ANNUAL 23

AI22:23-863356:5/23

MEMORANDUM FROM THE SPEAKER OF THE HOUSE OF DELEGATES

- **All Delegates, Alternate Delegates and others receiving this material are reminded that it refers only to items to be considered by the House.**

- **No action has been taken on anything herein contained, and it is informational only.**

- **Only those items that have been acted on finally by the House can be considered official.**

- **REMINDER*: Only the Resolve portions of the resolutions are considered by the House of Delegates. The Whereas portions or preambles are informational and explanatory only.***

AMA
AMERICAN MEDICAL ASSOCIATION

UNDERSTANDING THE RECORDING OF AMERICAN MEDICAL ASSOCIATION POLICY

Current American Medical Association (AMA) policy is catalogued in PolicyFinder, an electronic database that is updated after each AMA House of Delegates (HOD) meeting and available online. Each policy is assigned to a topical or subject category. Those category headings are alphabetical, starting with "abortion" and running to "women"; the former topic was assigned the number 5, and "women" was assigned 525. Within a category, policies are assigned a 3 digit number, descending from 999, meaning that older policies will *generally* have higher numbers within a category (eg, 35.999 was initially adopted before 35.984). A policy number is not affected when it is modified, however, so a higher number may have been altered more recently than a lower number. Numbers are deleted and not reused when policies are rescinded.

AMA policy is further categorized into one of four types, indicated by a prefix:

- "H" – for statements that one would consider positional or philosophical on an issue
- "D" – for statements that direct some specific activity or action. There can be considerable overlap between H and D statements, with the assignment made on the basis of the core nature of the statement.
- "G" – for statements related to AMA governance
- "E" – for ethical opinions, which are the recommendations put forward in reports prepared by the Council on Ethical and Judicial Affairs and adopted by the AMA-HOD

AMA policy can be accessed at ama-assn.org/go/policyfinder.

The actions of the AMA-HOD in developing policy are recorded in the *Proceedings*, which are available online as well. Annotations at the end of each policy statement trace its development, from initial adoption through any changes. If based on a report, the annotation includes the following abbreviations:

BOT – Board of Trustees
CCB – Council on Constitution and Bylaws
CEJA – Council on Ethical and Judicial Affairs
CLRPD – Council on Long Range Planning and Development
CME – Council on Medical Education
CMS – Council on Medical Service
CSAPH – Council on Science and Public Health

If a resolution was involved, "Res" is indicated. The number of the report or resolution and meeting (A for Annual; I for Interim) and year (two digits) are also included (eg, BOT Rep. 1, A-14 or Res. 319, I-12).

AMA policy is recorded in the following categories, and any particular policy is recorded in only a single category.

5.000 Abortion	10.000 Accident Prevention/Unintentional Injuries
15.000 Accident Prevention: Motor Vehicles	20.000 Acquired Immunodeficiency Syndrome
25.000 Aging	30.000 Alcohol and Alcoholism
35.000 Allied Health Professions	40.000 Armed Forces
45.000 Aviation Medicine	50.000 Blood
55.000 Cancer	60.000 Children and Youth
65.000 Civil and Human Rights	70.000 Coding and Nomenclature
75.000 Contraception	80.000 Crime
85.000 Death and Vital Records	90.000 Disabled
95.000 Drug Abuse	100.000 Drugs
105.000 Drugs: Advertising	110.000 Drugs: Cost
115.000 Drugs: Labeling and Packaging	120.000 Drugs: Prescribing and Dispensing
125.000 Drugs: Substitution	130.000 Emergency Medical Services
135.000 Environmental Health	140.000 Ethics
145.000 Firearms: Safety and Regulation	150.000 Foods and Nutrition

155.000 Health Care Costs	160.000 Health Care Delivery
165.000 Health Care/System Reform	170.000 Health Education
175.000 Health Fraud	180.000 Health Insurance
185.000 Health Insurance: Benefits and Coverage	190.000 Health Insurance: Claim Forms and Claims Processing
195.000 Health Maintenance Organizations	200.000 Health Workforce
205.000 Health Planning	210.000 Home Health Services
215.000 Hospitals	220.000 Hospitals: Accreditation Standards
225.000 Hospitals: Medical Staff	230.000 Hospitals: Medical Staff - Credentialing and Privileges
235.000 Hospitals: Medical Staff - Organization	240.000 Hospitals: Reimbursement
245.000 Infant Health	250.000 International Health
255.000 International Medical Graduates	260.000 Laboratories
265.000 Legal Medicine	270.000 Legislation and Regulation
275.000 Licensure and Discipline	280.000 Long-Term Care
285.000 Managed Care	290.000 Medicaid and State Children's Health Insurance Programs
295.000 Medical Education	300.000 Medical Education: Continuing
305.000 Medical Education: Financing and Support	310.000 Medical Education: Graduate
315.000 Medical Records and Patient Privacy	320.000 Medical Review
330.000 Medicare	335.000 Medicare: Carrier Review
340.000 Medicare: PRO	345.000 Mental Health
350.000 Minorities	355.000 National Practitioner Data Bank
360.000 Nurses and Nursing	365.000 Occupational Health
370.000 Organ Donation and Transplantation	373.000 Patients
375.000 Peer Review	380.000 Physician Fees
383.000 Physician Negotiation	385.000 Physician Payment
390.000 Physician Payment: Medicare	400.000 Physician Payment: Medicare - RBRVS
405.000 Physicians	406.000 Physician-Specific Health Care Data
410.000 Practice Parameters	415.000 Preferred Provider Arrangements
420.000 Pregnancy and Childbirth	425.000 Preventive Medicine
430.000 Prisons	435.000 Professional Liability
440.000 Public Health	445.000 Public Relations
450.000 Quality of Care	455.000 Radiation and Radiology
460.000 Research	465.000 Rural Health
470.000 Sports and Physical Fitness	475.000 Surgery
478.000 Technology - Computer	480.000 Technology - Medical
485.000 Television	490.000 Tobacco Use, Prevention and Cessation
495.000 Tobacco Products	500.000 Tobacco: AMA Corporate Policies and Activities
505.000 Tobacco: Federal and International Policies	510.000 Veterans Medical Care
515.000 Violence and Abuse	520.000 War
525.000 Women	600.000 Governance: AMA House of Delegates
605.000 Governance: AMA Board of Trustees and Officers	610.000 Governance: Nominations, Elections, and Appointments
615.000 Governance: AMA Councils, Sections, and Committees	620.000 Governance: Federation of Medicine
625.000 Governance: Strategic Planning	630.000 Governance: AMA Administration and Programs
635.000 Governance: Membership	640.000 Governance: Advocacy and Political Action

LIST OF MATERIAL INCLUDED IN THIS HANDBOOK (A-23)

Resolutions and reports have been collated by referral according to reference committee assignment. In the listing below, referral is indicated by letter in parenthesis following the title of the report. Resolutions have been numbered according to referrals (i.e., those referred to the Reference Committee on Amendments to Constitution and Bylaws begin with 001, Reference Committee B begins with 201, etc.).

The informational reports contain no recommendations and will be filed on Saturday, June 10, unless a request is received for referral and consideration by a Reference Committee (similar to the use of a consent calendar).

1. **Memorandum from the Speaker**

2. **Understanding the Recording of American Medical Association Policy**

3. **Declaration of Professional Responsibility - Medicine's Social Contract with Humanity**

4. **Delegate / Alternate Delegate Job Description, Roles and Responsibilities**

5. **Seating Allocation and Seating Chart for the House of Delegates**

6. **Hotel Maps**

7. **Official Call to the Officers and Members of the AMA**
   - **Officials of the Association and AMA Councils**
   - **Ex Officio Members of the HOD**
   - **SSS Representatives**
   - **Listing of Delegates and Alternate Delegates**

8. **Reference Committee schedule and room assignments**

9. **Note on Order of Business**

10. **Summary of Fiscal Notes**

11. **List of resolutions by sponsor**

FOLLOWING COLLATED BY REFERRAL

12. **Report(s) of the Board of Trustees - Sandra Adamson Fryofer, MD, Chair**
    - 01 Annual Report (F)
    - 02 New Specialty Organizations Representation in the House of Delegates (Amendments to C&B)
    - 03 2022 Grants and Donations (Info. Report)
    - 04 AMA 2024 Dues (F)
    - 05 Update on Corporate Relationships (Info. Report)
    - 06 Redefining AMA's Position on ACA and Healthcare Reform (Info. Report)
    - 07 AMA Performance, Activities, and Status in 2022 (Info. Report)

08 Annual Update on Activities and Progress in Tobacco Control: March 2022 through February 2023 (Info. Report)

09 Council on Legislation Sunset Review of 2013 House Policies (B)

10 American Medical Association Health Equity Annual Report (Info. Report)

11 HPSA and MUA Designation For SNFs (B)

12 Promoting Proper Oversight and Reimbursement for Specialty Physician Extenders and Non-Physician Practitioners (B)

13 Delegate Apportionment and Pending Members (F)

14 Advocacy of Private Practice Options for Healthcare Operations in Large Corporations (G)

15 National Cancer Research Patient Identifier (Amendments to C&B)

16 Informal Inter-Member Mentoring (Info. Report)

17 AMA Public Health Strategy (D)

18 Making AMA Meetings Accessible (F)

19 Medical Community Voting in Federal and State Elections (Info. Report)

20 Surveillance Management System for Organized Medicine Policies and Reports (F)

13. Report(s) of the Council on Constitution and Bylaws - Kevin C. Reilly, Sr., MD, Chair

01 AMA Bylaws and Gender Neutral Language and Miscellaneous Update (Amendments to C&B)

14. Report(s) of the Council on Ethical and Judicial Affairs - Peter A. Schwartz, MD, Chair

01 Utilization Review, Medical Necessity Determination, Prior Authorization Decisions (Amendments to C&B)

02 Ethical Principles for Physicians In Private Equity Owned Practices (Amendments to C&B)

03 Short-term Medical Service Trips (Amendments to C&B)

04 Responsibilities to Promote Equitable Care (Amendments to C&B)

05 CEJA's Sunset Review of 2013 House Policies (Amendments to C&B)

06 Use of De-identified Patient Information D-315.969 (Info. Report)

07 Use of Social Media for Product Promotion and Compensation (Info. Report)

08 Judicial Function of the Council on Ethical and Judicial Affairs – Annual Report (Info. Report)

15. Opinion(s) of the Council on Ethical and Judicial Affairs - Peter A. Schwartz, MD, Chair

01 Amendment to Opinion 4.2.7, "Abortion" (Info. Report)

02 Amendment to Opinion E-10.8, "Collaborative Care" (Info. Report)

03 Pandemic Ethics and the Duty of Care (Info. Report)

16. Report(s) of the Council on Long Range Planning and Development - Edmond B. Cabbabe, MD, Chair

01 Demographic Characteristics of the House of Delegates and AMA Leadership (Info. Report)

02 A Primer on the Medical Supply Chain (Info. Report)

17. Report(s) of the Council on Medical Education - John P. Williams, MD, Chair

01 Council on Medical Education Sunset Review of 2013 House of Delegates' Policies (C)

02 Financing Medical Education (C)

03 Financial Burdens and Exam Fees for International Medical Graduates (C)

04 Decreasing Bias in Assessments of Medical Student Clinical Clerkship Performance (C)

05 Support for Institutional Policies for Personal Days for Undergraduate Medical Students (C)

06 Modifying Financial Assistance Eligibility Criteria for Medical School Applicants (C)

07 Management and Leadership Training in Medical Education (C)

08 Challenges to Primary Source Verification of International Medical Graduates Resulting from International Conflict (C)

09 The Impact of Midlevel Providers on Medical Education (C)

18. Report(s) of the Council on Medical Service - Lynn L. C. Jeffers, MD, Chair

01 Council on Medical Service Sunset Review of 2013 House Policies (G)

02 Medicare Coverage of Dental, Vision, and Hearing Services (A)

03 Private Insurer Payment Integrity (A)

04 Bundled Payments and Medically Necessary Care (A)

05 Prescription Drug Dispensing Policies (G)

06 Health Care Marketplace Plan Selection (Info. Report)

07 Reporting Multiple Services Performed During a Single Patient Encounter (A)

08 Impact of Integration and Consolidation on Patients and Physicians (G)

09 Federally Qualified Health Centers and Rural Health Care (G)

19. Report(s) of the Council on Science and Public Health - Noel N. Deep, MD, Chair

01 Oppose Scheduling of Gabapentin (E)

02 Improving Research Standards, Approval Processes, and Post-Market Surveillance Standards for Medical Devices (E)

03 Regulation and Control of Self-Service Labs (E)

04 School Resource Officer Violence De-Escalation Training and Certification (D)

05 Increasing Public Umbilical Cord Blood Donations in Transplant Centers (D)

06 Study of Best Practices for Acute Care of Patients in the Custody of Law Enforcement or Corrections (D)

07 Support Removal of BMI as a Standard Measure in Medicine and Recognizing Culturally-Diverse and Varied Presentations of Eating Disorders (D)

08 Sunset Review of 2013 HOD Policies (D)

20. Report(s) of the HOD Committee on Compensation of the Officers - Ray C. Hsiao, MD, Chair

01 Report of the HOD Committee on the Compensation of the Officers (F)

21. Joint Report(s)

CCB/CLRPD 01 Joint Council Report: Sunset Review of 2013 House Policies (F)

22. Resolutions

001 Opposing Mandated Reporting of LGBTQ+ Status (Amendments to C&B)

002 Exclusion of Race and Ethnicity in the First Sentence of Case Reports (Amendments to C&B)

003 Laying the First Steps Towards a Transition to a Financial and Citizenship Need Blind Model for Organ Procurement and Transplantation (Amendments to C&B)

004 Amending Policy H-525.988, “Sex and Gender Differences in Medical Research” (Amendments to C&B)

005 Providing Culturally and Religiously Sensitive Attire Options at Hospitals for Patients and Employees (Amendments to C&B)

006 Ensuring Privacy as Large Retail Settings Enter Healthcare (Amendments to C&B)

007 Independent Medical Evaluation (Amendments to C&B)

008* Study on the Criminalization of the Practice of Medicine (Amendments to C&B)

009* Racism - A Threat to Public Health (Amendments to C&B)

010* Advocating for Increased Support to Physicians in Family Planning and Fertility (Amendments to C&B)

011* Rights of the Developing Baby (Amendments to C&B)

012* Viability of the Newborn (Amendments to C&B)

013* Serial (Repeated) Sperm Donors (Amendments to C&B)

014* Redressing the Harms of Misusing Race in Medicine (Amendments to C&B)

015* Report Regarding the Criminalization of Providing Medical Care (Amendments to C&B)

101 Updating Physician Job Description for Disability Insurance (A)

102 Reforming the Medicare Part B "Buy and Bill" Process to Encourage Biosimilar Use (A)

103 Movement Away from Employer-Sponsored Health Insurance (A)

104 Support for Medicare Expansion to Wheelchair Accessibility Home Modifications as Durable Medical Equipment (A)

105 Studying Population-Based Payment Policy Disparities (A)

106 Billing for Traditional Healing Services (A)

107 Reducing the Cost of Centers for Medicare and Medicaid Services Limited Data Sets for Academic Use (A)

108 Sustainable Reimbursement for Community Practices (A)

109 Improved Access to Care For Patients in Custody of Protective Services (A)

110 Long-Term Care Coverage for Dementia Patients (A)

111* Potential Negative Consequences of ACOs (A)

112* Removal of Barriers to Care for Lung Cancer Screening in Medicaid Programs (A)

113* Cost of Insulin (A)

114* Physician and Trainee Literacy of Healthcare Costs (A)

115* Advocating for All Payer Coverage of Wigs for Patients Undergoing Treatment for Cancer (A)

116* Medicare Coverage of OTC Nicotine Replacement Therapy (A)

201 Pharmacists Prescribing for Urinary Tract Infections (B)

202 Support for Mental Health Courts (B)

203 Drug Policy Reform (B)

204 Supporting Harm Reduction (B)

205 Amending H-160.903, Eradicating Homelessness, to Reduce Evictions and Prevent Homelessness (B)

206 Tribal Public Health Authority (B)

207 Ground Ambulance Services and Surprise Billing (B)

208 Medicaid Managed Care for Indian Health Care Providers (B)

209 Purchased and Referred Care Expansion (B)

210 The Health Care Related Effects of Recent Changes to the US Mexico Border (B)

211 Amending Policy H-80.999, "Sexual Assault Survivors", to Improve Knowledge and Access to No-cost Rape Test Kits (B)

212 Marijuana Product Safety (B)

213 Telemedicine Services and Health Equity (B)

214 Advocacy and Action for a Sustainable Medical Care System (B)

215 Supporting Legislative and Regulatory Efforts Against Fertility Fraud (B)

216 Improved Foster Care Services for Children (B)

217 Increase Access to Naloxone in Schools Including by Allowing Students to Carry Naloxone in Schools (B)

218 Hold Accountable the Regulatory Bodies, Hospital Systems, Staffing Organizations, Medical Staff Groups, and Individual Physicians Supporting Systems of Care Promoting Direct Supervision of Emergency Departments by Nurse Practitioners (B)

219 Repealing the Ban on Physician-Owned Hospitals (B)

220 Coverage of Routine Costs in Clinical Trials by Medicare Advantage Organizations (B)

221 Fentanyl Test Strips as a Harm Reduction and Overdose-Prevention Tool (B)
222 Physician Ownership of Hospitals Blocked by the Affordable Care Act (ACA) (B)
223 Protecting Access to Gender Affirming Care (B)
224 Advocacy Against Obesity-Related Bias by Insurance Providers (B)
225* Regulation of "Cool/Non-Menthol" Tobacco Products (B)
226* Vision Qualifications for Driver's License (B)
227* Reimbursement for Postpartum Depression Prevention (B)
228* Reducing Stigma for Treatment of Substance Use Disorder (B)
229* Firearm Regulation for Persons Charged with or Convicted of a Violent Offense (B)
230* Address Disproportionate Sentencing for Drug Offenses (B)
231* Equitable Interpreter Services and Fair Reimbursement (B)
232* Supervised Injection Facilities (SIFs) Allowed by Federal Law (B)
233* Dobbs - EMTALA Medical Emergency (B)
234* Medicare Physician Fee Schedule Updates and Grassroots Campaign (B)
235* EMS as an Essential Service (B)
236* AMA Support for Nutrition Research (B)
237* Prohibiting Covenants Not-To-Compete in Physician Contracts (B)
238* Eliminate Mandatory Medicare Budget Cuts (B)
239* Creating an AMA Taskforce Dedicated to the Alignment of Specialty Designations for Advanced Practice Providers with their Supervising Physicians (B)
240* Attorneys' Retention of Confidential Medical Records and Controlled Medical Expert's Tax Returns After Case Adjudication (B)
241* Allow Viewing Access to Prescription Drug Monitoring Programs Through EHR for Clinical Medical Students and Residents (B)
242* Peer to Peer Reviewer Must be of Same Specialty as Physician Requesting Procedure (B)
243* Replacing the Frye Standard for the Daubert Standard in Expert Witness Testimony (B)
244* Recidivism (B)
245* Biosimilar/Interchangeable Terminology (B)
246* Modification of CMS Interpretation of Stark Law (B)
247* Assessing the Potentially Dangerous Intersection Between AI and Misinformation (B)
248* Supervised Consumption Sites (B)
249* Restrictions on Social Media Promotion of Drugs (B)
250* Medicare Budget Neutrality (B)
251* Federal Government Oversight of Augmented Intelligence (B)
252* Strengthening Patient Privacy (B)
253* Appropriate Compensation for Non-Visit Care (Remote or Care of Coordination) (B)
254* Eliminating the Party Statement Exception in Quality Assurance Proceedings (B)
255* Correctional Medicine (B)
256* Regulating Misleading AI Generated Advice to Patients (B)
301 Increasing Musculoskeletal Education in Primary Care Specialties and Medical School Education through Inclusion of Osteopathic Manual Therapy Education (C)
302 Antitrust Legislation Regarding the AAMC, ACGME, NRMP, and other Relevant Associations or Organizations (C)
303 Medical School Management of Unmatched Medical Students (C)

304 Increasing Access to Gender-Affirming Procedures Through Expanded Training and Equitable Reimbursement (C)

305 Indian Health Service Graduate Medical Education (C)

306 Increased Education and Access to Fertility Resources for U.S. Medical Students (C)

307 Amending Access to Confidential Health Services for Medical Students and Physicians H-295.858 to Include Annual Opt-Out Mental Health Screening for Suicide Prevention for Residents (C)

308 Increased Inclusivity and Admission Policies Clarification for DACA Medical School and Residency Applicants (C)

309 Against Legacy Preferences as a Factor in Medical School Admissions (C)

310 Teaching and Assessing Osteopathic Manipulative Treatment and Osteopathic Principles and Practice to Resident Physicians in the Context of ACGME Single System of Accreditation (C)

311 Residency Application Support for Students of Low-Income Backgrounds (C)

312 Indian Health Service Licensing Exemptions (C)

313 Filtering International Medical Graduates During Residency or Fellowship Applications (C)

314 Support for International Medical Graduates from Turkey (C)

315* Prohibit Discriminatory ERAS® Filters In NRMP Match (C)

316* Physician Medical Conditions and Questions on Applications for Medical Licensure, Specialty Boards, and Institutional Privileges (C)

317* Supporting Childcare for Medical Residents (C)

318* Fostering Pathways for Resident Physicians to Pursue MBA Programs in Order to Increase the Number of Qualified Physicians for Healthcare Leadership Positions (C)

319* Supporting Diversity, Equity, & Inclusion Offices and Initiatives at United States Medical Schools to Enhance Longitudinal Community Engagement (C)

320* Banning Affirmative Action is a Critical Threat to Health Equity and to the Medical Profession (C)

321* Corporate Compliance Consolidation (C)

322* Disclosure of Compliance issues and Creating a National Database of Joint Leadership (C)

401 Metered Dose Inhalers and Greenhouse Gas Emissions (D)

402 Encouraging Discussion of Family Planning Counseling as Part of Recommended Routine Health Maintenance (D)

403 Denouncing the Use of Solitary Confinement in Correctional Facilities and Detention Centers (D)

404 Additional Interventions to Prevent Human Papillomavirus (HPV) infection and HPV-Associated Cancers (D)

405 Amendment to AMA Policy "Firearms and High-Risk Individuals H-145.972" to Include Medical Professionals as a Party Who Can Petition the Court (D)

406 Increase Employment Services Funding for People with Disabilities (D)

407 Addressing Inequity in Onsite Wastewater Treatment (D)

408 School-to-Prison Pipeline (D)

409 Expanding Inclusion of Diverse Mannequins Used in CPR and AED Training (D)

410 Formal Transitional Care Program for Children and Youth with Special Health Care Needs (D)

411 Protecting Workers During Catastrophes (D)

412 Waste Receptacles in All Restroom Stalls for Menstrual Product Disposal (D)

413 Supporting Intimate Partner and Sexual Violence Safe Leave (D)

414 Increased Access to HIV Treatment and Supportive Services in the Unstably Housed and Homeless Population (D)

415 Environmental Health Equity in Federally Subsidized Housing (D)

416 New Policies to Respond to the Gun Violence Public Health Crisis (D)

417 Treating Social Isolation and Loneliness as a Social Driver of Health (D)
418 Increasing the Availability of Automated External Defibrillators (D)
419 Increased Suicide Risk for Children, Youths, and Young Adults in the Welfare System (D)
420 Foster Health Care (D)
421 Prescribing Guided Physical Activity for Depression and Anxiety (D)
422 National Emergency for Children (D)
423 Reducing Sodium Intake to Improve Public Health (D)
424 Job Security Related to Leave for Caregiver When a Child in Foster Care is Placed in Their Home (D)
425* Examining Policing Through a Public Health Lens (D)
426* Accurate Abortion Reporting with Demographics by the Center for Disease Control (D)
427* Minimizing the Influence of Social Media on Gun Violence (D)
428* Mattress Safety in the Hospital Setting (D)
429* Promoting the Highest Quality of Healthcare and Oversight for Those Involved in the Criminal Justice System (D)
430* Teens and Social Media (D)
431* Qualified Immunity Reform (D)
501 AMA Study of Chemical Castration in Incarceration (E)
502 Pain Management for Long-Acting Reversible Contraception and other Gynecological Procedures (E)
503 Increasing Diversity in Stem Cell Biobanks and Disease Models (E)
504 Moved to Reference Committee B - Now Resolution 256 (E)
505 Improving Access to Opioid Antagonists for Vulnerable and Underserved Populations (E)
506 Moved to Reference Committee F - Now Resolution 609 (E)
507 Recognizing the Burden of Rare Disease (E)
508 Development and Implementation of Recommendations for Responsible Media Coverage of Opioid Overdoses (E)
509 Addressing Medical Misinformation Online (E)
510 Comparative Effectiveness Research (E)
511 Regulation of Phthalates in Adult Personal Sexual Products (E)
512 Wheelchairs on Airplanes (E)
513 Substance Use History is Medical History (E)
514 Adolescent Hallucinogen-Assisted Therapy Policy (E)
515 Regulate Kratom and Ban Over-The-Counter Sales (E)
516 Fasting is Not Required for Lipid Analysis (E)
517* Genetic Predisposition and Healthcare Disparities, Including Cardiovascular Disease in South Asians Residing in the United States (E)
518* Defending NIH funding of Animal Model Research From Legal Challenges (E)
519* Rescheduling or Descheduling Testosterone (E)
520* Supporting Access to At-Home Injectable Contraceptives (E)
521* Preventing the Elimination of Cannabis from Occupational and Municipal Drug Testing Programs (E)
522* Approval Authority of the FDA (E)
523* Reducing Youth Abuse of Dextromethorphan (E)
524* Ensuring Access to Reproductive Health Services Medications (E)
601 Solicitation using the AMA Brand (F)

602 Supporting the Use of Gender-Neutral Language (F)
603 Environmental Sustainability of AMA National Meetings (F)
604 Speakers Task Force to Review and Modernize the Resolution Process (F)
605 Equity and Justice Initiatives for International Medical Graduates (F)
606* AMA Reimbursement of Necessary HOD Business Meeting Expenses for Delegates and Alternate Delegates (F)
607* Enabling Sections of the American Medical Association (F)
608* Supporting Carbon Offset Programs for Travel for AMA Conferences (F)
609* Encouraging Collaboration Between Physicians and Industry in AI (Augmented Intelligence) Development (F)
701 Reconsideration of the Birthday Rule (G)
702 Providing Reduced Parking for Patients (G)
703 Tribal Health Program Electronic Health Record Modernization (G)
704 Interrupted Patient Sleep (G)
705 Aging and Dementia Friendly Health Systems (G)
706 Revision of H-185.921, Removal of AMA Support for Applied Behavior Analysis (G)
707 Expediting Repairs for Power and Manual Wheelchairs (G)
708 UnitedHealthcare Comprehensive Prior Authorization for Gastrointestinal Endoscopy Procedures (G)
709 Hospital Bans on Trial of Labor After Cesarean (G)
710* Protect Patients with Medical Debt Burden (G)
711* Doctors' Risk for Termination of Liability Coverage or Medical Privileges Consequent to Dobbs (G)
712* Medical Bankruptcy – A Unique Feature in the USA (G)
713* Redesigning the Medicare Hospice Benefit (G)
714* Improving Hospice Program Integrity (G)
715* Published Metrics for Hospitals and Hospital Systems (G)
716* Transparency and Accountability of Hospitals and Hospital Systems (G)
717* Improving Patient Access to Supplemental Oxygen Therapies (G)
718* Insurance Coverage of FDA Approved Medications and Devices (G)
719* Care Partner Access to Medical Records (G)
720* Prior Authorization Costs, AMA Update to CMS (G)
721* Use of Artificial Intelligence for Prior Authorization (G)
722* Expanding Protections of End-Of-Life Care (G)

Contained in the Handbook Addendum

DECLARATION OF PROFESSIONAL RESPONSIBILITY: MEDICINE'S SOCIAL CONTRACT WITH HUMANITY

Preamble

Never in the history of human civilization has the well-being of each individual been so inextricably linked to that of every other. Plagues and pandemics respect no national borders in a world of global commerce and travel. Wars and acts of terrorism enlist innocents as combatants and mark civilians as targets. Advances in medical science and genetics, while promising great good, may also be harnessed as agents of evil. The unprecedented scope and immediacy of these universal challenges demand concerted action and response by all.

