zing), Medcurio, Inc. (Medcurio), Phenomix Sciences, Inc. (Phenomix), Sitebridge Research, Inc. (Sitebridge), Emergence Healthcare Group, Inc. (Emergence), Heal Security, Inc. (Heal), Recovery Exploration Technologies, Inc. (RecoverX) and Scholar Rx, Inc. (Scholar Rx).

In 2022, Health2047 liquidated two of these companies, Akiri and HXS, as third-party financing efforts were unsuccessful. Upon liquidation of Akiri, there was an $11.6 million gain from recognizing deferred revenue and expense for a customer contract entered into and paid in 2017. There was no material gain or loss upon the HXS liquidation.

As of December 31, 2022, Health2047 has an ownership interest in nine companies, including a consolidated subsidiary, FMC, two companies accounted for using the equity method, Heal and Emergence, and six companies accounted for using the cost method, Zing, Medcurio, Phenomix, Sitebridge, RecoverX and Scholar Rx. The footnotes to AMA's financial statements include a detailed discussion on accounting for Health2047 spinoff companies.

Third-party financing is expected to cover most long-term future costs for many of these companies.

Health2047 revenue in 2022 was $14.3 million, compared to $1 million in 2021. In 2022, as a result of the Akiri liquidation, Health2047 recognized $14.3 million in revenue and $2.7 million in associated costs for creating a custom platform for a customer. Both revenue and expense had been received or incurred in prior years but were deferred until the project was completed or abandoned, which occurred in 2022.

Costs increased $3.4 million, of which $2.7 million was the recognition of deferred costs for the custom platform.

Net expenses declined by $9.9 million in 2022 to $1.4 million, primarily due to the net $11.6 million impact from recognizing the deferred revenue and expense discussed above.

The summary of group operating results is included on the following page.

American Medical Association group operating results

(in millions)	Revenues 2022	Revenues 2021	Margin (expenses) 2022	Margin (expenses) 2021

Notes to consolidated financial statements

For the years ended December 31, 2022 and 2021
(Columnar amounts in millions)

1. Nature of operations

The American Medical Association (AMA) is a national professional association of physicians with approximately 275 thousand members. The AMA serves the medical community and the public through standard setting and implementation in the areas of science, medical education, improving health outcomes, health equity, delivery and payment systems, ethics, representation and advocacy, policy development, and image and identity building. The AMA provides information and services to hundreds of thousands of physicians and includes journal and book publishing, physician credentialing, database licensing, insurance and other professional services for physicians.

The AMA classifies all operating results as revenues and expenses in the consolidated statements of activities. Non-operating items include net realized and unrealized gains and losses on investments, defined benefit postretirement plan non-service expense and other non-recurring income or expense.

Donor-restricted association equity includes contributions restricted for use for scope of practice program which are not available for general use by AMA.

2. Significant accounting policies

Consolidation policy

The accompanying consolidated financial statements include the accounts of the AMA and its subsidiaries, AMA Services, Inc., American Medical Assurance Company and Health2047 Inc. (collectively, the AMA).

AMA, through its wholly owned subsidiary, Health2047 Inc. (Health2047), has investments in nine companies or limited partnerships as of December 31, 2022. Health2047 controls and therefore consolidates the results of two companies, First Mile Care, Inc. as well as Akiri, Inc. (Akiri). Akiri was liquidated during 2022 resulting in recognition of $14.3 million of deferred revenue, in grants and other income, and $2.7 million of deferred costs, in cost of products sold and selling expenses, related to completion of a customer contract entered into during 2017.

The equity method of accounting is used to account for investments in companies or limited partnerships in which the AMA has significant influence but not overall control. The investments are initially recorded at the original amounts paid for common and convertible preferred stock, and subsequently adjusted for the AMA's share of undistributed earnings and losses from the underlying entities from the dates of formation. Each investment will be increased or reduced by any future additional contributions and distributions received, respectively. The cost method of accounting is used to account for investments in companies in which the AMA has neither significant influence nor overall control and where the fair value is not readily determinable.

The companies accounted for under the equity method of accounting during 2022 are: HXSquare, Inc. (formed in January 2019 and liquidated in February 2022), Emergence Healthcare Group, Inc. (formed in January 2021), Heal Security, Inc. (formed in February 2021), and Recovery Exploration Technologies, Inc. (formed in August 2021). During 2022, the AMA ceased application of the equity method to account for the investment in Recovery Exploration Technologies, Inc. as additional third-party investment resulted in AMA no longer exercising significant influence over this entity.

At December 31, 2022, AMA ownership interest is 20.1% in Emergence Healthcare Group, Inc. and 33.3% in Heal Security, Inc. The book value of the two investments accounted for under the equity method, net of convertible debt, at December 31, 2022 is $1.8 million.

In addition, at December 31, 2022, AMA has an ownership interest of 3.6% in Zing Health Enterprises, LP (formed in May 2020), 12.1% in Medcurio Inc., (formed in February 2020), 12.6% in Phenomix Sciences, Inc. (formed in August 2020), 11.3% in Recovery Exploration Technologies, Inc., 18.8% in Sitebridge Research, Inc. (formed January 2021), and 6.0% in Scholar Rx, Inc. (formed December 2022). The investments in these entities are accounted for using the cost method, as AMA holds less than a 20% ownership and does not exercise significant influence over the entities. The book value of the six investments carried at cost at December 31, 2022 is $7.1 million.

Health2047 had investments in ten companies or limited partnerships as of December 31, 2021, including two that were consolidated, First Mile Care, Inc. and Akiri, Inc. The companies accounted for under the equity method of accounting during 2021 were: HXSquare, Inc., Phenomix Sciences, Inc., Emergence Healthcare Group, Inc., Heal Security, Inc., and Recovery Exploration Technologies, Inc. During 2021, the AMA ceased application of the equity method to account for the investment in Phenomix Sciences, Inc. as additional third-party investment resulted in AMA no longer exercising significant influence over this entity.

At December 31, 2021 AMA ownership interest was 20% in HXSquare, Inc., 21.9% in Emergence Healthcare Group, Inc., 33.3% in Heal Security, Inc. and 22.6% in Recovery Exploration Technologies, Inc. The book value of the four investments accounted for under the equity method, net of convertible debt, at December 31, 2021 was $2.4 million.

In addition, at December 31, 2021, AMA had an ownership interest of 5.5% in Zing Health Enterprises, LP, 11.8% in Medcurio Inc., 14.4% in Phenomix Sciences, Inc. and 18.8% in Sitebridge Research, Inc. The investments in these entities were accounted for using the cost method, as AMA held less than a 20% ownership and did not exercise significant influence over the entities. The book value of the four investments carried at cost at December 31, 2021 was $4.6 million.

Use of estimates

Preparation of consolidated financial statements in conformity with accounting principles generally accepted (GAAP) in the United States of America requires management to make estimates and assumptions that affect reported amounts of assets, liabilities, revenues and expenses as reflected in the consolidated financial statements. Actual results could differ from estimates.

Cash equivalents

Cash equivalents consist of liquid investments with original maturities of three months or less and are recorded at cost, which approximates fair value.

Fiduciary funds

One of the AMA's subsidiaries, the AMA Insurance Agency, Inc., in its capacity as an insurance broker, collects premiums from the insured and, after deducting its commission, remits the premiums to the underwriter of the insurance coverage. Unremitted insurance premiums are invested on a short-term basis and are held in a fiduciary capacity. The AMA also collects and holds contributions on behalf of separate unincorporated entities with $2.3 million and $2.8 million held at December 31, 2022 and 2021, respectively.

Inventories

Inventories, consisting primarily of books and paper for publications, are valued at the lower of cost or net realizable value.

Property and equipment

Property and equipment are carried at cost, less accumulated depreciation and amortization. Depreciation and amortization are computed using the straight-line method over the estimated useful lives of the assets. Equipment and software are depreciated or amortized over three to 10 years. Leasehold improvements are depreciated over the shorter of the estimated useful lives or the remaining lease term.

Revenue recognition

Revenue is recognized upon transfer of control of promised products or services to customers in an amount that reflects the consideration that AMA expects to receive in exchange for those products or services. AMA enters into contracts that generally include only one product or service and as such, are distinct and accounted for as separate performance obligations. Revenue is recognized net of allowances for returns and any taxes collected from customers, which are subsequently remitted to governmental authorities.

Nature of products and services

Membership dues are deferred and recognized as revenue in equal monthly amounts during the applicable membership year, which is a calendar year. Dues from lifetime memberships are recognized as revenue over the approximate life of the member.

Licensing and subscriptions to scientific journals, site licenses, newsletters or other online products are recognized as revenue ratably over the terms of the subscriptions or service period. Advertising revenue and direct publication costs are recognized in the period the related journal is issued. Book and product sales are recognized at the time the book or product is shipped or otherwise delivered to the customer. Royalties are recognized as revenue over the royalty term. Insurance brokerage commissions on individual policies are recognized as revenue on the date they become effective or are renewed, to the extent services under the policies are complete. Brokerage commissions or plan rebates on the group products are recognized as revenue ratably over the term of the contract as services are rendered.

Contract balances

AMA records a receivable when the performance obligation is satisfied and revenue is recognized. For agreements covering subscription or service periods, AMA generally records a receivable related to revenue recognized for the subscription, license or royalty period. For sales of books and products, AMA records a receivable at the time the product is shipped or otherwise delivered to the customer. These amounts are included in accounts receivable on the consolidated statements of financial position and the balance, net of allowance for doubtful accounts, was $96.3 million and $85.1 million as of December 31, 2022 and 2021, respectively.

The allowance for doubtful accounts reflects AMA's best estimate of probable losses inherent in the accounts receivable balance. The allowance is based on historical experience and other currently available evidence.

Payment terms and conditions vary by contract type, although terms generally include a requirement of payment within 30 to 60 days. Some annual licensing agreements carry longer payment terms. In instances where the timing of revenue recognition differs from the timing of invoicing, AMA has determined that these contracts generally do not include a significant financing component.

Prepaid dues are included as deferred membership dues revenue in the consolidated statements of financial position. Prepayments by customers in advance of the subscription, royalty or insurance coverage period are recorded as deferred subscriptions, licensing, insurance commissions and royalty revenue in the consolidated statements of financial position.

Income taxes

The AMA is an exempt organization as defined by Section 501(c)(6) of the Internal Revenue Code and is subject to income taxes only on income determined to be unrelated business taxable income. The AMA's subsidiaries are taxable entities and are subject to income taxes.

3. New accounting standards update

In August 2020, Financial Accounting Standards Board (FASB) issued Accounting Standards Update No. 2020-06, *Debt — Debt with Conversion and Other Options (Subtopic 470-20) and Derivatives and Hedging — Contracts in Entity's Own Equity (Subtopic 815-40) — Accounting for Convertible Instruments and Contracts in an Entity's Own Equity*. The amendments in this update are expected to improve, simplify, and enhance the financial reporting requirements for convertible instruments and contracts in an entity's own equity for all entities, including private companies. The new guidance is effective for the AMA for the year ending December 31, 2024. AMA does not expect there to be a material impact on the consolidated financial statements upon adoption.

4. Investments

Investments include marketable securities, venture capital and private equity investments that are carried at fair value.

In determining fair value, the AMA uses various valuation approaches. The FASB's Accounting Standards Codification (ASC) Topic 820, *Fair Value Measurements and Disclosures*, establishes a hierarchy for inputs used in measuring fair value that maximizes the use of observable inputs and minimizes the use of unobservable inputs by requiring that the most observable inputs be used when available. Observable inputs are inputs that market participants would use in pricing the asset based on market data obtained from sources independent of the organization. Unobservable inputs are inputs that would reflect an organization's assumptions about the assumptions market participants would use in pricing the asset developed based on the best information available in the circumstances. The hierarchy is broken down into three levels based on the observability of inputs as follows:

Level 1 — Valuations based on quoted prices in active markets for identical assets that the organization has the ability to access. Since valuations are based on quoted prices that are readily and regularly available in an active market, valuation of these products does not entail a significant degree of judgment.

Level 2 — Valuations based on one or more quoted prices in markets that are not active or for which all significant inputs are observable, either directly or indirectly.

Level 3 — Valuations based on inputs that are unobservable and significant to the overall fair value measurement.

The availability of observable inputs can vary from instrument to instrument and is affected by a wide variety of factors, including, for example, the liquidity of markets and other characteristics particular to the transaction. To the extent that valuation is based on models or inputs that are less observable or unobservable in the market, the determination of fair value requires more judgment.

The AMA uses prices and inputs that are current as of the measurement date, obtained through a third-party custodian from independent pricing services.

A description of the valuation techniques applied to the major categories of investments measured at fair value is outlined below.

Exchange-traded equity securities are valued based on quoted prices from the exchange. To the extent these securities are actively traded, valuation adjustments are not applied and they are categorized in Level 1 of the fair value hierarchy.

Mutual funds are open-ended Securities and Exchange Commission (SEC) registered investment funds with a daily net asset value (NAV). The mutual funds allow investors to sell their interests to the fund at the published daily NAV, with no restrictions on redemptions. These mutual funds are categorized in Level 1 of the fair value hierarchy.

The fair value of corporate debt securities is estimated using recently executed transactions, market price quotations (where observable) or bond spreads. If the spread data does not reference the issuer, then data that reference a comparable issuer are used. Corporate debt securities are generally categorized in Level 2 of the fair value hierarchy.

U.S. government agency securities consist of two categories of agency issued debt. Non-callable agency issued debt securities are generally valued using dealer quotes. Callable agency issued debt securities are valued by benchmarking model-derived prices to quoted market prices and trade data for identical or comparable securities. Agency issued debt securities are categorized in Level 2 of the fair value hierarchy.

U.S. government securities are valued using quoted prices provided by a vendor or broker-dealer. These securities are categorized in Level 2 of the fair value hierarchy, as it is difficult for the custodian to accurately assess at a security level whether a quoted trade on a bond represents an active market.

Foreign and U.S. state government securities are valued using quoted prices in active markets when available. To the extent quoted prices are not available, fair value is determined based on interest rate yield curves, cross-currency basis index spreads, and country credit spreads for structures similar to the bond in terms of issuer, maturity and seniority. These investments are generally categorized in Level 2 of the fair value hierarchy.

Investments also include investments in a diversified closed end private equity fund with a focus on buyout and secondary market opportunities in the United States and the European Union, as well as investments in a venture capital fund focused on companies developing promising health care technologies that can be commercialized into revolutionary products and services that improve the practice of medicine and the delivery and management of health care. The investments are not redeemable and distributions are received through liquidation of the underlying assets of the funds. It is estimated that the underlying assets will be liquidated over the next four to ten years. The fair value estimates of these investments are based on NAV as provided by the investment manager. Unfunded commitments as of December 31, 2022, and 2021 totaled $80.1 million and $76.4 million, respectively.

The AMA manages its investments in accordance with Board-approved investment policies that establish investment objectives of real inflation-adjusted growth over the investment time horizon, with diversification to provide a balance between long-term growth objectives and potential liquidity needs.

The following table presents information about the AMA's investments measured at fair value as of December 31. In accordance with ASC Subtopic 820-10, investments that are measured at fair value using the NAV per share (or its equivalent) practical expedient have not been classified in the fair value hierarchy. The fair value amounts presented in this table are intended to permit reconciliation of the fair value hierarchy to the amounts presented in the consolidated statements of financial position.

	2022	2021
Level 1 – Quoted prices in active market for identical securities		
Equity securities	$ 419.9	$ 474.6
Fixed-income mutual funds	27.1	48.9
	447.0	523.5
Level 2 – Significant other observable inputs		
Debt securities		
Corporate	106.7	116.0
U.S. government and federal agency	264.8	269.1
Foreign government	24.7	28.7
U.S. state government	0.1	0.2
	396.3	414.0
Other investments measured at NAV – Private equity and venture capital funds	89.9	69.1
Investments	$ 933.2	$ 1,006.6

Interest and dividends are included in investment income as operating revenue while realized and unrealized gains and losses are included as a component of non-operating items.

Investment income consists of:

	2022	2021
Investment dividend and interest income	$ 18.3	$ 15.1
Management fees	(3.2)	(3.5)
	$ 15.1	$ 11.6

Investment non-operating items include:

	2022	2021
Realized gains on investments, net	$ 6.4	$ 74.8
Unrealized (losses) gains on investments, net	(121.5)	8.0
	$ (115.1)	$ 82.8

5. Other assets

Other assets include investments in mutual funds maintained in separate accounts designated for various nonqualified benefit plans that are not available for operations. Mutual funds are open-ended SEC registered investment funds with a daily NAV. The mutual funds allow investors to sell their interests to the fund at the published daily NAV, with no restrictions on redemptions. These mutual funds are categorized in Level 1 of the fair value hierarchy. The investments totaled $8.2 million and $9.4 million as of December 31, 2022 and 2021, respectively.

6. Property and equipment

Property and equipment at December 31 consists of:

	2022	2021
Leasehold improvements	$ 39.0	$ 38.7
Furniture and office equipment	19.9	19.7
Information technology		
Hardware	12.9	13.5
Software	94.4	97.6
	166.2	169.5
Accumulated depreciation and amortization	(132.9)	(129.9)
Property and equipment, net	$ 33.3	$ 39.6

7. Retirement savings plans

The AMA has a 401(k) retirement and savings plan, which allows eligible employees to contribute up to 75 percent of their compensation annually, subject to Internal Revenue Service (IRS) limits. The AMA matches 100 percent of the first three percent and 50 percent of the next two percent of employee contributions. The AMA may, at its discretion, make additional contributions for any year in an amount up to two percent of the compensation for each eligible employee. Compensation is subject to IRS limits and excludes bonuses and severance pay. AMA matching and discretionary contribution expense totaled $8.3 million and $7.9 million in 2022 and 2021, respectively.

8. Postretirement health care benefits

The AMA provides health care benefits to retired employees who were employed on or prior to December 31, 2010. After that date, no individual can become a participant in the plan. Generally, qualified employees become eligible for these benefits if they retire in accordance with the plan provisions and are participating in the AMA medical plan at the time of their retirement. The AMA shares the cost of the retiree health care payments with retirees, paying approximately 60 to 80 percent of the expected benefit payments. The AMA has the right to modify or terminate the postretirement benefit plan at any time. Other employers participate in this plan and liabilities are allocated between the AMA and the other employers.

The AMA has applied for and received the federal subsidy to sponsors of retiree health care benefit plans that provides a prescription drug benefit that is actuarially equivalent to Medicare Part D under the *Medicare Prescription Drug, Improvement and Modernization Act of 2003*. In accordance with ASC Topic 958-715, *Compensation-Retirement Benefits*, the AMA initially accounted for the subsidy as an actuarial experience gain to the accumulated postretirement benefit obligation.

The postretirement health care plan is unfunded. In accordance with ASC Topic 958-715, the AMA recognizes this liability in its consolidated statements of financial position.

The following reconciles the change in accumulated benefit obligation and the amounts included in the consolidated statements of financial position at December 31:

	2022	2021
Benefit obligation at beginning of year	$ 117.5	$ 120.5
Service cost	1.1	1.5
Interest cost	3.1	2.8
Benefits paid	(4.1)	(3.8)
Participant contributions	1.2	1.2
Federal subsidy	0.2	0.2
Actuarial gain	(30.9)	(4.9)
Accrued postretirement benefit costs	$ 88.1	$ 117.5

The postretirement health care plan accumulated losses not yet recognized as a component of periodic postretirement health care expense, but included as an accumulated charge or credit to equity as of December 31 are:

	2022	2021
Actuarial (gains) losses	$ (9.7)	$ 21.6

Actuarial assumptions used in determining the accumulated benefit obligation at December 31 are:

	2022	2021
Discount rate	5.2%	2.8%
Initial health care cost trend	7.0%	6.1%
Ultimate health care cost trend	4.0%	4.0%
Year that the rate reaches the ultimate trend rate	2046	2045

AMA recognizes postretirement health care expense in its consolidated statements of activities. The service cost component is included as part of compensation and benefits expense and the other components of expense are recognized as a non-operating item:

	2022	2021
Service cost	$ 1.1	$ 1.4
Interest cost	3.1	2.8
Amortization of prior service credit	-	(0.3)
Amortization of actuarial loss	0.4	1.4
	$ 4.6	$ 5.3

Postretirement health care-related changes, other than periodic expense, that have been included as a charge or credit to unrestricted equity consist of:

	2022	2021
Actuarial gains arising during period	$ 30.9	$ 4.8
Reclassification adjustment for recognition of actuarial loss	0.4	1.4
Reclassification adjustment for recognition of prior service credit	-	(0.3)
Change in unrestricted equity	$ 31.3	$ 5.9

Actuarial assumptions used in determining postretirement health care expense are the same assumptions noted in the table above for determining the accumulated benefit obligation, except as follows:

	2022	2021
Discount rate	2.8%	2.5%
Initial health care cost trend	6.1%	5.64%

The following postretirement health care benefit payments are expected to be paid by the AMA, net of contributions by retirees and federal subsidies:

2023	$ 3.6
2024	3.7
2025	4.1
2026	4.3
2027	4.6
2028 – 2032	26.0

9. Income taxes

The provision for income taxes includes:

	2022	2021
Operating		
Current	$ 4.3	$ 3.7
Deferred	(21.4)	0.1
Valuation allowance	21.5	(0.2)
	4.4	3.6
Tax expense related to credits or charges to equity		
Deferred	1.9	0.3
	$ 6.3	$ 3.9

As prescribed under ASC Topic 740, *Income Taxes*, the AMA determines its provision for income taxes using the asset and liability method. Under this method, deferred tax assets and liabilities are recognized for future tax effects of temporary differences between the consolidated financial statement carrying amounts of existing assets and liabilities and their respective tax basis.

The deferred tax benefit or charge from credits or charges to equity represents the estimated tax benefit from recording unrecognized actuarial losses and prior service credits for the postretirement health care plan, pursuant to ASC Topic 958-715.

Valuation allowances are provided to reduce deferred tax assets to an amount that is more likely than not to be realized. The AMA evaluates the likelihood of realizing its deferred tax assets by estimating sources of future taxable income and assessing whether or not it is likely that future taxable income will be adequate for the AMA to realize the deferred tax asset. The AMA established an initial valuation allowance in 2009 to reflect the fact that deferred tax assets include future expected benefits, largely related to retiree health care payments, that may not be deductible due to a projected lack of taxable advertising income in future years. Increases or decreases in deferred tax assets, where future benefits are considered unlikely, will result in an equal and offsetting change in the valuation reserve. If the AMA were to make a determination in future years that these deferred tax assets would be realized, the related valuation allowance would be reduced and a benefit to earnings recorded.

Deferred tax assets recognized in the consolidated statements of financial position at December 31 are:

	2022	2021
Net operating loss carryforward	$ 21.4	$ -
Benefit plans and compensation	5.2	7.3
Other	0.1	(0.1)
	26.7	7.2
Valuation allowance	(24.0)	(2.5)
	$ 2.7	$ 4.7

Cash payments for income taxes were $4 million and $6.2 million in 2022 and 2021, respectively, net of refunds.

10. Leases

AMA leases office space at a number of locations and the initial terms of the office leases range from five years to 15 years. Most leases have options to renew at then prevailing market rates, or, in one circumstance, early terminate with appropriate notice and termination payments. As any extension, renewal, or termination is at the sole discretion of AMA, and at this date is not certain, renewal and termination options are not included in the right-of-use (ROU) asset or lease liability.

AMA leases do not provide an implicit interest rate and as such, AMA calculates the lease liability at lease commencement or remeasurement date as the present value of unpaid lease payments using an estimated incremental borrowing rate. The incremental borrowing rate represents the rate of interest that AMA estimates it would have to pay to borrow an amount equal to the lease payments on a collateralized basis over a similar term, based on information available at the time of commencement or remeasurement.

AMA exercised a contraction option during 2022 reducing the square footage at the main headquarters by approximately 10%, with a contraction penalty. The ROU asset and lease liability were remeasured as of the lease modification date and the impact of the contraction is reflected in the ROU asset and lease liability as of December 31, 2022. ROU assets decreased $1.3 million, lease liabilities decreased $2.3 million, with the resulting net gain of $1 million included as a reduction to other operating expense. AMA also leases copiers and printers in several locations. The lease agreements do not contain variable lease payments, residual value guarantees or material restrictive covenants. All office and equipment leases are classified as operating leases.

Operating lease costs totaled $9.7 million in 2022 and $10.1 million in 2021. Cash paid for amounts included in the measurement of lease liabilities totaled $13.2 million in 2022 and $13.1 million in 2021.

The remaining weighted-average lease term is 6.3 years and 7.1 years as of December 31, 2022 and 2021, respectively. The weighted-average discount rate used for operating leases is 5% for both 2022 and 2021.

The maturity of lease liabilities as of December 31, 2022:

2023	$ 15.3
2024	11.4
2025	11.4
2026	11.6
2027	11.8
2028 and beyond	14.5
Total lease payments	76.0
Less imputed interest	(10.7)
Present value of lease obligations	$ 65.3

11. Financial asset availability and liquidity

AMA has a formal reserve policy that defines the reserve investment portfolios as pools of liquid net assets that can be accessed to mitigate the impact of undesirable financial events or to pursue opportunities of strategic importance that may arise, as well as provide a source of capital appreciation. The policy establishes minimum required dollar levels required to be held in the portfolios (defined as an amount equal to one-year's general and administrative operating expenses plus long-term liabilities). The policy also covers the use of dividend and interest income, establishes criteria for use of the funds and outlines the handling of excess operating funds on an annual basis.

Dividend and interest income generated from the reserve portfolios are transferred to operating funds monthly and used to fund operations. The formal reserve policy contemplates use of reserve portfolio funds for board approved time- or dollar-limited strategic outlays, to the extent that the reserve portfolio balances exceed the minimum amount established by policy. All surplus funds generated from operations annually (defined as operating cash plus other current assets minus current liabilities and deferred revenue at year end) are transferred to the reserve portfolios after year-end. The reserve policy does not cover the for-profit subsidiaries' activities.

AMA invests cash in excess of projected weekly requirements in short-term investments and money market funds. AMA does not maintain any credit facilities as the reserve portfolios provide ample protection against any liquidity needs.

The following reflects AMA's financial assets as of December 31 reduced by amounts not available for general use that have been set aside for long-term investing in the reserve investment portfolios or funds subject to donor restrictions. AMA's financial assets include cash, cash equivalents and donor restricted cash, short-term investments and long-term investments in the reserve portfolios.

	2022	2021
Financial assets	$ 966.7	$ 1,038.7
Less assets unavailable for general expenditures:		
Restricted by governing body primarily for long-term investing or for governing body approved outlays	(841.4)	(887.6)
Financial assets available to meet cash needs for general expenditures within one year	$ 125.3	$ 151.1

In addition to financial assets available to meet general expenditures over the next 12 months, the AMA operates under a policy that requires an annual budget surplus, excluding time- or dollar-limited strategic expenditures approved by the board, and anticipates generating sufficient revenue to cover general ongoing expenditures on an annual basis.

12. Contingencies

In the opinion of management, there are no pending legal actions for which the ultimate liability will have a material effect on the equity of the AMA.

13. Subsequent events

ASC Topic 855, *Subsequent Events,* establishes general standards of accounting for and disclosure of events that occur after the consolidated balance sheet date but before consolidated financial statements are issued or are available to be issued.

For the year ended December 31, 2022, the AMA has evaluated all subsequent events through February 10, 2023, which is the date the consolidated financial statements were available to be issued, and concluded no additional subsequent events have occurred that would require recognition or disclosure in these consolidated financial statements that have not already been accounted for.

14. Functional expenses

The costs of providing program and other activities have been summarized on a functional basis in the consolidated statements of activities. Certain costs have been allocated among the Strategic Arcs and Core Mission Activities, Publishing, Health Solutions and Insurance, Membership and other supporting services.

The expenses that are allocated and the method of allocation include the following: fringe benefits based on percentage of compensation and occupancy based on square footage. All other expenses are direct expenses of each functional area.

	Membership	Publishing, Health Solutions and Insurance	Investments (AMA only)	Strategic Arcs and Core Mission Activities	Governance, Administration and Operations	Health2047 and Subsidiaries	Total
Cost of products sold and selling expense	$ -	$ 27.9	$ -	$ -	$ -	$ 2.7	$ 30.6
Compensation and benefits	6.4	65.1	-	78.1	78.1	7.0	234.7
Occupancy	0.4	5.7	-	6.9	7.1	1.3	21.4
Travel and meetings	0.1	2.6	-	4.5	7.2	0.3	14.7
Technology costs	1.0	11.0	-	7.1	10.3	0.1	29.5
Marketing and promotion	11.7	0.1	-	7.3	1.6	0.6	21.3
Professional services	0.4	4.2	0.3	17.5	3.8	3.0	29.2
Other operating expense	1.0	5.9	0.4	12.0	4.7	0.7	24.7
2022 total expense	**$ 21.0**	**$ 122.5**	**$ 0.7**	**$ 133.4**	**$ 112.8**	**$ 15.7**	**$ 406.1**
Cost of products sold and selling expense	$ -	$ 25.9	$ -	$ -	$ -	$ -	$ 25.9
Compensation and benefits	5.8	62.4	-	70.1	88.5	6.5	233.3
Occupancy	0.5	5.6	-	6.7	6.8	1.5	21.1
Travel and meetings	-	0.6	-	1.1	1.8	0.1	3.6
Technology costs	1.6	10.4	-	6.3	9.7	-	28.0
Marketing and promotion	9.6	0.4	-	7.5	0.1	0.5	18.1
Professional services	0.1	4.5	0.3	16.6	4.7	2.5	28.7
Other operating expense	0.9	5.3	0.4	8.9	2.8	1.2	19.5
2021 total expense	**$ 18.5**	**$ 115.1**	**$ 0.7**	**$ 117.2**	**$ 114.4**	**$ 12.3**	**$ 378.2**

Independent auditor's report

The Board of Trustees of American Medical Association

Opinion

We have audited the consolidated financial statements of the American Medical Association (the "AMA") and subsidiaries, which comprise the consolidated statements of financial position as of December 31, 2022 and 2021, and the related consolidated statements of activities and cash flows for the years then ended, and the related notes to the consolidated financial statements (collectively referred to as the "financial statements").

In our opinion, the accompanying financial statements present fairly, in all material respects, the financial position of the AMA as of December 31, 2022 and 2021, and the results of its operations and its cash flows for the years then ended in accordance with accounting principles generally accepted in the United States of America.

Basis for Opinion

We conducted our audits in accordance with auditing standards generally accepted in the United States of America (GAAS). Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of the AMA and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements relating to our audits. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with accounting principles generally accepted in the United States of America, and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the AMA's ability to continue as a going concern for one year after the date that the financial statements are available to be issued.

Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with GAAS will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the financial statements.

In performing an audit in accordance with GAAS, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the AMA's internal control. Accordingly, no such opinion is expressed.
- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the financial statements.
- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about the AMA's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control-related matters that we identified during the audit.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 04-A-23

Subject: AMA 2024 Dues

Presented by: Sandra Adamson Fryhofer, MD, Chair

Referred to: Reference Committee F

Our American Medical Association (AMA) last raised its dues in 1994. AMA continues to invest in improving the value of membership. As our AMA's membership benefits portfolio is modified and enhanced, management will continuously evaluate dues pricing to ensure optimization of the membership value proposition.

RECOMMENDATION

2024 Membership Year

The Board of Trustees recommends no change to the dues levels for 2024, that the following be adopted and that the remainder of this report be filed:

Regular Members	$ 420
Physicians in Their Fourth Year of Practice	$ 315
Physicians in Their Third year of Practice	$ 210
Physicians in Their Second Year of Practice	$ 105
Physicians in Their First Year of Practice	$ 60
Physicians in Military Service	$ 280
Semi-Retired Physicians	$ 210
Fully Retired Physicians	$ 84
Physicians in Residency/Fellow Training	$ 45
Medical Students	$ 20

(Directive to Take Action)

Fiscal Note: No significant fiscal impact.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 13-A-23

Subject: Delegate Apportionment and Pending Members

Presented by: Sandra Adamson Fryhofer, MD, Chair

Referred to: Reference Committee F

At the November 2022 Interim Meeting, Board of Trustees Report 3, "Delegate Apportionment and Pending Members," was considered and referred.

BACKGROUND

At the 2018 Interim Meeting, policy was adopted calling for the inclusion of pending members in the delegate apportionment process. Per Board of Trustees Report 1-I-18 pending members are those who at the time they apply for AMA membership are not members and who pay dues for the following calendar year. This typically occurs in the last few weeks of one year, with the individual's membership becoming active on January 1 of the following year. The policy was refined in Board of Trustees Report 12-A-19 to address issues related to counting such members as well as distinctions between constituent and specialty societies, and the necessary bylaws amendments were adopted at the 2019 Interim Meeting in the Council on Constitution and Bylaws Report 3-I-19. This formed AMA Policy G-600.016, "Data Used to Apportion Delegates," which also called for an evaluation at A-22. Board of Trustees Report 20-A-22 provided a review on the effects of counting pending members and included six recommendations. One recommendation was adopted which defined the apportionment process for 2023 and was predicated on not counting pending members. (Policy G-600.959 paragraph 1). Recommendation 1 of BOT Report 20-A-22 was referred for decision and the remaining recommendations were referred.

In September 2022, your Board voted to adopt Recommendation 1 of Board Report 20-A-22, which had been referred for decision. By this action pending members would not be counted for apportionment purposes, which was subsequently recorded as paragraph 2 of Policy G-600.959, "Delegate Apportionment and Pending Members."

Board of Trustees Report 3-I-22 dealt with the remaining referred items from Board Report 20-A-22. The report included a recommendation to rescind Policy G-600.016. The House of Delegates (HOD) referred the report back to the Board. Also at I-22, the HOD considered Constitution & Bylaws Report 1-I-22 which recommended changes to Bylaw §2.1.1.1 specifying how apportionment would be accomplished for 2023 and recommended deletion of the following sentence, "*The December 31 count will include pending members for purposes of apportionment; however, pending members shall not be recounted the following year absent membership renewal."* The HOD adopted the bylaw amendment specifying the 2023 apportionment but referred the recommended deletion of the sentence reproduced above. Given the Board's September action, to no longer count pending members and the adopted bylaw which specifies the process to be used for 2023, the referred sentence although retained in Bylaw §2.1.1.1 has no impact. Furthermore, the amendment adopted by the House includes a sunset provision for the entirety of Bylaw §2.1.1.1 as of December 31, 2023.

DISCUSSION

The original policy adopted by the HOD regarding pending members called for a subsequent evaluation of the policy with recommendations regarding its continuation. This evaluation showed that the intended goals of counting pending members for apportionment of HOD Delegates had not been realized. In addition, your Board believes that counting pending members diminishes the role of active members themselves, devalues other benefits of membership and unnecessarily complicates the apportionment process.

There is little to no evidence that suggests that the offer to count pending members for apportionment purposes has led to membership gains. Virtually all the pending members identified in the initial adoption of the policy had already joined prior to the implementation of the experiment. Anecdotes suggesting that being counted toward representation in the House of Delegates is a motivation for members to join late in the membership cycle has not been confirmed with data over the trial years. Physicians consistently report valuing the advocacy that emerges from House of Delegates (HOD) policy, not representation in the House of Delegates itself *per se.*

There may be isolated instances where state delegations at risk for losing a seat in the House may be motivated to recruit pending members, but it would seem these efforts should be undertaken earlier in the membership year to recruit members for the actual year used for apportionment not the following year. In fact, our current bylaws (2.1.1.2.1) provide that if the membership information as recorded at the end of a year warrants a decrease in the number of delegates, the association is permitted to retain their delegate number, without decrease, for an additional year to intensify their recruitment of members. Counting pending members, those who pay dues not for that additional grace year but for the following year, in effect extends the grace period and creates an opportunity for members to join every third year while still being counted for apportionment.

The notion that pending members gain representation by being counted for apportionment purposes belies the fact that delegates represent the needs of not only members but patients, their sponsoring societies, and the profession, including nonmembers. This is explicitly stated in the HOD Reference Manual. Pending members are in fact NOT members. Individuals who join late in the year wishing to be represented in the HOD could join for the current year by paying half-year dues. It has been said that counting pending members more fairly apportions delegation count. On the contrary, since representation in HOD is based upon membership numbers, allowing certain societies to inflate their delegate numbers beyond their true proportional representation by including pending members diminishes the vote of other societies that have fulfilled their membership requirements and may be thought to disenfranchise the current members.

Some delegations hoped that including pending members would increase their number of delegates. Upon implementation virtually all the increase came in the first year of the experiment and few states actually gained delegates even in that initial year. Any increase was short lived as pending members provide a net membership increase only in their initial count. Ultimately, there is no evidence that pending members have any positive effect on apportionment numbers.

Others have argued that not counting pending members is tantamount to treating them as second-class members. As noted above, they are indeed not members, at least not initially, and once they are members they will be counted just like all other members in the year in which their membership dues apply. Decisions about apportionment need not be linked to more concrete member benefits. In fact, members do begin receiving most membership benefits shortly after the membership decision is made.

Although physicians and medical students make the membership decision throughout the year, AMA membership, similar to most every other medical society membership, is calendar year based. For example, medical students, particularly first year students, often join in July or August and most continuing members renew their membership for the following year in November and December. As such, the membership count varies from day to day. Determination of membership count and thus apportionment could theoretically be done on any date but has to be completed on a defined date. The date of December 31 is specified in multiple provisions within our bylaws. The AMA recognizes dues revenue in financial statements for the calendar membership year. Legally, members are listed as members for the calendar year membership designated on the membership application, regardless when submitted and paid.

Finally, as a practical matter, once someone becomes a pending member, the individual must be tracked across time in perpetuity solely for apportionment lest membership become an on-again, off-again process to game the system. The timing of one's dues payment and one's membership status at the time of that payment affect how and whether one is counted for apportionment purposes. These elements cannot be captured by AMA's membership accounting system across a potential 40- or 50-year career in medicine. To track the information would require an estimated quarter million dollar change to the membership accounting system.

CONCLUSION

While the composition of the House is the province of the HOD, your Board maintains that the long-standing policy of counting actual members for apportionment, including a one-year grace period for societies at risk of losing a delegate seat, has served our association, the House, and members well. There is no clear evidence that counting pending members increases membership or provides benefit to constituent societies. Counting pending members can be considered to diminish or discount actual members' value as much as it can be seen to enhance representation. In addition, it unnecessarily complicates the apportionment process and adds additional cost of tracking pending members over time. Your Board concludes that the trial of counting pending members for apportionment purposes should not be continued.

The adoption of the Policy G-600.959 [1] and the bylaw amendment from CC&B Report 1-I-22 specified the process that was followed for apportionment for 2023. The amended Bylaw §2.1.1.1includes a sunset provision for the entirety of the bylaw as of December 31, 2023. Given that the apportionment process for 2023 is complete, Policy G-600.959 [1] should be rescinded as it has been accomplished.

RECOMMENDATION

Therefore, your Board of Trustees recommends that paragraphs 2-4 of Policy G-600.016 and paragraph 1 of Policy G-600.959 be rescinded and the remainder of the report filed.

Fiscal Note: $150 to update PolicyFinder

RELEVANT AMA POLICY

Data Used to Apportion Delegates G-600.016
1. Our AMA shall issue an annual, mid-year report on or around June 30 to inform each state medical society and each national medical specialty society that is in the process of its 5-year review of its current AMA membership count.
2. "Pending members" (defined as individuals who at the time they apply for membership are not current in their dues and who pay dues for the following calendar year) will be added to the number of active AMA members in the December 31 count for the purposes of AMA delegate allocations to state medical societies for the following year and this total will be used to determine the number of national medical specialty delegates to maintain parity.
3. Our AMA will track “pending members” from a given year who are counted towards delegate allocation for the following year and these members will not be counted again for delegate allocation unless they renew their membership before the end of the following year.
4. Our AMA Board of Trustees will issue a report to the House of Delegates at the 2022 Annual Meeting on the impact of Policy G-600.016 and recommendations regarding continuation of this policy.

Delegate Apportionment and Pending Members G-600.959
1. Delegates will be apportioned to constituent societies for 2023 with each society getting the greatest of the following numbers:
- The number of delegates apportioned at the rate of 1 per 1000, or fraction thereof, AMA members;
- The number of delegates apportioned for 2022 so long as that figure is not greater than 2 more than the number apportioned at the rate of 1 per 1000, or fraction thereof, AMA members; or
- For societies that would lose more than five delegates from their 2022 apportionment, the number of delegates, apportioned at the rate of 1 per 1000, or fraction thereof, AMA members, plus 5.
2. Pending members will no longer be counted for delegate apportionment.
BOT Rep. 20, A-22; BOT Action in response to referred for decision: BOT Rep. 20, A-22

REPORT OF THE BOARD OF TRUSTEES

B of T Report 18-A-23

Subject: Making AMA Meetings Accessible

Presented by: Sandra Adamson Fryhofer, MD, Chair

Referred to: Reference Committee F

Policy G-630.140 [8], adopted by the American Medical Association House of Delegates (HOD) at the 2022 Annual Meeting, called for a report to the HOD by no later than the 2023 Annual Meeting with a plan on how to maximize meeting participation for members and invited attendees with disabilities. This report responds to G-630.140 [8].

BACKGROUND

AMA meeting venues are selected several years in advance to secure locations and begin meeting planning. Among the other considerations, management is directed by current AMA policy to choose hotels for its meetings, conferences, and conventions based on size, service, location, cost, and similar factors. For our Interim and Annual Meetings, efforts are made to locate the Section Assembly Meetings in the House of Delegates meeting hotel or in a hotel in proximity.

When planning an event, it is important to consider accessibility for individuals with disabilities, and AMA management takes this responsibility seriously by researching venues and assessing their accessibility features, considering unique needs, and providing necessary aids for optimal participation.

To ensure accessibility for individuals with disabilities, AMA management follows a thorough process. This includes researching venues that have necessary accessibility features and conducting in-person site visits to assess various features such as parking, entrances, elevators, ramps, restrooms, all gender restrooms, seating arrangements, and audiovisual capabilities. Additionally, AMA management considers unique needs such as sensory processing issues and provides options for individuals to retreat to quiet spaces as needed. To further enhance participation, AMA management offers various audio and visual aids to accommodate those who are sight or hearing impaired. For individuals with hearing impairments, options include sign language interpreters, assistive listening devices, and captioning. For individuals with visual impairments, options include audio descriptions, tactile maps and models, Braille and large-print materials, and accessible technology such as screen readers or magnification software.

For the hearing assistance device, management will work to ensure that the device is available and working properly during management meetings. Members who require this device can inform management in advance, and staff will make sure that the device is set up and ready for use. This information will be included in the registration form for the meeting, or members can contact management directly to request the device.

For an in-person interpreter, management will work to ensure that a qualified interpreter is available for members who require this service. The cost of the interpreter will be covered by the AMA, not by the member. Meeting services will coordinate with the interpreter and the member to ensure that the interpreter is available at the appropriate time and location. Members who require an interpreter can inform management in advance, and staff will make sure that an interpreter is available.

For members in wheelchairs, management will work to ensure that the meeting venue is accessible and that accommodations are made as needed. This may include providing accessible seating, ensuring that there are accessible paths of travel throughout the venue, and making sure that any equipment or materials needed by the member are available and accessible. Members who require accommodations for mobility issues can inform management in advance, and staff will work with the member to ensure that their needs are met.

Overall, management is committed to ensuring that all members are able to participate fully in meetings and that their needs are accommodated appropriately. Members who require special accommodations should inform management in advance, and staff will work to ensure that these accommodations are made.

Further, the House of Delegates (HOD) Affairs Office provides an opportunity for delegates and alternate delegates to request special accommodations thru the delegate credentialing process. Any requests are handled by the Director, HOD Affairs, in conjunction with meeting services. The HOD Office has been made aware of three instances where accommodations were needed. In those instances, the attendees provided their own accommodations and informed the HOD Office for awareness purposes.

CONCLUSION

Ensuring accessibility for all attendees, including those with disabilities, is an important aspect of event planning and management. Providing accommodations such as assistive technologies and sign language interpreters can help ensure that all attendees have an equal opportunity to participate fully in the conference and benefit from its content. It is also important to ensure that the accommodations are communicated clearly to attendees, so they know how to request them if needed. By taking these steps, the conference organizers are demonstrating their commitment to inclusion and creating a welcoming environment for all attendees.

AMA management considers that all the venues for the conference have taken steps to ensure that they are compliant with the Americans with Disabilities Act (ADA) requirements. This means that attendees with disabilities will have access to all areas of the venue, including entrances, restrooms, and meeting rooms.

RECOMMENDATION

The Board of Trustees recommends that Policy G-630.140 [8] be rescinded as being accomplished by this report, and the remainder of the report be filed.

Fiscal Note: No significant fiscal impact

REPORT OF THE BOARD OF TRUSTEES

B of T Report 20-A-23

Subject:	Surveillance Management System for Organized Medicine Policies and Reports (Resolution 609-A-22)
Presented by:	Sandra Adamson Fryhofer, MD, Chair
Referred to:	Reference Committee F

Resolution 609 A-22 "Surveillance Management System for Organized Medicine Policies and Reports," sponsored by Georgia Delegation, was referred to the Board of Trustees. Resolution 609 A-22 asked:

1. That our American Medical Association develop a prioritization matrix across both global and reference committee specific areas of interest (Directive to Take Action);
2. That our AMA develop a web-based surveillance management system, with pre-defined primary and/or secondary metrics, for resolutions and reports passed by their respective governance body (Directive to Take Action);
3. That our AMA share previously approved metrics and results from the surveillance management system at intervals deemed most appropriate to the state and local membership of organized medicine, including where and when appropriate to their patients. (Directive to Take Action)

BACKGROUND

Resolution 609 describes a need to have appropriate surveillance and dissemination system(s) in place that addresses the informational needs of physicians at the state and local levels including those who are members of House of Delegates within organized medicine. Further, the resolution asks that a prioritization matrix be created to aid delegates' and Federation societies' decision-making in submission of relevant and timely resolutions.

The role of prioritization matrices

Decision-making and prioritization frameworks are in common use across industries. Prioritization can be determined by any number of factors, but typical examples may include:

- Importance
- Urgency
- Relevancy
- Probability of Successful Outcome
- Risk

Matrices are used when executive decision-making is required to move forward. Typically, scoring values (e.g. Rank-Order, Likert Scales) must be captured in a consistent manner. Furthermore, the relative weighting of each factor is another important design element that must be determined.

Current resources within AMA

By nature of our AMA's councils, sections, and delegates structures, resolutions are shaped through a rigorous process of research, proposal, discussion, review and ultimately debate and voting.

Members of our House of Delegates today have access to a detailed House of Delegates microsite within *ama-assn.org*. The site provides a preliminary agenda that incorporates a "Bookmark" feature to allow delegates to be notified of changes over time.

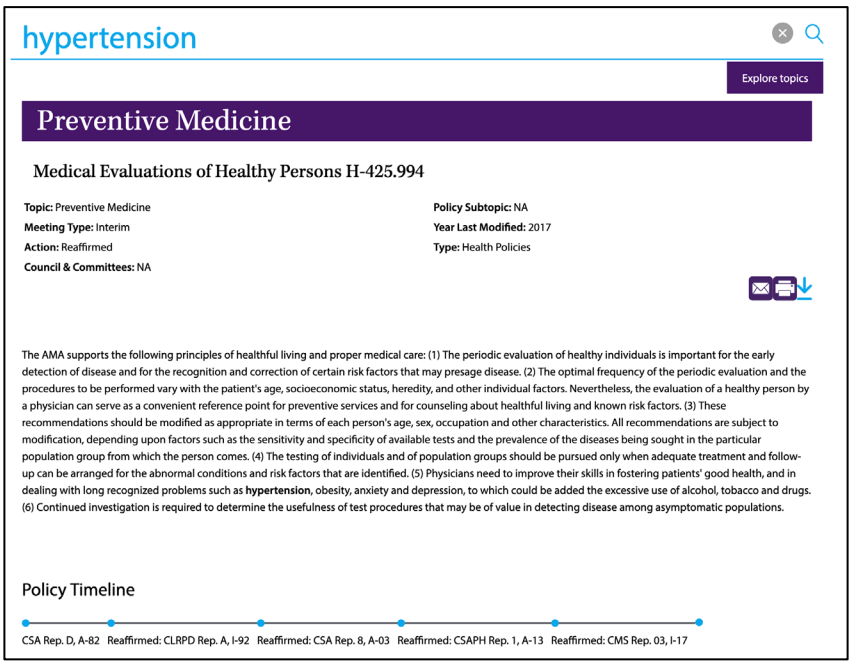
There are three primary database tools available to the public:

PolicyFinder	Council Reports Finder	AMA Archives

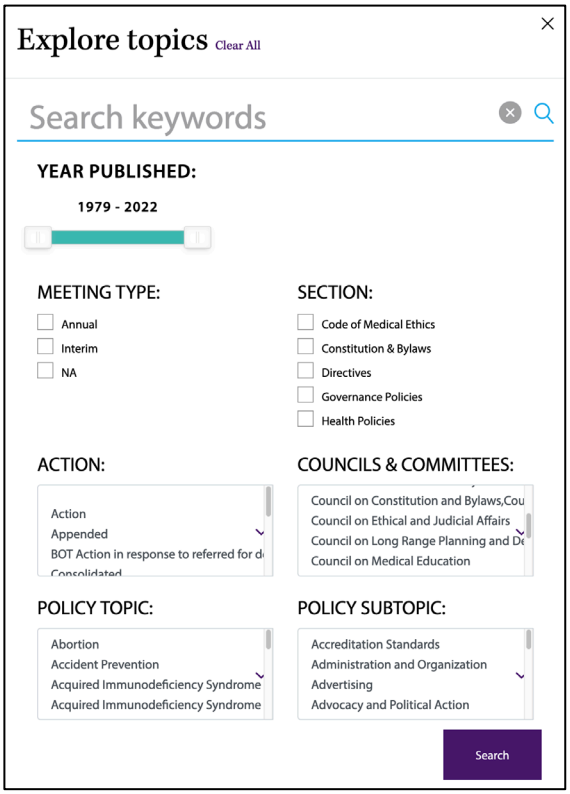
AMA's PolicyFinder resource allows delegates and other interested parties to search prior AMA policies with free text and Boolean keyword search. Information from this search includes Topic, Meeting Type, Action, Council & Committees, Year Last Modified, and Type. In addition to a description of the policy, there is a timeline that shows the trajectory of that policy, including relevant hyperlinks to council reports where possible (see Figure).

AMA's Council Report Finder contains 347 artifacts as of February 2023. Users may search based on keywords and filter by meeting date and by Councils and Committees among others.

AMA Archives contains digests of official actions, historical monographs, HoD proceedings, and Transactions (records of day-to-day activities). As of this writing, the database houses materials from 1847 to 2019.



In addition to keyword searches, users can enable a variety of filters and flags to explore AMA policy. The screenshot below highlights some of these options:



Prior organizational investments in House of Delegates usability

Our AMA maintains a website repository of proceedings, accessible to the public, from prior House of Delegates meetings, covering the prior decade. Visitors to this site can determine the implementation status of reports and resolutions. Materials are available in PDF format and searchable. Meetings dating prior to 2012 are located on AMA's archive database, also available to members, the research community, and public.

In late 2022, AMA's Strategic Insights team was asked to lead a user experience study on our PolicyFinder. Study subjects specifically incorporated members of our HOD, Council, and Reference Committee staff. The goals of the study were to better understand:

- The extent to which the design and functionality of PolicyFinder align with the needs and expectations of target users (with particular attention to the search functionality)
- Usability issues that may impact the user experience and highlight opportunities for further enhancement

This project is concluding at the time of this writing. The conclusions will be used to inform the product development roadmap for PolicyFinder.

Significant financial and logistical challenges exist to maintain a prioritization matrix tool for use by delegates. Any new tool deployment would require rigorous market and user research, product

development roadmaps, and significant data exchange infrastructure among states and specialties that do not exist today. We anticipate there would be a high degree of manual data entry and monitoring for changes that would require dedicated staff members. Additionally, a multi-organization governance mechanism would need to be established that describes the prioritization dimensions. We believe this would be a significant cost burden among AMA and the Federation, without adding great value for the AMA, delegates, and societies.

Federation Activities

The experience of accessing policy and council reports from our Federation ranges widely. State and specialty societies' resources and capabilities devoted to policy databases and reporting systems are unknown but likely vary widely.

We reviewed options for three state medical societies. One society has testimony, letters, and advocacy content available to the public, but the reports of its councils are not publicly available. Another state medical society provided a downloadable Policy Compendium from their House of Delegates but the link was broken. Another state medical association did not have a similar option.

One large specialty society provided a functional public database to browse Guidelines, Expert Consensus Statements, Policy Documents, and artifacts. Another specialty examined did not have any discernable publicly available database or archive of materials from their annual meeting.

RECOMMENDATION

In view of these considerations, your AMA recommends that the following recommendations be adopted in lieu of Resolution 609-A-22 and that the remainder of this report be filed:

1. That our American Medical Association (AMA) maintains the existing resolution management structure within the House of Delegates without imposing a potentially confusing or unsustainable prioritization matrix on delegates and reference committees. (New HOD Policy)

2. That our AMA continues to invest in critical information technology and other appropriate infrastructure that allows for the tracking of past resolutions, existing policy, and supporting materials. (New HOD Policy)

Fiscal note:

REPORT OF THE HOUSE OF DELEGATES COMMITTEE
ON THE COMPENSATION OF THE OFFICERS

Compensation Committee Report, June 2023

Subject: REPORT OF THE HOUSE OF DELEGATES COMMITTEE ON THE COMPENSATION OF THE OFFICERS

Presented by: Ray C. Hsiao, MD, Chair

Referred to: Reference Committee F

This report by the committee at the 2023 Annual meeting presents one recommendation.

BACKGROUND

The Committee has commissioned its external consultant, Ms. Becky Glantz Huddleston, an expert in Board Compensation with Willis Towers Watson, to conduct a comprehensive compensation review of Officer Compensation because it has been five years since the last review. The Committee intends to present the results of this review and related recommendations, if any, to the House at I-2023.

The Committee thanks our Officers for their representation of the AMA and recommends no changes to Officer Compensation pending completion of the comprehensive review.

RECOMMENDATION

1. That there be no changes to the Officers' compensation for the period beginning July 1, 2023 through June 30, 2024. (Directive to Take Action.)

2. That the remainder of the report be filed.

Fiscal Note: $0

APPENDIX

POSITION	GOVERNANCE HONORARIUM
President	$290,160
Immediate Past President	$284,960
President-Elect	$284,960
Chair	$280,280
Chair-Elect	$207,480
Officers	$67,000

Definition of Governance Honorarium Effective July 1, 2017:

The purpose of this payment is to compensate Officers for all Chair-assigned internal AMA work and related travel. This payment is intended to cover all currently scheduled Board meetings, special Board or Board Committee meetings, task forces, subcommittees, Board orientation, development and media training, Board calls, sections, councils, or other internal representation meetings or calls, and any associated review or preparatory work, and all travel days related to all meetings as noted up to eleven (11) Internal Representation days.

Definition of Per Diem for Representation effective July 1, 2017:

The purpose of this payment is to compensate for Board Chair-assigned representation day(s) and related travel. Representation is either external to the AMA, or for participation in a group or organization with which the AMA has a key role in creating/partnering/facilitating, achievement of the respective organization goals such as the AMA Foundation, PCPI, etc. or for Internal Representation days above eleven (11). The Board Chair may also approve a per diem for special circumstances that cannot be anticipated such as weather-related travel delays. Per Diem for Chair-assigned representation and related travel is $1400 per day.

Definition of Telephone Per Diem for External Representation effective July 1, 2017:

Officers, excluding the Board Chair and the President(s) who are assigned as the AMA representative to outside groups as one of their specific Board assignments or assigned Internal Representation days above eleven (11), receive a per diem for teleconference meetings when the total of all teleconference meetings of 30 minutes or longer during a calendar day equal 2 or more hours. Payment for those meetings would require approval of the Chair of the Board. The amount of the Telephonic Per Diem will be ½ of the full Per Diem which is $700.

JOINT REPORT OF THE COUNCIL ON CONSTITUTION AND BYLAWS AND THE COUNCIL ON LONG RANGE PLANNING AND DEVELOPMENT

CCB/CLRPD Report 1-A-23

Subject:	Joint Council Sunset Review of 2013 House Policies
Presented by:	Kevin C. Reilly, Sr., MD, Chair, Council on Constitution and Bylaws Edmond Cabbabe, MD, Chair, Council on Long Range Planning and Development
Referred to:	Reference Committee F

Policy G-600.110, "Sunset Mechanism for AMA Policy," calls for the decennial review of American Medical Association (AMA) policies to ensure that our AMA's policy database is current, coherent, and relevant. Policy G-600.010 reads as follows, laying out the parameters for review and specifying the procedures to follow:

1. As the House of Delegates (House) adopts policies, a maximum ten-year time horizon shall exist. A policy will typically sunset after ten years unless action is taken by the House to retain it. Any action of our AMA House that reaffirms or amends an existing policy position shall reset the sunset "clock," making the reaffirmed or amended policy viable for another 10 years.

2. In the implementation and ongoing operation of our AMA policy sunset mechanism, the following procedures shall be followed: (a) Each year, the Speakers shall provide a list of policies that are subject to review under the policy sunset mechanism; (b) Such policies shall be assigned to the appropriate AMA councils for review; (c) Each AMA council that has been asked to review policies shall develop and submit a report to the House identifying policies that are scheduled to sunset; (d) For each policy under review, the reviewing council can recommend one of the following actions: (i) retain the policy; (ii) sunset the policy; (iii) retain part of the policy; or (iv) reconcile the policy with more recent and like policy (per Policy G-600.111(4), The consolidation process permits editorial amendments for the sake of clarity, so long as the proposed changes are transparent to the House and do not change the meaning); (e) For each recommendation that it makes to retain a policy in any fashion, the reviewing council shall provide a succinct, but cogent justification (f) The Speakers shall determine the best way for the House to handle the sunset reports.

3. Nothing in this policy shall prohibit a report to the House or resolution to sunset a policy earlier than its 10-year horizon if it is no longer relevant, has been superseded by a more current policy, or has been accomplished.

4. The AMA councils and the House should conform to the following guidelines for sunset: (a) when a policy is no longer relevant or necessary; (b) when a policy or directive has been accomplished; or (c) when the policy or directive is part of an established AMA practice that is transparent to the House and codified elsewhere such as the AMA Bylaws or the AMA House of Delegates Reference Manual: Procedures, Policies and Practices.

5. The most recent policy shall be deemed to supersede contradictory past AMA policies.

6. Sunset policies will be retained in the AMA historical archives

RECOMMENDATION

The Councils on Constitution and Bylaws and Long Range Planning and Development recommend that the House of Delegates policies that are listed in the appendix to this report be acted upon in the manner indicated and the remainder of this report be filed.

APPENDIX – Recommended Actions

Policy Number	Title	Text	Recommendation
D-405.991	Clarification of the Title "Doctor" in the Hospital Environment	1. Our AMA Commissioners will, for the purpose of patient safety, request that The Joint Commission develop and implement standards for an identification system for all hospital facility staff who have direct contact with patients which would require that an identification badge be worn which indicates the individual's name and credentials as appropriate (i.e., MD, DO, RN, LPN, DC, DPM, DDS, etc), to differentiate between those who have achieved a Doctorate, and those with other types of credentials. 2. Our AMA Commissioners will, for the purpose of patient safety, request that The Joint Commission develop and implement new standards that require anyone in a hospital environment who has direct contact with a patient who presents himself or herself to the patient as a "doctor," and who is not a "physician" according to the AMA definition (H-405.969) that a physician is an individual who has received a "Doctor of Medicine" or a "Doctor of Osteopathic Medicine" degree or an equivalent degree following successful completion of a prescribed course of study from a school of medicine or osteopathic medicine?) must specifically and simultaneously declare themselves a "non-physician" and define the nature of their doctorate degree. 3. Our AMA will request the American Osteopathic Association (AOA) to (1) expand their standards to include proper identification of all medical staff and hospital personnel with their applicable credential (i.e., MD, DO, RN, LPN, DC, DPM, DDS, etc), and (2) Require anyone in a hospital environment who has direct contact with a patient presenting himself or herself to the patient as a "doctor", who is not a "Physician" according to the AMA definition (AMA Policy H-405.969 .. that a physician is an individual who has received a "Doctor of Medicine" or a "Doctor of Osteopathic Medicine" degree or an equivalent degree following successful completion of a prescribed course of study from a school of medicine or osteopathic medicine) must specifically and simultaneously declare themselves a "non-physician" and define the nature of their doctorate degree.	Retain. Still Relevant. [The Councils acknowledge there is some overlap with other AMA policies D-405.974, Clarification of Healthcare Physician Identification: Consumer Truth & Transparency, H-405.989, Physicians and Surgeons, and H-405.951, Definition and Use of the Term Physician, and H-405.969, Definition of a Physician, and plans to issue a consolidation report at I-23.]
D-450.965	Patients' Responsibilities for Health Care Outcomes	Our AMA will: (1) continue to support the development of resources for patients and physicians to promote adherence through its partnerships with the National Council on Patient Information and Education and National Consumer League National Medication Adherence Campaign; (2) publicize existing resources for	Sunset. Superseded by more recent policies that exist, including H-373.993, Medication Adherence, H-

		physicians to help patients adhere to treatment through its website; and (3) examine issues of patient adherence as part of its strategic initiative on Improving Health Outcomes and, if appropriate, will develop with others targeted education and resources to support patient adherence.	450.942, Patient Adherence to Treatment Plans, H-115.967, Addressing Drug Overdose and Patient Compliance with Targeted Pharmaceutical Packaging Efforts, H-275.976, Boundaries of Practice for Health Professionals, H-120.967, Dispensing of Drug Information, and Code of Medical Ethics Opinion 1.1.4, Patient Responsibilities. Improving Health Outcomes is one of AMA's major focus areas. Other resources include The AMA's STEPS Forward™ practice management tools which include modules on patient adherence, BOT Report 3-I-12, Physician Education to Support Patient Adherence to Treatment, and BOT Report 11-A-14, Medication Non-Adherence and Error.
D-75.994	Tubal Ligation and Vasectomy Consents	1. Our AMA will work closely with the American College of Obstetricians and Gynecologists, the American Urological Association, and any other interested organizations, to advocate to Congress for the legislative or regulatory elimination of the required 30 day interval between informed consent and a permanent sterilization procedure. 2. Our AMA will work with the Centers for Medicare & Medicaid Services to eliminate the time restrictions on informed consent for permanent sterilization procedures.	Sunset. Superseded by more current policy H-290.977, Medicaid Sterilization Services Without Time Constraints. Also, BOT 17-A-14, Tubal Ligation and Vasectomy Consents provides a historical context to the issue.
G-600.045	Online Member Forums in the House of Delegates	Online member forums should be incorporated into every House of Delegates policymaking meeting, using the following parameters: a. Each reference committee should participate in the online member	Retain. Still relevant. Policy D-600.956, Increasing the Effectiveness of

		forum process; b. Each online member forum should cover as many items of business as possible, including, at minimum, those items that appear in the initial compilation of the Delegate Handbook; c. Comments submitted to an online member forum should be used to prepare a summary report that reflects the comments received up to that point; d. Full, free and complete testimony should be allowed in the onsite hearings; and e. The Speakers should experiment with alternative procedures to enhance and improve the overall online member forum process.	Online Reference Committee, commits our AMA to a two-year study of preliminary reference committee documents based on the written online testimony, with those documents being used to inform the discussion at the in-person reference committee.
G-615.001	Establishment and Function of Sections	1. Our AMA adopts the following criteria in consideration of requests for establishing new sections or changing the status of member component groups: A. Issue of Concern - Focus will relate to concerns that are distinctive to the subset within the broader, general issues that face medicine. A demonstrated need exists to deal with these matters, as they are not currently being addressed through an existing AMA group. B. Consistency - Objectives and activities of the group are consistent with those of the AMA. Activities make good use of available resources and are not duplicative. C. Appropriateness - The structure of the group will be consistent with its objectives and activities. D. Representation Threshold - Members of the formal group would be based on identifiable segments of the physician population and AMA membership. The formal group would be a clearly identifiable segment of AMA membership and the general physician population. A substantial number of members would be represented by this formal group. At minimum, this group would be able to represent 1,000 AMA members. It is important to note this threshold will not be used to determine representation as each new group will be allocated only one delegate and one alternate delegate. E. Stability - The group has a demonstrated history of continuity. This segment can demonstrate an ongoing and viable group of physicians will be represented by this section and both the segment and the AMA will benefit from an increased voice within the policymaking body. F. Accessibility - Provides opportunity for members of the constituency who are otherwise underrepresented to introduce issues of concern and to be able to participate in the policymaking process within the HOD. 2. Our AMA will consider requests for establishing new sections by letter of application to the CLRPD, which will make recommendations to the	Retain. Still relevant and necessary to specify the criteria used to evaluate new sections or changing the status of a member component group. A five-year review cycle of delineated sections provides an excellent opportunity for the House to receive updates on section activities to ensure that these sections continue to meet HOD goals. CLRPD Report 1-I-10, Establishment and Function of Sections provides a historical context.

		BOT and HOD for further action or by submission of a resolution.	
G-625.020	AMA Strategic Planning	1. Our AMA annual strategic planning cycle shall include the following dimensions: (a) Information: Our AMA strategic planning process shall be based on information about the environment in which medicine and our AMA must function. Drawing from a variety of sources including public and physician survey data, other types of research findings and data, and the work of our AMA councils, sections, and special groups, the Council on Long Range Planning and Development (CLRPD) shall provide strategic support to our AMA Board by identifying, analyzing, and interpreting environmental trends. The Board of Trustees and the CLRPD shall work collaboratively to distribute information on the environment and our AMA's vision, objectives, and strategies to all the participants in the strategic planning process. (b) Participation: Our AMA strategic planning process should provide for broad participation by the House of Delegates, Councils, Sections, Special Groups, staff, and other appropriate internal and external sources. The Board of Trustees shall provide opportunities for these entities to provide input into the development of our AMA's strategic plan. 2. Our AMA strategic planning process should generate: (a) A multi-year plan that identifies the most critical strategic issues for the organization; (b) The critical success factors for each issue; and (c) Annual work plans with measurable performance objectives, tasks and timelines, assignments for implementation, and expected outcomes. 3. The Board must ensure that adequate resources - staff, funding, and material - are available for developing our AMA strategic plan. 4. The goals of our AMA strategic plan should become an overarching part of all Board and Council meetings. All ongoing initiatives and new undertakings must be regularly measured against the plan, and emerging issues that impact the plan should be identified. 5. The AMA strategic plan will be presented to the HOD in a more visible, proactive, and interactive way. 6. Our AMA Board of Trustees will continue to (a) consider input from the House, CLRPD, and broad physician community when developing the Strategic Plan and making resource allocation decisions; (b) exercise its fiduciary responsibilities with respect to allocating resources appropriately and consistent with the AMA's vision, goals and priorities; and (c) monitor the activity and results related to commitments established in the planning process.	Retain as editorially amended in #7 for accuracy. Still Relevant and Necessary.

		7. Our AMA will continue to communicate activities, achievements, and opportunity for physician involvement through the Federation, Physician ~~Action~~ Grassroots Network, AMA publications (paper, email, and web-based), and other channels as appropriate.	
H-255.967	Mock Residency Interview Program	Our AMA will promote the AMA-International Medical Graduates Section's Mock Residency Interview Program to any AMA member who is in the process of applying for a medical residency position and as one of the benefits of AMA membership.	Retain. Still Relevant and Necessary
H-40.993	Support of the Civilian-Military Contingency Hospital System	The AMA supports the CMCHS and urges U.S. civilian hospitals, when requested, to provide all possible support to the Department of Defense CMCHS in this important effort which will enable the U.S. to prepare for the treatment of casualties from any future conventional military conflict.	Retain. Still Relevant.
H-475.992	Definitions of "Cosmetic" and "Reconstructive" Surgery	(1) Our AMA supports the following definitions of "cosmetic" and "reconstructive" surgery: Cosmetic surgery is performed to reshape normal structures of the body in order to improve the patient's appearance and self-esteem. Reconstructive surgery is performed on abnormal structures of the body, caused by congenital defects, developmental abnormalities, trauma, infection, tumors or disease. It is generally performed to improve function, but may also be done to approximate a normal appearance. (2) Our AMA encourages third party payers to use these definitions in determining services eligible for coverage under the plans they offer or administer.	Retain. Still Relevant.
H-475.983	Definition of Surgery	Our AMA adopts the following definition of 'surgery' from American College of Surgeons Statement ST-11: Surgery is performed for the purpose of structurally altering the human body by the incision or destruction of tissues and is part of the practice of medicine. Surgery also is the diagnostic or therapeutic treatment of conditions or disease processes by any instruments causing localized alteration or transposition of live human tissue which include lasers, ultrasound, ionizing radiation, scalpels, probes, and needles. The tissue can be cut, burned, vaporized, frozen, sutured, probed, or manipulated by closed reductions for major dislocations or fractures, or otherwise altered by mechanical, thermal, light-based, electromagnetic, or chemical means. Injection of diagnostic or therapeutic substances into body cavities, internal organs, joints, sensory organs, and the central nervous system also is considered to be surgery (this does not include the administration by nursing personnel of some injections, subcutaneous, intramuscular, and intravenous, when ordered by a physician). All of these surgical procedures are invasive, including those that are performed with lasers, and the risks	Retain. Still Relevant.

		of any surgical procedure are not eliminated by using a light knife or laser in place of a metal knife, or scalpel. Patient safety and quality of care are paramount and, therefore, patients should be assured that individuals who perform these types of surgery are licensed physicians (defined as doctors of medicine or osteopathy) who meet appropriate professional standards.	
H-475.988	Laser Surgery	The AMA supports the position that revision, destruction, incision or other structural alteration of human tissue using laser is surgery.	Rescind (duplicative of Policy H-475.983 being recommended for retention).
H-475.984	Office-Based Surgery Regulation	Our AMA supports the following Core Principles on Office-Based Surgery: Core Principle #1: Guidelines or regulations for office-based surgery should be developed by states according to levels of anesthesia defined by the American Society of Anesthesiologists (ASA) excluding local anesthesia or minimal sedation. (American Society of Anesthesiologists. Continuum of depth of sedation. Available at: https://www.asahq.org/standards-and-guidelines/guidelines-for-office-based-anesthesia, https://www.asahq.org/standards-and-guidelines/continuum-of-depth-of-sedation-definition-of-general-anesthesia-and-levels-of-sedationanalgesia ~~http://www.asahq.org/for-members/standards-guidelines-and-statement.aspx. Accessed July 2, 2013)~~. Core Principle #2: Physicians should select patients for office-based surgery using moderate sedation/analgesia, deep sedation/analgesia or general anesthesia by criteria including the ASA Physical Status Classification System and so document. (American Society of Anesthesiologists. ASA physical status classification system. Available at: https://www.asahq.org/standards-and-guidelines/asa-physical-status-classification-system ~~http://www.asahq.org/for-members/clinical-informaion/asa-physical-status-classification-system.aspx. Accessed July 2, 2013~~). Core Principle #3: Physicians who perform office-based surgery with moderate sedation/analgesia, deep sedation/analgesia, or general anesthesia should have their facilities accredited by The Joint Commission, Accreditation Association for Ambulatory Health Care (AAAHC), American Association for Accreditation of Ambulatory Surgical Facilities (AAAASF), American Osteopathic Association (AOA), or by a state recognized entity, such as the Institute for Medical Quality (IMQ), or be state licensed and/or Medicare certified. Core Principle #4: Physicians performing office-based surgery with moderate sedation/analgesia, deep sedation/analgesia, or general anesthesia must have admitting privileges at a nearby hospital, or a transfer agreement with	Retain as editorially amended for accuracy. Still relevant.

		another physician who has admitting privileges at a nearby hospital, or maintain an emergency transfer agreement with a nearby hospital. Core Principle #5: States should follow the guidelines outlined by the Federation of State Medical Boards (FSMB) regarding informed consent. (Report of the Special Committee on Outpatient [Office-Based] Surgery. ~~(Med. Licensure Discipline. 2002; 88: 160-174).~~ Core Principle #6: For office surgery with moderate sedation/analgesia, deep sedation/analgesia, or general anesthesia, states should consider legally privileged adverse incident reporting requirements as recommended by the FSMB and accompanied by periodic peer review and a program of Continuous Quality Improvement. (Report of the Special Committee on Outpatient (Office-Based) Surgery. ~~Journal Medical Licensure and Discipline. 2002; 88:160-174)~~. Core Principle #7: Physicians performing office-based surgery using moderate sedation/analgesia, deep sedation/analgesia or general anesthesia must obtain and maintain board certification by one of the boards recognized by the American Board of Medical Specialties, American Osteopathic Association, or a board with equivalent standards approved by the state medical board within five years of completing an approved residency training program. The procedure must be one that is generally recognized by that certifying board as falling within the scope of training and practice of the physician providing the care. Core Principle #8: Physicians performing office-based surgery with moderate sedation/analgesia, deep sedation/analgesia, or general anesthesia may show competency by maintaining core privileges at an accredited or licensed hospital or ambulatory surgical center, for the procedures they perform in the office setting. Alternatively, the governing body of the office facility is responsible for a peer review process for privileging physicians based on nationally recognized credentialing standards. Core Principle #9: For office-based surgery with moderate sedation/analgesia, deep sedation/analgesia, or general anesthesia, at least one physician who is credentialed or currently recognized as having successfully completed a course in advanced resuscitative techniques (e.g., ATLS, ACLS, or PALS), must be present or immediately available with age- and size-appropriate resuscitative equipment until the patient has met the criteria for discharge from the facility. In addition, other medical personnel with direct patient contact should at a minimum be trained in Basic Life Support (BLS). Core Principle #10: Physicians administering or supervising moderate sedation/analgesia, deep sedation/analgesia, or general anesthesia should have appropriate education and training.	