As physicians, we are bound in our response by a common heritage of caring for the sick and the suffering. Through the centuries, individual physicians have fulfilled this obligation by applying their skills and knowledge competently, selflessly and at times heroically. Today, our profession must reaffirm its historical commitment to combat natural and man-made assaults on the health and well-being of humankind. Only by acting together across geographic and ideological divides can we overcome such powerful threats. Humanity is our patient.

Declaration

We, the members of the world community of physicians, solemnly commit ourselves to:

1. Respect human life and the dignity of every individual.

2. Refrain from supporting or committing crimes against humanity and condemn all such acts.

3. Treat the sick and injured with competence and compassion and without prejudice.

4. Apply our knowledge and skills when needed, though doing so may put us at risk.

5. Protect the privacy and confidentiality of those for whom we care and breach that confidence only when keeping it would seriously threaten their health and safety or that of others.

6. Work freely with colleagues to discover, develop, and promote advances in medicine and public health that ameliorate suffering and contribute to human well-being.

7. Educate the public and polity about present and future threats to the health of humanity.

8. Advocate for social, economic, educational, and political changes that ameliorate suffering and contribute to human well-being.

9. Teach and mentor those who follow us for they are the future of our caring profession.

We make these promises solemnly, freely, and upon our personal and professional honor.

Adopted by the House of Delegates of the American Medical Association
in San Francisco, California on December 4, 2001

Delegate/Alternate Delegate Job Description, Roles and Responsibilities

At the 1999 Interim Meeting, the House of Delegates adopted as amended Recommendation 16 of the final report of the Special Advisory Committee to the Speaker of the House of Delegates. This recommendation included a job description and roles and responsibilities for delegates and alternate delegates. The description and roles and responsibilities were modified at the 2002 Annual Meeting by Recommendation 3 of the Joint Report of the Board of Trustees and Council on Long Range Planning and Development. The modified job description, qualifications, and responsibilities are listed below.

Delegates and Alternate Delegates should meet the following job description and roles and responsibilities:

Job Description and Roles and Responsibilities of AMA Delegates/Alternate Delegates

Members of the AMA House of Delegates serve as an important communications, policy, and membership link between the AMA and grassroots physicians. The delegate/alternate delegate is a key source of information on activities, programs, and policies of the AMA. The delegate/alternate delegate is also a direct contact for the individual member to communicate with and contribute to the formulation of AMA policy positions, the identification of situations that might be addressed through policy implementation efforts, and the implementation of AMA policies. Delegates and alternate delegates to the AMA are expected to foster a positive and useful two-way relationship between grassroots physicians and the AMA leadership. To fulfill these roles, AMA delegates and alternate delegates are expected to make themselves readily accessible to individual members by providing the AMA with their addresses, telephone numbers, and e-mail addresses so that the AMA can make the information accessible to individual members through the AMA web site and through other communication mechanisms. The qualifications and responsibilities of this role are as follows:

A. Qualifications
- AMA member.
- Elected or selected by the principal governing body or the membership of the sponsoring organization.
- The AMA encourages that at least one member of each delegation be involved in the governance of their sponsoring organization.

B. Responsibilities
- Regularly communicate AMA policy, information, activities, and programs to constituents so he/she will be recognized as the representative of the AMA.
- Relate constituent views and suggestions, particularly those related to implementation of AMA policy positions, to the appropriate AMA leadership, governing body, or executive staff.
- Advocate constituent views within the House of Delegates or other governance unit, including the executive staff.
- Attend and report highlights of House of Delegates meetings to constituents, for example, at hospital medical staff, county, state, and specialty society meetings.
- Serve as an advocate for patients to improve the health of the public and the health care system.
- Cultivate promising leaders for all levels of organized medicine and help them gain leadership positions.
- Actively recruit new AMA members and help retain current members.
- Participate in the AMA Membership Outreach Program.

SEATING ALLOCATION – 2023 ANNUAL MEETING

ADDICTION MEDICINE – 3
American Society of Addiction Medicine (ASAM) – 3
Trustee (Levin) – 1
Delegates - 2

MEMBERS OF THE HOUSE OF DELEGATES SPECIAL MEETING - JUNE 2023
The following is a list of delegates and alternate delegates to the House of Delegates as reported to the Executive Vice President

Medical Association of the State of Alabama

Delegate(s)

B Jerry Harrison, Haleyville AL

John Meigs Jr, Brent AL

William Schneider, Huntsville AL

George C. Smith, Lineville AL

Alternate Delegate(s)

Alexis Mason, Tuscaloosa AL

Jane Weida, Tuscaloosa AL

Tom Weida, Tuscaloosa AL

Regional Medical Student Delegate(s)

Amber Shirley, New Tazewell TN

Regional Medical Student Alternate Delegate(s)

Joshua Collingwood, Dothan AL

Alaska State Medical Association

Delegate(s)

Alex Malter, Juneau AK

Alternate Delegate(s)

Rhene Merkouris, Anchorage AK

Arizona Medical Association

Delegate(s)

Veronica K. Dowling, Lakeside AZ

Gary R. Figge, Tucson AZ

Michael Hamant, Tucson AZ

M Zuhdi Jasser, Phoenix AZ

Marc Leib, Phoenix AZ

Alternate Delegate(s)

Adam Brodsky, Phoenix AZ

Timothy Fagan, Tucson AZ

Jennifer Hartmark-Hill, Phoenix AZ

Arizona Medical Association

Alternate Delegate(s)

Jacquelyn Hoffman, Tucson AZ

Arkansas Medical Society

Delegate(s)

Amy Cahill, White Hall AR

Eugene Shelby, Little Rock AR

Alan Wilson, Monticello AR

Alternate Delegate(s)

Stephen Magie, Conway AR

Danny Wilkerson, Little Rock AR

California Medical Association

Delegate(s)

Jerry P Abraham, Los Angeles CA

Barbara J. Arnold, Sacramento CA

Patricia L. Austin, Alamo CA

Dirk Stephen Baumann, Burlingame CA

David Bazzo, San Diego CA

Jeffrey Brackett, Ventura CA

Peter N. Bretan, Novato CA

J Brennan Cassidy, Newport Beach CA

Lawrence Cheung, San Francisco CA

Maisha Draves, Fairfield CA

Kyle P. Edmonds, San Diego CA

Rachel Ekaireb, Sacramento CA

George Fouras, Los Angeles CA

Dev A. GnanaDev, Upland CA

Robert Hertzka, Rancho Santa Fe CA

Samuel Huang, Los Angeles CA

Kermit Jones, Vacaville CA

California Medical Association

Delegate(s)

Jessica Kim, San Jose CA

Jeff Klingman, Orinda CA

Edward Lee, Sacramento CA

Man Kit Leung, San Francisco CA

Arthur N. Lurvey, Los Angeles CA

Michael Luszczak, Carmichael CA

Ramin Manshadi, Stockton CA

Theodore Mazer, Poway CA

Kelly McCue, Davis CA

Mihir Parikh, La Jolla CA

Stephen Parodi, Oakland CA

Albert Ray, San Diego CA

Ryan J. Ribeira, Mountain View CA

Tatiana W. Spirtos, Redwood City CA

Holly Yang, San Diego CA

Paul Yost, Seal Beach CA

Alternate Delegate(s)

Alan Anzai, Sacramento CA

Jacob Burns, Sacramento CA

Jack Chou, Baldwin Park CA

James Cotter, Napa CA

Suparna Dutta, Oakland CA

Sergio Flores, San Diego CA

David Friscia, San Diego CA

Anjalee Galion, Santa Ana CA

Raminder Gill, Sacramento CA

Brian Grady, San Francisco CA

Catherine Gutfreund, Santa Rosa CA

Jennifer Hone, Santa Barbara CA

Scott Richard Karlan, West Hollywood CA

California Medical Association

Alternate Delegate(s)

Nikan Khatibi, Laguna Niguel CA

Mark H. Kogan, San Pablo CA

Sudeep Kukreja, Orange CA

Stacey Ludwig, Los Angeles CA

Debbie Lupeika, Redding CA

Chang Na, Bakersfield CA

Kimberly Newell, San Francisco CA

Bing Pao, Rcho Santa Fe CA

Sion Roy, Torrance CA

Lorin Scher, Sacramento CA

Ellen Shank, Sacramento CA

Seema Sidhu, Fremont CA

James J. Strebig, Irvine CA

Raymond Tsai, Lost Hills CA

William Tseng, San Diego CA

Shannon Udovic-Constant, San Francisco CA

Valencia Walker, Los Angeles CA

Patricia Wang, Antioch CA

Barbara Weissman, Pacifica CA

Frank Zhou, Los Angeles CA

Resident and Fellow Sectional Delegate(s)

Jacob Hoerter, Oakland CA

Pauline Huynh, Oakland CA

Regional Medical Student Delegate(s)

Rana Andary, Irvine CA

Sarah M. Smith, Irvine CA

Regional Medical Student Alternate Delegate(s)

Jade Cook, Los Angeles CA

Elisabeth McCallum, Irvine CA

Dhruv Puri, Pleasanton CA

Current as of: 5/11/2023

California Medical Association

Regional Medical Student Alternate Delegate(s)

Jacob Schlossman, Irvine CA

Colorado Medical Society

Delegate(s)

David Downs, Denver CO

Jan Kief, Merritt Island FL

A. "Lee" Morgan, Denver CO

Tamaan Osbourne-Roberts, Denver CO

Lynn Parry, Littleton CO

Alternate Delegate(s)

Carolynn Francavilla, Lakewood CO

Rachelle M. Klammer, Denver CO

Katie Lozano, Centennial CO

Patrick Pevoto, Fruita CO

Brigitta J. Robinson, Centennial CO

Michael Volz, Englewood CO

Connecticut State Medical Society

Delegate(s)

Katherine L. Harvey, Canton CT

Kathleen A. LaVorgna, Norwalk CT

Bollepalli Subbarao, Middletown CT

Steven C. Thornquist, Bethany CT

Alternate Delegate(s)

M. Natalie Achong, Unionville CT

Raymond Lorenzoni, Woodbridge CT

Stacy Taylor, New Hartford CT

Michael Virata, Woodbridge CT

Resident and Fellow Sectional Delegate(s)

Daniel Kerekes, New Hyde Park NY

Regional Medical Student Delegate(s)

Krishna Channa, Farmington CT

Connecticut State Medical Society

Regional Medical Student Delegate(s)

Julia Silverman, Farmington CT

Regional Medical Student Alternate Delegate(s)

Catriona Hong, Glastonbury CT

Vedika Karandikar, Farmington CT

Lizzie Suschana, Farmington CT

Medical Society of Delaware

Delegate(s)

Janice Tildon-Burton, Newark DE

Alternate Delegate(s)

Matthew Burday, Wilmington DE

Medical Society of the District of Columbia

Delegate(s)

Neal D Barnard, Washington DC

Peter E. Lavine, Washington DC

Jason Goldman, Coral Springs FL

Florida Medical Association

Delegate(s)

Corey L. Howard, Naples FL

Rebecca Lynn Johnson, Tampa FL

Tra'Chella Johnson Foy, Jacksonville FL

Joshua Lenchus, Davie FL

John Montgomery, Fleming Island FL

Douglas Murphy, Ocala FL

Ralph Jacinto Nobo, Bartow FL

Arthur E. Palamara, Hollywood FL

Michael L. Patete, Venice FL

Alan B. Pillersdorf, Lake Worth FL

Alternate Delegate(s)

Shawn Baca, Boca Raton FL

Courtney Bovee, Tampa FL

Andrew Cooke, Mount Dora FL

Michael Cromer, Tampa FL

Aaron Elkin, Hollywood FL

Vania Fernandez, Miami FL

Shelley C. Glover, Clermont FL

Raphael C. Haciski, Naples FL

Ryan Hall, Lake Mary FL

Lawrence S. Halperin, Altamonte Spg FL

Karen Harris, Gainesville FL

Kacey Montgomery, Gulf Breeze FL

Sergio B. Seoane, Lakeland FL

Michael Andrew Zimmer, St Petersburg FL

Regional Medical Student Delegate(s)

Neva Lundy, Miami FL

Regional Medical Student Alternate Delegate(s)

Alex Tolbert, Tallahassee FL

Medical Association of Georgia

Delegate(s)

John S. Antalis, Dalton GA

S William Clark III, Waycross GA

Michael E. Greene, Savannah GA

Billie Luke Jackson, Macon GA

Ali R Rahimi, Atlanta GA

Sandra B. Reed, Atlanta GA

Alternate Delegate(s)

Keisha Callins, Macon GA

Shamie Das, Atlanta GA

Zachary Lopater, Macon GA

Chris McAdams, Atlanta GA

Fonda A. Mitchell, Atlanta GA

Charles Wilmer, Atlanta GA

Regional Medical Student Alternate Delegate(s)

Aditi Dave, Macon GA

Hawaii Medical Association

Delegate(s)

Bernard Robinson, Aiea HI

Jerry Van Meter, Honolulu HI

Alternate Delegate(s)

Angela Pratt, Honolulu HI

Resident and Fellow Sectional Alternate Delegate(s)

Aaron J Wolbrueck, Honlulu HI

Idaho Medical Association

Delegate(s)

A. Patrice Burgess, Boise ID

Alternate Delegate(s)

Keith Davis, Shoshone ID

Current as of: 5/11/2023

Illinois State Medical Society

Delegate(s)

Rodney Alford, Watseka IL

Thomas M. Anderson, Chicago IL

Howard Axe, Grayslake IL

Christine Bishof, Elmhurst IL

Howard Chodash, Springfield IL

506 Moved to Reference Committee F - Now Resolution 609: Approximately $47,000 for identifying, recruiting, promoting, and facilitating industry-physician relationships through the Physician Innovation Network regarding AI.
507 Recognizing the Burden of Rare Disease: Minimal
508 Development and Implementation of Recommendations for Responsible Media Coverage of Opioid Overdoses: Minimal
509 Addressing Medical Misinformation Online: Minimal

SUMMARY OF FISCAL NOTES (A-23)

Resolution(s)

510 Comparative Effectiveness Research: Modest

511 Regulation of Phthalates in Adult Personal Sexual Products: Minimal

512 Wheelchairs on Airplanes: Minimal

513 Substance Use History is Medical History: Minimal

514 Adolescent Hallucinogen-Assisted Therapy Policy: Modest

515 Regulate Kratom and Ban Over-The-Counter Sales: Minimal

516 Fasting is Not Required for Lipid Analysis: Approximately $50k for the development of CME-accredited interactive e-learning including staff costs and external vendor contracting

517* Genetic Predisposition and Healthcare Disparities, Including Cardiovascular Disease in South Asians Residing in the United States: Modest

518* Defending NIH funding of Animal Model Research From Legal Challenges: Modest

519* Rescheduling or Descheduling Testosterone: Minimal

520* Supporting Access to At-Home Injectable Contraceptives: Minimal

521* Preventing the Elimination of Cannabis from Occupational and Municipal Drug Testing Programs: Minimal

522* Approval Authority of the FDA: Modest

523* Reducing Youth Abuse of Dextromethorphan: Modest

524* Ensuring Access to Reproductive Health Services Medications: Modest

601 Solicitation using the AMA Brand: Minimal

602 Supporting the Use of Gender-Neutral Language: Up to $23K to review all current AMA policies and compile a report with recommendations for HOD consideration

603 Environmental Sustainability of AMA National Meetings: Implementation of this initiative will be a multi-million dollar undertaking due to the need for consultants to develop a plan, project management to implement measures, potential reduction of in-person meetings and travel, and the ongoing purchase of carbon credits to offset areas where AMA may not be able to reduce emissions, including, among others, utilities in rented AMA office space. Measuring and reporting on compliance will contribute to significant annual costs thereafter. It is currently impossible to provide more precise cost information given the myriad factors involved.

604 Speakers Task Force to Review and Modernize the Resolution Process: Modest

605 Equity and Justice Initiatives for International Medical Graduates: Approximately $44K for a one-time update of the health equity strategic plan, plus ~$24k annually to produce the requested forum

606* AMA Reimbursement of Necessary HOD Business Meeting Expenses for Delegates and Alternate Delegates: This policy would result in AMA being responsible for approximately $8.1 million annually based on current AMA travel policy, estimated average costs for airfare and travel, and current number of delegates and alternate delegates

607* Enabling Sections of the American Medical Association: Space permitting within currently contracted venues, the incremental daily cost of expanding an AMA Section meeting beyond one day is ~$10-$12K per meeting, per section

608* Supporting Carbon Offset Programs for Travel for AMA Conferences: Implementation of this initiative will be a multi-million dollar undertaking due to the need for consultants to develop a plan, project management to implement measures, potential reduction of in-person meetings and travel, and the ongoing purchase of carbon credits to offset AMA emissions, including, among others, making mitigation efforts accessible to attendees. Measuring and reporting on compliance will contribute to significant annual costs thereafter. It is currently impossible to provide more precise cost information given the myriad factors involved.

609* Encouraging Collaboration Between Physicians and Industry in AI (Augmented Intelligence) Development: Approximately $47,000 for identifying, recruiting, promoting, and facilitating industry-physician relationships through the Physician Innovation Network regarding AI.

610* NIH Public Access Plan: Minimal

701 Reconsideration of the Birthday Rule: Minimal

702 Providing Reduced Parking for Patients: Minimal

703 Tribal Health Program Electronic Health Record Modernization: Minimal

704 Interrupted Patient Sleep: Minimal

705 Aging and Dementia Friendly Health Systems: Modest

706 Revision of H-185.921, Removal of AMA Support for Applied Behavior Analysis: Not yet determined

707 Expediting Repairs for Power and Manual Wheelchairs: Modest

708 UnitedHealthcare Comprehensive Prior Authorization for Gastrointestinal Endoscopy Procedures: Modest

SUMMARY OF FISCAL NOTES (A-23)

Resolution(s)

709 Hospital Bans on Trial of Labor After Cesarean: Not yet determined
710* Protect Patients with Medical Debt Burden: Modest
711* Doctors' Risk for Termination of Liability Coverage or Medical Privileges Consequent to Dobbs: Modest
712* Medical Bankruptcy – A Unique Feature in the USA: Modest
713* Redesigning the Medicare Hospice Benefit: Modest
714* Improving Hospice Program Integrity: Modest
715* Published Metrics for Hospitals and Hospital Systems: Minimal
716* Transparency and Accountability of Hospitals and Hospital Systems: Minimal
717* Improving Patient Access to Supplemental Oxygen Therapies: Modest
718* Insurance Coverage of FDA Approved Medications and Devices: Modest
719* Care Partner Access to Medical Records: Modest
720* Prior Authorization Costs, AMA Update to CMS: Modest
721* Use of Artificial Intelligence for Prior Authorization: Modest
722* Expanding Protections of End-Of-Life Care: Modest

Minimal - less than $1,000
Modest - between $1,000 - $5,000
Moderate - between $5,000 - $10,000

REPORT OF THE BOARD OF TRUSTEES

B of T Report 02-A-23

Subject: New Specialty Organizations Representation in the House of Delegates

Presented by: Sandra Adamson Fryhofer, MD, Chair

Referred to: Reference Committee on Amendments to Constitution and Bylaws

---

The Board of Trustees (BOT) and the Specialty and Service Society (SSS) considered the applications of the American Academy of Addiction Psychiatry, American Society for Aesthetic Plastic Surgery, and the Society for Cardiovascular Magnetic Resonance for national medical specialty organization representation in the American Medical Association (AMA) House of Delegates (HOD). The applications were first reviewed by the AMA SSS Rules Committee and presented to the SSS Assembly for consideration.

The applications were considered using criteria developed by the Council on Long Range Planning and Development and adopted by the HOD (Policy G-600.020). (Exhibit A)

Organizations seeking admission were asked to provide appropriate membership information to the AMA. That information was analyzed to determine AMA membership, as required under criterion three. A summary of this information is attached to this report as Exhibit B.

In addition, organizations must submit a letter of application in a designated format. This format lists the above-mentioned guidelines followed by each organization's explanation of how it meets each of the criteria.

Before a society is eligible for admission to the HOD, it must participate in the SSS for three years. These organizations have actively participated in the SSS for more than three years.

Review of the materials and discussion during the SSS meeting at the November 2022 Interim Meeting indicated that the American Academy of Addiction Psychiatry, American Society for Aesthetic Plastic Surgery, and the Society for Cardiovascular Magnetic Resonance meet the criteria for representation in the HOD.

RECOMMENDATION

Therefore, the Board of Trustees recommend that the American Academy of Addiction Psychiatry, American Society for Aesthetic Plastic Surgery, and the Society for Cardiovascular Magnetic Resonance be granted representation in the AMA House of Delegates and that the remainder of the report be filed. (Directive to Take Action)

Fiscal Note: Less than $500

APPENDIX
Exhibit A

GUIDELINES FOR REPRESENTATION IN & ADMISSION TO THE HOUSE OF DELEGATES:

National Medical Specialty Societies

1) The organization must not be in conflict with the constitution and bylaws of the American Medical Association by discriminating in membership on the basis of race, religion, national origin, sex, or handicap.

2) The organization must (a) represent a field of medicine that has recognized scientific validity; and (b) not have board certification as its primary focus, and (c) not require membership in the specialty organization as a requisite for board certification.

3) The organization must meet one of the following criteria:

   - 1,000 or more AMA members;
   - At least 100 AMA members and that twenty percent (20%) of its physician members who are eligible for AMA membership are members of the AMA; or
   - Have been represented in the House of Delegates at the 1990 Annual Meeting and that twenty percent (20%) of its physician members who are eligible for AMA membership are members of the AMA.

4) The organization must be established and stable; therefore, it must have been in existence for at least 5 years prior to submitting its application.

5) Physicians should comprise the majority of the voting membership of the organization.

6) The organization must have a voluntary membership and must report as members only those who are current in payment of applicable dues are eligible to participate on committees and the governing body.

7) The organization must be active within its field of medicine and hold at least one meeting of its members per year.

8) The organization must be national in scope. It must not restrict its membership geographically and must have members from a majority of the states.

9) The organization must submit a resolution or other official statement to show that the request is approved by the governing body of the organization.

10) If international, the organization must have a US branch or chapter, and this chapter must be reviewed in terms of all of the above guidelines.

RESPONSIBILITIES OF NATIONAL MEDICAL SPECIALTY ORGANIZATIONS

1. To cooperate with the AMA in increasing its AMA membership.

2. To keep its delegate to the House of Delegates fully informed on the policy positions of the organizations so that the delegate can properly represent the organization in the House of Delegates.

3. To require its delegate to report to the organization on the actions taken by the House of Delegates at each meeting.

4. To disseminate to its membership information to the actions taken by the House of Delegates at each meeting.

5. To provide information and data to the AMA when requested.

Exhibit B - Summary Membership Information

Organization	**AMA Membership of Organization's Total Eligible Membership**
American Academy of Addiction Psychiatry	384 of 1,127 (34%)
American Society for Aesthetic Plastic Surgery	359 of 1,691 (21%)
Society for Cardiovascular Magnetic Resonance	254 of 866 (30%)

REPORT OF THE BOARD OF TRUSTEES

B of T Report 15-A-23

Subject: National Cancer Research Patient Identifier

Presented by: Sandra Adamson Fryhofer, MD, Chair

Referred to: Reference Committee on Amendments to Constitution and Bylaws

---

Resolution 021-A-22, "National Cancer Research Identifier," sponsored by the Mississippi Delegation, was referred by the House of Delegates. Resolution 021-A-22 asks our AMA to establish:

> "[The] National Cancer Research Identifier (NCRI) […] to improve care for patients with cancer."

The NCRI as described would be overseen by a nonprofit entity, and the role of the NCRI would be to collect identifying patient information to create:

> "a privacy-ensuring, unique cancer research identifier [that] could travel with the anonymous fragments of medical information currently collected by large databases, and therefore allow the fragments to be reunited into a complete, yet anonymous cancer journey that researchers can study to improve care".

The summary of testimony from A-22 acknowledges concerns regarding the creation of the NCRI and recommends Resolution 021 for referral. Testimony was strongly in support of referral, noting the complexity of the issue, i.e., a national identifier may exclude some people from clinical trials, may dissuade some people with privacy concerns from joining trials, may put undue burdens (e.g., further EHR responsibilities) on some physicians, and it may implicate privacy, trust, and surveillance concerns. Testimony also noted concern about what organizations would be involved in overseeing the NCRI process and questioned why the resolution should be limited to cancer rather than be broader in scope.

BACKGROUND

In the US, all 50 states have laws that require newly diagnosed cancers to be reported to a central cancer registry [1]. The CDC's National Program of Cancer Registries (NPCR) and NCI's Surveillance, Epidemiology, and End Results (SEER) Program are the two primary central registries that collect cancer incidence data in the US. Together, the NPCR and the SEER Program collect data from the entire US population, and according to a 2017 joint report by the CDC and NIH, the two comprehensive surveillance systems work collaboratively to collect, compile, and disseminate information on more than 1.7 million cancer cases annually [2].

ALTERNATIVES TO NCRI

While Resolution 021-A-22 claims that the formation of the NCRI would "dramatically increase the speed and power of real-world research" it is unclear if this would be the case. Using identified data may in fact slow down the research process if the identified data are subject to the Common Rule, which would require researchers using NCRI data to go through IRB approval. Furthermore, as noted in BOT 16 N-21 "De-Identified Data" and Resolution 003-A-18 "Proposing Consent for De-Identified Patient Information," once data has been de-identified, HIPAA no longer applies, which raises potential concerns if certain entities obtain access to the NCRI. This is particularly troubling because of the unequal power between those whose data has been collected and those who control that data, an issue that has been referred to as the "Big Data Divide" [3]. This is also a threat to justice within clinical research, as data subjects from lower socioeconomic and/or minority backgrounds tend to have even less control over their data and are thus more vulnerable to misuse of their data [4].

Meanwhile current cancer research is clipping along at a steady pace. A 2020 report by Springer Nature found that "[t]he number of cancer research articles published in journals listed in the Nature Index increased by 25.8 percent between 2015 and 2019. This is four times the growth for overall article output in this period" [5]. The report also found that the US's National Cancer Institute (NCI) "is by far the world's biggest funder of cancer research" [5].

Supporting the NCRI's data modernization efforts to move to modern cloud-based systems, working to ensure that data collection is conducted in a just and equitable manner for all peoples, and encouraging physicians to discuss opportunities with cancer patients about participating in cancer research may be more appropriate avenues for our AMA to approach improving cancer research instead of forming the NCRI.

Our AMA could also seek to promote data and code sharing in oncology research as an alternative means of accomplishing the goal of Resolution 021. The practice of code sharing involves stating explicitly, in text or supplementary material, in research publications if and where any or all data or code underpinning the results is available for access. A recent research paper found that data and code sharing occur infrequently in oncology despite the prevalence of mandatory sharing policies outlined by publishers; additionally, there is a large gap between oncology researchers who declare their data to be available, and those who actually archive data in a way that facilitates its reuse [6].

ETHICAL CONCERNS SURROUDING NCRI

The AMA's *Code of Medical Ethics* does not explicitly prohibit such a patient identifier so long as the body adheres to the Code's opinions on protecting patient confidentiality, respecting patient privacy, providing appropriate informed consent, and ensuring the data is used in a manner that promotes justice (see Opinion 3.2.1 Confidentiality; Opinion 3.3.2 Confidentiality & Electronic Medical Records; Opinion 3.2.4 Access to Medical Records by Data Collection Companies; Opinion 4.1.3 Third-Party Access to Genetic Information; Opinion 3.1.1 Privacy in Health Care; Opinion 7.3.7 Safeguards in the Use of DNA Databanks; Opinion 2.1.1 Informed Consent; Opinion 7.1.2 Informed Consent in Research; Opinion 8.5 Disparities in Health Care).

However, Policy H-315.962 "Research Handling of De-Identified Patent Information" states, "[o]ur AMA supports efforts to promote transparency in the use of de-identified patent data and to protect patient privacy by developing methods of, and technologies for, de-identification of patient information that reduce the risk of re-identification of such information." The collection and use of identified patient data pose several concerns as even de-identified data do not eliminate the risk of

re-identification that can potentially harm patients. The Board observes the Council on Ethical and Judicial Affairs is in the process of reviewing existing ethics guidance on the use of patient information in research.

CONCLUSION

For these reasons, the Board concludes that the creation of a national cancer patient research identifier is neither necessary nor desirable. AMA resources might be better utilized to support data modernization efforts by existing cancer registries, work to ensure that no groups face barriers to data collection efforts, encourage physicians to educate and engage patients to participate in existing cancer research, and urge cancer researchers to improve data and code sharing.

RECOMENDATIONS

In light of these considerations, your Board of Trustees recommends that the following be adopted in lieu of Resolution 021, A-22, "National Cancer Research Patient Identifier," and the remainder of this report be filed:

> Our AMA encourages greater use of code and data sharing to enhance the timely conduct of research in oncology and implementation of innovations in care.

Fiscal Note: Minimal – less than $500

REPORT OF THE COUNCIL ON CONSTITUTION AND BYLAWS

CCB Report 01-A-23

Subject: AMA Bylaws--Gender Neutral Language and Miscellaneous Update

Presented by: Kevin Reilly, Sr., MD, Chair

Referred to: Reference Committee on Amendments to Constitution and Bylaws

---

The AMA Constitution establishes the basic principles of our AMA and the AMA Bylaws provide the framework for the governance and administration of the Association. Our AMA membership, like the population of physicians practicing in the United States, has become increasingly diverse. Language plays a major role in shaping culture and social attitudes and gender-neutral language promotes gender equality and inclusivity and eradicates gender bias; thus, your Council believes that the AMA Constitution and Bylaws should utilize gender-neutral language, and proposes recommendations for Bylaw amendments for House consideration and action.

The *Merriam-Webster Dictionary* recognizes the word 'they' as a singular pronoun, and the *AP Manual of Style* states that "they/them/their is acceptable in limited cases as a singular and-or gender-neutral pronoun, when alternative wording is overly awkward or clumsy." Lastly, the *AMA Manual of Style* provides the following guidance: "Avoid sex-specific pronouns in cases in which sex specificity is irrelevant. Do not use common-gender "pronouns" (eg, "s/he," "shem," "shim"). Reword the sentence to use a singular or plural non–sex-specific pronoun, neutral noun equivalent, or change of voice; or use "he or she" ("him or her," "his or her[s]," "they or their[s]"). The use of the "singular they" construction is permitted when rewriting would be awkward or unclear."

It also should be noted that where Bylaw language is included in the Internal Operating Procedures (IOPs) of an AMA section or in the Rules of an AMA Council, those documents will be similarly modified. All sections are or will be modifying their IOPs to make these gender-neutral.

Lastly, there is one other proposed change unrelated to gender-neutrality in 7.4.1, which defines the membership of the Organized Medical Staff Section (OMSS). The change in wording from "Active resident and fellows who have been ~~selected~~ certified by their medical staffs as representatives to the Business Meeting also shall be considered members of the Section," mirrors the language in the OMSS IOPs and accurately reflects OMSS practice.

RECOMMENDATIONS

The Council on Constitution and Bylaws recommends that the following amendments to the AMA Bylaws be adopted and that the remainder of this report be filed. Adoption requires the affirmative vote of two-thirds of the members of the House of Delegates present and voting.

2—House of Delegates

****

2.8 Alternate Delegates.

***

2.8.6 Status. The alternate delegate is not a "member of the House of Delegates" as that term is used in these Bylaws. Accordingly, an alternate delegate may not introduce resolutions into the House of Delegates, nor vote in any election conducted by the House of Delegates. An alternate delegate is not eligible for nomination or election as Speaker or Vice Speaker of the House of Delegates. The alternate delegate must immediately relinquish ~~his or her~~ their position on the floor of the House of Delegates upon the request of the delegate for whom the alternate delegate is substituting.

3—Officers

***

3.4 Elections.

***

3.4.2.1.1 First Ballot. All nominees for the office of At-Large Trustee shall be listed alphabetically on a single ballot. Each elector shall have as many votes as the number of Trustees to be elected, and each vote must be cast for a different nominee. No ballot shall be counted if it contains fewer or more votes than the number of Trustees to be elected, or if the ballot contains more than one vote for any nominee. A nominee shall be elected if they ~~he or she has~~ have received a vote on a majority of the legal ballots cast and ~~is~~ are one of the nominees receiving the largest number of votes within the number of Trustees to be elected.

***

3.5 Terms and Tenure.

***

3.5.7.1 Limitations. No candidate shall be eligible for election or re-election as the young physician trustee unless, at the time of election, ~~he or she is~~ they are under 40 years of age or within the first eight years of practice after residency and fellowship training, and ~~is~~ are not a resident/fellow physician. A young physician trustee shall be eligible to serve on the Board of Trustees for the full term for which elected, even if during that term the trustee reaches 40 years of age or completes the eighth year of practice after residency and fellowship training.

***

3.8 Installation of Officers. The officers of the AMA shall assume their duties at the close of the meeting at which they are elected, except as stated herein. The medical student trustee shall assume office at the close of the Annual Meeting following the Interim Meeting at which the

medical student trustee was elected. If elected at an Interim Meeting or Special Meeting, the public trustee shall assume office at the close of the Annual Meeting following ~~his or her~~ their election. If elected at an Annual Meeting, the public trustee shall assume office at the close of the Annual Meeting at which ~~he or she was~~ elected.

6—Councils

***

6.8 Election - Council on Constitution and Bylaws, Council on Medical Education, Council on Medical Service, and Council on Science and Public Health.

***

6.8.1.2 Other Council Members. With reference to each such Council, all nominees for election shall be listed alphabetically on a single ballot. Each elector shall have as many votes as there are members to be elected, and each vote must be cast for a different nominee. No ballot shall be counted if it contains fewer votes or more votes than the number of members to be elected, or if the ballot contains more than one vote for any nominee. A nominee shall be elected if ~~he or she~~ they have ~~has~~ received a vote on a majority of the legal ballots cast and ~~is~~ are one of the nominees receiving the largest number of votes within the number of members to be elected.

7—Sections

***

7.4 Organized Medical Staff Section.

7.4.1 Membership. Membership in the Section shall be open to all active physician members of the AMA who are members of a medical staff of a hospital or a medical staff of a group of practicing physicians organized to provide healthcare. Active resident and fellow members of the AMA who are ~~selected~~ certified by their medical staffs as representatives to the Business Meeting also shall be considered members of the Section.

***

7.4.2 Representatives to the Business Meeting. Each medical staff of a hospital and each medical staff of a group of practicing physicians organized to provide healthcare may select up to two active physician AMA member representatives to the Business Meeting. The president or chief of staff of a medical staff may also attend the Business Meeting as a representative if ~~he or she is~~ they are an active physician member of the AMA. The representatives must be physician members of the medical staff of a hospital or group of practicing physicians organized to provide healthcare or residents/fellows affiliated with the medical staff of a hospital or group of practicing physicians organized to provide healthcare. All representatives to the Business Meeting shall be properly certified in accordance with procedures established by the Governing Council and approved by the Board of Trustees.

7.4.2.1 When a multi-hospital system and its component medical staffs have unified the medical staffs, those medical staff members who hold specific privileges to practice at each separate entity within the unified system may select up to two representatives to the Business Meeting, so long as they are active physician members of the AMA. The president or chief of staff of a unified medical staff also may attend the Business Meeting as a representative if ~~he or she is~~ they are an active physician member of the AMA.

***

7.7 Minority Affairs Section.

***

7.7.3.1 Section Representatives on the Governing Council. If a representative of the Medical Student Section, Resident and Fellow Section or Young Physicians Section ceases to meet the criteria for membership in the section from which elected within 90 days prior to the Annual Meeting, such member shall be permitted to serve in office until the conclusion of the Annual Meeting in the calendar year in which ~~he or she~~ they cease~~s~~ to meet the membership requirement of the respective section.

7.7.3.2 Section Representative as Immediate Past Chair. A Section representative who has been elected as chair of the Governing Council, but who ceases to meet the criteria for membership in the section from which elected during ~~his or her~~ their term as Immediate Past Chair, shall be permitted to complete the term of office, as long as the officer remains an active physician member of the AMA.

***

7.10 Women Physicians Section.

***

7.10.3.1 Section Representatives on the Governing Council. If a representative of the Medical Student Section, Resident and Fellow Section or Young Physicians Section ceases to meet the criteria for membership in the section from which elected within 90 days prior to the Annual Meeting, such member shall be permitted to serve in office until the conclusion of the Annual Meeting in the calendar year in which ~~she or he~~ they cease~~s~~ to meet the membership requirement of the respective section.

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS*

CEJA Report 01-A-23

Subject:	Utilization Review, Medical Necessity Determination, Prior Authorization Decisions
Presented by:	Peter A. Schwartz, MD, Chair
Referred to:	Reference Committee on Amendments to Constitution and Bylaws

Policy D-320.977, "Utilization Review, Medical Necessity Determination, Prior Authorization Decisions," as adopted in June 2022, requests that the Council on Ethical and Judicial Affairs "review current ethical opinions similar to the Texas Medical Association (TMA) Board of Councilors' opinions regarding medical necessity determination and utilization review."

The relevant TMA Board of Councilors opinions read as follows:

> MEDICAL NECESSITY. The determination of medical necessity is the practice of medicine; it is not a benefit determination. Whether or not a proposed treatment is medically necessary should be decided in a manner consistent with generally accepted standards of medical practice that a prudent physician would provide to a patient for the purposes of preventing, diagnosing or treating an illness, injury, disease or its symptoms. This is true even if the physician making the medical necessity determination is making those decisions on behalf of a managed care organization. That physician must not permit financial mechanisms to interfere with his/her determination as to whether a treatment is medically necessary. Although the physician may take cost considerations into account, the physician may not refuse to approve the medical necessity of a treatment simply based on cost, and must approve the treatment if it is clearly more therapeutically effective than other treatment options that may be covered under the plan, even if those treatment options are less expensive than their more costly counterpart.
>
> UTILIZATION REVIEW. The physician who performs prospective and/or concurrent utilization review is obligated to review the request for treatment with the same standard of care as would be required by the profession in the community in which the patient is being treated.

As originally presented to the American Medical Association (AMA) House of Delegates, the background resolution asked that Council on Ethical and Judicial Affairs (CEJA) "devise ethical opinions similar to" those issued by the TMA Board of Councilors (Resolution 727 A-22).

The opinions of the TMA maintain that decisions about the appropriateness of recommended interventions are matters of professional medical judgment, not administrative determinations.

*Reports of the Council on Ethical and Judicial Affairs are assigned to the Reference Committee on Amendments to Constitution and Bylaws. They may be adopted, not adopted, or referred. A report may not be amended, except to clarify the meaning of the report and only with the concurrence of the Council.

Thus, physicians charged to determine whether an intervention is medically necessary on behalf of health care organizations or third-party payers

- may not refuse to approve treatment based solely on cost considerations; and
- must approve treatment that is "clearly more therapeutically effective" even if it is costlier than other covered options.

Physicians who perform utilization review likewise should base determinations on the standard of care prevailing in the professional community.

The council reviewed existing guidance in the AMA *Code of Medical Ethics* and concluded that issues raised by the opinions of the TMA are appropriately addressed in several opinions:

- 10.1 "Ethics Guidance for Physicians in Nonclinical Roles"
- 10.1.1 "Ethical Obligations of Medical Directors"
- 11.2.1 "Professionalism in Health Care Systems"
- 11.2.2 "Conflicts of Interest in Patient Care"
- 11.2.3 "Contracts to Deliver Health Care Services"
- 11.2.6 "Mergers of Secular and Religiously Affiliated Health Care Institutions"
- 11.1.2 "Physician Stewardship of Health Care Resources"

Opinions 10.1 and 10.1.1 maintain that whenever physicians "use the knowledge and values they gained through medical training . . . in roles that affect the care and well-being" of patients, physicians are "functioning within the sphere of their profession" and must uphold their fiduciary obligations to patients. Opinion 11.2.2 holds patient welfare takes priority over the economic interests of hospitals, health care organizations, and other entities.

Opinion 11.2.1 sets out essential conditions for the ethically appropriate design and use of incentives to address health care costs. Rather than address specific mechanisms or strategies, guidance identifies key ethics concerns, particularly conflict of interest and implications for physicians' exercise of professional judgment and professionalism. Thus 11.2.1 defines essential conditions for the ethical use of incentives, irrespective of the form such incentives may take:

- ensuring that health care disparities are not exacerbated
- ensuring that supporting infrastructure and resources are in place to support high quality care and physician professionalism
- recognizing and respecting physicians' duty to advocate on behalf of patients by providing meaningful pathways for appealing denials of care
- accepting an institutional obligation to monitor the impact of incentives

Although it speaks less directly to matters of determining medical necessity or utilization review, Opinion 11.2.6 similarly underscores the importance of ensuring that health care institutions adopt mechanisms to enable physicians to appeal constraints in order to meet the unique needs of individual patients and to monitor the impact of policies that constrain resource use or the availability of clinical services.

Finally, Opinion 11.1.2 addresses the position expressed by the TMA that physicians should approve "clearly more therapeutically effective" among available options, irrespective of cost. 11.1.2 provides that physicians should recommend interventions "demonstrated to meaningfully improve clinical outcomes," although when different interventions offer comparable benefits and risks for an individual patient, they should generally prefer those that require fewer resources.

The council further noted that amending guidance specifically to address determinations of medical necessity and utilization review as such would not be consistent with the approach taken in modernizing the *Code of Medical Ethics*. In updating the *Code* CEJA intentionally reframed guidance to ensure that it remained "evergreen" and not tied to specific technologies or practices. The council focused on clarifying the ethical values underlying guidance and for the most part eliminated specific examples and content that read as instruction on how to implement guidance.

Multiple opinions in earlier editions of the *Code* spoke to particulars of, e.g., capitation, use of restricted medication formularies, and similar issues tied to strategies for cost containment imposed by managed care organizations. In modernizing this guidance CEJA re-organized and consolidated content from multiple opinions to focus on relevant ethics issues, such as conflict of interest and physician professionalism. For example, Opinion 11.2.1, "Professionalism in Health Care Systems," identifies and consolidates guidance from five separate opinions to offer a succinct statement of conditions essential to promoting professionalism in care delivery systems.

For these reasons, the council concluded that in its present form the AMA *Code of Medical Ethics* appropriately addresses the fundamental concerns identified in the cited opinions of the TMA Board of Councilors.

RECOMMENDATION

Based on the foregoing considerations, the Council on Ethical and Judicial Affairs recommends that paragraph 2 of D-320.977, "Utilization Review, Medical Necessity Determination, Prior Authorization Decisions," be rescinded as having been accomplished and the remainder of this report be filed:

1. Our AMA will advocate: (a) for implementation of a federal version of a prior authorization "gold card" law, which aims to curb onerous prior authorization practices by many state-regulated health insurers and health maintenance organizations; and (b) that health plans should offer physicians at least one physician-driven, clinically-based alternative to prior authorization, including a "gold-card" or "preferred provider program."

~~2. Our AMA will request that the Council on Ethical and Judicial Affairs review current ethical opinions similar to the Texas Medical Association Board of Councilors opinions regarding medical necessity determination and utilization review.~~

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS*

CEJA Report 02-A-23

Subject: Ethical Principles for Physicians Involved in Private Equity Owned Practices

Presented by: Peter A Schwartz, MD, Chair MD, Chair

Referred to: Reference Committee on Amendments to Constitution and Bylaws

---

Policy D-140.951, "Establishing Ethical Principles for Physicians Involved in Private Equity Owned Practices," instructs our American Medical Association (AMA) to

> study and clarify the ethical challenges and considerations regarding physician professionalism raised by the advent and expansion of private equity ownership or management of physician practices and report back on the status of any ethical dimensions inherent in these arrangements, including consideration of the need for ethical guidelines as appropriate. Such a study should evaluate the impact of private equity ownership, including but not limited to the effect on the professional responsibilities and ethical priorities for physician practices.

This report presents the fruits of deliberations by the Council on Ethical and Judicial Affairs (CEJA) on the need for ethics guidance in this area.

The council noted that current guidance in the AMA *Code of Medical Ethics (Code)* was developed initially to address issues raised by the advent of managed care. Reflecting on the respective challenges posed by managed care and private equity, the council concluded that where managed care organizations focused on goals of cost-containment and improving efficiency of care delivery rather than profitability per se, private equity/venture capital (PE/VC) investment in health care practices explicitly aims to enhance the profitability of any medical practice in which they invest during the period of their investment and further to realize significant profit when they divest of that practice after a term of years.

CEJA observed that House policy adopted in 2019 substantially accomplishes the goals sought by D-140.951. Council on Medical Service Report 11-A-19 carefully reviewed available data on the scope and impact of PE/VC investment in health care. Its recommendations were adopted as H-160.891, "Corporate Investors," which delineates 11 factors physicians should consider before entering into partnership with corporate investors, including issues of alignment of mission, vision, and goals; the degree to which corporate partners may require physicians to cede control over practice decision making; process for staff representation on the board of directors and medical leadership selection; and retaining medical authority in patient care and supervision of nonphysician practitioners.

* Reports of the Council on Ethical and Judicial Affairs are assigned to the Reference Committee on Amendments to Constitution and Bylaws. They may be adopted, not adopted, or referred. A report may not be amended, except to clarify the meaning of the report and only with the concurrence of the Council.

The AMA further developed and published materials to assist physicians contemplating partnering with PE/VC firms:

- Venture Capital and Private Equity: How to Evaluate Contractual Agreements
- Model Checklist: Venture Capital and Private Equity Investments
- Snapshot: Venture Capital and Private Equity Investments

In the council's view, the salient concerns raised by the engagement of PE/VC firms in health care, notably challenges to physicians' freedom to exercise professional judgment and strategies for reducing cost/enhancing profitability, are addressed in existing guidance in Opinions 11.2.1, "Professionalism in Health Care Systems"; 11.2.2, "Conflicts of Interest in Patient Care"; and 11.2.3, "Contracts to Deliver Health Care Services."

Given the existence of rich House policy on point and the fact that existing opinions in the *Code* substantially address key issues of concern, the council concluded that guidance specifically addressing PE/VC in health care is not the most effective response. Rather, the council believes that amending current guidance to more clearly encompass partnerships with PE/VC firms would best serve the interests of physicians and the patients they care for.

RECOMMENDATION

In view of these deliberations, the Council on Ethical and Judicial Affairs recommends that Opinion 11.2.3, "Contracts to Deliver Health Care Services," be amended as follows and the remainder of this report be filed:

> Physicians have a fundamental ethical obligation to put the welfare of patients ahead of other considerations, including personal financial interests. This obligation requires ~~them to~~ that before entering into contracts to deliver health care services physicians consider carefully the proposed contract to assure themselves that ~~the~~ its terms and conditions ~~of contracts to deliver health care services before entering into such contracts to ensure that those contracts do not create untenable conflicts of interests~~ do not obviously compromise their ability to fulfill their fiduciary obligations to patients.
>
> Ongoing evolution in the health care system continues to bring changes to medicine, including changes in reimbursement mechanisms, models for health care delivery, restrictions on referral and use of services, clinical practice guidelines, and limitations on benefits packages. While these changes are intended to enhance quality, efficiency, and safety in health care, they can also put at risk physicians' ability to uphold professional ethical standards ~~of informed consent and fidelity to patients~~ and can impede physicians' freedom to exercise independent professional judgment and tailor care to meet the needs of individual patients.
>
> As physicians seek capital to support their practices or enter into various differently structured contracts to deliver health care services—with group practices, hospitals, health plans, or other entities—they should be mindful that while many arrangements have the potential to promote desired improvements in care, some arrangements also have the potential to ~~impede~~ put patients' interests at risk
>
> When ~~contracting~~ partnering with other entities to provide health care services, physicians should:

(a) Carefully review the terms of proposed contracts or have a representative do so on their behalf to assure themselves that the arrangement:

(i) Minimizes conflict of interest with respect to proposed reimbursement mechanisms, financial or performance incentives, restrictions on care or other mechanisms intended to influence physicians' treatment recommendations or direct what care patients receive, in keeping with ethics guidance.

(ii) Does not compromise physicians' own financial well-being or ability to provide high-quality care through unrealistic expectations regarding utilization of services or terms that expose the physician to excessive financial risk.

(iii) Allows the physician to appropriately exercise professional judgment.

(iv) Includes a mechanism to address grievances and supports advocacy on behalf of individual patients.

(v) Permits disclosure to patients.

(vi) Enables physicians to participate in, if not outright control, decisions about practice staffing.

(b) Negotiate modification or removal of any terms that unduly compromise physicians' ability to uphold ethical standards.

When physicians enter into arrangements with partners who may later sell the practice, physicians should seek explicit commitments that subsequent partners will sustain fidelity to patients and respect physicians' professional ethical obligations.

(Modify HOD policy)

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS*

CEJA Report 03-A-23

Subject: Short-Term Medical Service Trips

Presented by: Peter A. Schwartz, MD, Chair

Referred to: Reference Committee on Amendments to Constitution and Bylaws

Short-term medical service trips send physicians and physicians in training from wealthier countries to provide care in resource-limited settings abroad for a period of days or weeks. They have been promoted, in part, as a strategy for addressing global health inequities, and have unquestionably benefitted thousands of individual patients. At the same time, short-term medical service trips have a problematic history and run the risk of causing harm to the patients and communities they intend to serve [1]. To minimize harm and ensure significant benefits, volunteers, sponsors, and hosts must jointly prioritize activities to meet mutually agreed-on goals; navigate day-to-day collaboration across differences of culture, language, and history; and fairly allocate host and team resources.

Ethics guidance can neither redress historical wrongs nor solve the underlying structural issues that drive medical need in resource-limited settings. However, by making explicit the conditions under which short-term medical service trips are ethically sound and articulating the fundamental ethical responsibilities of those who participate in or sponsor such trips, ethics guidance can promote immediate benefit to individuals *and* sustainable benefit for their communities. In addition, ethics guidance can highlight the ways in which power imbalances and neo-colonial assumptions can shape these practices and so may undermine their moral acceptability. This report by the Council on Ethical and Judicial Affairs (CEJA) explores the challenges of short-term medical service trips and offers guidance for physicians, physicians in training, and sponsors to help them address ethical challenges of providing clinical care in resource-limited settings abroad.

THE APPEAL OF SHORT-TERM MEDICAL SERVICE TRIPS

Just how many clinicians volunteer to provide medical care in resource-limited settings abroad is difficult to estimate, but the number is large. By one estimate, in the U.S. some 21% of the nearly 3 billion dollars' worth of volunteer hours spent in international efforts in 2007 were medically related [2]. For trainees, in January 2015 the Consortium of Universities for Global Health identified more than 180 websites relating to global health opportunities [3]. The Association of American Medical Colleges found that among students who graduated in 2017–2018 between 25% and 31% reported having had some "global health experience" during medical school [4].

A variety of reasons motivate physicians and trainees to volunteer for service trips. For many, compelling motivations include the opportunities to help address health inequities, to improve their diagnostic and technical skills as clinicians, or to explore global health as a topic of study [2].

*Reports of the Council on Ethical and Judicial Affairs are assigned to the Reference Committee on Amendments to Constitution and Bylaws. They may be adopted, not adopted, or referred. A report may not be amended, except to clarify the meaning of the report and only with the concurrence of the Council.

Service trips can also serve the goals of building one's resume, improving one's professional prospects, gaining the esteem of peers and family, or simply enjoying international travel [2].

A NOTE ON TERMINOLOGY

The literature is replete with different terms for the activity of traveling abroad to provide medical care on a volunteer basis, including "short-term medical volunteerism" [5], "short-term medical missions" [6], "short-term medical service trips" [7,8], "short-term experience in global health" [9,10], "global health field experience" [11], "global health experience," and "international health experience"[2].

The Council on Ethical and Judicial Affairs prefers "short-term medical service trips." This term is clear, concrete, concise, and does not easily lend itself to multiple interpretations or misunderstanding. It also captures the features of these activities that are most salient from the perspective of professional ethics in medicine: their limited duration and their orientation toward service.

MEDICAL SERVICE IN RESOURCE-LIMITED SETTINGS

Traditionally, short-term medical service trips focused on providing clinical care as a charitable activity, not infrequently under the auspices of faith-based institutions, whose primary goal was to address unmet medical needs [10]. Increasingly, such trips focus on the broader goal of improving the health and well-being of host communities [9]. Many also offer training opportunities for medical students and residents [9,10,11]. Ideally, short-term medical service trips are part of larger, long-term efforts to build capacity in the health care systems being visited, and ultimately to reduce global health disparities [9,10].

The medical needs of host communities differ from those of volunteers' home countries—volunteers may encounter patients with medical conditions volunteers have not seen before, or who present at more advanced stages of disease, or are complicated by "conditions, such as severe malnutrition, for which medical volunteers may have limited experience" [7]. At the same time, available treatment options will often include medications, procedures or tools with which volunteers are not familiar. As such, global health and limited-resource medicine should be considered a unique area of expertise, requiring specific background and training to practice effectively [12].

By definition, short-term medical service trips take place in contexts of scarce resources. The communities they serve are "victims of social, economic, or environmental factors" who have limited access to health care [7], and often lack access to food, and economic and political power. They "may feel unable to say no to charity in any form offered" [10]. Moreover, short-term medical service trips take place under the long shadow of colonialism, including medicine's role [10], and have been critiqued as perpetuating the colonial legacy of racism, exploitation, and dependency [1,10,13]. To avoid reproducing these injustices, participants and sponsors should recognize that it is a privilege to practice and train in vulnerable communities, and that justice requires reciprocity and equal respect among local and expatriate staff, community members, and patients in this context [9].

These realities define fundamental ethical responsibilities not only for those who volunteer, but equally for the individuals and organizations that sponsor short-term medical service trips.

ETHICAL RESPONSIBILITIES IN SHORT-TERM MEDICAL SERVICE TRIPS

Emerging guidelines identify the following ethical duties for participants of short-term medical service trips and organizations sponsoring them: (a) to produce good clinical outcomes, (b) to promote justice and sustainability, (c) to minimize burdens on host communities, and (d) to respect persons and local cultures [2,9,10,11].

Promoting Justice & Sustainability

If short-term medical service trips are to achieve their goal of improving the health of local host communities, they must commit not simply to addressing immediate, concrete needs, but to helping the community build its own capacity to provide health care. To that end, the near and longer-term goals of trips should be set in collaboration with the host community, not determined in advance solely by the interests or intent of trip sponsors and participants [7,9]. Trips should seek to balance community priorities with the training interests and abilities of participants [10], but in the first instance benefits should be those desired by the host community [9]. Likewise, interventions must be acceptable to the community [9].

Volunteers and sponsors involved with short-term medical service trips have a responsibility to ask how they can best use a trip's limited time and material resources to promote the long-term goal of developing local capacity. Will the trip train local health care providers? Build local infrastructure? Empower the community [7]? Ideally, a short-term medical service trip will be embedded in a longer-term strategy and collaboratively planned with the host community [7,10].

Minimizing Harms & Burdens in Host Communities

Just as focusing on the overarching goal of promoting justice and sustainability is foundational to ethically sound short-term medical service trips, so too is identifying and minimizing the burdens such trips place on the intended beneficiaries.