D-478.977	Exam Room Computing and Patient Physician Interactions	Our AMA will make physicians aware of tips and resources for effectively using computers and electronic health records (EHRs) in patient-physician interactions through AMA publication vehicles, and encourages physicians to incorporate questions regarding use of computers and EHRs in patient-satisfaction surveys to provide feedback on how their own patients experience the use of computers in the examination room.	Sunset. The actions requested have been accomplished. The AMA's STEPS Forward™ practice management tools, found at the AMA Ed Hub™, provide physicians with in-depth CME on acquisition and efficient use of an EHR. Modules include "Electronic Health Record (EHR) Software Selection and Purchase" and "Electronic Health Record Optimization: Strategies for Thriving," which include techniques physicians and office staff can use to "maximize the benefits and minimize the burdens of the EHR." The AMA Ed Hub also includes a substantial selection of EHR case studies. An additional resource is AMA's Taming the EHR Playbook. Policy, H-480.971, commits our AMA to continued work in this area.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 601
(A-23)

Introduced by: Resident and Fellow Section

Subject: Solicitation Using the AMA Brand

Referred to: Reference Committee F

Whereas, Some physicians are turned off by third-party solicitation material mailed with the American Medical Association brand, such as regarding disability insurance or student loan refinancing, potentially harming the AMA's reputation and costing physician membership; and

Whereas, Financial literacy websites such as White Coat Investor detail the flaws in the AMA branded third-party disability insurance plan[1]; and

Whereas, There is a financial and environmental cost to printed solicitation; and

Whereas, Associating the AMA brand to specific third-party products may or may not be in the best interest of the AMA or current and potential AMA members; therefore be it

RESOLVED, That our American Medical Association study the use of AMA branded solicitation material mailed to physicians, the impact it has on the perception of our AMA by current and potential physician members, and the merits of continuing to use these materials in future communications (Directive to Take Action); and be it further

RESOLVED, That our American Medical Association survey our membership on the preferred method to receive third-party solicitation material (mail, phone, email, social media) and provide a method to opt-out of certain methods if not desired. (Directive to Take Action)

Fiscal Note: Minimal - less than $1,000

Received: 3/19/23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 602
(A-23)

Introduced by: Medical Student Section

Subject: Supporting the Use of Gender-Neutral Language

Referred to: Reference Committee F

Whereas, Existing American Medical Association policy inconsistently uses gendered language- in particular, gender pronouns- when referring to physicians, medical students, patients, and others, most often referencing generic individuals with traditionally male and sometimes female pronouns ("he/him/his", "he or she", "his or hers"); and

Whereas, One of many examples of gendered language is AMA Policy H-140.951, which states "Our AMA believes that the primary mission of the physician is to use his best efforts and skill in the care of his patients…"; and

Whereas, The American medical profession is increasingly gender diverse: 50.5% of all current U.S. medical students are women, and there many medical students and physicians who have other genders that are not male or female, including gender-expansive, gender-fluid, gender-nonconforming, genderqueer, nonbinary, and others[1,2,7]; and

Whereas, The frequent default use of male pronouns to describe generic physicians in AMA policy (for example, using "him" and "his" as pronouns for "the physician") may reinforce patriarchal (pro-male) bias in medicine and disadvantage physicians who do not use such pronouns[3-6]; and

Whereas, Gender identity exists on a spectrum that includes cisgender individuals whose gender identity aligns with their sex assigned at birth and transgender individuals whose gender identity differs from their sex assigned at birth[8]; and

Whereas, Cisnormative, gender-specific language has been shown to contribute to health disparities and alienate gender-diverse people from accessing care [9-12]; and

Whereas, The use of cisnormative, gender-specific language in public health campaigns such as breast cancer screening, testicular cancer awareness, HPV vaccination, and dissemination of PrEP has contributed to health disparities that negatively impact gender-diverse patients[13-15]; and

Whereas, Cisgendered imagery in medical education including anatomical diagrams has been demonstrated to exacerbate gender bias in students and contribute to students' reduced comfort and knowledge in treating gender-diverse patients[16-17]; and

Whereas, Reputable organizations and government departments that guide the public via public health communication continue to use gendered messaging that excludes gender-diverse individuals; for example, alcoholic beverage warning labels that read "*women* should not drink alcoholic beverages during pregnancy because of the risk of birth defects" [18]; and

Whereas, The use of gendered messaging in spaces such as Women's Health Clinics with pink chairs, patient restrooms labeled as a "women's" restrooms, and brochures containing language helpful for cisgender women only, have been shown to be stigmatizing and isolating for gender-diverse individuals and may discourage them from accessing necessary services[19]; and

Whereas, Gender-neutral language has been shown to positively impact the comfort and psychological safety of gender-diverse individuals "in the institutions with which they must interact" [20]; and

Whereas, To address the exclusion of gender-diverse individuals through the use of gendered messaging, peer organizations are already adopting gender-neutral language, including the Section on Women's Health of the American Physical Therapy Association which changed its name to the Academy of Pelvic Health Physical Therapy and the American College of Obstetricians and Gynecologists which released Committee Opinion 823 recognizing that not all pregnant individuals may identify as "mothers" [21-22]; and

Whereas, The AMA should aspire to use gender-neutral language where feasible, recognizing that American physicians and the patients we serve have diverse gender identities and may use similarly diverse personal pronouns; and

Whereas, One solution for correcting the bias established by using traditionally male pronouns as default in AMA policy is to replace them with gender-neutral pronouns such as "they", "them", "their", and "theirs", which are pronouns used by many gender non-binary individuals and may also be used to collectively describe people of all genders[7]; and

Whereas, The pronouns "they", "them", "their", and "theirs" have long been widely accepted as both singular and plural pronouns, allowing them to be incorporated into AMA policy with great flexibility[23-25]; and

Whereas, Adopting consistent gender-neutral pronouns and other non-gendered language into AMA policy would be an efficient and adequate way to collectively reference medical students, physicians, patients, and others of all genders; and

Whereas, Updating the language in our AMA's policies to be maximally inclusive is a simple act that aligns with our organization's work to document and appreciate the diversity in sexual orientation and gender identity (SOGI) of our members as well as to champion gender equity and non-discrimination in medicine and society[26-31]; and

Whereas, AMA policy D-65.990, which calls on the AMA to standardize existing and future language relating to LGBTQ people, establishes precedent for this timely action; therefore be it

RESOLVED, That our American Medical Association (1) Recognize the importance of using gender-neutral language such as gender neutral pronouns, terms, imagery, and symbols in respecting the spectrum of gender identity, (2) revise all relevant policies to utilize gender-neutral language in place of gendered language where such text inappropriately appears, (3) utilize gender-neutral language in future policies, internal communications, and external communications where gendered language does not specifically need to be used, (4) encourage the use of gender-neutral language in public health and medical messaging, (5) encourage other professional societies to utilize gender-neutral language in their work, and (6) support the use of gender-neutral language in clinical spaces that may serve both cisgender and gender-diverse individuals. (New HOD Policy)

Fiscal Note: Up to $23K to review all current AMA policies and compile a report with recommendations for HOD consideration

RELEVANT AMA POLICY

Professionalism in Medicine H-140.951
Our AMA believes that the primary mission of the physician is to use his best efforts and skill in the care of his patients and to be mindful of those forces in society that would erode fundamental ethical medical practice. The AMA affirms that the medical profession is solely responsible for establishing and maintaining standards of professional medical ethics and that the state neither legislate ethical standards nor excuse physicians from their ethical obligations. The AMA House of Delegates, Board of Trustees, staff, and membership rededicate themselves to professionalism such that it permeates all activities and is the defining characteristic of the AMA's identity.
Citation: Res. 4, A-95; Reaffirmed: CEJA Rep. 2, A-05; Reaffirmation I-09; Consolidated: CEJA Rep. 03, A-19;

Strategies for Enhancing Diversity in the Physician Workforce H-200.951
Our AMA: (1) supports increased diversity across all specialties in the physician workforce in the categories of race, ethnicity, disability status, sexual orientation, gender identity, socioeconomic origin, and rurality; (2) commends the Institute of Medicine (now known as the National Academies of Sciences, Engineering, and Medicine) for its report, "In the Nation's Compelling Interest: Ensuring Diversity in the Health Care Workforce," and supports the concept that a racially and ethnically diverse educational experience results in better educational outcomes; (3) encourages the development of evidence-informed programs to build role models among academic leadership and faculty for the mentorship of students, residents, and fellows underrepresented in medicine and in specific specialties; (4) encourages physicians to engage in their communities to guide, support, and mentor high school and undergraduate students with a calling to medicine; (5) encourages medical schools, health care institutions, managed care and other appropriate groups to adopt and utilize activities that bolster efforts to include and support individuals who are underrepresented in medicine by developing policies that articulate the value and importance of diversity as a goal that benefits all participants, cultivating and funding programs that nurture a culture of diversity on campus, and recruiting faculty and staff who share this goal; and (6) continue to study and provide recommendations to improve the future of health equity and racial justice in medical education, the diversity of the health workforce, and the outcomes of marginalized patient populations.
Citation: CME Rep. 1, I-06; Reaffirmed: CME Rep. 7, A-08; Reaffirmed: CCB/CLRPD Rep. 4, A-13; Modified: CME Rep. 01, A-16; Reaffirmation A-16; Modified: Res. 009, A-21; Modified: CME Rep. 5, A-21;

Principles for Advancing Gender Equity in Medicine H-65.961
Our AMA:
1. declares it is opposed to any exploitation and discrimination in the workplace based on personal characteristics (i.e., gender);
2. affirms the concept of equal rights for all physicians and that the concept of equality of rights under the law shall not be denied or abridged by the U.S. Government or by any state on account of gender;
3. endorses the principle of equal opportunity of employment and practice in the medical field;
4. affirms its commitment to the full involvement of women in leadership roles throughout the federation, and encourages all components of the federation to vigorously continue their efforts to recruit women members into organized medicine;
5. acknowledges that mentorship and sponsorship are integral components of one’s career advancement, and encourages physicians to engage in such activities;
6. declares that compensation should be equitable and based on demonstrated competencies/expertise and not based on personal characteristics;
7. recognizes the importance of part-time work options, job sharing, flexible scheduling, re-entry, and contract negotiations as options for physicians to support work-life balance;
8. affirms that transparency in pay scale and promotion criteria is necessary to promote gender equity, and as such academic medical centers, medical schools, hospitals, group practices and other physician employers should conduct periodic reviews of compensation and promotion rates by gender and evaluate protocols for advancement to determine whether the criteria are discriminatory; and

9. affirms that medical schools, institutions and professional associations should provide training on leadership development, contract and salary negotiations and career advancement strategies that include an analysis of the influence of gender in these skill areas.
Our AMA encourages: (1) state and specialty societies, academic medical centers, medical schools, hospitals, group practices and other physician employers to adopt the AMA Principles for Advancing Gender Equity in Medicine; and (2) academic medical centers, medical schools, hospitals, group practices and other physician employers to: (a) adopt policies that prohibit harassment, discrimination and retaliation; (b) provide anti-harassment training; and (c) prescribe disciplinary and/or corrective action should violation of such policies occur.

Utilization of "LGBTQ" in Relevant Past and Future AMA Policies D-65.990
Our AMA will: (1) utilize the terminology lesbian, gay, bisexual, transgender, and queerand the abbreviation LGBTQ in all future policies and publications when broadly addressing this population; (2) revise all relevant and active policies to utilize the abbreviation LGBTQ in place of the abbreviations LGBT and GLBTwhere such text appears; and (3) revise all relevant and active policies to utilize the terms lesbian, gay, bisexual, transgender, and queer to replace lesbian, gay, bisexual, and transgenderwhere such text appears.
Citation: Res. 016, A-18;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 603
(A-23)

Introduced by: Medical Student Section

Subject: Environmental Sustainability of AMA National Meetings

Referred to: Reference Committee F

Whereas, The World Health Organization (WHO) and our AMA have called climate change "the greatest public health challenge of the 21st century"[1,2]; and

Whereas, Reputable entities including the WHO, Intergovernmental Panel on Climate Change (IPCC), and U.S. Global Change Research Program assert that climate change has had an effect on, and continues to pose a great risk for, human health through climate related extreme weather events, worsening air quality, and increased disease transmission[1,3,4]; and

Whereas, Climate change is primarily driven through human activity and the release of greenhouse gases, including carbon dioxide, into the atmosphere[5]; and

Whereas, The United States healthcare system alone is responsible for 10% of national greenhouse gas emissions and, if it were its own country, it would be the 13th largest producer of greenhouse gas emissions in the world[6,7]; and

Whereas, Extreme weather and climate events have significantly increased healthcare spending in the United States, with $14 billion in additional spending through 760,000 additional patient encounters and 1,689 premature deaths between 2000 and 2009[8,9]; and

Whereas, The Intergovernmental Panel on Climate Change (IPCC) has determined it is possible to avoid warming past 1.5°C above pre-industrial levels by 2100 if extreme measures are taken to curtail anthropogenic emissions[10]; and

Whereas, If global warming exceeds 1.5°C, the estimated global effects include 92,207 additional heat-related deaths per year by 2030, 350 million more humans exposed to severe heat by 2050, and 31 to 69 million humans exposed to flooding from sea level rise by 2100[10]; and

Whereas, Compared to no action, limiting global warming to less than 1.5°C would result in ~50% lower annual health-related costs and prevention of ~50% of infectious disease cases in the United States by 2100[8,9]; and

Whereas, The IPCC has estimated that limiting global warming to 1.5°C would require "global net human-caused emissions of carbon dioxide to fall by about 45 percent from 2010 levels by 2030, and reach net zero by approximately 2050"[10]; and

Whereas, IPCC defines net zero emissions as a state where anthropogenic emissions of greenhouse gasses (GHG) are balanced by anthropogenic removals of GHG over a specific time period[8]; and

Whereas, Setting emissions targets is an essential part of carbon abatement, and many non-profit organizations, large corporations, and countries have committed to carbon neutrality for their business operations by a date certain in order to improve their business efficiencies and to foster the development of carbon neutral practices[11-13;] and

Whereas, Multiple organizations in the healthcare industry have committed to becoming carbon neutral on or before 2030, including Harvard Medical School and its affiliated hospitals, all University of California campus and medical centers, the Cleveland Clinic, and Kaiser-Permanante[14-17]; and

Whereas, Other professional organizations, including the Association of Energy Services Professionals, and International Federation of Medical Students' Associations have committed to making their conferences carbon neutral[18,19]; and

Whereas, Our American Medical Association has set discrete benchmark dates for achieving goals in other settings, including child blood lead levels (H-60.924), accreditation of health care service providers in jails (D-430.997), and disaggregation of demographic data (H-350.954); and

Whereas, Our AMA has substantial policy recognizing the impacts of climate change, committing to sustainable business operations, emphasizing the importance of physician leadership regarding climate change, encouraging the study of environmental causes of disease, and encouraging other stakeholders in healthcare to practice environmental responsibility, but has no explicit emissions goal and no way to account for progress towards environmental sustainability (H-135.938, H-135.923, G-630.100, D-135.997, H-135.973); therefore be it

RESOLVED, That our American Medical Association commit to reaching net zero emissions for its business operations by 2030, and remain net zero or net negative, as defined by a carbon neutral certifying organization, and report annually on the AMA's progress towards implementation (New HOD Policy); and be it further

RESOLVED, That our AMA work with appropriate stakeholders to encourage the United States healthcare system, including but not limited to hospitals, clinics, ambulatory care centers, and healthcare professionals, to decrease emissions to half of 2010 levels by 2030 and become net zero by 2050, and remain net zero or negative, as defined by a carbon neutral certifying organization, including by creating educational materials (Directive to Take Action); and be it further

RESOLVED, That our AMA evaluate the feasibility of purchasing carbon offsets for members traveling to and from Annual and Interim meetings and report back to the House of Delegates (Directive to Take Action); and be it further

RESOLVED, That our AMA evaluate the feasibility of holding future Annual and Interim meetings at Leadership in Energy and Environmental Design-certified or sustainable conference centers and report back to the House of Delegates. (Directive to Take Action)

Fiscal Note: Implementation of this initiative will be a multi-million dollar undertaking due to the need for consultants to develop a plan, project management to implement measures, potential reduction of in-person meetings and travel, and the ongoing purchase of carbon credits to offset areas where AMA may not be able to reduce emissions, including, among others, utilities in rented AMA office space. Measuring and reporting on compliance will contribute to significant annual costs thereafter. It is currently impossible to provide more precise cost information given the myriad factors involved.

RELEVANT AMA POLICY

Global Climate Change and Human Health H-135.938

Our AMA: 1. Supports scientific consensus that the Earth is undergoing adverse global climate change and that anthropogenic contributions are significant. These climate changes have adversely affected the physical and mental health of people. We recognize that minoritized and marginalized populations, children, pregnant people, the elderly, rural communities, and those who are economically disadvantaged will suffer disproportionate harm from climate change.
2. Supports educating the medical community on the adverse public health effects of global climate change and incorporating the health implications of climate change into the spectrum of medical education, including topics such as population displacement, heat waves and drought, flooding, infectious and vector-borne diseases, and potable water supplies.
3. (a) Recognizes the importance of physician involvement in policymaking at the state, national, and

global level and supports efforts to search for novel, comprehensive, and economically sensitive approaches to mitigating climate change to protect the health of the public; and (b) recognizes that whatever the etiology of global climate change, policymakers should work to reduce human contributions to such changes.
4. Encourages physicians to assist in educating patients and the public on the physical and mental health effects of climate change and on environmentally sustainable practices, and to serve as role models for promoting environmental sustainability.
5. Encourages physicians to work with local and state health departments to strengthen the public health infrastructure to ensure that the global health effects of climate change can be anticipated and responded to more efficiently, and that adaptation interventions are equitable and prioritize the needs of the populations most at risk.
6. Supports epidemiological, translational, clinical and basic science research necessary for evidence-based global climate change policy decisions related to health care and treatment.
7. Encourages physicians to assess for environmental determinants of health in patient history-taking and encourages the incorporation of assessment for environmental determinants of health in patient history-taking into physician training.
Citation: CSAPH Rep. 3, I-08; Reaffirmation A-14; Reaffirmed: CSAPH Rep. 04, A-19; Reaffirmation: I-19; Modified: Res. 424, A-22; Modified: CSAPH Rep. 2, I-22;

AMA Advocacy for Environmental Sustainability and Climate H-135.923
Our AMA (1) supports initiatives to promote environmental sustainability and other efforts to halt global climate change; (2) will incorporate principles of environmental sustainability within its business operations; and (3) supports physicians in adopting programs for environmental sustainability in their practices and help physicians to share these concepts with their patients and with their communities.
Citation: Res. 924, I-16; Reaffirmation: I-19;

Stewardship of the Environment H-135.973
The AMA: (1) encourages physicians to be spokespersons for environmental stewardship, including the discussion of these issues when appropriate with patients; (2) encourages the medical community to cooperate in reducing or recycling waste; (3) encourages physicians and the rest of the medical community to dispose of its medical waste in a safe and properly prescribed manner; (4) supports enhancing the role of physicians and other scientists in environmental education; (5) endorses legislation such as the National Environmental Education Act to increase public understanding of environmental degradation and its prevention; (6) encourages research efforts at ascertaining the physiological and psychological effects of abrupt as well as chronic environmental changes; (7) encourages international exchange of information relating to environmental degradation and the adverse human health effects resulting from environmental degradation; (8) encourages and helps support physicians who participate actively in international planning and development conventions associated with improving the environment; (9) encourages educational programs for worldwide family planning and control of population growth; (10) encourages research and development programs for safer, more effective, and less expensive means of preventing unwanted pregnancy; (11) encourages programs to prevent or reduce the human and environmental health impact from global climate change and environmental degradation.(12) encourages economic development programs for all nations that will be sustainable and yet nondestructive to the environment; (13) encourages physicians and environmental scientists in the United States to continue to incorporate concerns for human health into current environmental research and public policy initiatives; (14) encourages physician educators in medical schools, residency programs, and continuing medical education sessions to devote more attention to environmental health issues;
(15) will strengthen its liaison with appropriate environmental health agencies, including the National Institute of Environmental Health Sciences (NIEHS); (16) encourages expanded funding for environmental research by the federal government; and (17) encourages family planning through national and international support.
Citation: CSA Rep. G, I-89; Amended: CLRPD Rep. D, I-92; Amended: CSA Rep. 8, A-03; Reaffirmed in lieu of Res. 417, A-04; Reaffirmed in lieu of Res. 402, A-10; Reaffirmation I-16;
AMA to Protect Human Health from the Effects of Climate Change by Ending its Investments in Fossil Fuel Companies H-135.921
1. Our AMA will: (a) choose for its commercial relationships, when fiscally responsible, vendors, suppliers, and corporations that have demonstrated environmental sustainability practices that seek to minimize

their fossil fuels consumption; and (b) support efforts of physicians and other health professional associations to proceed with divestment, including to create policy analyses, support continuing medical education, and to inform our patients, the public, legislators, and government policy makers.
2. Our AMA: (a) declares that climate change is an urgent public health emergency, and calls upon all governments, organizations, and individuals to work to avert catastrophe; (b) urges all health and life insurance companies, including those that provide insurance for medical, dental, and long-term care, to work in a timely, incremental, and fiscally responsible manner to end all financial investments or relationships (divestment) with companies that generate the majority of their income from the exploration for, production of, transportation of, or sale of fossil fuels; and (c) will send letters to the nineteen largest health or life insurance companies in the United States to inform them of AMA policies concerned with climate change and with fossil fuel divestments, and urging these companies to divest.
Citation: BOT Rep. 34, A-18; Appended: Res. 607, A-22; Reaffirmed: CSAPH Rep. 2, I-22;

Support of Clean Air and Reduction in Power Plant Emissions H-135.949
1. Our AMA supports (a) federal legislation and regulations that meaningfully reduce the following four major power plant emissions: mercury, carbon dioxide, sulfur dioxide and nitrogen oxide; and (b) efforts to limit carbon dioxide emissions through the reduction of the burning of coal in the nation's power generating plants, efforts to improve the efficiency of power plants and continued development, promotion, and widespread implementation of alternative renewable energy sources in lieu of carbon-based fossil fuels.
2. Our AMA will: (a) support the Environmental Protection Agency’s proposal, under the Clean Air Act, to regulate air quality for heavy metals and other air toxins emitted from smokestacks. The risk of dispersion through air and soil should be considered, particularly for people living downwind of smokestacks; and (b) urge the EPA to finalize updated mercury, cadmium, and air toxic regulations for monitoring air quality emitted from power plants and other industrial sources, ensuring that recommendations to protect the public’s health are enforceable.
Citation: Res. 429, A-03; Reaffirmation I-07; Reaffirmed in lieu of Res. 526, A-12; Reaffirmed: Res. 421, A-14; Modified: Res. 506, A-15; Modified: Res. 908, I-17; Appended: Res. 401, A-22;

EPA and Green House Gas Regulation H-135.934
1. Our AMA supports the Environmental Protection Agency's authority to promulgate rules to regulate and control green house gas emissions in the United States.
2.Our AMA: (a) strongly supports evidence-based environmental statutes and regulations intended to regulate air and water pollution and to reduce greenhouse gas emissions; and (b) will advocate that environmental health regulations should only be modified or rescinded with scientific justification.
Citation: Res. 925, I-10; Reaffirmed in lieu of Res. 526, A-12; Reaffirmed: Res. 421, A-14; Appended: Res. 523, A-17;

Conservation, Recycling and Other "Green" Initiatives G-630.100
AMA policy on conservation and recycling include the following: (1) Our AMA directs its offices to implement conservation-minded practices whenever feasible and to continue to participate in "green" initiatives. (2) It is the policy of our AMA to use recycled paper whenever reasonable for its in-house printed matter and publications, including JAMA, and materials used by the House of Delegates, and that AMA printed material using recycled paper should be labeled as such. (3) During meetings of the American Medical Association House of Delegates, our AMA Sections, and all other AMA meetings, recycling bins, where and when feasible, for white (and where possible colored) paper will be made prominently available to participants.
Citation: CCB/CLRPD Rep. 3, A-12; Modified: Speakers Rep., A-15; Reaffirmed: CCB/CLRPD Rep. 1, A-22;

Disaggregation of Demographic Data Within Ethnic Groups H-350.954
1. Our AMA supports the disaggregation of demographic data regarding: (a) Asian-Americans and Pacific Islanders in order to reveal the within-group disparities that exist in health outcomes and representation in medicine; and (b) ethnic groups in order to reveal the within-group disparities that exist in health outcomes and representation in medicine.
2. Our AMA: (a) will advocate for restoration of webpages on the Asian American and Pacific Islander (AAPI) initiative (similar to those from prior administrations) that specifically address disaggregation of health outcomes related to AAPI data; (b) supports the disaggregation of data regarding AAPIs in order to reveal the AAPI ethnic subgroup disparities that exist in health outcomes; (c) supports the disaggregation of data regarding AAPIs in order to reveal the AAPI ethnic subgroup disparities that exist in representation in medicine, including but not limited to leadership positions in academic medicine; and (d) will report back at the 2020 Annual Meeting on the issue of disaggregation of data regarding AAPIs (and other ethnic subgroups) with regards to the ethnic subgroup disparities that exist in health outcomes and representation in medicine, including leadership positions in academic medicine.
Citation: Res. 001, I-17; Appended: Res. 403, A-19;

Reducing Lead Poisoning H-60.924
1. Our AMA: (a) supports regulations and policies designed to protect young children from exposure to lead; (b) urges the Centers for Disease Control and Prevention to give priority to examining the current weight of scientific evidence regarding the range of adverse health effects associated with blood lead concentrations below the current "level of concern" in order to provide appropriate guidance for physicians and public health policy, and encourage the identification of exposure pathways for children who have low blood lead concentrations, as well as effective and innovative strategies to reduce overall childhood lead exposure; (c) encourages physicians and public health departments to screen children based on current recommendations and guidelines and to report all children with elevated blood levels to the appropriate health department in their state or community in order to fully assess the burden of lead exposure in children. In some cases this will be done by the physician, and in other communities by the laboratories; (d) promotes community awareness of the hazard of lead-based paints; and (e) urges paint removal product manufacturers to print precautions about the removal of lead paint to be included with their products where and when sold.
2. Our AMA will call on the United States government to establish national goals to: (a) ensure that no child has a blood lead level >5 g/dL (>50 ppb)by 2021, and (b) eliminate lead exposures to pregnant women and children, so that by 2030, no child would have a blood lead level >1 g/dL (10 ppb).
3. Our AMA will call on the United States government in all its agencies to pursue the following strategies to achieve these goals: (a) adopt health-based standards and action levels for lead that rely on the most up-to-date scientific knowledge to prevent and reduce human exposure to lead, and assure prompt implementation of the strongest available measures to protect pregnant women and children from lead toxicity and neurodevelopmental impairment; (b) identify and remediate current and potential new sources of lead exposure (in dust, air, soil, water and consumer products) to protect children before they are exposed; (c) continue targeted screening of children to identify those who already have elevated blood lead levels for case management, as well as educational and other services; (d) eliminate new sources of lead introduced or released into the environment, which may entail banning or phasing out all remaining uses of lead in products (aviation gas, cosmetics, wheel weights, industrial paints, batteries, lubricants, and other sources), and the export of products containing lead, and setting more protective limits on emissions from battery recyclers and other sources of lead emissions; (e) provide a dedicated funding stream to enhance the resources available to identify and eliminate sources of lead exposure, and provide educational, social and clinical services to mitigate the harms of lead toxicity, particularly to protect and improve the lives of children in communities that are disproportionately exposed to lead; and (f) establish an independent expert advisory committee to develop a long-term national strategy, including recommendations for funding and implementation, to achieve the national goal of eliminating lead toxicity in pregnant women and children, defined as blood lead levels above 1 g/dL (10 ppb).
4.Our AMA supports requiring an environmental assessment of dwellings, residential buildings, or child care facilities following the notification that a child occupant or frequent inhabitant has a confirmed elevated blood lead level, to determine the potential source of lead poisoning, including testing the water supply.
Citation: CCB/CLRPD Rep. 3, A-14; Appended: Res. 926, I-16; Appended: Res. 412, A-17;

Pollution Control and Environmental Health H-135.996
Our AMA supports (1) efforts to alert the American people to health hazards of environmental pollution and the need for research and control measures in this area; and (2) its present activities in pollution control and improvement of environmental health.
Citation: Sub. Res. 40, A-70; Reaffirmed: CLRPD Rep. C, A-89; Reaffirmed: Sunset Report, A-00; Modified: CSAPH Rep. 1, A-10; Reaffirmed: CSAPH Rep. 01, A-20;

Research into the Environmental Contributors to Disease D-135.997
Our AMA will (1) advocate for greater public and private funding for research into the environmental causes of disease, and urge the National Academy of Sciences to undertake an authoritative analysis of environmental causes of disease; (2) ask the steering committee of the Medicine and Public Health Initiative Coalition to consider environmental contributors to disease as a priority public health issue; and (3) lobby Congress to support ongoing initiatives that include reproductive health outcomes and development particularly in minority populations in Environmental Protection Agency Environmental Justice policies.
Citation: Res. 402, A-03; Appended: Res. 927, I-11; Reaffirmed in lieu of: Res. 505, A-19;

Environmental Health Programs H-135.969
Our AMA (1) urges the physicians of the United States to respond to the challenge for a clean environment individually and through professional groups by becoming the spokespersons for environmental stewardship; and (2) encourages state and county medical societies to establish active environmental health committees.
Citation: Res. 124, A-90; Reaffirmed: Sunset Report, I-00; Reaffirmed: CSAPH Rep. 1, A-10; Reaffirmed: CSAPH Rep. 01, A-20;

Federal Programs H-135.999
The AMA believes that the problem of air pollution is best minimized through the cooperative and coordinated efforts of government, industry and the public. Current progress in the control of air pollution can be attributed primarily to such cooperative undertakings. The Association further believes that the federal government should play a significant role in these continuing efforts. This may be done by federal grants for (1) the development of research activity and (2) the encouragement of local programs for the prevention and control of air pollutants.
Citation: BOT Rep. M, A-63; Reaffirmed: CLRPD Rep. C, A-88; Reaffirmed: Sunset Report, I-98; Reaffirmation I-06; Reaffirmation I-07; Reaffirmed: CSAPH Rep. 01, A-17;

Racism as a Public Health Threat H-65.952
1. Our AMA acknowledges that, although the primary drivers of racial health inequity are systemic and structural racism, racism and unconscious bias within medical research and health care delivery have caused and continue to cause harm to marginalized communities and society as a whole.
2. Our AMA recognizes racism, in its systemic, cultural, interpersonal, and other forms, as a serious threat to public health, to the advancement of health equity, and a barrier to appropriate medical care.
3. Our AMA encourages the development, implementation, and evaluation of undergraduate, graduate, and continuing medical education programs and curricula that engender greater understanding of: (a) the causes, influences, and effects of systemic, cultural, institutional, and interpersonal racism; and (b) how to prevent and ameliorate the health effects of racism.
4. Our AMA: (a) supports the development of policy to combat racism and its effects; and (b) encourages governmental agencies and nongovernmental organizations to increase funding for research into the epidemiology of risks and damages related to racism and how to prevent or repair them.
5. Our AMA will work to prevent and combat the influences of racism and bias in innovative health technologies.
Citation: Res. 5, I-20; Reaffirmed: Res. 013, A-22; Modified: Speakers Rep., A-22;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 604
(A-23)

Introduced by: American Academy of Physical Medicine and Rehabilitation

Subject: Speakers Task Force to Review and Modernize the Resolution Process

Referred to: Reference Committee F

Whereas, Our American Medical Association House of Delegates recently reviewed and revised the election process for officers and councils through a Speakers Task Force; and

Whereas, The process of submitting, reviewing, evaluating, reporting, and voting on resolutions in our HOD has not changed in many years; and

Whereas, For the past two years, all delegations and sections have met virtually and have been able to work asynchronously to discuss and vote on potential resolutions to submit to the AMA HOD; and

Whereas, The Saturday/Sunday tote contains a significant amount of new resolutions each year; and

Whereas, The resolutions in the Saturday/Sunday tote cannot be adequately reviewed and vetted by all delegations and delegation staff and reference committee members prior to the start of the reference committee hearings; and

Whereas, According to Bylaws 2.11.3.1.3, “Late resolutions may be presented by a delegate prior to the recess of the opening session of the House of Delegates, and will be accepted as business of the House of Delegates only upon two-thirds vote of delegates present and voting”; and

Whereas, According to Bylaws 2.11.3.1.4 Emergency Resolutions, “resolutions of an emergency nature may be presented by a delegate any time after the opening session of the House of Delegates is recessed. Emergency resolutions will be accepted as business only upon a three-fourths vote of delegates present and voting, and if accepted shall be presented to the House of Delegates without consideration by a reference committee. A simple majority vote of the delegates present, and voting shall be required for adoption”; and

Whereas, The ability to meet virtually and work asynchronously was enhanced during the pandemic to the point where it is potentially more efficient and convenient for Delegations and Sections; therefore be it

RESOLVED, That our American Medical Association form a Speakers Task Force on the Resolution Process to review the entire process of handling resolutions for our AMA House of Delegates, including but not limited to definitions of on time resolutions, emergency resolutions, and late resolutions, deadlines for submission of resolutions by all sections, processing and review of reference committee reports, and use of virtual meetings so that all on time resolutions can be submitted by the same deadline (Directive to Take Action); and be it further

RESOLVED, That our AMA Speakers Task Force on the Resolution Process report back to our AMA House of Delegates by the 2024 Annual Meeting with recommendations regarding the resolution process. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/2/23

RELEVANT AMA POLICY

Procedure B-2.11
2.11.3.1.3 Late Resolutions. Late resolutions may be presented by a delegate prior to the recess of the opening session of the House of Delegates, and will be accepted as business of the House of Delegates only upon two-thirds vote of delegates present and voting.
2.11.3.1.4 Emergency Resolutions. Resolutions of an emergency nature may be presented by a delegate any time after the opening session of the House of Delegates is recessed. Emergency resolutions will be accepted as business only upon a three-fourths vote of delegates present and voting, and if accepted shall be presented to the House of Delegates without consideration by a reference committee. A simple majority vote of the delegates present and voting shall be required for adoption.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 605
(A-23)

Introduced by: International Medical Graduates Section

Subject: Equity and Justice Initiatives for International Medical Graduates

Referred to: Reference Committee F

Whereas, International medical graduates represent 25% of the physician workforce in the United States and constitutes the backbone of the medical healthcare system in rural and underserved areas; and

Whereas, International medical graduates continue to be treated with explicit and implicit biases during their training, academic and community careers, careers in organized medicine, and consideration for leadership positions as reported by recent studies; and

Whereas, The American Medical Association created the Center for Health Equity in 2019 which released the health equity strategic plan in 2021, which lacks a specific strategy to address the unique challenges faced by international medical graduates in achieving equity and justice in their medical practice in the U.S.; therefore be it

RESOLVED, That our American Medical Association, via the Center for Health Equity, create a yearly session (during the Interim or Annual Meeting) as a part of the equity forum that will be dedicated to international medical graduates (Directive to Take Action); and be it further

RESOLVED, That our AMA, via the Center of Health Equity, create an amendment to the health equity plan that will address the issues of equity and justice for international medical graduates. (Directive to Take Action)

Fiscal Note: Approximately $44K for a one-time update of the health equity strategic plan, plus ~$24k annually to produce the requested forum.

Received: 4/27/23

RELEVANT AMA POLICY

Plan for Continued Progress Toward Health Equity D-180.981

1. Our AMA will develop an organizational unit, e.g., a Center or its equivalent, to facilitate, coordinate, initiate, and track AMA health equity activities.
2. The Board will provide an annual report to the House of Delegates regarding AMAs health equity activities and achievements.
Citation: BOT Rep. 33, A-18;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 606
(A-23)

Introduced by: Georgia, Mississippi, Oklahoma, New Jersey, Alabama, Virginia, Delaware

Subject: AMA Reimbursement of Necessary HOD Business Meeting Expenses for Delegates and Alternate Delegates

Referred to: Reference Committee F

Whereas, Our American Medical Association is the largest and only national organization that convenes delegations from 190+ state and national medical specialty societies and other critical stakeholders twice a year, with the mission of promoting the art and science of medicine and the betterment of public health; and

Whereas, At these meetings, our AMA's policies are determined by our AMA House of Delegates (HOD), which is an incredibly diverse deliberating body whose delegates bring a wealth of knowledge, experience, and perspective to the debates; and

Whereas, Many of our AMA's constituent and component medical societies are facing significant financial challenges—in some cases even existential; and

Whereas, In too many instances, these financial challenges are negatively affecting the sponsoring societies' ability to fully fund the essential activities (travel, lodging, meals, staffing, caucus expenses, etc.) of their AMA delegation members, including medical students, residents, and fellows; and

Whereas, When the financial costs of participating in AMA delegation activities become the personal expense obligations of the individual delegation members, this may result in an unfortunate and potentially devastating reversal of the diversity of the delegation representation—possibly weighting them towards older, more financially successful membership and conceivably resulting in reduced medical student, resident, and fellow representation; and

Whereas, The 2021 AMA Annual Report reported over 278,000 AMA members, $34.8 Million in dues receipts, consolidated revenue and income of $459.7 Million before tax, net operating income of $77.9 Million, and reserves of almost $1 Billion; and

Whereas, Instituting a reimbursement policy to help state and national specialty societies fund their AMA delegation HOD business meeting expenses will not significantly affect the AMA's financial position while providing a critical lifeline for many of the former; therefore be it

RESOLVED, That our American Medical Association develop a reimbursement policy consistent with established AMA travel policies for reasonable travel expenses that any state or national specialty society is eligible to receive reimbursement for its delegate's and alternate delegate's actual expenses directly related to the necessary business functions required of its AMA delegates and alternate delegates in service to the AMA at HOD meetings, including travel, lodging, and meals (Directive to Take Action); and be it further

RESOLVED, That each state or national specialty society requesting such reimbursement for its delegate's and alternate delegate's reasonable travel expenses will submit its own aggregated documentation to the AMA in whatever form is requested by the AMA. (Directive to Take Action)

Fiscal Note: This policy would result in AMA being responsible for approximately $8.1 million annually based on current AMA travel policy, estimated average costs for airfare and travel, and current number of delegates and alternate delegates.

Received: 5/9/23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 607
(A-23)

Introduced by: Matthew D. Gold, M.D., Delegate

Subject: Enabling Sections of the American Medical Association

Referred to: Reference Committee F

Whereas, The American Medical Association is the premiere single organization that represents the entire spectrum of the medical profession; and

Whereas, Sections of the AMA serve as centers of association of individuals around a theme regardless of residence or practice location, in contrast to State delegations which are geographically limited; and

Whereas, Sections of the AMA traditionally have developed novel initiatives and serve as a source of synthesis of ideas from diverse perspectives, in a setting more conducive to person to person interaction than the much larger House of Delegates; and

Whereas, The financial expenditure, as well as opportunity cost (e.g., time away from practice) involved in attending a Section meeting is virtually the same whether that meeting is held over one or two days; and

Whereas, Restricting Section meetings to a single calendar day significantly limits the opportunity for sharing of ideas, development of policy and educational sessions, and enrichment of interpersonal connections; and

Whereas, Restricting Section meetings to a single calendar day reduces the opportunity for Sections to interact, collaborate, and share educational sessions; and

Whereas, Compressing the Session meetings leaves those who are involved in other AMA business unable fully to participate in their Sections business and activities; and

Whereas, The effect of limiting Section meetings to a single day is a disincentive to attend, at least in person; therefore be it

RESOLVED, That our American Medical Association Section meetings be held officially over no less than two calendar days in anticipation of general House of Delegates meetings, unless otherwise determined by a given individual Section. (Directive to Take Action)

Fiscal Note: Space permitting within currently contracted venues, the incremental daily cost of expanding an AMA Section meeting beyond one day is ~$10-$12K per meeting, per section.

Received: 5/9/23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 608
(A-23)

Introduced by: Illinois

Subject: Supporting Carbon Offset Programs for Travel for AMA Conferences

Referred to: Reference Committee F

Whereas, Climate change is a grave threat facing human and planetary health and is an issue that is already recognized and addressed by our American Medical Association. According to the World Health Organization, it is "…the single biggest health threat facing humanity, and health professionals worldwide are already responding to the health harms caused by this unfolding crisis;"[1] and

Whereas, The healthcare industry, which is one of the most carbon-intensive service sectors in the industrialized world, is responsible for 4.4–4.6 percent of worldwide greenhouse gas (GHG) emissions, largely stemming from fossil fuel combustion[2], and

Whereas, In 2022, our AMA adopted policy to declare climate change a public health crisis and advocates for policies that reduce emissions aimed at carbon neutrality and supports rapid implementation in incentivization of clean energy solutions and significant investments in climate resilience through a climate justice lens (D-135.966, *Declaring Climate Change a Public Health Crisis*); and

Whereas, Our AMA supports calling on the health sector to lead by example to commit to carbon neutrality by 2050 by supporting initiatives to promote environmental sustainability within its business operations (D-135.966, H-135.921, *AMA to Protect Human Health from the Effects of Climate Change by Ending its Investments in Fossil Fuel Companies*, and H-135.923, *AMA Advocacy for Environmental Sustainability and Climate*); and

Whereas, Carbon offsetting is "the act of reducing carbon dioxide or greenhouse gases in order to compensate for emissions that were produced elsewhere;"[3] and

Whereas, Our AMA has resumed in-person meetings, allowing for enhanced didactic sessions, colleague interaction and efficient discussion and advancement of relevant and timely policy impacting the healthcare profession and public health. These conferences require air and ground travel for hundreds of participants, amounting to thousands of tons of greenhouse gas emissions; and

Whereas, Carbon pollution from transportation is due to burning fossil fuels such as gasoline and diesel, releasing GHG into the atmosphere, and such emissions from transportation are the largest contributor of U.S. GHG emissions, accounting for about 27%[4]; and

Whereas, Carbon-neutral procurement and other purchasing options or equivalent carbon offsets are a mechanism to mitigate such emissions; therefore be it

RESOLVED, That our American Medical Association facilitate the mitigation or offset of carbon emissions related to AMA events, including planning and management, travel, and conference

operations, by procurement of sustainable or otherwise carbon-neutral energy, travel services, supplies, etc. under the direct control of the AMA and provision for conference attendees and other external stakeholders to access the equivalent mitigation or offsets for their own attendance and related activities. Mitigation and offset measures may include purchase of renewable energy credits, sustainable purchasing requirements integrating emissions criteria, investment in forestry and conservation, energy efficiency projects, or other instruments traded by accredited entities. (Directive to Take Action)

Fiscal Note: Implementation of this initiative will be a multi-million dollar undertaking due to the need for consultants to develop a plan, project management to implement measures, potential reduction of in-person meetings and travel, and the ongoing purchase of carbon credits to offset AMA emissions, including, among others, making mitigation efforts accessible to attendees. Measuring and reporting on compliance will contribute to significant annual costs thereafter. It is currently impossible to provide more precise cost information given the myriad factors involved.

RELEVANT AMA POLICY

Declaring Climate Change a Public Health Crisis D-135.966
1. Our AMA declares climate change a public health crisis that threatens the health and well-being of all individuals.
2. Our AMA will protect patients by advocating for policies that: (a) limit global warming to no more than 1.5 degrees Celsius, (b) reduce US greenhouse gas emissions aimed at carbon neutrality by 2050, and (c) support rapid implementation and incentivization of clean energy solutions and significant investments in climate resilience through a climate justice lens.
3. Our AMA will develop a strategic plan for how we will enact our climate change policies including advocacy priorities and strategies to decarbonize physician practices and the health sector with report back to the House of Delegates at the 2023 Annual Meeting.
Citation: Res. 420, A-22;

AMA to Protect Human Health from the Effects of Climate Change by Ending its Investments in Fossil Fuel Companies H-135.921
1. Our AMA will: (a) choose for its commercial relationships, when fiscally responsible, vendors, suppliers, and corporations that have demonstrated environmental sustainability practices that seek to minimize their fossil fuels consumption; and (b) support efforts of physicians and other health professional associations to proceed with divestment, including to create policy analyses, support continuing medical education, and to inform our patients, the public, legislators, and government policy makers.
2. Our AMA: (a) declares that climate change is an urgent public health emergency, and calls upon all governments, organizations, and individuals to work to avert catastrophe; (b) urges all health and life insurance companies, including those that provide insurance for medical, dental, and long-term care, to work in a timely, incremental, and fiscally responsible manner to end all financial investments or relationships (divestment) with companies that generate the majority of their income from the exploration for, production of, transportation of, or sale of fossil fuels; and (c) will send letters to the nineteen largest

health or life insurance companies in the United States to inform them of AMA policies concerned with climate change and with fossil fuel divestments, and urging these companies to divest.

AMA Advocacy for Environmental Sustainability and Climate H-135.923
Our AMA (1) supports initiatives to promote environmental sustainability and other efforts to halt global climate change; (2) will incorporate principles of environmental sustainability within its business operations; and (3) supports physicians in adopting programs for environmental sustainability in their practices and help physicians to share these concepts with their patients and with their communities.
Citation: Res. 924, I-16; Reaffirmation: I-19;

Environmental Health Programs H-135.969
Our AMA (1) urges the physicians of the United States to respond to the challenge for a clean environment individually and through professional groups by becoming the spokespersons for environmental stewardship; and (2) encourages state and county medical societies to establish active environmental health committees.
Citation: Res. 124, A-90; Reaffirmed: Sunset Report, I-00; Reaffirmed: CSAPH Rep. 1, A-10; Reaffirmed: CSAPH Rep. 01, A-20;

Referral Change:
Was Resolution 506

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 609
(A-23)

Introduced by:	Medical Student Section
Subject:	Encouraging Collaboration Between Physicians and Industry in AI (Augmented Intelligence) Development
Referred to:	Reference Committee F

Whereas, Our American Medical Association supports augmented intelligence (AI) systems that advance the quadruple aim, specifically AMA H-480.939, "Augmented Intelligence in Health Care:"

(1) To enhance the patient experience of care and outcomes,
(2) To improve population health,
(3) To reduce overall costs for the healthcare system while increasing value,
(4) To support the professional satisfaction of physicians and the healthcare team; and

Whereas, Our AMA seeks to identify opportunities to integrate practicing physicians' perspectives into the development, design, validation, and implementation of health care AI AMA policy H-480.940, "Augmented Intelligence in Health Care"; and

Whereas, Research from the medical device industry has provided evidence that physicians substantially contribute to medical device innovation, specifically that:

(1) Physicians contributed to a fifth of medical device patents and generated a great number of citations, demonstrating a substantial physician involvement in medical device innovation[1],
(2) Physician patents were cited more times by subsequent patents than those without physician involvement, where the number of citation by follow-on inventions indicate the significance of the original innovation[1],
(3) Physician patents generated more follow-on innovations from a more diverse set of disciplines, emphasizing the broader impact of physician involvement in research[1]; and

Whereas, Research on the implementation of electronic health records (EHRs) has indicated that technology developed with physician involvement is associated with physicians' perceived ease of use and acceptance[2]; and

Whereas, Current research on AI has indicated that:

(1) Physicians assisted by AI models can outperform physicians or AI alone, specifically in diagnosing metastatic breast cancer and diabetic retinopathy[3, 4],
(2) Physicians can use interactive AI-based technologies in medical image segmentation and identification, providing evidence that physicians and AI technologies can work together to better fulfill the quadruple aim[5]; and

Whereas, Our AMA has launched pathways for healthcare innovation, but these pathways are greatly targeted to physicians currently involved in AI, such as Health 2047, a business that connects our AMA to leading experts in AI and machine learning to produce healthcare solutions[6]; and

Whereas, Our AMA has supported physician innovation, especially in the field of AI, through the Physician Innovation Network (PIN), an online forum board for entrepreneurs to seek medical specialists to "connect the health care innovation ecosystems to improve the development of emerging healthcare technology solutions"[7]; and

Whereas, Early analysis of the PIN has identified that early engagement of physicians and respecting a physician's time and expertise contribute to more meaningful connections between physicians and entrepreneurs[8]; and

Whereas, The PIN currently experiences limited physician utilization, as evidenced by:

(1) Interviews with current physicians on the PIN suggest that the PIN only appeals to a small subset of physicians who have already realized early in their careers that they wish to pursue a nontraditional path in medicine and innovation[9],

(2) As of 2018, only 2,600 physicians were reported to be on the network, or about 1% of our AMA's physician membership base[10]; and

Whereas, Our AMA advocates that our organization, national, and medical specialty societies and state medical associations (AMA, H-480.939):

(1) Leverage medical expertise to ensure clinical validation and assessment of clinical applications of AI systems by practicing physicians,

(2) Outline a new professional role to aid and guide health care AI systems; therefore be it

RESOLVED, That our American Medical Association augment the existing Physician Innovation Network (PIN) through the creation of advisors to specifically link physician members of AMA and its associated specialty societies with companies or individuals working on augmented intelligence (AI) research and development, focusing on:

(1) Expanding recruitment among AMA physician members,

(2) Advising AMA physician members who are interested in healthcare innovation/AI without knowledge of proper channels to pursue their ideas,

(3) Increasing outreach from AMA to industry leaders and companies to both further promote the PIN and to understand the needs of specific companies,

(4) Facilitating communication between companies and physicians with similar interests,

(5) Matching physicians to projects early in their design and testing stages,

(6) Decreasing the time and workload spent by individual physicians on finding projects themselves,

(7) Above all, boosting physician-centered innovation in the field of AI research and development (Directive to Take Action); and be it further

RESOLVED, That our AMA support selection of PIN advisors through an application process where candidates are screened by PIN leadership for interpersonal skills, problem solving, networking abilities, objective decision making, and familiarity with industry. (New HOD Policy)

Fiscal Note: Approximately $47,000 for identifying, recruiting, promoting, and facilitating industry-physician relationships through the Physician Innovation Network regarding AI.

Received: 4/3/23

RELEVANT AMA POLICY

Augmented Intelligence in Health Care H-480.940

As a leader in American medicine, our AMA has a unique opportunity to ensure that the evolution of augmented intelligence (AI) in medicine benefits patients, physicians, and the health care community.
To that end our AMA will seek to:
1. Leverage its ongoing engagement in digital health and other priority areas for improving patient outcomes and physiciansprofessional satisfaction to help set priorities for health care AI.
2. Identify opportunities to integrate the perspective of practicing physicians into the development, design, validation, and implementation of health care AI.
3. Promote development of thoughtfully designed, high-quality, clinically validated health care AI that:
a. is designed and evaluated in keeping with best practices in user-centered design, particularly for physicians and other members of the health care team;
b. is transparent;
c. conforms to leading standards for reproducibility;
d. identifies and takes steps to address bias and avoids introducing or exacerbating health care disparities including when testing or deploying new AI tools on vulnerable populations; and
e. safeguards patientsand other individualsprivacy interests and preserves the security and integrity of personal information.
4. Encourage education for patients, physicians, medical students, other health care professionals, and health administrators to promote greater understanding of the promise and limitations of health care AI.
5. Explore the legal implications of health care AI, such as issues of liability or intellectual property, and advocate for appropriate professional and governmental oversight for safe, effective, and equitable use of and access to health care AI.
Citation: BOT Rep. 41, A-18;

Augmented Intelligence in Health Care H-480.939
Our AMA supports the use and payment of augmented intelligence (AI) systems that advance the quadruple aim. AI systems should enhance the patient experience of care and outcomes, improve population health, reduce overall costs for the health care system while increasing value, and support the professional satisfaction of physicians and the health care team. To that end our AMA will advocate that:
1. Oversight and regulation of health care AI systems must be based on risk of harm and benefit accounting for a host of factors, including but not limited to: intended and reasonably expected use(s); evidence of safety, efficacy, and equity including addressing bias; AI system methods; level of automation; transparency; and, conditions of deployment.
2. Payment and coverage for all health care AI systems must be conditioned on complying with all appropriate federal and state laws and regulations, including, but not limited to those governing patient safety, efficacy, equity, truthful claims, privacy, and security as well as state medical practice and licensure laws.
3. Payment and coverage for health care AI systems intended for clinical care must be conditioned on (a) clinical validation; (b) alignment with clinical decision-making that is familiar to physicians; and (c) high-quality clinical evidence.
4. Payment and coverage for health care AI systems must (a) be informed by real world workflow and human-centered design principles; (b) enable physicians to prepare for and transition to new care delivery models; (c) support effective communication and engagement between patients, physicians, and the health care team; (d) seamlessly integrate clinical, administrative, and population health management functions into workflow; and (e) seek end-user feedback to support iterative product improvement.
5. Payment and coverage policies must advance affordability and access to AI systems that are designed for small physician practices and patients and not limited to large practices and institutions. Government-conferred exclusivities and intellectual property laws are meant to foster innovation, but constitute interventions into the free market, and therefore, should be appropriately balanced with the need for competition, access, and affordability.
6. Physicians should not be penalized if they do not use AI systems while regulatory oversight, standards, clinical validation, clinical usefulness, and standards of care are in flux. Furthermore, our AMA opposes:
a. Policies by payers, hospitals, health systems, or governmental entities that mandate use of health care AI systems as a condition of licensure, participation, payment, or coverage.
b. The imposition of costs associated with acquisition, implementation, and maintenance of healthcare AI systems on physicians without sufficient payment.
7. Liability and incentives should be aligned so that the individual(s) or entity(ies) best positioned to know the AI system risks and best positioned to avert or mitigate harm do so through design, development, validation, and implementation. Our AMA will further advocate:
a. Where a mandated use of AI systems prevents mitigation of risk and harm, the individual or entity issuing the mandate must be assigned all applicable liability.
b. Developers of autonomous AI systems with clinical applications (screening, diagnosis, treatment) are in the best position to manage issues of liability arising directly from system failure or misdiagnosis and must accept this liability with measures such as maintaining appropriate medical liability insurance and in their agreements with users.
c. Health care AI systems that are subject to non-disclosure agreements concerning flaws, malfunctions, or patient harm (referred to as gag clauses) must not be covered or paid and the party initiating or enforcing the gag clause assumes liability for any harm.
8. Our AMA, national medical specialty societies, and state medical associations—
a. Identify areas of medical practice where AI systems would advance the quadruple aim;
b. Leverage existing expertise to ensure clinical validation and clinical assessment of clinical applications of AI systems by medical experts;
c. Outline new professional roles and capacities required to aid and guide health care AI systems; and
d. Develop practice guidelines for clinical applications of AI systems.
9. There should be federal and state interagency collaboration with participation of the physician community and other stakeholders in order to advance the broader infrastructural capabilities and requirements necessary for AI solutions in health care to be sufficiently inclusive to benefit all patients, physicians, and other health care stakeholders. (New HOD Policy)
10. AI is designed to enhance human intelligence and the patient-physician relationship rather than replace it.

REPORT 14 OF THE BOARD OF TRUSTEES (A-23)
Advocacy of Private Practice Options for Healthcare Operations in Large Corporations
(Reference Committee G)

EXECUTIVE SUMMARY

At the 2022 Annual Meeting of the House of Delegates, Policy D-160.912, "Advocacy of Private Practice Options for Healthcare Operations in Large Corporations," was adopted. The policy directs the American Medical Association to (1) study the best method to create pilot programs which advance the advocacy of private practice and small business medicine within the rapidly growing area of internal health care within Fortune 500 corporations in America with a report back at the 2023 Annual Meeting, (2) use proposals for the advocacy of small business medicine and private practice models in health care as a pilot project in the development of advocacy programs within major leading corporations like Amazon and Walmart which are currently entering the health care service market with internalized models of health care in the complete absence of more diverse private practice (small business) options, and (3) prioritize advocacy efforts that emphasize small private practice utilization within the investment and business efforts of Fortune 500 corporations that are currently seeking to enter into the health care industry (Directive to Take Action).

To study potential pilots to advance the advocacy of private practice within corporate health care, the AMA conducted a market landscape assessment based on publicly available news articles and studies. Confidential informational interviews were undertaken among a small sample of national corporate entities with individuals directly responsible for each organization's strategy in care delivery. These interviews were conducted with a series of pre-determined questions regarding their approaches and strategic thinking on care delivery and the role of private practices in the community. Three key themes emerged from this market analysis:

1. Corporate entities are increasingly investing in opportunities in care delivery and believe this strategy will increase value for their insured employees, their customers and shareholders.
2. Corporations believe "value-based" payment and delivery models will drive better patient outcomes and lower health care costs and are investing heavily in these models.
3. While acquisition of independent practices is accelerating in certain markets, some corporate entities, particularly among vertically integrated health insurers, have a strategy of working with independent practices in communities. These companies express a goal of supporting integrated networks of practices, with the aim of providing more enhanced, coordinated care for patients and preventing practice acquisition by larger health care systems or hospitals that can lead to consolidation and attendant price increases. Newer corporate retail and technology entrants will continue experimenting with various arrangements subject to market conditions and shareholder priorities.

Based on the market assessment, the AMA identified vital opportunities to (1) inform corporations about the value of private practices in successfully implementing new "value-based" models; (2) identify and work with a specific corporate entity advancing these models to explore a two-year pilot with independent private practices in which the AMA will: (a) convene practices in a community; (b) provide educational resources and technical assistance to practices to support participation in a pilot; and (c) formally evaluate the pilot for outcomes; and (3) continue advocacy that improves "value-based" models to ensure that physicians can succeed in these models with adequate payment, infrastructure and data.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 14-A-23

Subject:	Advocacy of Private Practice Options for Healthcare Operations in Large Corporations
Presented by:	Sandra Adamson Fryhofer, MD, Chair
Referred to:	Reference Committee G

INTRODUCTION

At the 2022 Annual Meeting, the House of Delegates (HOD) adopted Policy D-160.912, "Advocacy of Private Practice Options for Healthcare Operations in Large Corporations." This policy directs our American Medical Association (AMA) to: (1) study the best method to create pilot programs which advance the advocacy of private practice and small business medicine within the rapidly growing area of internal healthcare within Fortune 500 corporations in America with a report back at the 2023 Annual Meeting; (2) use proposals for the advocacy of small business medicine and private practice models in healthcare as a pilot project in the development of advocacy programs within major leading corporations like Amazon and Walmart which are currently entering the healthcare service market with internalized models of healthcare in the complete absence of more diverse private practice (small business) options, and (3) prioritize advocacy efforts that emphasize small private practice utilization within the investment and business efforts of Fortune 500 corporations that are currently seeking to enter into the healthcare industry.

BACKGROUND:

Over the last two decades, large corporations have increasingly entered health care delivery—a trend that has accelerated following the onset of the COVID-19 pandemic. These entities include Walmart, CVS, Walgreens and Amazon, as well as national health insurance corporations such as UnitedHealth Group. Even unexpected corporate retailers like Dollar General are offering health care delivery models. These corporations have assumed various roles within health care, such as in-person and virtual health care delivery, pharmaceuticals, wellness and employer-sponsored health insurance.

Following blocked mergers of Aetna-Humana and Anthem-Cigna in 2017, these large national insurers, along with United Healthcare, accelerated acquisitions of other types of health care companies.[1] This represented a shift from horizontal integration (two health insurers merging) to vertical integration (different parts of the health care delivery system merging). These acquisitions and mergers include retail pharmacies (e.g., Aetna-CVS), pharmacy benefit managers (e.g., Cigna-Express Scripts) and data/analytic companies (e.g., United-Change Healthcare). In addition, these organizations are acquiring a broad spectrum of health care delivery organizations, from physician practices to home health companies to mental health care companies. For example, UnitedHealth Group's Optum Health is now the largest employer of physicians in the country.[2]

In addition to traditional health insurers, new entrants such as large retailers (e.g., Walmart) and new and established technology companies (e.g., Amazon) are entering the health care delivery space. These organizations are entering health care delivery as a new revenue source to drive shareholder value, create synergy with other portions of their business (e.g., pharmacy) and help control employee health care costs.[3,4,5,6] While these investments have not been as expansive as the large national health insurers, they will likely shake up health care delivery with new models of pricing, the integration of technology and alignment with their other offerings.

The consumerization of health care is one factor that has fostered opportunities for corporations not traditionally involved in health care delivery to enter these spaces and offer greater convenience at a lower cost.[3] Occurring alongside this trend is the acquisition of independent physician practices by these large corporations, as well as by hospitals and payers. According to one estimate, corporate entities acquired over 30,000 additional physician practices between 2019 and 2021.[7] The 2020 AMA Physician Practice Benchmark survey found that less than half of patient care physicians worked in private practice, nearly five percent lower than two years prior.[8]

Some see this trend of corporate entry into health care as positive, believing it will make health care more sustainable and provide physicians greater access to capital, negotiating power and the latest technology. However, others view it as disruptive to high-quality, coordinated care delivered by a physician-led team, believing it decreases access and competition.[8] There is also limited scrutiny of the impact on market competition, as some proposed transactions involving the corporate acquisition of physician practices may not come to the attention of antitrust enforcers if the transaction is not sufficiently large enough to trigger statutory reporting obligations.[9]

Further, restrictive networks are commonly associated with these acquisitions. For instance, patients receiving care from a physician employed by a hospital or large corporation may only receive referrals to other clinicians employed by said hospital or corporation. This can lead to less patient choice and arbitrary removal from networks of independent physicians.[10] As these large corporations continue their entry into the health care market, this can result in more harm than good if the voices of patients and community-based private practice physicians are not integrated into their plans.

The Role of Large Corporations in Health Care: Recent Examples

Amazon

Amazon's entry into health care predominantly consists of health care services, such as in-person care, telehealth, and pharmaceuticals. For example, the company launched a telehealth service, Amazon Care, after first piloting it to its employees.[3] Designed to address high employee health care costs, the app-based platform partnered with One Medical to offer members in-person and virtual primary, urgent, and preventive care services, including COVID-19 and flu testing, vaccinations, and treatment for illnesses and injuries.[3,11] One Medical places medical offices near the workplace, and its members use an app to book appointments and track health records.[12] The platform reported a membership of 790,000 customers at the end of June 2022.[13] In June 2022, Amazon announced its intent to purchase OneMedical for $3.9 billion.[14,15] After an eight month review, the Federal Trade Commission (FTC) declined to challenge the acquisition and the deal was finalized on February 22, 2023.[12,16]

CVS

Perhaps the most established in health care of the mentioned corporations, CVS, is focused on journeying further into primary care.[4,5] The company has offered walk-in health care services since the early 2000s. Today, consumers may take advantage of routine physicals, screenings, vaccinations, treatment for illnesses and minor injuries, mental health counseling and services that address social determinants of health, such as wellness and health education classes, tobacco cessation support and sleep assessments.[4] In addition to the company's 10,000 pharmacy locations, CVS recently amassed a 10,000-clinician-network that makes in-person and virtual home visits through its Signify Health acquisition.[6]

A key part of its strategy to deliver on its goal, announced in 2021, to facilitate 65 billion health care interactions over the next decade, is to transform the number of stores converted to the HealthHUB model. With over 20 percent of the store dedicated to these HealthHUBs, this concept is designed to provide patients with chronic disease management consultations and other health and wellness services such as sleep apnea assessments and blood draws. Further, the concept will offer an array of durable medical equipment and other medical supplies[17.] As the HealthHUBs are currently staffed by nurse practitioners, CVS aims to hire physicians to staff the primary care sites. In addition to offering convenience to customers, the company also believes these efforts will reduce health care costs.[5]

Most recently, CVS acquired Oak Street Health for $10.6 billion. Oak Street's centers predominantly serve low- to middle-income patients aged 65 and older with Medicare Advantage plans. The company operates in 169 locations throughout 21 states, and its locations are expected to increase to 300 by 2026.[18]

Walmart

Walmart continues to disrupt the health care industry through low-cost health care services and insurance.[19] The company opened comprehensive health clinics in 2019 that offer affordable services such as primary care, urgent care, dental care, mental health counseling, and vision and hearing services.[5] In addition to the 20 clinic locations that the company currently operates in Georgia, Walmart has over 5,000 pharmacy locations and aims to expand to Florida in 2023.[11,12] Walmart now also offers virtual care through its telehealth platform, MeMD, and recently procured an agreement with UnitedHealth Group, the world's largest insurer.[5,6] Through this partnership, Walmart and UnitedHealth Group will offer a Medicare Advantage plan. UnitedHealth Group will provide data analytics and decision support tools to Walmart clinicians, and Walmart Health's virtual care services will be included as part of one of UnitedHealth's commercial PPO plans.[4]

Walgreens

Walgreens is also focused on offering health care services, as demonstrated by its recent launch of Walgreens Health. The company currently owns 70 VillageMD primary care clinics. Walgreens continues to provide in-store services such as health tests, screenings and help with medications. The company also created an online marketplace where users may schedule appointments.[5]

Elevance Health

Elevance Health, formerly Anthem, combines care delivery tools and technology in its Carelon Division with its health insurance companies, with aspirations of growing beyond providing health insurance to become a "lifetime partner" in the delivery of healthcare to its members.[20] Unique

among other insurance companies that have purchased physician practices as part of their delivery network, Elevance is investing in an "Aggregator Strategy." Through this strategy, Carelon, with other third-party partners, provides infrastructure and data analytics to independent primary care physician practices to enable them to effectively participate in value-based contracts so they can remain independent in local communities.[20,21]

UnitedHealth Group

UnitedHealth Group is an example of a large vertically-integrated health care corporation that comprises a health insurance company, UnitedHealthcare, a solutions service, Optum, and a provider group subsidiary, Optum Health. Optum Health owns physician practices inclusive of approximately 60,000 physicians who treat over 20 million patients annually. Much of this growth is derived from the group's focus on value-based care. Optum's CEO, Andrew Witty, expects that the company will have four million patients in accountable care arrangements in 2023.[21] The company plans to continue its expansion of value-based services—Witty informed investors that Optum Health intends to integrate further behavioral and home health offerings into its health care strategy.[23]

Dollar General

In January 2023, Dollar General announced a partnership with DocGo, a publicly traded company that offers "last-mile care" via mobile health care clinics with trained providers, a transportation and logistics network, and an advanced data analytics network to deliver quick and easy health visits outside Dollar General stores. DocGo onsite care is provided by certified medical assistants, emergency medical technicians, licensed practical nurses, paramedics and physicians via remote technology. Services offered at Dollar General locations will include preventive visits and chronic care management. Dollar General, with over 18,000 stores nationwide—many in underserved rural and urban areas—seeks to make health care more accessible and convenient for its shoppers.[24]

Others

Other companies, including National Public Radio (NPR), CHG Healthcare Services, USAA, Goldman Sachs, CustomInk, Anthrex, JM Family Enterprises and QuikTrip, have begun providing their employees with on-site health care services. NPR's and CHG's health clinics are available at no cost to all employees regardless of their enrollment status within the companies' health plans. USAA offers its employees cancer screenings, flu shots, blood pressure checks, massages and physical rehabilitation. Goldman Sachs' and QuikTrip's health care benefits are available to all enrolled employees and their families. Further, many physicians employed by QuikTrip work exclusively for the company.[25]

Investments and Support of Private Practices

Also accelerating is private sector investment in small- to medium-sized physician practices for the purpose of providing infrastructure to transition to value-based models. There has been significant growth in companies specifically designed to help independent practices succeed in value-based models, including Aledade, Emergence Healthcare Group, Redesign Health and Privia. Representing a shift from the 2010s, wherein founders of venture capital-backed health tech mainly pursued large payers and employers, as well as hospitals, there has been recent interest in selling to small- to medium-sized businesses which include private practices. Owners of private practices are increasingly seeking to remain independent, and these opportunities provide them with the agency

and revenue to do so.[26] Private equity firms see significant opportunities in investing in physician practices across specialties to offer administrative support.[27]

AMA Market Analysis

The AMA conducted confidential informational interviews to better understand the evolving market landscape and identify opportunities to create pilot programs to advance the advocacy of private practice and small business medicine within the rapidly growing area of health care delivery within Fortune 500 corporations in America.

To better understand the best method to explore the creation of potential pilots, the AMA: (1) conducted (1) a market landscape assessment based on publicly available news articles and studies; and (2) qualitative informational interviews among a sample of national corporate entities. The confidential informational interviews were conducted between Fall 2022 and Winter 2023 with individuals directly responsible for each organization's strategy in health care delivery. The interviews were conducted with a series of pre-determined questions regarding corporate entities' approaches and strategic thinking on health care delivery and the role of private practices in the community. Interviews included a selection of large national insurers vertically integrating into the delivery of care through acquisitions, along with national retailers and large technology companies entering the health care delivery marketplace.

Three key themes emerged from this market analysis:

1. Corporate entities are increasingly investing in opportunities in care delivery and believe this strategy will increase value for their insured employees, their customers and shareholders.
2. Corporations believe "value-based" payment and delivery models will drive better patient outcomes and lower health care costs and are investing heavily in these models.
3. While acquisition of independent practices is accelerating in certain markets, some corporate entities, particularly among vertically integrated health insurers, have a strategy of working with independent practices in communities. These companies express a goal of supporting integrated networks of practices, with the aim of providing more enhanced, coordinated care for patients and preventing practice acquisition by larger health care systems or hospitals that can lead to consolidation and attendant price increases. Newer corporate retail and technology entrants will continue experimenting with various arrangements subject to market conditions and shareholder priorities.

AMA POLICY

The AMA supports preserving the value of the private practice of medicine and its benefit to patients. AMA will:

a. Utilize its resources to protect and support the continued existence of solo and small group medical practice and to protect and support the ability of these practices to provide quality care. They will also advocate in Congress to ensure adequate payment for services rendered by private practicing physicians.
b. Work through the appropriate channels to preserve choices and opportunities, including the private practice of medicine, for new physicians whose choices and opportunities may be limited due to their significant medical education debt. The organization will work through the appropriate channels to ensure that medical students and residents during their training are educated in all of medicine's career choices, including the private practice of medicine.

c. Create, maintain and make accessible to medical students, residents and fellows, and physicians resources to enhance satisfaction and practice sustainability for physicians in private practice.
d. Create and maintain a reference document establishing principles for entering into and sustaining a private practice, and encourage medical schools and residency programs to present physicians in training with information regarding private practice as a viable option.
e. Issue a report in collaboration with the Private Practice Physicians Section at least every two years communicating their efforts to support independent medical practices (Policy D-405.988, "The Preservation of the Private Practice of Medicine").

The AMA also supports the consideration of prospective payment elements in the development of payment and delivery reform that are consistent with AMA principles, as well as the following principles to support physicians who choose to participate in prospective payment models:
a. The AMA, state medical associations and national medical specialty societies should be encouraged to continue to provide guidance and support infrastructure that allows independent physicians to join with other physicians in clinically integrated networks, independent of any hospital system.
b. Prospective payment model compensation should incentivize specialty and primary care collegiality among independently practicing physicians.
c. Prospective payment models should take into consideration clinical data, where appropriate, in addition to claims data.
d. Governance within the model must be physician-led and autonomous.
e. Physician practices should be encouraged to work with field advisors on patient attributions and a balanced mix of payers.
f. Quality metrics used in the model should be clinically meaningful and developed with physician input.
g. Administrative burdens, such as those related to prior authorization, should be reduced for participating physicians (Policy H-385.904, "Prospective Payment Model Best Practices for Independent Private Practice").

The AMA will identify financially viable prospective payment models and develop educational opportunities for physicians to learn and collaborate on best practices for such payment models for physician practice, including but not limited to independent private practice (Policy H-385.904, "Prospective Payment Model Best Practices for Independent Private Practice").

Additionally, the AMA supports flexibility in the design and implementation of value-based insurance design (VBID) programs, consistent with the following principles:
a. Value reflects the clinical benefit gained relative to the money spent. VBID explicitly considers the clinical benefit of a given service or treatment when determining cost-sharing structures or other benefit design elements.
b. Practicing physicians must be actively involved in the development of VBID programs. VBID program design related to specific medical/surgical conditions must involve appropriate specialists.
c. High-quality, evidence-based data must be used to support the development of any targeted benefit design. Treatments or services for which there is insufficient or inconclusive evidence about their clinical value should not be included in any targeted benefit design elements of a health plan.
d. The methodology and criteria used to determine high- or low-value services or treatments must be transparent and easily accessible to physicians and patients.

e. Coverage and cost-sharing policies must be transparent and easily accessible to physicians and patients. Educational materials should be made available to help patients and physicians understand the incentives and disincentives built into the plan design.
f. VBID should not restrict access to patient care. Designs can use incentives and disincentives to target specific services or treatments but should not otherwise limit patient care choices.
g. Physicians retain the ultimate responsibility for directing the care of their patients. Plan designs that include higher cost-sharing or other disincentives to obtaining services designated as low-value must include an appeals process to enable patients to secure care recommended by their physicians, without incurring cost-sharing penalties.
h. Plan sponsors should ensure adequate resource capabilities to ensure effective implementation and ongoing evaluation of the plan designs they choose. Procedures must be in place to ensure VBID coverage rules are updated in accordance with evolving evidence.
i. VBID programs must be consistent with AMA Pay for Performance Principles and Guidelines (Policy H-450.947), and AMA policy on physician economic profiling and tiered, narrow or restricted networks (Policies H-450.941 and D-285.972) (Policy H-185.939, "Value-Based Insurance Design").

The AMA will also study and clarify the ethical challenges and considerations regarding physician professionalism raised by the advent and expansion of private equity ownership or management of physician practices and report back on the status of any ethical dimensions inherent in these arrangements, including consideration of the need for ethical guidelines as appropriate. Such a study should evaluate the impact of private equity ownership, including but not limited to the effect on the professional responsibilities and ethical priorities for physician practices (Policy D-140.951, "Establishing Ethical Principles for Physicians Involved in Private Equity Owned Practices").

Moreover, the AMA encourages physicians who are contemplating corporate investor partnerships to consider the following guidelines:

a. Physicians should consider how the practice's current mission, vision and long-term goals align with those of the corporate investor.
b. Due diligence should be conducted that includes, at minimum, review of the corporate investor's business model, strategic plan, leadership and governance and culture.
c. External legal, accounting and/or business counsels should be obtained to advise during the exploration and negotiation of corporate investor transactions.
d. Retaining negotiators to advocate for best interests of the practice and its employees should be considered.
e. Physicians should consider whether and how corporate investor partnerships may require physicians to cede varying degrees of control over practice decision-making and day-to-day management.
f. Physicians should consider the potential impact of corporate investor partnerships on physician and practice employee satisfaction and future physician recruitment.
g. Physicians should have a clear understanding of compensation agreements, mechanisms for conflict resolution, processes for exiting corporate investor partnerships, and application of restrictive covenants.
h. Physicians should consider corporate investor processes for medical staff representation on the board of directors and medical staff leadership selection.
i. Physicians should retain responsibility for clinical governance, patient welfare and outcomes, physician clinical autonomy and physician due process under corporate investor partnerships.
j. Each individual physician should have the ultimate decision for medical judgment in patient care and medical care processes, including supervision of non-physician practitioners.

k. Physicians should retain primary and final responsibility for structured medical education inclusive of undergraduate medical education including the structure of the program, program curriculum, selection of faculty and trainees, as well as education and disciplinary issues related to these programs (Policy H-160.891, "Corporate Investors").

Further, the AMA supports improved transparency regarding corporate investment in physician practices and subsequent changes in health care prices, encourages national medical specialty societies to research and develop tools and resources on the impact of corporate investor partnerships on patients and the physicians in practicing in that specialty and supports consideration of options for gathering information on the impact of private equity and corporate investors on the practice of medicine (Policy H-160.891, "Corporate Investors").

Additionally, AMA policy states that any individual, company, or other entity that establishes and/or operates worksite health clinics should adhere to the following principles:

a. Worksite health clinics must have a well-defined scope of clinical services, consistent with state scope of practice laws.
b. Worksite health clinics must establish a referral system with physician practices or other facilities for appropriate treatment if the patient's conditions or symptoms are beyond the scope of services provided by the clinic.
c. Worksite health clinics that use nurse practitioners and other health professionals to deliver care must establish arrangements by which their health care practitioners have direct access to MD/DOs, as consistent with state laws.
d. Worksite health clinics must clearly inform patients in advance of the qualifications of the health care practitioners who are providing care, as well as the limitation in the types of illnesses that can be diagnosed and treated.
e. Worksite health clinics should develop expertise in specific occupational hazards and medical conditions that are likely to be more common in the particular industry where the company offers products and services.
f. Worksite health clinics must use evidence-based practice guidelines to ensure patient safety and quality of care.
g. Worksite health clinics must measure clinical quality provided to patients and participate in quality improvement efforts in order to demonstrate improvement in their system of care.
h. Worksite health clinics must adopt explicit and public policies to assure the security and confidentiality of patients' medical information. Such policies must bar employers from unconsented access to identifiable medical information so that knowledge of sensitive facts cannot be used against individuals.
i. Worksite health clinics must establish protocols for ensuring continuity of care with practicing physicians within the local community. Such protocols must ensure after-hours access of employees and eligible family members, as well as the transmission of reports of all worksite clinic visits and treatments to the physicians of patients with an identified community physician.
j. Worksite health clinics administering immunizations must establish processes to ensure communication to the patient's medical home and the state immunization registry documenting what immunizations have been given.
k. Patient cost-sharing for treatment received outside of the clinic must be affordable and not prohibit necessary access to care.
l. Worksite health clinics should allow the involvement of community physicians in clinic operations.
m. Employers implementing worksite health clinics should communicate the eligibility for services of employees' family members.

n. Worksite health clinics should be encouraged to use interoperable electronic health records as a means of communicating patient information to and facilitating continuity of care with community physicians, hospitals and other health care facilities (Policy H-160.910, "Worksite Health Clinics").

The AMA also acknowledges that the corporate practice of medicine: (1) has the potential to erode the patient-physician relationship; and (2) may create a conflict of interest between profit and best practices in residency and fellowship training (Policy H-160.887, "Corporate Practice of Medicine").

Furthermore, (1) the AMA vigorously opposes any effort to pass federal legislation preempting state laws prohibiting the corporate practice of medicine; (2) At the request of state medical associations, the AMA will provide guidance, consultation, and model legislation regarding the corporate practice of medicine, to ensure the autonomy of hospital medical staffs, employed physicians in non-hospital settings and physicians contracting with corporately-owned management service organizations; and (3) the AMA will continue to monitor the evolving corporate practice of medicine with respect to its effect on the patient-physician relationship, financial conflicts of interest, patient-centered care and other relevant issues (Policy H-215.981, "Corporate Practice of Medicine").

DISCUSSION

Opportunities for Corporation-Provided Health Care

Large corporations, equipped with large amounts of capital, massive active user bases, and data and technology capabilities, have the potential to offer greater options for how patients receive care and streamline and automate processes to potentially alleviate high costs, burnout and inefficiencies.

Additionally, large corporations, which collect and maintain significant amounts of customer data, claim to utilize this data to address social determinants of health. For example, Dollar General and Walmart plan to expand access to care in rural communities, and Walmart is prioritizing diversity in clinical trials, as 20 percent of drugs reportedly respond differently across ethnic groups.[5,18]

Further, new venture capital-backed companies, of which many are physician-led, are specifically designed to provide opportunities to improve the care delivery and financial sustainability of underinvested-in small to medium-independent physician practices.