Beyond lodging, food, and other direct costs of short-term medical service trips, which are usually reimbursed to host communities [9], such trips can place other, less visible burdens on local communities. Physicians, trainees, and others who organize or participate in short-term medical service trips should be alert to possible unintended consequences that can undermine the value of a trip. Trips should not detract from or place significant burdens on local clinicians and resources, particularly in ways that negatively affect patients, jeopardize sustainability, or disrupt relationships between trainees and their home institutions [9,11]. For example, donations of medical supplies can address immediate need, but at the same time create storage and distribution burdens for the local health care system and jeopardize development by the local community of effective solutions to long-term supply problems [7]. Likewise, the expectation that local healthcare and support staff will be available to assist visiting clinicians in addition to (or in place of) their usual duties can disrupt care for their existing patients. It should not be assumed that host communities can absorb additional costs, even on a temporary basis [14]. Particular attention should be paid to the follow-up care that burdens local practitioners and may result in harm to patients in the aftermath of invasive procedures [15].

Negotiating beforehand how visiting health care professionals will be expected to interact with the host community and the boundaries of the team's mission, skill, and training can reveal possible impacts and allow them to be addressed before the team is in the field. Likewise, selecting team members whose skills and experience map onto the needs and expectations of the host community can help minimize disruptive effects on local practice [11]. Advance preparation should include

developing a plan to monitor and address ongoing costs and benefits to patients and host communities and institutions, including local trainees (when the trip includes providing training for the host community), once the team is in the field [11].

Respecting Persons & Cultures

Physicians and trainees who participate in short-term medical service trips face a host of challenges. Some of them are practical, such as resource limitations, unfamiliar medical needs, living conditions outside their experience, among many others. Others involve successfully navigating language(s) and norms they may never have encountered before, or not encountered with the same immediacy [1,2,9]. Striking a balance between Western medicine's understanding of the professional commitment to respect for persons and the expectations of host communities rooted in other histories, traditions, and social structures calls for a level of discernment, sensitivity, and humility that may more often be seen as the skill set of an ethnographer than a clinician.

Individuals who travel abroad to provide medical care in resource-limited settings should be aware that the interactions they will have in the field will inevitably be cross-cultural. They should seek to become broadly knowledgeable about the communities in which they will work, such as the primary language(s) in which encounters will occur; predominant local "explanatory models" of health and illness; local expectations for how health care professionals behave toward patients and toward one another; and salient economic, political, and social dynamics. Volunteers should take advantage of resources that can help them cultivate the cultural sensitivity they will need to provide safe, respectful, patient-centered care in the context of the specific host community [7,10,11]. Further, trip participants should be mindful that they bring with them their own unexamined cultural beliefs and assumptions about lower income countries, some of which trace back to colonialist, racialized attitudes. For instance, there is a widespread assumption that visiting physicians and trainees possess universally applicable (and unmistakably superior) skills and knowledge by virtue of their association with Western biomedicine [19].

Individuals do not bear these responsibilities alone. Organizations and institutions that sponsor short-term medical service trips have a responsibility to make appropriate orientation and training available to volunteers before they depart [11], in addition to working with host communities to put in place appropriate services, such as interpreters or local mentors, to support volunteers in the field.

The ethical obligation to respect the individual patients they serve and their host communities' cultural and social traditions does not obligate physicians and trainees "to violate fundamental personal values, standards of medical care or ethical practice, or the law" [9]. Volunteers will be challenged, rather, to negotiate compromises that preserve in some reasonable measure the values of both parties whenever possible [16]. Volunteers should be allowed to decline to participate in activities that violate deeply held personal beliefs, but they should reflect carefully before reaching such a decision [17].

GETTING INTO THE FIELD

To fulfill these fundamental ethical responsibilities, requires meeting other obligations with respect to organizing and carrying out short-term medical service trips. Specifically, sponsoring organizations and institutions have an obligation to ensure thoughtful, diligent preparation to promote a trip's overall goals, including appropriately preparing volunteers for the field

experience. Physicians and trainees, for their part, have an obligation to choose thoughtfully those programs with which they affiliate themselves [1,2, 9,11].

Prepare Diligently

Guidelines from the American College of Physicians recognize that "predeparture preparation is itself an ethical obligation" even though this is far from a universal practice [9,cf. 2,12]. Collaborative planning can identify what material resources and clinical skills volunteers should be expected to bring to the effort. For example, what activities volunteers should be assigned, or whether local mentors are needed or desirable and how such relationships will be coordinated [11].

Supervision of trainees also needs to be explicitly arranged and followed up once they reach the field. Studies show that 20% of participants reported inadequate supervision during their trips, and it is common for medical schools to allow "students to arrange experiences abroad without faculty supervision and support" [18, 12]. Allowing students to practice in limited-resource settings without proper supervision is a clear violation of their fiduciary duty.

Thoughtful preparation includes determining what nonclinical skills and experience volunteers should have to contribute to the overall success of the service opportunity. For example, the goal of supporting capacity building in the local community calls for participants who have "training and/or familiarity with principles of international development, social determinants of health, …public health systems" and in some cases, health care administration [10,12]. Without this background, interventions may result in "resource wasting and potentially poorer patient care" [12].

Adequately preparing physicians and trainees for short-term medical service trips encompasses planning with respect to issues of personal safety, vaccinations, unique personal health needs, travel, malpractice insurance, and local credentialing requirements [7]. Equally important, to contribute effectively and minimize "culture shock" and distress, volunteers need a basic understanding of the context in which they will be working [1,2,7]. Without expecting them to become experts in local culture, volunteers should have access to resources that will orient them to the language(s), traditions, norms, and expectations of the host community, not simply to the resource and clinical challenges they are likely to face. Volunteers should have sufficient knowledge to conduct themselves appropriately in the field setting, whether that is in how they dress, how they address or interact with different members of the community, or how they carry out their clinical responsibilities [7]. They also need to know to whom they can turn for guidance. If at all possible, this should be someone from outside the host community, since community members may be reluctant to "push back" against the judgments and actions of volunteers [19].

Preparation should also include explicit attention to the possibility that volunteers will encounter ethical dilemmas. Working in unfamiliar cultural settings and with limited resources introduces the real possibility that physicians and trainees will encounter situations in which they "are unable to act in ways that are consistent with ethics and their professional values" or "feel complicit in a moral wrong" [9]. In particular, volunteers will be required to assess "how to balance risks and benefits [for very poor and medically vulnerable patients they would not normally encounter] … how to distribute limited medical resources, and when non-intervention is the appropriate choice" [15]. In addition, volunteers may find that local biases are inconsistent with their own commitments to equity and non-discrimination. Having strategies in place to address dilemmas when they arise and to debrief after the fact can help mitigate the impact of such experiences. Physicians under stress due to difficult ethical situations experience emotional harm and this may, in turn, affect the quality of patient care [12]. In cases of irreducible conflict with local norms,

volunteers may withdraw from care of an individual patient or from the mission after careful consideration of the effect withdrawing will have on the patient, the medical team, and the mission overall, in keeping with ethics guidance on the exercise of conscience.

Choose Thoughtfully

Individual physicians and trainees who volunteer for short-term medical service trips are not in a position to directly influence how such programs are organized or carried out. They can, however, choose to participate in activities carried out by organizations that fulfill the ethical responsibilities discussed above [9,10,11]. Volunteers can select organizations and programs that demonstrate commitment to long-term, community-led efforts to build and sustain local health care resources over programs that provide episodic, stop-gap medical interventions, [10]. Volunteers should strive to avoid working with "volunteer placement organizations" that operate primarily for their own profit and/or lack adequate on-site supervision for trainees [14]. Such organizations exploit the needs of host communities by offering them a small sum per volunteer and then sending volunteers to them without support. Physicians and trainees should also refrain from the "casual or opportunistic" treatment of patients that are not coordinated with local health care systems in advance [20].

Measure & Share Meaningful Outcomes

Organizations that sponsor short-term medical service trips have a responsibility to monitor and evaluate the effectiveness of their programs, [7,9,10]. The measures used to evaluate program outcomes should be appropriate to the program's goals as defined proactively in collaboration with the host community [9]. Prospective participants should affiliate themselves with programs that demonstrate effectiveness in providing outcomes meaningful to the population they serve, rather than simple measures of process such as number of procedures performed [7]. Since the success of procedures and programs cannot reasonably be verified if even their medium-term outcomes cannot be monitored, participants should prefer programs that can track patient results over an extended timeframe, even if their own contribution is made in a short time.

RECOMMENDATION

In light of these considerations, the Council on Ethical and Judicial Affairs recommends that the following be adopted and the remainder of this report be filed:

Short-term medical service trips, which send physicians and physicians in training from wealthier countries to provide care in resource-limited settings for a period of days or weeks, have been promoted as a strategy to provide needed care to individual patients and, increasingly, as a means to address global health inequities. To the extent that such service trips also provide training and educational opportunities, they may offer benefit both to the communities that host them and the medical professionals and trainees who volunteer their time and clinical skills.

By definition, short-term medical service trips take place in contexts of scarce resources and in the shadow of colonial histories. These realities define fundamental ethical responsibilities for volunteers, sponsors, and hosts to jointly prioritize activities to meet mutually agreed-on goals; navigate day-to-day collaboration across differences of culture, language, and history; and fairly allocate host and team resources. Participants and sponsors must focus not only on enabling good health outcomes for individual patients, but on promoting justice and sustainability, minimizing burdens on host communities, and respecting persons and local cultures. Responsibly carrying out

short-term medical service trips requires diligent preparation on the part of participants and sponsors in collaboration with host communities.

Physicians and trainees who are involved with short-term medical service trips should ensure that the trips with which they are associated:

(a) Focus prominently on promoting justice and sustainability by collaborating with the host community to define mission parameters, including identifying community needs, mission goals, and how the volunteer medical team will integrate with local health care professionals and the local health care system. In collaboration with the host community, short-term medical service trips should prioritize efforts to support the community in building health care capacity. Trips that also serve secondary goals, such as providing educational opportunities for trainees, should prioritize benefits as defined by the host community over benefits to members of the volunteer medical team or the sponsoring organization.

(b) Seek to proactively identify and minimize burdens the trip places on the host community, including not only direct, material costs of hosting volunteers, but also possible adverse effects the presence of volunteers could have for beneficial local practices and practitioners. Sponsors and participants should ensure that team members practice only within their skill sets and experience.

(c) Seek to become broadly knowledgeable about the communities in which they will work and take advantage of resources that help them to cultivate the cultural sensitivity they will need to provide safe, respectful, patient-centered care in the context of the specific host community. Members of the volunteer medical team are expected to uphold the ethics standards of their profession and volunteers should insist that strategies are in place to address ethical dilemmas as they arise. In cases of irreducible conflict with local norms, volunteers may withdraw from care of an individual patient or from the mission after careful consideration of the effect that will have on the patient, the medical team, and the mission overall, in keeping with ethics guidance on the exercise of conscience. Volunteers should be clear that they may be ethically required to decline requests for treatment that cannot be provided safely and effectively due to resource constraints.

Sponsors of short-term medical service trips should:

(d) Ensure that resources needed to meet the defined goals of the trip will be in place, particularly resources that cannot be assured locally. This includes arranging for local mentors, translation services, and volunteers' personal health needs. It should not be assumed that host communities can absorb additional costs, even on a temporary basis.

(e) Proactively define appropriate roles and permissible range of practice for members of the volunteer team, so that they can provide safe, high-quality care in the host setting. Team members should practice only within the limits of their training and skills in keeping with professional standards they would deem acceptable for practice in their home country, even if the host country's standards are more flexible or less rigorously enforced.

(f) Ensure appropriate supervision of trainees, consistent with their training in their home countries, and make certain that they are only permitted to practice independently in ways commensurate with their level of experience in resource-limited settings.

(g) Ensure a mechanism for meaningful data collection is in place, consistent with recognized standards for the conduct of health services research and quality improvement activities in the sponsor's country.

(New HOD/CEJA Policy)

REPORT OF THE COUNCIL ON CONSTITUTION AND BYLAWS*

CEJA Report 04-A-23

Subject: Responsibilities to Promote Equitable Care

Presented by: Peter A. Schwartz, MD, Chair

Referred to: Reference Committee on Amendments to Constitution and Bylaws

---

The disproportionate impact of the COVID-19 pandemic on minoritized and marginalized communities harshly illuminated ongoing inequities in health care across the globe. In the U.S., the pandemic lent new energy to calls for change within and outside medicine and health care. Even as the American Medical Association (AMA) drew on the *Code of Medical Ethics* as a key resource during this public health crisis, the Council on Ethical and Judicial Affairs recognized that additional guidance is needed to explicitly address the ethical implications of social forces that drive how and to whom health care is provided. What role, that is, should physicians and health care institutions play as agents for change in the face of manifest inequity?

Looking critically at the *Code,* the council observed that existing guidance does indeed speak to matters of fairness or justice in health care. Principle IX of the *AMA Principles of Medical Ethics* enjoins physicians to "support access to care for all people." Opinions variously enjoin physicians to promote access to care and address financial barriers to care; to avoid discriminating against or exploiting patients and research participants; to be prudent stewards of health care resources in the interests of all; to ensure that limited resources are allocated solely on the basis of medical criteria; even to ensure that organs and tissues for transplantation are treated as a national rather than a regional or local resource. (Appendix A.)

At the same time, the council recognized that, for the most part, guidance in the *Code* focuses narrowly on the conduct of individual physicians in their interactions with individual patients. By presenting guidance that addresses the manifestations of inequitable care, not the root causes, the *Code* tacitly presumes that inequity flows straightforward from the decisions and actions of individuals. Yet medicine has long understood that social factors play a critical role in health status and health disparities.

Such an individualist approach further fails to realize that the social drivers of health have deep and powerful histories. While important and necessary, it is not sufficient to remind physicians of their professional ethical obligations not to discriminate against patients based on explicit and continuously evolving "protected categories" of civil rights law. A professional responsibility to promote equitable care calls for situated, historically informed social and political knowledge of a sort that physicians are not specifically trained in, however, and on forms of discernment and self-reflection on which ethics guidance is generally silent.

*Reports of the Council on Ethical and Judicial Affairs are assigned to the Reference Committee on Amendments to Constitution and Bylaws. They may be adopted, not adopted, or referred. A report may not be amended, except to clarify the meaning of the report and only with the concurrence of the Council.

This report by the Council on Ethical and Judicial Affairs seeks to explore more thoughtfully the joint responsibilities that physicians as individual professionals and health care institutions as sites of service have to ensure that all patients in their practices and communities receive "safe, effective, patient centered, timely, efficient, and equitable care."[Opinion 1.1.6]

FOUNDATIONAL ETHICS

At its core, the *Code* rests on an understanding of medicine as inherently a moral activity, rooted in the encounter between "someone who is ill, on the one hand, and someone who professes to heal, on the other," in the words of physician and ethicist Edmund Pellegrino [1]. The "covenant of trust" established in such encounters binds physicians in a duty of fidelity to patients. The *Code* enjoins physicians, as medical professionals, to "dedicate themselves to providing competent medical care and respect for human dignity and rights."[Principle I] Doing so encompasses a responsibility for physicians to "examine their own practices to ensure that inappropriate considerations about race, gender identity, sexual orientation, sociodemographic factors, or other nonclinical factors, do not affect their judgment."[Opinion 8.5] Competent physicians "cultivate continuous self-awareness and self-observation," and strive to "be attentive to environmental and other factors that may compromise their ability to bring appropriate skills to the care of individual patients and act in the patient's best interest."[Opinion 8.13]

Together these commitments entail physicians' responsibility to become attentive to how their own perceptions, attitudes, and assumptions can color how they interact with different patients and to take steps to ensure that in delivering care their behavior as individuals neither privileges some patients nor disadvantages others.

It is also the case that "clinical medicine is the final pathway through which public policies ultimately come to affect the lives of sick persons" [2]. Although Pellegrino had in mind the specific example of managed care as the public policy in question, his observation holds more broadly. Physicians' duty of fidelity also encompasses the responsibility to recognize and address the ways in which the policies and practices of health care institutions shape patients' experience of health, illness, and care.

SHIFTING PERSPECTIVE: FROM "CULTURAL COMPETENCE" TO "STRUCTURAL COMPETENCE"

Training physicians for "cultural competence" has been promoted as a way to ensure that physicians take account of non-medical dimensions of health and illness, with the ultimate goal of promoting robust respect for patient autonomy and improving quality of care. By learning how to recognize "cross-cultural expressions of illness and health," the thinking has been, physicians would "be able to counteract the marginalization of patients by race, ethnicity, social class, religion, sexual orientation or other markers of difference" [3]. Yet as the physician anthropologist Arthur Kleinman noted, "culture" is not reducible to a technical skill in which clinicians can develop expertise [4]. Moreover, "cultural factors are not always central to a case, and might actually hinder a more practical understanding of an episode [of illness]."

Patients' health status, outcomes, and experiences of care are shaped significantly by social, economic, and political drivers unrelated to cultural understandings of illness and healing [3,5]. To make meaningful progress in achieving equitable care, physicians must recognize how "the pathologies of social systems impact the material realities of their patients' lives" [3]. As the pathologist Rudolf Virchow noted more than a century ago, "If medicine is to fulfill her great task,

then she must enter the political and social life. Do we not always find the diseases of the populace traceable to defects in society" [5]?

Truly to address their patients' health needs, physicians must acquire skills, not of cultural competence, but of "structural competence." That is:

> the trained ability to discern how a host of issues defined clinically as symptoms, attitudes, or diseases (e.g., depression, hypertension, obesity, smoking, medication "noncompliance," trauma, psychosis) also represent downstream implications of a number of upstream decisions, about matters such as health care and food delivery systems, zoning laws, urban and rural infrastructures, medicalization, or even about the very definitions of health and illness [3,6].

ADDRESSING INEQUITY, PROMOTING EQUITABLE CARE[1]

Public health expert Camara Jones observed that when people think about "racism" they think of "personally mediated racism": the expression of prejudice and discrimination based on "differential assumptions about the abilities, motives, and intentions of others" and "differential actions toward others according to their race" [7]. Personally mediated racism may be intentional or unintentional, manifest in acts of commission and acts of omission. Jones distinguishes this from "institutional racism," that is, "differential access to goods, services, and opportunities of society by race." Institutionalized racism, she notes, is structural, "codified in our institutions of custom, practice, and law, so there need not be an identifiable perpetrator."

Fulfilling the ethical responsibility to promote equitable care, then, requires that medicine address inequity and discrimination not only at the level of personal interactions among physicians and patients, but equally at the institutional level in the policies and practices that structure interactions within an institution's walls and in the institution's interactions with the community (communities) beyond its walls.

Personal Interactions

Physicians individually cannot be expected to repair structural discrimination and inequity in health care on their own, but they *can* hold themselves accountable for the ways in which their own interactions with patients, families, and fellow health care personnel may contribute to perpetuating discrimination and inequity. Doing so requires that physicians cultivate awareness of how they perceive others, how they speak about or describe persons and medical conditions, and how they approach interactions with patients and others one on one. As first steps, they must address in their own behaviors and implicit biases, such as the use of stigmatizing language and habits of discrediting patients' knowledge and reports of illness. So too, adopting a trauma-informed care approach can help physicians recognize and address the medical and psychosocial effects for patients of persistent marginalization and discrimination.

Implicit bias. In its 2003 report, *Unequal Treatment,* the Institute of Medicine linked health care professionals' implicit bias—that is, bias, prejudices, and stereotypes that are not consciously held or recognized—to health disparities [8]. Subsequent research has confirmed that in health care, bias is "negatively associated with both care satisfaction and provider trust among racial/ethnic minority patients" [9]. Among African American patients, for example, physicians' implicit bias has been

[1] See Appendix B for selected resources for individuals and institutions.

shown to be a "relatively consistent predictor of ethnic/racial differences in patients' subjective experiences with their health care providers" [10].

Whether implicit bias is straightforwardly linked to discriminatory behavior is open to question [10], but learning to recognize one's own biases offers a point of entry for cultivating the awareness and critical self-reflection required of physicians as medical professionals. The most effective training will affirm learners' egalitarian goals and commitment and go beyond raising awareness to teach how to control implicit bias, using active learning techniques that enable learners to practice new skills [10]. Training to "replace negative nonverbal or paraverbal behaviors with positive communication behaviors" can be a practical, attainable way to improve health outcomes [11].

Stigmatizing language. How physicians and other health care personnel speak to and about patients conveys multiple messages, intended and otherwise. Languages that "others" patients, "blames" them for their illness, or casts them as dangerous or threatening can influence care in the moment and risks perpetuating bias by inscribing it in the medical record [12,13]. Thus the U.S. National Institute on Drug Abuse, for example, offers preferred language for talking about addiction [14]; Diabetes Australia likewise draws attention to problematic language used about diabetes [15]. Phrasing that suggests negative attitudes toward patients, questions patients' credibility, conveys disapproval of patients, or stereotypes them by race or social class captured in the medical record can undermine care [13]. By the same token, complimenting patients, offering patient-centered accounts of health behaviors that minimizes blame, and incorporating into the record details that personalize the patient as an individual can foster less discriminatory, more effective interactions [13].

Language that calls into question patients' credibility or their ability to report their experience of illness accurately or appropriately constitutes a form of *epistemic injustice* [16]. It demeans patients as knowers based on physicians' expectations, explicit or implicit, about what information is relevant and meaningful for the health care encounter. It privileges a biomedical model of disease over patients' culturally and socially informed explanatory models and lived experience of illness [4], at times in ways that may actually be harmful to patients when marginalizing their reports of illness undermine diagnostic accuracy, isolate patients, or even lead them to withdraw from care [17]. Epistemic injustice may be both more common and more likely to be harmful for patients whose conditions are poorly understood or contested biomedically—as has been the case with chronic fatigue syndrome, for example [17]. By minimizing or outright dismissing the patient's contribution to the encounter, physicians undermine trust and the opportunity to create an effective therapeutic relationship.

Trauma-informed practice. Adopting a trauma-informed approach to care offers further opportunity for physicians and other health care professionals to promote equitable care. Trauma-informed care recognizes that trauma "has lasting adverse effects on the individual's functioning and mental, physical, social, emotional, or spiritual well-being" [18]. "Trauma" encompasses more than the effects of a specific event—sexual abuse, interpersonal violence, or exposure to combat, for example [19]. It also acknowledges the impact of social, economic, and political structures that cause harm to individuals and communities captured in Paul Farmer's concept of "structural violence" [20], which can carry forward through descendants of those who suffered [E.g., 21,22].

Suggestions for implementing trauma-informed care focus on patient-centered communication practices, understanding the effects of trauma, interprofessional collaboration, understanding how one's own experience of trauma may influence interactions with patients, and specific screening for

trauma [19]. Trauma-informed practice acknowledges that physicians cannot change a patient's past; rather, it offers a way to help improve patients' function and well-being in the present [23].

Institutional Policies and Practices

Health care institutions share in medicine's fundamental commitment of fidelity to patients. Institutions are the physical and social settings of medical practice, constellations of resources and relationships established to enable the provision of care. Indeed, health care only happens in and through institutions. They reflect the attitudes of clinical professionals, administrators, and society even as they help to form the attitudes of practitioners and shape the delivery of care. In contemporary health care, institutions are the primary medium by which health care interacts with the political, economic, and social structures of society and the major means by which care is delivered. They too bear the ethical responsibilities of medicine.

The policies and practices of health care institutions importantly determine what care choices are available to patients and physicians. Regardless of size, physician practices, hospitals, and other institutions share responsibility to promote equitable access and care for all. What an institution chooses to know about its patients and staff and how that information factors into institutional decision making and patterns of practice can play a significant role in whether or to what extent the institution promotes equitable care across the board.

Social drivers of health. Just as how physicians perceive, speak about, and interact with others can perpetuate discriminatory attitudes and inequity, so too can organizational decisions about what information the institution captures about the patients it serves, how it does so, how that information is available to clinicians for treatment purposes, and how (or whether) it informs institutional operations. The foundational "explanatory model" of allopathic medicine—to borrow Kleinman's terminology again—grounds diagnosis and treatment jointly in biological function and personal health behaviors, despite ample evidence that social factors powerfully influence health and the delivery of health care [3,20,24].

Recognition of the significant health impact of structural factors has led to calls to rethink the social history to capture information beyond questions about tobacco or alcohol use to glean information about the socioeconomic and political realities of patients' lives.[25]. For example, initiatives at Brigham & Women's Health and Massachusetts General Hospital have expanded history taking to gather information about patients' particular life circumstances, emotional health, perceptions of health care, and health-related behaviors, as well as access to and utilization of health care [26]. Other institutions have deployed tools to assess patients' "structural vulnerability," including whether someone has money to pay for rent, food, and utilities; a safe, stable place to sleep; friends, family, or others who can provide help when needed; or has experienced discrimination [27,28].

Some health care institutions have gone beyond collecting data to intervene directly to address the extra-medical factors that so deeply affect health through initiatives to promote income security, medical-legal partnerships to help patients address legal issues that impinge on health status, and clinic-based child literacy programs among others [29,30].

Race-based versus race-conscious tools. As CEJA noted in its 2021 informational report on augmented intelligence in medicine, scholars have argued compellingly that medicine in the U.S. helps to perpetuate racial discrimination and inequity—and provide inadequate clinical care—when it grounds research and clinical practice in notions of race as unproblematically a genetic, biological characteristic of patients rather than a socially mediated classification of persons [31,32].

A growing body of evidence demonstrates that race-adjusted practices, intended to improve care, are often in fact harmful [32], particularly as a result of biases built into clinical algorithms and machine learning tools intended to support prediction of risk or diagnosis [33,34].

Nonetheless, ignoring race and ethnicity entirely can also be damaging. As imperfect as the category of race (/ethnicity) is, as a proxy measure it does indirectly capture important information about the influence of sociocultural, economic, environmental and genetic factors on health and health outcomes [31]. Scholars urge scientists and clinicians to continue to use categories of race and ethnicity until better predictors become available [31]. Ensuring that when racial categories are used, they promote equitable health remains of the upmost importance, however.

Aversive racism. How institutions interact with and treat their staff and affiliated personnel can also perpetuate discrimination and inequitable care—e.g., policies and practices for hiring and promoting personnel can reflect aversive racism, "which results from the interplay of … social dominance, implicit bias, and in-group favoritism" [35]. Aversive racism is reflected in laments about lack of qualified candidates from historically minoritized communities; it attributes an individual's inability to thrive within an organization to their personal characteristics or behaviors; and it buys into the "myth of meritocracy" that sees success as a function of ability while ignoring the effects that structural inequity has on opportunity. To the extent that racial, ethnic, or gender concordance between patient and physician improves patient satisfaction with care and health outcomes, fostering and respecting diversity among health care personnel can be a path toward promoting more equitable care.

Equity, safety, and quality improvement. As a species of "wicked problem," a term first introduced in the realm of urban planning [36], inequitable care doesn't lend itself to a simple, one-time solution. Wicked problems are dynamic, highly complex, and resistant to solution; generally there is "significant disagreement [among stakeholders] about the nature and cause of the problem and . . . potential solutions" [37]. By their nature, wicked problems cannot be solved by individual action but must be addressed at the organizational or systems level. To address ongoing inequities in care, institutions must first acknowledge that such inequities exist—they must ensure that they have compendious information about patients and leverage that information to understand where and how change needs to be made. For example, studies show that African American patients with heart failure tend to have poorer outcomes than white patients—but *why* that is the case isn't apparent without further exploration. A retrospective study at Brigham & Women's Health found that patients who receive care in a cardiology unit rather than on a medical ward have better outcomes, and that African American and Latinx patients were less frequently admitted to cardiology from the emergency department, as were women, suggesting an institutional pattern that may contribute to disparate outcomes [38].

Health care institutions in fact already have models on hand that can be adapted to promote equitable care in the form, especially, of patient safety initiatives [39]. Like patient safety, equity initiatives can focus on redesigning the processes and systems that perpetuate discrimination and inequity. In both realms, well-designed initiatives:

> balance [a] systems approach with individual accountability. Both recognize the role of cognitive, often subconscious biases in contributing to unintentional harm. Both highlight the importance of psychological safety to support difficult conversations. And both avoid excessive focus on individual or interpersonal blame. The goal isn't to shame individual clinicians but to build resilient systems around them that support optimal behaviors [39].

ADVOCATING FOR CHANGE

For both individual health care professionals and for health care institutions, the commitment to serve patients in need entails obligations to examine prevailing attitudes, habits, policies, and practices that determine what care is available to whom and to take steps to remove or re-engineer obstacles that undermine the ability to ensure equitable care for all.

Physicians have a responsibility to recognize that despite ongoing change in health care and seeming erosion of their authority they *do* have power within their institutions, and to use their voice and status to advocate for change. They have a responsibility to help create opportunities in which to raise challenging issues, to argue for tools to enable difficult conversations, and to develop relationships within their institutions to support one another. Ultimately, physicians have a responsibility to thoughtfully and constructively identify and begin to address the formal and informal expectations that create barriers to equitable care for their patients and equitable treatment of those who provide care and support caregiving within the health care institution.

Health care institutions have a responsibility to foster change within their walls, and to acknowledge the multiple roles they play in their communities. Health care institutions are deeply embedded in the life of their communities beyond their role in delivering care—they are employers, purchasers of goods and services, property owners, and civic leadership. A growing number of institutions recognize that as "anchor institutions" within their communities they can—and should—be agents for positive change. As member institutions of the Healthcare Anchor Network observe,

> Hospitals and health systems are critical local economic engines and mission-driven organizations inextricably linked to the long-term well-being of those we serve—because of this, we as healthcare leaders, are uniquely positioned and incentivized to play a more active role in supporting our local economies. We have an opportunity and obligation to improve health and well-being outcomes in the communities we serve and confront economic and social instability in our nation that remain obstacles to that goal [40].

The Institute for Healthcare Improvement's Pursuing Equity Initiative identifies five strategies institutions should adopt to eliminate racism—and other forms of discrimination—in health care:

- Understanding the context of racism and other forms of oppression among the communities in which the institution is located;
- Normalizing discussion of oppression and listening to stakeholders to understand their experience;
- Meaningfully promoting workforce diversity;
- Developing and implementing business practices and policies through an equity lens;
- Adopting data systems that identify and track equity gaps in clinical outcomes;
- Using quality improvement strategies to narrow equity gaps and improve health care for all [41].

RECOMMENDATION

In light of these considerations, the Council on Ethical and Judicial Affairs recommends that the following be adopted and the remainder of this report be filed:

> Medicine at its core is a moral activity rooted in the encounter between a patient who is ill and a physician who professes to heal. The "covenant of trust" established in that encounter binds physicians in a duty of fidelity to patients. As witness to how public policies ultimately affect

the lives of sick persons, physicians' duty of fidelity also encompasses a responsibility to recognize and address how the policies and practices of the institutions within which physicians work shape patients' experience of health, illness, and care. As the physical and social settings of medical practice, hospitals and other health care institutions share the duty of fidelity and, with physicians, have a responsibility to ensure that the care patients receive is safe, effective, patient centered, timely, efficient, and equitable.

Enduring health disparities across patient populations challenge these duties of fidelity. Disparities reflect the habits and practices of individual clinicians and the policies and decisions of individual health care institutions, as well as deeply embedded, historically rooted socioeconomic and political dynamics. Neither individual physicians nor health care institutions can entirely resolve the problems of discrimination and inequity that underlie health disparities, but they can and must accept responsibility to be agents for change.

In their individual practice, physicians have an ethical responsibility to address barriers to equitable care that arise in their interactions with patients and staff. They should:

a) Cultivate self-awareness and strategies for change, for example, by taking advantage of training and other resources to recognize and address implicit bias;
b) Recognize and avoid using language that stigmatizes or demeans patients in face-to-face interactions and entries in the medical record;
c) Use the social history to capture information about non-medical factors that affect a patient's health status and access to care to inform their relationships with patients and the care they provide.

Within their institutions, as professionals with unique knowledge, skill, experience, and status, physicians should collaborate with colleagues to promote change. They should:

d) Support one another in creating opportunities for critical reflection across the institution;
e) Identify institutional policies and practices that perpetuate or create barriers to equitable care;
f) Participate in designing and supporting well-considered strategies for change to ensure equitable care for all.

As institutions in and through which health care occurs, hospitals and other health care institutions share medicine's core values and commitment of fidelity, and with it ethical responsibility to promote equitable care for all. Moreover, as entities that occupy positions of power and privilege within their communities, health care institutions are uniquely positioned to be agents for change. They should:

g) Support efforts within the institution to identify and change institutional policies and practices that may perpetuate or create barriers to equitable care;
h) Engage stakeholders to understand the histories of the communities they serve and recognize local drivers of inequities in health and health care;
i) Identify opportunities and adopt strategies to leverage their status within the community to minimize conditions of living that contribute to adverse health status.

(New HOD policy)

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS*

CEJA Report 05-A-23

Subject: CEJA's Sunset Review of 2013 House Policies

Presented by: Peter A. Schwartz, MD, Chair

Referred to: Reference Committee on Amendments to Constitution and Bylaws

---

Policy G-600.110, "Sunset Mechanism for AMA Policy," calls for the decennial review of American Medical Association (AMA) policies to ensure that our AMA's policy database is current, coherent, and relevant. This policy reads as follows, laying out the parameters for review and specifying the needed procedures:

1. As the House of Delegates adopts policies, a maximum ten-year time horizon shall exist. A policy will typically sunset after ten years unless action is taken by the House of Delegates to retain it. Any action of our AMA House that reaffirms or amends an existing policy position shall reset the sunset "clock," making the reaffirmed or amended policy viable for another 10 years.

2. In the implementation and ongoing operation of our AMA policy sunset mechanism, the following procedures shall be followed: (a) Each year, the Speakers shall provide a list of policies that are subject to review under the policy sunset mechanism; (b) Such policies shall be assigned to the appropriate AMA councils for review; (c) Each AMA council that has been asked to review policies shall develop and submit a report to the House of Delegates identifying policies that are scheduled to sunset; (d) For each policy under review, the reviewing council can recommend one of the following actions: (i) retain the policy; (ii) sunset the policy; (iii) retain part of the policy; or (iv) reconcile the policy with more recent and like policy; (e) For each recommendation that it makes to retain a policy in any fashion, the reviewing council shall provide a succinct, but cogent justification (f) The Speakers shall determine the best way for the House of Delegates to handle the sunset reports.

3. Nothing in this policy shall prohibit a report to the HOD or resolution to sunset a policy earlier than its 10-year horizon if it is no longer relevant, has been superseded by a more current policy, or has been accomplished.

4. The AMA councils and the House of Delegates should conform to the following guidelines for sunset: (a) when a policy is no longer relevant or necessary; (b) when a policy or directive has been accomplished; or (c) when the policy or directive is part of an established AMA practice that is transparent to the House and codified elsewhere such as the AMA Bylaws or the AMA House of Delegates Reference Manual: Procedures, Policies and Practices.

---

*Reports of the Council on Ethical and Judicial Affairs are assigned to the reference committee on Amendments to Constitution and Bylaws. They may be adopted, not adopted, or referred. A report may not be amended, except to clarify the meaning of the report and only with the concurrence of the Council.

5. The most recent policy shall be deemed to supersede contradictory past AMA policies.

6. Sunset policies will be retained in the AMA historical archives.

RECOMMENDATION

The Council on Ethical and Judicial Affairs recommends that the House of Delegates policies that are listed in the Appendix to this report be acted upon in the manner indicated and the remainder of this report be filed. (Directive to Take Action)

Fiscal Note: Less than $500.

APPENDIX - RECOMMENDED ACTIONS

Policy Number	Title	Text	Recommendation
D-480.974	Professionalism in Telemedicine and Telehealth	The Council on Ethical and Judicial Affairs will review Opinions relating to telemedicine/telehealth and update the Code of Medical Ethics as appropriate. (BOT Rep. 22, A-13)	Rescind; Directive was fulfilled by issuance of Opinion 1.2.12 – "Ethical Practice in Telemedicine".
H-185.937	Reproductive Parity	Our AMA supports legislation and policies that require any health insurance products offering maternity services to include all choices in the management of reproductive medical care. (Res. 4, I-13)	Retain; remains relevant.
H-245.984	Treatment Decisions for Seriously Ill Newborns	Physicians should play an active role in advocating for changes in the Child Abuse Prevention Act as well as state laws that require physicians to violate the ethical guidelines stated in E-2.215 (Treatment Decisions for Seriously Ill Newborns). (CEJA Rep. I, A-92; Modified and Reaffirmed: CEJA Rep. 1, A-03; Reaffirmed: CEJA Rep. 4, A-13)	Retain; remains relevant.
H-25.999	Health Care for Older Patients	The AMA: (1) endorses and encourages further experimentation and application of home-centered programs of care for older patients and recommends further application of other new experiments in providing better health care, such as rehabilitation education services in nursing homes, chronic illness referral centers, and progressive patient care in hospitals; (2) recommends that there be increased emphasis at all levels of medical education on the new challenges being presented to physicians in health care of the older person, on the growing opportunities for effective use of health maintenance programs and restorative services with this age group, and on the importance of a total view of health, embracing social, psychological, economic, and vocational aspects; (3) encourages continued leadership and participation by the medical profession in community programs for seniors; and (4) will explore and advocate for policies that best improve access to, and the availability of, high quality geriatric care for older adults in the post-acute and long term care continuum.. (Committee on Aging Report, I-60; Reaffirmed: CLRPD Rep. C, A-88; Reaffirmed: Sunset Report, I-98; Reaffirmed: CSAPH Rep. 2, A-08; Reaffirmation A-11; Appended: Res. 709, A-13)	Retain; remains relevant.
H-295.865	Discrimination Against Patients	Our AMA opposes the refusal by medical students to participate in the care of patients on	Retain; remains relevant.

	by Medical Students	the basis of the patient's race, ethnicity, age, religion, ability, marital status, sexual orientation, sex, or gender identity. (Res. 1, A-13)	
H-450.942	Patient Adherence to Treatment Plans	It is AMA policy that patient adherence to any medical treatment program is necessary in order to achieve high quality and cost-effective health care. (Res. 505, A-06; Reaffirmed: BOT Rep. 8, I-11; Reaffirmed: Res. 818, I-13)	Retain; remains relevant.
H-478.988	Data Ownership and Access to Clinical Data in Health Information Exchanges	1. Our AMA: (A) will continue its efforts to educate physicians on health information exchange (HIE) issues, with particular emphasis placed on alerting physicians to the importance of thoroughly reviewing HIE business associate contracts and clarifying any and all secondary uses of HIE data prior to agreeing to participate in a particular HIE; (B) will advocate for HIEs to provide an overview of their business models and offered services to physicians who are considering joining the organization; (C) will advocate for HIE contracts to clearly identify details of participation, including transparency regarding any secondary uses of patient data; (D) will advocate that HIEs comply with all provisions of HIPAA in handling clinical data; and (E) encourages physicians who experience problems accessing and using HIE data to inform the AMA about these issues. 2. Our AMA supports the inclusion of actively practicing physicians and patients in health information exchange governing structures. 3. Our AMA will advocate that physician participation in health information exchanges should be voluntary, to support and protect physician freedom of practice. 4. Our AMA will advocate that the direct and indirect costs of participating in health information exchanges should not discourage physician participation or undermine the economic viability of physician practices. (BOT Rep. 17, A-13; CMS Rep. 6, A-13; Reaffirmed: CMS Rep. 4, I-13)	Retain; remains relevant.
H-5.989	Freedom of Communication Between Physicians and Patients	It is the policy of the AMA: (1) to strongly condemn any interference by the government or other third parties that causes a physician to compromise his or her medical judgment as to what information or treatment is in the best interest of the patient;	Retain; remains relevant.

		(2) working with other organizations as appropriate, to vigorously pursue legislative relief from regulations or statutes that prevent physicians from freely discussing with or providing information to patients about medical care and procedures or which interfere with the physician-patient relationship; (3) to communicate to HHS its continued opposition to any regulation that proposes restrictions on physician-patient communications; and (4) to inform the American public as to the dangers inherent in regulations or statutes restricting communication between physicians and their patients. (Sub. Res. 213, A-91; Reaffirmed: Sub. Res. 232, I-91; Reaffirmed by Rules & Credentials Cmt., A-96; Reaffirmed by Sub. Res. 133 and BOT Rep. 26, A-97; Reaffirmed by Sub. Res. 203 and 707, A-98; Reaffirmed: Res. 703, A-00; Reaffirmed in lieu of Res. 823, I-07; Reaffirmation I-09; Reaffirmation: I-12; Reaffirmed in lieu of Res. 5, I-13)	
H-520.998	Medical Neutrality	Our AMA supports medical neutrality, under the principles of the Geneva Convention, for all health care workers and the sick and wounded in all countries. (Res. 505, A-06; Reaffirmed: BOT Rep. 8, I-11; Reaffirmed: Res. 818, I-13)	Retain; remains relevant.
H-525.981	Discrimination of Women Physicians in Hospital Locker Facilities	The AMA, in an effort to promote professional equality as guaranteed by the law, requests that appropriate organizations require: that male and female physicians have equitable locker facilities including equal equipment, similar luxuries and equal access to uniforms. (Res. 810, A-93; Modified and Reaffirmed: CCB Rep. 6, A-03; Reaffirmed: CCB/CLRPD Rep. 4, A-13)	Retain; remains relevant.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 001
(A-23)

Introduced by: Medical Student Section

Subject: Opposing Mandated Reporting of LGBTQ+ Status

Referred to: Reference Committee on Amendments to Constitution and Bylaws

---

Whereas, Outing is defined as "exposing someone's lesbian, gay, bisexual, transgender or gender non-binary identity to others without their permission"[1]; and

Whereas, Mandatory reporting can "out" LGBTQ+ individuals and those questioning their sexual orientation and/or gender identity[2]; and

Whereas, Protection of LGBTQ+ and questioning individuals from being "outed" prevents additional physical safety risks, stress, mental health degradation, and discrimination[3,4]; and

Whereas, There has been a recent wave of directives, resolutions, and laws in states such as Texas and Florida that require mandated reporters, including physicians, to disclose an individual's gender identity and/or sexual orientation to outside entities[5,6,7,8]; therefore be it

RESOLVED, That our American Medical Association amend Policy H-65.959, "Opposing Mandated Reporting of People Who Question Their Gender Identity" by addition to read as follows:

> **Opposing Mandated Reporting of People Who Question Their Gender Identity, H-65.959**
> Our AMA opposes mandated reporting of individuals who identify as part of the LGBTQ+ community and those who question or express interest in exploring their gender identity and/or sexual orientation. (Modify Current Policy)

Fiscal Note: Minimal - less than $1,000

Received: 3/31/23

RELEVANT AMA POLICY

Opposing Mandated Reporting of People Who Question Their Gender Identity H-65.959
Our AMA opposes mandated reporting of individuals who question or express interest in exploring their gender identity.
Citation: Res. 015, A-19;

Eliminating Health Disparities - Promoting Awareness and Education of Sexual Orientation and Gender Identity Health Issues in Medical Education H-295.878
Our AMA: (1) supports the right of medical students and residents to form groups and meet on-site to further their medical education or enhance patient care without regard to their gender, gender identity, sexual orientation, race, religion, disability, ethnic origin, national origin or age; (2) supports students and residents who wish to conduct on-site educational seminars and workshops on health issues related to sexual orientation and gender identity; and (3) encourages medical education accreditation bodies to both continue to encourage and periodically reassess education on health issues related to sexual orientation and gender identity in the basic science, clinical care, and cultural competency curricula in undergraduate and graduate medical education.
Citation: Res. 323, A-05; Modified in lieu of Res. 906, I-10; Reaffirmation A-11; Reaffirmation A-12; Reaffirmation A-16; Modified: Res. 16, A-18; Modified: Res. 302, I-19;

Nondiscriminatory Policy for the Health Care Needs of LGBTQ Populations H-65.976
Our AMA encourages physician practices, medical schools, hospitals, and clinics to broaden any nondiscriminatory statement made to patients, health care workers, or employees to include "sexual orientation, sex, or gender identity" in any nondiscrimination statement.
Citation: Res. 414, A-04; Modified: BOT Rep. 11, A-07; Modified: Res. 08, A-16; Modified: Res. 903, I-17;

Health Care Needs of Lesbian, Gay, Bisexual, Transgender and Queer Populations H-160.991
1. Our AMA: (a) believes that the physician's nonjudgmental recognition of patients' sexual orientations, sexual behaviors, and gender identities enhances the ability to render optimal patient care in health as well as in illness. In the case of lesbian, gay, bisexual, transgender, queer/questioning, and other (LGBTQ) patients, this recognition is especially important to address the specific health care needs of people who are or may be LGBTQ; (b) is committed to taking a leadership role in: (i) educating physicians on the current state of research in and knowledge of LGBTQ Health and the need to elicit relevant gender and sexuality information from our patients; these efforts should start in medical school, but must also be a part of continuing medical education; (ii) educating physicians to recognize the physical and psychological needs of LGBTQ patients; (iii) encouraging the development of educational programs in LGBTQ Health; (iv) encouraging physicians to seek out local or national experts in the health care needs of LGBTQ people so that all physicians will achieve a better understanding of the medical needs of these populations; and (v) working with LGBTQ communities to offer physicians the opportunity to better understand the medical needs of LGBTQ patients; and (c) opposes, the use of "reparative" or "conversion" therapy for sexual orientation or gender identity.
2. Our AMA will collaborate with our partner organizations to educate physicians regarding: (i) the need for sexual and gender minority individuals to undergo regular cancer and sexually transmitted infection screenings based on anatomy due to their comparable or elevated risk for these conditions; and (ii) the need for comprehensive screening for sexually transmitted diseases in men who have sex with men; (iii) appropriate safe sex techniques to avoid the risk for sexually transmitted diseases; and (iv) that individuals who identify as a sexual and/or gender minority (lesbian, gay, bisexual, transgender, queer/questioning individuals) experience intimate partner violence, and how sexual and gender minorities present with intimate partner violence differs from their cisgender, heterosexual peers and may have unique complicating factors.

3. Our AMA will continue to work alongside our partner organizations, including GLMA, to increase physician competency on LGBTQ health issues.
4. Our AMA will continue to explore opportunities to collaborate with other organizations, focusing on issues of mutual concern in order to provide the most comprehensive and up-to-date education and information to enable the provision of high quality and culturally competent care to LGBTQ people.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 002
(A-23)

Introduced by: Medical Student Section

Subject: Exclusion of Race and Ethnicity in the First Sentence of Case Reports

Referred to: Reference Committee on Amendments to Constitution and Bylaws

---

Whereas, Patients of color often have worse healthcare outcomes than White patients, particularly noticeable in the decreased life expectancies for Black and Indigenous patients[1,2]; and

Whereas, Non-Hispanic White patients report lower satisfaction with their doctors, and patients of color routinely report worse treatment and experiencing bias and racism when accessing care[1,3]; and

Whereas, Medical racism has been present throughout history and its legacy continues to unfold today, manifesting as unethical experiments and substandard, unnecessary, or incorrect treatments being given to minoritized racial groups historically and continuing to be discovered even today[4,5]; and

Whereas, The perpetuation of racial bias begins early in preclinical medical education, such as when race is taught to be a biological factor or a substitute for education, income, or genetics, which also deeply harms medical trainees from minoritized communities by perpetuating the belief that their race makes them biologically different, unusual, or inferior [6,7]; and

Whereas, A common example is that Black race is often used as a proxy for sickle cell trait or disease, ignoring that sickle cell genetics can and do occur in people of any race, leading to missed diagnoses in some individuals and also opening the possibility of “premature closure” in diagnoses of Black patients experiencing symptoms that are similar to sickle cell but are occurring due to a different pathological process[7,8]; and

Whereas, Analyses of lecture slides and clinical vignettes used in medical education have found that race or ethnicity is often presented as a biological risk factor or linked to certain behaviors, without addressing social context or history[9-11]; and

Whereas, During training, medical students learn to use race as a heuristic in preclinical exams and on standardized licensing examinations, with a study of first- and second-year medical students finding that all participants believed that if race was used in a board-style question, it was likely relevant to answering the question correctly[12-14]; and

Whereas, A 2017 study of common USMLE Step 1 preparation material found that of 2,011 questions, 455 (20.6%) referred to race or ethnicity in the question stem, answer, or educational objective, with 412 cases (90.5%) only mentioning it as a descriptor without a stated educational objective, while the other 43 cases (9.45%) made race or ethnicity central to the case[15]; and

Whereas, It has been argued, including in the *AMA Journal of Ethics*, that race should (a) be obtained as directly identified by the patient themselves and (b) be recorded in the social

history, rather than the first line in a case presentation, to help decrease the possibility of race being inappropriately used as a proxy while still recording this social factor as identified by the patient so that important social impacts like the patient's experiences with discrimination and racism can still be understood[10,16-18]; and

Whereas, The American Medical Association has committed to recognizing and addressing the harmful effects of racism in medicine, medical training, and medical research (H-65.952, H-65.953, D-350.984, H-165.822, D-350.981); therefore be it

RESOLVED, That our American Medical Association encourage curriculum and clinical practice that omits race and/or ethnicity from the first sentence of case reports and other medical documentation (New HOD Policy); and be it further

RESOLVED, That our AMA encourage the maintenance of race and ethnicity in other relevant sections of case reports and other medical documentation. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Racism as a Public Health Threat H-65.952
1. Our AMA acknowledges that, although the primary drivers of racial health inequity are systemic and structural racism, racism and unconscious bias within medical research and health care delivery have caused and continue to cause harm to marginalized communities and society as a whole.
2. Our AMA recognizes racism, in its systemic, cultural, interpersonal, and other forms, as a serious threat to public health, to the advancement of health equity, and a barrier to appropriate medical care.
3. Our AMA encourages the development, implementation, and evaluation of undergraduate, graduate, and continuing medical education programs and curricula that engender greater understanding of: (a) the causes, influences, and effects of systemic, cultural, institutional, and interpersonal racism; and (b) how to prevent and ameliorate the health effects of racism.
4. Our AMA: (a) supports the development of policy to combat racism and its effects; and (b) encourages governmental agencies and nongovernmental organizations to increase funding for research into the epidemiology of risks and damages related to racism and how to prevent or repair them.
5. Our AMA will work to prevent and combat the influences of racism and bias in innovative health technologies.

Elimination of Race as a Proxy for Ancestry, Genetics, and Biology in Medical Education, Research and Clinical Practice H-65.953
1. Our AMA recognizes that race is a social construct and is distinct from ethnicity, genetic ancestry, or biology.
2. Our AMA supports ending the practice of using race as a proxy for biology or genetics in medical education, research, and clinical practice.
3. Our AMA encourages undergraduate medical education, graduate medical education, and continuing medical education programs to recognize the harmful effects of presenting race as biology in medical education and that they work to mitigate these effects through curriculum change that: (a) demonstrates how the category “race” can influence health outcomes; (b) that supports race as a social construct and not a biological determinant and (c) presents race within a socio-ecological model of individual, community and society to explain how racism and systemic oppression result in racial health disparities.
4. Our AMA recommends that clinicians and researchers focus on genetics and biology, the experience of racism, and social determinants of health, and not race, when describing risk factors for disease.
Citation: Res. 11, I-20;

Reducing Discrimination in the Practice of Medicine and Health Care Education D-350.984
Our AMA will pursue avenues to collaborate with the American Public Health Association's National Campaign Against Racism in those areas where AMA's current activities align with the campaign.
Citation: BOT Action in response to referred for decision Res. 602, I-15;

Health Plan Initiatives Addressing Social Determinants of Health H-165.822
Our AMA:
1. recognizing that social determinants of health encompass more than health care, encourages new and continued partnerships among all levels of government, the private sector, philanthropic organizations, and community- and faith-based organizations to address non-medical, yet critical health needs and the underlying social determinants of health;
2. supports continued efforts by public and private health plans to address social determinants of health in health insurance benefit designs;
3. encourages public and private health plans to examine implicit bias and the role of racism and social determinants of health, including through such mechanisms as professional development and other training;
4. supports mechanisms, including the establishment of incentives, to improve the acquisition of data related to social determinants of health, while minimizing burdens on patients and physicians;
5. supports research to determine how best to integrate and finance non-medical services as part of health insurance benefit design, and the impact of covering non-medical benefits on health care and societal costs; and
6. encourages coverage pilots to test the impacts of addressing certain non-medical, yet critical health

needs, for which sufficient data and evidence are not available, on health outcomes and health care costs.
Citation: CMS Rep. 7, I-20; Reaffirmed: CMS Rep. 5, I-21; Reaffirmed: CMS Rep. 5, A-22;

Racial Essentialism in Medicine D-350.981
1. Our AMA recognizes that the false conflation of race with inherent biological or genetic traits leads to inadequate examination of true underlying disease risk factors, which exacerbates existing health inequities.
2. Our AMA encourages characterizing race as a social construct, rather than an inherent biological trait, and recognizes that when race is described as a risk factor, it is more likely to be a proxy for influences including structural racism than a proxy for genetics.
3. Our AMA will collaborate with the AAMC, AACOM, NBME, NBOME, ACGME and other appropriate stakeholders, including minority physician organizations and content experts, to identify and address aspects of medical education and board examinations which may perpetuate teachings, assessments, and practices that reinforce institutional and structural racism.
4. Our AMA will collaborate with appropriate stakeholders and content experts to develop recommendations on how to interpret or improve clinical algorithms that currently include race-based correction factors.
5. Our AMA will support research that promotes antiracist strategies to mitigate algorithmic bias in medicine.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 003
(A-23)

Introduced by: Medical Student Section

Subject: Laying the First Steps Towards a Transition to a Financial and Citizenship Need Blind Model for Organ Procurement and Transplantation

Referred to: Reference Committee on Amendments to Constitution and Bylaws

---

Whereas, The Department of Homeland Security (DHS) estimates there were 11.4 million undocumented immigrants in the United States as of 2018, 5,500 - 8,857 of whom are living with end-stage renal disease (ESRD)[1-3]; and

Whereas, Patients with ESRD who are citizens or, in some cases, documented non-citizens are eligible for coverage through Medicare, but undocumented non-citizens are not eligible for these benefits[4,5]; and

Whereas, The cost of hemodialysis is exceptionally high, with a recent analysis suggesting a cost of between $40,000 - $120,000 per year depending on the type of coverage[6]; and

Whereas, Undocumented immigrants who cannot afford the cost of maintenance hemodialysis must rely on emergent-only hemodialysis after they develop life-threatening metabolic disturbances, as the Emergency Medical Treatment and Active Labor Act (EMTALA) mandates that all states must provide federally funded emergency medical treatment irrespective of a patient's ability to pay[7]; and

Whereas, California, New York, Illinois, Washington, and Colorado have passed laws that recognize ESRD as an emergency medical condition, which allows Medicaid to be extended to patients with ESRD for dialysis in outpatient clinics, but the remaining 45 US states do not have similar exemptions[8-12]; and

Whereas, A cost-effective alternative approach to maintenance hemodialysis is kidney transplantation[13-15]; and

Whereas, Current ethical and legal guidelines dictate that medical need alone should determine how organs are allocated for transplant, including the AMA Code of Ethics 11.1.3, "Allocating Limited Health Care Resources"; and

Whereas, Only 1% of all kidney transplant recipients per year are non-citizens, which is grossly out of proportion to the 2-3% annual contribution to the donor organ pool made by this same population, suggesting that citizenship status is adversely impacting the ability of noncitizens to receive needed organs[16]; and