Challenges for Corporation-Provided Health Care

Trust and a lack of health care background remain significant barriers to success for large corporations, particularly Big Tech companies such as Apple, Google, Microsoft and Amazon. For example, consumers, regulators and privacy advocates have all raised concerns about the implications of Big Tech having access to patient's health records, as well as a potential cybersecurity crisis. [5,12,] This concern has only further intensified following the overturning of Roe v. Wade, which sparked questions about the use of personal data to surveil people seeking reproductive health services.[12]

Others have pointed to the underperformance of large corporations' investments in health care. For instance, Haven, an effort by Amazon, JPMorgan Chase and Berkshire Hathaway that sought to reduce health care costs and improve patient outcomes, failed after just two years. Additionally, margins in health care are small. As large corporations are used to high margins and rapidly scaled

businesses, some experts question their preparedness for the health care industry where profit margins are typically small.[28]

Further, common adverse effects of mergers and acquisitions on physicians include workflow disruptions, organizational changes that may increase workloads and staff burden, technological transitions such as shifts in EHR implementation and even lower wages. Athenahealth's 2021 Physician Sentiment Index report demonstrated that physicians undergoing a merger or acquisition expressed less willingness to remain at their organization and were more likely to experience burnout. While 68 percent of physician respondents undergoing a merger or acquisition reported that they would recommend their health care organization to friends or family, 85 percent of physicians not undergoing a merger or acquisition reported that they would recommend their organization to loved ones. The National Institute for Health Care (NIHCM) Foundation found that after a hospital merger, skilled workers experienced a four percent decrease in wages, and nurses and pharmacy workers saw a 6.8 percent decrease.[29]

Finally, value-based payment models have persistent and ongoing methodologic and implementation challenges for payers, large integrated health care systems and independent private practices alike, including designing adequate risk models, measuring quality, providing access to timely and actionable data, and imposing significant administrative burdens. These fundamental design and implementation challenges must be addressed to ensure sustainable success for any of these investments.[30,31.]

CONCLUSION

With the continued growth of corporate entrants in care delivery pursuing new practice ownership strategies and delivery models, particularly among small-to-medium-sized physician practices, this report highlights opportunities for the AMA to work directly with corporate entities to advocate for and support independent physician practices in communities. Health care costs continue to increase, and the quality of and access to care continues to erode in many local communities. Thus, we support corporate entities to work with and assist independent physician practices with the capabilities to deliver highly coordinated care that is critical to improving patient outcomes and competition in many markets.

RECOMMENDATIONS

The Board of Trustees recommends that the following be adopted and the remainder of the report be filed:

1. That our American Medical Association (AMA) reaffirm the following policies:
    a. D-405.988, "The Preservation of the Private Practice of Medicine"
    b. H-385.904, "Prospective Payment Model Best Practices for Independent Private Practice"
    c. H-185.939, "Value-Based Insurance Design"
    d. D-140.951, "Establishing Ethical Principles for Physicians Involved in Private Equity Owned Practices"
    e. H-160.891, "Corporate Investors"; (Reaffirm HOD Policy) and

2. That our AMA will: (1) inform corporate efforts about the value of private practices to successfully participate in new "value-based" models; (2) identify and work with a corporate entity that is advancing these models to explore a two year pilot among independent private practices in which the AMA will: (a) convene physician practices in a

community; (b) provide educational resources and technical assistance to practices to support their participation with the corporate entity and (c) formally evaluate the pilot for outcomes; and (3) advocate with commercial payers and health plans and federal and state payers and policymakers to support private practice through policies and models that provide adequate payment, infrastructure and data to succeed in "value-based" models. (Directive to Take Action)

3. That Policy D-160.912 be rescinded as having been accomplished by this report. (Rescind HOD Policy)

Fiscal Note: $274,962

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 01-A-23

Subject: Council on Medical Service Sunset Review of 2013 House Policies

Presented by: Lynn Jeffers, MD, Chair

Referred to: Reference Committee G

Policy G-600.110, "Sunset Mechanism for AMA Policy," calls for the decennial review of American Medical Association (AMA) policies to ensure that our AMA's policy database is current, coherent, and relevant. Policy G-600.110 reads as follows:

1. As the House of Delegates adopts policies, a maximum ten-year time horizon shall exist. A policy will typically sunset after ten years unless action is taken by the House of Delegates to retain it. Any action of our AMA House that reaffirms or amends an existing policy position shall reset the sunset "clock," making the reaffirmed or amended policy viable for another ten years.

2. In the implementation and ongoing operation of our AMA policy sunset mechanism, the following procedures shall be followed: (a) Each year, the Speakers shall provide a list of policies that are subject to review under the policy sunset mechanism; (b) Such policies shall be assigned to the appropriate AMA councils for review; (c) Each AMA council that has been asked to review policies shall develop and submit a report to the House of Delegates identifying policies that are scheduled to sunset; (d) For each policy under review, the reviewing council can recommend one of the following actions: (i) retain the policy; (ii) sunset the policy; (iii) retain part of the policy; or (iv) reconcile the policy with more recent and like policy; (e) For each recommendation that it makes to retain a policy in any fashion, the reviewing council shall provide a succinct, but cogent justification (f) The Speakers shall determine the best way for the House of Delegates to handle the sunset reports.

3. Nothing in this policy shall prohibit a report to the HOD or resolution to sunset a policy earlier than its 10-year horizon if it is no longer relevant, has been superseded by a more current policy, or has been accomplished.

4. The AMA councils and the House of Delegates should conform to the following guidelines for sunset: (a) when a policy is no longer relevant or necessary; (b) when a policy or directive has been accomplished; or (c) when the policy or directive is part of an established AMA practice that is transparent to the House and codified elsewhere such as the AMA Bylaws or the AMA House of Delegates Reference Manual: Procedures, Policies and Practices.

5. The most recent policy shall be deemed to supersede contradictory past AMA policies.

6. Sunset policies will be retained in the AMA historical archives.

RECOMMENDATION

The Council on Medical Service recommends that the House of Delegates policies that are listed in the appendix to this report be acted upon in the manner indicated and the remainder of this report be filed.

APPENDIX – Recommended Actions

POLICY #	Title	Text	Recommendation
D-130.965	On-Call Coverage Models	Our AMA will compile and make available to the physician community various examples of on-call solutions intended to avoid subjecting physicians to unrealistic and unduly burdensome on-call demands and educate AMA physician members regarding these options.	Retain. Still relevant.
D-160.934	Physician Participation in Multiple Medicare Accountable Care Organizations	Our AMA will continue to work with the Centers for Medicare & Medicaid Services to address accountable care organization (ACO) rules that preclude physician participation in multiple Medicare ACOs.	Retain. Still relevant.
D-165.939	Transitional Reinsurance Fees Under the Affordable Care Act	Our AMA will advocate that any proposed assessment on "issuers of insurance" (scheduled to commence in 2014 for a 3-year period), intended to fund a "risk adjustment program" to cushion insurers against any actual uncertainties surrounding the health status of the uninsured, be taken from administrative and medical management costs.	Retain-in-part. All is still relevant other than "(scheduled to commence in 2014 for a 3-year period)," which should be removed.
D-165.955	Status Report on Expanding Health Care Coverage to all Individuals, with an Emphasis on the Uninsured	1. Our AMA will continue to: (1) place a high priority on expanding health insurance coverage for all; (2) pursue bipartisan support for individually selected and owned health insurance through the use of adequately funded federal tax credits as a preferred long-term solution for covering all; and (3) explore and support alternative means of ensuring health care coverage for all. 2. Our AMA Board of Trustees will consider assisting Louisiana, and other Gulf Coast States if	Rescind. Superseded by Policies H-165.920, H-165.865, D-290.979, H-165.823, and H-165.904. **Individual Health Insurance H-165.920** Our AMA: (1) affirms its support for pluralism of health care delivery systems and financing mechanisms in obtaining universal coverage and access to health care services; (2) recognizes incremental levels of coverage for different groups of the uninsured, consistent with finite resources, as a necessary

POLICY #	Title	Text	Recommendation
		they should desire, in developing and evaluating a pilot project(s) utilizing AMA policy as a means of dealing with the impending public health crisis of displaced Medicaid enrollees and uninsured individuals as a result of the recent natural disasters in that region.	interim step toward universal access; (3) actively supports the principle of the individual's right to select his/her health insurance plan and actively support ways in which the concept of individually selected and individually owned health insurance can be appropriately integrated, in a complementary position, into the Association's position on achieving universal coverage and access to health care services. To do this, our AMA will: (a) Continue to support equal tax treatment for payment of health insurance coverage whether the employer provides the coverage for the employee or whether the employer provides a financial contribution to the employee to purchase individually selected and individually owned health insurance coverage, including the exemption of both employer and employee contributions toward the individually owned insurance from FICA (Social Security and Medicare) and federal and state unemployment taxes; (b) Support the concept that the tax treatment would be the same as long as the employer's contribution toward the cost of the employee's health insurance is at least equivalent to the same dollar amount that the employer would pay when purchasing the employee's insurance directly; (c) Study the viability of provisions that would allow individual employees to opt out of group plans without jeopardizing the ability of the group to continue their employer sponsored group coverage; and (d) Work toward establishment of safeguards, such as a health

POLICY #	Title	Text	Recommendation
			care voucher system, to ensure that to the extent that employer direct contributions made to the employee for the purchase of individually selected and individually owned health insurance coverage continue, such contributions are used only for that purpose when the employer direct contributions are less than the cost of the specified minimum level of coverage. Any excess of the direct contribution over the cost of such coverage could be used by the individual for other purposes; (4) will identify any further means through which universal coverage and access can be achieved; (5) supports individually selected and individually-owned health insurance as the preferred method for people to obtain health insurance coverage; and supports and advocates a system where individually-purchased and owned health insurance coverage is the preferred option, but employer-provided coverage is still available to the extent the market demands it; (6) supports the individual's right to select his/her health insurance plan and to receive the same tax treatment for individually purchased coverage, for contributions toward employer-provided coverage, and for completely employer provided coverage; (7) supports immediate tax equity for health insurance costs of self-employed and unemployed persons; (8) supports legislation to remove paragraph (4) of Section 162(l) of the US tax code, which discriminates against the self-employed by requiring them to pay federal payroll (FICA) tax on health

POLICY #	Title	Text	Recommendation
			insurance premium expenditures; (9) supports legislation requiring a "maintenance of effort" period, such as one or two years, during which employers would be required to add to the employee's salary the cash value of any health insurance coverage they directly provide if they discontinue that coverage or if the employee opts out of the employer-provided plan; (10) encourages through all appropriate channels the development of educational programs to assist consumers in making informed choices as to sources of individual health insurance coverage; (11) encourages employers, unions, and other employee groups to consider the merits of risk-adjusting the amount of the employer direct contributions toward individually purchased coverage. Under such an approach, useful risk adjustment measures such as age, sex, and family status would be used to provide higher-risk employees with a larger contribution and lower-risk employees with a lesser one; (12) supports a replacement of the present federal income tax exclusion from employees' taxable income of employer-provided health insurance coverage with tax credits for individuals and families, while allowing all health insurance expenditures to be exempt from federal and state payroll taxes, including FICA (Social Security and Medicare) payroll tax, FUTA (federal unemployment tax act) payroll tax, and SUTA (state unemployment tax act) payroll tax;

POLICY #	Title	Text	Recommendation
			(13) advocates that, upon replacement, with tax credits, of the exclusion of employer-sponsored health insurance from employees' federal income tax, any states and municipalities conforming to this federal tax change be required to use the resulting increase in state and local tax revenues to finance health insurance tax credits, vouchers or other coverage subsidies; and (14) believes that refundable, advanceable tax credits inversely related to income are preferred over public sector expansions as a means of providing coverage to the uninsured. (15) Our AMA reaffirms our policies committed to our patients and their individual responsibility and freedoms consistent with our United States Constitution. **Medicaid Expansion D-290.979** Our AMA, at the invitation of state medical societies, will work with state and specialty medical societies in advocating at the state level to expand Medicaid eligibility to 133 percent (138 percent FPL including the income disregard) of the Federal Poverty Level as authorized by the ACA and will advocate for an increase in Medicaid payments to physicians and improvements and innovations in Medicaid that will reduce administrative burdens and deliver healthcare services more effectively, even as coverage is expanded. 2. Our AMA will: (a) continue to advocate strongly for expansion of the Medicaid program to all states and reaffirm existing policies D-290.979, H 290.965 and

POLICY #	Title	Text	Recommendation
			H-165.823; and (b) work with interested state medical associations and national medical specialty societies to provide AMA resources on Medicaid expansion and covering the uninsured to health care professionals to inform the public of the importance of expanded health insurance coverage to all. **Principles for Structuring a Health Insurance Tax Credit H-165.865** (1) AMA support for replacement of the present exclusion from employees' taxable income of employer-provided health insurance coverage with tax credits will be guided by the following principles: (a) Tax credits should be contingent on the purchase of health insurance, so that if insurance is not purchased the credit is not provided. (b) Tax credits should be refundable. (c) The size of tax credits should be inversely related to income. (d) The size of tax credits should be large enough to ensure that health insurance is affordable for most people. (e) The size of tax credits should be capped in any given year. (f) Tax credits should be fixed-dollar amounts for a given income and family structure. (g) The size of tax credits should vary with family size to mirror the pricing structure of insurance premiums. (h) Tax credits for families should be contingent on each member of the family having health insurance. (i)Tax credits should be applicable only for the purchase of health insurance, including all components of a qualified Health Savings Account, and not for out-of-pocket health expenditures. (j) Tax credits should be advanceable for low-

POLICY #	Title	Text	Recommendation
			income persons who could not afford the monthly out-of-pocket premium costs. (2) It is the policy of our AMA that in order to qualify for a tax credit for the purchase of individual health insurance, the health insurance purchased must provide coverage for hospital care, surgical and medical care, and catastrophic coverage of medical expenses as defined by Title 26 Section 9832 of the United States Code. (3) Our AMA will support the use of tax credits, vouchers, premium subsidies or direct dollar subsidies, when designed in a manner consistent with AMA principles for structuring tax credits and when designed to enable individuals to purchase individually owned health insurance. **Options to Maximize Coverage under the AMA Proposal for Reform H-165.823** That our AMA advocate for a pluralistic health care system, which may include a public option, that focuses on increasing equity and access, is cost-conscious, and reduces burden on physicians. 2. Our AMA will advocate that any public option to expand health insurance coverage must meet the following standards: a. The primary goals of establishing a public option are to maximize patient choice of health plan and maximize health plan marketplace competition. b. Eligibility for premium tax credit and cost-sharing assistance to purchase the public option is restricted to individuals without access to affordable employer-sponsored

POLICY #	Title	Text	Recommendation
			coverage that meets standards for minimum value of benefits. c. Physician payments under the public option are established through meaningful negotiations and contracts. Physician payments under the public option must be higher than prevailing Medicare rates and at rates sufficient to sustain the costs of medical practice. d. Physicians have the freedom to choose whether to participate in the public option. Public option proposals should not require provider participation and/or tie physician participation in Medicare, Medicaid and/or any commercial product to participation in the public option. e. The public option is financially self-sustaining and has uniform solvency requirements. f. The public option does not receive advantageous government subsidies in comparison to those provided to other health plans. g. The public option shall be made available to uninsured individuals who fall into the "coverage gap" in states that do not expand Medicaid – having incomes above Medicaid eligibility limits but below the federal poverty level, which is the lower limit for premium tax credits – at no or nominal cost. 3. Our AMA supports states and/or the federal government pursuing auto-enrollment in health insurance coverage that meets the following standards: a. Individuals must provide consent to the applicable state and/or federal entities to share their health insurance status and tax data with the entity with the authority to make coverage determinations.

POLICY #	Title	Text	Recommendation
			b. Individuals should only be auto-enrolled in health insurance coverage if they are eligible for coverage options that would be of no cost to them after the application of any subsidies. Candidates for auto-enrollment would, therefore, include individuals eligible for Medicaid/Children's Health Insurance Program (CHIP) or zero-premium marketplace coverage. c. Individuals should have the opportunity to opt out from health insurance coverage into which they are auto-enrolled. d. Individuals should not be penalized if they are auto-enrolled into coverage for which they are not eligible or remain uninsured despite believing they were enrolled in health insurance coverage via auto-enrollment. e. Individuals eligible for zero-premium marketplace coverage should be randomly assigned among the zero-premium plans with the highest actuarial values. f. Health plans should be incentivized to offer pre-deductible coverage including physician services in their bronze and silver plans, to maximize the value of zero-premium plans to plan enrollees. g. Individuals enrolled in a zero-premium bronze plan who are eligible for cost-sharing reductions should be notified of the cost-sharing advantages of enrolling in silver plans. h. There should be targeted outreach and streamlined enrollment mechanisms promoting health insurance enrollment, which could include raising awareness of the availability of premium tax credits and cost-sharing reductions, and establishing a

POLICY #	Title	Text	Recommendation
			special enrollment period. 4. Our AMA: (a) will advocate that any federal approach to cover uninsured individuals who fall into the "coverage gap" in states that do not expand Medicaid--having incomes above Medicaid eligibility limits but below the federal poverty level, which is the lower limit for premium tax credit eligibility--make health insurance coverage available to uninsured individuals who fall into the coverage gap at no or nominal cost, with significant cost-sharing protections; (b) will advocate that any federal approach to cover uninsured individuals who fall into the coverage gap provide states that have already implemented Medicaid expansions with additional incentives to maintain their expansions; (c) supports extending eligibility to purchase Affordable Care Act (ACA) marketplace coverage to undocumented immigrants and Deferred Action for Childhood Arrivals (DACA) recipients, with the guarantee that health plans and ACA marketplaces will not collect and/or report data regarding enrollee immigration status; and (d) recognizes the potential for state and local initiatives to provide coverage to immigrants without regard to immigration status. **Universal Health Coverage H-165.904** Our AMA: (1) seeks to ensure that federal health system reform include payment for the urgent and emergent treatment of illnesses and injuries of indigent, non-U.S. citizens in the U.S. or its territories; (2) seeks federal legislation that would require the federal government to provide

POLICY #	Title	Text	Recommendation
			financial support to any individuals, organizations, and institutions providing legally-mandated health care services to foreign nationals and other persons not covered under health system reform; and (3) continues to assign a high priority to the problem of the medically uninsured and underinsured and continues to work toward national consensus on providing access to adequate health care coverage for all Americans.
D-185.983	Diabetic Documentation Requirements	1. Our AMA Board of Trustees will consider a legal challenge, if appropriate, to the authority of the Centers for Medicare & Medicaid Services (CMS) and other health care insurers placing onerous barriers on diabetic patients to procure medically necessary durable medical equipment and supplies. 2. Our AMA Board of Trustees will consider a legal challenge, if appropriate, to the authority and policy of CMS and other insurers to practice medicine through their diabetes guidelines, and place excessive time and financial burdens without reimbursement on a physician assisting patients seeking reimbursement for supplies needed to treat their diabetes.	Rescind. Directive accomplished. Research by the AMA Office of General Counsel indicated a reasonable basis did not exist for bringing a lawsuit against CMS related to diabetic documentation requirements.
D-225.986	Blue Cross of California Quality of Care Allegations	Our AMA will reiterate its position stating that medical staffs shall not be impugned and quality of care issues not be imposed between insurance plans and hospitals as a means of addressing economic or contractual issues.	Retain. Still relevant.
D-225.988	Elimination of 48-Hour Signature Rule for Verbal Orders	Our AMA will, through the Organized Medical Staff Section, encourage hospital medical staffs to include policies, which consider	Retain. Still relevant.

POLICY #	Title	Text	Recommendation
		applicable state law, on authentication of all medical record entries, including telephone and verbal orders, in their medical staff bylaws.	
D-235.986	Random Drug Screening	Our AMA will develop model medical staff bylaws addressing random drug testing of medical staffs.	Rescind. Directive accomplished. The AMA Physician's Guide to Medical Staff Organization Bylaws includes sample bylaws that address drug screening for medical staff (see Section 5.7, "Drug Testing," pages 90-94).
D-285.998	Creation of Joint AMA Committee with Representatives from the America's Health Insurance Plans	Our AMA will continue to work with America's Health Insurance Plans and other appropriate organizations on issues of mutual interest.	Retain. Still relevant.
D-330.941	Medicare Outpatient Therapy Caps	Our AMA will not support Medicare outpatient rehabilitation therapy caps.	Retain. Still relevant.
D-330.958	Social Security Disability Medical Benefits	Our AMA will take an active role in supporting reduction of the waiting period to receive Social Security Disability medical benefits.	Retain. Still relevant.
D-330.961	Social Security Disability Medical Benefits	Our AMA will continue to monitor future research and related developments on Medicare benefits for Social Security disability recipients and will report and recommend further action to the House of Delegates as appropriate.	Retain. Still relevant.
D-335.983	Review of Self-Administered Drug List Alterations Under Medicare Part B	Our AMA will seek regulatory or legislative changes to require that any alterations to Self-Administered Drug lists made by Medicare Administrative Contractors shall be subject to Carrier Advisory Committee review and advisement.	Retain. Still relevant. SAD List approval does not yet involve Carrier Advisory Committee review and advisement.
D-390.975	Payment for Facilities Expenses in Physicians' Offices	Our AMA will (1) advocate that CMS increase allowed expenditures subject to the SGR target whenever CMS assigns new office expenses to codes that historically have only been performed in the hospital; and (2) incorporate this	Rescind. MACRA repealed the SGR.

POLICY #	Title	Text	Recommendation
		recommended administrative change into the other SGR system changes our AMA has advocated, such as removing drug spending from the SGR system and recognizing new coverage decisions.	
D-390.983	CMS Pharmaceutical Reimbursement Method	Our AMA will work to exclude pharmaceutical costs from the Sustainable Growth Rate formula.	Rescind. MACRA repealed the SGR.
D-400.985	Geographic Practice Cost Index	Our AMA will: (1) use the AMA Physician Practice Information Survey to determine actual differences in rural vs. urban practice expenses; (2) seek Congressional authorization of a detailed study of the way rents are reflected in the Geographic Practice Cost Index (GPCI); (3) advocate that payments under physician quality improvement initiatives not be subject to existing geographic variation adjustments (i.e., GPCIs); and (4) provide annual updates on the Centers for Medicare and Medicaid Services efforts to improve the accuracy of Medicare Economic Index weights and geographic adjustments and their impact on the physician payment schedule, and AMA advocacy efforts on these issues.	Retain-in-part: (4) (1) & (3) Accomplished; (2) Addressed by CMS. Suggest revising policy title to "MEI GPCI Impacts on the Physician Payment Schedule."
D-440.937	Vaccines for Children Program and the New CPT Codes for Immunization Administration	Our AMA will work with the American Academy of Pediatrics and other groups to convince the Centers for Medicare & Medicaid Services to allow state Medicaid agencies to pay physicians for using the new immunization administration codes (90460, 90461) to immunize eligible patients and to be paid fairly for their participation in the Vaccines for Children Program.	Retain. Still relevant.

POLICY #	Title	Text	Recommendation
D-450.960	Improve the HCAHPS Rating System	Our AMA will urge the Centers for Medicare & Medicaid Services to modify the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) scoring system so that it assigns a unique value for each rating option available to patients.	Rescind. The directive was accomplished by correspondence sent to CMS.
D-450.963	Align the Recognition Periods for the Bridges to Excellence and the National Committee on Quality Assurance Recognition Programs	Our AMA will request the Bridges to Excellence program to align its validation periods for its recognition programs with the validation periods of the National Committee on Quality Assurance recognition programs.	Rescind. Directive accomplished. A letter was sent to the Executive Director of the Health Care Incentives Improvement Institute requesting that the Bridges to Excellence program align its validation periods with those of the NCQA.
D-510.999	Veterans Health Administration Health Care System	Our AMA will: (1) urge state medical associations to encourage their members to advise patients who qualify for Veterans Health Administration (VHA) care of the importance of facilitating the flow of clinical information among all of the patient's health care providers, both within and outside the VHA system; (2) facilitate collaborative processes between state medical associations and VHA regional authorities, aimed at generating regional and institutional contacts to serve as single points of access to clinical information about veterans receiving care from both private physicians and VHA providers; and (3) continue discussions at the national level with the VHA and the Centers for Medicare and Medicaid Services (CMS), to explore the need for and feasibility of legislation to address VHA's payment for prescriptions written by physicians who have no formal affiliation with the VHA.	Retain-in-part. The following subsections are superseded by Policy H-510.983: (1) urge state medical associations to encourage their members to advise patients who qualify for Veterans Health Administration (VHA) care of the importance of facilitating the flow of clinical information among all of the patient's health care providers, both within and outside the VHA system; (2) facilitate collaborative processes between state medical associations and VHA regional authorities, aimed at generating regional and institutional contacts to serve as single points of access to clinical information about veterans receiving care from both private physicians and VHA providers; and **Expansion of U.S. Veterans Health Care Choices H-510.983** 1. Our AMA will continue to work with the Veterans Administration (VA) to provide quality care to veterans.

POLICY #	Title	Text	Recommendation
			2. Our AMA will continue to support efforts to improve the Veterans Choice Program (VCP) and make it a permanent program. 3. Our AMA encourages the VA to continue enhancing and developing alternative pathways for veterans to seek care outside of the established VA system if the VA system cannot provide adequate or timely care, and that the VA develop criteria by which individual veterans may request alternative pathways. 4. Our AMA will support consolidation of all the VA community care programs. 5. Our AMA encourages the VA to use external assessments as necessary to identify and address systemic barriers to care. 6. Our AMA will support interventions to mitigate barriers to the VA from being able to achieve its mission. 7. Our AMA will advocate that clean claims submitted electronically to the VA should be paid within 14 days and that clean paper claims should be paid within 30 days. 8. Our AMA encourages the acceleration of interoperability of electronic personal and medical health records in order to ensure seamless, timely, secure and accurate exchange of information between VA and non-VA providers and encourage both the VA and physicians caring for veterans outside of the VA to exchange medical records in a timely manner to ensure efficient care. 9. Our AMA encourages the VA to engage with physicians providing care in the VA system to explore and develop solutions on improving the health care choices of veterans.

POLICY #	Title	Text	Recommendation
			10. Our AMA will advocate for new funding to support expansion of the Veterans Choice Program.
H-120.978	Principles of Drug Utilization Review	Our AMA adopts the following Principles of Drug Utilization Review. Principle 1: The primary emphasis of a DUR program must be to enhance quality of care for patients by assuring appropriate drug therapy. Characteristics: (a) While a desired therapeutic outcome should be cost-effective, the cost of drug therapy should be considered only after clinical and patient considerations are addressed; (b) Sufficient professional prerogatives should exist for individualized patient drug therapy. Principle 2: Criteria and standards for DUR must be clinically relevant. Characteristics: (a) The criteria and standards should be derived through an evaluation of (i) the peer-reviewed clinical and scientific literature and compendia; (ii) relevant guidelines obtained from professional groups through consensus-derived processes; (iii) the experience of practitioners with expertise in drug therapy; (iv) drug therapy information supplied by pharmaceutical manufacturers; and (v) data and experience obtained from DUR program operations. (b) Criteria and standards should identify underutilization as well as overutilization and inappropriate utilization. (c) Criteria and standards should be validated prior to use. Principle 3: Criteria and standards for DUR must be nonproprietary and must be developed and revised	Retain. Still relevant.

POLICY #	Title	Text	Recommendation
		through an open professional consensus process. Characteristics: (a) The criteria and standards development and revision process should allow for and consider public comment in a timely manner before the criteria and standards are adopted. (b) The criteria and standards development and revision process should include broad-based involvement of physicians and pharmacists from a variety of practice settings. (c) The criteria and standards should be reviewed and revised in a timely manner. (d) If a nationally developed set of criteria and standards are to be used, there should be a provision at the state level for appropriate modification. Principle 4: Interventions must focus on improving therapeutic outcomes. Characteristics: (a) Focused education to change professional or patient behavior should be the primary intervention strategy used to enhance drug therapy. (b) The degree of intervention should match the severity of the problem. (c) All retrospective DUR profiles/reports that are generated via computer screening should be subjected to subsequent review by a committee of peers prior to an intervention. (d) If potential fraud is detected by the DUR system, the primary intervention should be a referral to appropriate bodies (e.g., Surveillance Utilization Review Systems). (e) Online prospective DUR programs should deny services only in cases of patient ineligibility, coverage limitations, or	

POLICY #	Title	Text	Recommendation
		obvious fraud. In other instances, decisions regarding appropriate drug therapy should remain the prerogative of practitioners. Principle 5: Confidentiality of the relationship between patients and practitioners must be protected. Characteristic: The DUR program must assure the security of its database. Principle 6: Principles of DUR must apply to the full range of DUR activities, including prospective, concurrent and retrospective drug use evaluation. Principle 7: The DUR program operations must be structured to achieve the principles of DUR. Characteristics: (a) DUR programs should maximize physician and pharmacist involvement in their development, operation and evaluation. (b) DUR programs should have an explicit process for system evaluation (e.g., total program costs, validation). (c) DUR programs should have a positive impact on improving therapeutic outcomes and controlling overall health care costs. (d) DUR programs should minimize administrative burdens to patients and practitioners.	
H-120.981	Drug Utilization Review	(1) Our AMA supports DUR programs provided: (a) primary emphasis is placed on high quality patient care through improved prescribing by physicians, dispensing by pharmacists, and medication compliance by patients; (b) physicians are actively involved in the development, implementation, and maintenance of the DUR programs; (c) criteria and	Rescind. Superseded by Policy H-120.978. **Principles of Drug Utilization Review H-120.978** Our AMA adopts the following Principles of Drug Utilization Review. Principle 1: The primary emphasis of a DUR program must be to enhance quality of care for patients by assuring appropriate drug therapy. Characteristics: (a) While a

POLICY #	Title	Text	Recommendation
		standards for prescribing are developed by physician organizations and they are based on the peer-reviewed medical literature and the experiences of physicians with expertise in drug therapy; (d) focused professional education is emphasized as the primary intervention strategy to improve physician prescribing, pharmacist dispensing, and patient compliance practices; and (e) the confidentiality relationship between physicians and their patients is maintained. (2) Our AMA supports interacting with appropriate pharmacy organizations to develop guidelines for prospective (point-of-sale) DUR that will decrease the incidence of adverse events from drug therapy. (3) Our AMA recognizes the right of government and private third party payers to include in DUR programs a component that addresses fraud and abuse, but reaffirms the right of physicians, who are so accused, to due process. (4) Our AMA opposes DUR programs of government or private third party payers that focus only on cost containment and prevent physicians from prescribing the most appropriate drugs for individual patients.	desired therapeutic outcome should be cost-effective, the cost of drug therapy should be considered only after clinical and patient considerations are addressed; (b) Sufficient professional prerogatives should exist for individualized patient drug therapy. Principle 2: Criteria and standards for DUR must be clinically relevant. Characteristics: (a) The criteria and standards should be derived through an evaluation of (i) the peer-reviewed clinical and scientific literature and compendia; (ii) relevant guidelines obtained from professional groups through consensus-derived processes; (iii) the experience of practitioners with expertise in drug therapy; (iv) drug therapy information supplied by pharmaceutical manufacturers; and (v) data and experience obtained from DUR program operations. Principle 7: The DUR program operations must be structured to achieve the principles of DUR. Characteristics: (a) DUR

POLICY #	Title	Text	Recommendation
			programs should maximize physician and pharmacist involvement in their development, operation and evaluation. (b) DUR programs should have an explicit process for system evaluation (e.g., total program costs, validation). (c) DUR programs should have a positive impact on improving therapeutic outcomes and controlling overall health care costs. (d) DUR programs should minimize administrative burdens to patients and practitioners.
H-130.955	Patient Responsibility of On-Call Physicians	The AMA urges hospital medical staffs to have written policies and procedures in place to delineate clearly the patient follow-up responsibilities of staff members who serve in an on-call capacity to the hospital emergency department.	Retain. Still relevant.
H-160.910	Worksite Health Clinics	It AMA policy that any individual, company, or other entity that establishes and/or operates worksite health clinics should adhere to the following principles: a) Worksite health clinics must have a well-defined scope of clinical services, consistent with state scope of practice laws. b) Worksite health clinics must establish a referral system with physician practices or other facilities for appropriate treatment if the patient's conditions or symptoms are beyond the scope of services provided by the clinic. c) Worksite health clinics that use nurse practitioners and other health professionals to deliver care must establish arrangements by which their health care practitioners have direct access to MD/DOs, as	Retain. Still relevant.

POLICY #	Title	Text	Recommendation
		consistent with state laws. d) Worksite health clinics must clearly inform patients in advance of the qualifications of the health care practitioners who are providing care, as well as the limitation in the types of illnesses that can be diagnosed and treated. e) Worksite health clinics should develop expertise in specific occupational hazards and medical conditions that are likely to be more common in the particular industry where the company offers products and services. f) Worksite health clinics must use evidence-based practice guidelines to ensure patient safety and quality of care. g) Worksite health clinics must measure clinical quality provided to patients and participate in quality improvement efforts in order to demonstrate improvement in their system of care. h) Worksite health clinics must adopt explicit and public policies to assure the security and confidentiality of patients' medical information. Such policies must bar employers from unconsented access to identifiable medical information so that knowledge of sensitive facts cannot be used against individuals. i) Worksite health clinics must establish protocols for ensuring continuity of care with practicing physicians within the local community. Such protocols must ensure after-hours access of employees and eligible family members, as well as the transmission of reports of all worksite clinic visits and treatments to the physicians	

POLICY #	Title	Text	Recommendation
		of patients with an identified community physician. j) Worksite health clinics administering immunizations must establish processes to ensure communication to the patient's medical home and the state immunization registry documenting what immunizations have been given. k) Patient cost-sharing for treatment received outside of the clinic must be affordable and not prohibit necessary access to care. l) Worksite health clinics should allow the involvement of community physicians in clinic operations. m) Employers implementing worksite health clinics should communicate the eligibility for services of employees' family members. n) Worksite health clinics should be encouraged to use interoperable electronic health records as a means of communicating patient information to and facilitating continuity of care with community physicians, hospitals and other health care facilities.	
H-160.911	Value of Group Medical Appointments	Our AMA promotes education about the potential value of group medical appointments for diagnoses that might benefit from such appointments including chronic diseases, pain, and pregnancy.	Retain. Still relevant.
H-160.952	Access to Specialty Care	The AMA: (1) continues to encourage primary care and other medical specialty organizations to collaborate in developing guidelines to delineate the clinical circumstances under which treatment by primary care physicians, referral for initial or ongoing specialist care, and direct patient self-	Rescind. Accomplished through CMMI TCPi.

POLICY #	Title	Text	Recommendation
		referral to other specialists are appropriate, timely, and cost-effective; (2) encourages the medical specialty organizations that develop referral guidelines to document the impact of the guidelines on the quality, accessibility, timeliness, and cost-effectiveness of care; and (3) urges all health plans that control access to services through a primary care case manager to cover direct access to and services by a specialist other than the case manager without financial penalty when that access is in conformance with such collaboratively developed guidelines.	
H-160.988	Health Care Coalitions	The AMA (1) supports health care coalitions that include strong physician participation so that primary emphasis is given to the quality, availability and access to medical care; and (2) encourages physicians in the clinical practice of medicine to take an active role in the development and activities of health care coalitions in their respective areas.	Retain. Still relevant.
H-165.830	Health Insurance Cancellations	Our AMA supports urgent efforts to maintain coverage while facilitating a smooth transition to alternative coverage options which offer 'meaningful coverage' as defined in Policy H-165.848 for individuals who have received cancellation notices from their health insurance companies as a result of the Affordable Care Act.	Retain. Still relevant for grandfathered plans.
H-185.961	Health Plan Coverage of Prescription Drugs	It is the policy of our AMA that third party payers should not establish a higher cost-sharing requirement exclusively for prescription drugs approved for coverage	Amend Policy H-110.990 to include specification of medical exception process. **Cost Sharing Arrangements for Prescription Drugs H-110.990**

POLICY #	Title	Text	Recommendation
		under a medical exceptions process.	Our AMA: 1. believes that cost-sharing arrangements for prescription drugs should be designed to encourage the judicious use of health care resources, rather than simply shifting costs to patients; 2. believes that cost-sharing requirements should be based on considerations such as: unit cost of medication; availability of therapeutic alternatives; medical condition being treated; personal income; and other factors known to affect patient compliance and health outcomes; 3. supports the development and use of tools and technology that enable physicians and patients to determine the actual price and patient-specific out-of-pocket costs of individual prescription drugs, taking into account insurance status or payer type, prior to making prescribing decisions, so that physicians and patients can work together to determine the most efficient and effective treatment for the patient's medical condition; and 4. supports public and private prescription drug plans in offering patient-friendly tools and technology that allow patients to directly and securely access their individualized prescription benefit and prescription drug cost information. 5. payers should not establish a higher cost-sharing requirement exclusively for prescription drugs approved for coverage under a medical exceptions process.

POLICY #	Title	Text	Recommendation
H-185.962	Payment for Advanced Technologies	Our AMA vigorously opposes actions by medical insurers to deny payment for services simply on the basis of the size of medical equipment.	Retain. Still relevant.
H-185.967	Coverage of Children's Deformities, Disfigurement and Congenital Defects	1. The AMA declares: (a) that treatment of a minor child's congenital or developmental deformity or disorder due to trauma or malignant disease should be covered by all insurers; (b) that such coverage shall include treatment which, in the opinion of the treating physician, is medically necessary to return the patient to a more normal appearance (even if the procedure does not materially affect the function of the body part being treated); and (c) that such insurability should be portable, i.e., not denied as a pre-existing condition if the patient's insurance coverage changes before treatment has been either initiated or completed. 2. Our AMA will advocate for appropriate funding for comprehensive dental coverage (including dental implants) for children with orofacial clefting.	Retain. Still relevant.

POLICY #	Title	Text	Recommendation
H-185.981	Third Party Responsibility for Payment	Our AMA (1) will develop, with the assistance of the Blue Cross and Blue Shield Association, the Group Health Association of America, the Health Insurance Association of America, and other relevant health care organizations, guidelines for a standardized system of verifying eligibility for health benefits; (2) will assume a leadership role with these organizations in the development of guidelines for a standardized system of verifying eligibility for health benefits; and (3) following the development of such guidelines, will work with major insurers and managed care plans to promote the development of a standardized, national health benefits verification system based on the guidelines, which would include an obligation on the part of the insurer or managed care plan to pay physicians for any services rendered to patients whose eligibility for benefits have been verified erroneously.	Rescind. ACA established EHBs and HHS Administrative Simplification Eligibility and Benefits Transaction covers inquiries and responses about a patient's eligibility for insurance benefits.
H-185.983	Patient's Out-of-Pocket Contributions to Private Health Insurance	(1) The AMA takes the position that the practice of basing copayments on a different basis than the third party reimbursement should be condemned. (2) If physicians learn that their patients' copayments are being computed on a different basis than the third party's reimbursement, they should inform their patients and, when appropriate, help them make fully informed, cost-conscious alternative choices about their insurance coverage. (3) If physicians suspect that copayments are being set unfairly, they should bring these matters to	Retain. Still relevant. Suggest revising every iteration of "copayments" to "copayments and coinsurance."

POLICY #	Title	Text	Recommendation
		the attention of the state insurance commissioner or other state regulator and ask for assistance from their state medical society.	
H-190.956	Errors in Electronic Claims	Our AMA will publicize and encourage physicians to make use of AMA resources created to help physicians submit accurate electronic claims, and advocates that at the time of claim confirmation or no later than two business days after receiving an electronic claim, a third-party payer should provide the physician with an exception report notifying the physician of all information that is missing from the claim, any errors in the claim, any attachment that is missing or in error, and any other circumstances which preclude the claim from being a clean claim.	Retain. Still relevant.
H-190.983	Submission of Electronic Claims Through Electronic Data Interchange	The AMA: (1) will take a leadership role in representing the interests of the medical profession in all major efforts to develop and implement EDI technologies related to electronic claims submission, claims payment, and the development of EDI standards that will affect the clinical, business, scientific, and educational components of medicine; (2) supports aggressive time tables for implementation of EDI as long as the implementation is voluntary, and as long as all payers are required to receive standard electronic claims and provide electronic reconciliation prior to physicians being required to transmit electronic claims; (3) supports the acceptance of the ANSI 837 standard as a uniform, but not exclusive, standard for those physicians who wish to bill	Rescind. Superseded by Policy H-190.978. **Promoting Electronic Data Interchange H-190.978** Our AMA: (1) adopts the following policy principles to encourage greater use of electronic data interchange (EDI) by physicians and improve the efficiency of electronic claims processing: (a) public and private payers who do not currently do so should cover the processing costs of physician electronic claims and remittance advice; (b) vendors, claims clearinghouses, and payers should offer physicians a full complement of EDI transactions (e.g., claims submission; remittance advice; and eligibility, coverage and benefit inquiry); (c) vendors, clearinghouses, and payers should adopt American National Standards Institute (ANSI) Accredited Standard's

POLICY #	Title	Text	Recommendation
		electronically; and (4) will continue to monitor the cost effectiveness of EDI participation with respect to rural physicians.	Committee (ASC) Insurance Subcommittee (X12N) standards for electronic health care transactions and recommendations of the National Uniform Claim Committee (NUCC) on a uniform data set for a physician claim; (d) all clearinghouses should act as all-payer clearinghouses (i.e., accept claims intended for all public and private payers); (e) practice management systems developers should incorporate EDI capabilities, including electronic claims submission; remittance advice; and eligibility, coverage and benefit inquiry into all of their physician office-based products; (f) states should be encouraged to adopt AMA model legislation concerning turnaround time for "clean" paper and electronic claims; and (g) federal legislation should call for the acceptance of the Medicare National Standard Format (NSF) and ANSI ASC X12N standards for electronic transactions and NUCC recommendations on a uniform data set for a physician claim. This legislation should also require that (i) any resulting conversions, including maintenance and technical updates, be fully clarified to physicians and their office staffs by vendors, billing agencies or health insurers through educational demonstrations and (ii) that all costs for such services based on the NSF and ANSI formats, including educational efforts be fully explained to physicians and/or their office staffs during negotiations for such contracted services; (2) continues to encourage physicians to develop electronic data interchange

POLICY #	Title	Text	Recommendation
			(EDI) capabilities and to contract with vendors and payers who accept American National Standards Institute (ANSI) standards and who provide electronic remittance advice as well as claims processing; (3) continues to explore EDI-related business opportunities; (4) continues to facilitate the rapid development of uniform, industry-wide, easy-to-use, low cost means for physicians to exchange electronically claims and eligibility information and remittance advice with payers and others in a manner that protects confidentiality of medical information and to assist physicians in the transition to electronic data interchange; (5) continues its leadership roles in the NUCC and WEDI; and. (6) through its participation in the National Uniform Claim Committee, will work with third party payers to determine the reasons for claims rejection and advocate methods to improve the efficiency of electronic claims approval.
H-20.906	Health and Disability Coverage for Health Care Workers at Risk for HIV and Other Serious Infectious Diseases	(1) Health Insurance A currently held health insurance policy of a health care worker should not be terminated, coverage reduced or restricted, or premiums increased solely because of HIV infection. (2) Disability Coverage a) Each health care worker should consider the risks of exposure to infectious agents posed by his/her type of practice and the likely consequences of infection in terms of changes needed in that practice mode and select disability insurance coverage	Retain. Still relevant.

POLICY #	Title	Text	Recommendation
		accordingly. The policy selected should contain a reasonable definition of "sickness" or "disability," an own-occupation clause, and guaranteed renewability, future insurability, and partial disability provisions; b) In making determinations of disability, carriers should take into consideration the recommendations of the professional and institutional staff with whom an infected health care worker is associated, including the worker's own personal physician; c) Since there are a variety of disability insurance coverages available and a diversity of practice modes, each health care professional should individually assess his/her risk of infection and that of his/her employees and select disability coverage accordingly.	
H-190.991	Excessive Requests for Information from Insurance Carriers and Delays in Processing Insurance Claims	1. It is the policy of our AMA (A) to continue to oppose excessive and unnecessary requests for additional information and unexplained delays in processing and payment by third party insurance carriers where a completed standard claim form for reimbursement has been submitted, and (B) that state medical societies should pursue existing AMA model legislation to require the payment of claims with interest where clean claims are not paid on a timely basis. 2. Our AMA will: (A) work with all payers to ensure that they stop the practice of delaying payments by asking for documentation to review,	Rescind. Superseded by Policy H-190.981. **Required Timely Reimbursements by all Health Insurers H-190.981** Our AMA will prepare and/or seek sponsorship of legislation calling for all health insurance entities and third party payers--inclusive of not-for-profit organizations and health maintenance organizations--to pay for "clean" claims when filed electronically within 14 days and paper claims within 30 days, with interest accruing thereafter. These time periods should be considered ceilings, not floors or fixed differentials between paper and electronic claims.

POLICY #	Title	Text	Recommendation
		prior to payment; and (B) work with payers to establish rules to continue to allow the payer to conduct prepayment documentation review if the payer has performed a post payment documentation review and proven that the provider has been submitting incorrect claims. 3. If efforts to work with payers to end the practice of delaying payments without reasonable justification fail, our AMA will seek legislation that would accomplish this.	

H-190.992	Electronic Claims Submission	It is the policy of the AMA to: (1) support, assist and encourage the use of electronic data interchange (EDI) and electronic media claims (EMC) by physicians; (2) support and continue its involvement in the development of uniform EMC format and technical requirements; (3) continue to support the elimination of the Medicare 14-day payment delay regulation following Medicare carrier receipt of a claim; and (4) oppose the establishment, at this time, of any time tables or plans for mandatory EMC or EDI use by physicians.	Rescind. Superseded by Policy H-190.978. **Promoting Electronic Data Interchange H-190.978** Our AMA: (1) adopts the following policy principles to encourage greater use of electronic data interchange (EDI) by physicians and improve the efficiency of electronic claims processing: (a) public and private payers who do not currently do so should cover the processing costs of physician electronic claims and remittance advice; (b) vendors, claims clearinghouses, and payers should offer physicians a full complement of EDI transactions (e.g., claims submission; remittance advice; and eligibility, coverage and benefit inquiry); (c) vendors, clearinghouses, and payers should adopt American National Standards Institute (ANSI) Accredited Standard's Committee (ASC) Insurance Subcommittee (X12N) standards for electronic health care transactions and recommendations of the National Uniform Claim Committee (NUCC) on a uniform data set for a physician claim; (d) all clearinghouses should act as all-payer clearinghouses (i.e., accept claims intended for all public and private payers); (e) practice management systems developers should incorporate EDI capabilities, including electronic claims submission; remittance advice; and eligibility, coverage and benefit inquiry into all of their physician office-based products; (f) states should be encouraged to adopt AMA model legislation concerning turnaround time for “clean” paper and electronic claims; and (g) federal legislation should call for the acceptance of the Medicare National Standard Format (NSF) and ANSI ASC X12N standards for electronic transactions and

POLICY #	Title	Text	Recommendation
			NUCC recommendations on a uniform data set for a physician claim. This legislation should also require that (i) any resulting conversions, including maintenance and technical updates, be fully clarified to physicians and their office staffs by vendors, billing agencies or health insurers through educational demonstrations and (ii) that all costs for such services based on the NSF and ANSI formats, including educational efforts be fully explained to physicians and/or their office staffs during negotiations for such contracted services; (2) continues to encourage physicians to develop electronic data interchange (EDI) capabilities and to contract with vendors and payers who accept American National Standards Institute (ANSI) standards and who provide electronic remittance advice as well as claims processing; (3) continues to explore EDI-related business opportunities; (4) continues to facilitate the rapid development of uniform, industry-wide, easy-to-use, low cost means for physicians to exchange electronically claims and eligibility information and remittance advice with payers and others in a manner that protects confidentiality of medical information and to assist physicians in the transition to electronic data interchange; (5) continues its leadership roles in the NUCC and WEDI; and (6) through its participation in the National Uniform Claim Committee, will work with third party payers to determine the reasons for claims rejection and advocate methods to

POLICY #	Title	Text	Recommendation
			improve the efficiency of electronic claims approval.
H-220.931	Evidence-Based Value of Joint Commission Standards and Measures	Our AMA asks The Joint Commission that all present and future standards and performance measures set forth by The Joint Commission be supported by the best available evidence.	Retain. Still relevant.
H-220.991	AMA Policy on Hospital Accreditation	The AMA (1) believes that the objective of hospital accreditation should be primarily to evaluate the quality of patient care, to provide recommendations for remedying deficiencies and improving the quality of patient care, and to withhold accreditation from those institutions which do not meet an acceptable standard of patient care; (2) opposes accreditation requirements which impose rigid, uniform, mandatory administrative procedures, methods of operation, nomenclature, or forms of organization for the hospital, its governing board, attending staff and committees; and (3) recognizes that excellence in patient care is more easily attainable when the accreditation process is flexible and is concerned with evaluating the quality of hospital service and not the administrative procedures or form of organization used to provide patient care.	Retain. Still relevant.
H-225.958	Insurance Plan Inquiries Regarding Quality of Care and Peer Review Issues	Our AMA insists that all insurance plan inquiries regarding quality of care and peer review issues be evaluated through objective due process and peer review; and supports a position stating that all future peer review and quality of care issues between insurance companies and medical staffs be brought to an objective	Retain. Still relevant.

POLICY #	Title	Text	Recommendation
		and neutral peer review body.	
H-225.962	Medical Staff Membership Category for Physicians Providing Telemedicine	The AMA recommends that organized medical staffs, as part of their responsibility for the quality of professional services provided by individuals with clinical privileges, identify to the governing body of the hospital/medical care organization those clinical services that can be provided by telemedicine; and recommends that organized medical staffs (a) amend the medical staff bylaws to allow physicians providing telemedicine to be granted and maintain medical staff membership if they meet other obligations of such membership and (b) incorporate Policy 160.937, regarding their responsibility for supervision of non-physician providers and technicians delivering services via telemedicine, in the medical staff bylaws or rules and regulations.	Retain. Still relevant.
H-225.968	Standard Admitting Orders	It is the policy of the AMA that any standard admitting orders are the responsibility of and should be developed and approved by the medical staff.	Retain. Still relevant.
H-225.970	Full Participation for All Members of Hospital Medical Staff	The AMA opposes efforts by hospital administrations or governing boards to abrogate the voting rights of the physicians who serve on the medical executive committee. The AMA will communicate to its members its strong concern about hospital administrations' or governing boards' efforts to limit the participation of any physician who serves on the medical executive committee in the self-governing medical staff.	Retain. Still relevant. Will be discussed by OMSS Policy Committee.

POLICY #	Title	Text	Recommendation
H-225.985	Medical Staff Review of Quality of Care Issues Prior to Exclusive Contract	The AMA believes that the medical staff should review and make recommendations to the governing body related to exclusive contract arrangements, prior to any decision being made, in the following situations: (1) the decision to execute an exclusive contract in a previously open department or service; (2) the decision to renew or otherwise modify an exclusive contract in a particular department or service; (3) the decision to terminate an exclusive contract in a particular department or service; and (4) prior to termination of the contract the medical staff should hold a hearing, as defined by the medical staff and hospital to permit interested parties to express their views on the hospital's proposed action.	Retain. Still relevant.
H-225.996	Computer-Based Hospital and Order System	The AMA supports the concept of early involvement and participation by the hospital medical staff in decisions as to installation of a hospital information system and in the development of policies governing the use of such a system in the institution.	Retain. Still relevant.
H-235.961	Employment Status and Eligibility for Election or Appointment to Medical Staff Leadership Positions	1. Our AMA adopted as policy the principle that a medical staff member’s personal or financial affiliations or relationships, including employment or contractual relationships with any hospital or health care delivery system, should not affect his or her eligibility for election or appointment to medical staff leadership positions, provided that such interests are disclosed prior to the member's election or appointment and in a manner consistent with the	Retain. Still relevant.

POLICY #	Title	Text	Recommendation
		requirements of the medical staff bylaws. 2. Our AMA will draft model medical staff bylaws provisions supporting the principle that a medical staff member's personal or financial affiliations or relationships, including employment or contractual relationships with any hospital or health care delivery system, should not affect his or her eligibility for election or appointment to medical staff leadership positions, provided that such interests are disclosed prior to the member's election or appointment and in a manner consistent with the requirements of the medical staff bylaws. 3. Our AMA encourages medical staffs and their advisors to consult the AMA Physician's Guide to Medical Staff Organization Bylaws and the AMA Conflict of Interest Guidelines for Organized Medical Staffs when developing policies for the disclosure of medical staff leaders' personal or financial affiliations or relationships and the management of resulting conflicts of interest.	
H-235.962	Medical Staff-Hospital Compacts	1. Given the limited utility of medical staff-hospital compacts relative to their significant potential unintended consequences, our AMA recommends that organized medical staffs and physicians not enter into compacts or similar agreements with their hospitals' governing bodies or administrations. Instead, the AMA encourages organized medical staffs and hospital governing bodies to: A. Clearly define within the medical staff bylaws the	Retain. Still relevant.

POLICY #	Title	Text	Recommendation
		obligations of each party; B. Outline within the medical staff bylaws the processes by which conflicts between the organized medical staff and the hospital governing body are to be resolved; and C. Regard the medical staff bylaws as a binding, mutually enforceable agreement between the organized medical staff and the hospital governing body. 2. Our AMA will publicize to medical staffs the pitfalls of medical staff-hospital compacts and modify as needed the Physician's Guide to Medical Staff Organization Bylaws.	
H-235.964	Preservation of Medical Staff Self-Governance	Our AMA strongly supports any hospital medical staff whose rights of self-governance are being threatened by the hospital administration or the governing body.	Retain. Still relevant.
H-235.972	Proxy Voting at Medical Staff Meetings	It is the policy of the AMA that proxy voting prior to or at medical staff meetings should not be permitted in medical staff bylaws.	Retain. Still relevant.
H-280.948	Long-Term Care Residents With Criminal Backgrounds	1. Our AMA encourages the long-term care provider and correctional care communities, including the American Medical Directors Association, the Society of Correctional Physicians, the National Commission on Correctional Health Care, the American Psychiatric Association, long-term care advocacy groups and offender advocacy groups, to work together to develop national best practices on how best to provide care to, and develop appropriate care plans for, individuals with violent criminal backgrounds or violent tendencies in long-term care facilities while	Retain. Still relevant.

POLICY #	Title	Text	Recommendation
		ensuring the safety of all residents of the facilities. 2. Our AMA encourages more research on how to best care for residents of long-term care facilities with criminal backgrounds, which should include how to vary approaches to care planning and risk management based on age of offense, length of incarceration, violent tendencies, and medical and psychiatric history. 3. Our AMA encourages research to identify and appropriately address possible liabilities for medical directors, attending physicians, and other providers in long-term care facilities caring for residents with criminal backgrounds. 4. Our AMA will urge the Society of Correctional Physicians and the National Commission on Correctional Health Care to work to develop policies and guidelines on how to transition to long-term care facilities for individuals recently released from incarceration, with consideration to length of incarceration, violent tendencies, and medical and psychiatric history.	
H-285.928	Health Plan and Fiscal Intermediary Insolvency Protection Measures	(1) It is the policy of the AMA that health plans should be legally responsible to pay directly for physician services in the event of an insolvency of fiscal intermediaries like groups, independent practice associations, and physician practice management companies. (2) Our AMA continues to advocate at the state level for protective measures for patients and physicians who are adversely affected by health insurers and their fiscal	Retain. Still relevant.

POLICY #	Title	Text	Recommendation
		intermediaries that declare insolvency, to include: (a) actuarially sound capitation rates and administrative costs; (b) submission of timely financial information by health plans to independent practice associations and medical groups; and (c) the establishment of financial and monetary standards for health plans, as well as for independent practice associations, and groups that assume financial risk unrelated to direct provision of patient care.	
H-285.929	Patient Notification of Physician Contract Termination	Our AMA encourages medical groups and other corporate entities, such as physician practice management corporations and limited liability corporations, to include in the contract language governing notification of patients regarding termination of a physician's contract, wording which is in compliance with Council on Ethical and Judicial Affairs Opinion 7.03 and/or model language developed by state medical societies.	Rescind. Superseded by Policy H-225.950. **AMA Principles for Physician Employment H-225.950** 1. Addressing Conflicts of Interest a) A physician's paramount responsibility is to his or her patients. Additionally, given that an employed physician occupies a position of significant trust, he or she owes a duty of loyalty to his or her employer. This divided loyalty can create conflicts of interest, such as financial incentives to over- or under-treat patients, which employed physicians should strive to recognize and address. b) Employed physicians should be free to exercise their personal and professional judgment in voting, speaking and advocating on any manner regarding patient care interests, the profession, health care in the community, and the independent exercise of medical judgment. Employed physicians should not be deemed in breach of their employment agreements, nor be retaliated against by their employers, for asserting these

POLICY #	Title	Text	Recommendation
			interests. Employed physicians also should enjoy academic freedom to pursue clinical research and other academic pursuits within the ethical principles of the medical profession and the guidelines of the organization. c) In any situation where the economic or other interests of the employer are in conflict with patient welfare, patient welfare must take priority. d) Physicians should always make treatment and referral decisions based on the best interests of their patients. Employers and the physicians they employ must assure that agreements or understandings (explicit or implicit) restricting, discouraging, or encouraging particular treatment or referral options are disclosed to patients. (i) No physician should be required or coerced to perform or assist in any non-emergent procedure that would be contrary to his/her religious beliefs or moral convictions; and (ii) No physician should be discriminated against in employment, promotion, or the extension of staff or other privileges because he/she either performed or assisted in a lawful, non-emergent procedure, or refused to do so on the grounds that it violates his/her religious beliefs or moral convictions. e) Assuming a title or position that may remove a physician from direct patient-physician relationships--such as medical director, vice president for medical affairs, etc.--does not override professional ethical obligations. Physicians whose actions serve to override the individual patient care decisions of other physicians are themselves engaged in the

POLICY #	Title	Text	Recommendation
			practice of medicine and are subject to professional ethical obligations and may be legally responsible for such decisions. Physicians who hold administrative leadership positions should use whatever administrative and governance mechanisms exist within the organization to foster policies that enhance the quality of patient care and the patient care experience. 2. Advocacy for Patients and the Profession a) Patient advocacy is a fundamental element of the patient-physician relationship that should not be altered by the health care system or setting in which physicians practice, or the methods by which they are compensated. b) Employed physicians should be free to engage in volunteer work outside of, and which does not interfere with, their duties as employees. 3. Contracting a) Physicians should be free to enter into mutually satisfactory contractual arrangements, including employment, with hospitals, health care systems, medical groups, insurance plans, and other entities as permitted by law and in accordance with the ethical principles of the medical profession. b) Physicians should never be coerced into employment with hospitals, health care systems, medical groups, insurance plans, or any other entities. Employment agreements between physicians and their employers should be negotiated in good faith. Both parties are urged to obtain the advice of legal counsel experienced in physician employment matters when negotiating employment contracts.

POLICY #	Title	Text	Recommendation
			c) When a physician's compensation is related to the revenue he or she generates, or to similar factors, the employer should make clear to the physician the factors upon which compensation is based. d) Termination of an employment or contractual relationship between a physician and an entity employing that physician does not necessarily end the patient-physician relationship between the employed physician and persons under his/her care. When a physician's employment status is unilaterally terminated by an employer, the physician and his or her employer should notify the physician's patients that the physician will no longer be working with the employer and should provide them with the physician's new contact information. Patients should be given the choice to continue to be seen by the physician in his or her new practice setting or to be treated by another physician still working with the employer. Records for the physician's patients should be retained for as long as they are necessary for the care of the patients or for addressing legal issues faced by the physician; records should not be destroyed without notice to the former employee. Where physician possession of all medical records of his or her patients is not already required by state law, the employment agreement should specify that the physician is entitled to copies of patient charts and records upon a specific request in writing from any patient, or when such records are necessary for the physician's defense in malpractice actions, administrative investigations,

POLICY #	Title	Text	Recommendation
			or other proceedings against the physician. (e) Physician employment agreements should contain provisions to protect a physician's right to due process before termination for cause. When such cause relates to quality, patient safety, or any other matter that could trigger the initiation of disciplinary action by the medical staff, the physician should be afforded full due process under the medical staff bylaws, and the agreement should not be terminated before the governing body has acted on the recommendation of the medical staff. Physician employment agreements should specify whether or not termination of employment is grounds for automatic termination of hospital medical staff membership or clinical privileges. When such cause is non-clinical or not otherwise a concern of the medical staff, the physician should be afforded whatever due process is outlined in the employer's human resources policies and procedures. (f) Physicians are encouraged to carefully consider the potential benefits and harms of entering into employment agreements containing without cause termination provisions. Employers should never terminate agreements without cause when the underlying reason for the termination relates to quality, patient safety, or any other matter that could trigger the initiation of disciplinary action by the medical staff. (g) Physicians are discouraged from entering into agreements that restrict the physician’s right to practice medicine for a specified period of time or in a

POLICY #	Title	Text	Recommendation
			specified area upon termination of employment. (h) Physician employment agreements should contain dispute resolution provisions. If the parties desire an alternative to going to court, such as arbitration, the contract should specify the manner in which disputes will be resolved. 4. Hospital Medical Staff Relations a) Employed physicians should be members of the organized medical staffs of the hospitals or health systems with which they have contractual or financial arrangements, should be subject to the bylaws of those medical staffs, and should conduct their professional activities according to the bylaws, standards, rules, and regulations and policies adopted by those medical staffs. b) Regardless of the employment status of its individual members, the organized medical staff remains responsible for the provision of quality care and must work collectively to improve patient care and outcomes. c) Employed physicians who are members of the organized medical staff should be free to exercise their personal and professional judgment in voting, speaking, and advocating on any matter regarding medical staff matters and should not be deemed in breach of their employment agreements, nor be retaliated against by their employers, for asserting these interests. d) Employers should seek the input of the medical staff prior to the initiation, renewal, or termination of exclusive employment contracts.

POLICY #	Title	Text	Recommendation
			5. Peer Review and Performance Evaluations a) All physicians should promote and be subject to an effective program of peer review to monitor and evaluate the quality, appropriateness, medical necessity, and efficiency of the patient care services provided within their practice settings. b) Peer review should follow established procedures that are identical for all physicians practicing within a given health care organization, regardless of their employment status. c) Peer review of employed physicians should be conducted independently of and without interference from any human resources activities of the employer. Physicians--not lay administrators--should be ultimately responsible for all peer review of medical services provided by employed physicians. d) Employed physicians should be accorded due process protections, including a fair and objective hearing, in all peer review proceedings. The fundamental aspects of a fair hearing are a listing of specific charges, adequate notice of the right to a hearing, the opportunity to be present and to rebut evidence, and the opportunity to present a defense. Due process protections should extend to any disciplinary action sought by the employer that relates to the employed physician's independent exercise of medical judgment. e) Employers should provide employed physicians with regular performance evaluations, which should be presented in writing and accompanied by an oral discussion with the employed

POLICY #	Title	Text	Recommendation
			physician. Physicians should be informed before the beginning of the evaluation period of the general criteria to be considered in their performance evaluations, for example: quality of medical services provided, nature and frequency of patient complaints, employee productivity, employee contribution to the administrative/operational activities of the employer, etc. (f) Upon termination of employment with or without cause, an employed physician generally should not be required to resign his or her hospital medical staff membership or any of the clinical privileges held during the term of employment, unless an independent action of the medical staff calls for such action, and the physician has been afforded full due process under the medical staff bylaws. Automatic rescission of medical staff membership and/or clinical privileges following termination of an employment agreement is tolerable only if each of the following conditions is met: i. The agreement is for the provision of services on an exclusive basis; and ii. Prior to the termination of the exclusive contract, the medical staff holds a hearing, as defined by the medical staff and hospital, to permit interested parties to express their views on the matter, with the medical staff subsequently making a recommendation to the governing body as to whether the contract should be terminated, as outlined in AMA Policy H-225.985; and iii. The agreement explicitly states that medical staff membership and/or clinical privileges must be resigned

POLICY #	Title	Text	Recommendation
			upon termination of the agreement. 6. Payment Agreements a) Although they typically assign their billing privileges to their employers, employed physicians or their chosen representatives should be prospectively involved if the employer negotiates agreements for them for professional fees, capitation or global billing, or shared savings. Additionally, employed physicians should be informed about the actual payment amount allocated to the professional fee component of the total payment received by the contractual arrangement. b) Employed physicians have a responsibility to assure that bills issued for services they provide are accurate and should therefore retain the right to review billing claims as may be necessary to verify that such bills are correct. Employers should indemnify and defend, and save harmless, employed physicians with respect to any violation of law or regulation or breach of contract in connection with the employer's billing for physician services, which violation is not the fault of the employee.
H-285.931	The Critical Role of Physicians in Health Plans and Integrated Delivery Systems	Our AMA adopts the following organizational principles for physician involvement in health plans and integrated delivery systems (IDS): (1) Practicing physicians participating in a health plan/IDS must: (a) be involved in the selection and removal of their leaders who are involved in governance or who serve on a council of advisors to the governing	Retain. Still relevant.

POLICY #	Title	Text	Recommendation
		body or management; (b) be involved in the development of credentialing criteria, utilization management criteria, clinical practice guidelines, medical review criteria, and continuous quality improvement, and their leaders must be involved in the approval of these processes; (c)be accountable to their peers for professional decisions based on accepted standards of care and evidence-based medicine; (d) be involved in development of criteria used by the health plan in determining medical necessity and coverage decisions; and (e) have access to a due process system. (2) Representatives of the practicing physicians in a health plan/IDS must be the decision-makers in the credentialing and recredentialing process. (3) To maximize the opportunity for clinical integration and improvement in patient care, all of the specialties participating in a clinical process must be involved in the development of clinical practice guidelines and disease management protocols. (4) A health plan/IDS has the right to make coverage decisions, but practicing physicians participating in the health plan/IDS must be able to discuss treatment alternatives with their patients to enable them to make informed decisions. (5) Practicing physicians and patients of a health plan/IDS should have access to a timely, expeditious internal appeals process. Physicians	

POLICY #	Title	Text	Recommendation
		serving on an appeals panel should be practicing participants of the health plan/IDS, and they must have experience in the care under dispute. If the internal appeal is denied, a plan member should be able to appeal the medical necessity determination or coverage decision to an independent review organization. (6) The quality assessment process and peer review protections must extend to all sites of care, e.g., hospital, office, long-term care and home health care. (7) Representatives of the practicing physicians of a health plan/IDS must be involved in the design of the data collection systems and interpretation of the data so produced, to ensure that the information will be beneficial to physicians in their daily practice. All practicing physicians should receive appropriate, periodic, and comparative performance and utilization data. (8) To maximize the opportunity for improvement, practicing physicians who are involved in continuous quality improvement activities must have access to skilled resource people and information management systems that provide information on clinical performance, patient satisfaction, and health status. There must be physician/manager teams to identify, improve and document cost/quality relationships that demonstrate value. (9) Physician representatives/leaders must communicate key policies	

POLICY #	Title	Text	Recommendation
		and procedures to the practicing physicians who participate in the health plan/IDS. Participating physicians must have an identified process to access their physician representative. (10) Consideration should be given to compensating physician leaders/representatives involved in governance and management for their time away from practice. Our AMA aggressively advocates to private health care accreditation organizations the incorporation of the organizational principles for physician involvement into their standards for health plans, networks and integrated delivery systems.	
H-285.940	Denials of Payment for Necessary Services Because of Lack of Authorization	1. Our AMA seeks the elimination of clauses in managed care contracts that allow plans to refuse to pay for provision of covered services for the sole reason that required notification of these services was not reported in a timely manner. 2. Our AMA supports a requirement that payers provide a retro-authorization process, with reasonable timeframes for submission and consideration and with reasonable procedural standards for all tests, procedures, treatments, medications and evaluations requiring authorization.	Rescind. Superseded by Policy H-320.939. **Prior Authorization and Utilization Management Reform H-320.939** 1. Our AMA will continue its widespread prior authorization (PA) advocacy and outreach, including promotion and/or adoption of the Prior Authorization and Utilization Management Reform Principles, AMA model legislation, Prior Authorization Physician Survey and other PA research, and the AMA Prior Authorization Toolkit, which is aimed at reducing PA administrative burdens and improving patient access to care. 2. Our AMA will oppose health plan determinations on physician appeals based solely on medical coding and advocate for such decisions to be based on the direct review of a physician of the same

POLICY #	Title	Text	Recommendation
			medical specialty/subspecialty as the prescribing/ordering physician. 3. Our AMA supports efforts to track and quantify the impact of health plans' prior authorization and utilization management processes on patient access to necessary care and patient clinical outcomes, including the extent to which these processes contribute to patient harm. 4. Our AMA will advocate for health plans to minimize the burden on patients, physicians, and medical centers when updates must be made to previously approved and/or pending prior authorization requests.
H-315.973	Guiding Principles for the Collection, Use and Warehousing of Electronic Medical Records and Claims Data	1. It is AMA policy that any payer, clearinghouse, vendor, or other entity that collects and uses electronic medical records and claims data adhere to the following principles: a. Electronic medical records and claims data transmitted for any given purpose to a third party must be the minimum necessary needed to accomplish the intended purpose. b. All covered entities involved in the collection and use of electronic medical records and claims data must comply with the HIPAA Privacy and Security Rules. c. The physician must be informed and provide permission for any analysis undertaken with his/her electronic medical records and claims data, including the data being studied and how the results will be used. d. Any additional work required by the physician practice to collect data beyond the average data collection for the submission of transactions (e.g., claims,	Rescind. Superseded by Policy D-478.995. **National Health Information Technology D-478.995** 1. Our AMA will closely coordinate with the newly formed Office of the National Health Information Technology Coordinator all efforts necessary to expedite the implementation of an interoperable health information technology infrastructure, while minimizing the financial burden to the physician and maintaining the art of medicine without compromising patient care. 2. Our AMA: (A) advocates for standardization of key elements of electronic health record (EHR) and computerized physician order entry (CPOE) user interface design during the ongoing development of this technology; (B) advocates that medical facilities and health systems work toward standardized login procedures and parameters to reduce user login fatigue; and (C)

POLICY #	Title	Text	Recommendation
		eligibility) must be compensated by the entity requesting the data. e. Criteria developed for the analysis of physician claims or medical record data must be open for review and input by relevant outside entities. f. Methods and criteria for analyzing the electronic medical records and claims data must be provided to the physician or an independent third party so re-analysis of the data can be performed. g. An appeals process must be in place for a physician to appeal, prior to public release, any adverse decision derived from an analysis of his/her electronic medical records and claims data. h. Clinical data collected by a data exchange network and searchable by a record locator service must be accessible only for payment and health care operations. 2. It is AMA policy that any physician, payer, clearinghouse, vendor, or other entity that warehouses electronic medical records and claims data adhere to the following principles: a. The warehouse vendor must take the necessary steps to ensure the confidentiality, integrity, and availability of electronic medical records and claims data while protecting against threats to the security or integrity and unauthorized uses or disclosure of the information. b. Electronic medical records data must remain accessible to authorized users for purposes of treatment, public health, patient safety, quality improvement, medical liability defense, and research. c. Physician and patient	advocates for continued research and physician education on EHR and CPOE user interface design specifically concerning key design principles and features that can improve the quality, safety, and efficiency of health care; and (D) advocates for continued research on EHR, CPOE and clinical decision support systems and vendor accountability for the efficacy, effectiveness, and safety of these systems. 3. Our AMA will request that the Centers for Medicare & Medicaid Services: (A) support an external, independent evaluation of the effect of Electronic Medical Record (EMR) implementation on patient safety and on the productivity and financial solvency of hospitals and physicians' practices; and (B) develop, with physician input, minimum standards to be applied to outcome-based initiatives measured during this rapid implementation phase of EMRs. 4. Our AMA will (A) seek legislation or regulation to require all EHR vendors to utilize standard and interoperable software technology components to enable cost efficient use of electronic health records across all health care delivery systems including institutional and community based settings of care delivery; and (B) work with CMS to incentivize hospitals and health systems to achieve interconnectivity and interoperability of electronic health records systems with independent physician practices to enable the efficient and cost effective use and sharing of electronic health records across all settings of care delivery.

POLICY #	Title	Text	Recommendation
		permission must be obtained for any person or entity other than the physician or patient to access and use individually identifiable clinical data, when the physician is specifically identified. d. Following the request from a physician to transfer his/her data to another data warehouse, the current vendor must transfer the electronic medical records and claims data and must delete/destroy the data from its data warehouse once the transfer has been completed and confirmed.	5. Our AMA will seek to incorporate incremental steps to achieve electronic health record (EHR) data portability as part of the Office of the National Coordinator for Health Information Technology's (ONC) certification process. 6. Our AMA will collaborate with EHR vendors and other stakeholders to enhance transparency and establish processes to achieve data portability. 7. Our AMA will directly engage the EHR vendor community to promote improvements in EHR usability. 8. Our AMA will advocate for appropriate, effective, and less burdensome documentation requirements in the use of electronic health records. 9. Our AMA will urge EHR vendors to adopt social determinants of health templates, created with input from our AMA, medical specialty societies, and other stakeholders with expertise in social determinants of health metrics and development, without adding further cost or documentation burden for physicians.
H-320.963	Disclosure of Medical Review Criteria and Eligibility Guidelines	The AMA will continue to press for the release of all Medicare carrier screens nationwide, including local screens, frequency parameters, and computer edits to identify claims for medical review.	Rescind. Superseded by Policies H-320.948 and H-340.898. **Physicians' Experiences with Retrospective Denial of Payment and Down-Coding by Managed Care Plans H-320.948** It is the policy of our AMA, when a health plan or utilization review organization makes a determination to retrospectively deny payment for a medical service, or down-code such a service, the physician rendering the service, as well as the patient

POLICY #	Title	Text	Recommendation
			who received the service, shall receive written notification in a timely manner that includes: (1) the principal reason(s) for the determination; (2) the clinical rationale used in making the determination; and (3) a statement describing the process for appeal. **Medicare Review Activities H-340.898** Our AMA: (1) strongly urges CMS to provide physician organizations with the opportunity for significant comment and input on the Medicare Integrity Program; (2) continues to oppose any type of "bounty" system for compensation to any Medicare contractor, including those in the Medicare Integrity Program, and instead urge CMS to base compensation on the proper repayment of claims, rather than on the numbers of resulting referrals to law enforcement agencies; (3) continues to advocate for the ongoing involvement of physician organizations and hospital and organized medical staffs in refining and implementing any Medicare review contractor's activities and the need to emphasize physician education and clinical improvements; (4) urges CMS to delete all "incentives" or other "award fees" for any Medicare review contractor; and (5) urges CMS to clarify that in any Statement of Work or contract with a Medicare review contractor that: (a) extrapolation should not occur unless it is to develop educational or compliance program interventions; and (b) referrals to the Office of Inspector General should not occur unless a hospital does not respond to intervention or

POLICY #	Title	Text	Recommendation
			when significant evidence of fraud exists.
H-330.886	Strengthening Medicare Through Competitive Bidding	1. Our AMA supports the following principles to guide the use of competitive bidding among health insurers in the Medicare program: a. Eligible bidders should be subject to specific quality and financial requirements to ensure sufficient skill and capacity to provide services to beneficiaries. b. Bidding entities must be able to demonstrate the adequacy of their physician and provider networks. c. Bids must be based on a clearly defined set of standardized benefits that should include, at a minimum, all services provided under the traditional Medicare program and a cap on out-of-pocket expenses. d. Bids should be developed based on the cost of providing the minimum set of benefits to a standardized Medicare beneficiary within a given geographic region. e. Geographic regions should be defined to ensure adequate coverage and maximize competition for beneficiaries in a service area. f. All contracting entities should be required to offer beneficiaries a plan that includes only the standardized benefit package. Expanded benefit options could also be offered for beneficiaries willing to pay higher premiums. g. Processes and resources must be in place to provide beneficiary education and support for choosing among alternative plans. 2. Our AMA supports using a competitive bidding	Retain. Still relevant.

POLICY #	Title	Text	Recommendation
		process to determine federal payments to Medicare Advantage plans.	
H-330.902	Subsidizing Prescription Drugs for Elderly Patients	Our AMA strongly supports subsidization of prescription drugs for Medicare patients based on means testing.	Retain. Policy remains relevant through implementation of the IRA.
H-330.952	Medicare Carrier Advisory Committee	The AMA will advocate to all relevant parties (e.g., CMS and Medicare carriers) that the role of the state medical associations and state specialty societies in representing the interests and views of physicians in their respective states should not in any way be diminished by the operations of the Medicare Carrier Advisory Committee.	Retain. Still relevant.
H-330.958	Regionalization of Medicare Carriers	The AMA will continue to: (1) encourage state medical associations and national medical specialty societies to participate proactively in the Medicare Carrier "Notice and Comment" program with their respective carriers; and (2) monitor the impact of present and future Medicare carrier regionalization on the consistency of carrier interpretations and efficiency of operations.	Retain. Still relevant.
H-335.978	Medicare Fair Hearing	The AMA urges CMS to encourage Medicare carriers to utilize as Hearing Officers licensed physicians of the same specialty and in the same geographical area as that of the physician who requests the Fair Hearing and to make known to the requesting physician, prior to the Fair Hearing, the educational and medical credentials of the Hearing Officer.	Retain. Still relevant.
H-340.907	Notification When Physician Specific Information is Exchanged	The AMA will petition CMS to require notification of a physician under focused review that his or her name is being exchanged between any carrier and the QIOs and	Retain. Still relevant.