Whereas, While organs may be allocated to undocumented immigrants, current policy excludes this patient population from receiving federal funding (and often state and local funding as a result) to cover their transplantation and post-transplantation care[5,17-19]; and

Whereas, Undocumented persons are not only often unable to afford potentially curative kidney transplants, they are also often unable to pay for costly post-transplant immunosuppressive medications, which may lead to graft failure over time[20]; and

Whereas, Undocumented persons experience barriers to transplant eligibility for organs other than the kidneys, with a recent study of liver transplants indicating that undocumented persons rarely have access to liver transplantation and experience long wait times that can negatively affect outcomes in the transplant recipients[20-23]; and

Whereas, Each transplant center sets their own rules for organ waiting list eligibility, which may include financial status and insurance coverage alongside patient health and the presence of risk factors, thus reducing the likelihood of accessing an organ transplant for undocumented immigrants and legally present noncitizens who are uninsured[24]; and

Whereas, The United Network for Organ Sharing (UNOS) is a private non-profit that contracts with the federal government to oversee the Organ Procurement Transplant Network (OPTN), which manages and maintains a national registry for organ matching in the US[25-27]; and

Whereas, Data from the United Network for Organ Sharing (UNOS) shows that from 2013-2018, heart and lung transplant outcomes were equivalent to or even better among non-citizens compared to citizens at one year, showing that citizenship status does not adversely impact transplant outcomes[28]; and

Whereas, The OPTN collects voluntary data on citizenship status for both organ donors and recipients for two main purposes: first, to study the contribution of non-US citizens/non-US residents to the organ transplantation network in the US, and second, to monitor transplant centers to prevent medical transplant tourism, which is a widely condemned and often exploitative practice wherein wealthy patients travel abroad to purchase or obtain organs from poorer donors that can impinge on a host country's ability to provide for the transplant needs of its own population[29,30]; and

Whereas, Current OPTN policy states that a candidate's citizenship or residency status should not be considered when making decisions about organ allocation[31]; therefore be it

RESOLVED, That our American Medical Association support initiatives that decrease financial and institutional barriers for organ transplantation to uninsured or insurance-ineligible recipients, regardless of immigration status, excluding medical tourism as defined in the AMA Code of Ethics 1.2.13 (New HOD Policy); and be it further

RESOLVED, That our AMA Council on Ethical and Judicial Affairs reconsider its Guidelines for Organ Transplantation from Deceased Donors to consider the concerns of differential access based upon immigration status (Directive to Take Action); and be it further

RESOLVED, That our AMA amend H-370.982 by addition to read as follows:

Ethical Considerations in the Allocation of Organ and Other Scarce Medical Resources Among Patients, H-370.982

Our AMA has adopted the following guidelines as policy:

(1) Decisions regarding the allocation of scarce medical resources among patients should consider only ethically appropriate criteria relating to medical need. (a) These criteria include likelihood of benefit, urgency of need, change in quality of life, duration of benefit, and, in some cases, the amount

of resources required for successful treatment. In general, only very substantial differences among patients are ethically relevant; the greater the disparities, the more justified the use of these criteria becomes. In making quality of life judgments, patients should first be prioritized so that death or extremely poor outcomes are avoided; then, patients should be prioritized according to change in quality of life, but only when there are very substantial differences among patients. (b) Research should be pursued to increase knowledge of outcomes and thereby improve the accuracy of these criteria. (c) Non-medical criteria, such as ability to pay, social worth, immigration status, perceived obstacles to treatment or follow-up, patient contribution to illness, or past use of resources should not be considered.
(2) Allocation decisions should respect the individuality of patients and the particulars of individual cases as much as possible. (a) All candidates for treatment must be fully considered according to ethically appropriate criteria relating to medical need, as defined in Guideline 1. (b) When very substantial differences do not exist among potential recipients of treatment on the basis of these criteria, a "first-come-first-served" approach or some other equal opportunity mechanism should be employed to make final allocation decisions. (c) Though there are several ethically acceptable strategies for implementing these criteria, no single strategy is ethically mandated. Acceptable approaches include a three-tiered system, a minimal threshold approach, and a weighted formula.
(3) Decision making mechanisms should be objective, flexible, and consistent to ensure that all patients are treated equally. The nature of the physician-patient relationship entails that physicians of patients competing for a scarce resource must remain advocates for their patients, and therefore should not make the actual allocation decisions.
(4) Patients must be informed by their physicians of allocation criteria and procedures, as well as their chances of receiving access to scarce resources. This information should be in addition to all the customary information regarding the risks, benefits, and alternatives to any medical procedure. Patients denied access to resources have the right to be informed of the reasoning behind the decision.
(5) The allocation procedures of institutions controlling scarce resources should be disclosed to the public as well as subject to regular peer review from the medical profession.
(6) Physicians should continue to look for innovative ways to increase the availability of and access to scarce medical resources so that, as much as possible, beneficial treatments can be provided to all who need them.
(7) Physicians should accept their responsibility to promote awareness of the importance of an increase in the organ donor pool using all available means. (Modify Current HOD Policy)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Ethical Considerations in the Allocation of Organs and Other Scarce Medical Resources Among Patients H-370.982
Our AMA has adopted the following guidelines as policy: (1) Decisions regarding the allocation of scarce medical resources among patients should consider only ethically appropriate criteria relating to medical need. (a) These criteria include likelihood of benefit, urgency of need, change in quality of life, duration of benefit, and, in some cases, the amount of resources required for successful treatment. In general, only very substantial differences among patients are ethically relevant; the greater the disparities, the more justified the use of these criteria becomes. In making quality of life judgments, patients should first be prioritized so that death or extremely poor outcomes are avoided; then, patients should be prioritized according to change in quality of life, but only when there are very substantial differences among patients. (b) Research should be pursued to increase knowledge of outcomes and thereby improve the accuracy of these criteria. (c) Non-medical criteria, such as ability to pay, social worth, perceived obstacles to treatment, patient contribution to illness, or past use of resources should not be considered.
(2) Allocation decisions should respect the individuality of patients and the particulars of individual cases as much as possible. (a) All candidates for treatment must be fully considered according to ethically appropriate criteria relating to medical need, as defined in Guideline 1. (b) When very substantial differences do not exist among potential recipients of treatment on the basis of these criteria, a "first-come-first-served" approach or some other equal opportunity mechanism should be employed to make final allocation decisions. (c) Though there are several ethically acceptable strategies for implementing these criteria, no single strategy is ethically mandated. Acceptable approaches include a three-tiered system, a minimal threshold approach, and a weighted formula.
(3) Decisionmaking mechanisms should be objective, flexible, and consistent to ensure that all patients are treated equally. The nature of the physician-patient relationship entails that physicians of patients competing for a scarce resource must remain advocates for their patients, and therefore should not make the actual allocation decisions.
(4) Patients must be informed by their physicians of allocation criteria and procedures, as well as their chances of receiving access to scarce resources. This information should be in addition to all the customary information regarding the risks, benefits, and alternatives to any medical procedure. Patients denied access to resources have the right to be informed of the reasoning behind the decision.
(5) The allocation procedures of institutions controlling scarce resources should be disclosed to the public as well as subject to regular peer review from the medical profession.
(6) Physicians should continue to look for innovative ways to increase the availability of and access to scarce medical resources so that, as much as possible, beneficial treatments can be provided to all who need them.
(7) Physicians should accept their responsibility to promote awareness of the importance of an increase in the organ donor pool using all available means.
Citation: CEJA Rep. K, A-93; Reaffirmed: CSA Rep. 12, I-99; Reaffirmed: CSA Rep. 6, A-00; Appended: Res. 512, A-02; Reaffirmed: CEJA Rep. 3, A-12; Reaffirmed: CEJA Rep. 4, A-22;

E-6.2.1 Guidelines for Organ Transplantation from Deceased Donors
Transplantation offers hope to patients with organ failure. As in all patient-physician relationships, the physician’s primary concern must be the well-being of the patient. However, organ transplantation is also unique in that it involves two patients, donor and recipient, both of whose interests must be protected. Concern for the patient should always take precedence over advancing scientific knowledge.
Physicians who participate in transplantation of organs from deceased donors should:
(a) Avoid actual or perceived conflicts of interest by ensuring that:
(i) to the greatest extent possible that the health care professionals who provide care at the end of life are not directly involved in retrieving or transplanting organs from the deceased donor. Physicians should encourage health care institutions to distinguish the roles of health care professionals who solicit or coordinate organ transplantation from those who provide care at the time of death;
(ii) no member of the transplant team has any role in the decision to withdraw treatment or the pronouncement of death.
(b) Ensure that death is determined by a physician not associated with the transplant team and in accordance with accepted clinical and ethical standards.
(c) Ensure that transplant procedures are undertaken only by physicians who have the requisite medical knowledge and expertise and are carried out in adequately equipped medical facilities.

(d) Ensure that the prospective recipient (or the recipient's authorized surrogate if the individual lacks decision-making capacity) is fully informed about the procedure and has given voluntary consent in keeping with ethics guidance.
(e) Except in situations of directed donation, ensure that organs for transplantation are allocated to recipients on the basis of ethically sound criteria, including but not limited to likelihood of benefit, urgency of need, change in quality of life, duration of benefit, and, in certain cases, amount of resources required for successful treatment.
(f) Ensure that organs for transplantation are treated as a national, rather than a local or regional, resource.
(g) Refrain from placing transplant candidates on the waiting lists of multiple local transplant centers, but rather place candidates on a single waiting list for each type of organ.
Issued: 2016

E-1.2.13 Medical Tourism
Medical tourists travel to address what they deem to be unmet personal medical needs, prompted by issues of cost, timely access to services, higher quality of care or perceived superior services, or to access services that are not available in their country of residence. In many instances, patients travel on their own initiative, with or without consulting their physician, and with or without utilizing the services of commercial medical tourism companies. The care medical tourists seek may be elective procedures, medically necessary standard care, or care that is unapproved or legally or ethically prohibited in their home system.
Many medical tourists receive excellent care, but issues of safety and quality can loom large. Substandard surgical care, poor infection control, inadequate screening of blood products, and falsified or outdated medications in lower income settings of care can pose greater risks than patients would face at home. Medical tourists also face heightened travel-related risks. Patients who develop complications may need extensive follow-up care when they return home. They may pose public health risks to their home communities as well.
Medical tourism can leave home country physicians in problematic positions: Faced with the reality that medical tourists often need follow-up when they return, even if only to monitor the course of an uneventful recovery; confronted with the fact that returning medical tourists often do not have records of the procedures they underwent and the medications they received, or contact information for the foreign health care professionals who provided services, asked to make right what went wrong when patients experience complications as a result of medical travel, often having not been informed about, let alone part of the patient's decision to seek health care abroad. (IV, V, VI)
Physicians need to be aware of the implications of medical tourism for individual patients and the community.
Collectively, through their specialty societies and other professional organizations, physicians should:
(a) Support collection of and access to outcomes data from medical tourists to enhance informed decision making.
(b) Advocate for education for health care professionals about medical tourism.
(c) Advocate for appropriate oversight of medical tourism and companies that facilitate it to protect patient safety and promote high quality care.
(d) Advocate against policies that would require patients to accept care abroad as a condition of access to needed services.
Individually, physicians should:
(e) Be alert to indications that a patient may be contemplating seeking care abroad and explore with the patient the individual's concerns and wishes about care.
(f) Seek to familiarize themselves with issues in medical tourism to enable them to support informed decision making when patients approach them about getting care abroad.
(g) Help patients understand the special nature of risk and limited likelihood of benefit when they desire an unapproved therapy. Physicians should help patients frame realistic goals for care and encourage a plan of care based on scientifically recognized interventions.
(h) Advise patients who inform them in advance of a decision to seek care abroad whether the physician is or is not willing to provide follow-up care for the procedure(s), and refer the patient to other options for care.
(i) Offer their best professional guidance about a patient's decision to become a medical tourist, just as they would any other decision about care. This includes being candid when they deem a decision to

obtain specific care abroad not to be in the patient's best interests. Physicians should encourage patients who seek unapproved therapy to enroll in an appropriate clinical trial.
(j) Physicians should respond compassionately when a patient who has undergone treatment abroad without the physician's prior knowledge seeks nonemergent follow-up care. Those who are reluctant to provide such care should carefully consider:
(i) the nature and duration of the patient-physician relationship;
(ii) the likely impact on the individual patient's well-being;
(iii) the burden declining to provide follow-up care may impose on fellow professionals;
(iv) the likely impact on the health and resources of the community.
Physicians who are unable or unwilling to provide care in these circumstances have a responsibility to refer the patient to appropriate services.
Issued: 2018

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 004
(A-23)

Introduced by: Medical Student Section

Subject: Amending Policy H-525.988, "Sex and Gender Differences in Medical Research"

Referred to: Reference Committee on Amendments to Constitution and Bylaws

---

Whereas, Considering sex, which is assigned at birth, and gender, which is how an individual identifies, are necessary to provide personalized care to patients[1,2;] and

Whereas, The importance of understanding sex and gender differences in clinical medicine was recognized and agreed upon by the 103rd Congress of the United States via the passage of the National Institutes of Health (NIH) Revitalization Act of 1993, which mandated that NIH-funded clinical trials include women and minoritized populations as participants, and evaluate outcomes by sex and race or ethnicity[3,4]; and

Whereas, Recent studies have revealed that the NIH Revitalization Act of 1993 has not resulted in significant increases in reporting results by sex, race, or ethnicity[4-6]; and

Whereas, Published randomized controlled trials frequently lack adequate enrollment of women and sexual and gender minority participants, and fail to stratify of outcomes by sex or gender[6-8]; and

Whereas, In a study of 215 leading surgery journals, only 6.7% of editors were women[9]; and

Whereas, The lack of diversity in sex and gender among authors, editors, peer reviewers, and others involved in the review process for articles increases the threat of implicit bias affecting the editorial review process[9]; and

Whereas, A study evaluating whether the sex of research participants influenced the recommendation to publish an article revealed that "reviewers were almost twice as likely to recommend publication for research conducted in men than the same research conducted in women"[10]; and

Whereas, Following the conduction of an internal audits of their peer-review process to self-monitor whether a gender bias or other biases impeding inclusivity existed amongst their journals, the American Geophysical Union encouraged other publishers and societies to conduct similar audits to establish a baseline for measuring progress and to promote accountability[11]; and

Whereas, Public access to medical research can promote collaboration between researchers and help patients make informed decisions about their health[12,13]; and

Whereas, There is a lack of harmonized, sex-disaggregated and gender-disaggregated statistics available to both the research community and the general public[6,10]; and

Whereas, Even when sex-disaggregated and gender-disaggregated data or clinical practice guidelines are published, patients, physicians, community-based researchers, and research-scientists will often remain unaware of their existence, as the resources fail to use sex-specific and gender-specific terminology necessary to be cached by search engines[7]; and

Whereas, The United States federal government has demonstrated its capacity to support efforts to provide centralized access to sex-stratified and gender-stratified data for patients, physicians, and researchers via the establishment of digital repositories and publicly downloadable databases by the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK), National Center for Biotechnology Information, National Hospital Ambulatory Medical Care Survey, and National Hospital Ambulatory Medical Care Survey[15,16]; and

Whereas, In a Listening Session with transgender adults organized by the Food and Drug Administration (FDA), respondents unanimously expressed enthusiasm towards "being part of registry to collect information about surgical and medical treatment"[16,17]; and

Whereas, These federal projects have developed and maintained confidentiality standards and protocols that have protected patient privacy to date[16,18]; and

Whereas, Despite the passage of the NIH Revitalization Act of 1993, only 3 of the 22 medical devices that the Food and Drug Administration (FDA) deemed "highest risk" or "novel" from 2014 to 2017 provided subgroup analysis for both effectiveness and safety or both sensitivity and selectivity for gender, race, and age[19]; and

Whereas, Clinical guidance criteria for implantable cardioverter defibrillators use, a device subject to FDA approval, is based on clinical trials comprised of less than 30% females, and in which evidence of safety and effectiveness is much stronger in males[20]; and

Whereas, FDA studies that do not account for sex and gender may be ineffective or even harmful to women, and sexual and gender minorities' patients, as illustrated by an FDA study of the LUTONIX drug-coated balloon catheter device, in which there was an increased effectiveness in the total population primarily attributed to male patients, while female patients had significantly worse outcomes with 51% effectiveness in bladder control compared to 70% in the control group[19]; and

Whereas, Women experience twice as many adverse drug reactions as men due to possible overmedication, with one study showing 88% of evaluated FDA-approved drugs had altered drug pharmacokinetic profiles leading to higher blood concentrations and elevated elimination times in women than in men, and 96% of evaluated drugs with higher pharmacokinetic values in women than men had a higher incidence of adverse drug reactions in women[21]; and

Whereas, Current medication labeling practices maintain a binary conception of gender, which has impeded sexual and gender minority patients from obtaining necessary medication[17]; therefore be it

RESOLVED, That our American Medical Association facilitate the inclusion of women and sexual and gender minority participants in clinical research studies and reporting of how the sex and gender of these participants influenced study outcomes requires the cooperation of researchers, federal agencies, and journal editors, by amending Policy H-525.988, "Sex and Gender Differences in Medical Research," by addition and deletion to read as follows:

Sex and Gender Differences in Medical Research, H-525.988
Our AMA: (1) reaffirms that gender exclusion in broad medical studies questions the validity of the studies' impact on the health care of society at large;
(2) affirms the need to include ~~both~~ all genders in studies that involve the health of society at large and publicize its policies;
(3) supports increased funding into areas of women's health and sexual and gender minority health research;
(4) supports increased research on women's health and sexual and gender minority health and the participation of women and sexual and gender minorities in clinical trials, the results of which will permit development of evidence-based prevention and treatment strategies for all women and sexual and gender minorities from diverse cultural and ethnic groups, geographic locations, and socioeconomic status; ~~and~~
(5) recommends that all medical/scientific journal editors require, where appropriate, a sex-based and gender-based analysis of data, even if such comparisons are negative~~.~~;
(6) recommends that medical and scientific journals diversify their review processes to better represent women and sexual and gender minorities; and
(7) encourages the FDA to internally develop criteria for identifying medication and medical devices seeking FDA approval that were developed based on research that did not include adequate participation of women, and sexual and gender minorities. (Modify Current HOD Policy)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

An Expanded Definition of Women's Health H-525.976
Our AMA recognizes the term "women's health" as inclusive of all health conditions for which there is evidence that women's risks, presentations, and/or responses to treatments are different from those of men, and encourages that evidence-based information regarding the impact of sex and gender be incorporated into medical practice, research, and training.
Citation: CSAPH Rep. 05, A-16;

Comparative Effectiveness Research H-460.909
The following Principles for Creating a Centralized Comparative Effectiveness Research Entity are the official policy of our AMA:

PRINCIPLES FOR CREATING A CENTRALIZED COMPARATIVE EFFECTIVENESS RESEARCH ENTITY:

A. Value. Value can be thought of as the best balance between benefits and costs, and better value as improved clinical outcomes, quality, and/or patient satisfaction per dollar spent. Improving value in the US health care system will require both clinical and cost information. Quality comparative clinical effectiveness research (CER) will improve health care value by enhancing physician clinical judgment and fostering the delivery of patient-centered care.
B. Independence. A federally sponsored CER entity should be an objective, independent authority that produces valid, scientifically rigorous research.
C. Stable Funding. The entity should have secure and sufficient funding in order to maintain the necessary infrastructure and resources to produce quality CER. Funding source(s) must safeguard the independence of a federally sponsored CER entity.
D. Rigorous Scientifically Sound Methodology. CER should be conducted using rigorous scientific methods to ensure that conclusions from such research are evidence-based and valid for the population studied. The primary responsibility for the conduct of CER and selection of CER methodologies must rest with physicians and researchers.
E. Transparent Process. The processes for setting research priorities, establishing accepted methodologies, selecting researchers or research organizations, and disseminating findings must be transparent and provide physicians and researchers a central and significant role.
F. Significant Patient and Physician Oversight Role. The oversight body of the CER entity must provide patients, physicians (MD, DO), including clinical practice physicians, and independent scientific researchers with substantial representation and a central decision-making role(s). Both physicians and patients are uniquely motivated to provide/receive quality care while maximizing value.
G. Conflicts of Interest Disclosed and Minimized. All conflicts of interest must be disclosed and safeguards developed to minimize actual, potential and perceived conflicts of interest to ensure that stakeholders with such conflicts of interest do not undermine the integrity and legitimacy of the research findings and conclusions.

H. Scope of Research. CER should include long term and short term assessments of diagnostic and treatment modalities for a given disease or condition in a defined population of patients. Diagnostic and treatment modalities should include drugs, biologics, imaging and laboratory tests, medical devices, health services, or combinations. It should not be limited to new treatments. In addition, the findings should be re-evaluated periodically, as needed, based on the development of new alternatives and the emergence of new safety or efficacy data. The priority areas of CER should be on high volume, high cost diagnosis, treatment, and health services for which there is significant variation in practice. Research priorities and methodology should factor in any systematic variations in disease prevalence or response across groups by race, ethnicity, gender, age, geography, and economic status.
I. Dissemination of Research. The CER entity must work with health care professionals and health care professional organizations to effectively disseminate the results in a timely manner by significantly expanding dissemination capacity and intensifying efforts to communicate to physicians utilizing a variety of strategies and methods. All research findings must be readily and easily accessible to physicians as well as the public without limits imposed by the federally supported CER entity. The highest priority should be placed on targeting health care professionals and their organizations to ensure rapid dissemination to those who develop diagnostic and treatment plans.
J. Coverage and Payment. The CER entity must not have a role in making or recommending coverage or payment decisions for payers.
K. Patient Variation and Physician Discretion. Physician discretion in the treatment of individual patients remains central to the practice of medicine. CER evidence cannot adequately address the wide array of patients with their unique clinical characteristics, co-morbidities and certain genetic characteristics. In addition, patient autonomy and choice may play a significant role in both CER findings and diagnostic/treatment planning in the clinical setting. As a result, sufficient information should be made available on the limitations and exceptions of CER studies so that physicians who are making individualized treatment plans will be able to differentiate patients to whom the study findings apply from those for whom the study is not representative.
Citation: CMS Rep. 5, I-08; Reaffirmed: Res. 203, I-09; Reaffirmation I-10; Reaffirmed: CMS Rep. 05, I-16; Reaffirmed: CMS Rep. 4, I-19;

Mitigating Gender Bias in Medical Research H-460.891
Our AMA will advocate for the establishment of best practices that remove any gender bias from the review and adjudication of grant applications and submissions for publication in peer-reviewed journals, including removing names and gender identity from the applications or submissions during the review process.
Citation: Res. 610, A-19;

Increasing Minority, Female, and other Underrepresented Group Participation in Clinical Research H-460.911
1. Our AMA advocates that:
a. The Food and Drug Administration (FDA) and National Institutes of Health (NIH) conduct annual surveillance of clinical trials by gender, race, and ethnicity, including consideration of pediatric and elderly populations, to determine if proportionate representation of women and minorities is maintained in terms of enrollment and retention. This surveillance effort should be modeled after National Institute of Health guidelines on the inclusion of women and minority populations. b. The FDA have a page on its web site that details the prevalence of minorities and women in its clinical trials and its efforts to increase their enrollment and participation in this research; and c. Resources be provided to community level agencies that work with those minorities, females, and other underrepresented groups who are not proportionately represented in clinical trials to address issues of lack of access, distrust, and lack of patient awareness of the benefits of trials in their health care. These minorities include Black Individuals/African Americans, Hispanics, Asians/Pacific Islanders/Native Hawaiians, and Native Americans.
2. Our AMA recommends the following activities to the FDA in order to ensure proportionate representation of minorities, females, and other underrepresented groups in clinical trials: a. Increased fiscal support for community outreach programs; e.g., culturally relevant community education, community leaders' support, and listening to community's needs; b. Increased outreach to all physicians to encourage recruitment of patients from underrepresented groups in clinical trials; c. Continued education for all physicians and physicians-in-training on clinical trials, subject recruitment, subject safety, and possible expense reimbursements, and that this education encompass discussion of barriers that currently constrain appropriate recruitment of underrepresented groups and methods for increasing trial

accessibility for patients; d. Support for the involvement of minority physicians in the development of partnerships between minority communities and research institutions; and e. Fiscal support for minority, female, and other underrepresented groups recruitment efforts and increasing trial accessibility.
3. Our AMA advocates that specific results of outcomes in all clinical trials, both pre- and post-FDA approval, are to be determined for all subgroups of gender, race and ethnicity, including consideration of pediatric and elderly populations; and that these results are included in publication and/or freely distributed, whether or not subgroup differences exist.

Decreasing Sex and Gender Disparities in Health Outcomes H-410.946
Our AMA: (1) supports the use of decision support tools that aim to mitigate gender bias in diagnosis and treatment; and (2) encourages the use of guidelines, treatment protocols, and decision support tools specific to biological sex for conditions in which physiologic and pathophysiologic differences exist between sexes.
Citation: Res. 005, A-18;

Promoting Inclusive Gender, Sex, and Sexual Orientation Options on Medical Documentation H-315.967
Our AMA: (1) supports the voluntary inclusion of a patient's biological sex, current gender identity, sexual orientation, preferred gender pronoun(s), preferred name, and clinically relevant, sex specific anatomy in medical documentation, and related forms, including in electronic health records, in a culturally-sensitive and voluntary manner; (2) will advocate for collection of patient data in medical documentation and in medical research studies, according to current best practices, that is inclusive of sexual orientation, gender identity, and other sexual and gender minority traits for the purposes of research into patient and population health; (3) will research the problems related to the handling of sex and gender within health information technology (HIT) products and how to best work with vendors so their HIT products treat patients equally and appropriately, regardless of sexual or gender identity; (4) will investigate the use of personal health records to reduce physician burden in maintaining accurate patient information instead of having to query each patient regarding sexual orientation and gender identity at each encounter; and (5) will advocate for the incorporation of recommended best practices into electronic health records and other HIT products at no additional cost to physicians.
Citation: Res. 212, I-16; Reaffirmed in lieu of: Res. 008, A-17; Modified: Res. 16, A-19; Appended: Res. 242, A-19; Modified: Res. 04, I-19;

E-9.5.5 Gender Discrimination in Medicine
Inequality of professional status in medicine among individuals based on gender can compromise patient care, undermine trust, and damage the working environment. Physician leaders in medical schools and medical institutions should advocate for increased leadership in medicine among individuals of underrepresented genders and equitable compensation for all physicians.
Collectively, physicians should actively advocate for and develop family-friendly policies that:
(a) Promote fairness in the workplace, including providing for:
(i) retraining or other programs that facilitate re-entry by physicians who take time away from their careers to have a family;
(ii) on-site child care services for dependent children;
(iii) job security for physicians who are temporarily not in practice due to pregnancy or family obligations.
(b) Promote fairness in academic medical settings by:
(i) ensuring that tenure decisions make allowance for family obligations by giving faculty members longer to achieve standards for promotion and tenure;
(ii) establish more reasonable guidelines regarding the quantity and timing of published material needed for promotion or tenure that emphasize quality over quantity and encourage the pursuit of careers based on individual talent rather than tenure standards that undervalue teaching ability and overvalue research;
(iii) fairly distribute teaching, clinical, research, administrative responsibilities, and access to tenure tracks;
(iv) structuring the mentoring process through a fair and visible system.
(c) Take steps to mitigate gender bias in research and publication.
Issued: 2016

Alzheimer's Disease H-25.991
Our AMA:
(1) encourages physicians to make appropriate use of guidelines for clinical decision making in the diagnosis and treatment of Alzheimer's disease and other dementias;
(2) encourages physicians to make available information about community resources to facilitate appropriate and timely referral to supportive caregiver services;
(3) encourages studies to determine the comparative cost-effectiveness/cost-benefit of assisted in-home care versus nursing home care for patients with Alzheimer's disease and related disorders;
(4) encourages studies to determine how best to provide stable funding for the long-term care of patients with Alzheimer's disease and other dementing disorders;
(5) supports the use of evidence-based cost-effective technologies with prior consent of patients or designated healthcare power of attorney, as a solution to prevent, identify, and rescue missing patients with Alzheimer's disease and other related dementias with the help of appropriate allied specialty organizations;
(6) supports increased awareness of the sex and gender differences in incidence and etiology of Alzheimer's disease and related dementias; and
(7) encourages increased enrollment in clinical trials of appropriate patients with Alzheimer's disease and related dementias, and their families, to better identify sex-differences in incidence and progression and to advance a treatment and cure of Alzheimer's disease and related dementias.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 005
(A-23)

Introduced by:	Medical Student Section
Subject:	Providing Culturally and Religiously Sensitive Attire Options at Hospitals for Patients and Employees
Referred to:	Reference Committee on Amendments to Constitution and Bylaws

---

Whereas, There is a lack of inclusivity in the hospital and operating rooms when it comes to the availability of modest professional uniforms and hospital gowns[1,2]; and

Whereas, Wearing modest or hijab-compliant professional attire is religiously obligatory for Muslim women observing hijab and a critical part of Muslim identity[3]; and

Whereas, Members of the medical care team or other patients who do not identify as Muslims may also want to wear more modest clothing, due to spiritual, personal, or even medical reasons; and

Whereas, Certain practicing Mormons, Amish, Orthodox Jews, and Christians use modest apparel[4]; and

Whereas, A 2020 study found that 4.5% of the total US physician workforce consists of physicians who are international medical graduates of Muslim-majority nations, and this number does not include Muslim physicians born in the United States so the total number of US Muslim physicians is likely higher[5]; and

Whereas, The Institute for Social Policy and Understanding's (ISPU) *American Muslim Poll 2022: A Politics and Pandemic Status Report* found that Muslims were the most likely religious group to experience discrimination in institutional settings, especially when seeking healthcare services[6]; and

Whereas, A national survey of American Muslim physicians in 2013 found that 24% of Muslims surveyed experience religious discrimination on the job[7]; and

Whereas, There are many accounts of hijab-wearing Muslim women who state that their medical duties are hindered due to a lack of modest attire, such as wearing an N-95 respirator over a hijab[8]; and

Whereas, Modest or 'halal' scrub options and medical hijabs exist, but are not laundered by hospitals or supplied by hospital-approved third parties, and therefore are not allowed into the operating room per hospital policy[8–10]; and

Whereas, A 2018 study found wearing long sleeves while prepping a patient in the operating room decreases airborne contaminants[11]; and

Whereas, The Association of Perioperative Registered Nurses (AORN) released guidelines in 2015 that require individuals who are scrubbed to wear long-sleeves in the operating room[12]; and

Whereas, Despite concerns that long-sleeves can cause increased surgical site infections, a study found that the implementation of AORN's guidelines about wearing long-sleeves in the operating room did not affect the frequency of surgical site infections[13]; and

Whereas, A 2021 systematic review of 59 articles from 2000-2019 found no correlation between what was worn in the operating room and the incidence of surgical site infections[14]; and

Whereas, A 2021 systematic review found that research studying the association between clothing in the operating room and surgical site infections is lacking, despite guidelines like those of AORN's that stipulate operating room attire requirements[14]; and

Whereas, The U.S. Equal Employment Opportunity Commission states, "...employers are required by federal law to make exceptions to their usual rules or references to permit employees to observe religious dress and grooming practices," and that hospitals with restrictive policies could be liable for denial of accommodation without evidence that religious garb and grooming pose a workplace risk or hazard[15]; and

Whereas, Modest, hospital-provided scrubs can serve as professional, clean and functional attire[8]; and

Whereas, According to OSHA, personal protective equipment (PPE) is any equipment that is worn by an individual whose purpose is to protect against exposures to hazardous materials that can cause bodily harm in the workplace[16]; and

Whereas, According to OSHA, PPE should "fit comfortably, encouraging worker use" but hijab observers often need to sacrifice comfort and ease of access for modesty[9,16]; and

Whereas, According to OSHA, scrubs are considered "street clothing", not PPE, and therefore should be covered under gowns, aprons, and laboratory coats in the operating room[17]; and

Whereas, Before entering the operating room at most institutions, scrubs must be covered by an additional sterile gown after a healthcare provider properly scrubs in, covering anything they may be wearing below, including hospital laundered scrubs[18]; and

Whereas, The American Hospital Association promotes the enhancement of cultural competency because cultural competency is recognized as an essential means of reducing racial and ethnic disparities in health care[19]; and

Whereas, Cultural competence is defined as the ability of providers and organizations to effectively deliver health care services that meet the social, cultural, and linguistic needs of patients[20,21]; and

Whereas, Cultural competence in the healthcare setting includes incorporating culture-specific attitudes and values into health promotion tools and willingness to make clinical settings more accessible to patients[20,21]; and

Whereas, Lack of cultural competence may lead to patient dissatisfaction[20,21]; and

Whereas, Hospitals should provide modest scrubs for employees and hospital attire options for patients as well to promote cultural and religious inclusivity[2,6]; and

Whereas, Some patients require modesty in interactions and in clothing during clinical encounters and procedures[2,22]; and

Whereas, Failure to provide modest accommodations for patients who require it is a predictor of delayed healthcare in certain patient populations[23]; and

Whereas, One approach of the AMA's 2021-2023 Organizational Strategic Plan to Embed Racial Justice and Advance Health Equity is to build alliances and share power with physicians and stakeholders who have been historically marginalized & minoritized to "develop structures and processes to consistently center [their] experiences and ideas"[24]; and

Whereas, Policy H-440.856 states that the AMA encourages all physicians to wear clean, appropriate attire, and research into textile transmission of infections[25]; and

Whereas, Policy H-440.810 states that the AMA encourages diverse PPE designs to fit all healthcare professional's body types, cultural expressions, and practices, but this policy fails to consider the religious obligations of modesty that some may follow and the fact that scrubs are not considered PPE according to OSHA[26]; and

Whereas, Policy H-65.949 states that the AMA encourages healthcare institutions to provide PPE that takes both patient safety and healthcare worker's natural hair/hairstyles or cultural headwear into account, but does not explicitly state whether this applies to religious and cultural modest clothing[27]; therefore be it

RESOLVED, That our American Medical Association support the provision of safe, culturally and religiously sensitive operating room scrubs and hospital attire options for both patients and employees. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Availability of Personal Protective Equipment (PPE) H-440.810

1. Our AMA affirms that the medical staff of each health care institution should be integrally involved in disaster planning, strategy and tactical management of ongoing crises.
2. Our AMA supports evidence-based standards and national guidelines for PPE use, reuse, and appropriate cleaning/decontamination during surge conditions.
3. Our AMA will advocate that it is the responsibility of health care facilities to provide sufficient personal protective equipment (PPE) for all employees and staff, as well as trainees and contractors working in such facilities, in the event of a pandemic, natural disaster, or other surge in patient volume or PPE need.
4. Our AMA supports physicians and health care professionals and other workers in health care facilities in being permitted to use their professional judgement and augment institution-provided PPE with additional, appropriately decontaminated, personally-provided personal protective equipment (PPE) without penalty.

5. Our AMA supports the rights of physicians and trainees to participate in public commentary addressing the adequacy of clinical resources and/or health and environmental safety conditions necessary to provide appropriate and safe care of patients and physicians during a pandemic or natural disaster.
6. Our AMA will work with the HHS Office of the Assistant Secretary for Preparedness and Response to gain an understanding of the PPE supply chain and ensure the adequacy of the Strategic National Stockpile for public health emergencies.
7. Our AMA encourages the diversification of personal protective equipment design to better fit all body types, cultural expressions and practices among healthcare personnel.

Combating Natural Hair and Cultural Headwear Discrimination in Medicine and Medical Professionalism H-65.949
Our AMA: (1) recognizes that discrimination against natural hair/hairstyles and cultural headwear is a form of racial, ethnic and/or religious discrimination; (2) opposes discrimination against individuals based on their hair or cultural headwear in health care settings; (3) acknowledges the acceptance of natural hair/hairstyles and cultural headwear as crucial to professionalism in the standards for the health care workplace; (4) encourages medical schools, residency and fellowship programs, and medical employers to create policies to oppose discrimination based on hairstyle and cultural headwear in the interview process, medical education, and the workplace; and (5) encourages healthcare institutions to provide adequate protective equipment in accordance with appropriate patient safety for healthcare workers with natural hair/hairstyles or cultural headwear.
Citation: Res. 006, A-22;

Hospital Dress Codes for the Reduction of Health Care-Associated Infection Transmission of Disease H-440.856
Our AMA encourages: (1) research in textile transmission of health care-associated infections (HAI); (2) testing and validation of research results before advocating for adoption of dress code policies that may not achieve reduction of HAIs; (3) all clinicians to assume "antimicrobial stewardship," i.e., adherence to evidence-based solutions and best practices to reduce of HAIs and HAI infection rates; and (4) all clinicians when seeing patients to wear attire that is clean, unsoiled, and appropriate to the setting of care.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 006
(A-23)

Introduced by: American Academy of Child and Adolescent Psychiatry, American Academy of Psychiatry and the Law, American Association for Geriatric Psychiatry, American Psychiatric Association

Subject: Ensuring Privacy as Large Retail Settings Enter Healthcare

Referred to: Reference Committee on Amendments to Constitution and Bylaws

---

Whereas, Large retail settings such as Amazon, CVS, Dollar General, Target, and Wal-Mart are in the process of moving into the provision of general and mental healthcare; and

Whereas, Concerns have been raised by medical providers about the business models, role of medical professionals, and quality of medical services provided by these organizations; and

Whereas, Amazon has not been transparent regarding if or how its medical databases would be integrated with its other massive customer databases; and

Whereas, Amazon has not been transparent regarding how it will ensure the privacy of medical data it accumulates through its healthcare businesses; therefore be it

RESOLVED, That our American Medical Association study privacy protections and the potential for data breaches of healthcare records in large retail settings. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/2/23

RELEVANT AMA POLICY

Patient Privacy and Confidentiality H-315.983
1. Our AMA affirms the following key principles that should be consistently implemented to evaluate any proposal regarding patient privacy and the confidentiality of medical information: (a) That there exists a basic right of patients to privacy of their medical information and records, and that this right should be explicitly acknowledged; (b) That patients' privacy should be honored unless waived by the patient in a meaningful way or in rare instances when strong countervailing interests in public health or safety justify invasions of patient privacy or breaches of confidentiality, and then only when such invasions or breaches are subject to stringent safeguards enforced by appropriate standards of accountability; (c) That patients' privacy should be honored in the context of gathering and disclosing information for clinical research and quality improvement activities, and that any necessary departures from the preferred practices of obtaining patients' informed consent and of de-identifying all data be strictly controlled; (d) That any information disclosed should be limited to that information, portion of the medical record, or abstract necessary to fulfill the immediate and specific purpose of disclosure; and (e) That the Health Insurance Portability and Accountability Act of 1996 (HIPAA) be the minimal standard for protecting clinician-patient privilege, regardless of where care is received.
2. Our AMA affirms: (a) that physicians and medical students who are patients are entitled to the same right to privacy and confidentiality of personal medical information and medical records as other patients, (b) that when patients exercise their right to keep their personal medical histories confidential, such action

should not be regarded as fraudulent or inappropriate concealment, and (c) that physicians and medical students should not be required to report any aspects of their patients' medical history to governmental agencies or other entities, beyond that which would be required by law.
3. Employers and insurers should be barred from unconsented access to identifiable medical information lest knowledge of sensitive facts form the basis of adverse decisions against individuals. (a) Release forms that authorize access should be explicit about to whom access is being granted and for what purpose, and should be as narrowly tailored as possible. (b) Patients, physicians, and medical students should be educated about the consequences of signing overly-broad consent forms. (c) Employers and insurers should adopt explicit and public policies to assure the security and confidentiality of patients' medical information. (d) A patient's ability to join or a physician's participation in an insurance plan should not be contingent on signing a broad and indefinite consent for release and disclosure.
4. Whenever possible, medical records should be de-identified for purposes of use in connection with utilization review, panel credentialing, quality assurance, and peer review.
5. The fundamental values and duties that guide the safekeeping of medical information should remain constant in this era of computerization. Whether they are in computerized or paper form, it is critical that medical information be accurate, secure, and free from unauthorized access and improper use.
6. Our AMA recommends that the confidentiality of data collected by race and ethnicity as part of the medical record, be maintained.
7. Genetic information should be kept confidential and should not be disclosed to third parties without the explicit informed consent of the tested individual.
8. When breaches of confidentiality are compelled by concerns for public health and safety, those breaches must be as narrow in scope and content as possible, must contain the least identifiable and sensitive information possible, and must be disclosed to the fewest possible to achieve the necessary end.
9. Law enforcement agencies requesting private medical information should be given access to such information only through a court order. This court order for disclosure should be granted only if the law enforcement entity has shown, by clear and convincing evidence, that the information sought is necessary to a legitimate law enforcement inquiry; that the needs of the law enforcement authority cannot be satisfied by non-identifiable health information or by any other information; and that the law enforcement need for the information outweighs the privacy interest of the individual to whom the information pertains. These records should be subject to stringent security measures.
10. Our AMA must guard against the imposition of unduly restrictive barriers to patient records that would impede or prevent access to data needed for medical or public health research or quality improvement and accreditation activities. Whenever possible, de-identified data should be used for these purposes. In those contexts where personal identification is essential for the collation of data, review of identifiable data should not take place without an institutional review board (IRB) approved justification for the retention of identifiers and the consent of the patient. In those cases where obtaining patient consent for disclosure is impracticable, our AMA endorses the oversight and accountability provided by an IRB.
11. Marketing and commercial uses of identifiable patients' medical information may violate principles of informed consent and patient confidentiality. Patients divulge information to their physicians only for purposes of diagnosis and treatment. If other uses are to be made of the information, patients must first give their uncoerced permission after being fully informed about the purpose of such disclosures
12. Our AMA, in collaboration with other professional organizations, patient advocacy groups and the public health community, should continue its advocacy for privacy and confidentiality regulations, including: (a) The establishment of rules allocating liability for disclosure of identifiable patient medical information between physicians and the health plans of which they are a part, and securing appropriate physicians' control over the disposition of information from their patients' medical records. (b) The establishment of rules to prevent disclosure of identifiable patient medical information for commercial and marketing purposes; and (c) The establishment of penalties for negligent or deliberate breach of confidentiality or violation of patient privacy rights.
13. Our AMA will pursue an aggressive agenda to educate patients, the public, physicians and policymakers at all levels of government about concerns and complexities of patient privacy and confidentiality in the variety of contexts mentioned.
14. Disclosure of personally identifiable patient information to public health physicians and departments is appropriate for the purpose of addressing public health emergencies or to comply with laws regarding public health reporting for the purpose of disease surveillance.
15. In the event of the sale or discontinuation of a medical practice, patients should be notified whenever possible and asked for authorization to transfer the medical record to a new physician or care provider.

Only de-identified and/or aggregate data should be used for "business decisions," including sales, mergers, and similar business transactions when ownership or control of medical records changes hands.
16. The most appropriate jurisdiction for considering physician breaches of patient confidentiality is the relevant state medical practice act. Knowing and intentional breaches of patient confidentiality, particularly under false pretenses, for malicious harm, or for monetary gain, represents a violation of the professional practice of medicine.
17. Our AMA Board of Trustees will actively monitor and support legislation at the federal level that will afford patients protection against discrimination on the basis of genetic testing.
18. Our AMA supports privacy standards that would require pharmacies to obtain a prior written and signed consent from patients to use their personal data for marketing purposes.
19. Our AMA supports privacy standards that require pharmacies and drug store chains to disclose the source of financial support for drug mailings or phone calls.
20. Our AMA supports privacy standards that would prohibit pharmacies from using prescription refill reminders or disease management programs as an opportunity for marketing purposes.
21. Our AMA will draft model state legislation requiring consent of all parties to the recording of a physician-patient conversation.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 007
(A-23)

Introduced by: Connecticut; Maine; Massachusetts; New Hampshire; Rhode Island; Vermont

Subject: Independent Medical Evaluation

Referred to: Reference Committee on Amendments to Constitution and Bylaws

---

Whereas, The Independent Medical Evaluation (IME) is typically a non-voluntary, non-consensual legally obligated mandate for persons who are injured or disabled to be evaluated by insurers or employers[1, 11]; and

Whereas, The IME evaluation does not involve the typical safeguards of a fiduciary and privacy obligations of the physician to the patient and under current CEJA opinion provides a "limited patient-physician relationship"[2, 3]; and

Whereas, The potential for undue influence of personal and corporate interests exist for IMEs. The compensation of the IME examiner inherently raises concerns about potential conflicts of interest and a pro-employer/carrier bias is embedded in the methodology IMEs, and that the practical impact of the IME approach is to reduce the recognition of occupationally related health conditions and to minimize the reported disability associated with such conditions[4, 5, 6, 12]; and

Whereas, The selection of the IME examiner often involves limited input from the patient; and

Whereas, There are no consistent national standards safeguarding patient's privacy, or ability of the patient to record, document or bring their own physician or advocate to the IME examination; and

Whereas, There is a paucity of research documenting a patient centric, objective unbiased outcomes which protect the injured or disabled patient being mandated to undergo an IME[14, 15]; and

Whereas, There is no established/longitudinal relationship between the IME examiner and the injured or disabled patient; and

Whereas, There are many different standards to which the examiner must adhere when completing an IME which include but are not limited to federal regulations set forth by the Social Security Administration, local state laws, and the American Medical Association's Guidelines to the Evaluation of Permanent Impairment. There are also guidelines set forth by many American colleges and boards of medical specialties including the American College of Surgeons, American Society of Interventional Pain Physicians, and the American College of Occupational and Environmental Medicine. In addition to many nationally created guidelines, the examiner may also consult the World Health Organizations Disability Assessment Schedules I and II, which provide a simple and unified approach to the disabled patient. No uniform qualifications

training or certification have been established for physicians performing IME. Best practices have been suggested by some experts in the field of IME[6, 16]; and

Whereas, There have been a long history of journalistic investigations including the *New York Times* documenting the inherent problems of the IME process[8, 9]; and

Whereas, Worker and disabled patient advocacy groups have highlighted that injured and disabled patients are discouraged from filing claims for fear of retaliation. The extent of fraud in workers compensation is 1 – 2 %[10, 17]; and

Whereas, A substantial body of literature exists questioning the ethical foundation of independent medical examinations (IMEs) in medicolegal cases. IME physicians are prone to biases, in that they are financially motivated to maintain a positive relationship with the insurance carriers that hire them[12, 13]; and

Whereas, The following areas should be important considerations: a) qualifications for those performing IME; b) appropriate privacy and informed consent for IME; c) fair and reasonable policies and procedures including due process for including recording, advocacy and access to the examination to their treating physicians for an IME; and d) model state or federal legislation, rules, or regulations to protect the interest of those injured and disabled; therefore be it

RESOLVED, That our American Medical Association study and report back at the 2024 Annual Meeting on the Independent Medical Evaluation (IME) process and recommend standards and safeguards to protect injured and disabled patients. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 008
(A-23)

Introduced by: American Society of Addiction Medicine

Subject: Study on the Criminalization of the Practice of Medicine

Referred to: Reference Committee on Amendments to Constitution and Bylaws

---

Whereas, The American Medical Association has policy opposing the attempted criminalization of health care decision-making (H-160.946, *The Criminalization of Health Care Decision Making*); and

Whereas, US District Judge Matthew Kacsmaryk's ruling that the US Food and Drug Administration's (FDA's) approval of Mifepristone was to be suspended was based on junk science and political ideology and threatened the integrity of the FDA itself; and

Whereas, Florida passed a state statute in 2011, *Florida's Firearm Owner's Privacy Act*, which was a gag law restricting doctors from discussing firearm ownership and firearm safety with patients who have a firearm-related injury. In 2017 the Eleventh Circuit found that three of the four provisions violated the First Amendment rights of physicians; and

Whereas, At least 30 states have introduced or passed laws that restrict gender-affirming services for minors and/or adults, often resulting in professional or criminal penalties for physicians, parents, and others involved in providing the care; and

Whereas, At least 13 states have made providing abortions illegal with targeted regulation of abortion providers (TRAP) laws that single out physicians who provide abortion care and are more burdensome than those imposed on physicians who provide comparable types of care. These laws do not increase patient safety and are contrary to evidence-based medicine; and

Whereas, The Department of Justice (DOJ) has established the Appalachian Regional Prescription Opioid Strike Force and the New England Prescription Opioid Strike Force, specifically to swiftly and effectively prosecute medical professionals[1]; and

Whereas, The DOJ has created the National Rapid Response Strike Force, which uses data analytics to identify and prosecute individual physicians[2]; and

Whereas, The DOJ has used non-scientific "red flag" data to, in part, determine physicians to target for prosecution. Among these data are whether patients have traveled more than 30 miles if in an urban area or 120 miles if in a rural area to obtain treatment[3]; and

Whereas, Certain specialties are likely to include individual physicians who may find themselves under investigation as a result of successful business practices, a high volume of controlled substance prescribing, or for being one of a few specialists in the area and therefore having patients from a wide catchment area; therefore be it

RESOLVED, That our American Medical Association study the rapidly changing environment in which the practice of medicine has been criminalized, the degree to which such criminalization is based or not based upon valid scientific findings, as well as the degree to which this is altering the actual practice of medicine due to physician concerns and personal risk assessments, reporting back to the HOD no later than the June, 2024 Annual Meeting. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/8/23

RELEVANT AMA POLICY

The Criminalization of Health Care Decision Making H-160.946
The AMA opposes the attempted criminalization of health care decision-making especially as represented by the current trend toward criminalization of malpractice; it interferes with appropriate decision making and is a disservice to the American public; and will develop model state legislation properly defining criminal conduct and prohibiting the criminalization of health care decision-making, including cases involving allegations of medical malpractice, and implement an appropriate action plan for all components of the Federation to educate opinion leaders, elected officials and the media regarding the detrimental effects on health care resulting from the criminalization of health care decision-making.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 009
(A-23)

Introduced by: Minnesota

Subject: Racism - A Threat to Public Health

Referred to: Reference Committee on Amendments to Constitution and Bylaws

---

Whereas, Racism is a public health crisis - a crisis rooted in the institutional, structural, and systemic barriers that continue to affect Black, Indigenous and other communities of color; and

Whereas, Racism may be intentional or unintentional; operates at many levels within society, and is a barrier to health equity; and

Whereas, Racism is a social driver of health (like housing, education, and employment) that has a deep impact on the health status of children, adolescents, and adults within marginalized communities; and

Whereas, Policymakers and our healthcare community need to work to address racism and its barriers, and do what is needed to eliminate the health inequities that disproportionately affect Black, Indigenous and other communities of color; and

Whereas, Standardizing how the various social drivers of health are recorded in a clinical encounter is needed in order to improve clinical practice, research, and policy; and

Whereas, Existing codes in the International Classification of Diseases (ICD) system do not encompass some of the most important social drivers of health, including racism; and

Whereas, Documenting instances where experiencing racism could be a causal factor in a health condition is important; and

Whereas, Examples of a patient experiencing racism include (1) a patient who presents with chronic stress and high-blood pressure due to exposure to racist abuse or discrimination; and (2) a patient who has experienced frequent racist encounters and is now presenting in clinic with low-grade inflammation; therefore be it

RESOLVED, That our American Medical Association advocate for the creation of an International Classification of Diseases (ICD) code for patients presenting with conditions related to experiencing racism, a code that will provide physicians with the tools necessary to address racism within the clinical encounter, and capture the data needed to provide more effective patient care. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 010
(A-23)

Introduced by: Women Physicians Section

Subject: Advocating for Increased Support to Physicians in Family Planning and Fertility

Referred to: Reference Committee on Amendments to Constitution and Bylaws

---

Whereas, One in four female physicians will suffer from infertility,[1] well above the estimated incidence (9%–18%) in the U.S. general population[1]; and

Whereas, Physician fertility and family planning, however, are rarely discussed as part of formal education during medical school, residency, or subsequent practice; and

Whereas, Among female physicians, infertility, high-risk pregnancies, and miscarriages have been associated with higher rates of burnout—as a cause, a consequence, or both[2]; and

Whereas, Evidence suggests female physicians are at higher risk of burnout than their male colleagues due to multiple factors, including work–life integration and gender bias[2]; and

Whereas, The lack of physician education on the risks and consequences of infertility exacerbates its potential emotional, physical, and financial impacts. Individuals/couples seeking fertility preservation or treatment for infertility may experience emotional distress, which may manifest as anxiety, guilt, loss of hope, loss of control, bereavement, and stigmatization[3,4]; therefore be it

RESOLVED, That our American Medical Association advocate for academic and employed physician practices to contract with insurance providers who provide infertility coverage that defrays the steep costs for fertility treatments (Directive to Take Action); and be it further

RESOLVED, That our AMA work with other key stakeholders to encourage full support of physicians desiring to have families to allow for flexible work policies and clinical coverage for those undergoing fertility treatments. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/5/23

RELEVANT AMA POLICY

Infertility and Fertility Preservation Insurance Coverage H-185.990

1. Our AMA advocates for third party payer health insurance carriers to make available insurance benefits for the diagnosis and treatment of recognized male and female infertility.
2. Our AMA advocates for payment for fertility preservation therapy services by all payers when iatrogenic infertility may be caused directly or indirectly by necessary medical treatments as determined by a licensed physician, and will support state and federal legislation requiring payment for fertility preservation therapy services by all payers when iatrogenic infertility may be caused directly or indirectly by necessary medical treatments as determined by a licensed physician, including but not limited to cryopreservation of embryos, sperm, oocytes, and ovarian and testicular tissue.
3. Our AMA advocates for the inclusion of impaired fertility as a consequence of gender-affirming hormone therapy and gender-affirming surgery within legislative definitions of iatrogenic infertility and supports access to fertility preservation services for those affected.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 011
(A-23)

Introduced by: Dr. Thomas W. Eppes, MD, Delegate

Subject: Rights of the Developing Baby

Referred to: Reference Committee on Amendments to Constitution and Bylaws

---

Whereas, At the moment of conception a new genetically unique fetus apart from pregnant woman who is carrying it is created; and

Whereas, That developing fetus has a total dependency of the mother carrying that fetus; and

Whereas, That mother carrying the fetus, has according to AMA policy passed in I-2022[(1)] total autonomy over her body; and

Whereas, At I-2022 affirmed abortion[(1)] as a human right; and

Whereas, The point of viability is to be determined by her doctor(s); and

Whereas, At the point of viability, the doctor(s) has two patients to care for; and

Whereas, Up until the point of viability, there is no statement of fetal/pre-natal rights in the AMA Code of Ethics (or the AOA Code of Ethics); therefore be it

RESOLVED, That our American Medical Association's Council of Judicial and Ethical Affairs (CEJA) address the rights of the viable fetus in a report to be delivered no later than the 2024 Annual meeting. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/9/23

1. Report 4 of the Board of Trustees (I-22) Preserving Access to Reproductive Health Services

RELEVANT AMA POLICY

Preserving Access to Reproductive Health Services D-5.999
Our AMA: (1) recognizes that healthcare, including reproductive health services like contraception and abortion, is a human right; (2) opposes limitations on access to evidence-based reproductive health services, including fertility treatments, contraception, and abortion; (3) will work with interested state medical societies and medical specialty societies to vigorously advocate for broad, equitable access to reproductive health services, including fertility treatments, fertility preservation, contraception, and abortion; (4) supports shared decision-making between patients and their physicians regarding reproductive healthcare; (5) opposes any effort to undermine the basic medical principle that clinical assessments, such as viability of the pregnancy and safety of the pregnant person, are determinations to be made only by healthcare professionals with their patients; (6) opposes the imposition of criminal and

civil penalties or 1 other retaliatory efforts against patients, patient advocates, physicians, other healthcare workers, and health systems for receiving, assisting in, referring patients to, or providing reproductive health services; (7) will advocate for legal protections for patients who cross state lines to receive reproductive health services, including contraception and abortion, or who receive medications for contraception and abortion from across state lines, and legal protections for those that provide, support, or refer patients to these services; and (8) will advocate for legal protections for medical students and physicians who cross state lines to receive education in or deliver reproductive health services, including contraception and abortion.