POLICY #	Title	Text	Recommendation
		to identify the reason for this exchange of information.	
H-365.997	Corporation or Employer-Sponsored Examinations	The AMA encourages employers who provide or arrange for special or comprehensive medical examinations of employees to be responsible for assuring that these examinations are done by physicians competent to perform the type of examination required. Whenever practical, the employee should be referred to his or her personal physician for such professional services. In the many instances in which an employee does not have a personal physician, efforts should be made to assist him or her in obtaining one, with emphasis on continuity of care. This effort should be aided by the local medical society wherever possible.	Retain. Still relevant.
H-373.999	Patient Advocacy/Protection Activities	The AMA will continue to aggressively pursue legislative, regulatory, communications and advocacy opportunities to identify and correct patient care and access problems created by new health care delivery mechanisms.	Retain. Still relevant.
H-375.977	Peer Review - Caused Litigation	The AMA urges medical staffs to review their hospital's policies for directors and officers liability and general liability coverage to determine if the policy provides defense, indemnity, or loss of income coverage for those members of the medical staff who are involved in a lawsuit as a result of the activities they have performed in good faith, conducting official peer review responsibilities or other official administrative duties of the medical staff.	Retain. Still relevant.

POLICY #	Title	Text	Recommendation
H-375.978	Medical Peer Review Outside Hospital Settings	The AMA requests state medical associations to study the need for, and if appropriate, to pursue the enactment of, legislation designed to protect the records of peer review activities in ambulatory health care facilities against discoverability in judicial or administrative proceedings.	Rescind. Accomplished.
H-385.923	Definition of "Usual, Customary and Reasonable" (UCR)	1. Our AMA adopts as policy the following definitions: (a) “usual; fee means that fee usually charged, for a given service, by an individual physician to his private patient (i.e., his own usual fee); (b) a fee is ‘customary’ when it is within the range of usual fees currently charged by physicians of similar training and experience, for the same service within the same specific and limited geographical area; and (c) a fee is ‘reasonable’ when it meets the above two criteria and is justifiable, considering the special circumstances of the particular case in question, without regard to payments that have been discounted under governmental or private plans. 2. Our AMA takes the position that there is no relationship between the Medicare fee schedule and Usual, Customary and Reasonable Fees.	Retain. Still relevant.

POLICY #	Title	Text	Recommendation
H-385.962	Physician Bargaining	The AMA acknowledges that some state medical associations are in favor of a budgeting process that incorporates the ability for physician groups to bargain collectively on state-level budgets and will continue to support such state medical associations in their negotiations and development of budgeting process.	Rescind. Superseded by Policies H-165.888 and H-155.960. **Evaluating Health System Reform Proposals H-165.888** 1. Our AMA will continue its efforts to ensure that health system reform proposals adhere to the following principles: A. Physicians maintain primary ethical responsibility to advocate for their patients' interests and needs. B. Unfair concentration of market power of payers is detrimental to patients and physicians, if patient freedom of choice or physician ability to select mode of practice is limited or denied. Single-payer systems clearly fall within such a definition and, consequently, should continue to be opposed by the AMA. Reform proposals should balance fairly the market power between payers and physicians or be opposed. C. All health system reform proposals should include a valid estimate of implementation cost, based on all health care expenditures to be included in the reform; and supports the concept that all health system reform proposals should identify specifically what means of funding (including employer-mandated funding, general taxation, payroll or value-added taxation) will be used to pay for the reform proposal and what the impact will be. D. All physicians participating in managed care plans and medical delivery systems must be able without threat of punitive action to comment on and present their positions on the plan's policies and

POLICY #	Title	Text	Recommendation
			procedures for medical review, quality assurance, grievance procedures, credentialing criteria, and other financial and administrative matters, including physician representation on the governing board and key committees of the plan. E. Any national legislation for health system reform should include sufficient and continuing financial support for inner-city and rural hospitals, community health centers, clinics, special programs for special populations and other essential public health facilities that serve underserved populations that otherwise lack the financial means to pay for their health care. F. Health system reform proposals and ultimate legislation should result in adequate resources to enable medical schools and residency programs to produce an adequate supply and appropriate generalist/specialist mix of physicians to deliver patient care in a reformed health care system. G. All civilian federal government employees, including Congress and the Administration, should be covered by any health care delivery system passed by Congress and signed by the President. H. True health reform is impossible without true tort reform. 2. Our AMA supports health care reform that meets the needs of all Americans including people with injuries, congenital or acquired disabilities, and chronic conditions, and as such values function and its improvement as key outcomes to be

POLICY #	Title	Text	Recommendation
			specifically included in national health care reform legislation. 3. Our AMA supports health care reform that meets the needs of all Americans including people with mental illness and substance use / addiction disorders and will advocate for the inclusion of full parity for the treatment of mental illness and substance use / addiction disorders in all national health care reform legislation. 4. Our AMA supports health system reform alternatives that are consistent with AMA principles of pluralism, freedom of choice, freedom of practice, and universal access for patients. **Strategies to Address Rising Health Care Costs H-155.960** Our AMA: (1) recognizes that successful cost-containment and quality-improvement initiatives must involve physician leadership, as well as collaboration among physicians, patients, insurers, employers, unions, and government; (2) supports the following broad strategies for addressing rising health care costs: (a) reduce the burden of preventable disease; (b) make health care delivery more efficient; (c) reduce non-clinical health system costs that do not contribute value to patient care; and (d) promote "value-based decision-making" at all levels; (3) will continue to advocate that physicians be supported in routinely providing lifestyle counseling to patients through: adequate third-party reimbursement; inclusion of lifestyle counseling in quality measurement and pay-for-performance incentives; and

POLICY #	Title	Text	Recommendation
			medical education and training; (4) will continue to advocate that sources of medical research funding give priority to studies that collect both clinical and cost data; use evaluation criteria that take into account cost impacts as well as clinical outcomes; translate research findings into useable information on the relative cost-effectiveness of alternative diagnostic services and treatments; and widely disseminate cost-effectiveness information to physicians and other health care decision-makers; (5) will continue to advocate that health information systems be designed to provide physicians and other health care decision-makers with relevant, timely, actionable information, automatically at the point of care and without imposing undue administrative burden, including: clinical guidelines and protocols; relative cost-effectiveness of alternative diagnostic services and treatments; quality measurement and pay-for-performance criteria; patient-specific clinical and insurance information; prompts and other functionality to support lifestyle counseling, disease management, and case management; and alerts to flag and avert potential medical errors; (6) encourages the development and adoption of clinical performance and quality measures aimed at reducing overuse of clinically unwarranted services and increasing the use of recommended services known to yield cost savings; (7) encourages third-party payers to use targeted benefit design, whereby patient cost-

POLICY #	Title	Text	Recommendation
			sharing requirements are determined based on the clinical value of a health care service or treatment. Consideration should be given to further tailoring cost-sharing requirements to patient income and other factors known to impact compliance; and (8) supports ongoing investigation and cost-effectiveness analysis of non-clinical health system spending, to reduce costs that do not add value to patient care. (9) Our AMA will, in all reform efforts, continue to identify appropriate cost savings strategies for our patients and the health care system.
H-385.963	Physician Review of Accounts Sent for Collection	(1) The AMA encourages all physicians and employers of physicians who treat patients to review their accounting/collection policies to ensure that no patient's account is sent to collection without the physician's knowledge. (2) The AMA urges physicians to use compassion and discretion in sending accounts of their patients to collection, especially accounts of patients who are terminally ill, homeless, disabled, impoverished, or have marginal access to medical care.	Retain. Still relevant.

POLICY #	Title	Text	Recommendation
H-390.884	Medicare Policy Change	Primary Care Consultation Policy: The AMA opposes Medicare's policy regarding denial of payment for consultation provided by primary care physicians for patients who are being cleared for surgery, as this policy is contrary to the best interests of Medicare patients and the fundamental goals of RBRVS, and will take any measures possible to have this policy changed.	Rescind. Superseded by Policy D-70.953. **Medicare's Proposal to Eliminate Payments for Consultation Service Codes D-70.953** Our American Medical Association opposes all public and private payer efforts to eliminate payments for inpatient and outpatient consultation service codes, and supports legislation to overturn recent Center for Medicare & Medicaid Services' (CMS) action to eliminate consultation codes. 2. Our AMA will work with CMS and interested physician groups through the CPT Editorial Panel to address all concerns with billing consultation services either through revision or replacement of the current code sets or by some other means. 3. Our AMA will, at the conclusion of the CPT Editorial Panel's work to address concerns with billing consultation services, work with CMS and interested physician groups to engage in an extensive education campaign regarding appropriate billing for consultation services. 4. Our AMA will: (a) work with the Centers for Medicare & Medicaid Services to consider a two-year moratorium on RAC audit claims based on three-year rule violations for E/M services previously paid for as consultations; and (b) pursue Congressional action through legislation to reinstate payment for consultation codes within the Medicare Program and all other governmental programs. 5. Our AMA will petition the CMS to limit RAC reviews to less than one year from payment of claims.

POLICY #	Title	Text	Recommendation
H-390.891	Hospital Services Provided Within Three Days of Hospital Admission	The AMA will resist strongly efforts to incorporate payment for Medicare Part B physician services into hospital payments.	Rescind. Superseded by Policy H-280.947. **Three Day Stay Rule H-280.947** 1. Our American Medical Association will continue to advocate that Congress eliminate the three-day hospital inpatient requirement for Medicare coverage of post-hospital skilled nursing facility services, and educate Congress on the impact of this requirement on patients. 2. Our AMA will continue to advocate, as long as the three-day stay requirement remains in effect, that patient time spent in the hospital, observation care or in the emergency department count toward the three-day hospital inpatient requirement for Medicare coverage of post-hospital skilled nursing facility services. 3. Our AMA will actively work with the Centers for Medicare and Medicaid Services (CMS) to eliminate any regulations requiring inpatient hospitalization as a prerequisite before a Medicare beneficiary is eligible for skilled (SNF) or long-term care (LTC) placement.
H-390.962	Notification to Patients of Charge Amounts Prior to Service as Per Omnibus Reconciliation Act of 1986	(1) The AMA opposes efforts by commercial carriers or the federal government which would require physicians to predict reimbursement for services rendered. (2) The AMA supports the repeal of the provision of OBRA 1986 regarding notification of patients receiving elective surgery of the physician charge, the expected amount of Medicare reimbursement, and the balance that the patient would be responsible for paying when the charge for the service is $500 or	Rescind. Superseded by Policy H-335.992. **Modifying the Medicare Unnecessary Services Program H-335.992** (1) The AMA continues to support the repeal of the "medically unnecessary" provisions of Section 9332(c) of OBRA 1986. (2) Until such time as repeal is achieved, the AMA urges CMS to require that there be stated on the medically unnecessary notices mailed by carriers (a) the basis for the denial; (b) the name, position, and title of the person

POLICY #	Title	Text	Recommendation
		more and the claim is not accepted on an assigned basis. (3) The AMA supports repeal of those provisions of OBRA that require physicians to refund payments associated with Medicare services that are deemed medically unnecessary by CMS after the fact. (4) The AMA believes that increases in Medicare reimbursement need to be universal, that current reimbursement should be adjusted and that there should be no discrimination in schedules between participating and nonparticipating physicians	to be contacted regarding questions about the review; and (c) the screening criteria or parameter used in denying payment for the service. Additionally, Policy H-330.892 supports physician choice of Medicare participation. **Medicare Participation Status H-330.982** It is AMA policy to eliminate any restrictions, including timing, on physicians' ability to determine their Medicare participation status.
H-390.992	Prospective Payment System and DRGs for Physicians	The AMA (1) endorses the concept that any system of reimbursement for physicians' services should be independent of reimbursement systems for other providers of health care; and (2) opposes expansion of prospective pricing systems until their impact on the quality, cost and access to medical care have been adequately evaluated.	Rescind. Superseded by Policy H-385.989. **Payment for Physicians Services H-385.989** Our AMA: (1) supports a pluralistic approach to third party payment methodology under fee-for-service, and does not support a preference for "usual and customary or reasonable" (UCR) or any other specific payment methodology; (2) affirms the following four principles: (a) Physicians have the right to establish their fees at a level which they believe fairly reflects the costs of providing a service and the value of their professional judgment. (b) Physicians should continue to volunteer fee information to patients, to discuss fees in advance of service where feasible, to expand the practice of accepting any third party allowances as payment in full in cases of financial hardship, and to communicate voluntarily to their patients their willingness to make appropriate arrangements in cases of financial need. (c) Physicians should have the

POLICY #	Title	Text	Recommendation
			right to choose the basic mechanism of payment for their services, and specifically to choose whether or not to participate in a particular insurance plan or method of payment, and to accept or decline a third party allowance as payment in full for a service. (d) All methods of physician payment should incorporate mechanisms to foster increased cost-awareness by both providers and recipients of service; and (3) supports modification of current legal restrictions, so as to allow meaningful involvement by physician groups in: (a) negotiations on behalf of those physicians who do not choose to accept third party allowances as full payment, so that the amount of such allowances can be more equitably determined; (b) establishing additional limits on the amount or the rate of increase in charge-related payment levels when appropriate; and (c) professional fee review for the protection of the public. Additionally, Policy H-385.922 supports using the term "payment" instead of "reimbursement" as the term for compensating physicians. **Payment Terminology H-385.922** It is AMA policy to change the terminology used in compensating physicians from "reimbursement" to "payment."
H-400.984	Geographic Practice Costs	1. Our AMA will work to ensure that the most current, valid and reliable data are collected and applied in calculating accurate geographic practice cost indices (GPCIs) and in determining geographic	Rescind. (1) Addressed by PPI; (2) Addressed by CMS.

POLICY #	Title	Text	Recommendation
		payment areas for use in the new Medicare physician payment system. 2. Our AMA supports the use of physician office rent data, along with other practice expense data, to measure geographic variation in rent costs and to determine the proportion of overall costs that relate to rental expense. These data should be obtained through new or existing data sources that are accurate, standardized, verifiable and include per unit costs in physician offices.	
H-400.988	Medicare Reimbursement, Geographical Differences	The AMA reaffirms its policy that geographic variations under a Medicare payment schedule should reflect only valid and demonstrable differences in physician practice costs, especially liability premiums, with other non-geographic practice cost index (GPCI) -based adjustments as needed to remedy demonstrable access problems in specific geographic areas.	Rescind. Superseded by Policy H-155.957. **Geographic Variation in Health Care Cost and Utilization H-155.957** Our American Medical Association: (1) encourages further study into the possible causes of geographic variation in health care delivery and spending, with particular attention to risk adjustment methodologies and the effects of demographic factors, differences in access to care, medical liability concerns, and insurance coverage options on demand for and delivery of health care services; (2) encourages the development of interoperable national claims databases in order to facilitate research into health care utilization patterns across all segments of the health care delivery system; and (3) supports efforts to reduce variation in health care utilization that are based on ensuring appropriate levels of care are provided within the context of specific clinical parameters, rather than solely on aggregated benchmarks.

POLICY #	Title	Text	Recommendation
H-410.980	Principles for the Implementation of Clinical Practice Guidelines at the Local/State/Regional Level	Our AMA has adopted the following principles regarding the implementation of clinical practice guidelines at the local/state/regional level: (1) Relevant physician organizations and interested physicians shall have an opportunity for input/comment on all issues related to the local/state/regional implementation of clinical practice guidelines, including: issue identification; issue refinement, identification of relevant clinical practice guidelines, evaluation of clinical practice guidelines, selection and modification of clinical practice guidelines, implementation of clinical practice guidelines, evaluation of impact of implementation of clinical practice guidelines, periodic review of clinical practice guideline recommendations, and justifications for departure from clinical practice guidelines.. (2) Effective mechanisms shall be established to ensure opportunity for appropriate input by relevant physician organizations and interested physicians on all issues related to the local/state/regional implementation of clinical practice guidelines, including: effective physician notice prior to implementation, with adequate opportunity for comment; and an adequate phase-in period prior to implementation for educational purposes. (3) clinical practice guidelines that are selected for implementation at the local/state/regional level	Retain. Still relevant.

POLICY #	Title	Text	Recommendation
		shall be limited to practice parameters that conform to established principles, including relevant AMA policy on practice parameters. (4) Prioritization of issues for local/state/regional implementation of clinical practice guidelines shall be based on various factors, including: availability of relevant and high quality practice parameter(s), significant variation in practice and/or outcomes, prevalence of disease/illness, quality considerations, resource consumption/cost issues, and professional liability considerations. (5) clinical practice guidelines shall be used in a manner that is consistent with AMA policy and with their sponsors' explanations of the appropriate uses of their clinical practice guidelines, including their disclaimers to prevent inappropriate use. (6) clinical practice guidelines shall be adapted at the local/state/regional level, as appropriate, to account for local/state/regional factors, including demographic variations, patient case mix, availability of resources, and relevant scientific and clinical information. (7) clinical practice guidelines implemented at the local/state/regional level shall acknowledge the ability of physicians to depart from the recommendations in clinical practice guidelines, when appropriate, in the care of individual patients. (8) The AMA and other relevant physician organizations should develop principles to assist physicians in appropriate	

POLICY #	Title	Text	Recommendation
		documentation of their adherence to, or appropriate departure from, clinical practice guidelines implemented at the local/state/regional level. (9) clinical practice guidelines, with adequate explanation of their intended purpose(s) and uses other than patient care, shall be widely disseminated to physicians who will be impacted by the clinical practice guidelines. (10) Information on the impact of clinical practice guidelines at the local/state/regional level shall be collected and reported by appropriate medical organizations.	
H-415.999	Preferred Provider Organizations	The AMA believes that state and local medical societies should (1) monitor PPOs which develop in their areas and should apprise their members of the status, structure and extent of physician and provider enrollment in any such plans; and (2) consider investigating the pros and cons of the society itself serving as an organizational focus for local physicians' effective and informed responses to PPOs, without compromising support for the existing policy of pluralism in health care delivery systems.	Retain. Still relevant.
H-440.840	Patient Access to Anti-Tuberculosis Medications	Our AMA supports state and federal policy to cover TB testing for individuals deemed to have a high risk for contracting TB infection and to provide anti-tuberculosis medications to patients with both active and latent TB free of charge or insurance co-pays or deductibles in order to prevent the transmission of	Retain. Still relevant.

POLICY #	Title	Text	Recommendation
		this airborne infectious disease.	
H-465.982	Rural Health	The AMA: (1) encourages state medical associations to study the relevance of managed competition proposals to meeting health care needs of their rural populations; (2) encourages state associations to work with their respective state governments to implement rural health demonstration projects; and (3) will provide all adequate resources to assist state associations in dealing with managed competition in rural areas.	Retain. Still relevant.
H-480.948	Medicare/Medicaid Coverage of Multi-Use Technology Platforms	AMA policy is that third party payers, including the Medicare and Medicaid programs, should investigate the possibility of allowing patients to use common consumer electronic devices as assistive devices and reimburse patient expenses related to the acquisition of such devices when used for bona fide health care needs.	Rescind. Superseded by Policies H-480.943 and H-385.919. **Integration of Mobile Health Applications and Devices into Practice H-480.943** 1. Our AMA supports the establishment of coverage, payment and financial incentive mechanisms to support the use of mobile health applications (mHealth apps) and associated devices, trackers and sensors by patients, physicians and other providers that: (a) support the establishment or continuation of a valid patient-physician relationship; (b) have a high-quality clinical evidence base to support their use in order to ensure mHealth app safety and effectiveness; (c) follow evidence-based practice guidelines, especially those developed and produced by national medical specialty societies and based on systematic reviews, to ensure patient safety, quality of care and positive health outcomes; (d) support care delivery that is patient-centered, promotes care coordination and facilitates team-based communication; (e) support data portability and

POLICY #	Title	Text	Recommendation
			interoperability in order to promote care coordination through medical home and accountable care models; (f) abide by state licensure laws and state medical practice laws and requirements in the state in which the patient receives services facilitated by the app; (g) require that physicians and other health practitioners delivering services through the app be licensed in the state where the patient receives services, or be providing these services as otherwise authorized by that state's medical board; and (h) ensure that the delivery of any services via the app be consistent with state scope of practice laws. 2. Our AMA supports that mHealth apps and associated devices, trackers and sensors must abide by applicable laws addressing the privacy and security of patients' medical information. 3. Our AMA encourages the mobile app industry and other relevant stakeholders to conduct industry-wide outreach and provide necessary educational materials to patients to promote increased awareness of the varying levels of privacy and security of their information and data afforded by mHealth apps, and how their information and data can potentially be collected and used. 4. Our AMA encourages the mHealth app community to work with the AMA, national medical specialty societies, and other interested physician groups to develop app transparency principles, including the provision of a standard privacy notice to patients if apps collect, store and/or transmit protected health information.

POLICY #	Title	Text	Recommendation
			5. Our AMA encourages physicians to consult with qualified legal counsel if unsure of whether an mHealth app meets Health Insurance Portability and Accountability Act standards and also inquire about any applicable state privacy and security laws. 6. Our AMA encourages physicians to alert patients to the potential privacy and security risks of any mHealth apps that he or she prescribes or recommends, and document the patient's understanding of such risks 7. Our AMA supports further development of research and evidence regarding the impact that mHealth apps have on quality, costs, patient safety and patient privacy. 8. Our AMA encourages national medical specialty societies to develop guidelines for the integration of mHealth apps and associated devices into care delivery. **Payment for Electronic Communication H-385.919** Our AMA will: (1) advocate that pilot projects of innovative payment models be structured to include incentive payments for the use of electronic communications such as Web portals, remote patient monitoring, real-time virtual office visits, and email and telephone communications; (2) continue to update its guidance on communication and information technology to help physicians meet the needs of their patients and practices; and (3) educate physicians on how to effectively and fairly bill for electronic communications between patients and their physicians.
H-510.990	Health Care Policy for Veterans	Our AMA encourages the Department of Veterans Affairs to continue to	Rescind. Superseded by Policies H-510.983 and H-510.985.

POLICY #	Title	Text	Recommendation
		explore alternative mechanisms for providing quality health care coverage for United States Veterans, including an option similar to the Federal Employees Health Benefit Program (FEHBP).	**Expansion of US Veterans' Health Care Choices H-510.983** 1. Our AMA will continue to work with the Veterans Administration (VA) to provide quality care to veterans. 2. Our AMA will continue to support efforts to improve the Veterans Choice Program (VCP) and make it a permanent program. 3. Our AMA encourages the VA to continue enhancing and developing alternative pathways for veterans to seek care outside of the established VA system if the VA system cannot provide adequate or timely care, and that the VA develop criteria by which individual veterans may request alternative pathways. 4. Our AMA will support consolidation of all the VA community care programs. 5. Our AMA encourages the VA to use external assessments as necessary to identify and address systemic barriers to care. 6. Our AMA will support interventions to mitigate barriers to the VA from being able to achieve its mission. 7. Our AMA will advocate that clean claims submitted electronically to the VA should be paid within 14 days and that clean paper claims should be paid within 30 days. 8. Our AMA encourages the acceleration of interoperability of electronic personal and medical health records in order to ensure seamless, timely, secure and accurate exchange of information between VA and non-VA providers and encourage both the VA and physicians caring for veterans outside of the VA to exchange medical records in a timely

POLICY #	Title	Text	Recommendation
			manner to ensure efficient care. 9. Our AMA encourages the VA to engage with physicians providing care in the VA system to explore and develop solutions on improving the health care choices of veterans. 10. Our AMA will advocate for new funding to support expansion of the Veterans Choice Program. **Access to Health Care for Veterans H-510.985** Our American Medical Association: (1) will continue to advocate for improvements to legislation regarding veterans' health care to ensure timely access to primary and specialty health care within close proximity to a veteran's residence within the Veterans Administration health care system; (2) will monitor implementation of and support necessary changes to the Veterans Choice Program's "Choice Card" to ensure timely access to primary and specialty health care within close proximity to a veteran's residence outside of the Veterans Administration health care system; (3) will call for a study of the Veterans Administration health care system by appropriate entities to address access to care issues experienced by veterans; (4) will advocate that the Veterans Administration health care system pay private physicians a minimum of 100 percent of Medicare rates for visits and approved procedures to ensure adequate access to care and choice of physician; (5) will advocate that the Veterans Administration health care system hire additional primary and specialty physicians, both full and part-time, as needed to provide care to veterans; and

POLICY #	Title	Text	Recommendation
			(6) will support, encourage and assist in any way possible all organizations, including but not limited to, the Veterans Administration, the Department of Justice, the Office of the Inspector General and The Joint Commission, to ensure comprehensive delivery of health care to our nation's veterans.
H-55.994	Coverage of Chemotherapy in Physicians' Offices	The AMA advocates that physicians who bill any third party payer for administering chemotherapy should ensure that the services billed for are described adequately and fully on the appropriate claim form and that the chemotherapy descriptors and code numbers provided by CPT are utilized.	Retain. Still relevant.
H-55.995	Medicare Coverage of Outpatient Chemotherapy Drugs	Carriers should recognize and encourage the administration of chemotherapy in physicians' offices, wherever practical and medically acceptable, as being more cost-effective than administration in many other settings.	Retain. Still relevant.
H-70.980	Bundling CPT Codes	1. Our AMA, through its CPT Editorial Panel and Advisory Committee, will continue to work with CMS to provide physician expertise commenting on the medical appropriateness of code bundling initiatives for Medicare payment policies. 2. Our AMA strongly urges the Centers for Medicare & Medicaid Services (CMS) to not treat bundling of existing services into a common code as a new procedure and new code. 3. Our AMA will advocate for a phase-in of new values for codes where the cuts resulting from the identification of misvalued services cause a significant reduction from the value of	Retain. Still relevant.

POLICY #	Title	Text	Recommendation
		the existing codes and work with CMS to achieve a smooth transition for such codes. 4. The RUC will take into consideration CMS's willingness or reluctance to transition large payment reductions as it schedules the review of relative values for bundled services or other codes that come before the RUC as a result of the identification of potentially misvalued services. 5. Our AMA strongly supports RUC recommendations and any cuts by CMS beyond the RUC recommendations will be strongly opposed by our AMA.	
H-75.988	Extension of Medicaid Coverage for Family Planning Services	The AMA supports legislation that will allow states to extend Medicaid coverage for contraceptive education and services for at least two years postpartum for all eligible women.	Retain. Still relevant.
H-90.971	Enhancing Accommodations for People with Disabilities	Our AMA encourages physicians to make their offices accessible to patients with disabilities, consistent with the Americans with Disabilities Act (ADA) guidelines.	Retain. Still relevant.
H-90.986	SSI Benefits for Children with Disabilities	The AMA will use all appropriate means to inform members about national outreach efforts to find and refer children who may qualify for Supplemental Security Income benefits to the Social Security Administration and promote and publicize the new rules for determining disability.	Retain. Still relevant.

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 05-A-23

Subject: Prescription Drug Dispensing Policies (Resolution 237-A-22)

Presented by: Lynn Jeffers, MD, MBA, Chair

Referred to: Reference Committee G

At the June 2022 Annual Meeting, the House of Delegates referred Resolution 237-A-22, Prescription Drug Dispensing Policies, which was sponsored by the Ohio Delegation and asks that the American Medical Association (AMA) work with pharmacy benefit managers (PBMs) to eliminate any financial incentives that may exist for patients to receive a supply of medication that is greater than the physician prescribed. Resolution 237-A-22 also asks that the AMA create model state legislation to restrict dispensing a prescription drug in greater quantities than prescribed, and support legislation that supports removing financial barriers that favor dispensing of quantities greater than prescribed. This report provides background on the process of drug dispensing quantities, reviews relevant AMA policy, and makes policy recommendations.

BACKGROUND

When physicians write prescriptions and provide them to their patients, an insurance company and/or PBM may influence not only the cost of the medication, but also the amount that is dispensed to the patient[1]. In certain situations, such as when a patient is taking a maintenance medication, the insurer or PBM, may be incentivized to require a 90-day supply to be dispensed, even if a 30-day supply was prescribed.[2] While this may not be an issue once the patient's medication and dosage are established, it can be a problem for patients and physicians when initially assessing medications, dosages, or making changes to either. When physicians write prescriptions with a set number of refills, some states allow pharmacists to dispense the total amount.[2] For example, a prescription for a 30-day supply of medication with two refills could result in these pharmacies dispensing the total 90-day supply at once.

PBM AND INSURER INFLUENCE ON DISPENSING QUANTITIES

To fully understand the pressures to dispense a 90-day supply it is important to understand the relationship between PBMs, health insurers, and the pharmacies that end up dispensing the medication. PBMs are considered an intermediary that works to manage prescription drug benefits for secondary entities, like health insurers. PBMs have the stated goal of working to lower drug prices through their work negotiating rebates and discounts off the list price of drugs. However, a lack of transparency and regulation into these efforts have yielded confusion and doubt as to if this goal is being met.[3] Current efforts by both the Federal Trade Commission (FTC) and Congress are being made to investigate and better understand the innerworkings of PBMs in the process.[4]

The process of dispensing medication has multiple intersections between PBMs, payers, and pharmacies. PBMs pay pharmacies a drug dispensing fee and negotiate rate prices with the manufacturer, while insurers pay the PBMs fees for administrative work and dispensing fees for

medications. For PBMs and payers, these points of intersection may be areas where requiring a larger quantity of medication to be dispensed is advantageous. For example, when a larger quantity of medication is being negotiated, it gives the PBM better negotiating power and can lead to lower negotiated prices or larger rebates. For both PBMs and payers, dispensing greater supplies of medication can lower the dispensing costs associated with the medication. Additionally, it is not uncommon for PBMs and/or health insurers to own and operate automatic dispensing facilities, such as mail order pharmacies, and dispensing greater quantities of a medication can lower operating costs in these settings as well.[5] One place of major PBM reform that is promoted by the National Community Pharmacist Association, is centered around the mandatory use of these PBM owned mail order pharmacies that often depersonalize the process. This is especially relevant to the quantity of a medication dispensed as the safeguards of both physicians and pharmacists interacting with the patient are removed in the automated process used with PBM-owned mail order pharmacies.[6]

Overall, the insertion of payers and PBMs in the process of determining the quantity of a prescription medication dispensed is opposed both by the AMA and community pharmacists, the two entities that interact most directly with the patient. While there can be benefits to the dispensing of a larger supply of medication, especially in the cost savings for the PBM and/or payer, the decision is one that needs to be made on a patient level and under the supervision and control of the prescribing physician.

POTENTIAL PATIENT RISKS OF A 90-DAY SUPPLY

Among the key concerns when a patient receives a quantity of a prescription drug that is greater than what was prescribed include the risk of intentional overdose. While there is not a guarantee that a physician will be aware of a patient's suicide risk, there is an opportunity for assessment, both formal and informal, during a medical appointment. Pharmacists' interactions with patients would not typically include this type of screening process and, thus, they may not be aware of a potential risk. Unfortunately, even if a risk was recognized, PBMs, who are further removed from direct patient engagement, may force pharmacists to fill larger quantities without the ability to apply insurance coverage at lower quantities. Currently, there are strict regulations on the quantity of controlled substances that can be dispensed as these medications are often seen in suicide attempts or completions.[7,8] However, other prescription medications are not regulated at the same level and may still be used in suicide attempts or completions.[8,9].

A second concern regarding patients receiving quantities of prescription medication greater than prescribed is the oversupply of medications. Oversupply is a concern with regard to the potential for increased cost to the patient and patient stockpiling. When a prescription is dispensed at a greater quantity than prescribed, a patient may not need the full 90 days. For example, if a medication is new and the physician is working with the patient to establish the correct dosage there may be a change in the dosage prior to completion of the full 90 days. The oversupply of a prescription drug can lead to a patient stockpiling a medication, which, even when unintentional, can be dangerous and should be avoided.[10] In addition to the potential for a medication to be stockpiled, it is possible that this oversupply could place an undue financial burden on the patient. For instance, should a patient be prescribed a medication with a substantial co-pay that is only covered in a 90-day supply, but that prescription is altered before completion of the 90 days, the patient may be responsible for an additional, expensive co-pay. The cost of prescription medications in the United States is a major barrier for many to access the care they require and should be mitigated whenever possible.[11]

POTENTIAL PATIENT BENEFITS OF A 90-DAY SUPPLY

While there are some substantial potential risks associated with dispensing larger supplies of medication than prescribed, there are some potential benefits as well. When allowed, pharmacists may be inclined or forced to dispense the larger supply due to the financial benefits and improved patient adherence to the medication regimen. Each year, a lack of medication adherence directly relates to approximately 10 percent of all health care spending in the United States[7]. Research has demonstrated that a larger supply of medication has been linked with greater medication adherence, which is especially true in patients who traditionally have the lowest levels of adherence. This improvement in adherence is explained by reduction of barriers and improvement in convenience for the patient. For example, if a patient has difficulty finding transportation to and from the pharmacy, reducing the number of trips may boost adherence. Additionally, patients report greater satisfaction with a greater supply of medication, especially for those who have multiple prescriptions. Most importantly, adherence to medications, particularly medications for chronic diseases like hypertension and diabetes, significantly improves patient outcomes and reduces health care costs.[7]

In addition to greater medication adherence, there is the added benefit of cost savings with a larger quantity of medication for the pharmacy and the patient. Prescription drug cost reduction is typically centered around a lower distribution cost, negotiated drug cost, and potential rebates.[5] These potential advantages can lead to cost-savings to the patient, as well as a reduction in the time spent obtaining their prescriptions. However, to ensure that patients are receiving lowered costs when appropriate, but not an oversupply of medication, it is important that the decision regarding amounts of dispensed medications remain within the context of the patient-physician relationship.

RELEVANT AMA POLICY

The AMA currently has policies that address the dispensing of prescription drugs. The most directly relevant AMA policies on the topic of medication dispensing are Policies H-120.962 and H-185.942. Each of these policies ensure that physicians can specify the appropriate quantity of a prescription drug and that insurers must have a specific process in place when exceptions to the typically dispensed amount needs to be altered due to a medical reason. Policy H-120.962 specifically addresses mail order pharmacies and outlines when a 90-day prescription may not be appropriate; during the initialization and dose stabilization of a new medication and when changing the dosage of a long-term medication. Policy H-185.942 outlines AMA support for working with insurers to ensure that there is an exceptions process for patients that may need a higher or lower dispensed amount of a medication due to a medical necessity and supports physician ability to limit quantities of a prescription drug during initialization and dose stabilization of a new medication or if the medication may pose a risk to patients.

In addition to policies related to the dispensing of prescription medications, the AMA has policy related to limiting the overreach of pharmacists into medical decision-making. Of specific relevance, Policy D-120.934 indicates AMA's intent to prohibit pharmacy actions that are unilateral medical decisions and directs the AMA to implement polices that ensure prescriptions are dispensed by pharmacists as ordered by the physician or prescriber, including the quantity ordered. Policies D-35.981 and D-35.987 more generally establish AMA's opposition to the inappropriate practice of medicine by pharmacists. Policy D-35.981 confronts the "intrusion" of pharmacy into medical practice. Policy D-35.987 outlines the AMA's intent to study, oppose, and educate about inappropriate scope of practice expansions that would allow pharmacists to perform services that constitute the practice of medicine, including opposition to laws that would allow

pharmacists to prescribe medications or to dispense medication beyond the expiration date of the original prescription.

In addition, Policies H-115.967 and H-95.945 both outline the AMA's actions to promote education, tracking, and packaging that prevents addiction, misuse, and harm. Specifically, Policy H-115.967 focuses on introducing packaging for controlled substances that is more functional for patients, improves patient adherence, and reduces the risk for misuse and abuse. Policy H-95.945 supports the permanency of and funding for the National All Schedules Prescription Electronic Reporting and state/jurisdiction Prescription Drug Monitoring Programs. Additionally, the policy outlines support for the availability of these data and the education of physicians on how to reduce the misuse of prescription drugs.

Policies H-120.943 and H-120.952 state the AMA's work to ensure that the dispensed quantity of a prescription drug is adequate for the patient, not overregulated, and not an undue burden on the physician. Policy H-120.943 outlines the requirement for a medication that is dispensed for a month and three-month supply and indicates the AMA's opposition to the arbitrary prescription limits of medication for patients with pain related to cancer or a terminal illness. Similarly, Policy H-120.952 opposes restriction to legitimate and clinically appropriate refills and encourages the implementation of a prescription refill schedule.

DISCUSSION

In weighing the potential benefits and risks of dispensing a larger supply of medication, there is no one correct answer for all patients. However, it is clear that physicians and patients should be able to work collaboratively to make the correct choice for each individual patient. Further complicating the issue are direction from PBMs and payers requiring or financially incentivizing the use of certain PBM owned mail order pharmacies that only dispense 90-day supplies of certain medications. These practices can lead to not only confusion and frustration for both physicians and patients, but also can be potentially dangerous and expensive for patients.

Although research has demonstrated benefits to dispensing 90-day supplies of medications to patients, the Council believes it is essential that the decision as to the quantity of medication dispensed is one that is made within the patient-physician relationship, not by insurers, pharmacies, or PBMs. The Council also believes that the benefits of a 90-day supply are most prevalent for maintenance medications that are stable and address chronic conditions. Although the AMA has policy to ensure that the patient is able to receive the prescribed amount of a medication, as well as policy that opposes the overreach of pharmacist practice, the Council believes that the language of existing policy can be strengthened to ensure that the quantity of a medication dispensed remains a decision made within the patient-physician relationship.

Therefore, the Council believes that the implementation of clear guidelines for physicians to indicate that a prescription should be dispensed only as written are warranted. These guidelines could follow what have been implemented in states where physicians are able to write "dispense quantity as written," "no change in quantity," or similar language to indicate the necessity of a prescription being dispensed in a specific quantity. Additionally, the Council believes that Policy H-185.942 which ensures that physicians are able to specify the quantity of a prescription dispensed, can be strengthened with the addition of PBMs as a regulated party. Finally, the Council believes that AMA policy on both ensuring the dispensing of adequate amounts of medication without undue burden on the physician or patient and restricting the influence of PBMs and payers are adequate and should be reaffirmed.

RECOMMENDATIONS

The Council on Medical Service recommends that the following be adopted in lieu of Resolution 237-A-22, and that the remainder of the report be filed:

1. That our American Medical Association (AMA) support the development and implementation of clear guidelines and mechanisms to indicate that the quantity of a prescription should be dispensed only as written using such language as "dispense quantity as written" or "no change in quantity." (New HOD Policy)

2. That our AMA amend Policy H-185.942, to read as follows:

   1. Our AMA supports the protection of the patient-physician relationship from interference by payers and Pharmacy Benefit Managers (PBMs) via various utilization control mechanisms, including medication and testing and treatment supply quantity limits.

   2. Our AMA will work with third party payers and PBMs to ensure that if they use quantity limits for prescription drugs or testing and treatment supplies, an exceptions process must be in place to ensure that patients can access higher or lower quantities of prescription drugs or testing and treatment supplies if medically necessary, and that any such process should place a minimum burden upon patients, physicians and their staff.

   3. Our AMA supports interested state legislative efforts and federal action and will develop model state legislation to ensure that third party payers or PBMs that institute quantity limits for prescription drugs or testing and treatment supplies include an exceptions process so that patients can access higher or lower quantities of prescription drugs or testing and treatment supplies if medically necessary, including provisions such as the following…. (Amend AMA Policy)

3. That our AMA reaffirm Policy H-320.953, which defines the term "medical necessity" as referenced in the suggested amended policy H-185.942 (above) in recommendation two. (Reaffirm AMA Policy)

4. That our AMA reaffirm Policy H-120.952, which ensures that the quantity of a medication dispensed to patients is of adequate supply, not overregulated, and that receiving the medication is not an undue burden on the patient or the prescribing physician. (Reaffirm HOD Policy)

5. That our AMA reaffirm Policy D-120.934, which ensures that prescriptions must be filled as ordered, including the quantity, and that PBMs and payers restrict policies that impact patient access to prescription medications. (Reaffirm HOD Policy)

Fiscal Note: Less than $500.

Appendix
AMA Policies Recommended for Reaffirmation or Amendment

Policy H-185.942 "Third Party Payer Quantity Limits"
1. Our AMA supports the protection of the patient-physician relationship from interference by payers via various utilization control mechanisms, including medication and testing and treatment supply quantity limits.
2. Our AMA will work with third party payers to ensure that if they use quantity limits for prescription drugs or testing and treatment supplies, an exceptions process must be in place to ensure that patients can access higher or lower quantities of prescription drugs or testing and treatment supplies if medically necessary, and that any such process should place a minimum burden upon patients, physicians and their staff.
3. Our AMA supports interested state legislative efforts and federal action and will develop model state legislation to ensure that third party payers that institute quantity limits for prescription drugs or testing and treatment supplies include an exceptions process so that patients can access higher or lower quantities of prescription drugs or testing and treatment supplies if medically necessary, including provisions such as the following:
- physicians can specify limited supplies of medications during initial trials of a medication, or if a larger quantity of medication would expose an at-risk patient to potential harm (e.g., opioids, benzodiazepines, or psychostimulants)
- physicians can appeal adverse determinations regarding quantity limitations;
- payers must provide an easily accessible list of all medications and testing and treatment supplies with quantity limits and the requirements for the exception process on the payer's Web site;
- payers must indicate, what, if any, clinical criteria (e.g., evidence-based guidelines, FDA label, scientific literature) support the plan's quantity limitations;
- physicians with specialized qualifications may not be subject to quantity limits;
- payers cannot charge patients for an additional co-pay if an exception request for a higher medication or testing and treatment supply quantity has been approved based on medical necessity;
- payer decisions on exception, and subsequent appeal requests, of quantity limits must be made within two working days in non urgent situations and one working day in urgent cases; and
- physicians or patients can submit any denied appeals to an independent review body for a final, binding decision. (BOT Rep. 12, A-12; Reaffirmation: I-17)

Policy H-320.953 "Definitions of "Screening" and "Medical Necessity""
(1) Our AMA defines screening as: Health care services or products provided to an individual without apparent signs or symptoms of an illness, injury or disease for the purpose of identifying or excluding an undiagnosed illness, disease, or condition.
(2) Our AMA recognizes that federal law (EMTALA) includes the distinct use of the word screening in the term "medical screening examination"; "The process required to reach, with reasonable clinical confidence, the point at which it can be determined whether a medical emergency does or does not exist."
(3) Our AMA defines medical necessity as: Health care services or products that a prudent physician would provide to a patient for the purpose of preventing, diagnosing or treating an illness, injury, disease or its symptoms in a manner that is: (a) in accordance with generally accepted standards of medical practice; (b) clinically appropriate in terms of type, frequency, extent, site, and duration; and (c) not primarily for the economic benefit of the health plans and purchasers or for the convenience of the patient, treating physician, or other health care provider.
(4) Our AMA incorporates its definition of "medical necessity" in relevant AMA advocacy documents, including its "Model Managed Care Services Agreement." Usage of the term "medical necessity" must be consistent between the medical profession and the insurance industry. Carrier

denials for non-covered services should state so explicitly and not confound this with a determination of lack of "medical necessity".
(5) Our AMA encourages physicians to carefully review their health plan medical services agreements to ensure that they do not contain definitions of medical necessity that emphasize cost and resource utilization above quality and clinical effectiveness.
(6) Our AMA urges private sector health care accreditation organizations to develop and incorporate standards that prohibit the use of definitions of medical necessity that emphasize cost and resource utilization above quality and clinical effectiveness.
(7) Our AMA advocates that determinations of medical necessity shall be based only on information that is available at the time that health care products or services are provided.
(8) Our AMA continues to advocate its policies on medical necessity determinations to government agencies, managed care organizations, third party payers, and private sector health care accreditation organizations. (CMS Rep. 13, I-98; Reaffirmed: BOT Action in response to referred for decision Res. 724, A-99; Modified: Res. 703, A-03; Reaffirmation I-06; Reaffirmed: CMS Rep. 01, A-16)

Policy H-120.952 "Restriction on Prescription Refills"
1. Our AMA opposes restrictions on the legitimate, clinically appropriate refill of patient prescriptions including, but not limited to: (A) restricting refill hours to less than usual pharmacy hours; (B) restricting refills to limited pharmacies rather than all participating pharmacies; (C) restricting refills for chronic medications to a less than 90-day supply; and (D) restricting the date of refill.
2. Our AMA will encourage relevant organizations, including but not limited to insurance companies and professional pharmacy organizations, to develop a plan to implement prescription refill schedule strategies so that patients requiring multiple prescription medications may reduce the need for multiple renewal requests and travel barriers for prescription acquisition. (Res. 512, A-01; Reaffirmed: CSAPH Rep. 1, A-11; Appended: Res. 801, I-12; Modified: Sub. Res. 719, A-13; Reaffirmed: CMS Rep. 04, A-16)

Policy D-120.934 "Evaluating Actions by Pharmacy Benefit Manager and Payer Policies on Patient Care"
1. Our AMA will take steps to implement AMA Policies H-120.947 and D-35.981 that prescriptions must be filled as ordered by physicians or other duly authorized/licensed persons, including the quantity ordered.
2. Our AMA will work with pharmacy benefit managers, payers, relevant pharmacy associations, and stakeholders to: (a) identify the impact on patients of policies that restrict prescriptions to ensure access to care and urge that these policies receive the same notice and public comment as any other significant policy affecting the practice of pharmacy and medicine; and (b) prohibit pharmacy actions that are unilateral medical decisions.
3. Our AMA will report back at the 2018 Annual Meeting on actions taken to preserve the purview of physicians in prescription origination.

REPORT 08 OF THE COUNCIL ON MEDICAL SERVICE (A-23)
Impact of Integration and Consolidation on Patients and Physicians
(Reference Committee G)

EXECUTIVE SUMMARY

At the 2022 Interim meeting, the Council presented CMS Report 3, which was an informational report that provided background on the issue of health system consolidation. The next report in the Council's ongoing series on this topic is presented here and examines the impact of horizontal and vertical integration on health care prices and spending, patient access to care, quality of care, and physician wages and labor. This report also includes an overview of the Federal Trade Commission (FTC) and the Department of Justice (DOJ) merger review process and how physicians can play a role in preventing anticompetitive behavior and outcomes.

This report specifically addresses the impact of hospital-hospital horizontal consolidation and hospital-physician practice vertical integration on physicians, patients, and local markets. An important distinction to make is that private equity investment in a hospital or a physician practice is not the same as vertical or horizontal integration, but instead is an issue of a change in ownership. While this is also a prevalent issue in health care, it is not the focus of this report.

Both horizontally and vertically integrated health care entities may engage in a range of anticompetitive behaviors, including raising prices, excluding rivals, raising their costs, bargaining with health plans to demand higher prices for affiliated providers, and including anticompetitive terms in their contracts.

This report examines the shared jurisdiction between the FTC and the DOJ in the merger and acquisition process. Typically, the FTC reviews mergers between providers (hospitals, physician groups, etc.), while the DOJ reviews mergers between health insurance companies. DOJ has exclusive control over criminal enforcement.

When examining a potential health care merger or acquisition, the FTC focuses on four areas: price effects, clinical quality effects, patient access, and provider wages. While evidence of impacts on health care prices and spending is stronger and more consistent, data on effects on patient access, changes in quality outcomes, and physician wages and workforce are insufficient to draw meaningful conclusions at this time.

The Council recommends that the American Medical Association (AMA) continue to monitor the impact of hospital-physician practice integration and hospital-hospital consolidation on health care prices and spending, patient access to care, potential changes in patient quality outcomes, and physician wages and labor, as well as the impact of non-compete clauses on physicians. The Council also recommends that the AMA broadly support efforts to collect relevant information on mergers and acquisitions in their state and/or region and work with state attorneys general (AG) to ensure proper review of these transactions before they occur. Finally, the Council recommends that the AMA support and encourage physicians to share their own experiences with mergers and acquisitions with the FTC through their online submission process.

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 08-A-23

Subject: Impact of Integration and Consolidation on Patients and Physicians

Presented by: Lynn Jeffers, MD, MBA, Chair

Referred to: Reference Committee G

At the 2022 Interim meeting, the Council presented CMS Report 3 which was informational and provided background on the broad issue of health system consolidation. Consistent with Policy D-215.984, which requested regular updates, this report examines the impact of horizontal and vertical integration on health care prices and spending, patient access to care, quality of care, and physician wages and labor. This report also includes an overview of the Federal Trade Commission (FTC) and the Department of Justice (DOJ) merger review process and how physicians can play a role in preventing anticompetitive behavior and outcomes.

BACKGROUND

It is important to distinguish the difference between horizontal integration and vertical integration. A horizontal transaction often refers to a merger, purchase, or acquisition of an entity. Horizontal integration (or consolidation) reflects arrangements between entities that "operate in a similar position along the production process,"[1] meaning that they offer the same services and compete with one another. One hospital acquiring or merging with another hospital would be considered horizontal consolidation. Vertical integration reflects arrangements between entities that "operate at different points along the production process,"[2] meaning that they do not directly compete with one another. An example of this could be a hospital acquiring a physician practice. For the purposes of this report, hospital-hospital mergers will be referred to as horizontal consolidation, while hospital-physician practice transactions will be referred to as vertical integration, although the latter may also have horizontal aspects if the hospital already owned other physician practices before the transaction. We note that mergers and acquisitions are complex economic issues and recognize that there are many different types of transactions – and nuances within each of those transactions – but the Council has chosen to focus on these two types of transactions for this report.[3]

HOSPITAL-PHYSICIAN INTEGRATION AND HOSPITAL-HOSPITAL CONSOLIDATION

This report specifically addresses the impact of hospital-hospital horizontal consolidation and hospital-physician vertical integration on physicians, patients, and local markets. At the onset, an important distinction to make is that private equity investment in a hospital or a physician practice is not the same as vertical or horizontal integration, but instead is an issue of a change in ownership. Recently there has also been an uptick in the number of physicians employed by corporate-owned or publicly traded practices (i.e., CVS, Amazon). While these are also prevalent issues in health care, they are not the focus of this report, and we would encourage members to reference CMS Report 2-I-22, Corporate Practice of Medicine, for more information on this topic.

In the United States, 90 percent of Metropolitan Statistical Areas (MSAs) are considered concentrated for hospital services, and 65 percent of MSAs are considered concentrated for

outpatient specialty care. Research suggests that the impact of hospital-hospital horizontal consolidation includes higher prices for services, higher insurance premiums and consumer cost sharing, lack of quality gains and decrements in the patient experience. Hospital markets are not the only component of care delivery that is concentrated, with an estimated 39 percent of MSAs considered concentrated for primary care physicians and 65 percent for specialty care. Rising prices and reduced choice for patients are often the outcome following hospital-hospital consolidation and/or hospital-physician integration.[4]

Vertically integrated health care entities may engage in a range of potentially anticompetitive behaviors, including raising prices, excluding rivals (or raising their costs), bargaining with health plans to demand higher prices for affiliated providers, and including anticompetitive terms in their contracts (such as restrictive covenants on employed physicians).[5]

Although billions of dollars in COVID-19 federal relief funds have been dispersed across the health care industry, a majority of the funding has gone to large hospital systems. This has left many independent physician practices to suffer reductions in patient visits and revenues, making them vulnerable to hospital-physician practice vertical integration.[6] The risks such transactions pose to patients include higher prices, increased spending, and reduced choice. The economic impact of the COVID-19 pandemic on independent physician practices has accelerated pressure for vertical integration between hospitals and physician practices. Remaining independent physician practices are under financial strain due to the economic impact of the pandemic, and even those who previously resisted acquisition face new pressure to sell to large hospital systems or private equity investors for financial stability and survival.[7]

Data from the AMA's 2022 Physician Practice Benchmark Survey indicates that physicians in practices wholly owned by physicians have decreased from 60 percent to 47 percent from 2012 to 2022. Conversely, physicians in practices wholly or jointly owned by hospitals have increased from 23 percent to 31 percent over the same time period. In 2022, ten percent of physicians were directly employed by or contracting with a hospital (up from six percent in 2012). While there are many factors driving these changes, it is important to note the trends in physician practice ownership over the last decade.

Impact on Health Care Prices and Costs

Evidence suggests that hospital-physician integration leads to higher health care prices – including higher hospital prices, percent higher physician prices, and 10-20 percent higher total expenditures per patient.[8] Prices have been shown to increase in hospitals following such integration. The harms of hospital-hospital consolidation also include higher prices for patients.[9]

There are several ways hospital-physician integration can increase health care prices. These include the addition of facility fees that hospitals can charge for outpatient services provided by acquired physicians, increased market power when negotiating with payers, and direct referrals of captive physician practices to a greater extent than independent physicians not related to the hospital system, which could increase referrals to higher-cost providers and services.[10]

Generally, prices will ascend to the level a market will pay. If a certain entity has market power, prices can rise to offset rising expenses and declining patient volume.[11] According to a paper prepared for Congress by economists Martin Gaynor, Farzad Mostashari, and Paul B. Ginsburg addressing horizontal consolidation of hospitals, hospitals without local competitors are estimated to have prices nearly 16 percent higher on average than hospitals with four or more competitors, which is a difference of nearly $2,000 per admission.[12] A large body of economic literature

summarized by Gaynor in 2021 found substantial increases in hospital prices as a result of hospital-hospital consolidation. Increases are widely seen, but vary significantly, from three percent to 65 percent. A 2019 study by Cooper et al., found an average price increase of six percent as a result of hospital mergers, and Arnold and Whaley (2020) found an average price increase of 3.9 percent.[13,14,15,16]

Impact on Patient Access to Care

Current data on the impact hospital-physician integration has on patient access to care is limited, making this issue one to continue to monitor. Nonetheless, the Council is concerned that vertical integration may lead to a more difficult environment for the remaining physician-owned practices in terms of competition and referral steering. To the extent that consolidation may narrow networks or make areas harder for new practices to enter, this may have the effect of reducing patient choice. Thus far, there have only been two peer reviewed studies that examined the effect of vertical integration of hospitals and physician practices on access to care.[17]

Increased vertical integration in health care could also potentially reduce consumer choice by creating larger, exclusive networks and driving patients and health plans to pay higher prices. Data does not yet indicate that these higher costs and reductions in choice among independent providers are offset by higher quality or efficiency from improved care coordination. As vertical integration continues to occur, states are increasingly searching for ways to curb the rising costs and loss of choices.[18]

Data on the impact of hospital-hospital consolidation are also limited. There have been two recent studies that examine the effect of consolidation on rural hospitals specifically, but there is no conclusive data on other markets. Henke et al., (2021) found that merged rural hospitals were more likely than independent hospitals to eliminate maternal, neonatal, and surgical care services. There was also a decrease in the number of mental health and substance use disorder-related stays. However, there is an important caveat to consider: without a merger a rural hospital may be forced to close and even limited services would be eliminated from a community entirely.[19,20] Similarly, O'Hanlon et al. (2019), found that rural hospitals that became affiliated with integrated health systems experienced a significant reduction in diagnostic imaging technologies, obstetric and primary service availability, and outpatient nonemergency visits.[21,22] While these results could be an early indication of a trend following hospital-hospital consolidation, more evidence is needed before conclusions can be drawn. For more information on Rural Health Care, please see CMS Report 9-A-23.

Impact on Quality of Care

Empirical studies examining the effect of vertical integration of hospitals and physician practices on quality of care showed mixed effects.[23] Findings from two studies suggest no effects on quality of care while two other studies using data from the American Hospital Association (AHA) found mixed effects. The findings of the studies using AHA data suggest that organizations that are fully clinically integrated had small positive effects on some measures of quality while arrangements that were not fully clinically integrated had no effect on the quality of care.[24]

Studies on hospital-hospital consolidation on quality of care are also inconclusive. Some have found no change in the quality of care while others have shown a decrease in the quality of care. A 2020 study by Beaulieu et al., examined 246 hospital mergers between 2007 and 2016 and found that relative to similar hospitals that did not experience a merger, hospitals acquired in a merger saw no significant differential change in 30-day readmission rate and 30-day mortality rate in the

Medicare population. Interestingly, patient experience measures declined. However, it is important to note that the association between mergers and declines in patient experience does not necessarily imply causality; other factors may be in play. Therefore, one should be cautious in the interpretation of those findings. Additionally, it is important to note that data on the impact of integration and consolidation on quality is meaningless without clearly defined quality metrics.[25,26]

Impact on Physicians

The AMA has long supported physician-led care teams and physician supervision of non-physicians. When either hospital-physician integration or hospital-hospital consolidation occurs, motives may shift to focus on profit and physicians may be replaced with non-physician practitioners in an effort to achieve cost savings. However, emerging data suggests that a provider mix (i.e., the number of physicians vs. non-physician practitioners) shift occurs in the years following a merger or acquisition, with physicians being replaced by non-physicians to lower costs and increase profits. Emerging data suggest shifting more patients to non-physician practitioners could ultimately increase cost and simultaneously decrease quality of care.

Available data from recent studies on the impact of vertical integration on health care wages and labor supply are limited, insufficient, and ultimately, inconclusive. In terms of compensation, a 2021 study by Whaley, Arnold, et.al., found that ownership of a physician's practice by a hospital or health system was associated with lower income among physicians overall.[27,28] As with the data on patient access to care, further evidence is needed to conclusively determine the impact of hospital-physician integration on health care wages and labor market changes.[29] There are even fewer studies available on the effect of hospital-hospital consolidation on physician wages. There is some evidence that nurses' and pharmacists' wages decrease following a hospital merger, but there is no significant data on the impact on physician wages.[30]

On January 5, 2023, the FTC proposed a rule to ban future noncompete clauses and invalidate existing agreements. In the proposed rule, the FTC stated that noncompete clauses depress worker wages and limit competition. Typically, a noncompete clause would bar a physician from practicing medicine for a certain period of time within a defined geographic area or specific mile radius. FTC regulators argue that noncompete clauses stifle competition and cause price increases for patients in markets that are highly concentrated, as many health care markets are in the United States. Critics question whether this proposed rule is within the purview of the FTC. One of those critics is the AHA, which stated in its comments that "the proposed regulation errs by seeking to create a one-size-fits-all rule for all employees across all industries, especially because Congress has not granted the FTC the authority to act in such a sweeping manner. Even if the FTC had the legal authority to issue this proposed rule, now is not the time to upend the health care labor markets with a rule like this."[31] The public comment period for this proposed rule was open until April 19, 2023.[32] At the time of writing, AMA comments were still being prepared. The Council will continue to monitor the issue and its impact on physicians.

OVERSIGHT AND ENFORCEMENT

There is shared jurisdiction between the FTC and the DOJ when reviewing mergers and acquisitions. Typically, the FTC reviews mergers between providers (hospitals, physician groups, etc.), while the DOJ reviews mergers between health insurance companies. DOJ has exclusive control over criminal enforcement.

The FTC, DOJ, and private parties suffering antitrust injury use the Clayton Act, the Sherman Act, and in the case of the FTC, the FTC Act to enforce antitrust laws. The Sherman Act of 1890 is the

US antitrust law which prescribes the rule of free competition among those engaged in commerce. Importantly, the Sherman Act does not prohibit every restraint of trade, only those that are unreasonable. Certain acts are considered so harmful to competition that they are almost always illegal under the Sherman Act. These include plain arrangements among competing individuals or businesses to fix prices, divide markets or rig bids. The Clayton Act of 1914 addresses specific practices that are not directly addressed by the Sherman Act, including mergers. Specifically, Section 7 of the Clayton Act prohibits mergers and acquisitions where the effect "may be substantially to lessen competition or tend to create a monopoly." The Clayton Act was amended in 1976 by the Hart-Scott-Rodino Act, which purposely exempts small transactions (valued at less than $111.4 million as of February 27, 2023) from pre-merger notification to not increase the regulatory burden on small enterprises in addition to avoiding generating unnecessary transactions for FTC staff to review. This threshold is adjusted annually and results in many health system, hospital and/or physician mergers proceeding without FTC and/or DOJ review.

Another hurdle contributing to increases in consolidation in recent years is FTC constraints on its ability to enforce antitrust laws in the not-for-profit health care sector. Vertical integration is particularly challenging for the FTC to monitor because it is often the result of hospitals acquiring many smaller practices and each of those transactions may fall under the $111.4 million threshold of having to notify the FTC. Additionally, the FTC has raised concerns about its inability to enforce antitrust rules on most non-profit organizations, including most non-profit hospitals. The FTC can only enforce Section 5 of the FTC Act against persons, partnerships, or corporations. "Corporations" are defined as those entities organized to carry on business for-profit. Accordingly, the FTC Act does not give the FTC the ability to enforce Section 5 against most non-profit entities, which constitute the vast majority of hospitals.

The Council met with representatives from the FTC to discuss the process of reviewing mergers and acquisitions. When examining a potential merger or acquisition, FTC staff focus on four areas: price effects, clinical quality effects, patient access, and provider wages. When a proposed merger filing comes in, FTC staff have 30 days to decide whether or not to issue a challenge. If a challenge is issued, the deal is prohibited from closing until further investigations are completed. During these investigations, the merging entities may negotiate further to receive the approval of the FTC, or the case could go to court. Alternatively, the two merging entities may decide to abandon the deal altogether.

The representatives from FTC stressed the importance of physicians as the best advocates for patients, especially regarding mergers between health care facilities. FTC staff time is limited, especially given the quick timeline in which the FTC must decide whether or not to challenge a merger, so input from impacted communities is helpful in flagging potential concerns. Information shared by physicians is used by the FTC when evaluating potential mergers and acquisitions and is immensely helpful in providing a voice for physicians and patients who would be impacted most. The FTC encourages physicians to share their experience via email to the following address which is monitored regularly by staff: antitrust@ftc.gov. Physicians are encouraged to work with their state medical associations and/or state attorneys general (AG) to report mergers or acquisitions that fall below the FTC threshold for review. Alternatively, physicians (or any member of the public) are welcome to report potential antitrust violations to the FTC here: https://www.ftc.gov/enforcement/report-antitrust-violation.

In 2020, the FTC and DOJ published, and the FTC subsequently withdrew, revised Vertical Merger Guidelines. After withdrawing the guidelines because they cited "unsound economic theories" the FTC stated that it will continue working with the DOJ Antitrust Division to update merger guidance to better reflect market realities. Updated Vertical Merger Guidelines are expected in

2023. Physicians are strongly encouraged to review these guidelines when they are available and provide comments during the public comment period.

States also have a critical role in oversight because vertical integration transactions often fly under the radar of federal antitrust agencies because they tend to be too small in size to be reported under the Hart-Scott-Rodino Act, which has a threshold of $111.4 million in 2023. States can be proactive in the merger process by data gathering using all-payer claims databases, pre-transaction review and approval, oversight of vertically integrated entities, and controlling outpatient costs (i.e., restrictions on facility fees to counteract private-equity based acquisitions).[33] States can study the price, utilization, or referral effects of vertical transactions; detect targets for enforcement; provide oversight of vertically integrated entities; plan and assess the need for new and additional services; quantify the amount of facility fees charged; enforce compliance with surprise out-of-network billing rules; or implement global budgets. Many states already require hospitals to notify state officials of proposed mergers or acquisitions; however, states could expand the requirement to transactions involving physicians. One example of this is in Washington state, which passed a law in 2019 to require notification to the state AG of health care transactions, including those involving "provider organizations," below the Hart-Scott-Rodino threshold. Connecticut requires 30-day notice] to the AG and the head of the Office of Health Strategy of any proposed transaction involving a physician practice of eight or more physicians. In Massachusetts, all provider organizations must provide the AG, the Health Policy Commission, and the Center for Health Information Analysis with a 60-day notice of any mergers, acquisitions, or affiliations. Unlike the FTC, state AGs can regulate transactions involving nonprofit entities.[34]

AMA POLICY

The AMA has long-standing policy emphasizing the importance of competition in health care markets and striving to protect physician autonomy and well-being before, during, and after health care mergers and acquisitions (H-215.960, H-215.969).

Policy D-215.984 states that the AMA will study nationwide health system and hospital consolidation in order to assist policymakers and the federal government in assessing health care consolidation for the benefit of patients and physicians who face an existential threat from health care consolidation; and regularly review and report back on these issues to keep the House of Delegates apprised on the relevant changes that may impact the practice of medicine. Furthermore, Policy D-383.980 affirms that the AMA will study the potential effects of monopolistic activity by health care entities that may have a majority of market share in a region on the patient-doctor relationship; and develop an action plan for legislative and regulatory advocacy to achieve a more vigorous application of antitrust laws to protect physician practices which are confronted with potentially monopolistic activity by health care entities.

DISCUSSION

In general, empirical evidence is emerging on the impact of vertical integration on patients, physicians, and health care. While evidence of impacts on health care prices and spending is stronger and more consistent, evidence on effects on patient access, changes in quality outcomes, and physician wages and workforce are insufficient to draw meaningful conclusions at this time. However, research continues to be conducted, such as on the effects of hospital-physician integration on quality as well as on the potential mechanisms underlying its effects on prices and spending, especially as this and other acquisitions of physician practices become more common The Council will continue to stay informed of new data and research and will address future policy recommendations as needed.

As data continue to be collected and vertical integration involving physicians continues to occur regularly, physicians should work with their state medical associations who in turn should work with their state attorneys general and state legislators to address these transactions. Potential state policy solutions include notification of health care transactions to public officials and pre-transaction review by states for those mergers and acquisitions that fall under the FTC/DOJ review threshold. Flagging these transactions will allow time to review the impacts each would have on the patients and physicians within a community and broader market concentration effects in the impacted areas.

When meeting with representatives from the FTC, it was repeatedly stressed that the most important thing physicians can do regarding concerning mergers and acquisitions is to share individual perspectives on how consolidation has impacted their practice, their patients, and their community. When published, physicians should review the FTC's update to the Vertical Merger Guidelines and provide feedback during the public comment period.

The Council believes that changes in provider mix and wages following a merger or acquisition is an issue that should be monitored closely but that peer-reviewed data on the topic is not yet robust enough for policy recommendations at this time. Similarly, the Council believes that mergers or acquisitions may impact access and quality of care and will continue to monitor this data as it becomes available.

The recommendations presented in this report are more actionable and supersede the recommendations in Policy D-215.984, Health System Consolidation. Thus, we recommend that policy be rescinded with the adoption of the following recommendations.

RECOMMENDATIONS

The Council on Medical Service recommends that the following recommendations be adopted, and the remainder of the report be filed:

1. That our American Medical Association (AMA) continue to monitor the impact of hospital-physician practice and hospital-hospital mergers and acquisitions on health care prices and spending, patient access to care, potential changes in patient quality outcomes, and physician wages and labor. (New HOD Policy)

2. That our AMA continue to monitor how provider mix may change following mergers and acquisitions and how non-compete clauses may impact patients and physicians. (New HOD Policy)

3. That our AMA broadly support efforts to collect relevant information regarding hospital-physician practice and hospital-hospital mergers and acquisitions in states or regions that may fall below the Federal Trade Commission(FTC)/Department of Justice review threshold. (New HOD Policy)

4. That our AMA encourage state and local medical associations, state specialty societies, and physicians to contact their state attorney general with concerns of anticompetitive behavior. (New HOD Policy)

5. That our AMA encourage physicians to share their experiences with mergers and acquisitions, such as those between hospitals and/or those between hospitals and physician practices, with the FTC via their online submission form. (New HOD Policy)

6. That our AMA rescind policy D-215.984. (Rescind HOD Policy)

Fiscal Note: Less than $500.

REPORT 09 OF THE COUNCIL ON MEDICAL SERVICES (A-23)
Federally Qualified Heath Centers and Rural Health Care
(Reference Committee G)

EXECUTIVE SUMMARY

This report, initiated by the Council, provides information and background on Federally Qualified Health Centers (FQHCs) and similar clinics serving areas of medical need. Additionally, the report discusses the importance of these centers to providing essential health care and the physician experience for those who work in these settings. The report also details relevant American Medical Association (AMA) policy and provides recommendations to ensure that these clinics are maintained and that physicians are able to practice without undue burden.

The Council understands that FQHCs and similar clinics serving areas of medical need are a key aspect of the AMA's existing advocacy to reduce health care disparities in rural communities through increasing access to health care services. The AMA has a robust body of policy and advocacy efforts supporting general efforts to improve health care in rural communities. To fully support the health care services provided in these clinic settings, the Council discusses the importance of maintaining funding streams, reducing physician administrative burden, and ensuring that all care provided is overseen by a physician. In order to maintain the feasibility of FQHCs and similar health centers, it is important that a continued investment be made by the federal government as FQHCs receive a majority of funding through grants from the federal government. These grants allow these health services to be delivered to communities that would otherwise face significant barriers to access. In addition to ongoing funding, it is important that the regulating bodies of these health centers ensure that the certification and operating regulations do not place undue burdens on the physicians practicing in these settings. Physicians nationwide are faced with significant administrative work and those practicing in settings like FQHCs may face even more daunting administrative tasks. Finally, to ensure that these underserved communities receive high quality health care, it is important that all care be overseen by physicians. Oversight regarding physician supervision must be maintained to guarantee that all communities served by FQHCs, and similar health centers receive high-quality health care.

The Council recommends adoption of two new policies, one advocating for clear certification requirements and other policies that reduce the administrative burden on physicians practicing in FQHCs, and a second supporting federal funding to maintain costs associated with operating these health centers. In addition to these two new policies, the Council recommends reaffirming existing AMA policy that supports the implementation of programs to improve rural communities' health, H-465.994, advocates for the authorization of Chronic Care Management reimbursement for physicians, D-390.923, and limits the scope of practice for nonphysician providers without supervision of a physician, H-160.947 and H-35.965.

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 09-A-23

Subject: Federally Qualified Health Centers and Rural Health Care

Presented by: Lynn Jeffers, MD, MBA Chair

Referred to: Reference Committee G

Adequately addressing the issues that contribute to poor health outcomes and significant disparities for those who live in rural communities continues to be challenging. Approximately 14 percent of Americans live in a rural area, representing approximately 46 million people.[1] The health disparities for rural Americans are quite stark, as these communities tend to be poorer, older, sicker, and die at a 50 percent higher rate from unintentional injury.[2] One contributing factor to these disparities is the lack of accessible health care facilities and physicians. Approximately 66 percent of all Primary Care Health Professional Shortage Areas are in rural communities, indicating a disproportionately high lack of access to care[3]. Additionally, those in rural areas are geographically further from hospitals and physicians, increasing barriers to access care[3]. Although the American Medical Association (AMA) has robust existing policy regarding improving the health of rural America, there is limited policy directly related to the centers that serve these populations.

This report, initiated by the Council, provides information and background on Federally Qualified Health Centers (FQHCs) and similar clinics serving areas of medical need. Additionally, the report discusses the importance of these centers to providing essential health care and the physician experience for those who work in these settings. The report also details relevant AMA policy and provides recommendations to ensure that these clinics are funded adequately and that physicians are able to practice without undue burden.

BACKGROUND

Although rural communities are often woefully underserved, FQHCs and Rural Health Clinics (RHCs) are two types of practices working to bring additional care to these communities. While FQHCs do not exclusively serve rural communities, many do serve these areas. FQHCs are health centers that serve communities, regardless of population density, that are designated health care shortage areas. These clinics are unique in that they not only provide medical care services, but also wraparound and social services. RHCs are clinics that serve designated health care shortage areas that are also considered rural. These clinics provide health care services to their communities, and may, but are not required to, provide social support services. FQHCs and RHCs are similar in many ways but do have distinct differences with RHCs only serving rural communities and FQHCs providing services beyond the traditional health care paradigm. Each of these centers work to provide health care to communities that are in desperate need and, in turn, help to mitigate health care disparities.

Federally Qualified Health Centers

As previously noted, FQHCs are health care centers that provide health care services to rural or urban shortage areas. FQHCs are often the last line of care for individuals who otherwise may go without health care services. These practices are a central location for patients to receive coordinated preventive care and disease management. FQHCs provide medical services and are often able to support patients in accessing dental, social, and mental health services. These centers are vital for the communities they serve by providing care to approximately 30 million people in over 1,400 locations across the country.[3] Not only are the communities served by FQHCs often underserved, but they are also often underinsured. Approximately 59 percent of patients at FQHCs are insured publicly and 20 percent are uninsured.[3,4] These centers are vital in rural communities, with nearly half (45 percent) of all centers serving rural communities where they are, if not the only, one of very few sources of health care services.[4]

These health centers were originally created in 1965 by President Lyndon B. Johnson as an element of his administration's "War on Poverty." These centers were initially called community health centers and operated in a semi-permanent capacity for about a decade. In 1975, these health centers were officially authorized as a permanent program with their incorporation in section 330 of the Public Health Services (PHS) Act. After gaining permanency, the program continued to receive bipartisan support and was continually funded by Congress. In the late 1980s and early 1990s, FQHCs were established as a part of Medicare and Medicaid and were given a $150 million increase in funding. The following decade brought additional funding increases and reauthorization for FQHCs via efforts by Congress and the Administration. In 2009, $2 billion was invested in FQHCs through the reauthorization of Children's Health Insurance Program and the American Recovery and Reinvestment Act. An additional funding increase was earmarked in 2011 with the passage of the Affordable Care Act (ACA). However, in the same year a significant budget deficit tempered the initially indicated $11 billion investment and slowed the expansion of FQHCs. Over the next decade, FQHCs continued to receive funding through reauthorizations and, both directly and indirectly, the implementation of the ACA in 2014. More recently, FQHCs faced significant challenges, as did all of health care, in battling the COVID-19 pandemic. In 2021, the American Rescue Plan was enacted and FQHCs received approximately $7.6 billion through a variety of different programs.[5] Notably, FQHCs provided care to 30 million Americans in 2021, indicating their vital place in the landscape of American health care.

In practice, FQHCs are diverse in the services they provide to their patients, with some providing expanded services like mental and behavioral health, but at the core they all meet the basic definition of providing at least primary care services to rural or urban shortage areas. Within these types of practices, clinics fall under one of three categories, a health center program grantee, a "look-alike" program, or an Outpatient Tribal facility. Health center program grantees are what are traditionally referred to as an FQHC. Along with meeting a host of eligibility requirements, in order to receive this designation, the center must receive a grant under section 330 of the PHS Act. FQHC "look-alike" clinics are those that meet many of the same eligibility requirements as the aforementioned health center program grantees, but do not receive grants or funding from section 330 of the PHS Act. Finally, Outpatient Tribal facilities are similar, in that they meet many of the same requirements as a PHS Act granted FQHC; however, they are operated by a tribe, tribal organization, or urban Indian organization. These clinics are funded through either the Indian Self-Determination Act or Title V of the Indian Health Improvement Act. In specific circumstances these clinics are able to be grandfathered in and may not meet each of the eligibility requirements of FQHCs or "look-alikes".[6] In the remainder of this report the use of the term FQHC will be inclusive of each of these three types of clinics, unless specifically distinguished. Clinics that are classified as FQHCs serve a wide variety of patients and can be seen across the country referred to

as organizations like, Community Health Centers, Migrant Health Centers, Health Care for the Homeless Health Centers, and Public Housing Primary Care Centers.[6]

In order to be designated a FQHC, a center must meet a multitude of practice requirements. Specifically, care must be provided by a physician, nurse practitioner (NP), physician assistant (PA), certified nurse midwife (CNM), clinical psychologist, clinical social worker, or a certified diabetes self-management training/medical nutrition therapy provider. FQHCs must be under the medical direction of a physician, but each of the previously mentioned nonphysician practitioners are able to independently see patients. When seeing a patient, the visit must be deemed either medically necessary or a qualified preventive health visit. Visits generally occur at the health center but may take place in the patient's residence if the patient is home-bound.[6] Traditionally, these visits were required to occur in person and face-to-face, however during the COVID-19 Public Health Emergency, exceptions were made for increased telehealth visits. These exceptions have been extended beyond the end of the health emergency and will allow for practitioners to continue to see some patients virtually.

While FQHCs provide a diverse range of services that vary from clinic to clinic, there are a core set of services that must be offered in order to receive a FQHC certification. Required services include primary health services like family medicine, internal medicine, pediatric, and obstetrics and gynecology care. FQHCs are required to provide diagnostic lab services, preventive health services, emergency medical services, and referrals. FQHCs are also required to provide dental screenings to determine if further dental care is needed and while some may have an on-site dentist, full dental care is not a requirement. Additionally, FQHCs are required to provide supplemental services to enable access to care, like transportation, and community education. While not required, FQHCs may also provide care including pharmaceutical services (e.g., pharmacies and/or drug monitoring), behavioral and mental health services, environmental health services, screening and control of infectious diseases, and/or injury prevention programs.[6] In short, the medical services provided by an FQHC are designed to allow for a "one stop shop" mentality where patients are able to receive care for a variety of needs.

In addition to the medically centered requirements of an FQHC, there are also more administrative requirements that must be met. These clinics must demonstrate effective procedures for tracking, compiling, and reporting operating costs and patterns of service use as well as the availability, accessibility, and acceptability of services offered. These records should be provided to the governing body upon request. Additionally, the FQHC must complete and file an annual independent financial audit with the Secretary of the Department of Health and Human Services. Regarding payment, FQHCs must have a contracted agreement with the state for those who are eligible for state insurance plans and encourage patients to participate in any insurance plan for which they are eligible. These centers are also responsible for collecting appropriate payment from patients through an established sliding scale fee/payment plan. Finally, they must ensure that no patient is turned away from receiving services due to the lack of ability to pay.[6]

FQHC governance boards must be comprised of a majority (51 percent+) of individuals who receive care at the clinic, and must meet at least once a month. Additional ongoing quality improvement processes must be continuous and include both clinical services and management operations. Additionally, FQHCs must have established continuing referral relationships with at least one hospital and must demonstrate continued efforts to establish and maintain relationships with other health care providers in the area.[6]

Any patient can be served at an FQHC, regardless of insurance status or ability to pay. While some FQHCs have a more specified focus, for example a migrant population, there is no restriction on

who they are able to provide care for. To ensure that the services offered are geographically accessible, clinics must regularly review the size of their catchment area and adjust if needed. Whenever possible, these boundaries should conform with existing local boundaries and work to eliminate any geographical barriers. FQHCs must operate in an area that has been designated as a Medically Underserved Area (MUA) or with a population that has been designated a medically underserved population. Should the clinic operate in an area in which a "substantial portion" of the community are limited-English speakers, there are specific cultural and language requirements that must be met. Clinics in these areas must ensure that services are provided in the language and cultural context that is appropriate for the community. Additionally, the clinic must employ at least one staff member who is fluent in the language dominant in the community and English in order to provide assistance in bridging cultural or linguistic differences.[6]

The COVID-19 pandemic and subsequent vaccination campaign highlighted the importance of FQHCs in delivering care to those who are underserved, underrepresented, and underinsured. The Office of the Assistant Secretary for Planning and Evaluation's Office of Health Policy's research report investigating the barriers and facilitators in COVID-19 vaccine outreach indicated the widespread success of FQHCs in delivering high rates of vaccination in the communities they serve. Specifically, 62 percent of FQHCs held vaccination events or mobile clinics in their communities, distributing 14+ million doses of the vaccine to communities. Importantly, these FQHCs were not only successful in vaccinating their communities, but 66 percent of vaccinations were given to people of color, supporting work to decrease health disparities.[7] In a more specific example, an FQHC, Proteus, serving primarily H2-A visa workers in Iowa, Nebraska, and Indiana, set up an innovative program to mitigate the spread of COVID-19. In a non-COVID year the FQHC provides these farm workers with preventive health care and training on topics like heat stress and pesticide safety. When the pandemic arose, this model was modified to include infection mitigation training for the workers and farm owners, COVID testing, providing personal protective equipment, housing, virtual town halls, and contact tracing. As most of the H2-A visa workers were Spanish-speaking, this work was all done in a bilingual and culturally responsive fashion. This program was able to mitigate the spread of COVID while the workers were in the United States, when they went to their home country, and when they returned to the United States for the subsequent agricultural season.[8]

However, the success of FQHCs providing care to underserved communities is not limited to COVID. FQHCs across the country provide care to individuals who are in underserved communities, with 62 percent of patients reporting being a person of color. One specific example is a FQHC, Dartmouth Geisel Migrant Health Center, that serves primarily Latino patients in the Northeast United States. It was found that the work done by this FQHC, especially around care coordination and interpreter services, improved the access to care for the community they served.[9] These examples demonstrate the power of FQHCs to support communities in not only times of crisis, like a pandemic, but in everyday health care needs. These centers are vital to providing health care services to the communities they serve.

Rural Health Clinics

While RHCs are similar to FQHCs in many ways, there are some key differences. Most significantly, RHCs only serve rural areas and populations. Similar to FQHCs, RHCs can vary in type, from independent, hospital-based, or provider-based centers. These clinics are designed to increase the accessibility of primary care in areas that are underserved due to their rural status.[10,11]

As a point of clarification, although RHCs and rural hospitals may sound similar in name, they are two separate types of practice. They face distinct differences in financial support, eligibility, and

operating requirements. To avoid confusion, rural hospitals will not be included in the current report. A recent report from the Council (Council on Medical Service Report 9-J-21) addressed rural hospitals.

RHC services are provided by a physician, NP, PA, or CNM and must be under the medical direction of a physician. RHCs are required to have a NP, PA, or CNM providing care services at least half of the time the center is open. These centers are required to provide primary care and routine diagnostic and lab services and, while not required, may provide other types of services such as Transitional Care Management, General Behavioral Health Integration, Chronic Care Management, Principal Care Management, and Psychiatric Collaborative Care Management. Although these clinics are able to provide behavioral and mental health serves, they cannot be designated as a rehabilitation agency or a primarily mental disease treatment facility. Patient visits follow very similar requirements as an FQHC in that they must be medically necessary or a qualified preventive health visit and can take place at the center, the patient's home, a skilled nursing facility, or hospice. Visits are not able to take place in an inpatient or outpatient hospital department. Similar to FQHCs, visits were historically required to be in person, but the COVID-19 pandemic allowed for telehealth exceptions that have now been extended beyond the Public Health Emergency.[7,8]

In order to meet the administrative requirements of RHC certification, centers must file annual cost reports that include payment rates, reconcile interim payments, graduate medical education adjustments, bad debt, and administrative payments. Payment is primarily made through a bundled All-Inclusive Rate (AIR) that is determined for all qualified primary and preventive care services. Dependent upon the patient's insurance status, a co-pay may be applied to the services. For example, patients with Part B Medicare coverage would pay for 20 percent of the AIR once their deductible is met. These centers must also maintain a contractual agreement with at least one hospital to provide services that are not available at the RHC.[7,8]

Unlike FQHCs there are no specific requirements related to the governance, quality improvement, nor culture or language of patients. RHCs do have specific requirements related to their service areas. These centers must serve a community that has been designated as a Primary Care Geographic Health Professional Shortage Area, Primary Care Population-Group Health Professional Shortage Area, MUA, or a governor-designated and secretary-certified shortage area. Additionally, these communities must be designated as non-urbanized. Each year RHCs serve approximately 7 million people throughout 47 states.[8]

While FQHCs and RHCs are mutually exclusive, they are similar in their basic mission which is to provide health care to individuals who are underserved. There are also similarities in the types of health care providers and types of services permitted. One of the defining differences between the two is the source of funding. FQHCs must receive funding via Section 330 of the PHS Act, while RHC funding comes from alternative federal avenues, such as appropriations from the Centers for Medicare & Medicaid Services. A full comparison outlining the certification requirements for FQHCs and RHCs has been appended to this report.

PHYSICIAN EXPERIENCE IN FQHCs

Physicians who work in FQHC settings may experience unique benefits and challenges. While the benefits of working in an FQHC are somewhat difficult to quantify, many physicians report that their work is more gratifying than other settings and that they believe they are helping communities that otherwise would not have adequate access to health care. There are also more tangible benefits

to working in an FQHC, such as student loan repayment programs and visas for foreign-born physicians.

Although these specific benefits and the ability to serve communities that are desperate for quality health care can provide physicians with a sense of fulfillment, there are significant challenges that these physicians face working in FQHCs[12]. For example, working in an FQHC does not relieve the physician burden of administrative paperwork. Serving a patient base that has higher rates of public insurance means that physicians are spending more time dealing with the rules, protocols, and paperwork associated with payment. The voluminous amount of paperwork that patients are required to complete to register as an FQHC patient can frequently lead to disruptions in scheduling and physicians spending significant amounts of time reviewing and signing the paperwork. In addition to the increased administrative and regulatory burdens, since physicians at FQHCs are operating in underserved areas it is often difficult to find reasonable timely referrals and coordinate care for patients who may need advanced or specialty care. Some physicians who work in FQHCs report feeling that they are practicing medicine without the support of a medical team or other physicians. For physicians in these settings, providing care to their patients, who are often facing complex medical conditions, can be a significant undertaking. Physicians practicing in FQHCs are frequently part of a limited network of providers in the area they serve, leading to increased stress and working hours in order to attempt to provide quality care on a reasonable timeline to the patients they serve.[9,10]

Finally, physicians working in FQHCs often have additional duties related to the supervision of nonphysician providers, which adds another set of tasks to already full schedules. FQHC physicians report spending considerable time on weekends and evenings reviewing cases that are handled by the non-physician practitioners in order to remain in compliance with federal regulations and provide quality care. Notably, physicians working in FQHCs report 11 percent higher burnout than their colleagues working in other practice settings.[13]

RELEVANT AMA POLICY

The AMA has a number of existing policies related to rural health and FQHCs. Many of the current AMA policies related to rural health are centered around rural hospitals. Policies H-465.979 and H-465.990 focus on the economic viability of rural hospitals. Each encourages efforts and legislation to support these hospitals' efforts to stay open and serve their communities. Policy D-465.998, established with Council on Medical Service Report 9-J-21, and Policies H-240.971, H-465.978, and H-240.970, all deal with the payment challenges that are faced by many rural physicians and hospitals. The policies both recognize and offer potential solutions for remedying the payment differentials between rural and urban medical care. Finally, Policies H-465.984, H-465.996, and H-465.999 focus on the certification and regulations of rural health care centers and hospitals.

The Council believes that, in conjunction with FQHCs and RHCs, rural hospitals are another vital strategy to deliver care to rural communities. Notably, the Council's recent 2021 report, "Addressing Payment and Delivery in Rural Hospitals" (Council on Medical Service Report 9-J-21) included policy recommendations that remain informative and relevant as to the current state of rural hospitals in America. As previously noted, in order to avoid confusion, this current report has remained focused on health care in non-hospital settings, like FQHCs and RHCs.

The AMA also has policies related to rural health care that are not centered solely around hospital centered care. Policies H-465.994 and H-465.982 are concentrated around improving the health of rural communities through promoting access to medical care. Policy H-465.978 works to recognize

and advocate for fixing the payment bias that is seen between rural and non-rural providers. The policy advocates specifically for payment equity in telehealth legislation. Finally, Policy H-465.980 supports the development and improvement of rural health networks to be centered around the needs of the communities they serve.

With respect to FQHCs, Policy D-390.923 acknowledges the need for Chronic Care Management payment for physicians who practice in FQHCs. Additionally, the AMA has existing policy surrounding issues of scope of practice for non-physician providers. Specifically, Policies D-35.989, H-160.947, and H-35.965 ensure the regulation of and appropriate scope (including physician supervision) of midwives/CNMs, PAs, NPs, and "related medical personnel."

DISCUSSION

FQHCs are, by definition, located in areas where health care is hard to access. As previously discussed, FQHCs were key in meeting the needs of communities that arose during the peak of the COVID-19 pandemic. FQHCs also have a long history of working to reduce health care disparities and providing preventive and primary care to the underserved.[8,9] Although the AMA has established policy on improving the health of rural Americans, the Council believes that strengthening our support of FQHCs is warranted.

One specific method to ensure the viability of FQHCs and RHCs is by reducing physician burnout, one of the core tenets of the AMA's Recovery Plan for America's Physicians. Burnout is reported at higher levels in physicians who practice in FQHCs,[10] with significant time and resource burdens related to the administrative aspects of maintaining patient care.[9,10] The Council believes that this is a potential point of intervention via the addition of AMA policy to ensure that administrative burdens placed on physicians practicing in these settings are not undue and do not influence levels of burnout.

In addition to ensuring that physicians are able to continue practicing in FQHCs the Council believes that it is also essential that the AMA advocate for continued federal support for these practices. Existing funding for FQHCs should be maintained and increased when feasible to support the expansion of existing clinics and founding of new clinics in underserved communities. The Council understands the importance of FQHCs in providing health care services for communities that have limited access and believes that it is essential to support these clinics and the physicians who practice in them.

Finally, in order to ensure that patients cared for in FQHCs are receiving high-quality medical care services, it is important to ensure that care is always performed under the supervision of a physician. While regulations for both FQHCs and RHCs allow for practitioners like PAs, NPs, and CNMs to provide care, they do require the supervision of a physician. The AMA does have existing policies that ensure support for state and local medical societies in identifying and advocating for the existing requirement of physician oversight. Each of these additions and reaffirmations of policy will ensure that the AMA works to support essential access points of care for rural communities and the physicians who provide this care.

RECOMMENDATIONS

The Council on Medical Service recommends that the following be adopted and that the remainder of the report be filed:

1. That our American Medical Association (AMA) support certification requirements and other policies that reduce the administrative burden for physicians practicing in Federally Qualified Health Center (FQHCs). (New HOD Policy)

2. That our AMA support sufficient federal funding to maintain the operation and costs associated with establishing and operating a FQHC, FQHC "Look-Alike", or Outpatient Tribal Facility. (New HOD Policy)

3. That our AMA reaffirm Policy H-465.994, which supports efforts to develop and implement proposals and programs to improve the health of rural communities. (Reaffirm HOD Policy)

4. That our AMA reaffirm Policy D-390.923, which advocates for the authorization of Chronic Care Management reimbursement for all physicians, including those practicing in FQHCs or Rural Health Clinics. (Reaffirm HOD Policy)

5. That our AMA reaffirm Policies H-160.947 and H-35.965, which both advocate for the support of state and local medical societies in identifying and working to prevent laws that may allow for non-physicians (e.g., nurse practitioners, physician assistants) to operate without the supervision of a physician. (Reaffirm HOD Policy)

Fiscal Note: Less than $500.

APPENDIX A: FQHC & RHC REQUIREMENTS

	FEDERALLY QUALIFIED HEALTH CENTERS	RURAL HEALTH CLINIC
SUMMARY	*Provide at least primary care services to rural and urban shortage areas.*	*Provide primary care services for patients who live in rural shortage areas.*
SUBTYPES	• FQHC (Health Center Program Grantees): Organizations receiving grants under section 330 of the PHS Act. • "Look-Alikes": Organizations that meet the eligibility requirements of an FQHC, but do not receive funding under section 330 of the PHS Act. • Outpatient Tribal Facilities: Organizations operated by a tribe, tribal organization, or urban Indian Organization. • Examples: Community Health Centers, Migrant Health Centers, Health Care for the Homeless Health Centers, and Public Housing Primary Care Centers	• Independent RHC: Clinics that meet the designation for an RHC and are standalone. • Hospital-Based RHC: Clinics that meet the designation for an RHC and are housed at a hospital. • Provider-Based RHC: Clinics that meet the designation for an RHC and are owned and operated by a nursing home or home health agency participating in Medicare.
PRACTITIONERS	Services must be provided by a physician, NP, PA, CNM, CP, CSW, or furnished by the care of an aforementioned provider.	Must have a physician providing medical direction. A NP, PA, or CNM must provide care services at least 50 percent of the time.
FUNDING	Dependent on the subtype of FQHC. For official FQHCs they must receiving funding from grants under section 330 of the PHS Act. FQHC "look-alikes" may receive grants and funding from a variety of sources but *cannot* receive grants under section 330 of the PHS Act. Outpatient Tribal facilities are funded through the Indian Self-Determination Act or Title V of the Indian Health Care Improvement Act.	Funding is via Medicare reimbursement and patient co-pays.
RECORDS & REPORTING	Must demonstrate an effective procedure for compiling and reporting operations costs, patterns of service use, availability, accessibility, and acceptability of services offered. Must establish and maintain records and provide the authorities with access to examine, copy, and reproduce.	Clinics must file an annual cost report that includes payment rate, reconcile interim payments, graduate medical education adjustments, bad debt shots, and administrative payments.
AUDITING	Must provide an independent annual financial audit and file with the HHS secretary.	Must cooperate with audits done by oversight bodies.
REQUIRED SERVICES	Primary health services including family medicine, internal medicine, pediatrics, OBGYN care, diagnostic lab services, preventative health services, emergency medical services, referrals, case management services, services that enable access to the FQHC, and community education.	Must provide routine diagnostic and lab services, including chemical urine exams, hemoglobin or hematocrit tests, blood sugar tests, and occult blood stool specimen's exam, pregnancy tests, and primary culturing onsite.
ADDITIONAL SERVICES	Pharmaceutical services, behavioral & mental health services, environmental health services, screening & control of infectious diseases, and injury prevention programs.	May provide care management services like Transitional Care Management (TCM), Chronic Care Management (CCM), General Behavioral Health Integration (BHI), Principal Care Management (PCM), and Psychiatric Collaborative Care Management.
POPULATIONS SERVED	Must serve a MUA or a MUP.	Must serve a non-urbanized community that is designated as a medical shortage area.

QUALITY IMPROVEMENT	Ongoing process that includes clinical services and management.	No specific quality improvement requirements.
PAYMENT & REIMBURSEMENT	Contracted agreement with the State for those eligible for medical assistance through a state plan. Collect appropriate reimbursement from patients who are insured and establish a prepared schedule of fees/payments from patients on a sliding scale, while ensuring no patient is turned away due to a lack of ability to pay. Must encourage patients to participate in insurance programs and plans for which they are eligible.	Reimbursement is paid via a bundled All-Inclusive Rate (AIR) per visit for all qualified primary and preventative care services. Dependent upon services and insurance status, patients may have a copay. For example, those with Part B coverage would pay 20 percent once their deductible is met and the AIR would pay 80 percent.
GOVERNANCE	Governed by a board comprised of a majority (51+ percent) of individuals who receive care at the center. The board must meet at least monthly.	No specific governance requirements.
SERVICE AREA	Must regularly review to ensure that the size of the catchment area is appropriate to ensure that services are available and accessible. Service boundaries should conform with local boundaries to the extent practical and should eliminate barriers to access due to geography.	Must serve a community designated as one of the following: a Primary Care Geographic Health Professional Shortage Area, Primary Care Population-Group Health Professional Shortage Area, MUA, Governor-designated and Secretary-certified shortage area.
COLLABORATIVE AGREEMENTS	Continued efforts to establish and maintain relationships with other health care providers. Must have an ongoing referral relationship with at least one hospital.	Must have arrangements with at least one hospital to provide services that are not available at the clinic.
CULTURAL & LANGUAGE CONSIDERATIONS	If a center serves a community with a "substantial portion" of limited-English speakers, services must be provided in the language and cultural context that is most appropriate. A staff member who is fluent in that language and English must be identified to bridge cultural and linguistic differences.	No specific cultural or language consideration requirements.
VISITS	Each visit must be medically necessary or a qualified preventative health visit. These visits traditionally needed to be face-to-face, but extensions have been made to allow for continued telehealth visits. Should multiple visits be required in the same day, they are considered one cumulative visit. Visits may also take place in the patient's place of residence should they be home-bound.	Each visit must be medically necessary, a qualified preventive health visit. These visits can take place at the RHC, the patient's residence, Medicare-covered Part A skilled nursing facility, scene of an accident, or hospice. Visits cannot take place at an inpatient or outpatient hospital department or in a facility specifically excludes RHC visits. Should multiple visits be required in the same day, they are considered one cumulative visit.
EXCLUSIONARY CRITERIA	FQHCs cannot be designated as an RHC.	Cannot be designated as a FQHC, rehabilitation agency, or be a primarily mental disease treatment facility.

Appendix B
AMA Policies Recommended for Reaffirmation

Policy H-465.994, "Improving Rural Health"
1. Our AMA (a) supports continued and intensified efforts to develop and implement proposals for improving rural health care and public health, (b) urges physicians practicing in rural areas to be actively involved in these efforts, and (c) advocates widely publicizing AMA's policies and proposals for improving rural health care and public health to the profession, other concerned groups, and the public.
2. Our AMA will work with other entities and organizations interested in public health to:

- Encourage more research to identify the unique needs and models for delivering public health and health care services in rural communities.
- Identify and disseminate concrete examples of administrative leadership and funding structures that support and optimize local, community-based rural public health.
- Develop an actionable advocacy plan to positively impact local, community-based rural public health including but not limited to the development of rural public health networks, training of current and future rural physicians and public health professionals in core public health techniques and novel funding mechanisms to support public health initiatives that are led and managed by local public health authorities.
- Advocate for adequate and sustained funding for public health staffing and programs. (Sub. Res. 72, I-88; Reaffirmed: Sunset Report, I-98; Reaffirmed: CLRPD Rep. 1, A-08; Reaffirmed: CEJA Rep. 06, A-18; Appended: Res. 433, A-19; Modified: CSAPH Rep. 2, A-22)

Policy D-390.923, "Chronic Care Management Payment for Patients Also on Home Health"
Our AMA will advocate for the authorization of Chronic Care Management (CCM) reimbursement for all physicians, including those practicing in Rural Health Clinics and Federally Qualified Health Centers, for patients in a home health episode. (Res. 801, I-17)

Policy H-160.947, "Physician Assistants and Nurse Practitioners"
Our AMA will develop a plan to assist the state and local medical societies in identifying and lobbying against laws that allow advanced practice nurses to provide medical care without the supervision of a physician.
The suggested Guidelines for Physician/Physician Assistant Practice are adopted to read as follows (these guidelines shall be used in their entirety):
(1) The physician is responsible for managing the health care of patients in all settings.
(2) Health care services delivered by physicians and physician assistants must be within the scope of each practitioner's authorized practice, as defined by state law.
(3) The physician is ultimately responsible for coordinating and managing the care of patients and, with the appropriate input of the physician assistant, ensuring the quality of health care provided to patients.
(4) The physician is responsible for the supervision of the physician assistant in all settings.
(5) The role of the physician assistant in the delivery of care should be defined through mutually agreed upon guidelines that are developed by the physician and the physician assistant and based on the physician's delegatory style.
(6) The physician must be available for consultation with the physician assistant at all times, either in person or through telecommunication systems or other means.
(7) The extent of the involvement by the physician assistant in the assessment and implementation of treatment will depend on the complexity and acuity of the patient's condition and the training, experience, and preparation of the physician assistant, as adjudged by the physician.

(8) Patients should be made clearly aware at all times whether they are being cared for by a physician or a physician assistant.
(9) The physician and physician assistant together should review all delegated patient services on a regular basis, as well as the mutually agreed upon guidelines for practice.
(10) The physician is responsible for clarifying and familiarizing the physician assistant with his/her supervising methods and style of delegating patient care. (BOT Rep. 6, A-95; Reaffirmed: Res 240 and Reaffirmation A-00; Reaffirmed: Res. 213, A-02; Modified: CLRPD Rep. 1, A-03; Reaffirmed: BOT Rep. 9, I-11; Reaffirmed: Joint CME-CMS Rep., I-12; Reaffirmed: BOT Rep. 16, A-13; Reaffirmed: Res. 206, I-22)

Policy H-35.965 "Regulation of Physician Assistants"
Our AMA: (1) will advocate in support of maintaining the authority of medical licensing and regulatory boards to regulate the practice of medicine through oversight of physicians, physician assistants and related medical personnel; (2) opposes legislative efforts to establish autonomous regulatory boards meant to license, regulate and discipline physician assistants outside of the existing state medical licensing and regulatory bodies' authority and purview; and (3) opposes efforts by organizations to board certify physician assistants in a manner that misleads the public to believe such board certification is equivalent to medical specialty board certification. (Res. 233, A-17; Modified: Res. 215, I-19)

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 701
(A-23)

Introduced by: Medical Student Section

Subject: Reconsideration of the Birthday Rule

Referred to: Reference Committee G

Whereas, Self-insured coverage is either a self-administered process or a third party administrator where the employer collects premiums from enrollees and assumes responsibility of paying employees' and dependents' medical claims[1]; and

Whereas, The Health Insurance Portability And Accountability Act of 1996 (HIPAA), established protections for "self-insured" and "insured" coverage, whereby newborns, adopted children, and new parents not enrolled under a health plan could enroll under a period of "special enrollment" upon the birth, adoption, or placement for adoption of a new child[2]; and

Whereas, Under HIPAA, as long as enrollment occurs within 30 days of birth, health insurance coverage is effective as of the date of birth and cannot be subject to pre-existing condition exclusion[2]; and

Whereas, If a health plan's benefits are provided through an insurance company or Health Maintenance Organization (HMO), state laws may amend HIPAA requirements to allow for additional considerations; such as extending the enrollment period[2]; and

Whereas, The National Association of Insurance Commissioners (NAIC) is the U.S. standard-setting organization governed by the chief insurance regulators from all 50 states, the District of Columbia, and five U.S. territories to coordinate regulation of multistate insurers[3]; and

Whereas, Coordination of Benefits (COB) as defined by the NAIC is the provision to eliminate over-insurance and establish a prompt and orderly claims payment system when a person is covered by more than one group insurance and/or group service plan[1]; and

Whereas, State law permits insurers to follow a COB to determine insurers' responsibilities under an insurance claim in the event the "insured" is covered by more than one health plan, in the identification of a "primary" and "secondary" benefit payer[4]; and

Whereas, Newborns of parents with separate insurance policies are subjected to a COB at birth[2,4]; and

Whereas, The birthday rule is a COB model regulation set by the NAIC in which a newborn takes as primary coverage the plan of the parent whose birthday comes first in the calendar year[2,4]; and

Whereas, The recently publicized case of the Kjelshus family resulted in a $200,000 bill for a NICU stay because the parents were unaware of their coordination of benefits, specifically the birthday rule, that resulted in the father's inferior policy determining their child's insurance

coverage solely due to the fact of having a birthday only 2 weeks earlier than his spouse in the calendar year[5]; and

Whereas, The birthday rule has led to confusion and frustration of parents when a child is automatically enrolled under the parent with the earlier birthday in the calendar year without considering the quality of insurance coverage between both parents, showing that simple awareness is not enough to address the problem[5,]; and

Whereas, H.R.4636l, known as the Empowering Parents' Healthcare Choices Act of 2021, currently in the House Subcommittee on Health, would give parents with dual policies 60 days before the birthday rule would take effect from the date of an infant's birth to choose which plan is primary and to notify the insurer of their choice effectively reclaiming parental choice[6]; therefore be it

RESOLVED, That our American Medical Association support evidence-based legislation that support a parent, or guardian's, choice of their dependent's health insurance plan under the event of multiple insurers (New HOD Policy); and be it further

RESOLVED, That our AMA amend Policy H-190.969: "Delay in Payments Due to Disputes in Coordination of Benefits" by addition to read as follows:

Delay in Payments Due to Disputes in Coordination of Benefits, H-190.969

Our AMA:

(1) urges state and federal agencies to exercise their authority over health plans to ensure that beneficiaries' claims are promptly paid and that state and federal legislation that guarantees the timely resolution of disputes in coordination of benefits between health plans is actively enforced;

(2) includes the "birthday rule" as a last resort only after parents/guardians have been allowed a choice of insurer and have failed to choose, and the "employer first rule" in any and all future AMA model legislation and model medical service agreements that contain coordination of benefits information and/or guidance on timely payment of health insurance claims;

(3) urges state medical associations to advocate for the inclusion of the "employer first rule", and "birthday rule" as a last resort only after parents/guardians have been allowed a choice of insurer and have failed to choose, in state insurance statutes as mechanisms for alleviating disputes in coordination of benefits;

(4) includes questions on payment timeliness in its Socioeconomic Monitoring System survey to collect information on the extent of the problem at the national level and to track the success of state legislation on payment delays;

(5) continues to encourage state medical associations to utilize the prompt payment provisions contained in the AMA Model Managed Care Medical Services Agreement and in AMA model state legislation;

(6) through its Advocacy Resource Center, continue to coordinate and implement the timely payment campaign, including the

promotion of the payment delay survey instrument, to assess and communicate the scope of payment delays as well as ensure prompt payment of health insurance claims and interest accrual on late payments by all health plans, including those regulated by ERISA; and
(7) urges private sector health care accreditation organizations to (a) develop and utilize standards that incorporate summary statistics on claims processing performance, including claim payment timeliness, and (b) require accredited health plans to provide this information to patients, physicians, and other purchasers of health care services. (Modify Current HOD Policy)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Delay in Payments Due to Disputes in Coordination of Benefits H-190.969
Our AMA:
(1) urges state and federal agencies to exercise their authority over health plans to ensure that beneficiaries' claims are promptly paid and that state and federal legislation that guarantees the timely resolution of disputes in coordination of benefits between health plans is actively enforced;
(2) includes the "birthday rule" and the "employer first rule" in any and all future AMA model legislation and model medical service agreements that contain coordination of benefits information and/or guidance on timely payment of health insurance claims;
(3) urges state medical associations to advocate for the inclusion of the "employer first rule" and "birthday rule" in state insurance statutes as mechanisms for alleviating disputes in coordination of benefits;
(4) includes questions on payment timeliness in its Socioeconomic Monitoring System survey to collect information on the extent of the problem at the national level and to track the success of state legislation on payment delays;
(5) continues to encourage state medical associations to utilize the prompt payment provisions contained in the AMA Model Managed Care Medical Services Agreement and in AMA model state legislation;
(6) through its Advocacy Resource Center, continue to coordinate and implement the timely payment campaign, including the promotion of the payment delay survey instrument, to assess and communicate the scope of payment delays as well as ensure prompt payment of health insurance claims and interest accrual on late payments by all health plans, including those regulated by ERISA; and
(7) urges private sector health care accreditation organizations to (a) develop and utilize standards that incorporate summary statistics on claims processing performance, including claim payment timeliness,

and (b) require accredited health plans to provide this information to patients, physicians, and other purchasers of health care services.

Health Insurance for Children H-185.948
Our AMA supports requiring all children to have adequate health insurance as a strategic priority.
Citation: Res. 610, I-08; Reaffirmed: CMS Rep. 01, A-18;

Multiple Coverage in Voluntary Health Insurance H-185.999
(1) Over-insurance can arise when an individual is insured under two or more policies of health insurance. When the reimbursement from this multiple coverage exceeds the expenses against which the individual has insured himself, a profit may result. Over-insurance thus encourages wasteful use of the public's health care dollar. (2) A solution to this problem can be accomplished by the use of contract language and the application of coordination of benefits provisions which operate to enable persons covered under two or more group programs to be fully reimbursed for their expenses of insured services without receiving more in total benefits than the amount of such expenses. (3) Therefore, the AMA encourages the health insurance companies and prepayment plans to adopt policy provisions and mechanisms based upon the preceding principles which would control the adverse effects of over-insurance.
Citation: CMS Rep. F, A-66; Reaffirmed: CLRPD Rep. C, A-88; Reaffirmed: Sunset Report, I-98; Reaffirmed: CMS Rep. 4, A-08; Reaffirmed: CMS Rep. 01, A-18;

Adequacy of Health Insurance Coverage Options H-165.846
1. Our AMA supports the following principles to guide in the evaluation of the adequacy of health insurance coverage options:
A. Any insurance pool or similar structure designed to enable access to age-appropriate health insurance coverage must include a wide variety of coverage options from which to choose.
B. Existing federal guidelines regarding types of health insurance coverage (e.g., Title 26 of the US Tax Code and Federal Employees Health Benefits Program [FEHBP] regulations) should be used as a reference when considering if a given plan would provide meaningful coverage.
C. Provisions must be made to assist individuals with low-incomes or unusually high medical costs in obtaining health insurance coverage and meeting cost-sharing obligations.
D. Mechanisms must be in place to educate patients and assist them in making informed choices, including ensuring transparency among all health plans regarding covered services, cost-sharing obligations, out-of-pocket limits and lifetime benefit caps, and excluded services.
2. Our AMA advocates that the Early and Periodic Screening, Diagnostic, and Treatment (EPSDT) program be used as the model for any essential health benefits package for children.
3. Our AMA: (a) opposes the removal of categories from the essential health benefits (EHB) package and their associated protections against annual and lifetime limits, and out-of-pocket expenses; and (b) opposes waivers of EHB requirements that lead to the elimination of EHB categories and their associated protections against annual and lifetime limits, and out-of-pocket expenses.
Citation: CMS Rep. 7, A-07; Reaffirmation I-07; Reaffirmation A-09; Reaffirmed: Res. 103, A-09; Reaffirmation I-09; Reaffirmed: CMS Rep. 3, I-09; Reaffirmed: CMS Rep. 2, A-11; Appended: CMS Rep. 2, A-11; Reaffirmed in lieu of Res. 109, A-12; Reaffirmed: CMS Rep. 1, I-12; Reaffirmed: CMS Rep. 3, A-13; Reaffirmed in lieu of Res. 812, I-13; Reaffirmed: CMS Rep. 6, I-14; Reaffirmed: CMS Rep. 6, I-15; Appended: CMS Rep. 04, I-17; Reaffirmed in lieu of: Res. 101, A-19;

Increasing Coverage for Children H-165.877
Our AMA: (1) supports appropriate legislation that will provide health coverage for the greatest number of children, adolescents, and pregnant women; (2) recognizes incremental levels of coverage for different groups of the uninsured, consistent with finite resources, as a necessary interim step toward universal access; (3) places particular emphasis on advocating policies and proposals designed to expand the extent of health expense coverage protection for presently uninsured children and recommends that the funding for this coverage should preferably be used to allow these children, by their parents or legal guardians, to select private insurance rather than being placed in Medicaid programs; (4) supports, and encourages state medical associations to support, a requirement by all states that all insurers in that jurisdiction make available for purchase individual and group health expense coverage solely for children up to age 18; (5) encourages state medical associations to support study by their states of the need to extend coverage under such children's policies to the age of 23; (6) seeks to have introduced or support

federal legislation prohibiting employers from conditioning their provision of group coverage including children on the availability of individual coverage for this age group for direct purchase by families; (7) advocates that, in order to be eligible for any federal or state premium subsidies or assistance, the private children's coverage offered in each state should be no less than the benefits provided under Medicaid in that state and allow states flexibility in the basic benefits package; (8) advocates that state and/or federal legislative proposals to provide premium assistance for private children's coverage provide for an appropriately graduated subsidy of premium costs for insurance benefits; (9) supports an increase in the federal and/or state sales tax on tobacco products, with the increased revenue earmarked for an income-related premium subsidy for purchase of private children's coverage; (10) advocates consideration by Congress, and encourage consideration by states, of other sources of financing premium subsidies for children's private coverage; (11) supports and encourages state medical associations and local medical societies to support, the use of school districts as one possible risk pooling mechanism for purchase of children's health insurance coverage, with inclusion of children from birth through school age in the insured group; (12) supports and encourages state medical associations to support, study by states of the actuarial feasibility of requiring pure community rating in the geographic areas or insurance markets in which policies are made available for children; and (13) encourages state medical associations, county medical societies, hospitals, emergency departments, clinics and individual physicians to assist in identifying and encouraging enrollment in Medicaid of the estimated three million children currently eligible for but not covered under this program.
Citation: Sub. Res. 208, A-97; CMS Rep. 7, A-97; Reaffirmation A-99; Reaffirmed: CMS Rep. 5, I-99; Reaffirmed: Res. 238 and Reaffirmation A-00; Reaffirmation A-02; Reaffirmation A-05; Consolidated: CMS Rep. 7, I-05; Reaffirmation A-07; Reaffirmation A-08; Modified: Speakers Rep. 2, I-14; Reaffirmed: CMS Rep. 01, A-18;

Mitigating the Negative Effects of High-Deductible Health Plans H-185.918
Our AMA: (1) encourages ongoing research and advocacy to develop and promote innovative health plan designs, including designs that can recognize that medical services may differ in the amount of health produced and that the clinical benefit derived from a specific service can vary among patients; (2) encourages employers to: (a) provide robust education to help patients make good use of their benefits to obtain the care they need, (b) take steps to collaborate with their employees to understand employees' health insurance preferences and needs, (c) tailor their benefit designs to the health insurance preferences and needs of their employees and their dependents, and (d) pursue strategies to help enrollees spread the costs associated with high out-of-pocket costs across the plan year; and (3) encourages state medical associations and state and national medical specialty societies to actively collaborate with payers as they develop innovative plan designs to ensure that the health plans are likely to achieve their goals of enhanced access to affordable care.
Citation: CMS Rep. 2, I-20;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 702
(A-23)

Introduced by: Medical Student Section

Subject: Providing Reduced Parking for Patients

Referred to: Reference Committee G

Whereas, In the United States, an estimated four million individuals fail to receive annual medical care due to transportation barriers[1]; and

Whereas, Many patients with common illnesses attend multiple outpatient appointments a year, such as one study which showed 47% of patients with hypertension had four or more visits in 2014[2]; and

Whereas, Parking prices at some of the country's largest medical centers can be as high as $20 to $43 per day[3-4]; and

Whereas, The public transportation system in the United States varies greatly within the country in terms of usage, location, and infrastructure, with most of the public transport concentrated in the Northeast[5]; and

Whereas, Approximately only a third of patients are within walking distance to their nearest public transportation in certain metropolitan medical centers[6]; and

Whereas, Public transport is not readily available in all locations, such as rural areas where the scarcity of local physicians can still require patients to drive to urban areas for care[7]; and

Whereas, Programs such as non-emergency patient/medical transportation (NEMT) are often limited to approved patients within Medicaid and can have many disadvantages, including restrictions on the type and number of rides, the necessity of a social worker to coordinate transportation, having to schedule days in advance, and carpooling with other patients leading to longer travel and wait times[8]; and

Whereas, The average cost of an NEMT in 2014 was $28, and this price rises in rural and suburban areas that are farther from medical centers[8,9]; and

Whereas, When surveying older Americans, the group that utilizes the most inpatient and outpatient healthcare, rideshare services were not seen as a practical option, with 74% of patients reporting no knowledge of these services and only 1.7% making use of them[10]; and

Whereas, In a study of patients with heart disease, individuals reported the high cost of parking at healthcare facilities as a financial barrier to attending multiple specialist appointments[11]; and

Whereas, In a study of factors influencing family burden in pediatric hematology/oncology, parking was cited as one of the most disproportionately distressing factors[12]; and

Whereas, Nonmedical costs, such as transportation, meals, and child care, have been reported to range from $50 to $165 a day, further contributing to a family's financial stress[13]; and

Whereas, The lower the financial burden a patient has, the less likely they are to miss appointments and adhere to treatment, preventing high cost emergent situations that would lead to hospitals losing money on patients who cannot pay[14]; and

Whereas, Reduced parking fees have been cited as an incentive for patients to travel to hospitals that can offer better treatment than local counterparts[15]; and

Whereas, A minority of hospitals rely on nonpatient care income to offset revenue losses, such that providing parking vouchers would only represent a minor loss in revenue while providing a major benefit to patients[16]; and

Whereas, Many hospitals have already implemented programs for patient parking such as reduced monthly rates and free validated parking[17-19]; and

Whereas, Several associations of healthcare facilities focus on developing solutions for and advocating improvements in social and economic aspects of healthcare, including the American Hospital Association, the Federation of American Hospitals, and the Children's Hospital Association[20-27]; and

Whereas, The American Hospital Association is a national organization of "5,000 hospitals, health care systems, networks, [and] other providers of care" and publishes standards and guidelines on various social and economic aspects of care[20,21]; and

Whereas, The Federation of American Hospitals is a national organization of over 1,000 hospitals that are not tax-exempt, including for-profit hospitals, and advocates their priorities[22-24]; and

Whereas, The Children's Hospital Association is a national organization of over 220 pediatric hospitals and develops and shares solutions with its members on various social and economic aspects of care[26,27]; therefore be it

RESOLVED, That our American Medical Association work with relevant stakeholders to recognize parking fees as a barrier to patient care and encourage mechanisms for reducing parking costs for patients and trainees. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Non-Emergency Patient Transportation Systems H-130.954

Our AMA: (1) supports the education of physicians, first responders, and the public about the costs associated with inappropriate use of emergency patient transportation systems; and (2) encourages the development of non-emergency patient transportation systems that are affordable to the patient, thereby ensuring cost effective and accessible health care for all patients.
Citation: Sub. Res. 812, I-93; Reaffirmed: CMS Rep. 10, A-03; Reaffirmed in lieu of Res. 101, A-12; Modified: CMS Rep. 02, I-18;

Controlling Cost of Medical Care H-155.966

The AMA urges the American Hospital Association and all hospitals to encourage the administrators and medical directors to provide to the members of the medical staffs, housestaff and medical students the charges for tests, procedures, medications and durable medical equipment in such a fashion as to

emphasize cost and quality consciousness and to maximize the education of those who order these items as to their costs to the patient, to the hospital and to society in general.

Voluntary Health Care Cost Containment H-155.998
(1) All physicians, including physicians in training, should become knowledgeable in all aspects of patient-related medical expenses, including hospital charges of both a service and professional nature. (2) Physicians should be cost conscious and should exercise discretion, consistent with good medical care, in determining the medical necessity for hospitalization and the specific treatment, tests and ancillary medical services to be provided a patient. (3) Medical staffs, in cooperation with hospital administrators, should embark now upon a concerted effort to educate physicians, including house staff officers, on all aspects of hospital charges, including specific medical tests, procedures, and all ancillary services. (4) Medical educators should be urged to include similar education for future physicians in the required medical school curriculum. (5) All physicians and medical staffs should join with hospital administrators and hospital governing boards nationwide in a conjoint and across-the-board effort to voluntarily contain and control the escalation of health care costs, individually and collectively, to the greatest extent possible consistent with good medical care. (6) All physicians, practicing solo or in groups, independently or in professional association, should review their professional charges and operating overhead with the objective of providing quality medical care at optimum reasonable patient cost through appropriateness of fees and efficient office management, thus favorably moderating the rate of escalation of health care costs. (7) The AMA should widely publicize and disseminate information on activities of the AMA and state, county and national medical specialty societies which are designed to control or reduce the costs of health care.
Citation: Res. 34, A-78; Reaffirmed: CLRPD Rep. C, A-89; Res. 100, I-89; Res. 822, A-93; Reaffirmed: BOT Rep. 40, I-93; CMS Rep. 12, A-95; Reaffirmed: Res. 808, I-02; Modified: CMS Rep. 4, A-12; Reaffirmed: CMS Rep. 1, A-22;

Health Promotion and Disease Prevention H-425.993
The AMA (1) reaffirms its current policy pertaining to the health hazards of tobacco, alcohol, accidental injuries, unhealthy lifestyles, and all forms of preventable illness; (2) advocates intensified leadership to promote better health through prevention; (3) believes that preventable illness is a major deterrent to good health and accounts for a major portion of our country's total health care expenditures; (4) actively supports appropriate scientific, educational and legislative activities that have as their goals: (a) prevention of smoking and its associated health hazards; (b) avoidance of alcohol abuse, particularly that which leads to accidental injury and death; (c) reduction of death and injury from vehicular and other accidents; and (d) encouragement of healthful lifestyles and personal living habits; (5) advocates that health be considered one of the goals in transportation planning and policy development including but not limited to the establishment, expansion, and continued maintenance of affordable, accessible, barrier-free, reliable, and preferably clean-energy public transportation; and (6) strongly emphasizes the important opportunity for savings in health care expenditures through prevention.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 703
(A-23)

Introduced by: Medical Student Section

Subject: Tribal Health Program Electronic Health Record Modernization

Referred to: Reference Committee G

Whereas, The Indian Health Service (IHS), an agency within the United States Department of Health and Human Services, provides federal health care services to American Indians and Alaska Natives[1]; and

Whereas, As of 2019, all 122 IHS facilities and more than 300 Tribes and Urban Indian (I/T/U) health facilities use the Resource and Patient Management System (RPMS), which handles everything from patient registration to insurance billing, including the electronic health record (EHR)[2,3]; and

Whereas, Although the IHS regularly updates RPMS, it is built on outdated technology from 1985 that will become obsolete within the next decade, making new development more difficult each year[4]; and

Whereas, RPMS exists in a decentralized database system at IHS facilities across the country, making it difficult for patients to share their health information with new providers when they seek care at an outside facility[4]; and

Whereas, RPMS uses software code and features from the U.S. Department of Veterans Affairs (VA) "VistA" EHR system[4]; and

Whereas, In 2017, the VA made the decision to fully transition away from VistA to a commercial EHR by 2028 due to limited interoperability with other EHR products, known cybersecurity vulnerabilities, and costly maintenance[4]; and

Whereas, The IHS will stop receiving VA VistA updates making it more challenging and costly to update RPMS[4]; and

Whereas, In 2019, the U.S. Government Accountability Office listed RPMS as a critical federal legacy system in need of modernization, because its underlying code will be unsupportable in the next 5 to 10 years[5]; and

Whereas, In 2019, the IHS did not have a Congressional appropriation or proposed budget for health information technology (HIT) and electronic health record modernization[5]; and

Whereas, The VA serves 9 million patients per year and the IHS serves 2.2 million patients per year[6,7]; and

Whereas, In fiscal year (FY) 2020, the VA received $1.5 billion to modernize their EHR, while the IHS only received an appropriation of $8 million to modernize their EHR[8-9]; and

Whereas, In FY21, the VA and IHS received an appropriation of $2.6 billion and $34.5 million to continue EHR modernization efforts, respectively, demonstrating a significant gap in federal health care expenditures per capita[10-11]; and

Whereas, In 2021, after a period of Tribal consultations, the IHS announced the IHS Health Information Technology Modernization Program, through which they would fully replace RPMS at IHS facilities with commercially available solutions, with no estimated completion date due to funding challenges[12]; and

Whereas, Many Tribes and Urban Indian health facilities compact and contract with the IHS to assume full funding and control over all programs, services, and functions, and activities provided by the IHS[13]; and

Whereas, Non-IHS Tribal health facilities (79.4% of all I/T/U facilities) do not all use RPMS, minimizing their involvement in and potential benefit from any programs managed by and funds provided to the IHS for EHR modernization[14]; and

Whereas, A 2019 study of 21 Tribes in the Pacific Northwest found that over half used non-RPMS EHR and medical claims systems, and EHR modernization costs up to $500,000 per Tribe with monthly maintenance costs up to $3,000 per Tribe[3]; and

Whereas, The IHS National Tribal Budget Formulation Workgroup, representing all 12 IHS Service Areas, made FY23 funding recommendations for EHR modernization efforts ranging from $282 million to $1.76 billion[16]; therefore be it

RESOLVED, That our American Medical Association support adequate funding for electronic health record modernization and maintenance costs for Tribal and Urban Indian Health Programs with active self-governance compacts and contracts with the Indian Health Service. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Improving Health Care of American Indians H-350.976

Our AMA recommends that: (1) All individuals, special interest groups, and levels of government recognize the American Indian people as full citizens of the U.S., entitled to the same equal rights and privileges as other U.S. citizens.
(2) The federal government provide sufficient funds to support needed health services for American Indians.
(3) State and local governments give special attention to the health and health-related needs of nonreservation American Indians in an effort to improve their quality of life.
(4) American Indian religions and cultural beliefs be recognized and respected by those responsible for planning and providing services in Indian health programs.
(5) Our AMA recognize the "medicine man" as an integral and culturally necessary individual in delivering health care to American Indians.
(6) Strong emphasis be given to mental health programs for American Indians in an effort to reduce the high incidence of alcoholism, homicide, suicide, and accidents.
(7) A team approach drawing from traditional health providers supplemented by psychiatric social workers, health aides, visiting nurses, and health educators be utilized in solving these problems.
(8) Our AMA continue its liaison with the Indian Health Service and the National Indian Health Board and establish a liaison with the Association of American Indian Physicians.
(9) State and county medical associations establish liaisons with intertribal health councils in those states where American Indians reside.
(10) Our AMA supports and encourages further development and use of innovative delivery systems and staffing configurations to meet American Indian health needs but opposes overemphasis on research for the sake of research, particularly if needed federal funds are diverted from direct services for American Indians.
(11) Our AMA strongly supports those bills before Congressional committees that aim to improve the health of and health-related services provided to American Indians and further recommends that members of appropriate AMA councils and committees provide testimony in favor of effective legislation and proposed regulations.

Indian Health Service H-350.977

The policy of the AMA is to support efforts in Congress to enable the Indian Health Service to meet its obligation to bring American Indian health up to the general population level. The AMA specifically recommends: (1) Indian Population: (a) In current education programs, and in the expansion of educational activities suggested below, special consideration be given to involving the American Indian and Alaska native population in training for the various health professions, in the expectation that such professionals, if provided with adequate professional resources, facilities, and income, will be more likely to serve the tribal areas permanently; (b) Exploration with American Indian leaders of the possibility of increased numbers of nonfederal American Indian health centers, under tribal sponsorship, to expand the American Indian role in its own health care; (c) Increased involvement of private practitioners and facilities in American Indian care, through such mechanisms as agreements with tribal leaders or Indian Health Service contracts, as well as normal private practice relationships; and (d) Improvement in transportation to make access to existing private care easier for the American Indian population.
(2) Federal Facilities: Based on the distribution of the eligible population, transportation facilities and roads, and the availability of alternative nonfederal resources, the AMA recommends that those Indian Health Service facilities currently necessary for American Indian care be identified and that an immediate

construction and modernization program be initiated to bring these facilities up to current standards of practice and accreditation.
(3)Manpower: (a) Compensation for Indian Health Service physicians be increased to a level competitive with other Federal agencies and nongovernmental service; (b) Consideration should be given to increased compensation for service in remote areas; (c) In conjunction with improvement of Service facilities, efforts should be made to establish closer ties with teaching centers, thus increasing both the available manpower and the level of professional expertise available for consultation; (d) Allied health professional staffing of Service facilities should be maintained at a level appropriate to the special needs of the population served; (e) Continuing education opportunities should be provided for those health professionals serving these communities, and especially those in remote areas, and, increased peer contact, both to maintain the quality of care and to avert professional isolation; and (f) Consideration should be given to a federal statement of policy supporting continuation of the Public Health Service to reduce the great uncertainty now felt by many career officers of the corps.
(4)Medical Societies: In those states where Indian Health Service facilities are located, and in counties containing or adjacent to Service facilities, that the appropriate medical societies should explore the possibility of increased formal liaison with local Indian Health Service physicians. Increased support from organized medicine for improvement of health care provided under their direction, including professional consultation and involvement in society activities should be pursued.
(5) Our AMA also support the removal of any requirement for competitive bidding in the Indian Health Service that compromises proper care for the American Indian population.

Principles for Hospital Sponsored Electronic Health Records D-478.973
1. Our AMA will promote electronic health record (EHR) interoperability, data portability, and health IT data exchange testing as a priority of the Office of the National Coordinator for Health Information Technology (ONC).
2. Our AMA will work with EHR vendors to promote transparency of actual costs of EHR implementation, maintenance and interface production.
3. Our AMA will work with the Centers for Medicare and Medicaid Services (CMS) and ONC to identify barriers and potential solutions to data blocking to allow hospitals and physicians greater choice when purchasing, donating, subsidizing, or migrating to new EHRs.
4. Our AMA will advocate that sponsoring institutions providing EHRs to physician practices provide data access and portability to affected physicians if they withdraw support of EHR sponsorship.
Citation: BOT Rep. 1, I-15; Reaffirmed: BOT Rep. 45, A-18; Reaffirmed: BOT Rep. 19, A-18;

Health Information Technology Principles H-478.981
Our AMA will promote the development of effective electronic health records (EHRs) in accordance with the following health information technology (HIT) principles. Effective HIT should:
1. Enhance physiciansability to provide high quality patient care;
2. Support team-based care;
3. Promote care coordination;
4. Offer product modularity and configurability;
5. Reduce cognitive workload;
6. Promote data liquidity;
7. Facilitate digital and mobile patient engagement; and
8. Expedite user input into product design and post-implementation feedback.
Our AMA will AMA utilize HIT principles to:
1. Work with vendors to foster the development of usable EHRs;
2. Advocate to federal and state policymakers to develop effective HIT policy;
3. Collaborate with institutions and health care systems to develop effective institutional HIT policies;
4. Partner with researchers to advance our understanding of HIT usability;
5. Educate physicians about these priorities so they can lead in the development and use of future EHRs that can improve patient care; and
6. Promote the elimination of Information Blocking.
Our AMA policy is that the cost of installing, maintaining, and upgrading information technology should be specifically acknowledged and addressed in reimbursement schedules.
Citation: BOT Rep. 19, A-18; Reaffirmation: A-19;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 704
(A-23)

Introduced by: Medical Student Section

Subject: Interrupted Patient Sleep

Referred to: Reference Committee G

Whereas, Sleep is critical for brain function and systemic physiology[1]; and

Whereas, The most at-risk patients for poor sleep are categorized as acutely ill and hospitalized[2]; and

Whereas, The American Academy of Sleep Medicine notes that hospital and long-term care environments can negatively impact patients' sleep due to nursing care activities such as frequent nocturnal vital signs and tests, and recommends greater focus on sleep health in these populations[3-6,16]; and

Whereas, Hospitalized patients experience disrupted and poor quality sleep with frequent arousals, poor nocturnal sleep efficiency, an increase in stage 2 sleep, a reduction or absence of deep or slow wave sleep, and a reduction or absence of rapid eye movement (REM) sleep[7]; and

Whereas, Hospital noise is a common complaint amongst patients which results in impaired sleep and is associated with adverse outcomes[16]; and

Whereas, Positive correlations were shown between the number of interruptions at night and mean number of as-needed pain medications given, systolic blood pressure, and heart rate at various times[8]; and

Whereas, Sleep disruption can lead to the development of delirium, hypertension, dyslipidemia, cardiovascular disease, metabolic syndrome, type 2 diabetes mellitus, colorectal cancer, lower physical functioning after release from the hospital, higher overall mortality 1-year post discharge, delayed healing, and fatigue, which may hinder patients' participation in recovery activities[1,2,9,10]; and

Whereas, Among medical inpatients, shorter sleep duration and worse sleep efficiency were associated with greater odds of hyperglycemia, which increases the risk of myocardial infarction, stroke, likelihood of admission to the intensive care unit, longer lengths of stay, decreased likelihood to be discharged home compared to patients with known diabetes and those without hyperglycemia[11]; and

Whereas, Interventions decreasing circadian disruptions resulted in shorter length of stay, lower readmission rates, and improved self-reported emotional and mental health for patients[12]; and

Whereas, Sleep intervention bundles which included reduced alarm volume, closing bedroom doors at night, earplugs, eye masks, and light dimming in ICU units are associated with better

sleep, a reduced incidence, duration and risk of developing delirium, and, in 2021, a project aimed at reducing delirium through sleep promotion in 2 inpatient units found that delirium decreased by 33% and 45%, respectively, on the units over 1 year[13-15]; and

Whereas, Sleep improvement projects increased the percentage of patients who self-reported five or more hours of uninterrupted sleep, improved patients' care and sleep experience, and included fewer room entries, fewer minutes of in-room activity, decreased sound during rest time, and empowered patients to ask their providers to minimize nighttime disruptions[16,17,19,20]; and

Whereas, Interventions to minimize sleep disturbances lead to fewer symptoms and significantly lower sleep disturbance scores in antepartum patients, decreased as-needed sedative use by 49%, and led to an increase in sleep-friendly orders, sleep promoting venous thromboembolism prophylaxis, and a decrease in night time disruptions[18,21,22]; and

Whereas, Decreasing nighttime vital sign measurement has been shown to increase patient satisfaction[23]; and

Whereas, A trial that utilized a risk stratification tool to classify patients into high or low risk categories to eliminate overnight vital sign monitoring for low risk patients reported no significant adverse events for low-risk patients[24]; and

Whereas, Our American Medical Association identifies adolescent insufficient sleep and sleepiness as a public health issue (H-60.930) and supports diagnosis and management of sleep and sleep disorders (H-295.894); and

Whereas, Our AMA does not have policy that evaluates or supports current inpatient sleep guidelines to improve patient sleep; therefore be it

RESOLVED, That our American Medical Association encourage physicians, trainees, inpatient care teams, and hospital administration to reduce the number of patient sleep interruptions as much as possible, including considering the impact of circadian and environmental factors on sleep, to only those interruptions which are necessary and cannot be performed at another time (New HOD Policy); and be it further

RESOLVED, That our AMA support efforts to improve quality, duration, and timing of inpatient sleep. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Insufficient Sleep in Adolescents H-60.930

1. Our AMA identifies adolescent insufficient sleep and sleepiness as a public health issue and supports education about sleep health as a standard component of care for adolescent patients.
2. Our AMA: (a) encourages school districts to aim for the start of middle schools and high schools to be no earlier than 8:30 a.m., in order to allow adolescents time for adequate sleep; (b) encourages physicians, especially those who work closely with school districts, to become actively involved in the education of parents, school administrators, teachers, and other members of the community to stress the importance of sleep and consequences of sleep deprivation among adolescents, and to encourage school districts to structure school start times to accommodate the biologic sleep needs of adolescents; and (c) encourages continued research on the impact of sleep on adolescent health and academic performance.

Citation: Res. 503, A-10; Appended: CSAPH Rep. 06, A-16;

Medical Education on Sleep and Sleep Disorders H-295.894

Our AMA supports diagnosis and management of sleep and sleep disorders as an essential and integral component of medical education.

Citation: Res. 310 , I-98; Reaffirmed: CME Rep. 2, A-08; Reaffirmed: CME Rep. 01, A-18;

Light Pollution: Adverse Health Effects of Nighttime Lighting H-135.932

Our AMA:

1. Supports the need for developing and implementing technologies to reduce glare from vehicle headlamps and roadway lighting schemes, and developing lighting technologies at home and at work that minimize circadian disruption, while maintaining visual efficiency.
2. Recognizes that exposure to excessive light at night, including extended use of various electronic media, can disrupt sleep or exacerbate sleep disorders, especially in children and adolescents. This effect can be minimized by using dim red lighting in the nighttime bedroom environment.
3. Supports the need for further multidisciplinary research on the risks and benefits of occupational and environmental exposure to light-at-night.
4. That work environments operating in a 24/7 hour fashion have an employee fatigue risk management plan in place.

Resident/Fellow Clinical and Educational Work Hours H-310.907

Our AMA adopts the following Principles of Resident/Fellow Clinical and Educational Work Hours, Patient Safety, and Quality of Physician Training:

1. Our AMA supports the 2017 Accreditation Council for Graduate Medical Education (ACGME) standards for clinical and educational work hours (previously referred to as “duty hours”).
2. Our AMA will continue to monitor the enforcement and impact of clinical and educational work hour standards, in the context of the larger issues of patient safety and the optimal learning environment for residents.
3. Our AMA encourages publication and supports dissemination of studies in peer-reviewed publications and educational sessions about all aspects of clinical and educational work hours, to include such topics as extended work shifts, handoffs, in-house call and at-home call, level of supervision by attending physicians, workload and growing service demands, moonlighting, protected sleep periods, sleep deprivation and fatigue, patient safety, medical error, continuity of care, resident well-being and burnout, development of professionalism, resident learning outcomes, and preparation for independent practice.
4. Our AMA endorses the study of innovative models of clinical and educational work hour requirements and, pending the outcomes of ongoing and future research, should consider the evolution of specialty- and rotation-specific requirements that are evidence-based and will optimize patient safety and competency-based learning opportunities.
5. Our AMA encourages the ACGME to:

a) Decrease the barriers to reporting of both clinical and educational work hour violations and resident intimidation.

b) Ensure that readily accessible, timely and accurate information about clinical and educational work hours is not constrained by the cycle of ACGME survey visits.

c) Use, where possible, recommendations from respective specialty societies and evidence-based approaches to any future revision or introduction of clinical and educational work hour rules.

d) Broadly disseminate aggregate data from the annual ACGME survey on the educational environment of resident physicians, encompassing all aspects of clinical and educational work hours.

6. Our AMA recognizes the ACGME for its work in ensuring an appropriate balance between resident education and patient safety, and encourages the ACGME to continue to:

a) Offer incentives to programs/institutions to ensure compliance with clinical and educational work hour standards.

b) Ensure that site visits include meetings with peer-selected or randomly selected residents and that residents who are not interviewed during site visits have the opportunity to provide information directly to the site visitor.

c) Collect data on at-home call from both program directors and resident/fellow physicians; release these aggregate data annually; and develop standards to ensure that appropriate education and supervision are maintained, whether the setting is in-house or at-home.

d) Ensure that resident/fellow physicians receive education on sleep deprivation and fatigue.

7. Our AMA supports the following statements related to clinical and educational work hours:
a) Total clinical and educational work hours must not exceed 80 hours per week, averaged over a four-week period (Note: “Total clinical and educational work hours” includes providing direct patient care or supervised patient care that contributes to meeting educational goals; participating in formal educational activities; providing administrative and patient care services of limited or no educational value; and time needed to transfer the care of patients).
b) Scheduled on-call assignments should not exceed 24 hours. Residents may remain on-duty for an additional 4 hours to complete the transfer of care, patient follow-up, and education; however, residents may not be assigned new patients, cross-coverage of other providers’ patients, or continuity clinic during that time.
c) Time spent in the hospital by residents on at-home call must count towards the 80-hour maximum weekly hour limit, and on-call frequency must not exceed every third night averaged over four weeks. The frequency of at-home call is not subject to the every-third-night limitation, but must satisfy the requirement for one-day-in-seven free of duty, when averaged over four weeks.
d) At-home call must not be so frequent or taxing as to preclude rest or reasonable personal time for each resident.
e) Residents are permitted to return to the hospital while on at-home call to care for new or established patients. Each episode of this type of care, while it must be included in the 80-hour weekly maximum, will not initiate a new “off-duty period.”
f) Given the different education and patient care needs of the various specialties and changes in resident responsibility as training progresses, clinical and educational work hour requirements should allow for flexibility for different disciplines and different training levels to ensure appropriate resident education and patient safety; for example, allowing exceptions for certain disciplines, as appropriate, or allowing a limited increase to the total number of clinical and educational work hours when need is demonstrated.
g) Resident physicians should be ensured a sufficient duty-free interval prior to returning to duty.
h) Clinical and educational work hour limits must not adversely impact resident physician participation in organized educational activities. Formal educational activities must be scheduled and available within total clinical and educational work hour limits for all resident physicians.
i) Scheduled time providing patient care services of limited or no educational value should be minimized.
j) Accurate, honest, and complete reporting of clinical and educational work hours is an essential element of medical professionalism and ethics.
k) The medical profession maintains the right and responsibility for self-regulation (one of the key tenets of professionalism) through the ACGME and its purview over graduate medical education, and categorically rejects involvement by the Centers for Medicare & Medicaid Services, The Joint Commission, Occupational Safety and Health Administration, and any other federal or state government bodies in the monitoring and enforcement of clinical and educational work hour regulations, and opposes any regulatory or legislative proposals to limit the work hours of practicing physicians.
l) Increased financial assistance for residents/fellows, such as subsidized child care, loan deferment, debt forgiveness, and tax credits, may help mitigate the need for moonlighting. At the same time, resident/fellow physicians in good standing with their programs should be afforded the opportunity for internal and external moonlighting that complies with ACGME policy.
m) Program directors should establish guidelines for scheduled work outside of the residency program, such as moonlighting, and must approve and monitor that work such that it does not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
n) The costs of clinical and educational work hour limits should be borne by all health care payers. Individual resident compensation and benefits must not be compromised or decreased as a result of changes in the graduate medical education system.
o) The general public should be made aware of the many contributions of resident/fellow physicians to high-quality patient care and the importance of trainees’ realizing their limits (under proper supervision) so that they will be able to competently and independently practice under real-world medical situations.
8. Our AMA is in full support of the collaborative partnership between allopathic and osteopathic professional and accrediting bodies in developing a unified system of residency/fellowship accreditation for all residents and fellows, with the overall goal of ensuring patient safety.
9. Our AMA will actively participate in ongoing efforts to monitor the impact of clinical and educational work hour limitations to ensure that patient safety and physician well-being are not jeopardized by excessive demands on post-residency physicians, including program directors and attending physicians.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 705
(A-23)

Introduced by: Senior Physicians Section

Subject: Aging and Dementia Friendly Health Systems

Referred to: Reference Committee G

Whereas, The *AMA Principles of Medical Ethics* encourages participation in activities to improve community and public health as well as access to medical care for all people"[1]; and

Whereas, Dementia and related diagnoses affect inexorably growing numbers of American seniors; and

Whereas, Immediately addressing long-term care services and support systems for seniors would allow for adjustments to best accommodate future demographic shifts; and

Whereas, Documentation on relative costs of home care versus facility-based nursing care for patients with dementia indicates that home care is more cost effective[2]; and

Whereas, AMA policies address health care in the home as well as cost-effectiveness/cost-benefit of assisted in-home versus nursing home care for Alzheimer's disease and related disorders; and

Whereas, The John A. Hartford Foundation and the Institute for Healthcare Improvement have released comprehensive evidence-based guidance for healthcare professionals entitled: *Age-Friendly Health Systems: A Guide to Using the 4Ms While Caring for Older Adults*, which highlights, "What Matters," "Medications," "Mentation," and "Mobility,"[3]; and

Whereas, Cost-effective, equitable, and quality health care for all may be achieved by comprehensive education, community grants for long-term home-care services, and appropriate support systems for seniors; and

Whereas, Development of dementia friendly communities may permit patients and families living with dementia to improve health outcomes; therefore be it

RESOLVED, That our American Medical Association lobby Congress, state legislatures and appropriate organizations to expand community and home-based services to promote and support "aging in place" (Directive to Take Action); and be it further

RESOLVED, That our AMA develop educational resources for all health care professionals about ways that successful outcomes have been achieved to appropriately support patients as they age including those with dementia both in their homes as well as in health care systems. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 4/26/23

RELEVANT AMA POLICY

Physicians and Family Caregivers: Shared Responsibility H-210.980

Our AMA: (1) specifically encourages medical schools and residency programs to prepare physicians to assess and manage caregiver stress and burden;
(2) continues to support health policies that facilitate and encourage health care in the home;
(3) reaffirm support for reimbursement for physician time spent in educating and counseling caregivers and/or home care personnel involved in patient care;
(4) supports research that identifies the types of education, support services, and professional caregiver roles needed to enhance the activities and reduce the burdens of family caregivers, including caregivers of patients with dementia, addiction and other chronic mental disorders; and
(5) (a) encourages partner organizations to develop resources to better prepare and support lay caregivers; and (b) will identify and disseminate resources to promote physician understanding of lay caregiver burnout and develop strategies to support lay caregivers and their patients.

Alzheimer's Disease H-25.991

Our AMA:
(1) encourages physicians to make appropriate use of guidelines for clinical decision making in the diagnosis and treatment of Alzheimer's disease and other dementias;
(2) encourages physicians to make available information about community resources to facilitate appropriate and timely referral to supportive caregiver services;
(3) encourages studies to determine the comparative cost-effectiveness/cost-benefit of assisted in-home care versus nursing home care for patients with Alzheimer's disease and related disorders;
(4) encourages studies to determine how best to provide stable funding for the long-term care of patients with Alzheimer's disease and other dementing disorders;
(5) supports the use of evidence-based cost-effective technologies with prior consent of patients or designated healthcare power of attorney, as a solution to prevent, identify, and rescue missing patients with Alzheimer's disease and other related dementias with the help of appropriate allied specialty organizations;
(6) supports increased awareness of the sex and gender differences in incidence and etiology of Alzheimer's disease and related dementias; and
(7) encourages increased enrollment in clinical trials of appropriate patients with Alzheimer's disease and related dementias, and their families, to better identify sex-differences in incidence and progression and to advance a treatment and cure of Alzheimer's disease and related dementias.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 706
(A-23)

Introduced by:	Medical Student Section
Subject:	Revision of H-185.921, Removal of AMA Support for Applied Behavior Analysis
Referred to:	Reference Committee G

Whereas, A 2018 study from the Centers for Disease Control and Prevention (CDC) estimated the prevalence of autism spectrum disorder (ASD) among adults aged 8 years to be 1 in 44[1]; and

Whereas, Applied Behavioral Analysis (ABA) is currently the most widely available and commonly used state-funded form of autism therapy in Canada and the United States[2,3]; and

Whereas, Autism treatment represents a fragmented industry that consists of a mixture of for-profit and nonprofit organizations, with the top nine for-profit chains estimated to have a combined revenue of $547 million and a market value close to $2 billion with future growth expected[4]; and

Whereas, An ABA software company reports over 3 billion in claims processed annually for about 1,300 practices highlighting the prevalence of ABA use as an intervention for individuals with autism[5]; and

Whereas, Autism Speaks lists 3,194 centers across the United States who offer ABA therapy as of 2022[6]; and

Whereas, ABA was conceived in 1961 by Dr. Ole Ivar Lovaas to condition neurotypical behaviors in children he viewed as “incomplete humans”[7–10]; and

Whereas, Desired behavior is often defined by the adult or behaviorist without input or requirement of consent from the child and may include non-harmful stimming or coping behaviors[2,3,8,11,12]; and

Whereas, ABA uses behavior modification techniques to eliminate behaviors deemed undesirable[2,8,11–14]; and

Whereas, ABA practices are historically based in abuse such as holding autistic children's communication hostage through the use of their devices as leverage, and denying basic rights such as food and toileting privileges[2,3,8,11,14–18]; and

Whereas, Modern ABA still abides by the founding principle of making a child appear “normal” or “indistinguishable from one’s peers”, which serves to separate the humanity of the individual with autism from desired behaviors[2,8,15]; and

Whereas, A 2018 study found that Adults with autism who have received ABA are more prone to suicide[19]; and

Whereas, ABA has been repeatedly linked to Post Traumatic Stress Disorder (PTSD), with 46% of 460 ABA participants meeting the diagnostic threshold for PTSD in an online survey[20]; and

Whereas, Adults with autism have been continuously outspoken about the trauma incurred by ABA practices experienced in their childhood[2,14,16–18]; and

Whereas, A 2012 literature review found the evidence base for services for adults with an ASD to be underdeveloped[21]; and

Whereas, A 2018 Cochrane review recommend further research after reporting very weak evidence in support of ABA[22]; and

Whereas, A 2022 informal online community survey found that 71% of adults with autism responded “disagree” or “strongly disagree” to the statement “Generally speaking, I support ABA therapy for autistic children”[23]; and

Whereas, A 2020 Department of Defense report demonstrated a lack of correlation between improvement in symptoms and hours of direct ABA services, found that the improvements recorded were due to reasons other than ABA services, and ABA services did not meet the TRICARE hierarchy of evidence standard for medical and proven care[24]; and

Whereas, A 2021 study on conflicts of interest (COIs) in autism early intervention research found COIs to be prevalent and under-reported, with 70% of studies containing a conflict of interest and less than 6% declaring them as such[25]; and

Whereas, Current research supports alternatives to ABA such as the Developmental, Individual Differences, and Relationship-based (DIRTM) program, the PLAY Project, individualized Early Social Interaction (ESI) and, Social Communication, Emotional Regulation, and Transactional Support (SCERTSTM)[24,26–29]; and

Whereas, Current AMA policy supports the use of ABA through its advocation of coverage of ABA and the evidence-based treatment for autism and fails to recognize its harms or controversial nature within the community at large; therefore be it

RESOLVED, That our American Medical Association support research towards the evaluation and the development of interventions and programs for autistic individuals (New HOD Policy); and be it further

RESOLVED, That our AMA work with relevant stakeholders to advocate for a comprehensive spectrum of primary and specialty care that recognizes the diversity and personhood of individuals who are neurodivergent, including people with autism (Directive to Take Action); and be it further

RESOLVED, That our AMA amend Policy H-185.921 "Standardizing Coverage of Applied Behavioral Analysis Therapy for Persons with Autism Spectrum Disorder" by addition and deletion as follows:

Standardizing Coverage ~~of Applied Behavioural Analysts Therapy~~ for Persons with Autism Spectrum Disorder, H-185.921

Our AMA supports coverage and reimbursement for evidence-based ~~treatment of~~ services for Autism Spectrum Disorder ~~including, but not limited to, Applied Behavior Analysis Therapy~~. (Modify Current HOD Policy)

Fiscal Note: Not yet determined.

Community-Based Treatment Centers H-160.963
Our AMA supports the use of community-based treatment centers for substance use disorders, mental health disorders and developmental disabilities.
Citation: BOT Rep. F, I-91; Reaffirmed: Sunset Report, I-01; Modified: CSAPH Rep. 1, A-11; Modified: CSAPH Rep. 1, A-21;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 707
(A-23)

Introduced by: American Academy of Physical Medicine & Rehabilitation
American Association of Neuromuscular & Electrodiagnostic Medicine

Subject: Expediting Repairs for Power and Manual Wheelchairs

Referred to: Reference Committee G

Whereas, Patients with neuromusculoskeletal weakness or other disabilities, such as amputations, paralysis, cerebral palsy, stroke, traumatic brain injury, multiple sclerosis, muscular dystrophy, arthritis, and spinal cord injury, who are unable to walk must use wheeled mobility devices in their homes and in their communities; and

Whereas, Power and manual wheelchairs are medically necessary specialized equipment used by individuals with mobility disabilities and designed to help individuals perform activities of daily living (ADLs) to the fullest extent possible; and

Whereas, The process of qualifying for power and manual wheelchairs is well established and requires physician certification of medical necessity, and for more complex wheelchairs, requires a comprehensive evaluation of long-term need for the device; and

Whereas, The Medicare program and many other payors will not replace a power or manual wheelchair unless it is more than five years old; and

Whereas, Medicare and most other payors currently do not cover preventative maintenance of power and manual wheelchairs; and

Whereas, There are more than five million wheelchair users in the United States and of those users, many will require some type of wheelchair repair during the five-year useful life of the mobility device[1,2]; and

Whereas, Prompt action is needed when the patient's power or manual wheelchair is in need of repairs in order to operate safely, return to work or school, enable the patient to get out of bed, move about the home, perform activities of daily living, or participate in community activities; and

Whereas, Prolonged bedrest or inactivity due to lack of a safely operating power or manual wheelchair can result in multiple medical complications for the patient including, but not limited to, pressure sores, pneumonia, increased weakness, depression; and

Whereas, The wheelchair repair process is currently flawed and causes delays in repairs due to multiple factors including payors' requirements for unnecessary documentation, such as prior authorization and new prescriptions, inadequate reimbursement policies to compensate suppliers for the costs of repairs, such as uncompensated labor and costs of travel to the patient's home to repair the wheelchair and the replacement or repair parts, and delays in availability of replacement or repair parts due to supply chain issues; and

Whereas, Most payors, except Medicare and the Veterans Administration, do not pay for a substitute rental wheelchair while the patient's own wheelchair is being repaired; therefore be it

RESOLVED, That our American Medical Association encourage all payors to improve the process of and reduce barriers to patients obtaining wheelchair repairs for patient-owned power and manual wheelchairs, to ensure that repairs and services are safe, affordable, and timely, and support mobility and independence for those who utilize power and manual wheelchairs (New HOD Policy); and be it further

RESOLVED, That our AMA encourage all payors to eliminate unnecessary paperwork including requiring prior authorization for basic repairs and proof of continuous need for patient-owned power and manual wheelchairs (New HOD Policy); and be it further

RESOLVED, That our AMA encourage all payors to add coverage and payment for

(1) temporary rental of a substitute wheelchair when repairs require the primary wheelchair to be taken out of the home;
(2) preventive maintenance; and
(3) travel to and from the patient's home when the patient cannot transport the wheelchair to a repair facility (New HOD Policy); and be it further

RESOLVED, That our AMA encourage all suppliers of power and manual wheelchairs to service wheelchairs they supply to patients and to permit consumers to perform simple self-repairs and have access to necessary parts. (New HOD Policy)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/2/23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 708
(A-23)

Introduced by: American College of Gastroenterology
American Gastroenterological Association
American Society for Gastrointestinal Endoscopy

Subject: UnitedHealthcare Comprehensive Prior Authorization for Gastrointestinal Endoscopy Procedures

Referred to: Reference Committee G

Whereas, As of June 1, 2023, UnitedHealthcare (UHC) requires prior authorization for all diagnostic and surveillance colonoscopies, esophagogastroduodenoscopies (EGDs), and capsule endoscopies; and

Whereas, This policy is contradictory to UHC's announced plans to eliminate 20% of its current prior authorizations starting the summer of 2023 and introduce a "Gold Card" program in 2024; and

Whereas, The American Medical Association 2021 Prior Authorization Physician Survey revealed that[1];

- 93% of physicians report care delays as a result of your authorization.
- 82% of physicians report prior authorization can lead to treatment abandonment.
- 34% of physicians reported prior authorization has led to a serious adverse event.
- 51% of physicians report prior authorization has interfered with a patient's ability to perform their job responsibilities; and

Whereas, The AMA 2021 Prior Authorization Physician Survey also reveals that physicians complete an average of 45 prior authorizations a week[1]; and

Whereas, The AMA's current position is that prior authorization, if used at all, must be used judiciously, efficiently, and in a manner that prevents cost-shifting onto patients, physicians and other providers[2] and discourages volume reduction solutions such as the elimination of prior authorization requirements for regularly approved care, gold-carding programs, and other exemption programs[3]; and

Whereas, The Office of Inspector General (OIG) review of Medicare Advantage Organizations (MAOs) appealed preauthorization and payment denials, MAOs overturned 75 percent of their own denials. The OIG also found that beneficiaries and providers appealed only 1 percent of denials to the first level of appeal[6]; and

Whereas, A 2022 American College of Gastroenterology survey found that more than 50% of members surveyed reported that prior authorization led to a serious adverse event in patients[4] and a 2022 American Gastroenterological Association survey found that 56% of members reported that prior authorization restrictions have "significantly" impacted patient access to clinically appropriate treatments and patient clinical outcomes[18]; and

Whereas, It also revealed that the alternative treatments were less effective, more costly to patients, less tolerable and/or supported by a lower level of clinical evidence[4]; and

Whereas, 2022 AMA data reveal 46% of respondents reported that prior authorization policies led to urgent or emergency care for patients and 86% reported prior authorization led to higher utilization of healthcare resources[5]; and

Whereas, All of the procedures flagged for prior authorization by UHC have robust multi-society clinical guidelines and quality indicators that can be used with a directed utilization review policy[7,8,9,10,11,12,13,14,15]; and

Whereas, This UHC policy is a blanket obstruction to the practice of diagnostic and therapeutic endoscopy rather than a directed utilization review of suspected outliers. AMA Prior Authorization and Utilization Principle #19 states "Health plans should restrict utilization management programs to "outlier" providers whose prescribing or ordering patterns differ significantly from their peers after adjusting for patient mix and other relevant factors" [16]; and

Whereas, The AMA, AHA, AHIP, BCBS, MGMA and the APhA have agreed to a Consensus Statement on Improving the Prior Authorization Process including an agreement to "Encourage the use of programs that selectively implement prior authorization requirements based on stratification of health care providers' performance and adherence to evidence-based medicine" [7]; and

Whereas, UHC has failed to provide, and denied access to, any documentation showing recent evidence of overutilization or to identify specific CPT procedure codes of concern in spite of multiple requests; and

Whereas, A coalition of over 90 patient advocacy groups, national and state medical associations urged UHC not to move forward with these prior authorization rules, due to the significant impact on access to care and to the patient-physician relationship; therefore be it

RESOLVED, That our American Medical Association strongly advocate with all state and federal agencies for the cancellation of UHC's 2023 blanket prior authorization policy directed at endoscopic procedures in favor of a directed utilization review of presumed outliers (Directive to Take Action); and be it further

RESOLVED, That our AMA redouble its efforts to promote state laws such as the AMA's example "Ensuring Transparency in Prior Authorization Act" (Directive to Take Action); and be it further

RESOLVED, That our AMA communicate with the various state insurance commissioners concerning UHC's prior authorization policy change, which has the potential to adversely affect access, quality, and equity of G.I. patient care. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Approaches to Increase Payer Accountability H-320.968

Our AMA supports the development of legislative initiatives to assure that payers provide their insureds with information enabling them to make informed decisions about choice of plan, and to assure that payers take responsibility when patients are harmed due to the administrative requirements of the plan. Such initiatives should provide for disclosure requirements, the conduct of review, and payer accountability.

(1) Disclosure Requirements. Our AMA supports the development of model draft state and federal legislation to require disclosure in a clear and concise standard format by health benefit plans to prospective enrollees of information on (a) coverage provisions, benefits, and exclusions; (b) prior authorization or other review requirements, including claims review, which may affect the provision or coverage of services; (c) plan financial arrangements or contractual provisions that would limit the services offered, restrict referral or treatment options, or negatively affect the physician's fiduciary responsibility to his or her patient; (d) medical expense ratios; and (e) cost of health insurance policy premiums. (Ref. Cmt. G, Rec. 2, A-96; Reaffirmation A-97)

(2) Conduct of Review. Our AMA supports the development of additional draft state and federal legislation to: (a) require private review entities and payers to disclose to physicians on request the screening criteria, weighting elements and computer algorithms utilized in the review process, and how they were developed; (b) require that any physician who recommends a denial as to the medical necessity of services on behalf of a review entity be of the same specialty as the practitioner who provided the services under review; (c) Require every organization that reviews or contracts for review of the medical

necessity of services to establish a procedure whereby a physician claimant has an opportunity to appeal a claim denied for lack of medical necessity to a medical consultant or peer review group which is independent of the organization conducting or contracting for the initial review; (d) require that any physician who makes judgments or recommendations regarding the necessity or appropriateness of services or site of service be licensed to practice medicine in the same jurisdiction as the practitioner who is proposing the service or whose services are being reviewed; (e) require that review entities respond within 48 hours to patient or physician requests for prior authorization, and that they have personnel available by telephone the same business day who are qualified to respond to other concerns or questions regarding medical necessity of services, including determinations about the certification of continued length of stay; (f) require that any payer instituting prior authorization requirements as a condition for plan coverage provide enrollees subject to such requirements with consent forms for release of medical information for utilization review purposes, to be executed by the enrollee at the time services requiring such prior authorization are recommended or proposed by the physician; and (g) require that payers compensate physicians for those efforts involved in complying with utilization review requirements that are more costly, complex and time consuming than the completion of standard health insurance claim forms. Compensation should be provided in situations such as obtaining preadmission certification, second opinions on elective surgery, and certification for extended length of stay.
(3) Accountability. Our AMA believes that draft federal and state legislation should also be developed to impose similar liability on health benefit plans for any harm to enrollees resulting from failure to disclose prior to enrollment the information on plan provisions and operation specified under Section 1 (a)-(d) above.

Payer Accountability H-320.982
Our AMA: (1) Urges that state medical associations and national medical specialty societies to utilize the joint Guidelines for Conduct of Prior Authorization Programs and Guidelines for Claims Submission, Review and Appeals Procedures in their discussions with payers at both the national and local levels to resolve physician/payer problems on a voluntary basis.
(2) Reaffirms the following principles for evaluation of preadmission review programs, as adopted by the House of Delegates at the 1986 Annual Meeting: (a) Blanket preadmission review of all or the majority of hospital admissions does not improve the quality of care and should not be mandated by government, other payers, or hospitals. (b) Policies for review should be established by state or local physician review committees, and the actual review should be performed by physicians or under the close supervision of physicians. (c) Adverse decisions concerning hospital admissions should be finalized only by physician reviewers and only after the reviewing physician has discussed the case with the attending physician. (d) All preadmission review programs should provide for immediate hospitalization, without prior authorization, of any patient whose treating physician determines the admission to be of an emergency nature. (e) No preadmission review program should make a payment denial based solely on the failure to obtain preadmission review or solely on the fact that hospitalization occurred in the face of a denial for such admission.
(3) Affirms as policy and advocates to all public and private payers the right of claimants to review by a physician of the same general specialty as the attending physician of any claim or request for prior authorization denied on the basis of medical necessity.

Prior Authorization and Utilization Management Reform H-320.939
1. Our AMA will continue its widespread prior authorization (PA) advocacy and outreach, including promotion and/or adoption of the Prior Authorization and Utilization Management Reform Principles, AMA model legislation, Prior Authorization Physician Survey and other PA research, and the AMA Prior

Authorization Toolkit, which is aimed at reducing PA administrative burdens and improving patient access to care.
2. Our AMA will oppose health plan determinations on physician appeals based solely on medical coding and advocate for such decisions to be based on the direct review of a physician of the same medical specialty/subspecialty as the prescribing/ordering physician.
3. Our AMA supports efforts to track and quantify the impact of health plans' prior authorization and utilization management processes on patient access to necessary care and patient clinical outcomes, including the extent to which these processes contribute to patient harm.
4. Our AMA will advocate for health plans to minimize the burden on patients, physicians, and medical centers when updates must be made to previously approved and/or pending prior authorization requests.

Fair Reimbursement for Administrative Burdens D-320.978
Our AMA will: (1) continue its strong state and federal legislative advocacy efforts to promote legislation that streamlines the prior authorization process and reduces the overall volume of prior authorizations for physician practices; (2) continue partnering with patient advocacy groups in prior authorization reform efforts to reduce patient harms, including care delays, treatment abandonment, and negative clinical outcomes; (3) oppose inappropriate payer policies and procedures that deny or delay medically necessary drugs and medical services; and (4) advocate for fair reimbursement of established and future CPT codes for administrative burdens related to (a) the prior authorization process or (b) appeals or denials of services (visits, tests, procedures, medications, devices, and claims), whether pre- or post-service denials.
Citation: Res. 701, A-22;

Promoting Accountability in Prior Authorization D-285.960
Our AMA will: (1) advocate that peer-to-peer (P2P) prior authorization (PA) determinations must be made and actionable at the end of the P2P discussion notwithstanding mitigating circumstances, which would allow for a determination within 24 hours of the P2P discussion; (2) advocate that the reviewing P2P physician must have the clinical expertise to treat the medical condition or disease under review and have knowledge of the current, evidence-based clinical guidelines and novel treatments; (3) advocate that P2P PA reviewers follow evidence-based guidelines consistent with national medical specialty society guidelines where available and applicable; (4) continue to advocate for a reduction in the overall volume of health plans' PA requirements and urge temporary suspension of all PA requirements and the extension of existing approvals during a declared public health emergency; (5) advocate that health plans must undertake every effort to accommodate the physician's schedule when requiring peer-to-peer prior authorization conversations; and (6) advocate that health plans must not require prior authorization on any medically necessary surgical or other invasive procedure related or incidental to the original procedure if it is furnished during the course of an operation or procedure that was already approved or did not require prior authorization.
Citation: CMS Rep. 4, A-21;

Managed Care H-285.998
(1) Introduction The needs of patients are best served by free market competition and free choice by physicians and patients between alternative delivery and financing systems, with the growth of each system determined not by preferential regulation and subsidy, but by the number of persons who prefer that mode of delivery or financing.
(2) Definition "Managed care" is defined as those processes or techniques used by any entity that delivers, administers, and/or assumes risk for health care services in order to control or influence the quality, accessibility, utilization, or costs and prices or outcomes of such services provided to a defined enrollee population.
(3) Techniques Managed care techniques currently employed include any or all of the following: (a) prior, concurrent, or retrospective review of the quality, medical necessity, and/or appropriateness of services or the site of services; (b) controlled access to and/or coordination of services by a case manager; (c) efforts to identify treatment alternatives and to modify benefits for patients with high cost conditions; (d) provision of services through a network of contracting providers, selected and deselected on the basis of standards related to cost-effectiveness, quality, geographic location, specialty, and/or other criteria; (e) enrollee

financial incentives and disincentives to use such providers, or specific service sites; and (f) acceptance by participating providers of financial risk for some or all of the contractually obligated services, or of discounted fees.

(4) Case Management Health plans using the preferred provider concept should not use coverage arrangements which impair the continuity of a patient's care across different treatment settings.

With the increased specialization of modern health care, it is advantageous to have one individual with overall responsibility for coordinating the medical care of the patient. The physician is best suited by professional preparation to assume this leadership role.

The primary goal of high-cost case management or benefits management programs should be to help to arrange for the services most appropriate to the patient's needs; cost containment is a legitimate but secondary objective. In developing an alternative treatment plan, the benefits manager should work closely with the patient, attending physician, and other relevant health professionals involved in the patient's care.

Any health plan which makes available a benefits management program for individual patients should not make payment for services contingent upon a patient's participation in the program or upon adherence to treatment recommendations.

(5) Utilization Review The medical protocols and review criteria used in any utilization review or utilization management program must be developed by physicians. Public and private payers should be required to disclose to physicians on request the screening and review criteria, weighting elements, and computer algorithms utilized in the review process, and how they were developed.

A physician of the same specialty must be involved in any decision by a utilization management program to deny or reduce coverage for services based on questions of medical necessity. All health plans conducting utilization management or utilization review should establish an appeals process whereby physicians, other health care providers, and patients may challenge policies restricting access to specific services and decisions to deny coverage for services, and have the right to review of any coverage denial based on medical necessity by a physician independent of the health plan who is of the same specialty and has appropriate expertise and experience in the field.

A physician whose services are being reviewed for medical necessity should be provided the identity of the reviewing physician on request. Any physician who makes judgments or recommendations regarding the necessity or appropriateness of services or site of services should be licensed to practice medicine and actively practicing in the same jurisdiction as the practitioner who is proposing or providing the reviewed service and should be professionally and individually accountable for his or her decisions.

All health benefit plans should be required to clearly and understandably communicate to enrollees and prospective enrollees in a standard disclosure format those services which they will and will not cover and the extent of coverage for the former. The information disclosed should include the proportion of plan income devoted to utilization management, marketing, and other administrative costs, and the existence of any review requirements, financial arrangements or other restrictions that may limit services, referral or treatment options, or negatively affect the physician's fiduciary responsibility to his or her patients. It is the responsibility of the patient and his or her health benefits plan to inform the treating physician of any coverage restrictions imposed by the plan.

All health plans utilizing managed care techniques should be subject to legal action for any harm incurred by the patient resulting from application of such techniques. Such plans should also be subject to legal action for any harm to enrollees resulting from failure to disclose prior to enrollment any coverage provisions; review requirements; financial arrangements; or other restrictions that may limit services, referral, or treatment options, or negatively affect the physician's fiduciary responsibility to his or her patient.

When inordinate amounts of time or effort are involved in providing case management services required by a third party payer which entail coordinating access to other health care services needed by the patient, or in complying with utilization review requirements, the physician may charge the payer or the patient for the reasonable cost incurred. "Inordinate" efforts are defined as those "more costly, complex and time-consuming than the completion of standard health insurance claim forms, such as obtaining preadmission certification, second opinions on elective surgery, certification for extended length of stay, and other authorizations as a condition of payer coverage."

Any health plan or utilization management firm conducting a prior authorization program should act within two business days on any patient or physician request for prior authorization and respond within one business day to other questions regarding medical necessity of services. Any health plan requiring prior authorization for covered services should provide enrollees subject to such requirements with consent forms for release of medical information for utilization review purposes, to be executed by the enrollee at

the time services requiring prior authorization are recommended by the physicians.
In the absence of consistent and scientifically established evidence that preadmission review is cost-saving or beneficial to patients, the AMA strongly opposes the use of this process.

Remuneration for Physician Services H-385.951
1. Our AMA actively supports payment to physicians by contractors and third party payers for physician time and efforts in providing case management and supervisory services, including but not limited to coordination of care and office staff time spent to comply with third party payer protocols.
2. It is AMA policy that insurers pay physicians fair compensation for work associated with prior authorizations, including pre-certifications and prior notifications, that reflects the actual time expended by physicians to comply with insurer requirements and that compensates physicians fully for the legal risks inherent in such work.
3. Our AMA urges insurers to adhere to the AMA's Health Insurer Code of Conduct Principles including specifically that requirements imposed on physicians to obtain prior authorizations, including pre-certifications and prior notifications, must be minimized and streamlined and health insurers must maintain sufficient staff to respond promptly.

Require Payers to Share Prior Authorization Cost Burden D-320.980
Our AMA will petition the Centers for Medicare and Medicaid Services to require the precertification process to include a one-time standard record of identifying information for the patient and insurance company representative to include their name, medical degree and NPI number.
Citation: Res. 811, I-19; Reaffirmation: A-22;

Administrative Simplification in the Physician Practice D-190.974
1. Our AMA strongly encourages vendors to increase the functionality of their practice management systems to allow physicians to send and receive electronic standard transactions directly to payers and completely automate their claims management revenue cycle and will continue to strongly encourage payers and their vendors to work with the AMA and the Federation to streamline the prior authorization process.
2. Our AMA will continue its strong leadership role in automating, standardizing and simplifying all administrative actions required for transactions between payers and providers.
3. Our AMA will continue its strong leadership role in automating, standardizing, and simplifying the claims revenue cycle for physicians in all specialties and modes of practice with all their trading partners, including, but not limited to, public and private payers, vendors, and clearinghouses.
4. Our AMA will prioritize efforts to automate, standardize and simplify the process for physicians to estimate patient and payer financial responsibility before the service is provided, and determine patient and payer financial responsibility at the point of care, especially for patients in high-deductible health plans.
5. Our AMA will continue to use its strong leadership role to support state and specialty society initiatives to simplify administrative functions.
6. Our AMA will continue its efforts to ensure that physicians are aware of the value of automating their claims cycle.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 709
(A-23)

Introduced by: Medical Student Section

Subject: Hospital Bans on Trial of Labor After Cesarean

Referred to: Reference Committee G

Whereas, Trial of labor after cesarean (TOLAC) is a procedure where women who have undergone a previous cesarean section undergo trial of vaginal birth; and

Whereas, Many hospitals ban the practice of TOLAC[1-3]; and

Whereas, Hospital bans on TOLAC increase the number of unnecessary cesarean sections because women eligible for vaginal birth are not given the opportunity for TOLAC[4]; and

Whereas, Women may have to travel far distances to find a hospital or provider that is willing to let them attempt TOLAC[5]; and

Whereas, Cesarean section rates are at a medically unjustifiable level, reaching 32% of all United States births in 2017[6-8]; and

Whereas, Cesarean sections are major surgeries that have inherent risks for the mother not associated with vaginal birth, such as increased risk of blood loss, hysterectomy, and preterm delivery for future pregnancies[9]; and

Whereas, Vaginal births result in decreased rates of respiratory distress and other complications for newborns as compared to cesarean section births[10,11]; and

Whereas, While relative risk of uterine rupture is higher for women undergoing TOLAC than elective repeat cesarean deliveries (ERCD), the absolute risk remains low at 0.47%[12]; and

Whereas, There are no significantly different rates of hemorrhage, hysterectomy, or infection between women undergoing TOLAC versus ERCD[12]; and

Whereas, TOLAC is associated with lower risk of maternal mortality at 3.8 deaths per 100,000 deliveries than ERCD at 13.4 deaths per 100,000 deliveries, showing it to be a safe option for women with no contraindications[13]; and

Whereas, The American College of Obstetrics and Gynecology recommends TOLAC at hospitals that provide at least basic maternal care[14,15]; and

Whereas, TOLAC is a viable alternative to cesarean section that should be considered during the antepartum course of care and be part of the physician-patient decision process[16]; and

Whereas, Opinion 1.1.3 in the AMA Code of Medical Ethics states that choice in treatment allows patient control and autonomy over their healthcare decisions; and

Whereas, Hospital bans on TOLAC infringe on patient autonomy by preventing providers from respecting patient choice; and

Whereas, Hospital policies regarding TOLAC are not always easily accessible to patients[3,17]; and

Whereas, Opinion 1.1.1 in the AMA Code of Medical Ethics supports shared decision making between patient and physician in order to help patients make informed decisions about their health care; therefore be it

RESOLVED, That our American Medical Association support the elimination of broad hospital-based restrictions that prevent physicians from offering a trial of labor after cesarean to their patients when medically appropriate (New HOD Policy); and be it further

RESOLVED, That our AMA encourage hospitals to establish clear and transparent policies on trial of labor after cesarean in order to improve the process of patient-physician shared decision-making. (New HOD Policy)

Fiscal Note: Not yet determined.

Received: 5/1/23

RELEVANT AMA POLICY

E-1.1.1 Patient-Physician Relationships
The practice of medicine, and its embodiment in the clinical encounter between a patient and a physician, is fundamentally a moral activity that arises from the imperative to care for patients and to alleviate suffering. The relationship between a patient and a physician is based on trust, which gives rise to physicians' ethical responsibility to place patients' welfare above the physician's own self-interest or obligations to others, to use sound medical judgment on patients' behalf, and to advocate for their patients' welfare.

A patient-physician relationship exists when a physician serves a patient's medical needs. Generally, the relationship is entered into by mutual consent between physician and patient (or surrogate). However, in certain circumstances a limited patient-physician relationship may be created without the patient's (or surrogate's) explicit agreement. Such circumstances include:
(a) When a physician provides emergency care or provides care at the request of the patient's treating physician. In these circumstances, the patient's (or surrogate's) agreement to the relationship is implicit.
(b) When a physician provides medically appropriate care for a prisoner under court order, in keeping with ethics guidance on court-initiated treatment.
(c) When a physician examines a patient in the context of an independent medical examination, in keeping with ethics guidance. In such situations, a limited patient-physician relationship exists.
Issued: 2016

E-1.1.3 Patient Rights
The health and well-being of patients depends on a collaborative effort between patient and physician in a mutually respectful alliance. Patients contribute to this alliance when they fulfill responsibilities they have, to seek care and to be candid with their physicians, for example.

Physicians can best contribute to a mutually respectful alliance with patients by serving as their patients' advocates and by respecting patients' rights. These include the right:
(a) To courtesy, respect, dignity, and timely, responsive attention to his or her needs.
(b) To receive information from their physicians and to have opportunity to discuss the benefits, risks, and costs of appropriate treatment alternatives, including the risks, benefits and costs of forgoing treatment. Patients should be able to expect that their physicians will provide guidance about what they consider the optimal course of action for the patient based on the physician's objective professional judgment.
(c) To ask questions about their health status or recommended treatment when they do not fully understand what has been described and to have their questions answered.
(d) To make decisions about the care the physician recommends and to have those decisions respected. A patient who has decision-making capacity may accept or refuse any recommended medical intervention.
(e) To have the physician and other staff respect the patient's privacy and confidentiality.
(f) To obtain copies or summaries of their medical records.
(g) To obtain a second opinion.
(h) To be advised of any conflicts of interest their physician may have in respect to their care.
(i) To continuity of care. Patients should be able to expect that their physician will cooperate in coordinating medically indicated care with other health care professionals, and that the physician will not discontinue treating them when further treatment is medically indicated without giving them sufficient notice and reasonable assistance in making alternative arrangements for care.
Issued: 2016

Obstetrical Delivery in the Home or Outpatient Facility H-420.998
Our AMA (1) believes that obstetrical deliveries should be performed in properly licensed, accredited, equipped and staffed obstetrical units; (2) believes that obstetrical care should be provided by qualified and licensed personnel who function in an environment conducive to peer review; (3) believes that obstetrical facilities and their staff should recognize the wishes of women and their families within the bounds of sound obstetrical practice; and (4) encourages public education concerning the risks and benefits of various birth alternatives.
Citation: Res. 23, A-78; Reaffirmed: CLRPD Rep. C, A-89; Reaffirmed: Sunset Report, A-00; Reaffirmed: CSAPH Rep. 1, A-10; Reaffirmed: CSAPH Rep. 01, A-20;

Shared Decision-Making H-373.997
Our AMA:
1. recognizes the formal shared decision-making process as having three core elements to help patients become active partners in their health care: (a) clinical information about health conditions, treatment options, and potential outcomes; (b) tools to help patients identify and articulate their values and priorities when choosing medical treatment options; and (c) structured guidance to help patients integrate clinical and values information to make an informed treatment choice;
2. supports the concept of voluntary use of shared decision-making processes and patient decision aids as a way to strengthen the patient-physician relationship and facilitate informed patient engagement in health care decisions;
3. opposes any efforts to require the use of patient decision aids or shared decision-making processes as a condition of health insurance coverage or provider participation;
4. supports the development of demonstration and pilot projects to help increase knowledge about integrating shared decision-making tools and processes into clinical practice;
5. supports efforts to establish and promote quality standards for the development and use of patient decision aids, including standards for physician involvement in development and evaluation processes, clinical accuracy, and conflict of interest disclosures; and
6. will continue to study the concept of shared decision-making and report back to the House of Delegates regarding developments in this area.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 710
(A-23)

Introduced by: Michigan

Subject: Protect Patients with Medical Debt Burden

Referred to: Reference Committee G

Whereas, It is estimated that the percentage of American adults with medical debt range from 17.8 percent to 35 percent; and

Whereas, The Consumer Financial Protection Bureau reports $88 billion in medical debt on consumer credit records as of June, 2021; and

Whereas, It is estimated that approximately 23 million adults owe over $250 in unpaid medical bills; with more than 70 percent owing over $1,000 and about half owing more than $2,000; and

Whereas, People with medical debt are far less likely to fill a prescription, see a specialist when needed, visit a doctor or clinic for a medical problem and more likely to skip a needed test, treatment, or follow-up visit; and

Whereas, Out of every 100 people in the U.S., between 18 and 35 people have medical debt in collections, with Black, Indigenous, and people of color and people with lower incomes having higher rates of medical debt than the general population; and

Whereas, The COVID-19 pandemic brought renewed attention to medical debt, health inequities, and public health; therefore be it

RESOLVED, That our American Medical Association work with the appropriate national organizations to address the medical debt crisis by advocating for robust policies at the federal and state level that prevent medical debt, help consumers avoid court involvement, and ensure that court involved cases do not result in devastating consequences to patients' employment, physical health, mental wellbeing, housing, and economic stability. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/8/23

RELEVANT AMA POLICY

Exclusion of Medical Debt That Has Been Fully Paid or Settled H-373.996
Our AMA supports the principles contained in The Medical Debt Relief Act as drafted and passed by the US House of Representatives to provide relief to the American consumer from a complicated collections process and supports medical debt resolution being portrayed in a positive and productive manner.
Citation: Res. 226, I-10; Reaffirmed: BOT Rep. 04, A-20;

Health Plan Payment of Patient Cost-Sharing D-180.979
Our AMA will: (1) support the development of sophisticated information technology systems to help enable physicians and patients to better understand financial obligations; (2) encourage states and other stakeholders to monitor the growth of high deductible health plans and other forms of cost-sharing in health plans to assess the impact of such plans on access to care, health outcomes, medical debt, and provider practice sustainability; (3) advocate for the inclusion of health insurance contract provisions that permit network physicians to collect patient cost-sharing financial obligations (eg, deductibles, co-payments, and co-insurance) at the time of service; and (4) monitor programs wherein health plans and insurers bear the responsibility of collecting patient co-payments and deductibles.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 711
(A-23)

Introduced by: Missouri

Subject: Doctors' Risk for Termination of Liability Coverage or Medical Privileges Consequent to *Dobbs*

Referred to: Reference Committee G

Whereas, U.S. Supreme Court's decision in *Dobbs v Jackson Women's Health Organization* led to the enactment of previously passed state legislation (known as "trigger laws") in many states hindering the provision of abortion services; and

Whereas, Unlike federal law, many of these state statutes are ambiguous regarding the definition of "emergency condition" that allow a physician to render pregnancy-related care; and

Whereas, The federal Emergency Medical Treatment and Active Labor law (EMTALA) governs the obligations of physicians and facilities where pregnancy-related care is rendered and supersedes any state laws to the contrary due to the "Supremacy Clause" of the United States Constitution; and

Whereas, EMTALA codifies that an emergency medical condition is defined to exist *upon the recognition of the threat* of loss of life or loss of function of any bodily system, an event that often occurs before "unstable" vital signs have developed consequent to the emergency condition; and

Whereas, In some cases, physicians complying with EMTALA will be forced to violate the recently enacted "trigger laws" and can be charged with a crime; and

Whereas, Insurers typically terminate liability insurance coverage for physicians who have been charged with a criminal offense, especially if the alleged offense is classified as a felony; and,

Whereas, Hospitals, medical clinics, and other health care facilities typically terminate a physician's medical staff membership and clinical privileges when a physician has been charged with a criminal offense, especially if the alleged offense is classified as a felony; therefore be it

RESOLVED**,** That the American Medical Association work with medical liability insurers and medical care facilities to discourage the termination of liability coverage or clinical privileges of any physician who has been charged with a crime arising from the provision of evidence-based healthcare. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/4/23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 712
(A-23)

Introduced by: New Jersey

Subject: Medical Bankruptcy – A Unique Feature in the USA

Referred to: Reference Committee G

Whereas, In 2020, medical debt was $429 million across the United States; and

Whereas, The United States is the only developed nation that has such an enormous medical debt; and

Whereas, In this country medical bills are the most common reason for bankruptcy. 17% of adults with health care debt had to declare bankruptcy or lose their home because of it in 2022; and

Whereas, The United States already has the most expensive health care of any country, despite the medical bankruptcies; and

Whereas, The average age of a medial bankruptcy filer is 44.9 years old and 66.5% of all bankruptcies are caused directly by medical debt, making it the leading cause for bankruptcy; and

Whereas, Projections by the Centers for Medicare and Medicaid Services project that healthcare expenditures will increase 50% by 2028, to 6.2 trillion dollars; and

Whereas, In 2019 Americans borrowed an estimated $90 billion to pay for health care; and

Whereas, On average, couples that retire at age 65 pay a total of $275,000 in medical bills for the remainder of their life; and

Whereas, About 51% of single-person households with private insurance reported they would be unable to pay a $6,000 medical bill. 32% reported they would be unable to pay a $2000 medical bill; and

Whereas, Americans health care expenses account for nearly 20% of GDP, which is almost double that of most other developed countries. From 2000 to 2019, annual health insurance premiums increased by approximately 50%; and

Whereas, According to the Organization for Economic Cooperation and Development, higher out-of-pocket costs have been shown to translate to worse health outcomes. These costs cover everything paid for directly by an individual, including prescription drug and physician visit copays, health insurance deductibles and medical goods for personal use. Higher out-of-pocket medical costs can deter someone with a medical problem from seeking treatment; and

Whereas, Americans had a life expectancy at birth of 78.6 years, which is lower than nearly all developed countries. For example, France has a life expectancy at birth of 82.6 years, four years longer than the United States; and

Whereas, In 2018 America's total healthcare bill, including spending on government programs, private health insurance, and patients' out-of-pocket costs exceeded $10,000 per person, which was more than twice what governments, insurers, and patients in the Netherlands, Canada, France, and the United Kingdom spent, and almost twice Germany's healthcare costs; and

Whereas, In the rest of the developed world, medical costs are rarely or never cited as a driver behind personal bankruptcy; therefore be it

RESOLVED**,** That our American Medical Association study the causes of medical bankruptcy in the United States and draft a report for presentation at the 2024 Annual House of Delegates meeting, with such report to include recommendations to the House of Delegates to severely reduce the problem of medical debt. (Directive to take action)

Fiscal Note: Modest - between $1,000 - $5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 713
(A-23)

Introduced by: American Academy of Hospice and Palliative Medicine

Subject: Redesigning the Medicare Hospice Benefit

Referred to: Reference Committee G

Whereas, The population of terminally ill patients enrolled under the Medicare hospice benefit today is very different than in 1983 when the benefit was established, with Alzheimer's disease and related dementias (ADRD) representing a growing portion of hospice enrollees. And with changing primary diagnoses, the care needs for these patients are also much different today[1]; and

Whereas, It has been shown that patients with ADRD can derive significant benefits from hospice care, yet a 2022 study published in *JAMA Health Forum* found that current Medicare policies aimed at reducing hospice misuse and long lengths of stay pose concerns for reduced utilization by patients with ADRD – given the unpredictable trajectory of dementia – which may be associated with poorer end-of-life experience and outcomes for these patients[2-5]; and

Whereas, Electing the hospice benefit means waiving access to all other Medicare services related to the terminal condition, consequently the desire to continue disease-directed care or certain intensive palliative treatments outside the usual scope of hospice care results in too many patients who do not access hospice services until the last hours or days of life – or not at all – depriving them and their families/caregivers of the supportive care to which they are entitled; and

Whereas, For many patients belonging to historically minoritized or marginalized groups, a history of discrimination, structural inequities, and substandard service delivery has resulted in a lack of trust in the medical system associated with a reduced willingness to forgo life-sustaining care and lower enrollment in hospice, as confirmed by a 2020 study published in *JAMA Network Open* showing "despite the increase in the use of hospice care in recent decades, racial disparities in the use of hospice remain, especially for noncancer deaths"[1,6]; and

Whereas, Some aspects of the Medicare hospice benefit drive disparities in access to vital services that can improve care and quality of life for seriously ill beneficiaries. For example, the benefit was designed with the assumption that a patient has caregivers available at home; thus, patients who lack home resources, transportation, and/or caregiver availability, or are otherwise socially isolated, simply may not elect the benefit[7]; and

Whereas, The payment structure of the Medicare hospice benefit contributes to reduced access to hospice care in rural settings given that rural providers receive lower payments compared to urban hospice providers, despite facing increased costs due to travel distances and greater difficulties in maintaining staff, remaining capitalized, and overcoming economic disadvantages; and

Whereas, Council on Medical Services Report 4-I-16 recommends "that our AMA support continued study and pilot testing by the Centers for Medicare & Medicaid Services (CMS) of a

variety of models for providing and paying for concurrent hospice, palliative and curative care"; and

Whereas, In light of the above, policymakers should reconsider the hospice benefit, and pursue efforts to redesign, establish, and implement an equitable, anti-racist benefit utilizing a process that is inclusive, transparent, and iterative; therefore be it

RESOLVED, That Our American Medical Association advocate for a 21st century evolution of the Medicare hospice benefit that meets the quadruple aim of health care; advances health equity; and improves access, support, and outcomes for seriously ill patients across all geographies, including underserved and low-resource communities (Directive to Take Action); and be it further

RESOLVED, That our AMA advocate for a reformed Medicare hospice benefit that incorporates the following components:

1) Hospice eligibility should not be based solely on a specified prognosis or life expectancy but rather on patients' needs; patients with unclear prognoses should be able to access hospice services if their need is otherwise established.
2) Patients must continue to have an open choice of hospice providers.
3) Hospice services, including telehealth or telemedicine, should be provided by a full, physician-led interdisciplinary team.
4) Patients and their caregivers should receive adequate support using home- or facility-based hospice services, identified by a thorough assessment of their social determinants of health. This would incorporate 24-hour a day care for beneficiaries with very limited life expectancy who lack around-the-clock caregivers.
5) Patients should have concurrent access to disease-directed treatments along with palliative services.
6) Payments to hospices should be sufficient to support the quality, experience, scope, and frequency of care that beneficiaries deserve throughout the later stages of serious illness as dictated by their physical, psychological, social, spiritual, and practical needs.
7) The hospice benefit should be consistent, including with regard to the quality and intensity of services, regardless of which Medicare program or entity pays for services.
8) Metrics for health provider accountability should focus on those aspects of care and experience that matter most to patients, families, and caregivers.

(Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Concurrent Hospice and Curative Care H-85.951
1. Our AMA supports continued study and pilot testing by the Centers for Medicare & Medicaid Services (CMS) of a variety of models for providing and paying for concurrent hospice, palliative and curative care.
2. Our AMA encourages CMS to identify ways to optimize patient access to palliative care, which relieves suffering and improves quality of life for people with serious illnesses, regardless of whether they can be cured, and to provide appropriate coverage and payment for these services.
3. Our AMA encourages physicians to be familiar with local hospice and palliative care resources and their benefit structures, as well as clinical practice guidelines developed by national medical specialty societies, and to refer seriously ill patients accordingly.
Citation: CMS Rep. 04, I-16; Reaffirmed: Res. 119, A-18;

Hospice Care H-85.955
Our AMA: (1) approves of the physician-directed hospice concept to enable the terminally ill to die in a more homelike environment than the usual hospital; and urges that this position be widely publicized in order to encourage extension and third party coverage of this provision for terminal care; (2) encourages physicians to be knowledgeable of patient eligibility criteria for hospice benefits and, realizing that prognostication is inexact, to make referrals based on their best clinical judgment; (3) supports modification of hospice regulations so that it will be reasonable for organizations to qualify as hospice programs under Medicare; (4) believes that each patient admitted to a hospice program should have his or her designated attending physician who, in order to provide continuity and quality patient care, is allowed and encouraged to continue to guide the care of the patient in the hospice program; (5) supports changes in Medicaid regulation and reimbursement of palliative care and hospice services to broaden eligibility criteria concerning the length of expected survival for pediatric patients and others, to allow provision of concurrent life-prolonging and palliative care, and to provide respite care for family care givers; (6) seeks amendment of the Medicare law to eliminate the six-month prognosis under the Medicare Hospice benefit and support identification of alternative criteria, meanwhile supporting extension of the prognosis requirement from 6 to 12 months as an interim measure; and (7) will advocate through all appropriate means to ensure that medications and other treatments used to stabilize palliative and hospice patients for pain, delirium, and related conditions in the hospital continue to be covered by pharmacy benefit management companies, health insurance companies, hospice programs, and other entities after patients are transitioned out of the hospital.
Citation: CCB/CLRPD Rep. 3, A-14; Reaffirmed: BOT Rep. 05, I-16; Appended: Res. 212, A-19; Reaffirmation: A-22;

Hospice Coverage and Underutilization H-85.966
The policy of the AMA is that: (1) The use of hospice care be actively utilized to provide the patient and family with appropriate physical and emotional support, but not preclude or prevent the use of appropriate palliative therapies to continue to treat the underlying malignant disease, if the patient is showing response to such palliative therapy; (2) The goal of terminal care is to relieve patient suffering and not necessarily to cure incurable disease; (3) Appropriate active palliation should be a covered hospital benefit; and (4) The initiation of hospice care may be done at the discretion of the attending physician without stopping whatever medical care is being rendered if the physician believes the patient is in the last six months of life.

End-of-Life Care H-85.949
Our AMA supports: (1) Medicare coverage of and appropriate payment for supportive care services, including assistance with activities of daily living, as needed, under Medicare's hospice benefit; (2) study and pilot testing by the Centers for Medicare & Medicaid Services of care models that allow concurrent use of Medicare's hospice and skilled nursing facility (SNF) benefits for the same condition; and (3) increased access to comprehensive interdisciplinary palliative care services by Medicare patients in skilled nursing facilities.
Citation: CMS Rep. 1, I-21;

Planning and Delivery of Health Care Services H-160.975
(1) Planning agencies should utilize policies, educational programs and incentives to develop and maintain individual lifestyles that promote good health. The planning process should identify incentives for the providers and participants in the health care system to encourage the development and introduction of innovative and cost-effective health care services. Government at all levels, as a provider, purchaser and consumer of health services, should play an integral role in the planning process, including the provision of adequate funding and ensuring that government policies and/or regulations facilitate and do not unduly restrict the planning process. The authority to impose sanctions on those who take actions that are inconsistent with developed plans should be separated from the planning process. Funding for the planning process should be developed by the participants.
(2) The planning process should seek to ensure the availability and the coordination of a continuum of supportive health care services for special populations in senior citizen centers, day care and home care programs, supervised life-care centers, nursing homes, hospitals, hospices, and rehabilitation facilities.
(3) Decisions concerning the use of health care services, including the selection of a health care provider or delivery mechanism, should be made by the individual.
(4) Both the public and private sectors should be encouraged to donate resources to improve access to health care services. Where appropriate, incentives should be provided for those in the private sector who give care to those who otherwise would not have access to such care. In addition, existing short-comings in the current public system for providing access need to be addressed.
(5) Health care facilities should have or should establish review bodies (such as hospital ethics committees) to resolve conflicts over access to scarce health care technologies. In the event that a conflict over delivery of scarce health care technologies cannot be mediated satisfactorily, individuals should be able to seek redress through appropriate appeal mechanisms.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 714
(A-23)

Introduced by: American Academy of Hospice & Palliative Medicine

Subject: Improving Hospice Program Integrity

Referred to: Reference Committee G

Whereas, Recent investigations show disproportionate hospice growth in some states with no clear correlation to need, along with unusual billing and operational activity – including to indicate some hospices are being established primarily for the purpose of selling them for profit – suggesting willful fraud or abuse of the hospice benefit; and

Whereas, Medicare data has shown excessive geographic clustering of hospices (in one case, 120 separately licensed agencies in California are located in the same building, 75 of which are Medicare certified); and

Whereas, After a statewide moratorium on new hospice licenses was enacted in California in 2022, similar troubling activity is shown to have spread to nearby states, including Arizona, Nevada, and Texas; and

Whereas, Medicare beneficiaries nearing the end-of-life need – and deserve – all the valuable services that good hospice delivers; and

Whereas, Patients and families who engage with fraudulent hospices can suffer real and lasting consequences, including not receiving the types or level of care they need, or in some cases, any care at all; and

Whereas, The many hospice audits currently in place have no bearing on care quality, nor have they been shown to significantly curtail inappropriate organizational behavior; and

Whereas, Policy interventions aimed at ensuring hospice program integrity and quality should:

- Center on the needs of hospice patients and their families to ensure an optimal care experience.
- Ensure timely and equitable access to hospice care across all geographies and communities.
- Focus on integrity and quality indicators that impact patient care rather than focusing on technical errors.
- Target non-operational and low-performing programs while avoiding blunt instruments that could unnecessarily burden high-performing programs.
- Promote education and training of hospice professionals and support the free exercise of reasonable, independent judgment in clinical decisions made in good faith, including certification of terminal illness; and

Whereas, Current AMA policy calls to “ensure the availability and the coordination of a continuum of supportive health care services for special populations in senior citizen centers, day care and home care programs, supervised life-care centers, nursing homes, hospitals,

hospices, and rehabilitation facilities (H-160.975, *Planning and Delivery of Health Care Services*); therefore be it

RESOLVED, That Our American Medical Association advocate that the Centers for Medicare & Medicaid Services (CMS) use its existing authority to limit certification of additional hospices in counties where growth in hospice programs is out of line with established need by implementing a temporary targeted moratorium based on federal and state data, allowing for appropriate exceptions to ensure continued access to care (Directive to Take Action); and be it further

RESOLVED, That Our AMA advocate that CMS strengthen investigation prior to approval of initial hospice certification applications and, for those new hospices approved but identified as high risk, require enhanced scrutiny and/or survey frequency (Directive to Take Action); and be it further

RESOLVED, That our AMA advocate that CMS use its existing authority to prohibit the sale or transfer of Medicare hospice certification numbers for a specified timeframe (similar to the 36-month change of ownership prohibition in the Medicare home health program), allowing for appropriate exceptions to ensure continued access to care (Directive to Take Action); and be it further

RESOLVED, That Our AMA advocate that CMS restrict Medicare privileges for non-operational hospices, including through voluntary termination of the provider agreement, deactivation of billing privileges, and revocation of Medicare enrollment (Directive to Take Action); and be it further

RESOLVED, That Our AMA advocate that CMS regulatory efforts aimed at weeding out fraud, waste, and abuse be refocused on integrity and quality indicators that impact patient care – rather than technical errors and retrospective chart audits focused on questioning eligibility – and avoid blunt instruments that burden high-performing programs, divert time and resources from patient care, and risk driving smaller providers from the market and/or putting rural or frontier hospice programs at a disadvantage. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Concurrent Hospice and Curative Care H-85.951
1. Our AMA supports continued study and pilot testing by the Centers for Medicare & Medicaid Services (CMS) of a variety of models for providing and paying for concurrent **hospice**, palliative and curative care.
2. Our AMA encourages CMS to identify ways to optimize patient access to palliative care, which relieves suffering and improves quality of life for people with serious illnesses, regardless of whether they can be cured, and to provide appropriate coverage and payment for these services.

3. Our AMA encourages physicians to be familiar with local **hospice** and palliative care resources and their benefit structures, as well as clinical practice guidelines developed by national medical specialty societies, and to refer seriously ill patients accordingly.
Citation: (CMS Rep. 04, I-16; Reaffirmed: Res. 119, A-18)

Hospice Care H-85.955
Our AMA: (1) approves of the physician-directed hospice concept to enable the terminally ill to die in a more homelike environment than the usual hospital; and urges that this position be widely publicized in order to encourage extension and third party coverage of this provision for terminal care;
(2) encourages physicians to be knowledgeable of patient eligibility criteria for hospice benefits and, realizing that prognostication is inexact, to make referrals based on their best clinical judgment;
(3) supports modification of hospice regulations so that it will be reasonable for organizations to qualify as hospice programs under Medicare;
(4) believes that each patient admitted to a hospice program should have his or her designated attending physician who, in order to provide continuity and quality patient care, is allowed and encouraged to continue to guide the care of the patient in the hospice program;
(5) supports changes in Medicaid regulation and reimbursement of palliative care and hospice services to broaden eligibility criteria concerning the length of expected survival for pediatric patients and others, to allow provision of concurrent life-prolonging and palliative care, and to provide respite care for family care givers;
(6) seeks amendment of the Medicare law to eliminate the six-month prognosis under the Medicare Hospice benefit and support identification of alternative criteria, meanwhile supporting extension of the prognosis requirement from 6 to 12 months as an interim measure; and
(7) will advocate through all appropriate means to ensure that medications and other treatments used to stabilize palliative and hospice patients for pain, delirium, and related conditions in the hospital continue to be covered by pharmacy benefit management companies, health insurance companies, hospice programs, and other entities after patients are transitioned out of the hospital.

Hospice Coverage and Underutilization H-85.966
The policy of the AMA is that:
(1) The use of hospice care be actively utilized to provide the patient and family with appropriate physical and emotional support, but not preclude or prevent the use of appropriate palliative therapies to continue to treat the underlying malignant disease, if the patient is showing response to such palliative therapy;
(2) The goal of terminal care is to relieve patient suffering and not necessarily to cure incurable disease;
(3) Appropriate active palliation should be a covered hospital benefit; and
(4) The initiation of hospice care may be done at the discretion of the attending physician without stopping whatever medical care is being rendered if the physician believes the patient is in the last six months of life.
Citation: (Res. 515, A-94; Reaffirmed: CMS Rep. 5, A-04; Reaffirmed: CMS Rep. 1, A-14; Reaffirmed: CMS Rep. 04, I-16; Reaffirmed: Res. 119, A-18; Reaffirmed: CMS Rep. 1, I-21)

End-of-Life Care H-85.949
Our AMA supports:
(1) Medicare coverage of and appropriate payment for supportive care services, including assistance with activities of daily living, as needed, under Medicare's **hospice** benefit;
(2) study and pilot testing by the Centers for Medicare & Medicaid Services of care models that allow concurrent use of Medicare's **hospice** and skilled nursing facility (SNF) benefits for the same condition; and
(3) increased access to comprehensive interdisciplinary palliative care services by Medicare patients in skilled nursing facilities.
Citation: (CMS Rep. 1, I-21)

Planning and Delivery of Health Care Services H-160.975
(1) Planning agencies should utilize policies, educational programs and incentives to develop and maintain individual lifestyles that promote good health. The planning process should identify incentives for the providers and participants in the health care system to encourage the development and introduction of innovative and cost-effective health care services. Government at all levels, as a provider, purchaser

and consumer of health services, should play an integral role in the planning process, including the provision of adequate funding and ensuring that government policies and/or regulations facilitate and do not unduly restrict the planning process. The authority to impose sanctions on those who take actions that are inconsistent with developed plans should be separated from the planning process. Funding for the planning process should be developed by the participants.

(2) The planning process should seek to ensure the availability and the coordination of a continuum of supportive health care services for special populations in senior citizen centers, day care and home care programs, supervised life-care centers, nursing homes, hospitals, hospices, and rehabilitation facilities.

(3) Decisions concerning the use of health care services, including the selection of a health care provider or delivery mechanism, should be made by the individual.

(4) Both the public and private sectors should be encouraged to donate resources to improve access to health care services. Where appropriate, incentives should be provided for those in the private sector who give care to those who otherwise would not have access to such care. In addition, existing short-comings in the current public system for providing access need to be addressed.

(5) Health care facilities should have or should establish review bodies (such as hospital ethics committees) to resolve conflicts over access to scarce health care technologies. In the event that a conflict over delivery of scarce health care technologies cannot be mediated satisfactorily, individuals should be able to seek redress through appropriate appeal mechanisms.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 715
(A-23)

Introduced by: American Association of Neurological Surgeons, Congress of Neurological Surgeons

Subject: Published Metrics for Hospitals and Hospital Systems

Referred to: Reference Committee G

Whereas, American health care has witnessed an explosion in the number of hospital administrators; and

Whereas, Studies have shown hospital boards are largely devoid of clinicians;[1] and

Whereas, The number of physicians who have become employed by hospitals has grown in recent years, with 74% of physicians now employed by a hospital, health system or corporate entity;[2] and

Whereas, While the C-Suite has significantly expanded, physicians have faced many negative changes to the practice of medicine, including Medicare cuts, increased regulatory burdens and crushing “burnout,” which have driven many to leave practice or curtail the hours they devote to patient care; and

Whereas, While physicians are subject to scrutiny and oversight, these same requirements are not placed on hospitals and health systems; and

Whereas, Hospital administrators are increasingly responsible for contributing to the high turnover of talented, well-trained clinicians; and

Whereas, While hospitals are subject to publicly available measures citing such data as infection rates, physicians do not have access to measures about the hospital as a workplace environment, such as how physician-friendly the environment is; and

Whereas, Existing employee-based websites, such as GlassDoor.com, do not have the ability to provide physicians the granular information needed to evaluate the hospital environment relevant to physicians; therefore be it

RESOLVED, That our American Medical Association identify transparency metrics, such as physician retention and physician satisfaction, that would apply to hospitals and hospital systems and report back with recommendations for implementing appropriate processes to require the development and public release of such transparency metrics. (Directive to Take Action)

Fiscal Note: Minimal - less than $1,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 716
(A-23)

Introduced by: American Association of Neurological Surgeons, Congress of Neurological Surgeons

Subject: Transparency and Accountability of Hospitals and Hospital Systems

Referred to: Reference Committee G

Whereas, There has been tremendous health care consolidation over the last several years, with hospital systems acquiring multiple hospitals and physician practices; and

Whereas, The size of these transactions has been increasing, with $1 billion deals involved;[1] and

Whereas, According to the Medicare Payment Advisory Commission, by 2017, in most markets, a single hospital system accounted for more than 50 percent of inpatient admissions; and

Whereas, As hospital systems grow, the bureaucracy and administration of these systems grow while competition decreases; and

Whereas, Burdens placed upon physicians, such as non-compete clauses, limit the ability of physicians to leave or challenge the system's dominance; and

Whereas, There have been several high-profile examples of physicians who have raised patient care concerns and have been targeted by the hospital system;[2] and

Whereas, Regulatory bodies, such as The Joint Commission, do not currently track or hold accountable hospital systems for the mistreatment of physicians; therefore be it

RESOLVED, That our American Medical Association identify options for developing and implementing processes — including increased transparency of physician complaints made to the Equal Employment Opportunity Commission and The Joint Commission — for tracking and monitoring physician complaints against hospitals and hospitals systems and report back with recommendations for implementing such processes, including potential revisions to the Health Care Quality Improvement Act of 1986 to include monetary penalties for institutions performing bad-faith peer reviews. (Directive to Take Action)

Fiscal Note: Minimal - less than $1,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 717
(A-23)

Introduced by: American College of Chest Physicians

Subject: Improving Patient Access to Supplemental Oxygen Therapies

Referred to: Reference Committee G

Whereas, More than 1.5 million Americans use supplemental oxygen, a therapy that can improve the quality of life for adults living with chronic lung diseases[1-3]; and

Whereas, Advocacy groups, health care professionals, and patients report with alarming frequency inaccurate coverage denials related to home oxygen; and

Whereas, The burden of these implementation gaps, and denials falls on the patients and their providers; and

Whereas, The Centers for Medicare and Medicaid Services (CMS) in September 2021 published a new National Coverage Decision Memo on Home Use of Oxygen and Oxygen Use to Treat Cluster Headaches which replaced the Certificate of Medical Necessity with medical record review for documentation of necessity of supplemental oxygen; and

Whereas, During the COVID related public health emergency, CMS suspended physician medical record review in recognition that hospital surges made it impossible for physician's records to accurately reflect all the information required by Medicare Recovery Audit Contractors; and

Whereas, During the period of suspension of medical record review no significant increase in fraud and abuse was recognized; and

Whereas, In the opinion of our organization, relying on medical review to establish supplemental oxygen medical necessity will introduce complexity, inconsistency, delays, and unneeded costs to the system without benefit; therefore be it

RESOLVED, That our American Medical Association advocate for the adoption of a CMS-crafted, patient- and provider- endorsed, clinical template in lieu of medical record review to maintain patient access to supplemental oxygen (Directive to Take Action); and be it further

RESOLVED, That our AMA, to ensure predictable reimbursement and establish medical necessity, advocate for CMS to establish a CMS-crafted, patient- and provider- endorsed, clinical template as the national standard documentation for supplemental oxygen suppliers. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 718
(A-23)

Introduced by: Georgia

Subject: Insurance Coverage of FDA Approved Medications and Devices

Referred to: Reference Committee G

Whereas, Health insurers are increasingly denying coverage per their policy letters claiming medications and devices are experimental; and

Whereas, Physicians and staff are spending increasing time on peer to peer calls trying to obtain approval for their patient's care; and

Whereas, Insurance companies are practicing medicine without a license by denying care recommended by licensed physicians; therefore be it

RESOLVED, That our American Medical Association support prohibiting the use of the rationale for denial that a medication or device is experimental by insurance companies where such medication or device has been approved by the United States Food and Drug Administration for one year or longer and has peer-reviewed evidence supporting its use in the manner in which it was prescribed. (New HOD Policy)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/9/23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 719
(A-23)

Introduced by: Illinois

Subject: Care Partner Access to Medical Records

Referred to: Reference Committee G

Whereas, Many people manage their health with the help of others including family members and friends, who are often referred to as informal care partners (or caregivers), and the role of these care partners can include arranging and attending medical appointments, participating in medical decision-making, coordinating services and addressing various patient needs; and

Whereas, Despite the vital role played by care partners, they are often unable to access health information in the electronic health record (EHR) that is necessary to coordinate and manage care; and

Whereas, One study revealed that only two-thirds of the U.S. hospitals surveyed offered adult patients the option of granting portal access to a care partner, and among hospitals that did, the process for obtaining proxy credentials was often difficult and time consuming; and

Whereas, Shared access to a patient's medical portal can improve patient and family satisfaction with care, improve agreement with goals of care and treatment decisions, care partner confidence in managing care and can help reduce care partner burden; and

Whereas, Few healthcare organizations have a convenient and straightforward procedure for granting proxy access, and even when EHR vendors offer mechanisms for access, healthcare organizations appear to give little thought to the information needs of this group; and

Whereas, Using secure patient portals to link care partners to the healthcare team should be a priority for healthcare organizations; therefore be it

RESOLVED, That our American Medical Association advocate that electronic health records (EHR) vendors offer simplified procedures for granting proxy access to care partners (or caregivers) to the electronic health record, including online registration with multifactor authentication to promote security, rather than requiring in person registration (Directive to Take Action); and be it further

RESOLVED, That our AMA advocate that vendors develop a simple mechanism for noting and displaying care partner names and contact information in the Electronic Health Record (EHR), along with privacy settings that allow patients to grant proxy access to selected portions of their records, including easy to understand information on use of this information and a user-friendly consent mechanism (Directive to Take Action); and be it further

RESOLVED, That our AMA support and encourage Congress to modernize Health Insurance Portability and Accountability Act (HIPAA) laws to ensure that HIPAA rules for preserving the privacy of patient and associated data also cover third party applications' access to electronic health records (EHRs). (New HOD Policy)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/5/23

RELEVANT AMA POLICY

Patient Privacy and Confidentiality H-315.983
1. Our AMA affirms the following key principles that should be consistently implemented to evaluate any proposal regarding patient privacy and the confidentiality of medical information: (a) That there exists a basic right of patients to privacy of their medical information and records, and that this right should be explicitly acknowledged; (b) That patients' privacy should be honored unless waived by the patient in a meaningful way or in rare instances when strong countervailing interests in public health or safety justify invasions of patient privacy or breaches of confidentiality, and then only when such invasions or breaches are subject to stringent safeguards enforced by appropriate standards of accountability; (c) That patients' privacy should be honored in the context of gathering and disclosing information for clinical research and quality improvement activities, and that any necessary departures from the preferred practices of obtaining patients' informed consent and of de-identifying all data be strictly controlled; (d) That any information disclosed should be limited to that information, portion of the medical record, or abstract necessary to fulfill the immediate and specific purpose of disclosure; and (e) That the Health Insurance Portability and Accountability Act of 1996 (HIPAA) be the minimal standard for protecting clinician-patient privilege, regardless of where care is received.
2. Our AMA affirms: (a) that physicians and medical students who are patients are entitled to the same right to privacy and confidentiality of personal medical information and medical records as other patients, (b) that when patients exercise their right to keep their personal medical histories confidential, such action should not be regarded as fraudulent or inappropriate concealment, and (c) that physicians and medical students should not be required to report any aspects of their patients' medical history to governmental agencies or other entities, beyond that which would be required by law.
3. Employers and insurers should be barred from unconsented access to identifiable medical information lest knowledge of sensitive facts form the basis of adverse decisions against individuals. (a) Release forms that authorize access should be explicit about to whom access is being granted and for what purpose, and should be as narrowly tailored as possible. (b) Patients, physicians, and medical students should be educated about the consequences of signing overly-broad consent forms. (c) Employers and insurers should adopt explicit and public policies to assure the security and confidentiality of patients' medical information. (d) A patient's ability to join or a physician's participation in an insurance plan should not be contingent on signing a broad and indefinite consent for release and disclosure.
4. Whenever possible, medical records should be de-identified for purposes of use in connection with utilization review, panel credentialing, quality assurance, and peer review.
5. The fundamental values and duties that guide the safekeeping of medical information should remain constant in this era of computerization. Whether they are in computerized or paper form, it is critical that medical information be accurate, secure, and free from unauthorized access and improper use.
6. Our AMA recommends that the confidentiality of data collected by race and ethnicity as part of the medical record, be maintained.
7. Genetic information should be kept confidential and should not be disclosed to third parties without the explicit informed consent of the tested individual.
8. When breaches of confidentiality are compelled by concerns for public health and safety, those breaches must be as narrow in scope and content as possible, must contain the least identifiable and sensitive information possible, and must be disclosed to the fewest possible to achieve the necessary end.
9. Law enforcement agencies requesting private medical information should be given access to such information only through a court order. This court order for disclosure should be granted only if the law enforcement entity has shown, by clear and convincing evidence, that the information sought is necessary to a legitimate law enforcement inquiry; that the needs of the law enforcement authority cannot be satisfied by non-identifiable health information or by any other information; and that the law enforcement need for the information outweighs the privacy interest of the individual to whom the information pertains. These records should be subject to stringent security measures.

10. Our AMA must guard against the imposition of unduly restrictive barriers to patient records that would impede or prevent access to data needed for medical or public health research or quality improvement and accreditation activities. Whenever possible, de-identified data should be used for these purposes. In those contexts where personal identification is essential for the collation of data, review of identifiable data should not take place without an institutional review board (IRB) approved justification for the retention of identifiers and the consent of the patient. In those cases where obtaining patient consent for disclosure is impracticable, our AMA endorses the oversight and accountability provided by an IRB.
11. Marketing and commercial uses of identifiable patients' medical information may violate principles of informed consent and patient confidentiality. Patients divulge information to their physicians only for purposes of diagnosis and treatment. If other uses are to be made of the information, patients must first give their uncoerced permission after being fully informed about the purpose of such disclosures
12. Our AMA, in collaboration with other professional organizations, patient advocacy groups and the public health community, should continue its advocacy for privacy and confidentiality regulations, including: (a) The establishment of rules allocating liability for disclosure of identifiable patient medical information between physicians and the health plans of which they are a part, and securing appropriate physicians' control over the disposition of information from their patients' medical records. (b) The establishment of rules to prevent disclosure of identifiable patient medical information for commercial and marketing purposes; and (c) The establishment of penalties for negligent or deliberate breach of confidentiality or violation of patient privacy rights.
13. Our AMA will pursue an aggressive agenda to educate patients, the public, physicians and policymakers at all levels of government about concerns and complexities of patient privacy and confidentiality in the variety of contexts mentioned.
14. Disclosure of personally identifiable patient information to public health physicians and departments is appropriate for the purpose of addressing public health emergencies or to comply with laws regarding public health reporting for the purpose of disease surveillance.
15. In the event of the sale or discontinuation of a medical practice, patients should be notified whenever possible and asked for authorization to transfer the medical record to a new physician or care provider. Only de-identified and/or aggregate data should be used for "business decisions," including sales, mergers, and similar business transactions when ownership or control of medical records changes hands.
16. The most appropriate jurisdiction for considering physician breaches of patient confidentiality is the relevant state medical practice act. Knowing and intentional breaches of patient confidentiality, particularly under false pretenses, for malicious harm, or for monetary gain, represents a violation of the professional practice of medicine.
17. Our AMA Board of Trustees will actively monitor and support legislation at the federal level that will afford patients protection against discrimination on the basis of genetic testing.
18. Our AMA supports privacy standards that would require pharmacies to obtain a prior written and signed consent from patients to use their personal data for marketing purposes.
19. Our AMA supports privacy standards that require pharmacies and drug store chains to disclose the source of financial support for drug mailings or phone calls.
20. Our AMA supports privacy standards that would prohibit pharmacies from using prescription refill reminders or disease management programs as an opportunity for marketing purposes.
21. Our AMA will draft model state legislation requiring consent of all parties to the recording of a physician-patient conversation.

Confidentiality of Computerized Patient Records H-315.990
The AMA (1) reaffirms the importance of confidentiality of patient records regardless of the form in which they are stored; and (2) will study and incorporate into its model legislation, Confidentiality of Health Care Information, a provision regulating third parties' use of computerized patient records in physicians' offices.
Citation: Res. 813, I-92; Reaffirmation I-99; Reaffirmed: BOT Rep. 19, I-06; Reaffirmed: BOT Rep. 19, A-07; Modified: CMS Rep. 01, A-17;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 720
(A-23)

Introduced by: Association for Clinical Oncology

Subject: Prior Authorization Costs, AMA Update to CMS

Referred to: Reference Committee G

Whereas, The impact of prior authorization costs is becoming excessive as an unfunded mandate on practices; and

Whereas, The study by our American Medical Association has shown that practices must complete 41 prior authorizations per physician each week on average, which consumes almost two business days of physician and staff time, with 40% of physicians reporting that they have hired staff who work exclusively on prior authorizations[1]; and

Whereas, ASCO conducted a survey of members and found that nearly all survey participants report patient harm including disease progression (80%) and loss of life (36%)[2]; and

Whereas, Our AMA will submit practice expense data and methodology information collected via a physician practice expense survey to begin in June 2023 to the Centers for Medicare & Medicaid Services (CMS) as they make updates; therefore be it

RESOLVED, That our American Medical Association include the costs associated with prior authorization in the practice expense data and methodology information submitted to the Centers for Medicare & Medicaid Services. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Update Practice Expense Component of Relative Value Units D-406.992
Our American Medical Association will conduct a pilot study to determine the best mechanism for gathering physician practice expense data, including the feasibility of fielding a new physician practice expense survey, and work with the Centers for Medicare & Medicaid Services (CMS) to update the resource-based relative value practice expense methodology.
Citation: BOT Action in response to referred for decision Res. 131, A-19;

Reimbursement to Physicians and Hospitals for Government Mandated Services H-240.966
(1) It is the policy of the AMA that government mandated services imposed on physicians and hospitals that are peripheral to the direct medical care of patients be recognized as additional practice cost expense.
(2) Our AMA will accelerate its plans to develop quantitative information on the actual costs of regulations.
(3) Our AMA strongly urges Congress that the RBRVS and DRG formulas take into account these additional expenses incurred by physicians and hospitals when complying with governmentally mandated regulations and ensure that reimbursement increases are adequate to cover the costs of providing these services.
(4) Our AMA will advocate to the CMS and Congress that an equitable adjustment to the Medicare physician fee schedule (or another appropriate mechanism deemed appropriate by CMS or Congress) be developed to provide fair compensation to offset the additional professional and practice expenses required to comply with the Emergency Medical Treatment and Labor Act.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 721
(A-23)

Introduced by: American Society for Gastrointestinal Endoscopy, American Academy of Physical Medicine and Rehabilitation, American College of Gastroenterology, American Gastroenterological Association, American Society for Surgery of the Hand Professional Organization, American Society of Echocardiography, North American Spine Society, Society for Cardiovascular, Angiography & Interventions

Subject: Use of Artificial Intelligence for Prior Authorization

Referred to: Reference Committee G

Whereas, Health insurers are adopting artificial intelligence technology to speed up prior authorization decisions; and

Whereas, Health insurance companies are increasingly relying on artificial intelligence as a more economical way to conduct prior authorization for a greater number of health care services; and

Whereas, *ProPublica* revealed that over a period of two months in 2022, Cigna doctors denied more than 300,000 claims as part of a review process that used artificial intelligence, with Cigna doctors spending an average of 1.2 seconds on each case[1]; and

Whereas, As of June 1, 2023, UnitedHealthcare (UHC) requires prior authorization for all diagnostic and surveillance colonoscopies, upper endoscopies, and capsule endoscopies — roughly 47 percent of all gastrointestinal services; and

Whereas, UHC has stated it uses technology that allows it to make “fast, efficient and streamlined coverage decisions”[2]; and

Whereas, the use of artificial intelligence to review requests for prior authorization raise questions about whether insurance companies are in compliance with state and federal insurance regulations; and

RESOLVED, That our American Medical Association advocate for greater regulatory oversight of the use of artificial intelligence for review of patient claims, including whether insurers are using a thorough and fair process that includes reviews by doctors and other health care professionals with expertise for the service under review, and that such reviews include human examination of patient records prior to a care denial. (Directive to Take Action)

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 722
(A-23)

Introduced by: New York

Subject: Expanding Protections of End-Of-Life Care

Referred to: Reference Committee G

Whereas, Despite clinical practice guidelines recommendations of ongoing assessments of pain, other symptoms, side effects of treatment, and functional capacity pain and other distressing symptoms are often undertreated and inadequately controlled[1]; and

Whereas, The medical profession increasingly recognizes the growing need to educate physicians in palliative care, however, trainee and physician awareness of and comfort with palliative care management is highly variable[2-5]; and

Whereas, Medical students receive varied training in palliative and end of life care ranging from 2 hours to weeks and most residents (81%) reported little to no classroom training on EOL care during residency[6,7]; and

Whereas, Palliative care is underutilized in the United States and the National Inpatient Sample showed that palliative care consultations were recorded in only 9.9% of 4,732,172 weighted advanced cancer hospitalizations[8]; and

Whereas, The need for palliative care and end of life symptom relief has been largely ignored as healthcare systems and medicine have focused on extending life, but not to the same extent on dignity and quality of life when curative treatment is no longer possible[5]; and

Whereas, The AMA Code of Ethics also states that “the duty to relieve pain and suffering is central to the physician’s role as healer and is an obligation physicians have to their patients”[9]; and

Whereas, There are many ethical and legal considerations in end of life care in a climate where physicians have faced civil and criminal liability for providing standard of care end of life symptom control to patients as recently as 2022[10,11]; and

Whereas, Standard of care end of life treatment can include treatments that can decrease the level of alertness and a patients remaining hours[12]; and

Whereas, There is variability in how prosecutors, juries, and judges interpret the law in relation to medical treatment of distressing symptoms therefore it is imperative the house of medicine take a strong stance to preserve the patient physician relationship[13,14]; therefore be it

RESOLVED, That our American Medical Association:
(1) recognizes that healthcare, including end of life care like hospice, is a human right;
(2) supports the education of medical students, residents and physicians about the need for physicians who provide end of life healthcare services;

(3) supports the medical and public health importance of access to safe end of life healthcare services and the medical, ethical, legal and psychological principles associated with end-of-life care;
(4) supports education of physicians and lay people about the importance of offering medications to treat distressing symptoms associated with end of life including dyspnea, air hunger, and pain;
(5) will work with interested state medical societies and medical specialty societies to vigorously advocate for broad, equitable access to end-of-life care;
(6) supports shared decision-making between patients and their physicians regarding end-of-life healthcare;
(7) opposes limitations on access to evidence-based end of life care services;
(8) opposes the imposition of criminal and civil penalties or other retaliatory efforts against physicians for receiving, assisting in, referring patients to, or providing end of life healthcare services. (New HOD Policy)

RELEVANT AMA POLICY

Good Palliative Care H-70.915
Our AMA: (1) encourages all physicians to become skilled in palliative medicine; (2) recognizes the importance of providing interdisciplinary palliative care for patients with disabling chronic or life-limiting illness to prevent and relieve suffering and to support the best possible quality of life for these patients and their families; (3) encourages education programs for all appropriate health care professionals, and the public as well, in care of the dying patient; and the care of patients with disabling chronic or life-limiting illness; (4) supports improved reimbursement for health care practices that are important in good

care of the dying patient, such as the coordination and continuity of care, "maintenance" level services, counseling for patient and family, use of multidisciplinary teams, and effective palliation of symptoms; (5) encourages physicians to become familiar with the use of current coding methods for reimbursement of hospice and palliative care services; (6) advocates for reimbursement of Evaluation and Management (E/M) codes reflecting prolonged time spent on patients' care outside of the face-to-face encounter in non-hospital settings; (7) continues to monitor the development and performance on the CMS 30-day mortality measures and enrollments in the Medicare hospice program and the VA hospice programs and continues to work to have CMS exclude palliative patients from mortality measures; (8) supports efforts to clarify coding guidance or development of codes to capture "comfort care," "end-of-life care," and "hospice care;" (9) encourages research in the field of palliative medicine to improve treatment of unpleasant symptoms that affect quality of life for patients; and (10) encourages research into the needs of dying patients and how the care system could better serve them.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 05-A-23

Subject: Update on Corporate Relationships

Presented by: Sandra Adamson Fryhofer, MD

PURPOSE

The purpose of this informational report is to update the House of Delegates (HOD) on the results of the Corporate Review process from January 1 through December 31, 2022. Corporate activities that associate the American Medical Association (AMA) name or logo with a company, non-Federation association or foundation, or include commercial support, currently undergo review and recommendations by the Corporate Review Team (CRT) (Appendix A).

BACKGROUND

At the 2002 Annual Meeting, the HOD approved revised principles to govern the American Medical Association's (AMA) corporate relationships, HOD Policy G-630.040 "Principles on Corporate Relationships." These guidelines for American Medical Association corporate relationships were incorporated into the corporate review process, are reviewed regularly, and were reaffirmed at the 2012 and 2022 Annual Meeting. AMA managers are responsible for reviewing AMA projects to ensure they fit within these guidelines.

YEAR 2022 RESULTS

In 2022, 92 activities were considered and approved through the Corporate Review process. Of the 92 projects recommended for approval, 48 were conferences or events, 11 were educational content or grants, 27 were collaborations or affiliations, five were member programs, and one was an American Medical Association Foundation (AMAF) program. See Appendix B for details.

CONCLUSION

The Board of Trustees (BOT) continues to evaluate the CRT review process to balance risk assessment with the need for external collaborations that advance the AMA's strategic focus.

Appendix A

CORPORATE REVIEW PROCESS OVERVIEW

The Corporate Review Team (CRT) includes senior managers from the following areas: Strategy, Finance, Health Solutions (HS), Advocacy, Office of the General Counsel, Medical Education, Publishing, Enterprise Communications (EC), Marketing and Member Experience (MMX), Center for Health Equity (CHE), and Health, Science and Ethics.

The CRT evaluates each project submitted to determine fit or conflict with AMA Corporate Guidelines, covering:

- Type, purpose, and duration of the activity;
- Audience;
- Company, association, foundation, or academic institution involved (due diligence reviewed);
- Source of external funding;
- Use of the AMA logo;
- Editorial control/copyright;
- Exclusive or non-exclusive nature of the arrangement;
- Status of single and multiple supporters; and
- Risk assessment for AMA.

The CRT reviews and makes recommendations regarding the following types of activities that utilize AMA name and logo:

- Industry-supported web, print, or conference projects directed to physicians or patients that do not adhere to Accreditation Council for Continuing Medical Education (ACCME) Standards and Essentials.
- AMA sponsorship of external events.
- Independent and company-sponsored foundation supported projects.
- AMA licensing and publishing programs. (These corporate arrangements involve licensing AMA products or information to corporate or non-profit entities in exchange for a royalty and involve the use of AMA's name, logo, and trademarks. This does not include database or Current Procedural Terminology (CPT ®) licensing.)
- Member programs such as new affinity or insurance programs and member benefits.
- Third-party relationships such as joint ventures, business partnerships, or co-branding programs directed to members.
- Non-profit association collaborations outside the Federation. The CRT reviews all non-profit association projects (Federation or non-Federation) that involve corporate sponsorship.
- Collaboration with academic institutions in cases where there is corporate sponsorship.

For the above specified activities, if the CRT recommends approval, the project proceeds.

In addition to CRT review, the Executive Committee of the Board must review and approve CRT recommendations for the following AMA activities:

- Any activity directed to the public with external funding.
- Single-sponsor activities that do not meet ACCME Standards and Essentials.
- Activities involving risk of substantial financial penalties for cancellation.
- Upon request of a dissenting member of the CRT.
- Any other activity upon request of the CRT.

All Corporate Review recommendations are summarized annually for information to the Board of Trustees (BOT). The BOT informs the HOD of all corporate arrangements at the Annual Meeting.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 06-A-23

Subject: Redefining AMA's Position on ACA and Healthcare Reform

Presented by: Sandra Adamson Fryhofer, MD, Chair

At the 2013 Annual Meeting of the House of Delegates (HOD), the HOD adopted Policy D-165.938, "Redefining AMA's Position on ACA and Healthcare Reform," which calls on our American Medical Association (AMA) to "develop a policy statement clearly outlining this organization's policies" on several specific issues related to the Affordable Care Act (ACA) as well as repealing the SGR and the Independent Payment Advisory Board (IPAB). The adopted policy also calls for our AMA to report back at each meeting of the HOD. Board of Trustees Report 6-I-13, "Redefining AMA's Position on ACA and Healthcare Reform," accomplished the original intent of the policy. This report serves as an update on the issues and related developments occurring since the most recent meeting of the HOD.

IMPROVING THE AFFORDABLE CARE ACT

Our AMA continues to engage policymakers and advocate for meaningful, affordable health care for all Americans to improve the health of our nation. Our AMA remains committed to the goal of universal coverage, which includes protecting coverage for the 20 million Americans who acquired it through the ACA. Our AMA has been working to fix the current system by advancing solutions that make coverage more affordable and expanding the system's reach to Americans who fall within its gaps. Our AMA also remains committed to improving health care access so that patients receive timely, high-quality care, preventive services, medications, and other necessary treatments.

Our AMA continues to advocate for policies that would allow patients and physicians to be able to choose from a range of public and private coverage options with the goal of providing coverage to all Americans. Specifically, our AMA has been working with Congress, the Administration, and states to advance our plan to cover the uninsured and improve affordability as included in the "2022 and Beyond: AMA's Plan to Cover the Uninsured." The COVID-19 pandemic initially led to many people losing their employer-based health insurance. This only increased the need for significant improvements to the Affordable Care Act. Recent data indicate that the uninsured rate has decreased during the COVID-19 pandemic, due to the temporary ACA improvements included in the American Rescue Plan Act, continuous Medicaid enrollment, and state Medicaid expansions.

We also continue to examine the pros and cons of a broad array of approaches to achieve universal coverage as the policy debate evolves.

Our AMA has been advocating for the following policy provisions:

Cover Uninsured Eligible for ACA's Premium Tax Credits

- Our AMA advocates for increasing the generosity of premium tax credits to improve premium affordability and incentivize tax credit eligible individuals to get covered. Currently, eligible individuals and families with incomes between 100 and 400 percent federal poverty level

(FPL) (133 and 400 percent in Medicaid expansion states) are being provided with refundable and advanceable premium tax credits to purchase coverage on health insurance exchanges.

- Our AMA has been advocating for enhanced premium tax credits for young adults. In order to improve insurance take-up rates among young adults and help balance the individual health insurance market risk pool, young adults ages 19 to 30 who are eligible for advance premium tax credits could be provided with "enhanced" premium tax credits—such as an additional $50 per month—while maintaining the current premium tax credit structure that is inversely related to income, as well as the current 3:1 age rating ratio.
- Our AMA is also advocating for an expansion of the eligibility for and increasing the size of cost-sharing reductions. Currently, individuals and families with incomes between 100 and 250 percent FPL (between 133 and 250 percent FPL in Medicaid expansion states) also qualify for cost-sharing subsidies if they select a silver plan, which leads to lower deductibles, out-of-pocket maximums, copayments, and other cost-sharing amounts. Extending eligibility for cost-sharing reductions beyond 250 percent FPL, and increasing the size of cost-sharing reductions, would lessen the cost-sharing burdens many individuals face, which impact their ability to access and afford the care they need.

<u>Cover Uninsured Eligible for Medicaid or Children's Health Insurance Program</u>

Before the COVID-19 pandemic, in 2018, 6.7 million of the nonelderly uninsured were eligible for Medicaid or the Children's Health Insurance Program (CHIP). Reasons for this population remaining uninsured include lack of awareness of eligibility or assistance in enrollment.

- Our AMA has been advocating for increasing and improving Medicaid/CHIP outreach and enrollment, including auto enrollment.
- Our AMA has been opposing efforts to establish Medicaid work requirements. The AMA believes that Medicaid work requirements would negatively affect access to care and lead to significant negative consequences for individuals' health and well-being.

<u>Make Coverage More Affordable for People Not Eligible for ACA's Premium Tax Credits</u>

Before the COVID-19 pandemic, in 2018, 5.7 million of the nonelderly uninsured were ineligible for financial assistance under the ACA, either due to their income, or because they have an offer of "affordable" employer-sponsored health insurance coverage. Without the assistance provided by ACA's premium tax credits, this population can continue to face unaffordable premiums and remain uninsured.

- Our AMA advocates for eliminating the subsidy "cliff," thereby expanding eligibility for premium tax credits beyond 400 percent FPL.
- Our AMA has been advocating for the establishment of a permanent federal reinsurance program, and the use of Section 1332 waivers for state reinsurance programs. Reinsurance plays a role in stabilizing premiums by reducing the incentive for insurers to charge higher premiums across the board in anticipation of higher-risk people enrolling in coverage. Section 1332 waivers have also been approved to provide funding for state reinsurance programs.
- Our AMA also is advocating for lowering the threshold that determines whether an employee's premium contribution is "affordable," allowing more employees to become eligible for premium tax credits to purchase marketplace coverage.
- Our AMA strongly advocated for the Internal Revenue Service (IRS) proposed regulation on April 7, 2022 that would fix the so-called "family glitch" under the ACA, whereby families of workers remain ineligible for subsidized ACA marketplace coverage even though they face

unaffordable premiums for health insurance coverage offered through employers. The proposed regulation would fix the family glitch by extending eligibility for ACA financial assistance to only the family members of workers who are not offered affordable job-based family coverage. The Biden Administration finalized the proposed rule on October 13, 2022.

EXPAND MEDICAID TO COVER MORE PEOPLE

Before the COVID-19 pandemic, in 2018, 2.3 million of the nonelderly uninsured found themselves in the coverage gap—not eligible for Medicaid, and not eligible for tax credits because they reside in states that did not expand Medicaid. Without access to Medicaid, these individuals do not have a pathway to affordable coverage.

- Our AMA has been encouraging all states to expand Medicaid eligibility to 133 percent FPL.

New policy adopted by the AMA HOD during the November 2021 Special Meeting seeks to assist more than two million nonelderly uninsured individuals who fall into the "coverage gap" in states that have not expanded Medicaid—those with incomes above Medicaid eligibility limits but below the FPL, which is the lower limit for premium tax credit eligibility. The new AMA policy maintains that coverage should be extended to these individuals at little or no cost, and further specifies that states that have already expanded Medicaid coverage should receive additional incentives to maintain that status going forward.

AMERICAN RESCUE PLAN OF 2021

On March 11, 2021, President Biden signed into law the American Rescue Plan (ARPA) of 2021. This legislation included the following ACA-related provisions that will:

- Provide a temporary (two-year) 5 percent increase in the Federal Medical Assistance Percentage (FMAP) for Medicaid to states that enact the Affordable Care Act's Medicaid expansion and covers the new enrollment period per requirements of the ACA.
- Invest nearly $35 billion in premium subsidy increases for those who buy coverage on the ACA marketplace.
- Expand the availability of ACA advanced premium tax credits (APTCs) to individuals whose income is above 400 percent of the FPL for 2021 and 2022.
- Give an option for states to provide 12-month postpartum coverage under State Medicaid and CHIP.

ARPA represents the largest coverage expansion since the Affordable Care Act. Under the ACA, eligible individuals, and families with incomes between 100 and 400 percent of the FPL (between 133 and 400 percent FPL in Medicaid expansion states) have been provided with refundable and advanceable premium credits that are inversely related to income to purchase coverage on health insurance exchanges. However, consistent with Policy H-165.824, "Improving Affordability in the Health Insurance Exchanges," ARPA eliminated ACA's subsidy "cliff" for 2021 and 2022. As a result, individuals and families with incomes above 400 percent FPL ($51,520 for an individual and $106,000 for a family of four based on 2021 federal poverty guidelines) are eligible for premium tax credit assistance. Individuals eligible for premium tax credits include individuals who are offered an employer plan that does not have an actuarial value of at least 60 percent or if the employee share of the premium exceeds 9.83 percent of income in 2021.

Consistent with Policy H-165.824, ARPA also increased the generosity of premium tax credits for two years, lowering the cap on the percentage of income individuals are required to pay for premiums of the benchmark (second lowest-cost silver) plan. Premiums of the second lowest-cost silver plan for individuals with incomes at and above 400 percent FPL are capped at 8.5 percent of their income. Notably, resulting from the changes, eligible individuals and families with incomes between 100 and 150 percent of the FPL (133 percent and 150 percent FPL in Medicaid expansion states) now qualify for zero-premium silver plans, effective until the end of 2022.

In addition, individuals and families with incomes between 100 and 250 percent FPL (between 133 and 250 percent FPL in Medicaid expansion states) also qualify for cost-sharing subsidies if they select a silver plan, which reduces their deductibles, out-of-pocket maximums, copayments, and other cost-sharing amounts.

LEGISLATIVE EXTENSION OF ARPA PROVISIONS

On August 16, 2022, President Biden signed into law the Inflation Reduction Act of 2022 through the highly partisan budget reconciliation process, which allows both the House and Senate to pass the bill with limits on procedural delays. Most significantly, reconciliation allows the Senate to bypass the filibuster and pass legislation with a 50-vote threshold so long as it meets a series of budgetary requirements. The Inflation Reduction Act included provisions that extended for three years to 2025 the aforementioned ACA premium subsidies authorized in ARPA.

The Inflation Reduction Act did not include provisions to close the Medicaid "coverage gap" in the states that have not chosen to expand.

ACA ENROLLMENT

According to the U.S. Department of Health and Human Services (HHS), 16.3 million Americans have signed up for or were automatically re-enrolled in the 2023 individual market health insurance coverage through the marketplaces since the start of the 2022 Marketplace Open Enrollment Period (OEP) on November 1, 2022, through January 15, 2023.

TEXAS VS. AZAR SUPREME COURT CASE

The Supreme Court agreed on March 2, 2020, to address the constitutionality of the ACA for the third time, granting the petitions for certiorari from Democratic Attorneys General and the House of Representatives. Oral arguments were presented on November 10, 2020, and a decision was expected before June 2021. The AMA filed an amicus brief in support of the Act and the petitioners in this case.

On February 10, 2021, the U.S. Department of Justice under the new Biden Administration submitted a letter to the Supreme Court arguing that the ACA's individual mandate remains valid, and, even if the court determines it is not, the rest of the law can remain intact.

This action reversed the Trump Administration's brief it filed with the Court asking the justices to overturn the ACA in its entirety. The Trump Administration had clarified that the Court could choose to leave some ACA provisions in place if they do not harm the plaintiffs, but as legal experts pointed out, the entire ACA would be struck down if the Court rules that the law is inseparable from the individual mandate—meaning that there would be no provisions left to selectively enforce.

On June 17, 2021, the Supreme Court in a 7-2 decision ruled that neither the states nor the individuals challenging the law have a legal standing to sue. The Court did not touch on the larger issue in the case: whether the entirety of the ACA was rendered unconstitutional when Congress eliminated the penalty for failing to obtain health insurance.

With its legal status now affirmed by three Supreme Court decisions, and provisions such as coverage for preventive services and pre-existing conditions woven into the fabric of U.S. health care, the risk of future lawsuits succeeding in overturning the ACA is significantly diminished.

BRAIDWOOD MANAGEMENT VS. BECCERRA FEDERAL COURT CASE

A case before a federal district court judge in the Northern District of Texas, *Braidwood v. Becerra* (formerly *Kelley v. Becerra)*, would eliminate the ACA requirement that most health insurance plans cover preventive services without copayments. Those filing the case object to paying for coverage that they do not want or need, particularly for those items or services that violate their religious beliefs, such as contraception or PrEP drugs. If the case is ultimately successful, health plan enrollees will also lose access to full coverage for dozens of preventive health services, including vaccinations and screenings for breast cancer, colorectal cancer, cervical cancer, heart disease, and other diseases and medical conditions.

The AMA and 61 national physician specialty organizations issued a joint statement on July 25, 2022, sounding the alarm about the millions of privately insured patients who would be affected by an adverse ruling.

On September 7, 2022, Texas federal court judge Reed O'Connor ruled that part of the ACA's requirement that health plans cover preventive services without copayments was unconstitutional. He further held that that one of the plaintiffs, Braidwood Management, a for-profit company, could not be required to cover PrEP through its employer health plan because of Braidwood's religious objections. Judge O'Conner did not immediately issue an order blocking enforcement of the coverage requirements. He also did not specify whether such an order would be nationwide, for his district only, for all the named plaintiffs, or only for Braidwood. These issues were held for further argument before Judge O'Connor.

On November 30, 2022, the Litigation Center of the American Medical Association and State Medical Societies, along with the American College of Obstetricians and Gynecologists, American Academy of Pediatrics, American Academy of Family Physicians, and four other national associations filed an amicus brief warning against the court ordering broad, nationwide relief, arguing that such a decision would imperil access to vital preventive care that keeps patients healthier and lowers overall costs for the health care system.

On March 30, 2023, after supplemental briefing from the parties and *amici*, the federal district court issued its opinion and order addressing the remedies and final judgment. Most notably, the court ordered that all actions taken by HHS to implement or enforce the preventive care coverage requirements in response to an "A" or "B" recommendation by the U.S. Preventive Services Task Force on or after March 23, 2010 are vacated and enjoined going forward. The court also ordered that the named plaintiffs need not comply with the PrEP mandate, based on the court's prior ruling that the PrEP mandate violates the plaintiffs' rights under the Religious Freedom Restoration Act. On March 31, the federal government filed its notice of appeal, and the litigation will continue.

In a statement following the ruling, AMA President Jack Resneck, Jr., M.D., expressed alarm at the ruling and urged employers and insurers to maintain this first dollar coverage while legislative and judicial next steps are considered.

SGR REPEAL

The Medicare Access and CHIP Reauthorization Act (MACRA) of 2015 repealing and replacing the SGR was signed into law by President Obama on April 16, 2015.

The AMA is now working on unrelated new Medicare payment reduction threats and is currently advocating for a sustainable, inflation-based, automatic positive update system for physicians.

INDEPENDENT PAYMENT ADVISORY BOARD REPEAL

The Bipartisan Budget Act of 2018 signed into law by President Trump on February 9, 2018, included provisions repealing IPAB. Currently, there are not any legislative efforts in Congress to replace the IPAB.

CONCLUSION

Our American Medical Association will remain engaged in efforts to improve the health care system through policies outlined in Policy D-165. 938 and other directives of the House of Delegates. Given that most of the ACA fixes that led to calls in 2013 for this report at every HOD meeting have been accomplished, our primary goal now related to health care reform is stabilization of the broken Medicare physician payment system, including the need for inflation-based positive annual updates and reform of budget neutrality rules.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 07-A-23

Subject: AMA Performance, Activities, and Status in 2022

Presented by: Sandra Adamson Fryhofer, MD, Chair

Policy G-605.050, "Annual Reporting Responsibilities of the AMA Board of Trustees," calls for the Board of Trustees to submit a report at the American Medical Association (AMA) Annual Meeting each year summarizing AMA performance, activities, and status for the prior year.

INTRODUCTION

The AMA's mission is to promote the art and science of medicine and the betterment of public health. As the physician organization whose reach and depth extend across all physicians, as well as policymakers, medical schools, and health care leaders, the AMA uniquely can deliver results and initiatives that enable physicians to improve the health of the nation.

Representing physicians with a unified voice

In a year that marked the organization's 175th anniversary, the AMA launched the Recovery Plan for America's Physicians, a five-point strategy to support and strengthen our nation's physician workforce. The plan was introduced at the Annual Meeting of the AMA House of Delegates in June 2022. The five objectives of the plan focus on prior authorization, Medicare payment reform, scope of practice creep, physician burnout and telehealth.

The AMA has been leading a multiyear effort to bring about Medicare payment models that give physicians greater flexibility in care delivery, minimize administrative burdens that detract from patient care, and improve the financial viability of physician practices. In 2022, we led a robust advocacy campaign that was joined by more than 150 organizations representing more than 1 million physicians that minimized the 8.5% Medicare physician payment cuts slated for 2023. In addition, AMA advocacy efforts helped secure a two-year postponement of the 4% cuts from the pay-as-you-go sequester tied to the American Rescue Plan Act

The AMA scored more than 40 state-level victories by working in partnership with state medical associations and national medical specialty societies. Pressing the fight for patient safety, we stopped bills that would have expanded the scope of practice for nurse practitioners and other APRNs, helped defeat legislation nationwide that would have allowed physician assistants to practice independently without physician oversight, and turned away measures allowing pharmacists to prescribe medications and optometrists to perform surgery.

The AMA continues to aggressively urge the Department of Veterans Affairs to reject the inappropriate scope of practice expansions outlined in the Federal Supremacy Project while advocating as strongly as ever in favor of physician-led teams and against improper scope expansions in all 50 states and the District of Columbia.

In cases ranging from COVID-19 standards of care and firearm regulations to climate change and transgender rights, the AMA continued to fight for physicians and patients in state and federal

courts in 2022. The AMA was a plaintiff in *African American Tobacco Control Leadership Council v. HHS*, which forced the federal government to take the first steps toward banning menthol cigarettes. And in the wake of the U.S. Supreme Court's *Dobbs v. Jackson Women's Health Organization* decision, the AMA joined numerous briefs outlining the need for access to reproductive care and opposing third-party interference in the patient-physician relationship.

The AMA elevated the voice of physician leadership on critical issues of public health, securing more than 175 billion media impressions representing nearly $1.6 billion in estimated ad value and achieving a commanding 43 percent share of voice among healthcare entities in the media.

Removing obstacles that interfere with patient care

The Improving Seniors' Timely Access to Care Act, the bipartisan effort to ease prior authorization burdens under the Medicare Advantage program, garnered 326 co-sponsors before it was passed by the U.S. House of Representatives in September. Its provisions were developed from the consensus statement on prior authorization reform that the AMA helped draft.

The AMA represented the interests of physicians in a federal regulatory task force exploring methods to streamline the prior authorization process. The AMA also played a key role in the successful adoption of prior authorization reform laws in Georgia, Iowa and Michigan, and paved the way for reform efforts in 2023 in nearly a dozen more states.

The AMA authored or co-authored a record 27 peer-reviewed journal articles and research reports in 2022 relating to physician burnout and improving professional satisfaction and practice sustainability. The AMA helped secure the enactment of the Dr. Lorna Breen Health Care Provider Protection Act, which enables a broad range of essential physician wellness resources, including evidence-based programs dedicated to improving mental health and resiliency.

The AMA STEPS Forward® Program exceeded 1.6 million lifetime users with new training programs that included two more playbooks, two new and 17 updated toolkits, 26 podcasts and four videos.

The AMA expanded its work in promoting physician wellness through its Joy in Medicine™ Health System Recognition Program, honoring nearly 30 health care organizations that represented more than 80,000 physicians.

The AMA expanded its national Behavioral Health Collaborative with the launch of the Behavioral Health Integration Immersion Program, a 12-month curriculum that provides enhanced technical assistance to physician practices seeking to deliver integrated care to patients. This effort builds on the success of the Overcoming Obstacles series with several new webinars on topics such as assembling a behavioral health integration care team and addressing physician and patient mental health.

Driving the future of medicine

The AMA played a key role in securing passage of legislation to extend Medicare telehealth flexibilities through the end of 2024. We launched model legislation that states can use to advance telehealth coverage and policies. The AMA further supported telehealth expansion by expanding our already-impressive library of print and online resources promoting evidence-based telehealth services to now include strategies to advance health equity in virtual care. The launch of the AMA's Telehealth Immersion Program supports practices in the implementation and optimization

of telehealth. The program expanded in 2022 with seven webinars, five clinical case studies, two virtual panel discussions and one mini bootcamp.

The industry-leading AMA Ed Hub™ online education portal received 6 million views and continued to expand its programs, affiliations and reach to support live broadcasts and enhance multimedia capabilities. The number of external education providers grew by 10 to encompass 35 organizations with the addition of the American Board of Pediatrics and the American Academy of Allergy, Asthma and Immunology, among others.

The AMA, led by its Center for Health Equity, strengthened its physician engagement with the launch of seven new social justice education modules published on the AMA Ed Hub™ learning platform. These modules focus on strategies to advance equity through quality and safety improvements to the historical foundations of racism in medicine. In addition, the AMA's popular "Prioritizing Equity" webinar series grew to 28 episodes, with new features on voting, health equity and reproductive care as a human right.

The AMA helped launch the "In Full Health Learning and Action Community to Advance Equitable Health in Innovation" initiative, building upon the expertise of 17 external collaborations to create three AMA Ed Hub™ learning modules and the "Equitable Health Innovation Solutions" toolkit.

Building on the AMA's commitment to diversity, equity and inclusion, the AMA Graduate Medical Education Competency Education Program and the AMA Undergraduate Medical Education Curricular Enrichment Program launched a series of health equity educational courses: "Social Determinants of Health," "Basics of Health Equity," and three courses in the "Racism in Medicine" series.

First published in March 2022 as part of the AMA's MedEd Innovation Series, "Coaching in Medical Education" quickly sold out. Now in its second printing, this instructor-focused guide outlines a scientific foundation for coaching competency and has ranked in the top 100 of medical education and training books since its release. The AMA also published "Protecting the Education Mission During Sustained Disruption" in 2022, a report that explores organizational strategies to support educators amid extreme stress and which formed the basis of the Educator Well-Being in Academic Medicine book published in December.

The AMA released a special 175th anniversary edition of its Code of Medical Ethics, and the Journal of the American Medical Association, under the direction of new Editor-in-Chief Kirsten Bibbins-Domingo, MD, PhD, MAS, maintained its place among the world's preeminent medical journals. All 12 specialty publications from the JAMA Network™ ranked among the top 10 in journal Impact Factor, with eight ranking in the top three for their respective specialties.

The launch of the AMA's new Current Procedural Terminology (CPT®) Developer Program helped creators of health technology and services utilize the code set for their transformative innovations. The new self-service portal gives physicians the ability to license CPT code sets through a simple pay model, including new codes introduced in 2022 relating to the mpox outbreak and ongoing releases for specific COVID-19 vaccines.

The AMA relaunched its popular Physician Innovation Network digital platform, which now has more than 18,000 collaborators and 30 industry partners, to improve user experience and more effectively connect physicians with technology innovators.

Leading the charge to confront public health crises

The AMA expanded its health equity investments with the launch of the Rise to Health: A National Coalition for Equity in Health Care, an effort that unites individuals and organizations in shared solutions for high-impact structural change, and with a $3 million multi-year investment in Chicago's West Side United, a community-based collaborative that is addressing determinants of health and helping restore economic vitality on the city's West Side.

The AMA developed a mpox resource page to provide physicians with updated information on testing access, vaccines and therapeutics, and worked with the FDA and CDC on a webinar detailing the tecovirimat (TPOXX) antiviral. And the AMA collaborated on the annual "Get My Flu Shot" campaign, with a specific focus on reaching Black and Latinx populations and kept physicians and the public up to date on the latest pandemic developments, including therapeutics and the importance of staying up to date with COVID-19 vaccines.

To close the gap in blood pressure management training within medical schools, the AMA launched a three-part eLearning series, supported by a one-year grant program to monitor the impact of this new training. AMA policy guidance led to four states increasing access to Medicaid programs for self-measured blood pressure by covering home-use devices and clinical support services. Additionally, the AMA also helped train more than 100 community health workers to help Chicago's West Side residents more accurately measure their blood pressure at home.

The AMA's Substance Use and Pain Care Task Force continues to advance evidence-based recommendations for policymakers and physicians to help end the nation's drug-related overdose and death epidemic. The AMA and Manatt Health 2022 State Toolkit identifies more than 400 state laws, regulations, and policy guidance to help end the nation's drug overdose epidemic.

The AMA's Enterprise Social Responsibility (ESR) program continues to deliver an organized and thoughtful structure to engage AMA employees in public service work aligned with the organization's values and goals. The program has strategically integrated with the Center for Health Equity's strategic plan to support healthy, thriving, equitable communities. Thirty percent of AMA employees, representing every business unit and office location, supported nearly 80 organizations and donated $160,000 to community partners.

Membership

Following 11 consecutive years of membership growth, in 2022 the AMA experienced a small decrease in overall membership (due to a drop in student numbers), but physician membership remained steady. Overall, the organization's advocacy efforts and mission activities were supported by another strong year of financial performance.

EVP Compensation

During 2022, pursuant to his employment agreement, total cash compensation paid to James L. Madara, MD, as AMA Executive Vice President was $1,281,270 in salary and $1,220,904 in incentive compensation, reduced by $2,632 in pre-tax deductions. Other taxable amounts per the contract are as follows: $151,198 distribution from a deferred compensation plan; $23,484 imputed costs for life insurance, $24,720 imputed costs for executive life insurance, and $3,650 paid for an executive physical, and $3,519 paid for parking and other. An $81,000 contribution to a deferred compensation account was also made by the AMA. This will not be taxable until vested and paid pursuant to provisions in the deferred compensation agreement. For additional information about AMA activities and accomplishments, please see the "AMA 2022 Annual Report."

REPORT OF THE BOARD OF TRUSTEES

B of T Report 08-A-23

Subject: Annual Update on Activities and Progress in Tobacco Control: March 2022 through February 2023

Presented by: Sandra Adamson Fryhofer, MD, Chair

This report summarizes trends and news on tobacco usage, policies, and tobacco control advocacy activities from March 2022 through February 2023. The report is written pursuant to AMA Policy D-490.983, "Annual Tobacco Report."

TOBACCO USE AT A GLANCE

Tobacco control efforts are often heralded as a roadmap for advocates addressing other health behaviors associated with negative health outcomes. The successes of those efforts to reduce the tobacco-related harms cannot be diminished; however, tobacco remains the leading cause of preventable disease, disability, and death in the United States.[1] According to the Centers for Disease Control and Prevention (CDC) tobacco kills more than 480,000 people annually. Based on 2020 data, an estimated 31 million U.S. adults smoke cigarettes, and each day 1600 youth under 18 years old smoke their first cigarette. More than 16 million people live with at least one disease caused by smoking.[2]

Youth Tobacco Use Associated with Social Determinants of Health Inequities

The National Youth Tobacco Survey (NYTS) is a cross-sectional, voluntary, school-based, self-administered survey of U.S. middle and high school students. In 2022, the survey was conducted using an online survey. A total of 28,291 students from 341 schools participated, yielding an overall response rate of 45.2%.[3]

An analysis of the 2022 NYTS estimates 3 million (4.5% of middle school students and 16.5% of high school students) currently use any tobacco product including electronic cigarettes (e-cigarettes). E-cigarettes are the most commonly used tobacco product by students. Three percent of middle school students and 14% of high school students reported current use of e-cigarettes. NYTS defines current tobacco use as one or more of any commercial tobacco product on ≥1 day during the past 30 days.[3]

For the first time since the initial survey in 1999, estimates for Asian, American Indian or Alaska Native (AI/AN), Native Hawaiian or Other Pacific Islander (NH/OPI), and multiracial population groups were provided. The report states, "Whereas AI/AN students reported the highest prevalence of current use of any tobacco product, current use of any combustible tobacco product, specifically cigar and hookah use, was highest among Black students. In addition, current use of any tobacco product was higher among those students identifying as LGB [lesbian, gay, bisexual] or transgender, those reporting severe psychological distress, those with low family affluence, and those with low academic achievement."[3]

The inequities suggest the impact of the continued aggressive marketing by tobacco companies and e-cigarette manufacturers to specific populations.

Because of changes in methodology, including differences in survey administration and data collection procedures, the ability to compare estimates from 2022 with those from previous NYTS waves is limited. However, the cross-sectional data provided by the 2022 survey are still valid and informative.[3]

Adult Tobacco Use

Adult tobacco use has continued to decline with an estimated 19% of U.S. adults reporting current use of any commercial tobacco product according to the 2020 National Health Interview Survey (NHIS) compared to 21% reported in 2019. NHIS is an annual, nationally representative household survey of the noninstitutionalized U.S. civilian population. Current use is defined by NHIS as having reported use of these products every day or some days at the time of survey. While e-cigarettes are the most common tobacco product of youth, an estimated 80% of adults reported using combustible products (cigarettes, cigars and pipes).[4]

The CDC report shows inequities in adults who smoke and use tobacco in the U.S. According to the report groups with high rates of smoking include people with lower income and less education, AI/AN adults, residents of the Midwest and South, residents of rural areas, LGB adults, and adults who regularly had feelings of anxiety or depression. Adults who are uninsured or enrolled in Medicaid smoke at more than double the rates of those with private health insurance or Medicare.[4]

Among all tobacco products, combustible products are the predominate cause of tobacco related morbidity and mortality indicating that policies directed at these products remain a high priority.[5] These policies should focus on providing access to evidence-based treatments for tobacco dependence and disincentives to smoking such as increases in taxes.[4]

EFFORTS TO ADDRESS TOBACCO CONTROL

ALA Releases its 2023 State of Tobacco Report

The American Lung Association (ALA) “State of Tobacco Control” report evaluates state and federal policies on actions taken to eliminate tobacco use and recommends proven-effective tobacco control laws and policies. The report provides letter grades to five interventions. At the federal level grades are given for regulation of tobacco products, coverage for smoking cessation, taxes, mass media campaigns and minimum sales age. At the state level the report evaluates smokefree workplace laws, sales of flavored tobacco products, state program funding, tobacco taxes, and access cessation services.

According to the American Lung Association’s 2023 State of Tobacco Report, the Federal government took major steps toward regulating tobacco products in 2022 but fell short in coverage of quit smoking treatments and increasing federal taxes. The states with the highest overall grades were California, District of Columbia, and Massachusetts. The report shows how widely tobacco policies vary from state to state. For example, some states still allow smoking in workplaces including restaurants and bars, and some states lack Medicaid coverage for tobacco cessation. Alabama, Mississippi, North Carolina, and Texas were states with the most need to enact evidence-based policies.

The report also highlights the need to continue funding programs like the CDC's Tips From Former Smokers® (Tips®) campaign launched in 2012. The campaign profiles real people from many different backgrounds living with serious long-term health effects from smoking and secondhand smoke exposure. State level funding for cessation efforts also should be prioritized as well as efforts to provide support for community-level engagements in addressing inequities.[6]

AMA Joins with Public Health Groups to Protect Tobacco Regulation and Funding

The CDC Office on Smoking and Health (OSH) has a proven track record in developing programs, initiatives and resources that have reduced the social, medical, and economic tolls associated with tobacco in the U.S. Dedicated and increased funding is needed by for OSH to support ongoing research that contributes to the development of innovative interventions in tobacco prevention and cessation.

In April 2022 the AMA signed on to a letter calling on the House of Representatives Appropriations Committee to increase funding for OSH by $68.5 million, for a total of $310 million.

In June 2022, when members of the House of Representative's Committee on Appropriations were reviewing the Agriculture, Rural Development, Food and Drug Administration, and Related Agencies Appropriations bill the public health community raised concerns that the bill would include language weakening FDA's authority over tobacco. The AMA was one of 70 organizations, including Federation members American Thoracic Society, American Academy of Pediatrics and American College of Cardiology, who signed a letter to the Committee calling on them to ensure that FDA has the unfettered ability to protect youth from unscrupulous marketing of any and all tobacco products.

These letters were part of a comprehensive strategy to ensure that the tobacco industry and others have limited influence in weakening the strides made in tobacco control while being prepared for new threats to public health in the future.

Supreme Court Upholds California Law Banning Flavored Tobacco Products

In 2020, California Governor Gavin Newsom signed Senate Bill 793 into law. This law prohibited the sale of menthol cigarettes and most flavored tobacco products. The law was immediately challenged and thus began a two-year legal battle by R.J. Reynolds who sued the state of California and effectively delayed implementation until the law could be considered in a ballot referendum in 2022. In November 2022, California voters overwhelmingly supported the 2020 law with more than 60% voting yes on the referendum.

R.J. Reynolds and other tobacco entities immediately appealed to the Supreme Court, requesting an emergency injunction against California's law arguing that the Federal Tobacco Control Act prohibited California from enacting its flavored tobacco law. The AMA joined with public health groups and other medical associations in an amicus brief opposing R.J. Reynolds' emergency application. On December 12, the Supreme Court denied the suit and on December 21, California became the second state to ban the sale of flavored tobacco products and menthol cigarettes. Massachusetts was the first state to ban flavors and menthol in 2019.

FDA Takes Steps to Remove Menthol

On April 28, 2022, the U.S. Food and Drug Administration (FDA) released two proposed rules on characterizing flavors in tobacco products. One of the proposed rules would ban menthol and all characterizing flavors such as strawberry flavor in cigarettes, and the other proposed rule would prohibit menthol in cigars. This news was treated with great support from public health groups, but it came after years of inaction by the FDA. The long-overdue action follows a lawsuit filed in 2020 by the African American Tobacco Control Leadership Council, Action on Smoking and Health, AMA, and National Medical Association.

According to a Substance Abuse and Mental Health Services Administration study, "85% of non-Hispanic Black and African American adults who smoke prefer menthol cigarettes, and menthol flavoring in cigarettes and e-cigarettes make it easier for youth to initiate smoking."[7] "It is estimated that nearly 1 million Americans—and about 230,000 African Americans—would quit smoking within 13 to 17 months of a ban on menthol cigarettes taking effect."[8]

FDA has announced that the final rules will be released sometime in 2023. Barring any delay from the anticipated lawsuits from the tobacco industry, products will have to be removed within one year.

Congress Closes Loophole in FDA Authority

In March, Congress took action to expand the FDA's regulatory authority over tobacco products using synthetic nicotine. FDA's authority to regulate nicotine in tobacco products was previously limited to tobacco-derived nicotine. This specificity created a loophole for manufacturers including Puff Bar to reintroduce their e-cigarette with synthetic nicotine when ordered to take their flavored tobacco-derived product off the market. Congress closed this loophole by allowing the FDA to regulate nicotine regardless of the source. Several state and local jurisdictions have already passed similar laws; however, having a federal framework in place allows for a more comprehensive approach.

Despite this promising measure, the FDA has yet to take significant enforcement actions against companies still selling unauthorized synthetic nicotine products. Tribal, state, local, and territorial governments can and should move forward to implement their own laws where necessary and ensure that synthetic nicotine is included in their tobacco control efforts.

FDA and DoJ Take Actions Against Manufacturers

Starting in September 2020, all tobacco product manufacturers are required to submit a premarket application and receive authorization from the FDA before introducing a new tobacco product into the market. In accordance with its regulatory authority, the FDA issued warning letters to two brands of e-cigarettes doing business as Puff Bar for "receiving and delivering e-cigarettes" without a marketing authorization order. The agency also issued marketing denial orders for 32 premarket tobacco applications, because they "lacked sufficient evidence demonstrating that these flavored e-cigarettes would provide a benefit to adult users that would be adequate to outweigh the risks to youth."

In October 2022 the U.S. Department of Justice (DoJ), on behalf of the FDA, filed for permanent injunctions against six e-cigarette manufacturers on behalf of the FDA. According to the FDA, this action represents the first time that the agency has begun injunction proceedings to enforce premarket review requirements under the Federal Food, Drug and Cosmetic Act.

Each of the six defendants—Lucky's Convenience & Tobacco LLC doing business as Lucky's Vape & Smoke Shop in the District of Kansas; Morin Enterprises Inc. doing business as E-Cig Crib in the District of Minnesota; Seditious Vapours LLC doing business as Butt Out in the District of Arizona; Soul Vapor LLC in the Southern District of West Virginia; Super Vape'z LLC in the Western District of Washington and Vapor Craft LLC in the Middle District of Georgia—illegally manufactured, sold and distributed their products, even after receiving warnings from the FDA.

The defendants did not submit premarket applications for their e-cigarettes and subsequently received a warning from the FDA. While most of the 300 companies that received warning labels removed their products from the marketplace, the six defendants continued manufacturing, distributing, and selling their products.

REPORT 10 OF THE BOARD OF TRUSTEES (A-23)
American Medical Association Health Equity Annual Report
(Informational)

EXECUTIVE SUMMARY

Background: At the 2018 Annual Meeting, the House of Delegates adopted the recommendations of Policy D-180.981 directing our AMA to "develop an organizational unit, e.g., a Center or its equivalent, to facilitate, coordinate, initiate, and track AMA health equity activities" and instructing the "Board to provide an annual report to the House of Delegates regarding AMA's health equity activities and achievements." The HOD provided additional guidance via Policy H-180.944: "Health equity, defined as optimal health for all, is a goal toward which our AMA will work by advocating for health care access, research, and data collection; promoting equity in care; increasing health workforce diversity; influencing determinants of health; and voicing and modeling commitment to health equity." HOD policy was followed by creation of the AMA Center for Health Equity ("Center") in April 2019 and the AMA's Organizational Strategic Plan to Embed Racial Justice and Advance Health Equity for 2021-2023 ("Plan") in May 2021. In 2022, updated Policy H-65.946 specified that this report will also include "updates on [the AMA's] comprehensive diversity and inclusion strategy."

Discussion: The AMA has steadfastly enhanced efforts over recent years to further embed equity in our work. The Plan serves as a guide for this work. This report outlines the activities conducted by our AMA during calendar year 2022, divided into five (5) strategic approaches detailed in the Plan: (1) Embed Equity; (2) Build Alliances and Share Power; (3) Ensure Equity in Innovation; (4) Push Upstream; and (5) Foster Truth, Reconciliation, and Racial Healing. The diversity and inclusion strategy updates are included within the Embed Equity section.

Conclusion: Despite challenges, including the COVID-19 pandemic, our AMA persevered in efforts to advance equity by continuously engaging in meaningful conversations, and finding innovative ways to connect, learn, and create. The AMA increased engagement of health equity content to 1,000,000 website users, including 124,374 engagements driven by publication of 78 new activities on Ed Hub. The AMA engaged in at least two Supreme Court amicus briefs and issued more than 70 advocacy letters to policymakers related to health equity, securing wins in the Consolidated Appropriations Act. The AMA expanded its social impact investments with an additional $3 million multi-year investment. The AMA continued to promote the art and science of medicine and the betterment of public health, advancing equity and embedding racial and social justice, making significant progress towards fulfilling the commitments outlined in the Plan during its second year.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 10-A-23

Subject: American Medical Association Health Equity Annual Report

Presented by: Sandra Adamson Fryhofer, MD, Chair

BACKGROUND

At the 2018 Annual Meeting, the House of Delegates adopted Policy D-180.981, directing our AMA to "develop an organizational unit, e.g., a Center or its equivalent, to facilitate, coordinate, initiate, and track AMA health equity activities" and instructing the "Board to provide an annual report to the House of Delegates regarding AMA's health equity activities and achievements." The HOD provided additional guidance via Policy H-180.944: "Health equity, defined as optimal health for all, is a goal toward which our AMA will work by advocating for health care access, research, and data collection; promoting equity in care; increasing health workforce diversity; influencing determinants of health; and voicing and modeling commitment to health equity." HOD policy was followed by creation of the AMA Center for Health Equity ("Center") in April 2019 and the AMA's Organizational Strategic Plan to Embed Racial Justice and Advance Health Equity for 2021-2023 ("Plan") in May 2021. In 2022, updated Policy H-65.946 specified that this report will also include "updates on [the AMA's] comprehensive diversity and inclusion strategy."

DISCUSSION

Our AMA has committed itself to advancing health equity, advocating for racial and social justice, and embedding equity across the organization and beyond. In 2022, the Center continued to collect enterprise-wide equity related work and track progress toward the five strategic approaches detailed in the AMA's Plan. This report outlines the activities conducted by our AMA during calendar year 2022, divided into five strategic approaches detailed in the Plan: (1) Embed Equity; (2) Build Alliances and Share Power; (3) Ensure Equity in Innovation; (4) Push Upstream; and (5) Foster Truth, Reconciliation, and Racial Healing. The diversity and inclusion strategy updates are included within the Embed Equity section.

Embed Equity

Ensuring a lasting commitment to health equity by our AMA involves embedding equity using anti-racism, structural competency, and trauma-informed lenses as a foundation for transforming the AMA's staff and broader culture, systems, policies, and practices, including training, tools, recruitment and retention, contracts, budgeting, communications, publishing, and regular assessment of organizational change. The following are some of the relevant accomplishments during 2022:

- The AMA engaged 1,000,000 users of health equity-related content on the website, a +43% increase over the prior year, by producing 108 new health equity-related articles or other content, significantly more than any other year. The most consumed content included: (1) "GME –These courses create health equity champions in your Residency Program" (193K users), (2) "2022 a critical year to address the worsening drug overdose crisis" (13K users), (3) "The AMA's Strategic plan to embed racial justice and advance health equity" (11k users).

- The AMA incorporated health equity into the annual Medical Student Advocacy Conference (MAC) and the annual Research Challenge, which is the largest national, multi-specialty medical research conference for medical students, residents and fellows, and international medical graduates to showcase and present research. Changes included incorporating customized diversity, equity, and inclusion (DEI) statements in Research Challenge marketing, reducing bias in the Research Challenge abstract review process by removing author names, incorporating subtitles in Research Challenge and MAC training videos, and producing an education session at MAC on redefining social determinants of health in organized medicine.
- The AMA continued to reflect its commitment to health equity in its messaging, speeches, and announcements on an ongoing basis on various fronts including the All-Employee Meeting, Frontline Communicator Training, Board of Trustees message/media training, and beyond.
- The AMA produced six Prioritizing Equity episodes (including voting and health and reproductive health care as a human right) and eight podcast episodes (five Stories of Care episodes on health equity and infection control, two LGBTQ-themed episodes, and one episode on embedding racial and health equity in health systems), hosted 2 webinars on social determinants of health and racial and health equity for health systems, and published a STEPS Forward toolkit (Racial and Health Equity: Concrete STEPS for Health Systems) and five health-equity centered issues of the Journal of Ethics (Inequity Along the Medical/Dental Divide, Toward Abolition Medicine, Health Equity in US Latinx Communities, Inequity and Iatrogenic Harm, What We Owe Workers in Health Care Who Earn Low Wages) with a combined 1 million unique journal website visitors during the months of those issues.
- AMA Councils produced three reports including health equity considerations adopted by the House of Delegates on pandemic ethics, rural public health, and climate change and public health. The Board of Trustees produced two health-equity related reports adopted by the House of Delegates on a global non-discrimination policy and language related to discrimination and harassment.
- AMA staff updated over 50 years of publication illustrations of patients in procedural descriptions for the Current Procedural Terminology (CPT) Pro Book. The 2023 CPT PRO Book will have over 20 illustrations that reflect diversity in skin tones and ethnicity, with plans for more in future years.

The AMA's employee life cycle and internal diversity, equity, and inclusion (DEI) framework help to operationalize DEI initiatives across the enterprise. Within embedding equity, updates on the AMA's diversity and inclusion strategy include:

- All of the AMA's business units (BUs) created their first annual equity action plans.
- The AMA developed the second phase of its embedding equity curriculum, for launch in 2023, to help staff practically apply inclusive skills.
- The AMA developed dashboards including demographics of existing staff and new hires, with data included in the annual report to AMA senior management.
- The AMA continued to diversify its outside counsel legal spend by working with law firms owned by Black attorneys, attorneys of color and/or women, some of whom are members of the National Association of Minority & Women Owned Law Firms (NAMWOLF).
- The AMA continued efforts toward expanding its vendor base to a more diverse group.
- The AMA added to its suite of Employee Resources Groups with the launch of the Immigrant Xchange ERG. ERGs[1] are voluntary, self-coordinating employee-driven groups which are based

[1] Immigrant Xchange joins Access, BEAN (Black Employees, Advocates and Allies Network), InspirASIAN, Pride, Unidos, Veterans Community Resource Group, and Women Inspired Now (WIN).

on a constituency or shared interest, and provide community, support and networking opportunities.

- The AMA continued its partnership with Urban Alliance's Alumni Internship Program (AIP), which matches graduates of the High School Internship Program with paid 6-week summer internships at the AMA, to help them gain valuable professional experience and earn income to support their future.
- The AMA committed to improving workplace accessibility including installing auto-operators on doors in Chicago and DC, and reduced size of conference room tables to improve accommodation for mobility devices and other factors.
- The JAMA Network Equity Action Team (JNEAT) led work including an anonymous pulse survey of staff and bi-monthly newsletters and learning sessions for staff. Webinars attracting over 325 employees included a dialogue with Dilla Thomas on the history of medicine in Chicago through the lens of its marginalized groups, a learning session with Open Books Chicago on literacy levels within Chicago's marginalized communities, and an interactive practice session for staff to learn about updates and practice applying inclusive language and reporting guidance in medical publication.

Build Alliances and Share Power

Building strategic alliances and partnerships and sharing power with historically marginalized and minoritized physicians and other stakeholders is essential to advancing health equity. This work centers previously excluded voices, builds advocacy coalitions, and establishes the foundation for true accountability. The following are some of the relevant accomplishments during 2022:

- The AMA continued to sponsor events that engaged historically marginalized audiences, including National Association of Black Journalists (NABJ), National Association of Hispanic Journalists (NAHJ), the Association of LGBTQ Journalists (NLGJA).
- The AMA completed a community impact plan for improving blood pressure control in collaboration with West Side United (WSU). In October, working with the City Club of Chicago, AMA convened business and civic leaders to highlight the collaboration and the AMA's additional $3 million social impact investment, bringing the AMA's multi-year total investment to $5 million, with the intention of benefitting Chicago's 500,000 West Side residents (33% Black, 39% Hispanic or Latino, 21% white). This investment leverages AMA's new commitment as an anchor mission partner with WSU—adding to a group of collaborators committed to addressing structural inequities, eliminating health disparities and improving economic vitality and educational opportunities in Chicago's west side communities, which have been devastated by decades of neglect and disinvestment.
- The national Release the Pressure (RTP) campaign, led by the AMA in collaboration with the American Heart Association, the AMA Foundation, the Association of Black Cardiologists, the Minority Health Institute, and the National Medical Association, was designed to increase awareness of heart health, heart disease and high blood pressure among Black women. The campaign continued momentum in 2022 with over 67,000 video views and almost 31,000 pledges.
- The Medical Justice in Advocacy Fellowship, an educational initiative in collaboration with Morehouse School of Medicine's Satcher Health Leadership Institute (SHLI), showcased capstone projects of the first cohort of 12 physician fellows at the AMA HOD Interim Meeting and launched the second cohort of 11 physician fellows with intensive training at Morehouse School of Medicine.
- As part of the Physician Data Collaborative (Collaborative), the AAMC, ACGME and AMA continue to work together to establish best practices for data sharing and collection and reporting

standards for sociodemographic data, including race and ethnicity, sexual orientation, gender identity and more. These efforts enable meaningful, collaborative research to better understand the dynamics of the physician workforce continuum. During 2022, the Collaborative agreed on race and ethnicity data collection standards and the addition of a Middle Eastern and North African category (establishing a pilot on the addition of this category), and continued to refine a collaborative research agenda.

- The AMA participated in or led four meetings with Association of American Medical Colleges (AAMC) and Accreditation Council for Graduate Medical Education (ACGME) about diversifying physician workforce, three ACGME Diversity Officers Forums, two webinars (Enhancing Diversity Among Academic Physicians: Recruitment, Retention and Advancement; Removing barriers and facilitating access: Supporting trainees with disabilities across the medical education continuum), two presentations to Academic Physicians Section (equity, diversity, and belonging activities in medical education; minoritized physician burnout and wellbeing), and three presentations on the implications of the pending Supreme Court decision on *Students for Fair Admissions v. Harvard / University of North Carolina*.
- The AMA provided seven speaking engagements or workshops with organizations that serve historically marginalized communities (including one with AllianceChicago and three with Arizona Alliance, both consortia of Federally Qualified Health Centers, or FQHCs), completed burnout assessments in 32 FQHCs (representing approximately 31% of all burnout assessments during the year), updated demographic questions in burnout assessments, and built a racial bias assessment tool (to be validated in 2023). The AMA piloted the stratification of all burnout assessment data for each health system report for a 3-month period to better understand how it informs systems as well as the limitations of the data.
- The AMA engaged with Illinois March of Dimes in workgroups on dismantling racism, increasing care access, and engaging communities in private practices to support maternity care deserts.
- The health equity content on AMA's Ed Hub has established itself as an impetus for institutional memberships and partnerships, with six additional health equity-focused external partners signed and launched during the year (Clinical Problem Solvers, Boston Children's Hospital, American Academy of Allergy, Asthma & Immunology, American Academy of Dermatology, Hope for Justice, and Accreditation Council for Graduate Medical Education or ACGME). The UNC Health Systems recently selected the Ed Hub's "Basics of Health Equity" as required education for their entire medical staff. During the Mpox outbreak, the established relationships with LGBTQ health organizations allowed for swift response with accurate, effective, and destigmatizing education reaching the large Ed Hub audience.
- The AMA ChangeMedEd initiative implemented grants awarded in November to various recipients, including Kaiser Permanente (Early Assurance: Community College to Medical School) and UC Davis (Learning from Bright Spots in Equitable Grading Practices).
- The AMA continued its work with organizations representing historically minoritized and marginalized physicians, including Association of American Indian Physicians (AAIP), GLMA, National Council of Asian Pacific Islander Physicians (NCAPIP), National Hispanic Medical Association (NHMA), and National Medical Association (NMA). The AMA concluded a second year of Health Equity Strategic Development (HESD) grants, an investment in these organizations in support of the advancement of their individual organizational mission and strategic goals, and in recognition of the collective impact of their work on the field of medicine. In addition, the Center convened the organizations quarterly, building a crosswalk of shared policy priorities to identify opportunities to build on each other's advocacy in future years. The LGBTQ Advisory Committee has a permanent position for a representative from GLMA on the committee, which allowed for continued regular coordination and collaboration with GLMA. The

Minority Affairs Section has permanent positions on its Governing Council for representatives from AAIP, NHMA, and NMA.

- The Medical Student Section (MSS) Assembly includes delegates from the Association of Native American Medical Students (ANAMS), the Latino Medical Student Association (LMSA), and the Student National Medical Association (SNMA). MSS continued collaborating with the Minority Affairs Section (MAS) to enhance engagement of medical students who are underrepresented in medicine (URM), sending select members of both Governing Councils as ambassadors to the annual conferences of URM medical student societies including SNMA, LMSA and ANAMS. This year, MAS launched its Leader-To-Leader initiative to better align the section's priorities around increasing diversity, equity, inclusion, and representation in the physician workforce. MAS and MSS members worked together to host receptions at the SNMA and LMSA annual conferences where our URM AMA leaders could meet with their elected and appointed leaders to open new lines of communication, to establish informal networks, and to learn more about organizational priorities. In April, MAS supported registration and housing for approximately 10 elected leaders of MSS, SNMA, LMSA and ANAMS to attend the annual Leadership Summit on Health Disparities, to foster network expansion, informal networking, and educational opportunities among these future doctors. The MAS and MSS Governing Councils also hosted a meeting in November to specifically convene URM medical student leaders who attended our Interim Meeting in Honolulu.
- The AMA formalized its collaboration with Stanford supporting research using AMA data to explore the effects of the COVID pandemic on international medical graduate (IMG) physicians, patterns of care provided by IMGs across the U.S., and their role in providing patient care for underserved communities during COVID-19.

Push Upstream

Pushing upstream requires looking beyond cultural, behavioral, or genetic reasons to understand structural and social drivers of health and inequities, dismantle systems of oppression, and build health equity into health care and broader society. The following are some of the relevant accomplishments during 2022:

- On the international stage, the World Medical Association (WMA) General Assembly adopted a new policy to address racism in medicine, to which the AMA contributed substantial language and support, based largely on HOD policy. The AMA has also been leading the ongoing revision of a seminal WMA document, the Declaration of Helsinki Ethical Principles for Medical Research Involving Human Subjects, prioritizing diverse perspectives and issues of equity, such as ethical research in vulnerable populations. Finally, the AMA has continued centering equity in other WMA policy revisions, including addressing the disproportionate impact of forced sterilization on certain groups.
- The AMA was a powerful voice on reproductive health following the Supreme Court's *Dobbs* decision in June and continued to be visible on this topic in the media and speeches and published numerous AMA Viewpoints on topics important to health equity including LGBTQ health, pulse oximeters, and Black maternal health.
- In cases ranging from COVID-19 standards of care and firearm regulations to climate change and transgender rights, the AMA continued to fight for physicians and patients in state and federal courts. The AMA was a plaintiff in *African American Tobacco Control Leadership Council v. HHS*, which forced the federal government to take the first steps toward banning menthol cigarettes. In support of the consideration of race in higher education admissions, the AMA joined an AAMC-led U.S. Supreme Court amicus brief in the *Students for Fair Admission v. Harvard* and *Students for Fair Admission v. University of North Carolina* cases. Together with the American Academy of Pediatrics, the AMA submitted an amicus brief urging the U.S.

Supreme Court to uphold the Indian Child Welfare Act (ICWA) of 1978. And in the wake of the U.S. Supreme Court's *Dobbs v. Jackson Women's Health Organization* decision, the AMA joined numerous briefs promoting access to reproductive care and opposing government interference in the patient-physician relationship.

- The AMA now looks at every advocacy issue with an eye towards its impact on historically marginalized and minoritized communities. The AMA issued more than 175 advocacy letters to policymakers, and more than 40 percent of those were directly related to our health equity work.
- AMA advocated in many ways for policies to advance health equity including:
    - Securing legislation extending telehealth payment and regulatory flexibilities through the end of 2024, including audio-only telephone visit services. The AMA also launched model legislation that states can use to advance telehealth coverage and policies.
    - Supporting maternal and child health. The AMA developed new model state legislation to support maternal and child health in partnership with leading medical societies and national organizations. The model bill is part of a national campaign to support pregnant, postpartum and parenting individuals, newborns, children and families affected by substance use disorders. The AMA supported 27 states and DC in extending Medicaid coverage to 12 months postpartum and secured a permanent option to support states in the Consolidated Appropriations Act of 2023 (CAA).
    - Securing key provisions of the Mainstreaming Addiction Treatment (MAT) Act (such as repealing the X-waiver requirement for buprenorphine prescribing) in the CAA, revisions to CDC guidelines for prescribing opioids that emphasize the need to treat patients as individuals, Food and Drug Administration (FDA) policy allowing harm reduction organizations to more easily obtain naloxone to prevent overdose deaths, and a Drug Enforcement Administration (DEA) commitment to working for permanent availability of medication assisted treatment based on telehealth visits. The AMA also helped multiple states enact legislation to decriminalize fentanyl test strips and other drug testing supplies and equipment, acknowledging the annual more than 100,000 deaths are primarily due to illicitly manufactured fentanyl and fentanyl analogues.
    - The AMA Substance Use and Pain Care Task Force continued to advocate to reduce health care inequities, including those that disproportionately affect historically minoritized and marginalized communities. Reports from the Task Force and those conducted with Manatt Health make clear that reversing the nation's overdose and death epidemic must directly address structural barriers and social determinants of health. The Task Force continues to gather input from member organizations Association of American Indian Physicians, National Hispanic Medical Association and National Medical Association.
    - Supporting multiple state efforts to enact legislation to strengthen mental health and substance use disorder parity laws. These include requiring payers to demonstrate compliance with parity laws and for state departments of insurance and attorneys general to investigate payers' compliance.
    - The AMA and several collaborators sent a letter to Attorney General Merrick Garland urging the Department of Justice to investigate the threats of violence against physicians, hospitals and families of children for providing and seeking evidence-based gender-affirming care. The organizations also call on technology platforms to do more to stop the rhetoric that often incites threats or acts of violence and has led to harassment campaigns across the country, much of it directed at children's hospitals and the physicians and staff who provide care.
    - Highlighting inequities in Medicare Advantage including quality and administrative barriers. In a letter to the United States Department of Health and Human Services (HHS), the AMA noted that Black, Asian, and Latino enrollees sign up for Medicare Advantage (MA) at higher rates than white enrollees but tend to be in plans with lower

quality ratings. Kaiser Family Foundation data show that nearly all (99 percent) of MA enrollees are in plans that require prior authorization (PA) for some services, up from 80 percent in 2018. Institute for Patient Access data show that patients with chronic conditions who identify as Black or Latino experience insurance claim rejections at least 40% more often than white patients, going on to experience more emergency room visits and hospitalizations. The AMA helped move a bipartisan House bill to reform prior authorization for Medicare Advantage plans, H.R. 3173, the "Improving Seniors' Access to Care Act," passed via voice vote, and a companion Senate bill now with 51 co-sponsors.

- Developing principles for Medicare physician payment reform endorsed by more than 120 medical societies, which incorporate concepts to advance equity and reduce disparities.
- Cosigning a letter in conjunction with over 60 national medical specialty, hospital and patient organizations urging the House and Senate Judiciary Committees to pass the "Conrad State 30 and Physician Access Reauthorization Act," which would reauthorize the Conrad 30 waiver policy for an additional three years, to ensure international medical graduates (IMGs) can continue to play a pivotal role in greater access to health care.
- Submitting a Statement for the Record to the U.S. House of Representatives Committee on the Judiciary Subcommittee on Immigration and Citizenship as part of the hearing entitled "Is there a Doctor in the House? The Role of Immigrant Physicians in the US Healthcare System." Additionally, the AMA submitted a Statement for the Record to the U.S. Senate Subcommittee on Immigration, Citizenship, and Border Safety as part of the hearing entitled, "Flatlining Care: Why Immigrants Are Crucial to Bolstering Our Health Care Workforce."
- The AMA continues to support laws that prohibit so-called conversion therapy. We successfully supported the Oklahoma State Medical Association in opposing a bill that would have protected conversion therapy and worked with the AMA's Advisory Committee on LGBTQ+ issues to update and disseminate an issue brief summarizing the medical literature demonstrating the harm caused by conversion therapy.
- Supporting a Dear Colleague letter to the FDA Commissioner urging the end of the blanket three-month blood donation deferral period for men who have sex with men. The Dear Colleague letter was ultimately cosigned by nearly 150 members of Congress. The FDA has signaled that it will continue existing flexibilities.

- Every bi-weekly issue of the AMA's Advocacy Update includes at least one article related to our health equity work. Equity-related episodes of the AMA's Advocacy Insights webinar series, such as the limited time Public Service Loan Forgiveness Program waiver, the future of telemedicine, and the impact of the nation's drug overdose epidemic on children and adolescents, have had significant participation (hundreds of attendees) and engagement (30+ questions) each session.
- The AMA launched a bi-monthly health equity newsletter and the Federation Equity Exchange, attracting dozens of attendees each month for state and specialty societies to share promising practices.
- This is the first year covered by the AMA's annual Health Equity in Organized Medicine Survey. The survey seeks to understand the specific actions that Federation organizations are taking or contemplated taking to advance health equity, gather shareable successes stories, and confidentially identify barriers and resource needs.
  - Eighty organizations completed the survey: half (n=40) were specialty societies, about 1 in 3 (n=25) were state and District of Columbia associations, and about 1 in 5 (n=15) were local associations.
  - Most organizations (70%) indicated that health equity was a strategic priority.

    - Most organizations were aware of the AMA's Organizational Strategic Plan to Embed Racial Justice and Advance Health Equity (85%), and the AMA and AAMC's Advancing Health Equity: A Guide to Language, Narrative and Concepts (54%). Among the organizations that were aware, about half referenced or used the materials. More than half (n=44) indicated they provided equity training to staff and leadership.
    - More than 1 in 3 (n=30) organizations indicated they had identified historical harms in their organization's policies and practices, and 30% of organizations indicated that they have taken action to address past harms caused by their organization.
    - Note: All results are preliminary. The survey results are still being analyzed, with a full summary planned for later in 2023.
- The JAMA Network published over 632 articles on topics related to equity, diversity, and inclusion, viewed in full text 4 million times.
- AMA staff contributed to at least 10 publications in related to health equity.
- The AMA's Ed Hub published an unprecedented volume of heath equity content (78 activities), with usage of equity-related content exceeding the prior year (124,374 engagements; 21,625 course completions). One highlight included: undergraduate / graduate (UME/GME) and continuing medical education (CME) versions of the Historical Foundations of Racism modules were published, as well as adapted versions accessible for UME and GME curricular enhancement program (UCEP/GCEP) members and individual learners: Medical Mistrust and Medical Distrust; Pain and Racism in Medicine and Health Care. In addition, the AMA led 4 presentations at health care meetings demonstrating educational best practices for integration of equity.
- The AMA concluded its year-long Peer Network learning collaborative, led by AMA with The Joint Commission (TJC) and Brigham and Women's Hospital as key collaborators, positively influencing the development of TJC equity accreditation standards for health systems.
    - The pilot program of 49 learning sessions included more than 40 participants from eight health systems, of which 3 were AMA group members, graduating the health systems into a Quality Safety and Equity Network integrated into the Physician Innovation Network.
    - Successes of over 26 new improvement practices implemented by the health system teams included embedding a bias/discrimination question into safety reporting to track and take action on equity-related harm events, incorporating fundamental data collection tools to stratify data sets by race, ethnicity, and language (REAL), improving on disability, sexual orientation and gender identity (SOGI) data collection, developing educational content to better equip staff on how to identify inequities, bringing together multidisciplinary stakeholders across the system to identify improvements that will result in better patient and staff experience and outcomes, and incorporating health equity into the development and implementation of a racial equity plan.
    - At mid-year, survey respondents agreed or strongly agreed that the quality of the Peer Network was excellent (100%) and that it equipped them to advance health equity, strengthened their knowledge of inequities, and empowered them to dismantle structural racism (>80%).
    - Products included creating seven Ed Hub modules with CME and a Prioritizing Equity episode highlighting the work of two group member health systems, Atlantic Medical Group and Ochsner Health.
    - The Peer Network was covered in 37 articles with over 10 million views.
- The AMA laid the groundwork for Rise to Health: A National Coalition for Equity in Health Care, an effort that unites individuals and organizations in shared solutions for high-impact structural change. The Coalition, co-led by the AMA and the Institute for Healthcare Improvement (IHI), secured other collaborators including Race Forward, Groundwater Institute,

the American Hospital Association (AHA), the National Association of Community Health Centers (NACHC), Association of Health Insurance Plans (AHIP), the Council of Medical Specialty Societies (CMSS), Policy Link, and HealthBegins, with a general audience launch planned for 2023.

- The AMA expanded its social impact investments with an additional $3 million multi-year investment in West Side United (WSU), a community-based collaborative that is addressing determinants of health and helping restore economic vitality on the Chicago's west side.
    - This new investment builds on the AMA's initial $2 million investment in 2020 and will continue to support WSU's multi-pronged social impact investing approach. WSU-coordinated impact investing is done in partnership with community development financial institutions (CDFIs) to help provide much-needed capital to foster economic opportunity, revitalize neighborhoods and support community transformation. AMA's renewed commitments will lead to more investments in affordable housing, healthy food options, job creation projects and educational programs.
    - To date, WSU partners have invested a combined $177 million in Chicago's West Side neighborhoods through local procurement, small business grants, and impact investing, including the AMA's 5-year, $5 million investment. Since 2018, the collaborative's funding has contributed to approximately 475 low-interest loans, including entrepreneurs, small businesses, and community-based organizations. CDFIs leveraged these investments for an additional $28 million to support the west side community and business projects. The WSU investments also resulted in the creation and preservation of 420 housing units, as well as the construction and preservation of more than 34,000 square feet of non-profit and commercial real estate projects. Additionally, these investments have supported 432 construction jobs, preserved 64 local jobs, and created 126 community employment opportunities.
- In collaboration with West Side United and West Side Health Equity Collaborative, the AMA, trained more than 100 community health workers. In addition, the AMA MAP BP program was implemented and demonstrated success in improving blood pressure control at Cook County Health, a large health care organization serving mostly patients from historically marginalized communities.

Ensure Equity in Innovation

The AMA is committed to ensuring equitable health innovation by embedding equity in innovation, centering historically marginalized and minoritized people and communities in development and investment, and collaborating across sectors. The following are some of the relevant accomplishments during 2022:

- The AMA launched the In Full Health Learning & Action Community to Advance Equitable Health Innovation initiative which seeks to provide a framework for shared understanding and a community for stakeholders committed to learning and action to center equity within their health innovation investment, development, and purchasing efforts by committing resources to innovations created by, with, and that measurably improve health and do no harm for Black, Latino, Indigenous, communities of color, women, LGBTQ+ communities, people with disabilities, people with low income, rural communities, and other communities historically marginalized by the health industry. The initiative established an external advisory group and published Principles for Equitable Health Innovation.
- The AMA completed a health equity assessment on Verifi Health Self-Measured Blood Pressure (SMBP), an app for remote blood pressure monitoring, and continues to build features into the product that promote health equity.

- The AMA created a prototype Social Needs Administrative Coder (SNAC) and began a Voice-of-the-Customer campaign across societies, technology vendors, state level entities, health insurers, community organizations and health information exchanges to better understand the need for consistent coding of health-related social needs (HRSN) screening data into nationally accepted codesets like ICD-10-CM.

Foster Truth, Racial Healing, Reconciliation, and Transformation

The AMA recognizes the importance of acknowledging and rectifying past injustices in advancing health equity for the health and well-being of both physicians and patients. Truth, racial healing, reconciliation, and transformation is a process and an outcome, documenting past harms, amplifying and integrating narratives previously made invisible, and creating collaborative spaces, pathways, and plans. The following are some of the relevant accomplishments during 2022:

- The 175th anniversary workgroup included AMA archivists as key stakeholders, supporting truth and reconciliation, through development of historical research for programming and educational modules and networking with other medical association professionals looking to examine their histories in this way.
- The AMA began creating a charter and identifying potential participants for the Truth, Reconciliation, Healing, and Transformation Advisory Committee called for by the AMA House of Delegates, so the committee can commence work in 2023.
- AMA staff engaged in educational sessions and community events including: AMA History/Transformative Narrative, Guide to Allyship, Time for Personal Reflection, Liberation Health: Allyship, My Hood / My Block, My City Event, Color of Care Screening and Breakouts, ERG Review & Recruitment, Gardeneers Event, Women Inspired Now (WIN) Reproductive Rights Session and Discussion. One session was a deeper look at the history of work toward reproductive justice within the AMA, findings from qualitative research with patients who have received obstetric, gynecological, and related care, and policy-related implications for maternal health given recent federal level court and legislative actions, state politics, transitional care, contraceptive access for patients, providers, and public health. A Reproductive Justice panel featured obstetrics and gynecology experts as guests, and opening remarks provided by former AMA President Patrice Harris, MD, MPH.
- Dilla Thomas was invited to speak to staff on the Black History of Medicine in Chicago. He titled the event, "Everything Dope Comes from Chicago: A Look into the History of Chicago in Medicine Through the Lens of its Marginalized Groups."

Challenges and Opportunities

As cities and states across the nation updated social distancing guidance, staff returned to AMA offices and began adjusting to new hybrid schedules which required an additional layer of planning and coordination. This required strategizing innovative ways to build connections and foster engagement in a new work environment.

Commonly noted challenges to advancing health equity work included: 1) limited staff time and capacity, resource constraints, and competing priorities with tight deadlines; 2) varying levels of understanding of health equity, with persistence of some common narratives that sustain inequity; 3) still fledgling structures and processes for cross-enterprise dialogue, coordination, and reporting on initiatives and measures; and 4) the capacity, infrastructure, and time needed to develop external collaborations. While turnover was mentioned as a challenge to sustaining the health equity work, in some cases the scarcity of open positions posed challenges to increasing diversity in promotion.

Prioritizing and matching workload to capacity were mentioned as essential in avoiding contributing to burnout. Additional curriculum and sessions that foster conversations and self-reflection to further understanding and undoing harms in a psychologically safe space require substantial time, timeliness, skilled facilitators, and openness and commitment from team leaders. Additional structures and processes that support transparent sharing of goals, planning, resources, implementation, and accountability across teams and with external collaborators can help bring focus to priorities and promote sustainability.

CONCLUSION

AMA staff were asked for their most prominent equity-related accomplishments, and not everything submitted could be included in this report, so the above represents a fraction of the work completed in 2022. The AMA increased engagement of health equity content to 1,000,000 website users, including 124,374 engagements driven by publication of 78 new activities on Ed Hub. The AMA engaged in at least two Supreme Court amicus briefs and issued more than 70 advocacy letters to policymakers related to health equity, securing wins in the Consolidated Appropriations Act. The AMA expanded its social impact investments with an additional $3 million multi-year investment. Overall, the AMA has made significant progress towards fulfilling the commitments outlined in the Plan during its second year.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 16-A-23

Subject: Informal Inter-Member Mentoring

Presented by: Sandra Adamson Fryhofer, MD, Chair

At the November 2021 Special Meeting of the House of Delegates (HOD), Policy D-635.980, "Informal Inter-Member Mentoring," was adopted. As reported at the 2022 Interim Meeting (Board Report 6), last year our AMA convened on an ad hoc basis a Mentorship Steering Committee consisting of representatives from each of the AMA sections. This group was charged with identifying mentorship opportunities and best practices within individual sections and more broadly across the organization. The Committee's key conclusion was that the AMA should create informal, organic opportunities for mentors and mentees to identify one another and connect, as opposed to establishing more formal programs with assigned mentors/mentees.

The Committee's discussions prompted a variety of mentorship initiatives of this connective nature within the sections in 2022, including for example:

- The Women Physicians Section implemented a "speed mentorship" event that connected members in small group discussions with facilitators versed in career-building topics.

- The Young Physicians Section hosted a "leadership boot camp" for young physician members interested in pursuing leadership opportunities beyond the YPS and throughout the AMA.

- The Minority Affairs Section hosted a webinar and networking reception to engage and build connections among current and future MAS and AMA leaders from minoritized and marginalized backgrounds.

While many individual sections have instituted informal mentorship opportunities designed primarily to connect members, with others in the works, cross-sectional and broader organizational mentorship initiatives have remained elusive, largely due to issues of scalability. In 2023, a reconstituted Mentorship Steering Committee representative of the broad swath of AMA member backgrounds and experiences will be reconvened to continue consideration of opportunities to connect members for mentorship purposes outside the confines of any particular section. Your Board will continue to provide updates via HOD implementation status documents as this work proceeds.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 19-A-23

Subject: Medical Community Voting in Federal and State Elections (Resolution 616-A-22)

Presented by: Sandra Adamson Fryhofer, MD, Chair

Resolution 616 "Medical Student, Resident/Fellow, and Physician Voting in Federal, State and Local Elections," was adopted at the AMA House of Delegates' 2022 Annual Meeting. Per the first resolve of Resolution 616, now AMA Policy D-65.982:

> Our AMA will: (1) study the rate of voter turnout in physicians, residents, fellows and medical students in federal and state elections without regard to political party affiliation or voting record, as a step towards understanding political participation in the medical community.

This report completes the request for such a study.

EXISTING RESEARCH ON PHYSICIAN VOTING TRENDS AND BEHAVIOR

The consensus conclusion of publicly available studies and analysis addressing physician voting is that physicians consistently vote at lower rates than the general public. Three such reports that help uphold this conclusion are "Trends in Physician Voting Practices in California, New York, and Texas, 2006-2018"[1] by Hussain Lalani, MD, MPH, et al., published in *JAMA Internal Medicine* 2021; "Voting Behavior of Physicians and Healthcare Professionals"[2] by Rachel Solnick, MD, MSc, et al., published in the *Journal of General Internal Medicine* 2020; and "Do Doctors Vote?"[3] by David Grande, MD, MPA, et al., published in the *Journal of General Internal Medicine* 2007. Through modeling analysis incorporating a variety of publicly available and commercially acquired data, the authors of these studies found physicians voting anywhere from 9 to more than 12 percent less than the general public going back to 2002.

Lalani et al. looked at the states with the highest physician populations in their study. Their finding that physicians who were eligible to vote did so at rates at least 9 percent less than the general population takes into account data as recent as 2018. The authors offer their proposed reasons as to why physician turnout was lower, including fear of appearing "political" as well as other "administrative and psychological barriers." However, it should be noted that Lalani et al. acknowledge that this reasoning is speculative and that the true source(s) of limited physician engagement in voting is "unclear" as well as the possible link between physicians who register to vote and those who actually turn out to vote.

In their study, Solnick et al. looked at physicians as well as other health care professionals including dentists, nurses, physician assistants and pharmacists and found that they also consistently voted at rates lower than the general public, although except for dentists somewhat higher than physicians. The researchers based their findings on a biennial nationally representative household survey that collects self-reported or household member-reported voting rates and behavior from congressional and presidential elections. They estimated physicians voting at approximately 12 percent below that of the public. The authors further found that 70 percent of

physicians who were either not registered to vote or did not vote reported that this was due to being "Too busy, conflicting work or school." Physicians were 30 percent more likely to vote by mail and 15 percent more likely to vote prior to election day compared to the public. Solnick et al. also examined non-health care related professions as part of this study; specifically, those requiring advanced education and/or training including, postsecondary teachers, chief executives, civil engineers, social workers and lawyers. Solnick et al. found that of these, postsecondary teacher turnout was highest; 14 percent above the general population. The authors suggest that further research examine whether health care professionals voting rates can be improved by Election Day flexible scheduling, health care organization campaigns to emphasize the social value of voting, voter registration drives, and education on mail-in voting.

Finally, Grande et al. compared adjusted physician voting rates in 1996-2002 congressional and presidential elections with those of lawyers and the general population. Like the others, they found physicians voting at lower rates when compared to the public (8.7 percent lower on average) for each of these elections except in 1996. Lawyers meanwhile had voting rates that were 13.5 percent higher than the public during this same time span. Additionally, Grande et al. noted that these trends occurred even in the face of a renewed commitment at that time to prioritize civic participation and engagement within the medical profession led by multiple medical organizations including the American Medical Association that in 2001 issued its "Declaration of Professional Responsibility Medicine's Social Contract with Humanity," which included a commitment to "advocate for…political changes that ameliorate suffering and contribute to human well-being."[4]

CONCLUSION

Apart from the studies referenced in this report, there would seem to be a paucity of in-depth, credible analysis on the issue of physician voter turnout. For the studies examined as part of this report however, it is notable that in each, to the extent that the authors explored possible reasons for why physicians overall voted at lower rates than the general public, their conclusions were speculative. It seems reasonable to conclude that physicians as a group do indeed tend to vote at rates both lower than the general public and lower than that of selected professions requiring advanced education and training. With so little data available and to better inform on the issue, the AMA may consider including questions related to the subject of physician voting habits in future polling projects if appropriate.

OPINION OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS*

CEJA Opinion 01-A-23

Subject: Amendment to Opinion 4.2.7, "Abortion"

Presented by: Peter A Schwartz, MD, Chair

At the 2022 Interim Meeting, the American Medical Association House of Delegates adopted the recommendations of Council on Ethical and Judicial Affairs Report 1-I-22, "Amendment to Opinion 4.2.7, 'Abortion.'" The Council issues this Opinion, which will appear in the next version of AMA PolicyFinder and the next print edition of the *Code of Medical Ethics*.

E-4.2.7 – Abortion

Abortion is a safe and common medical procedure, about which thoughtful individuals hold diverging, yet equally deeply held and well-considered perspectives. Like all health care decisions, a decision to terminate a pregnancy should be made privately within the relationship of trust between patient and physician in keeping with the patient's unique values and needs and the physician's best professional judgment.

The *Principles of Medical Ethics* of the AMA permit physicians to perform abortions in keeping with good medical practice. (III, IV)

* Opinions of the Council on Ethical and Judicial Affairs will be placed on the Consent Calendar for informational reports, but may be withdrawn from the Consent Calendar on motion of any member of the House of Delegates and referred to a Reference Committee. The members of the House may discuss an Opinion fully in Reference Committee and on the floor of the House. After concluding its discussion, the House shall file the Opinion. The House may adopt a resolution requesting the Council on Ethical and Judicial Affairs to reconsider or withdraw the Opinion.

OPINION OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS*

CEJA Opinion 02-A-23

Subject: Amendment to Opinion 10.8, "Collaborative Care"

Presented by: Peter A. Schwartz, MD, Chair

At the 2022 Interim Meeting, the American Medical Association House of Delegates adopted the recommendations of Council on Ethical and Judicial Affairs Report 2-I-22, "Amendment to Opinion 10.8, 'Collaborative Care.'" The Council issues this Opinion, which will appear in the next version of AMA PolicyFinder and the next print edition of the *Code of Medical Ethics*.

E-10.8 – Collaborative Care

In health care, teams that collaborate effectively can enhance the quality of care for individual patients. By being prudent stewards and delivering care efficiently, teams also have the potential to expand access to care for populations of patients. Such teams are defined by their dedication to providing patient-centered care, protecting the integrity of the patient-physician relationship, sharing mutual respect and trust, communicating effectively, sharing accountability and responsibility, and upholding common ethical values as team members.

Health care teams often include members of multiple health professions, including physicians, nurse practitioners, physician assistants, pharmacists, physical therapists, and care managers among others. To foster the trust essential to healing relationships between patients and physicians or nonphysician practitioners, all members of the team should be candid about their professional credentials, their experience, and the role they will play in the patient's care.

An effective team requires the vision and direction of an effective leader. In medicine, this means having a clinical leader who will ensure that the team as a whole functions effectively and facilitates decision-making. Physicians are uniquely situated to serve as clinical leaders. By virtue of their thorough and diverse training, experience, and knowledge, physicians have a distinctive appreciation of the breadth of health issues and treatments that enables them to synthesize the diverse professional perspectives and recommendations of the team into an appropriate, coherent plan of care for the patient.

As clinical leaders within health care teams, physicians individually should:

(a) Model ethical leadership by:
    (i) Understanding the range of their own and other team members' skills and expertise and roles in the patient's care

* Opinions of the Council on Ethical and Judicial Affairs will be placed on the Consent Calendar for informational reports, but may be withdrawn from the Consent Calendar on motion of any member of the House of Delegates and referred to a Reference Committee. The members of the House may discuss an Opinion fully in Reference Committee and on the floor of the House. After concluding its discussion, the House shall file the Opinion. The House may adopt a resolution requesting the Council on Ethical and Judicial Affairs to reconsider or withdraw the Opinion.

(ii) Clearly articulating individual responsibilities and accountability

(iii) Encouraging insights from other members and being open to adopting them and

(iv) Mastering broad teamwork skills

(b) Promote core team values of honesty, discipline, creativity, humility and curiosity and commitment to continuous improvement.

(c) Help clarify expectations to support systematic, transparent decision making.

(d) Encourage open discussion of ethical and clinical concerns and foster a team culture in which each member's opinion is heard and considered and team members share accountability for decisions and outcomes.

(e) Communicate appropriately with the patient and family, respecting the unique relationship of patient and family as members of the team.

(f) Assure that all team members are describing their profession and role.

As leaders within health care institutions, physicians individually and collectively should:

(g) Advocate for the resources and support health care teams need to collaborate effectively in providing high-quality care for the patients they serve, including education about the principles of effective teamwork and training to build teamwork skills.

(h) Encourage their institutions to identify and constructively address barriers to effective collaboration.

(i) Promote the development and use of institutional policies and procedures, such as an institutional ethics committee or similar resource, to address constructively conflicts within teams that adversely affect patient care.

(j) Promote a culture of respect, collegiality and transparency among all health care personnel. (II, V, VIII)

OPINION OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS*

CEJA Opinion 03-A-23

Subject: Pandemic Ethics and the Duty of Care

Presented by: Peter A. Schwartz, MD, Chair

At the 2022 Interim Meeting, the American Medical Association House of Delegates adopted the recommendations of Council on Ethical and Judicial Affairs Report 3-I-22, "Pandemic Ethics and the Duty of Care." The Council issues this Opinion, which will appear in the next version of AMA PolicyFinder and the next print edition of the *Code of Medical Ethics*.

RECOMMENDATION

E-8.3 – Physician Responsibility in Disaster Response and Preparedness

Whether at the national, regional, or local level, responses to disasters require extensive involvement from physicians individually and collectively. Because of their commitment to care for the sick and injured, individual physicians have an obligation to provide urgent medical care during disasters. This obligation holds even in the face of greater than usual risks to physicians' own safety, health, or life.

The duty to treat is foundational to the profession of medicine but is not absolute. The health care work force is not an unlimited resource and must be preserved to ensure that care is available in the future. For their part, physicians have a responsibility to protect themselves, as well as a duty of solidarity to colleagues to share risks and burdens in a public health crisis. So too, health care institutions have responsibilities to support and protect health care professionals and to apportion the risks and benefits of providing care as equitably as possible.

Many physicians owe competing duties of care as medical professionals and as individuals outside their professional roles. In a public health crisis, institutions should provide support to enable physicians to meet compelling personal obligations without undermining the fundamental obligation to patient welfare. In exceptional circumstances, when arrangements to allow the physician to honor both obligations are not feasible, it may be ethically acceptable for a physician to limit participating in care, provided that the institution has made available another mechanism for meeting patients' needs. Institutions should strive to be flexible in supporting physicians in efforts to address such conflicts. The more immediately relevant a physician's clinical expertise is to the urgent needs of the moment and the less that alternative care mechanisms are available, the stronger the professional obligation to provide care despite competing obligations.

* Opinions of the Council on Ethical and Judicial Affairs will be placed on the Consent Calendar for informational reports, but may be withdrawn from the Consent Calendar on motion of any member of the House of Delegates and referred to a Reference Committee. The members of the House may discuss an Opinion fully in Reference Committee and on the floor of the House. After concluding its discussion, the House shall file the Opinion. The House may adopt a resolution requesting the Council on Ethical and Judicial Affairs to reconsider or withdraw the Opinion.

With respect to disaster, whether natural or manmade, individual physicians should:

(a) Take appropriate advance measures, including acquiring and maintaining appropriate knowledge and skills to ensure they are able to provide medical services when needed.

Collectively, physicians should:

(b) Provide medical expertise and work with others to develop public health policies that:

(i) Are designed to improve the effectiveness and availability of medical services during a disaster
(ii) Are based on sound science

(iii) Are based on respect for patients

(c) Advocate for and participate in ethically sound research to inform policy decisions. (V, VI, VII, VIII)

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS

CEJA Report 06-A-23

Subject: Use of De-Identified Patient Information (D-315.969)

Presented by: Peter A. Schwartz, MD, Chair

Policy D-315.969, "Research Handling of De-Identified Patient Data," adopted in November 2021 directs the Council on Ethical and Judicial Affairs (CEJA) to "consider re-examining existing guidance relevant to the confidentiality of patient information, striving to preserve the benefits of widespread use of de-identified patient data for purposes of promoting quality improvement, research, and public health while mitigating the risks of re-identification of such data."

This informational report summarizes CEJA's research and deliberations to date and direction of further inquiry.

DO YOU KNOW WHERE YOUR PATIENTS' DATA ARE TONIGHT?

An extraordinary variety of data are now regularly collected by multiple entities and stakeholders, for multiple—and potentially discrepant—purposes:

> The last few decades have witnessed the creation of novel ways to produce, store, and analyse data, culminating in the emergence of the field of data science, which brings together computational, algorithmic, statistical and mathematical techniques towards extrapolating knowledge from big data. . . . The availability of vast amounts of data in machine-readable formats provides an incentive to create efficient procedures to collect, organise, visualise and model these data. . . . Researchers across all disciplines see the newfound ability to link and cross-reference data from diverse sources as improving the accuracy and predictive power of scientific findings and helping to identify future directions of inquiry, thus ultimately providing a novel starting point for empirical investigation [1].

As one scholar has noted, in this new data landscape "it is almost impossible to perform most daily activities without revealing personal information and providing fodder for data brokers and big data organizations, whether they are public or private" [2]. Data that in themselves are not traditionally categorized as "medical" or "health related" can still yield information about health status—for example, predictive analysis of data about customers' purchases enabled Target "to identify about 25 products that, when analyzed together, allowed the company to assign each shopper a "pregnancy prediction" score, and even to predict the shopper's due date [3].

The ease with which data from multiple sources within and outside medicine can now be linked and cross-referenced significantly exacerbates challenges of protecting patient privacy and the confidentiality of health information. The council has come to recognize that it should extend its analysis beyond research use of patient information to questions of what role physicians and health

care institutions can and should play in protecting patients' interests in how their information is shared and used more broadly.

WHY PROTECT PRIVACY/CONFIDENTIALITY?

Within the *Code,* Opinion 3.1.1, "Privacy in Health Care," distinguishes four aspects of privacy:

> personal space (physical privacy), personal data (informational privacy), personal choices including cultural and religious affiliations (decisional privacy), and personal relationships with family members and other intimates (associational privacy).

The *Code* does not explicitly examine whether personal medical or health information are ethically distinct from other kinds of personal information (e.g., financial records) or in what way. Current guidance treats the importance of protecting privacy in all its forms as self-evident, holding that respecting privacy in all its aspects is of fundamental importance, "an expression of respect for autonomy and a prerequisite for trust" (Opinion 3.1.1).

In the context of information technology, van den Hoven identifies the following concerns with respect to protecting personal data (medical or other):

- Prevention of harm
- Commodification of and asymmetry in power to control personal information
- Informational injustice and discrimination
- Encroachment on moral autonomy and human dignity [4]

Price and Cohen observe that violations of privacy can result in both harm—tangible negative consequences, such as discrimination in insurance or employment or identity theft—and in wrongs that occur from the fact of personal information being known without the subject's awareness, even if the subject suffers no tangible harm:

> One may be wronged by a privacy breach even if one has not been harmed. For example, suppose that an organization unscrupulously or inadvertently gains access to data you store on your smart phone as part of a larger data dragnet. After reviewing it, including photos you have taken of an embarrassing personal ailment, the organization realizes your data is valueless to them and destroys the record. You never find out this happened. Those reviewing your data live abroad and will never encounter you or anyone who knows you. It is hard to say you have been harmed in a consequentialist sense, but many think the loss of control over your data, the invasion, is itself ethically problematic even absent harm [5].

They further note that privacy issues can arise not only when data are known, but when data mining enables others to "generate knowledge about individuals through the process of inference rather than direct observation or access" [5]. Recall the anecdote above about Target inferring customers' current health status from data of their purchases over time.

STRATEGIES FOR PROTECTING PRIVACY/CONFIDENTIALITY

In the U.S., the Health Insurance Portability and Accountability Act (HIPAA) imposes constraints on the sharing of "protected health information" contained in the medical record—including in the context of relationships within the limited domain of "covered entities" defined in the Act, such as physicians, hospitals, pharmacies, and third-party payers. HIPAA does not cover certain other

health-relevant data, especially data generated voluntarily by patients themselves, for example, through the use of health-related apps on devices such as Fitbit or Apple Watch, let alone identifiable data individuals provide to municipal authorities, utilities, or retailers. Information that began in the medical record can take on a new, independent life when linked with personal information widely available through datasets generated outside of health care.

The current state of data science challenges the prevailing procedural model for protecting privacy: informed consent and de-identification. Yet as Barocas and Nissenbaum have observed, many continue to see these "as the best and only workable solutions for coping with privacy hazards. They do not deny the practical challenges, but their solution is to try harder—to develop more sophisticated mathematical and statistical techniques and new ways of furnishing notice . . ." [6].

That is, solutions have tended to take the form of technical solutions to enable captured data to be shared, such as the creation of synthetic datasets that replace some or all sensitive or identifying data in an original dataset with a statistically representative sample that preserves statistical properties and relationships among variables of interest [7,8]. Alternative responses have taken the form of proposals for new models of informed consent, such as "blanket consent" (permission to use without restriction), [9] "broad consent" (consent for an unspecified range of future research subject to content or process restrictions), [6,10,11] and "dynamic consent" (the use of personalized, digital interface between participants and researchers that allows participants to "tailor and manage their own consent preferences" over time) [12,13].

The Problem of Re-Identification

Whether de-identifying datasets truly prevents individual data subjects from being re-identified is increasingly called into question. Removing the 18 identifiers specified in HIPAA can no longer ensure that the data subject cannot be re-identified by triangulation with identifying information from other readily available datasets [14]. The development of ever more robust statistical strategies for de-identifying data in turn prompts the development of yet more robust strategies to enable re-identification [15,16].

The creation of "synthetic" datasets seeks to offer a technical solution that will enable research with large datasets while protecting privacy by replacing some or all sensitive or identifying data in an original dataset with a statistically representative sample that preserves statistical relationships among variables of interest [17,18]. Inspired by models in manufacturing and engineering, medical "digital twins"—AI technologies that simulate organs or tissues in real time and in relation to an identifiable patient—are proffered as tools to enable highly personalized predictive medicine for the patient whose data have been "twinned" [19,20].

AN ALTERNATIVE APPROACH: PRIVACY AS CONTEXTUAL INTEGRITY

Barocas and Nissenbaum contend that "even if [prevailing forms of consent and anonymization] were achievable, they would be ineffective against the novel threats to privacy posed by big data." [6] A more effective option, Nissenbaum has argued, would understand privacy protection as a function of "contextual integrity," i.e., that in a given social domain information flows conform to the context-specific informational norms of that domain. Whether a transmission of information is appropriate depends on "the type of information in question, about whom it is, by whom and to whom it is transmitted, and conditions or constraints under which this transmission takes place" [21].

Nissenbaum goes on to note that novel information flows, such as those enabled by contemporary data science, should be assessed in reference to how they affect the interests of key parties and whether the distribution of associated benefits, risks, and costs among parties is fair in terms of who enjoys the benefits and who endures the costs. Further, appropriate information flows serve "not merely the interests of individual information subjects, but also contextual, social ends and values—for example, whether information flows with health care achieve the ends and purposes of health care and sustain the values associated with health care.

An evaluative framework proposed by Nissenbaum and colleagues focuses on components of dataset creation and use:

- Creation of the dataset—sourcing, assembling, cleaning, assigning labels [1]
- Composition—properties of the dataset (content, mappings among data elements expressed in different modalities) and attributes of the dataset (e.g., demographic representativeness)
- Distribution—how the dataset is made available, terms of use, disclaimers
- Purpose—what the data set is for, its intended uses, the purposes for which it is optimized [22]

Nissenbaum and colleagues identify ethical values associated with these components, including privacy, autonomy, and the moral legitimacy of the purpose a dataset is created to serve, as well as issues of bias, equity, and accountability, among others.

This approach has much in common with AMA analysis of conditions for trustworthy augmented intelligence in medicine [23] and offers a starting point for thinking about how CEJA might approach recommendations for ethically responsible management of patient information for purposes of both clinical care and biomedical research.

MOVING FORWARD

Against this backdrop the council looks forward to continuing its deliberations and to presenting its analysis and recommendations at a future meeting of the House of Delegates.

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS

CEJA Report 07-A-23

Subject: Use of Social Media for Product Promotion and Compensation (Resolution 025-A-22)

Presented by: Peter A. Schwartz, MD, Chair

At its 2022 Annual Meeting, the House of Delegates referred Resolution 025-A-22 (Resolution 025), "Use of Social Media for Product Promotion and Compensation," which asked that the American Medical Association (AMA) "study the ethical issues of medical students, residents, fellows, and physicians endorsing non-health related products through social and mainstream media for personal or financial gain."

Over the course of its deliberations, the Council on Ethical and Judicial Affairs (CEJA) has identified several relevant issues. These include the volatile and dynamic nature of social media and the fact social media users are able to present themselves as a product, promoting themselves and/or attempting to influence others. At issue as well are the distinctive notions of professionalism attached to the profession of medicine and how they impact individuals and physician integrity; and ethical differences among different promotional activities, e.g., whether the products or services sold or promoted health- or non-health related and whether they are marketed to patients or the general public.

The AMA *Code of Ethics* has existing relevant guidance: Opinions 9.6.4, "Sale of Health-Related Products," and 9.6.5, "Sale of Non-Health-Related Goods," as well as Opinion 2.3.2, "Professionalism in the Use of Social Media." The Council will continue to review existing guidance in contemplation of the relevant issues identified above and anticipates submitting a report to the House of Delegates at a subsequent meeting.

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS

CEJA Report 08-A-23

Subject: Judicial Function of the Council on Ethical and Judicial Affairs – Annual Report

Presented by: Peter A. Schwartz, MD, Chair

At the 2003 Annual Meeting, the Council on Ethical and Judicial Affairs (CEJA) presented a detailed explanation of its judicial function. This undertaking was motivated in part by the considerable attention professionalism has received in many areas of medicine, including the concept of professional self-regulation.

CEJA has authority under the Bylaws of the American Medical Association (AMA) to disapprove a membership application or to take action against a member. The disciplinary process begins when a possible violation of the Principles of Medical Ethics or illegal or other unethical conduct by an applicant or member is reported to the AMA. This information most often comes from statements made in the membership application form, a report of disciplinary action taken by state licensing authorities or other membership organizations, or a report of action taken by a government tribunal.

The Council rarely re-examines determinations of liability or sanctions imposed by other entities. However, it also does not impose its own sanctions without first offering a hearing to the physician. CEJA can impose the following sanctions: applicants can be accepted into membership without any condition, placed under monitoring, or placed on probation. They also may be accepted, but be the object of an admonishment, a reprimand, or censure. In some cases, their application can be rejected. Existing members similarly may be placed under monitoring or on probation, and can be admonished, reprimanded or censured. Additionally, their membership may be suspended or they may be expelled. Updated rules for review of membership can be found at https://www.ama-assn.org/governing-rules.

Beginning with the 2003 report, the Council has provided an annual tabulation of its judicial activities to the House of Delegates. In the appendix to this report, a tabulation of CEJA's activities during the most recent reporting period is presented.

APPENDIX

CEJA
Judicial Function
Statistics

APRIL 1, 2022 – MARCH 31, 2023

Physicians Reviewed	SUMMARY OF CEJA ACTIVITIES
4	Determinations of no probable cause
18	Determinations following a plenary hearing
33	Determinations after a finding of probable cause, based only on the written record, after the physician waived the plenary hearing

Physicians Reviewed	FINAL DETERMINATIONS FOLLOWING INITIAL REVIEWS
9	No sanction or other type of action
2	Monitoring
14	Probation
1	Revocation
6	Suspension
2	Denied
1	Suspension lifted
4	Censure
12	Reprimand
4	Admonish

Physicians Reviewed	PROBATION/MONITORING STATUS
16	Members placed on Probation/Monitoring during reporting interval
14	Members placed on Probation without reporting to Data Bank
8	Probation/Monitoring concluded satisfactorily during reporting interval
0	Memberships suspended due to non-compliance with the terms of probation
14	Physicians on Probation/Monitoring at any time during reporting interval who paid their AMA membership dues
8	Physicians on Probation/Monitoring at any time during reporting interval who did not pay their AMA membership dues

REPORT OF THE COUNCIL ON LONG RANGE PLANNING AND DEVELOPMENT

CLRPD Report 01-A-23

Subject: Demographic Characteristics of the House of Delegates and AMA Leadership

Presented by: Edmund Cabbabe, MD, Chair

This informational report is prepared in odd numbered years by the Council on Long Range Planning and Development (CLRPD), pursuant to American Medical Association (AMA) Policy G-600.035, "The Demographics of the House of Delegates." This policy states:

> (1) A report on the demographics of our AMA House of Delegates will be issued annually and include information regarding age, gender, race/ethnicity, education, life stage, present employment, and self-designated specialty. (2) As one means of encouraging greater awareness and responsiveness to diversity, our AMA will prepare and distribute a state-by-state demographic analysis of the House of Delegates, with comparisons to the physician population and to our AMA physician membership every other year. (3) Future reports on the demographic characteristics of the House of Delegates should, whenever possible, identify and include information on successful initiatives and best practices to promote diversity within state and specialty society delegations.

This report will survey the current demographic makeup of AMA leadership in accordance with AMA Policy G-600.030, "Diversity of AMA Delegations," which states that, "Our AMA encourages…state medical associations and national medical specialty societies to review the composition of their AMA delegations with regard to enhancing diversity..." and AMA Policy G 610.010, "Nominations," which states in part:

> Guidelines for nominations for AMA elected offices include the following... (2) the Federation (in nominating or sponsoring candidates for leadership positions), the House of Delegates (in electing Council and Board members), and the Board, the Speakers, and the President (in appointing or nominating physicians for service on AMA Councils or in other leadership positions) to consider the need to enhance and promote diversity…

Like previous reports, this document compares AMA leadership with the entire AMA membership and with the overall U.S. physician population. Medical students are included in all references to the total physician population, which is consistent with past practice. For the purposes of this report, AMA leadership includes delegates; alternate delegates; the Board of Trustees (BOT); and councils and leadership of sections and special groups (hereafter referred to as CSSG; see detailed listing in Appendix A).

Additionally, this report includes information on successful initiatives and best practices to promote diversity of state and specialty society delegations, pursuant to part 3 of Policy G-600.035.

DATA SOURCES

Lists of delegates and alternate delegates are maintained by the Office of House of Delegates (HOD) Affairs and based on official rosters provided by the relevant societies. The lists used in this report reflect year-end 2022 delegation rosters. AMA council rosters as well as listings for the governing bodies of each of the sections and special groups were provided by the relevant AMA staff.

Data on demographic characteristics of individuals are taken from the AMA Physician Masterfile, which provides comprehensive demographic, medical education, and other information on all graduates of U.S. medical schools and international medical graduates (IMGs) who have undertaken residency training in the United States. Data on AMA members and the total physician population are taken from the year-end 2022 Masterfile after it is considered final.

Some key considerations must be kept in mind regarding the information in this report. Members of the BOT, the American Medical Political Action Committee (AMPAC) and the Council on Legislation who are not physicians or medical students are not included in any tables. Vacancies in delegation rosters mean the total number of delegates is fewer than the number allotted at the 2022 Interim Meeting, and the number of alternate delegates is nearly always less than the full allotment. Race and ethnicity information, which is provided directly by physicians, is missing for approximately one-fifth of AMA members (20.0%) and the total U.S. physician population (20.4%), limiting the ability to draw firm conclusions.

Readers are reminded that most AMA leadership groups considered herein designate seats for students and resident/fellow physicians. This affects some characteristics, particularly age, as well as the makeup of age-related groups, namely the student, resident, and young physician sections. To provide further clarity on this point, an additional table has been included in the appendix illustrating demographic characteristics and career stage breakdowns of AMA section governing councils.

CHARACTERISTICS OF AMA LEADERSHIP

Table 1 displays the basic characteristics of AMA leadership, AMA members, and all physicians and medical students. Raw counts for Tables 1 and 2 can be found in Appendix A. Upward- and downward-pointing arrows indicate an increase or decrease of at least two percentage points compared to CLRPD Report 1-A-21, “Demographic Characteristics of the House of Delegates and AMA Leadership”; the following observations refer to changes since CLRPD Report 1-A-21. Changes are not highlighted for the BOT due to the small number of Board members. Between year-end 2020 and year-end 2022, AMA membership increased by 3,061 members, a 1.1% increase.

- Little change was observed in the age breakdown of AMA membership and leadership. The share of delegates in the 60-69 age group decreased by 3.9 percentage points since 2020, but no age group saw a significant increase. Likewise, among councils and leadership of sections and special groups, two age groups (under age 40 and age 50-59) saw increased representation, while two others (40-49 and 60-69) saw their percentages decrease, but these changes seem more attributable to fluctuation than any specific trend.

- A continued increase in female representation among AMA delegates and alternate delegates was observed, as females in 2022 made up 34.3% of delegates (up from 30.7% in 2020) and 43.7% of alternate delegates (38.3% in 2020). Over the past decade, the number of female delegates and alternate delegates has increased steadily; in 2012, 20.2% of delegates and 21.5% of alternate delegates identified as female.

- The percentage of white delegates and alternate delegates decreased by 3.5 percentage points and 4.4 percentage points, respectively.
- The percentage of international medical graduate (IMG) alternate delegates increased by 2.7 percentage points.

[1] Numbers include medical students and residents endorsed by their states for delegate and alternate delegate positions.
[2] Numbers do not include the public member of the Board of Trustees, who is not a physician.
[3] Numbers do not include non-physicians on the Council on Legislation and the American Medical Political Action Committee. In addition, Appendix A contains a listing of the AMA Councils, Sections, and Special Groups.
[4] Age as of December 31. Mean age is the arithmetic average.
[5] Includes other self-reported racial and ethnic groups.

Table 2 displays life stage, present employment, and self-designated specialty of AMA leadership.

- No significant changes were observed to the life stage, employment, and specialty characteristics of delegates to the HOD. Among alternate delegates, decreases were observed among established physicians (from 49.7% in 2020 to 44.0% in 2022), employees of the U.S. government (4.1% in 2020, 2.1% in 2022) and internal medicine specialists (19.2% in 2020, 15.1% in 2022). The percentage of senior physician alternate delegates increased from 19.4% to 22.5% since 2020.

- Among CSSG, increases were observed among young physicians (9.6% in 2020, 13.2% in 2022), employees of non-government hospitals (4.2% in 2020, 6.6% in 2022) and internal medicine specialists (18.7% in 2020, 22.2% in 2022). Decreases were observed among senior physicians (28.9% in 2020, 24.6% in 2022), employees of state or local government hospitals (10.8% in 2020, 7.2% in 2022) and OB/GYN specialists (13.3% in 2020, 9.6% in 2022).

PROMOTING DIVERSITY AMONG DELEGATIONS

Pursuant to Part 3 of AMA Policy G-600.035, CLRPD queried state and specialty societies on initiatives they have instituted to encourage diversity among their delegations, and the outcomes of these initiatives.

- Convening groups with a focus on diversity: several societies mentioned convening task forces, councils and/or committees with the goal of evaluating and/or increasing diversity among their organization, including their delegations and other leadership positions. Societies that have implemented these types of groups reported a number of beneficial outcomes including advising the society on internal and external action, developing educational programming and online content, writing grants, and increasing diversity at society meetings.

- Intentional recruitment: societies mentioned making a conscious effort to recruit diverse candidates from across their organizations and ready them for larger leadership opportunities. Additionally, some societies reported making conscious outreach efforts to medical students, including those from historically black colleges and universities, with the goal of increasing diversity within their respective societies, and in the case of specialties, among the specialty itself.

- Initiatives and summits: societies mentioned instituting a variety of initiatives focused on issues related to equity, diversity, and inclusion. These included convening members with interest in addressing lifestyle-related chronic disease health disparities, training and

[7] See Appendix B for a listing of specialty classifications.

certification scholarships for physicians who are representative of and delivering care to underserved communities, leadership summits to prepare young members for future leadership roles, and podcasts to discuss issues related to health and wellness through a DEI lens.

[1] The Medical Student Section elects AMA delegates and alternate delegates from Medical Student Regions. There are seven Medical Student Regions defined for the purposes of electing AMA Delegates from Medical Student Regions. Each Region is entitled to delegate and alternate delegate representation based on the number of seats allocated to it by apportionment. A delegate is seated with the state delegation in which his or her medical school resides.

[2] Resident sectional delegates and alternate delegates endorsed by specialty societies were not included in this table. The following specialty societies endorsed sectional resident delegates and alternate delegates: American Academy of Family Physicians, American Academy of Neurology, American Academy of Pediatrics, American Association of Neurological Surgeons, American Association of Public Health Physicians, American College of Emergency Physicians, American Geriatrics Society, American Psychiatric Association, American Urological Association, Infectious Diseases Society of America, and Society of Critical Care Medicine. This table reflects information available as of January 31, 2023, and is subject to change. Information on alternate delegates was not available.

REPORT 02 OF THE COUNCIL ON LONG RANGE PLANNING AND DEVELOPMENT
(A-23) A Primer on the Medical Supply Chain

EXECUTIVE SUMMARY

The medical supply chain is an extensive network of systems, components, and processes that collectively work to ensure medicines and other health care supplies are manufactured, distributed, and provided to patients. In the broadest sense, a supply chain includes all activities related to manufacturing, the extraction of raw materials, processing, warehousing, and transportation. Hence, for large multinational companies that manufacture complex products, supply chains are highly complex socioeconomic systems. To strengthen and stabilize the medical supply chain, it is important to understand the various aspects of the medical supply chain, to identify the challenges that resulted in supply chain disruptions during the pandemic, and to consider several strategies to mitigate medical supply chain disruptions for the future.

Over decades, the medical supply chain has assembled substantial global networks; however, the pandemic has exposed structural weaknesses and cracks within these networks. Many medical supply distributors and health systems had adopted a "just-in-time" approach to supplies, by which they stocked only what they immediately needed and trusted supply chains to deliver other items quickly. At the same time, much of America's manufacturing capacity shifted abroad, where products could be made inexpensively with low labor and energy costs. While American manufacturing's share of overall output remained constant, its labor share declined as firms automated production lines and relied upon emerging technologies. That production and distribution system worked as planned until difficulties in the global supply chain disrupted those practices and created problems in supply, safety, and security. Today's problems include a wide array of medical supply and equipment shortages that can be traced to component scarcities, factory closures, backlogged ports, and transportation glitches.

The disruptions caused by the "just-in-time" approach have led to calls for greater domestic manufacturing capability through onshoring or reshoring (bringing production back to the United States) or nearshoring (bringing production back to friendly countries not far from the U.S., such as Canada and Mexico). One of the key areas affected by the pandemic was the manufacturing facilities making active pharmaceutical ingredients (APIs) for the U.S. market—72% of the medical supplies and APIs for making drugs found in the United States have resulted from outsourcing to other countries. While locally sourced API production will likely become an increasingly important part of government policy and pharmaceutical company commercial strategy, diversifying supply chains is expensive, and the cost of reconfiguring them will fall on consumers or governments.

Factors that disrupt medical supply chains include infectious disease outbreaks, geopolitical conflict, economic conditions, and quality-related issues at production sites. These factors can impact daily health care, as well as the profitability of manufacturing companies. In 2021, virtually all U.S. hospitals and health care systems (99%) reported challenges in procuring needed supplies, including shortages of key items and significant price increases.

Most experts agree that stakeholders must come together to develop consistent, meaningful metrics that reflect a sophisticated approach to managing and preventing shortages that pose risks to health care systems and patients. There are several automated technologies available that health care systems can use to quickly access data and projections: cloud-based, radio-frequency identification

(RFID) technology allows for real-time tracking that prevents shortages while enabling health care professionals to view their inventory quickly and accurately; internet-connected medical devices and equipment enable different systems in health care organizations to speak to one another and ensure information is updated across departments, rather than being held up in siloes; and analytics platforms, powered by artificial intelligence (AI), can be embedded in an electronic health record (EHR) to allow users to access benchmarking data so they can analyze their overall performance.

In a recent McKinsey survey of U.S. health system and supply chain executives, three themes emerged as critical to a high-performing medical supply chain function:

- *Engage front-line physicians in supply decisions,*
- *Jointly set goals across facilities and functions, and*
- *Invest in accurate, actionable data and analytics.*

While the pandemic caused major disruptions in health care with severe consequences, it also spurred medical and technological innovations. Telemedicine has become common, medical professionals have urged adoption of new models of care, shifting from cost-efficiency to long-term planning, and public-private partnerships have been formed to deal with current and future crises. Patient care has historically been limited to a person's ability to arrive at a hospital or care facility and restricted by the supply chain's capacity to swiftly provide the correct product for that patient's individual need. Technology has recently enhanced treatment products to allow patients to receive care outside of a traditional care facility. The use of 3D printing and new forms of diagnostics allow for more personalized treatment to be provided while saving manufacturing costs.

Artificial Intelligence (AI) and predictive analytics—while being used nominally right now by physicians and health care organizations—can, should, and will be used to ensure the right items, from the right sources, at the right prices for the right outcomes are ordered at the right times and in the right quantities to prevent shortages and price gouging. This will help to ensure financial stability of medical practices and health care organizations while mitigating patient risk. Although technology is a crucial enabler of resilience through supply chain digitalization, using it as the tip of the spear to address weaknesses may only partially fix the issues. Comprehensive solutions that position technology as a component alongside people and processes can help make the medical supply chain more resilient. Several large health care organizations have developed partnerships with shared goals and vision between physicians and hospital administrations. What is necessary to further these efforts is an investment in evidence tools and the creation of a physician role in the supply chain, which is becoming more common.

The future of the medical supply chain entails transparent communication of supply chain issues and patient needs between suppliers and health care professionals who can work together to create methods that enhance situational awareness. The medical supply chain can gain physician trust by communicating regularly and providing insight into the inner workings of logistics. Physicians can articulate needs, and medical supply chain professionals can provide information about the prices of products and transportation, outcomes, and alternative options for their products. Addressing these issues can improve the relationship between the supply chain, physicians, and health care organizations. Effective supply chain performance directly links to patient outcomes and clinical safety, influencing much more than personal protective equipment (PPE).

REPORT OF THE COUNCIL ON LONG RANGE PLANNING AND DEVELOPMENT

CLRPD Report 02-A-23

Subject: A Primer on the Medical Supply Chain

Presented by: Edmond Cabbabe, MD, Chair

The critical medical shortages that resulted from COVID-19 hampered the pandemic response and cascaded into defaults of other aspects of U.S. health care delivery. This informational report was developed to provide members of the House of Delegates (HOD) with some history of medical supply chain shortages, the structure of the medical supply chain, globalization of the U.S. medical supply chain, causes and consequences of failures, U.S. governmental actions to mitigate issues, and onshoring and nearshoring strategies for the U.S. medical supply chain. It also identifies opportunities for physicians and health systems to improve medical supply chain resilience and performance.

BRIEF HISTORY OF U.S. MEDICAL SUPPLY CHAIN SHORTAGES

Shortages of medical supplies in the United States due to supply chain issues are not new.

- During War II, the supply of quinine that was primarily sourced in the Japanese-occupied East Indies, was cut off. The United States suddenly found itself facing malaria across the globe without sufficient treatment, which resulted in major hospitalizations from malarial infections throughout different battles and theaters.[1]
- In September 2017, Hurricane Maria devastated the territory of Puerto Rico—producer of 50% of America's supply of intravenous saline—catapulting hospitals nationwide into a shortage.[2]
- In late 2019, SARS-CoV-2 emerged from China and rapidly evolved into a pandemic, resulting in disrupted production and export of medications and personal protective equipment (PPE) around the world.

The critical medical shortages that resulted from COVID-19 hampered the pandemic response and cascaded into defaults of other aspects of U.S. health care delivery. What differentiates COVID-19 from prior supply chain disruptions is the level of uncertainty and the length of the disruption, as well as its simultaneous global impact. Additionally, unlike most other disruptions, COVID-19 has affected not only the supply of, but also the demand for products and services.

MEDICAL SUPPLY CHAIN STRUCTURE

The medical supply chain is an extensive network of systems, components, and processes that collectively work to ensure medicines and other health care supplies are manufactured, distributed, and provided to patients. In the broadest sense, a supply chain includes all activities related to manufacturing, the extraction of raw materials, processing, warehousing, and transportation. Hence, for large multinational companies that manufacture complex products supply chains are

highly complex socioeconomic systems. There are many players in the medical supply chain; however, manufacturers and distributors are particularly prominent.

- Manufacturers are the first link in the supply chain and make the medicines and health care supplies patients and physicians rely on. Manufacturers acquire raw materials for production of approved products; conduct research, develop, and process medicines and products; identify what product(s) is needed and if enough supply will be available based on demand; conduct safety trial testing; and package approved products for distribution.
- Distributors are the second link in the medical supply chain. Distributors repackage, relabel, and ensure special handling for unique products; obtain medicines and products from manufacturing facilities and distribute to providers, health care facilities or other general areas of need; and manage temperature and climate conditions for safe transportation of medicines and products. Distributors purchase drugs and medical products in bulk from manufacturers and maintain large stocks in strategic locations across the country. Some wholesalers specialize in dealing with a particular range of products, such as biologics or to specific types of customers.
- Providers (hospitals, pharmacies, dialysis centers, urgent care, assisted living, and long-term care facilities) submit orders to distributors; refill prescriptions for patients; and identify shortages in inventory and potential distribution challenges.
- Patients and communities with unique medical needs that require specific products influence the demand for medicines and products.

To strengthen and stabilize the medical supply chain, it is important to understand the various aspects of the medical supply chain, to identify the challenges that resulted in supply chain disruptions during the pandemic, and to consider several strategies to mitigate medical supply chain disruptions for the future.

GLOBALIZATION OF U.S. MEDICAL SUPPLY CHAIN

Over decades, the medical supply chain has assembled substantial global networks; however, the COVID-19 pandemic has exposed structural weaknesses and cracks within these networks. Many medical supply distributors and health systems had adopted a “just-in-time” approach to supplies, by which they stocked only what they immediately needed and trusted supply chains to deliver other items quickly. That approach saved money because firms and hospitals did not need to build extended storage facilities or keep full inventories. Rather, they kept their stocks low and refreshed on an “as needed” basis.[3] At the same time, much of America’s manufacturing capacity shifted abroad, where products could be made inexpensively with low labor and energy costs.[4] Further, while American manufacturing’s share of overall output remained constant, its labor share declined as firms automated production lines and relied upon emerging technologies.[5] That production and distribution system worked as planned until issues in the global supply chain disrupted those practices, creating problems in terms of supply, safety, and security.

The National Academies of Sciences, Engineering, and Medicine (NASEM) reported that only 28% of the manufacturing facilities making active pharmaceutical ingredients (APIs) for the U.S. market were in the United States as of August 2019. This means that 72% of the medical supplies and APIs for making drugs found in the United States had resulted from outsourcing to other countries. A previous shortfall occurred with the anticoagulant heparin, made using pig intestines: China makes 80% of the world’s heparin and 60% of the U.S. supply. In 2007, an infectious disease outbreak in Asia decimated pig herds, pushing heparin into short supply and doubling prices. Seeking a rapid, practical solution, the U.S. Food and Drug Administration (FDA)

suggested using U.S. bovine heparin and asked manufacturers to submit applications that demonstrated safety, efficacy, quality, and purity. Although the FDA cannot eliminate all possible risk, it can enforce requirements, controls, and best practices to detect problems early while ensuring the availability of safe and effective medications.[6]

As COVID-19 became a pandemic, different countries took steps to protect their local supplies by limiting or stopping exports entirely. For example, China, which produces roughly 50% of the global supply of masks at 10 million masks daily, ramped up production to 115 million daily during the early phases of COVID-19, yet simultaneously terminated all mask exports, leading to a gradual depletion of global stockpiles. Additionally, Germany banned the export of most of its PPE supplies. In other areas where local production was not significant, essential equipment procurement became vulnerable.

Virus mitigation measures continue to affect production and limit efforts to return the supply chain to pre-pandemic levels. Several industry players have reduced worker levels due to fears of the further spread of COVID-19 within the workplaces. In China, port terminals temporarily closed because of the country's COVID-19 zero-tolerance policy, creating lengthy shipping backlogs at some of the world's largest ports. While consumer demand can increase in months, more time is required to increase port capacity, build warehouses, and hire employees so that shipping can meet the needs of the demand.

Problems include a wide array of medical supply and equipment shortages that can be traced to component scarcities, factory closures, backlogged ports, transportation glitches, and COVID-19 lockdowns across the global supply chain. According to the FDA, the list of persistently scarce items is long and includes latex and vinyl examination gloves, surgical gowns, laboratory reagents, specimen-collection testing supplies, saline-flush syringes, and dialysis-related products.[7]

CAUSES AND CONSEQUENCES OF MEDICAL SUPPLY CHAIN FAILURES

Factors that disrupt medical supply chains include infectious disease outbreaks, geopolitical conflict, economic conditions, and quality-related issues at production sites. These factors can impact daily health care, as well as the profitability of manufacturing companies. Once there is an infectious outbreak, it may be difficult to access treatment and other health services, especially if the outbreak comes with harsh control measures such as quarantines and lockdowns. Such measures may generate an acute surge in the demand for critical medical supplies and equipment, which exceeds supply, leading to shortages and protocols for prioritized use. A disruptive event can cause a mismatch between supply and demand in medical product supply chains in three ways:

1. Demand surge: An event drives demand for a medical product well above the normal level for an extended period. For example, a major natural disaster, such as a tornado or earthquake, can spike regional demand for certain medical products if these events result in a significant number of casualties requiring medical care. As seen during COVID-19, a pandemic can drive up global demand for many medical products.
2. Capacity reduction: One or more production or transport processes are impeded by lack of assets, power, or people. For example, a natural disaster could cause a factory to lose power and halt production, or regulatory barriers or manufacturing quality problems could restrict the output of a supplier or producer and could even eliminate inventory stock if a product is recalled. As seen during the COVID-19 pandemic, production of some products decreased because of lockdown measures, as well as acute loss of workers to quarantine and illness.

3. Coordination failure: Events that prevent coordination of supply to meet demand can cause shortages of medical products even when total supply is sufficient to meet total demand. For example, geopolitical issues or communication system failures during a hurricane or other natural disaster can reduce or obstruct the delivery of emergency supplies into a city or region.[8]

The COVID-19 pandemic led to such shortages in medical supplies as a combination of all three ways, leading to gaps in medical supplies for routine health care (e.g., dialysis-related products) and pandemic response (e.g., PPE, lab testing supplies and equipment, and ventilation-related products) in most health care facilities around the world.

The medical supply chain may be influenced by U.S. insurance companies, hospitals, physicians, employers, and regulatory agencies, with differing objectives among them. Demand for services is determined by both available treatments and insurance coverage for those treatments. Decisions made by one party often affect the options available to other parties, as well as the costs of these options, in ways that are not well understood. Most of these complicated factors are also present, to varying degrees, in industrial supply chains.

In 2021, virtually all U.S. hospitals and health care systems (99%) reported challenges in procuring needed supplies, including shortages of key items and significant price increases. A Kaufman Hall report noted that 80% of hospitals had significant supply shortages and had to seek new vendors for supplies during the pandemic. Shortages in raw materials and components hampered the production of both drugs and sophisticated medical devices. Manufacturing facilities struggled to keep up as COVID-19 swept through the workplace. Labor shortages prevented medical products from being transported to the places where they were needed most.[9]

Helium, a nonrenewable element found deep within the earth's crust, is essential for keeping magnetic resonance imaging (MRI) machines cool enough to work. With a boiling point of minus 452 degrees Fahrenheit, liquid helium is the coldest element on Earth. Pumped inside an MRI magnet, helium lets the current travel resistance-free. However, the supply of helium is running low leaving hospitals wondering how to plan with a much scarcer supply. Currently, four of five major U.S. helium suppliers are rationing the element.[10] Shortages in aluminum, semiconductors, wood and paper pulp, and resin are disrupting supplies of medical devices, with different business sectors competing for the same raw materials. Those shortages have led to uneven supplies of medical monitors, CT scan devices, packaging for medical supplies, and gloves. While only a fraction of the world's semiconductors is in medical equipment compared with cars and consumer electronics, the components are key to a range of medical devices such as MRI machines, pacemakers, glucose monitors, CT scanners, defibrillators, multiparameter monitors, and ultrasound machines. As a result, hospitals are experiencing long order delays for equipment because of the semiconductor shortage.[11]

Drugs used in the United States involve raw materials from all over the world. Many chemical inputs are manufactured in India and China and then shipped to the United States. Regardless of the root cause, drug shortages can lead to substitutions for available medications that are costlier and/or less effective. In some instances, hospital pharmacies must compound and modify products, which adds workload and potential error.[12] The American Medical Association (AMA) Council on Science and Public Health (CSAPH) has issued eleven reports on drug shortages. AMA Policy H-100.956, "National Drug Shortages," directs the CSAPH to continue to evaluate the drug shortage issue and report back at least annually to the House of Delegates on progress made in addressing drug shortages in the United States. CSAPH Report 01-I-22 provides an update on continuing

trends in national drug shortages and ongoing efforts to further evaluate and address this critical public health issue.[13]

The United States recently experienced a surge in respiratory illnesses, a potential "tripledemic" of three viruses: respiratory syncytial virus the influenza virus, and the COVID-19 coronavirus. While antibiotics like amoxicillin typically are not effective against such respiratory viruses, they can be important treatments for secondary bacterial infections that may occur when respiratory tract defenses and the immune system in general are battling a viral infection. Despite the best efforts to address root causes of drug shortages, the United States has a dysfunctional, opaque medical supply chain. There is still no easy way to scale up production to meet excess demand. Moreover, there remains a limited profit motive to do better, particularly for low-cost medications such as amoxicillin.

U.S. GOVERNMENT ACTIONS TO MITIGATE MEDICAL SUPPLY CHAIN ISSUES

During the COVID-19 public health emergency, the FDA took many actions to ensure that health care professionals had timely and continued access to high-quality medical devices. These actions included *Emergency Use Authorizations)* and guidance permits to expand available resources for diagnostic, therapeutic, and medical devices in high demand. Further, President Trump invoked the *Defense Production Act* and released government funds to help American companies build facilities and expand production capabilities for medical equipment.[14]

In October 2020, in response to Executive Order 1394410, the FDA published a *List of Essential Medicines, Medical Countermeasures, and Critical Inputs* (described herein as EM). This executive order sought to ensure sufficient, reliable, and long-term domestic production of these products and minimize potential shortages. The published EM list contained 227 drug and biological product essential medicines and countermeasures, including analgesics, antivirals, anticoagulants, antihypertensives, and antimicrobials.[15] The *Center for Drug Evaluation and Research (CDER) Site Catalog* includes approximately 1,100 locations that manufacture at least one product on the EM list. There are 1,686 sites that manufacture an active pharmaceutical ingredient (API), of which 354 manufacture API for EM products. Currently, 23% of API manufacturing sites are in the United States; for EM, this drops to 19%. These data illustrate that only a minority of drug manufacturing sites are domestic. Overall, API and finish dose form manufacturing are heavily dependent on foreign manufacturing sites.

Since early 2020, the United States has made progress in strengthening the health care supply chain by addressing concerns regarding domestic manufacturing and supply chain surge capabilities. In 2021, President Biden issued Executive Order (EO) 14017, *On America's Supply Chains*. The 100-Day Review under this order directed the U.S. Department of Health and Human Services (HHS) to identify products for which onshoring (bringing production back to the U.S.) may be advisable. HHS subsequently issued a 2022 report that identifies successes and practical strategies to further U.S. goals for America's supply chain and industrial base. Particular efforts should be directed at expanding the public health industrial base by working across government agencies, academia, and the private sector, and strengthening capabilities to monitor and manage supply chain bottlenecks.[16] Note that Section 510(j)(3) of *the Food, Drug and Cosmetic (FD&C) Act*, which was added by the recent *CARES Act,* requires FDA registered sites to report annually the amounts of drugs manufactured for U.S. commercial distribution. Combined with FDA information about the location of manufacturing sites, these data should enable the FDA to perform better manufacturing site surveillance.[17]

In 2020, the FDA reported 43 new drug shortages after a peak of 251 shortages in 2011.[18] On the surface, this looks like tremendous progress; however, this measurement does not consider the scope, scale, or severity of the shortage. The FDA metric measures every shortage the same way, whether a drug is dispensed 20 times or 20,000 times a month. Moreover, not every shortage is the same. In response to the public health crisis, some U.S. hospital groups, startups, and nonprofits began making their own sterile injectables and other medicines as a short-term workaround to combat persistent drug shortages.[19] Experts anticipate that efforts by hospitals to have more direct control over their critical drug supply chains will continue to evolve as they work to find a sustainable, cost-effective, and safe model. Joint public-private sector efforts, such as the creation of a *Strategic Active Pharmaceutical Ingredient Reserve (SAPIR),* will be instrumental in defining how these products are supplied in the future.[20]

The 2013 *Drug Supply Chain Security Act (DSCSA)* outlines steps to build an electronic, interoperable system to track and trace prescription drugs.[21] The original aim of the DSCSA was to enhance the ability of the FDA to regulate drug safety and help protect patients. However, this system could improve the management of drug product shortages as well.[22] Serialization (assignment of a unique serial number to each suppliable prescription product) in the drug supply chain could vastly improve an organization's ability to manage inventory. A pilot DSCSA program with the FDA showed the potential for using IBM blockchain technology to connect disparate data for tracking and tracing prescription medications and vaccines in the United States.[23]

In 2022, the NASEM published the congressionally mandated report, *Building Resilience into the Nation's Medical Product Supply Chains*. The report called for the FDA to track sourcing, quality, volume, and capacity information, and to establish a public database for health systems, inclusive of failure-to-supply penalties in contracts. In addition, the report recommended that the federal government optimize inventory stockpiling to respond to medical product shortages.[24]

While the federal government can generate greater economies of scale for the procurement of health care supplies during a pandemic, local governments can identify lower socioeconomic groups and minorities that are particularly vulnerable to both the health and economic aspects of a pandemic. As a result, they can employ resources more efficiently for a rise or fall in cases and hospitalizations.

ONSHORING AND NEARSHORING STRATEGIES

Concerns unleashed by the pandemic and dependence on foreign manufacturers combined to increase risks and raise doubts regarding "just-in-time" practices.[25] The disruptions caused by this approach have led to calls for greater domestic manufacturing capability through onshoring or reshoring (bringing production back to the United States) or nearshoring (bringing production back to friendly countries not far from the United States, such as Canada and Mexico). A European Parliament report found modest benefits to reshoring in the United Kingdom, United States and Japan and argued that reshoring should be primarily focused on specific critical sectors and products with pronounced supply bottlenecks, rather than across-the-board. Targeted reshoring was advised because host countries often do not have the production facilities and/or workforce required for wholesale reshoring.[26] Both onshoring and nearshoring should consider the ownership of the manufacturing: a foreign company can own domestic manufacturing facilities and still monopolize production.

One of the key areas affected by the pandemic was the API market. Research by McKinsey shows that supply chains in the pharmaceutical industry are more global than in other sectors, and there is a tendency to source certain materials from a particular region. For instance, 86% of the

streptomycin in North America and 96% of the chloramphenicol in the European Union come from China. Diversifying supply chain materials is an option that pharmaceutical companies could pursue to reduce their exposure through onshoring. McKinsey estimates that 38% to 60% of the international pharmaceutical trade, worth $236 billion to $377 billion in 2018, could be considered for onshoring. Locally sourced API production will likely become an increasingly important part of government policy and pharmaceutical company commercial strategy. However, diversifying supply chains is expensive, and the cost of reconfiguring them will fall on consumers or governments. Further, the risk from regional domestic disasters in the vicinity of manufacturing and distribution facilities must be assessed. [27]

The United States once led the world in semiconductor manufacturing yet has fallen behind. Other countries, especially in Asia, made deliberate investments to build powerful chipmakers in their own countries. Foreign state subsidies created a ~30% cost advantage for foreign chipmaking plants, and the resulting advantage is startling: in 1990, the United States supplied 37% of the world's chips, but now only 11%. This outcome has undermined U.S. technology leadership with significant economic and national security implications: a recent White House study concluded that "our reliance on imported chips introduces new vulnerabilities into the critical semiconductor supply chain."[28]

In 2019, the U.S. medical end-use market accounted for $5.6 billion in total semiconductor sales—roughly 11% of the global industrial semiconductor market and 1.3% of the total semiconductor market. However, 47% of the chips sold worldwide are designed in the United States. Meanwhile, the medical semiconductor segment is growing faster than the overall industrial semiconductor market, which is driven by long-term trends of an aging population, the rise of telehealth, the move to portable and wearable devices, and the applications of artificial intelligence.[29] Despite being a small percentage of the overall semiconductor chip market, there is an urgent need for chips in medical device manufacturing.[30]

Recognition of chip vulnerabilities led Congress to pass and President Biden to sign the *CHIPS and Science Act* in August 2022. This law provides $52.7 billion in aid to the semiconductor industry along with other incentives to build new semiconductor production facilities in the United States.[31]

OPPORTUNITIES TO IMPROVE MEDICAL SUPPLY CHAIN PERFORMANCE

Since disruptions in medical supply chains have the potential to seriously impact patient care and safety, health care systems need the capacity to proactively foresee, absorb, and adapt to shocks and structural changes in a way that allows them to sustain required operations, resume optimal performance as quickly as possible, transform their structure and functions, and reduce their vulnerability to similar shocks and structural changes in the future.[32] Most experts agree that stakeholders must come together to develop consistent, meaningful metrics that reflect a sophisticated approach to managing and preventing shortages that pose risks to health care systems and patients.

There are several automated technologies available that health care systems can use to quickly access data and projections:

- Cloud-based, radio-frequency identification (RFID) technology allows for real-time tracking that prevents shortages while enabling health care professionals to view their inventory quickly and accurately.

- By tapping into the Internet of Things, internet-connected medical devices and equipment enable different systems in health care organizations to speak to one another and ensure information is updated across departments rather than being held up in siloes.
- A third option are analytics platforms, powered by artificial intelligence (AI), e.g., an electronic health record (EHR) embedded in an AI platform. On these platforms, cataloging allows users to distribute and curate all analytics in a single web-based action. Users may also have access to benchmarking data so they can analyze their overall performance.[33]

In a recent McKinsey survey of U.S. health system and supply chain executives, nearly three-quarters of survey respondents agreed that "the supply chain stands to assume an even more strategic role." Three themes emerged as critical to a high-performing supply chain function:

- *Engage front-line physicians in supply decisions.* In high-performing organizations, physicians play an integral role in supply chain initiatives: they provide input on supplier selection and contracting strategies, including their financial impact; they support compliance with contract terms (for example, by committing to give a supplier a negotiated share of business); they manage the use of supplies; and they contribute to achieving financial, quality, or other goals.
- *Jointly set goals across facilities and functions.* Supply chain initiatives may require meaningful changes in behavior by some clinicians, including shifting away from their suppliers of choice to clinically similar suppliers used by their peers. To assist this change, systems may consider providing incentives, which can be financial or nonfinancial and may include a commitment to reinvest a percentage of savings in priorities of physicians.
- *Invest in accurate, actionable data and analytics.* Analytical tools are only useful if they provide relevant insights to their users, which may require individual customization and, for convenience, accessibility on multiple devices. For example, a supplies cost-per-case tool, which shows the cost of all supplies for a given operating-room procedure, should provide the relevant views for physicians so that they can see the supplies they use, cost compared to supplies used by peers, alternative supply options, and quality outcomes.[34]

At the 2019 Association for Health Care Resource & Materials Managementconference of the American Hospital Association, speakers emphasized eight points to strengthen relationships between physicians and PURE (Physicians Understanding, Respecting, and Engaging Supply Chain) professionals:

- *Share meaningful data with physicians*. Physicians are empiricists, motivated by data. As a result, health systems should provide meaningful data at a consistent cadence to physicians, perhaps quarterly.
- *Welcome partnerships in achieving the strategic goals of the organization*. Hospital systems that work with independent physicians should bring them into supply chain decision-making to include clinical perspectives.
- *Use evidence-based principles to guide decision making.*
- *Place some restriction on the number of vendors used.* However, be mindful not to limit physician preference items completely or force surgeons to use specific or substandard products.
- *Provide context for supply chain decision making.* Organizations should be very transparent regarding what relationships drive their supply chain decision-making, to include the use of group purchasing organizations (GPOs). Physicians understand

economies of scale, price sensitivity and market trends, and want to play a role in finding solutions.

- *Include practicing physicians as part of the decision-making team*. Many hospital administrators do not have clinical backgrounds or currency, so it is important to have physicians with clinical experience on supply chain leadership teams. Physicians can share clinical insights to inform supply chain discussions, translate clinical and supply chain languages, and provide credibility for communication with physicians.
- *Update clinical pathways to include product categories that support evidence-based medicine and minimize clinical variation.* Data should be used to create algorithms and care pathways for high-volume procedures.
- *Emphasize that supply chain sustainment needs logisticians and physicians.* Collaboration is essential to anticipate and fulfill supply needs with timeliness and realism.[35]

FUTURE OF THE MEDICAL SUPPLY CHAIN: IMPROVED TECHNOLOGY AND PROCESSES, AND SITUATIONAL AWARENESS

While the pandemic caused major disruptions in health care with severe consequences, it also spurred medical and technological innovations. Telemedicine has become common, medical professionals have urged adoption of new models of care, shifting from cost-efficiency to long-term planning, and public-private partnerships have been formed to deal with current and future crises. One of the highest priorities for the medical supply chain is expansion, which includes more than the expansion of infrastructure and transportation in areas that have less accessibility. Patient care has historically been limited to a person's ability to arrive at a hospital or care facility and restricted by the supply chain's capacity to provide swiftly the correct product for that patient's individual need. Technology has recently enhanced treatment products to allow patients to receive care outside of a traditional care facility. A patient's treatment can now follow them outside of a hospital or medical practice with the use of telehealth communication, at-home testing kits, and at-home treatment that can be sent right to the patient's door. This requires the medical supply chain to extend past hospitals and include last-mile transportation to patients so that they do not have to return to the hospital. At-home patient care also requires more treatments to become personalized. The use of 3D printing and new forms of diagnostics allow for more personalized treatment to be provided while saving manufacturing costs.

As physicians and health care organizations adapt to newer data processing capabilities, they can more readily keep their information correct and consistent. Predictability is a must as we continue to move towards standardizing patient experience and more at-home care. The medical supply chain will need to implement strategies that help it become more predictable to physicians and health care organizations who need high visibility on their needed products. Currently, medical supply chain management lacks a unified, well-adopted data standard. The Global Trade Item Number (GTIN) standard is available, but adoption rates remain low compared to the universal product code (UPC) fully adopted in other industries. Clinical and regulatory requirements necessitate tracking of device information through the supply chain and in clinical EHR systems. Supply chain intermediaries bear responsibility for efficient supply chain integration.

Data will be utilized to anticipate product demand. Clean data will also help supply chains stay agile and not allow disruptions to hold up the services they are working to provide. Discontinued or back-ordered products can greatly disrupt a supply chain, though when such things can be more easily resolved with data analysis, the supply chain can become much more predictable. Data usage is one strategy that will help supply chain predictability, and several strategies can help a supply chain stay consistent and save costs. Some strategies for resilience include expanding domestic

supply chain production, making product allocation needs-based, and increasing trust. The medical supply chain will have data that, if it is fully captured and analyzed, will be essential for decision making. Organized collection of data can greatly impact every stage of the supply chain, as each segment can make predictions based on past data and optimize processes.

Data can greatly enhance a company's capacity to be proactive, and predictive analytics can amplify that capability. Predictive analytics will help the supply chain with decision-making and offer a clear way to see the ebb and flow of supply and demand. Companies can use predictive analytics in new ways that help bring visibility to inventory and ensure the right products are being ordered and priced correctly and that there are enough items to meet demand. Predictive analytics can also help companies be more proactive in situations that significantly impact the medical supply chain. The COVID-19 pandemic created new aspects of health care to predict, like the number of COVID-19 cases, and the number of patients needing treatment. Predictive analytics can help companies prepare for these unforeseen circumstances and prepare the supply chain for future unknowns.

The use of artificial and augmented intelligence (AI) is growing throughout the health care industry: AI is being used to clean data and promote efficient human effort. There are even more ways that AI can be used to enhance health care and save costs. AI and predictive analytics—while being used nominally right now by physicians and health care organizations—can, should and will be used to ensure the right items, from the right sources, at the right prices for the right outcomes are ordered at the right times and in the right quantities to prevent shortages and price gouging. This will help to ensure financial stability of medical practices and health care organizations, while mitigating patient risk. AI can help supply chains keep up demand, by recommending stand-in products if the preferred product is not available. AI algorithms can be used to fill the gap between supply and demand while saving costs and eliminating human error.

Many health care organizations are addressing supply chain challenges with holistic solutions that pair technology with other changes. For the supply chain to function efficiently, physicians need to be involved in decision-making. Increasing supply chain resilience requires fostering an organization-wide commitment from leaders to staff members and by investing time and resources necessary to identify and address the root causes of supply chain challenges. Although technology is a crucial enabler of resilience through supply chain digitalization, using it as the tip of the spear to address weaknesses may only partially fix the issues. Comprehensive solutions that position technology as a component alongside people and processes can help make the medical supply chain more resilient. Several large health care organizations across the country have developed partnerships with shared goals and vision between physicians and hospital administrations. What is necessary to further these efforts is an investment in evidence tools and the creation of a physician role in the supply chain, which is becoming more common.

Some disruptions in a patient's care can be attributed to limited situational awareness between physicians and the supply chain. When physicians do not have knowledge of the products in the supply chain, they cannot provide the best treatment possible. When the supply chain lacks clear communication with physicians, medical practices, and health care facilities, it is difficult to know the demand for products and when they should arrive. The future of the medical supply chain entails transparent communication of supply chain issues and patient needs between suppliers and health care professionals. Supply chain professionals and physicians can work together to create methods that enhance situational awareness. Physicians can articulate needs, and medical supply chain professionals can provide information about the prices of products and transportation, outcomes, and alternative options for their products. Addressing these issues can improve the relationship between the supply chain and physicians and health care organizations. The medical

supply chain can gain physician trust by communicating regularly and providing insight into the inner workings of logistics.

Adaptability and efficiency are crucial in today's health care supply chain environment. If a company's methods are too rigid, it will not be able to adapt quickly to unexpected changes. Furthering relationships between clinicians and suppliers will help a supply chain boost its robustness. Having trusting relationships between distributors and manufacturers, as well as effective contracting models, will create a strong network within the health care supply chain that can adapt smoothly while providing the most efficient services possible. Effective supply chain performance directly links to patient outcomes and clinical safety, influencing much more than PPE. Prior to the COVID epidemic, many physician leaders recognized the value of supply chain excellence; that value is now apparent to all physicians.

REPORT 06 OF THE COUNCIL ON MEDICAL SERVICE (A-23)
Health Care Marketplace Plan Selection
Informational Report

EXECUTIVE SUMMARY

At the 2022 Interim Meeting, the House of Delegates adopted Policy D-165.933, "Health Care Marketplace Plan Selection." This policy directs the American Medical Association (AMA) to re-evaluate and study the effectiveness of the current plan options in the health care marketplace to adequately provide choice and competition, especially in communities in close proximity to multiple states (insurance markets) and submit a report to the AMA House of Delegates at the 2023 Annual Meeting. This report, which is presented for information to the House of Delegates, provides updated information on insurer competition in health insurance exchanges, insurer concentration in exchange markets, and policies impacting the marketplace in 2023. Additionally, the report summarizes key AMA policies that strongly support competition and choice in the health insurance marketplace.

Insurer participation in the Affordable Care Act (ACA) marketplace has increased for five consecutive years, enrollment has surpassed 16 million people, and the exchanges are generally functioning well. Still, the Council recognizes that insurer participation in the marketplace remains lower today than in 2015, when it was at its highest, and the share of plans offered by large insurers has been steadily growing in recent years. Many insurer exchange markets remain highly concentrated, as evidenced by data compiled in the AMA's most recent edition of *Competition in Health Insurance: A Comprehensive Study of U.S. Markets*. The Council shares the sentiment of many physicians that insufficient competition in the ACA marketplace remains concerning in many areas. Importantly, health insurance markets are local; across states, there is significant variation in the number of insurers and plans offered in ACA exchanges and, within states, there may be differences in insurer participation in rural and urban regions.

The Council finds that the concerns raised in Policy D-165.933 are addressed by Policies H-165.825, H-165.839, H-165.838, H-165.846, H-180.946, H-165.856, and H-180.947. We identify no gaps in existing AMA policy and make no recommendations at this time. However, the Council believes network adequacy, which is key to maintaining healthy competition and choice in the marketplace, remains problematic and is worthy of additional study. The Council has begun looking at the need for stronger network adequacy standards for ACA, Medicare Advantage, and Medicaid plans and will present a report on this topic at the 2023 Interim Meeting.

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 06-A-23

Subject: Health Care Marketplace Plan Selection

Presented by: Lynn Jeffers, MD, Chair

At the 2022 Interim Meeting, the House of Delegates adopted Policy D-165.933, "Health Care Marketplace Plan Selection." This policy directs the American Medical Association (AMA) to re-evaluate and study the effectiveness of the current plan options in the health care marketplace to adequately provide choice and competition, especially in communities in close proximity to multiple states (insurance markets) and submit a report to the AMA House of Delegates at the 2023 Annual Meeting. This report, which is presented for information to the House of Delegates, provides updated information on insurer competition in health insurance exchanges, insurer concentration in exchange markets, and policies impacting the marketplace in 2023. Additionally, the report summarizes AMA policy that strongly supports competition and choice in the health insurance marketplace.

BACKGROUND

The intent of individual health insurance exchanges required under the Affordable Care Act (ACA) is to broaden coverage through a patient-friendly market and ensure healthy competition among plans. Products sold in the ACA marketplace are required to be certified as qualified health plans (QHPs); and as a condition of QHP certification, insurers—or issuers—must meet certain standards and requirements designed to protect patients while encouraging health plan competition and choice. Robust competition among issuers participating in the insurance exchanges is essential to health plan affordability and choice, as evidenced by research showing that the participation of additional insurers on an exchange is associated with lower premiums and, conversely, regions with fewer insurers have higher premiums.[1] Across states, there is significant variation in the number of insurers and plans offered in ACA exchanges and, within states, there may be differences in insurer participation in rural and urban areas.

INSURER PARTICIPATION IN HEALTH INSURANCE EXCHANGES

Insurer participation in the marketplace has been an ongoing concern since the ACA exchanges began operating and have gone up and down in the ensuing years in response to marketplace regulations and insurers entering and exiting the market. After a period of decreasing insurer participation between 2016 and 2018 (participation was at its highest in 2015), 2023 marks the fifth consecutive year of increases in the number of insurers offering ACA marketplace plans. In fact, most people shopping for coverage on an exchange must navigate through scores of offerings before choosing a health plan that best meets their needs and budget, a process that can be both daunting and confusing. This year, consumers using the federal exchange through HealthCare.gov will have, on average, more than 113 QHPs to choose from, up from over 60 plan options in 2021 and just over 25 options in 2019.[2] An issue brief released by the Office of Health Policy for the Assistant Secretary for Planning and Evaluation (ASPE) showed that, in 2021, nearly three-quarters of HealthCare.gov users had more than 60 plan options to choose from, and over a quarter selected from more than 160 plans.[3] Within a specific metal tier (i.e., bronze, silver, gold, or

platinum), or even within a particular metal tier and a specific issuer, consumers in many areas can still have an abundance of plan options from which to choose.

In the 33 marketplaces using the HealthCare.gov platform, the Centers for Medicare & Medicaid Services (CMS) has announced that there is greater choice of insurers in 2023 with only one percent of enrollees having access to a single QHP issuer, the lowest in marketplace history.[4] The Center for Consumer Information and Insurance Oversight (CCIIO) has reported that, in HealthCare.gov states, 92 percent of enrollees have three or more insurers from which to choose this year compared to 89 percent of enrollees in 2022. There are 220 total insurers participating in HealthCare.gov states, an increase of seven from 2022, and the average enrollee has access to between six and seven issuers, and over 113 QHPs.[5] A CCIIO map (https://www.cms.gov/files/document/py2023-county-coverage-map.pdf) of Plan Year 2023 exchange insurers, which includes federally-facilitated exchange data as well as self-reported data (updated as of October 2022) from the 18 states operating their own exchanges, shows that only three percent of counties (93) have a single insurer while 25 percent (771) have two insurers and remaining counties have three or more insurers on the exchange. This contrasts with 2018 when over half (51.3 percent) of counties had a single carrier, a percentage that decreased to just over 35 percent of counties in 2019, 24 percent in 2020, nine percent in 2021, five percent in 2022, and three percent in 2023 (see appendix). County level data is important to measuring competition in the ACA marketplace because many insurers offer plans in some parts of a state but not others, and because health plans are priced and offered locally.

A brief from the Robert Wood Johnson Foundation explains that although insurer participation in the ACA marketplace increased significantly between 2019 and 2021, such increases were more moderate in 2022 and relatively small in 2023.[6] This year, large increases in insurer participation were seen in only a small number of states, including a few non-expansion states, as insurers continue to focus on areas where more uninsured people live. Although Georgia had a large increase in new plan offerings in 2022, the increase in that state was much smaller in 2023 when Texas had the most new offerings.[7] Importantly, the share of plans offered by large health insurers, including Blues plans, UnitedHealthcare, Cigna, CVS/Aetna, Centene, and Molina, increased in the marketplace while the share of smaller insurers, such as regional and provider-sponsored plans, decreased from 45 percent in 2022 to 40 percent in 2023.[8] Furthermore, the large national insurers have tended to take over where smaller companies, including Bright Health and Oscar Health, have exited markets. It is also notable that the Medicaid managed care companies Centene and Molina have been steadily increasing their footprints on the exchanges.

INSURER CONCENTRATION IN EXCHANGE MARKETS

The 2022 edition of the AMA's *Competition in Health Insurance: A Comprehensive Study of U.S. Markets* notes that there have been large changes over time in exchange market concentration and some volatility in exchange insurers' market shares and rankings. According to the study's analysis, there were large increases in average market concentration in the exchanges between 2015 and 2018, annual decreases thereafter, and a notably large decrease between 2020 and 2021 that was widespread across metropolitan statistical areas (MSAs). The AMA study found that, at the MSA level in 2021, at least one insurer had a market share of 30 percent in 98 percent of exchange markets; in 73 percent of markets, one insurer had a market share of 50 percent; and in 39 percent of markets, an insurer had a market share of 70 percent.[9] Turning to the national level, Anthem had the largest share of the exchange market in 2014 and 2015 but fell to sixth largest in 2021 while Centene, which had a smaller share of the exchange market in earlier years, had the largest market share (15 percent) in 2021.[10]

Concerns over the years regarding insufficient competition in the individual health care marketplace have led some thought leaders, as well as state and federal policy makers, to put forward a range of proposals to ensure marketplace coverage options, including the creation of a public option. Concerns with public option proposals have previously been addressed at length by the Council on Medical Service in Council Report 3-A-18 and Council Report 1-Nov.-20. Policy experts have also suggested leveraging Federal Employees Health Benefits Program (FEHBP) health plan participation as a solution to prevent bare counties in the marketplaces, which is consistent with Policy H-165.825. In addition to discussing a public option and establishing policy that supports requiring the largest two FEHBP insurers in counties that lack a marketplace plan to offer at least one silver-level marketplace plan as a condition of FEHBP participation, Policy H-165.825—established via Council on Medical Service Report 3-A-18—supports health plans offering coverage options for individuals and small groups competing on a level playing field, including providing coverage for pre-existing conditions and essential health benefits. This policy also opposes the sale of health insurance plans in the individual and small group markets that do not guarantee: (a) pre-existing condition protections and (b) coverage of essential health benefits and their associated protections against annual and lifetime limits, and out-of-pocket expenses, except in the limited circumstance of short-term limited-duration insurance offered for no more than three months.

A primary purpose of regulations governing the health insurance marketplace has been to help ensure that insurers are competing and operating on an even playing field in which all insurers and plans must play by the same rules. The AMA advocates that exchanges need to offer choices to patients to spur competition and that mechanisms to facilitate competition in health insurance should ensure that critical patient protections remain in place, including the ban on pre-existing condition exclusions as well as critical cost protections guaranteed in the ACA (e.g., annual cap on out-of-pocket expenses). The AMA strongly believes that an important federal role remains to ensure that proposals to foster competition in health insurance also promote ACA marketplace stability and a balanced risk pool and do not lead to adverse selection in the marketplace.[11]

NETWORK ADEQUACY

AMA policy and advocacy also underscores that a plan's provider network is an important factor in maintaining healthy competition and choice and, as such, the AMA consistently advocates for stronger network adequacy standards for QHPs, including those offered through federally facilitated exchanges. The AMA believes that state regulators should have flexibility to regulate their provider networks but also maintains that there is a critical need for a minimum federal network adequacy standard that includes quantifiable standards, especially in light of inaction in many states to update network adequacy requirements. The AMA has also advocated that CMS implement additional qualitative standards to measure network adequacy and better evaluate access to timely and appropriate care for enrollees in QHP plans.[12]

In response to CMS' proposed rulemaking on benefits and payment parameters under the ACA for 2024, the AMA strongly supported CMS' inclusion of wait time requirements into the measurement of network adequacy. The AMA believes this, and other quantitative standards are critical to determining if a network can serve the needs of its enrollees. Often network physicians may appear to be available but may not be accepting new patients at all or have a lengthy wait time for obtaining an appointment that makes it impossible to see them in a timely manner. Wait time requirements could help address these issues. The AMA also urged CMS to consider additional tools to measure compliance beyond insurer attestation, including audits, secret shopper programs, and patient surveys.[13]

SALE OF HEALTH INSURANCE ACROSS STATE LINES

The issue of permitting the sale of health insurance across state lines has been debated by the House of Delegates several times over the years, with proponents arguing that this would spur competition, choice, and affordability and others maintaining that any such allowances could motivate insurers to incorporate in states with less insurance regulation, putting important patient and provider protections at risk. Under AMA Policy H-180.946, established in 2017, the AMA would support the sale of health insurance across state lines, including multistate compacts, when patient and provider protection laws are consistent with and enforceable under the laws of the state in which the patient resides. These protections include not weakening any state's laws or regulations involving network adequacy and transparency; fair contracting and claims handling; prompt payment for physicians; regulation of unfair health insurance market products and activities; rating and underwriting rules; grievance and appeals procedures; and fraud. The sentiment of AMA policy is that patients purchasing an out-of-state policy should retain the right to bring a claim against an insurer in a state court in the state in which the patient resides.

Because a state's insurance regulator cannot enforce another state's laws or regulate beyond its borders, consumer protections and other regulations must be clearly defined when interstate health insurance sales are permitted. It is unclear whether insurers would even be interested in selling products in new markets across state lines where other carriers are already competing. When interstate health insurance sales were debated at the federal level in 2017, a handful of states had laws allowing such sales; however, out-of-state issuers were not drawn to these markets, primarily due to the costs and other challenges associated with developing provider networks in another state. Some stakeholders, including the American Academy of Actuaries and the National Association of Insurance Commissioners, have cautioned that interstate sales will neither increase competition nor decrease premium pricing but could have unintended consequences related to consumer protections and adverse selection.[14]

ADDITIONAL POLICIES IMPACTING THE MARKETPLACE IN 2023

Extension of Enhanced Premium Tax Credit Subsidies: The Inflation Reduction Act, signed into law in August 2022, extends through 2025 the enhanced premium tax credits that were made available to eligible consumers under the American Rescue Plan Act of 2021. This advanceable and refundable credit, which the AMA supports, reduces the premium contribution for families with incomes between 100 and 150 percent of the federal poverty level (FPL) to zero and provides subsidies to 90 percent of consumers selecting marketplace plans. Partly as a result, enrollment in marketplace plans has reached record highs, surpassing 16 million during the open enrollment period that ran until mid-January 2023 for most exchanges.[15] Additionally, the enhanced subsidies significantly increase affordability of marketplace plans and will improve the stability of the exchange market if healthier people enroll.[16]

Special Enrollment Opportunity (SEP) for Consumers Losing Medicaid/CHIP Coverage: The Consolidated Appropriations Act of 2023 decoupled the Medicaid continuous enrollment requirement from the public health emergency (PHE) end date and permitted state eligibility redeterminations of Medicaid/CHIP enrollees to begin as early as March 2023. Although it is not yet known how many individuals will be disenrolled as states undertake these mass redeterminations, major disruptions in coverage are anticipated and many people could become uninsured. Importantly, CMS established a SEP for consumers losing Medicaid/CHIP coverage due to the unwinding of the continuous enrollment requirement. This SEP, which allows individuals and families to enroll in marketplace plans, if eligible, outside of the annual open enrollment period, runs between March 31, 2023 and July 31, 2024 and presents a significant enrollment

opportunity for the exchanges.[17] The Council addressed the mass redeterminations and strategies for preventing coverage losses in Council Report 03-A-22.

Fixing the "Family Glitch:" The AMA long supported fixing the "family glitch" and was accomplished this year by regulations allowing family members of workers offered affordable self-only coverage to gain access to subsidized ACA marketplace coverage. Under the new rule, it was anticipated that nearly one million Americans would see their coverage become more affordable.[18]

Requiring Standardized Plan Options: To address "choice overload" and increase transparency, in 2023, CMS began requiring issuers offering QHPs on HealthCare.gov to offer standardized benefit plans for every product, metal level, and geographic area. In comment letters to CMS, the AMA has supported this change which will help highlight clear and meaningful differences between plans, simplify consumer choice, and improve the plan selection process.[19]

AMA POLICY

As previously noted, Council on Medical Service Report 3-A-18 established Policy H-165.825, which added to the AMA's strong body of policy on marketplace competition and health plan choice. Policy H-165.839 outlines principles for the operation of health insurance exchanges, including that: health insurance exchanges should maximize health plan choice for individuals and families purchasing coverage; health plans participating in the exchange should provide an array of choices, in terms of benefits covered, cost-sharing levels, and other features; and federal authority or oversight of health insurance exchanges must respect the role of state insurance commissioners with regard to ensuring protections for patients and physicians. Additionally, this policy supports using the open marketplace model for any health insurance exchange to increase competition and maximize patient choice of health plans.

Policy H-165.838 supports health reform initiatives that are consistent with long-standing AMA policies on pluralism, freedom of choice, freedom of practice, and universal access for patients. This policy also states that insurance coverage options offered in a health insurance exchange be self-supporting; have uniform solvency requirements; not receive special advantages from government subsidies; include payment rates established through meaningful negotiations and contracts; not require provider participation; and not restrict enrollees' access to out-of-network physicians. Support for fixing the ACA's "family glitch" is addressed by Policy H-165.828, which also supports efforts to ensure clear and meaningful differences between plans offered on health insurance exchanges.

Principles to guide in the evaluation of the adequacy of health insurance coverage options are outlined in Policy H-165.846, including that: any insurance pool or similar structure designed to enable access to age-appropriate health insurance coverage must include a wide variety of coverage options from which to choose; existing federal guidelines regarding types of health insurance coverage should be used as a reference when considering if a given plan would provide meaningful coverage; and mechanisms must be in place to educate patients and assist them in making informed choices. This policy also opposes waivers of essential health benefits (EHB) requirements that lead to the elimination of EHB categories and their associated protections. Policy H-165.865 states that in order to qualify for a tax credit for the purchase of individual health insurance, the health insurance purchased must provide coverage for hospital care, surgical and medical care, and catastrophic coverage of medical expenses as defined by Title 26 Section 9832 of the U.S. Code.

Network adequacy is addressed in Policy H-285.908, which supports state regulators as the primary enforcer of network adequacy requirements. This policy supports requiring health insurers to

submit and make publicly available, at least quarterly, reports to state regulators that provide data on several measures of network adequacy. Policy H-180.946 supports the selling of insurance across state lines that ensure that certain patient and provider protection laws are consistent with and enforceable under the laws of the state in which the patient resides. Additionally, Policy H-180.946 states that patients purchasing an out-of-state policy should retain the right to bring a claim in a state court in the state in which the patient resides.

Policy H-165.856 supports greater national uniformity of market regulation across health insurance markets, geographic location, or type of health plan. Under this policy, state variation in market regulation is permissible so long as states demonstrate that departures from national regulations would not drive up the number of uninsured, and so long as variations do not hamper the development of multi-state group purchasing alliances or create adverse selection. Under Policy D-165.971, the AMA will support an association health plan that safeguards state and federal patient protection laws, including those state regulations regarding fiscal soundness and prompt payment. Policy D-180.986 encourages local, state, and federal regulatory authorities to aggressively pursue action against "sham" health insurers.

Policy H-180.947 opposes consolidation in the health insurance industry that may result in anticompetitive markets. Antitrust reform is an AMA priority under Policy D-383.990, which directs the AMA to continue to: aggressively advocate for a level playing field for negotiations between physicians and health insurers; advocate to the Federal Trade Commission and Department of Justice for more flexible and fair treatment of physicians and for greater scrutiny for insurers; continue to develop and publish objective evidence of the dominance of health insurers through its study, Competition in Health Insurance; and identify consequences of the concentration of market power by health plans.

DISCUSSION

Insurer participation in the ACA marketplace has increased for five consecutive years, although a smaller increase was seen in 2023. Additionally, record numbers of individuals have signed up for coverage in the exchanges, which seem to be functioning well. Enrollment is likely being influenced this year by 1) the Inflation Reduction Act's extension of enhanced premium tax credit subsidies for marketplace plans, through 2025, and 2) the disenrollment of individuals no longer eligible for Medicaid/CHIP, some of whom may be eligible for subsidized ACA plans. Still, the Council recognizes that insurer participation in the marketplace remains lower today than in 2015, when it was at its highest, and the share of plans offered by large insurers has been steadily growing in recent years. Additionally, many insurer exchange markets remain highly concentrated, as evidenced by data compiled in the AMA's most recent edition of *Competition in Health Insurance: A Comprehensive Study of U.S. Markets*. Importantly, health insurance markets are local; across states, there is significant variation in the number of insurers and plans offered in ACA exchanges and, within states, there may be differences in insurer participation in rural and urban regions. The Council shares the sentiment of many physicians that insufficient competition in the ACA marketplace remains concerning in many areas.

The Council also recognizes that the AMA has been a longstanding advocate for health insurance coverage for all Americans, as well as pluralism, freedom of choice, freedom of practice and universal access for patients. The AMA's plan to cover the uninsured, updated annually with new policy and metrics on the uninsured, lays out key calls for action to not only maintain, but build upon, the coverage gains that have been achieved under the ACA. This plan guides ongoing AMA federal and state advocacy on health reform policy priorities. Importantly, increasing insurer competition, maximizing health plan choice, and strengthening and ensuring the sustainability of

the ACA marketplace remain key AMA priorities. The Council has presented several reports in recent years to establish and update AMA policy on these issues, including:

- Council on Medical Service Report 4-I-17, Health Insurance Affordability: Essential Health Benefits and Subsidizing the Coverage of High-Risk Patients;
- Council on Medical Service Report 3-A-18, Ensuring Marketplace Competition and Health Plan Choice;
- Council on Medical Service Report 2-A-18, Improving Affordability in the Health Insurance Exchanges;
- Council on Medical Service Report 2-A-19, Covering the Uninsured under the AMA Proposal for Reform;
- Council on Medical Service Report 1-Nov.-20, Options to Maximize Coverage under the AMA Proposal for Reform; and
- Council on Medical Service Report 3-Nov.-21, Covering the Remaining Uninsured.

Additionally, the Council highlights the following AMA policies addressing the issues raised in Policy D-165.933 and exemplifying the AMA's strong support for insurer competition and health plan choice:

- Policy H-165.825, which offers solutions to ensuring marketplace competition and health plan choice;
- Policy H-165.839, which supports using the open marketplace model for any health insurance exchange and states that exchanges should maximize health plan choice;
- Policy H-165.838, under which insurance coverage options offered in an exchange should be self-supporting and have uniform solvency and other requirements;
- Policy H-165.846, which outlines principles to guide in the evaluation of health insurance coverage options;
- Policy H-180.946, which supports the selling of insurance across state lines, including multistate compacts, when patient and provider protection laws are consistent with and enforceable under the laws of the state in which the patient resides;
- Policy H-165.856, which supports greater uniformity of market regulation across health insurance markets, geographic location, or type of health plan; and
- Policy H-180.947, which opposes consolidation in the health insurance industry that may result in anticompetitive markets.

CONCLUSION

During the development of this report, the Council did not identify gaps in existing AMA policy on competition and choice and, therefore, makes no policy recommendations at this time. However, the Council believes network adequacy, which is key to maintaining healthy competition and choice in the exchanges, is an issue that remains problematic and is worthy of additional study. Relatedly, the Council is concerned about the ability of patients to see certain physicians who are listed by plans as in-network but for whom, in reality, access is limited. Accordingly, the Council has begun looking at the need for stronger network adequacy standards for ACA, Medicare Advantage, and Medicaid plans and will present a report on this topic at the 2023 Interim Meeting.