Right to Privacy in Termination of Pregnancy H-5.993
1. The AMA reaffirms existing policy that:
(a) abortion is a human right and the practice of medicine and should be performed in conformance with standards of good medical practice; and (b) no physician or other professional personnel shall be required to perform an act violative of good medical judgment or personally held moral principles. In these circumstances, a physician or other professional may withdraw from the case so long as the withdrawal is consistent with good medical practice and ethical guidance on the exercise of conscience.
2. The AMA further supports the position that termination of pregnancy is a medical matter between the patient and the physician, subject to the physician's clinical judgment, the patient's informed consent, and the ability to perform the procedure safely.
Citation: Res. 49, I-89; Reaffirmed by Sub. Res. 208, I-96; Reaffirmed by BOT Rep. 26, A-97; Reaffirmed: Sub. Res. 206, A-04; Reaffirmed: CCB/CLRPD Rep. 2, A-14; Modified: BOT Rep. 4, I-22;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 012
(A-23)

Introduced by: Dr. Thomas W. Eppes, MD, Delegate

Subject: Viability of the Newborn

Referred to: Reference Committee on Amendments to Constitution and Bylaws

---

Whereas, At the 2022 Interim meeting a woman's right to abortion was affirmed; and

Whereas, In that affirmation was a qualifier statement[1] that at the end of pregnancy the only reason for an abortion is the endangerment of the life of the mother or severe fetal abnormalities incompatible with life; and

Whereas, Current advanced neonatal care has lowered the viability of the newborn to approximately 22 weeks gestation; and

Whereas, In that qualifier statement[1] there was no mention of care for a potentially viable newborn; therefore be it

RESOLVED, That our American Medical Association advocate for availability of the highest standard of neonatal care to aborted fetus born alive at a gestational age of viability. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/9/23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 013
(A-23)

Introduced by: Illinois

Subject: Serial (Repeated) Sperm Donors

Referred to: Reference Committee on Amendments to Constitution and Bylaws

---

Whereas, Some individuals have become multiple sperm donors; and

Whereas, The female sperm recipient may not be aware that their sperm donor has made multiple donations, and with the continued escalation of DNA and gene testing, the potential for many unknown half cousins or half siblings or relatives is escalating; and

Whereas, The discovery of the existence of unknown relatives may lead to family and legal concerns unexpectantly; therefore be it

RESOLVED, That our American Medical Association work with other relevant national medical specialty societies to study the further elaboration of potential risks associated with allowing sperm from a single donor to be used to conceive children by multiple recipients and make recommendations for additional policies to minimize these risks. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/5/23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 014
(A-23)

Introduced by: Minority Affairs Section, National Medical Association

Subject: Redressing the Harms of Misusing Race in Medicine

Referred to: Reference Committee on Amendments to Constitution and Bylaws

---

Whereas, Pulmonary function tests (PFTs), also known as spirometry, are the standard of care for diagnosing obstructive and restrictive lung diseases such as asthma, emphysema, and interstitial lung disease[1]; and

Whereas, Differences in population averages for PFT values by race and socioeconomic status have long been documented and were used to justify and uphold slavery and structural racism in the United States in the 19th century, to deny workers' compensation claims for Welsh vs. English white miners in the United Kingdom in the early 20th century, and to deny workers' compensation claims for Black asbestos workers in Baltimore in a landmark 1999 case[2–5]; and

Whereas, Differences in population averages for PFT values by race may be explained by racially segregated exposure to environmental toxins, adverse working conditions, poor air quality, and worse access to health care — all of which impact lung health and disease progression[6–12] — yet widely used PFT reference values based on the National Health and Nutrition Survey (NHANES) have only included a "race adjustment" without accounting for any other relevant factors[13]; and

Whereas, The *AMA Guides to the Evaluation of Permanent Impairment* has been published for over 50 years and is the main guiding document for workers' compensation evaluations[14,15]; and

Whereas, Chapter 5 of the *AMA Guides* 6th edition states that "The [American Thoracic Society] Task Force for Interpretation of Pulmonary Function recommends an adjustment on a population basis for predicted lung function in Blacks," motivating clinicians to provide differential care by race[15]; and

Whereas, Chapter 5 of the *AMA Guides* 6th edition states that "Reliable population data are not yet available for other ethnic groups, such as Hispanics, Native Americans, and Asians. For these ethnic groups, the values for North American whites may be used," thereby motivating clinicians to use a reference standard derived only from white populations for a broad array of non-white populations[15]; and

Whereas, The American Thoracic Society, with endorsement from the European Respiratory Society, recently released new recommendations which state that "PFT laboratories should adopt a race-neutral approach to PFT interpretation by reporting and interpreting results using average reference equations" such as the Global Lung Initiative (GLI) aggregated equation, rather than using race-based algorithms[16,17]; and

Whereas, Race is a profoundly imprecise proxy for biological characteristics and should be instead characterized as a sociopolitical construct, in accordance with AMA-RFS and AMA policies (350.003R, H-65.953, D-350.981); and

Whereas, The economic consequences of using of race to deny workers' compensation to Black individuals is a problematic intersection of the medical field with *racial capitalism* — the "centrality of race in structuring social and labor hierarchies in capitalist economies"[18]; and

Whereas, The misuse of race in clinical algorithms is arguably a civil rights violation[19]; and

Whereas, Other race-based algorithms are actively being or have already been litigated, including a landmark lawsuit recently settled by hundreds of Black former National Football League players who were denied workers' compensation due to a race-normed cognitive testing algorithm, and pending lawsuits related to the now-defunct race-based estimated glomerular filtration rate (eGFR) equations[20–24]; and

Whereas, Our American Medical Association recognizes the public health threats of racism (H-65.952), advocates against the use of racial essentialism in medicine and clinical research (D-350.981, H-65.953), and recommends structural and cultural changes to prevent and address racism in healthcare (H-65.951); and

Whereas, Reparative approaches to address the disparate harms caused to patients by structural racism embedded in health care delivery are already being investigated and implemented at the health system, city, state, and national levels,[25-37] including federal inquiries from the House Ways & Means Committee and Agency for Healthcare Research & Quality,[32-34] proposed reforms to Section 1557 of the Affordable Care Act which prohibit the use of discriminatory clinical algorithms,[35] a "Blueprint for an AI Bill of Rights" from the Office for Science and Technology Policy,[36] and a new "time back" mandate from the Organ Procurement and Transplantation Network to restructure kidney transplant waiting lists to redress harms caused by race-based eGFR equations[37]; and

Whereas, Actively ongoing litigation, regulatory agency initiatives, and policymaking to address racism in clinical algorithms will continue to require input from our AMA within the next 6 months; therefore be it

RESOLVED, That our American Medical Association recognize the exacerbation of health and economic inequities due to race-based algorithms as a manifestation of racism within the medical field (New HOD Policy); and be it further

RESOLVED, That our AMA will revise the *AMA Guides to the Evaluation of Permanent Impairment*, in accordance with existing AMA policy on race as a social construct and national standards of care, to modify recommendations that perpetuate racial essentialism or race-based medicine (Directive to Take Action); and be it further

RESOLVED, That our AMA support and promote racism-conscious, reparative, community-engaged interventions at the health system, organized medical society, local, and federal levels which seek to identify, evaluate, and address the health, economic, and other consequences of structural racism in medicine. (New HOD Policy)

RELEVANT AMA POLICY

Racial Essentialism in Medicine D-350.981

1. Our AMA recognizes that the false conflation of race with inherent biological or genetic traits leads to inadequate examination of true underlying disease risk factors, which exacerbates existing health inequities.
2. Our AMA encourages characterizing race as a social construct, rather than an inherent biological trait, and recognizes that when race is described as a risk factor, it is more likely to be a proxy for influences including structural racism than a proxy for genetics.
3. Our AMA will collaborate with the AAMC, AACOM, NBME, NBOME, ACGME and other appropriate stakeholders, including minority physician organizations and content experts, to identify and address aspects of medical education and board examinations which may perpetuate teachings, assessments, and practices that reinforce institutional and structural racism.
4. Our AMA will collaborate with appropriate stakeholders and content experts to develop recommendations on how to interpret or improve clinical algorithms that currently include race-based correction factors.
5. Our AMA will support research that promotes antiracist strategies to mitigate algorithmic bias in medicine.
Citation: Res. 10, I-20;

Elimination of Race as a Proxy for Ancestry, Genetics, and Biology in Medical Education, Research and Clinical Practice H-65.953

1. Our AMA recognizes that race is a social construct and is distinct from ethnicity, genetic ancestry, or biology.
2. Our AMA supports ending the practice of using race as a proxy for biology or genetics in medical education, research, and clinical practice.
3. Our AMA encourages undergraduate medical education, graduate medical education, and continuing medical education programs to recognize the harmful effects of presenting race as biology in medical education and that they work to mitigate these effects through curriculum change that: (a) demonstrates how the category “race” can influence health outcomes; (b) that supports race as a social construct and not a biological determinant and (c) presents race within a socio-ecological model of individual, community and society to explain how racism and systemic oppression result in racial health disparities.
4. Our AMA recommends that clinicians and researchers focus on genetics and biology, the experience of racism, and social determinants of health, and not race, when describing risk factors for disease.
Citation: Res. 11, I-20;

Racism as a Public Health Threat H-65.952

1. Our AMA acknowledges that, although the primary drivers of racial health inequity are systemic and structural racism, racism and unconscious bias within medical research and health care delivery have caused and continue to cause harm to marginalized communities and society as a whole.
2. Our AMA recognizes racism, in its systemic, cultural, interpersonal, and other forms, as a serious threat to public health, to the advancement of health equity, and a barrier to appropriate medical care.
3. Our AMA encourages the development, implementation, and evaluation of undergraduate, graduate, and continuing medical education programs and curricula that engender greater understanding of: (a) the

causes, influences, and effects of systemic, cultural, institutional, and interpersonal racism; and (b) how to prevent and ameliorate the health effects of racism.
4. Our AMA: (a) supports the development of policy to combat racism and its effects; and (b) encourages governmental agencies and nongovernmental organizations to increase funding for research into the epidemiology of risks and damages related to racism and how to prevent or repair them.
5. Our AMA will work to prevent and combat the influences of racism and bias in innovative health technologies.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 015
(A-23)

Introduced by: New York

Subject: Report Regarding the Criminalization of Providing Medical Care

Referred to: Reference Committee on Amendments to Constitution and Bylaws

---

Whereas, The American Medical Association has policy opposing the attempted criminalization of health care decision-making (H-160.946, *The Criminalization of Health Care Decision Making*); and

Whereas, Physicians and other care providers have been criminally charged for medical errors such as mistaking a dialysis catheter for a feeding tube in NY, mistakenly giving an excessive dose of penicillin to a newborn in Colorado, an error in preparation of a chemotherapy solution for a child in Ohio, mistakenly giving an anesthetic to a teenage patient in Wisconsin[1], and errors in the medical record in Illinois[2]; and

Whereas, Florida passed a state statute in 2011, Florida's Firearm Owner's Privacy Act, which was a gag law restricting doctors from discussing firearm ownership and firearm safety with patients who have a firearm-related injury. In 2017 the Eleventh Circuit found that three of the four provisions violated the First Amendment rights of physicians; and

Whereas, At least other 30 states have introduced or passed laws that have restricts gender-affirming services for minors and/or adults, often resulting in professional or criminal penalties for physicians, parents, and others involved in providing the care; and

Whereas, At least 13 states have made providing abortions illegal with Targeted regulation of abortion providers (TRAP) laws that single out physicians who provide abortion care and are more burdensome than those imposed on physicians who provide comparable types of care. These laws do not increase patient safety and are contrary to evidence-based medicine; and

Whereas, The U.S. Department of Justice (DOJ) has established the Appalachian Regional Prescription Opioid Strike Force and the New England Prescription Opioid Strike Force, specifically to swiftly and effectively prosecute medical professionals[3]; and

Whereas, The DOJ has created the National Rapid Response Strike Force, which uses data analytics to identify and prosecute individual and corporate actors in healthcare fraud[4]; and

Whereas, The DOJ has used non-scientific “red flag” data to, in part, determine physicians to target for prosecution. Among these data are whether patients have traveled more than 30 miles if in an urban area or 120 miles if in a rural area to obtain treatment[5]; and

Whereas, Certain specialties are likely to include individual physicians who find themselves being investigated simply for having a successful business model, or for prescribing a high volume of FDA-approved medication, or for being one of few specialists in the area and therefore having patients from a wide service area; therefore be it

RESOLVED, That our American Medical Association study the rapidly changing environment in which the practice of medicine has been criminalized, the degree to which such criminalization is based or not based upon valid scientific findings, as well as the degree to which this is altering the actual practice of medicine due to physician concerns and personal risk assessments, reporting back to the House of Delegates no later than the 2024 Annual meeting. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/10/23

REPORT 02 OF THE COUNCIL ON MEDICAL SERVICE (A-23)
Medicare Coverage of Dental, Vision, and Hearing Services
(Referred Resolve Clause of Alternate Resolution 113-A-22)

EXECUTIVE SUMMARY

At the 2022 Annual Meeting, the House of Delegates partially referred Alternate Resolution 113, which asked the American Medical Association (AMA) to "support new funding that is independent of the physician fee schedule for Medicare coverage of 1) preventive dental care, including dental cleanings and x-rays, and restorative services, including fillings, extractions, and dentures; 2) visual aids, including eyeglasses and contact lenses; and 3) aural rehabilitative services and hearing aids.

Expansion of Medicare coverage to new services has been debated extensively by Congress. Proponents of expanding Medicare coverage for dental, vision, and hearing services have frequently suggested that Congress could change the law to add dental, vision, and hearing coverage under traditional Medicare Part B; beneficiaries could enroll in Medicare Advantage (Part C) plans; a new, optional part of Medicare for dental, vision, and hearing coverage that would be similar to Medicare Part D for prescription drug coverage could be created; or some form of cash assistance or debit card for beneficiaries who do not have access to coverage for dental, vision, and/or hearing services could be established.

Nonetheless, while many believe that Medicare beneficiaries should have coverage for a wider range of services, significant obstacles remain. Given the current rate of inflation, the $358 billion projection from Congressional Budget Office in 2019 to include coverage for dental, vision, and hearing services in the Medicare program over the next decade would likely be substantially higher today. Further, given that Medicare is subject to statutory budget neutrality requirements, the Council believes it is impossible to consider this issue in a vacuum, and we must be sensitive to what implications adding these services could mean for payment and access to other current health care services for Medicare beneficiaries.

While the Council acknowledges the potential value of expanded Medicare benefits, it believes that the current options in place for beneficiaries to access these services are adequate. In terms of the current political environment, at the time that this report was written, Congress had failed to prevent a budget neutrality cut to the Medicare physician conversion factor and was facing a stalemate on how to move forward with managing the national debt. Broader Medicare physician payment reform remains one of the highest priorities of the AMA, under the AMA's Recovery Plan for America's Physicians.

The Council reemphasizes the importance of working with the American Dental Association regarding strategies to expand dental coverage to Medicare beneficiaries. The Council believes that the AMA can be most influential in addressing the need for hearing services by improving mechanisms already in place. Additionally, the AMA can encourage the United States Preventive Task Services Task Force to re-evaluate its decision not to recommend screening for hearing loss in asymptomatic adults over age 65, especially considering the new evidence that exists about the connection of hearing loss and dementia. Finally, the Council believes that AMA policy on vision coverage can be strengthened, and we recommend amendments to Policy H-25.990 to encourage programs and outreach efforts for affordable prescription eyeglasses.

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 02-A-23

Subject: Medicare Coverage of Dental, Vision, and Hearing Services (Referred Resolve Clause of Alternate Resolution 113-A-22)

Presented by: Lynn Jeffers, MD, MBA, Chair

Referred to: Reference Committee A

At the 2022 Annual Meeting, the House of Delegates partially referred Alternate Resolution 113, which asked the American Medical Association (AMA) to "support new funding that is independent of the physician fee schedule for Medicare coverage of 1) preventive dental care, including dental cleanings and x-rays, and restorative services, including fillings, extractions, and dentures; 2) visual aids, including eyeglasses and contact lenses; and 3) aural rehabilitative services and hearing aids.

Resolution 119 was combined with similar resolutions 113 and 114 to become Alternate Resolution 113, which was passed in part to become Policy D-185.972, "Increasing Patient Access to Hearing, Dental, and Vision Services." The policy states that the AMA will promote awareness of hearing impairment as a potential contributor to cognitive impairment later in life and encourage further research on this topic. This policy also encourages increased patient access to both vision and dental services.

There was mixed testimony heard on these related items. There were several calls for referral, but support for ensuring that patients have access to, and coverage for, essential hearing, dental, and vision services. Some testimony noted that some of the resolve clauses of the original resolutions did not align with the United States Preventive Task Services Task Force (USPSTF) recommendations for hearing and vision screening for older adults. Further testimony stressed that the expansion of health insurance coverage, and potentially Medicare benefits, for dental, vision, and hearing services needs to be considered not only from the patient perspective, but within the context of a Medicare payment infrastructure that is unsustainable for physician practices. In response to concerns regarding how coverage for these services would be paid for, an amendment was proffered to ensure that our AMA supports new Medicare funding that is independent of the Medicare Physician Payment Schedule to pay for these services. However, the Reference Committee noted in its report that expanding dental, vision, and hearing coverage would still require "pay-fors" in the current Congressional environment, pitting these coverage expansions against other AMA priorities that require funding. This referred clause was assigned by the Board of Trustees to the Council on Medical Service for study.

The Council has developed reports on these topics in recent years. In 2015, the Council authored CMS Report 6, "Hearing Aid Coverage" and concluded that a recommendation supporting adult hearing aid coverage mandates would conflict with Policies H-185.964 and H-165.856, which oppose new health benefit mandates unrelated to patient protections and which jeopardize coverage to currently insured populations, and supports the principle that benefit mandates should be minimized to allow markets to determine benefit packages and permit a wide choice of coverage

options. Given the policy, the Council did not recommend that the AMA support Medicare coverage for hearing aids.

In 2019, the Council authored CMS Report 3, "Medicare Coverage for Dental Services" and concluded that the AMA should continue to explore opportunities to work with the American Dental Association (ADA) to improve access to dental care for Medicare beneficiaries, support initiatives to expand health services research on the effectiveness of expanded dental coverage in improving health and preventing disease in the Medicare population, explore optimal dental benefit plan designs to cost-effectively improve health and prevent disease in the Medicare population, and examine the impact of expanded dental coverage on health care costs and utilization.

BACKGROUND

The most recent enrollment data from the Centers for Medicare & Medicaid Services (CMS) show that over 65 million individuals are enrolled in Medicare. This includes 35 million individuals enrolled in traditional fee-for-service Medicare plans and a little over 30 million individuals enrolled in Medicare Advantage plans.[1] According to a 2019 Kaiser Family Foundation (KFF) poll, 16 percent of Medicare beneficiaries reported they could not get access to dental, vision, or hearing care. These numbers were higher amongst those with low incomes, in poor health, and/or in communities of color.[2]

Another 2019 KFF poll indicated that 90 percent of the American public supported expanding Medicare to include dental, hearing, and vision care as a "top" or "important" priority for Congress.[3] However, recent attempts at passing legislation in Congress have not been successful. In 2019, the House passed H.R. 3, the Elijah E. Cummings Lower Drug Costs Now Act. Title VI of this bill would have added new benefits for dental, vision, and hearing coverage under Medicare, such as dentures, glasses, hearing aids, and preventive services. The Congressional Budget Office (CBO) estimate for this bill was $358 billion over the next ten years ($238 billion for dental coverage, $30 billion for vision coverage, and $89 billion for hearing coverage).[4] In 2021, H.R. 4311, the Medicare Dental, Vision, and Hearing Benefit Act was introduced in the House and proposed repealing the statutory exclusion that restricts coverage of dental, vision, and hearing benefits, and expanding coverage to offer these services under Medicare Part B. Neither of these bills advanced out of Congress. In March 2023, Senators Bob Casey (D-PA) and Ben Cardin (D-MD) introduced a similar bill, S.842, The Medicare and Medicaid Dental, Vision, and Hearing Benefit Act. This bill would also repeal the statutory exclusion that restricts coverage of dental, vision, and hearing services and expand coverage to offer:

- Dental and oral care, including coverage of routine cleanings and exams, fillings and crowns, major services such as root canals and extractions, emergency dental care and other necessary services, and payment for both full and partial dentures.
- Vision care, including routine eye exams, procedures performed to determine the refractive states of the eyes and other necessary services, and payment for eyeglasses, contact lenses, and low-vision devices.
- Hearing care, including hearing exams, exams for hearing aids and other necessary services, and payment for hearing aids.

This bill also encourages states to provide these optional services to people with Medicaid by increasing the associated Federal Medical Assistance Percentage rate to 90 percent. At the time that this report was written, this bill was referred to the Senate Committee on Finance and the full text of the bill was not yet available.

DENTAL CARE AND COVERAGE

The medical-dental coverage divide first began in the 20th century. In the early 1900s, oral health was widely thought to have little to no bearing on overall health and efforts to combine medical and dental fields were opposed by dentists. In the 1920s, William Gies, a biological chemist, insisted that oral health was directly related to overall health and recommended dentistry should be integrated into the medical field, but dentists again resisted this change. During the 1940s and 1950s, the AMA and the ADA joined efforts to oppose health insurance nationalization and/or expansion. During this same period, tap water fluoridation improved oral disease prevention among Americans, which some believed mitigated the need for some dental services and reduced demand for dental insurance coverage. Moreover, because dental service coverage began being widely included in employer-sponsored benefit packages later than medical health service coverage, it was considered a "perk" or cosmetic-only benefit, a perception that continues as dental care is still regarded by many as auxiliary to general health care even though current research clearly demonstrates the critical relationship between oral health and optimal overall health. When Medicare legislation was passed in 1965, oral health coverage was not included. As a result, the medical profession has frequently had to respond to the challenges of Medicare and Medicaid coverage and changes in payment policy over the years, while dentistry has not.[5]

A statutory exclusion in Section 1862(a)(12) of the Social Security Act expressly prohibits coverage for most dental services, specifically, "services in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth" by Medicare for its beneficiaries.[6] Therefore, traditional Medicare regulations do not include coverage for routine oral health care including checkups, cleanings, and x-rays, or restorative procedures, tooth extraction, and dentures. To integrate dental benefits in Medicare, Congress would need to remove this exclusion, and add statutory changes, such as establishing the scope of dental services and a mechanism for provider payment that is independent from the Medicare Physician Payment Schedule.

As of 2018, almost half of Medicare beneficiaries did not have a dental visit within the past year (47 percent), with higher rates among those who are Black (68 percent) or Hispanic (63 percent), have low incomes (73 percent), or who are in fair or poor health (63 percent). Nonetheless, 94 percent of Medicare Advantage enrollees in individual plans are in a plan that offers access to some dental coverage. Nearly two-thirds of Medicare Advantage enrollees (64 percent) with access to preventive benefits, such as oral exams, cleaning and/or x-rays, pay no cost sharing for these services, though their coverage is typically limited to an annual dollar amount. Average out-of-pocket spending on dental services among Medicare beneficiaries (both traditional fee-for-service and Medicare Advantage) who had any dental service was $872 in 2019. Those enrolled in Medicare Advantage plans paid slightly less out-of-pocket than those enrolled in traditional Medicare ($729 vs. $995).[7] A February 2023 study published in *Health Affairs* found substantial declines in dental service use and worsened health outcomes after individuals became eligible for traditional Medicare at age 65. Additionally, this study found that there was also evidence of lower dental service use by those beneficiaries who opted for a Medicare Advantage plan and who likely have some coverage for these services. The authors suggest that benefit and plan design should not only offer coverage of these services, but also address barriers to access to necessary care beyond whether or not a beneficiary has coverage (i.e., out of pocket affordability for co-pays/coinsurance, lack of familiarity with covered benefits, or inability to find local dentists accepting Medicare or Medicare Advantage patients).[8]

Historically, Medicare has paid for dental services when they are integral and inextricably linked to treating a beneficiary's primary medical condition. However, the services Medicare paid for were

limited to those specified in sub-regulatory guidance, such as reconstruction of a ridge when performed as a result of and at the same time as the surgical removal of a tumor; stabilization or immobilization of teeth when done in connection with the reduction of a jaw fracture; extraction of teeth to prepare the jaw for radiation treatment of neoplastic disease; dental splints only when used in conjunction with medically necessary treatment of a medical condition; and dental services – including both examination and treatment – prior to organ transplants, cardiac valve replacements, and valvuloplasty.[9] Beginning in 2023, CMS formally codified these existing services in rulemaking and added additional services to the dental exclusion exception including dental examination and treatment when performed prior to a cardiac valve replacement and valvuloplasty or organ transplant procedures. In 2024, coverage will be expanded to include dental services to eliminate infection prior to treatment for head and neck cancers.

Additionally, the new regulation establishes an annual process to review public input and clinical evidence on other medical circumstances that may allow for payment of relevant dental services under the same exception.[10] Medical associations and their members are encouraged to participate in this annual review process by submitting their comments.

ADA policy states that for the purpose of presenting potential legislation that includes dental benefits for adults age 65 and over in a tax payer-funded public program such as, Medicaid, Children's Health Insurance Program (CHIP), privately administered Medicare or other federal or state programs, the ADA supports a program that: 1) covers individuals under 300 percent FPL; 2) covers the range of services necessary to achieve and maintain oral health; 3) is primarily funded by the federal government and not fully dependent on state budgets; 4) is adequately funded to support an annually reviewed reimbursement rate such that at least 50 percent of dentists within each geographic area receive their full fee to support access to care; 5) includes minimal and reasonable administration requirements; and 6) allows freedom of choice for patients to seek care from any dentist while continuing to receive the full program benefit.[11] The full text of the policy can be found here: https://www.ada.org/about/governance/current-policies#medicare.

VISION CARE AND COVERAGE

Medicare Part B covers certain vision services including treatment for glaucoma, macular degeneration, cataract surgery (if done using traditional surgical techniques or using lasers), annual eye exams for diabetic retinopathy for patients with diabetes, and annual glaucoma tests for patients at high risk for developing glaucoma. However, traditional Medicare does not typically cover routine eye examinations or refractions for eyeglasses or contact lenses, nor does it cover eyeglasses or contact lenses themselves, other than eyeglasses following cataract surgery or corrective lenses if a patient has cataract surgery that implants an intraocular lens.[12,13]

Beneficiaries typically spend significantly less on vision coverage compared to dental and hearing services. Traditional Medicare does not generally cover routine eye exams. However, beneficiaries can seek supplemental vision coverage from Medicare Advantage or other private insurance coverage. As of 2021, 99 percent of Medicare Advantage enrollees have access to some vision coverage. 93 percent of Medicare Advantage enrollees are in plans that provide access to both eye exams and eyewear (contacts and/or eyeglasses). However, enrollees may be limited in terms of frequency of obtaining certain covered services and may be subject to annual dollar limits.[14]

Another option for seniors to receive an eye exam and eye health services is through EyeCare America, which connects eligible seniors 65 and older with local volunteer ophthalmologists who provide a medical eye exam often at no cost out-of-pocket, and up to one year of follow-up care for any condition diagnosed during the initial exam and for the physician services. To qualify, an

individual must be a U.S. citizen or legal resident, aged 65 or older, not belong to a Health Maintenance Organization or have eye care benefits through the Veterans Affairs, and not have seen an ophthalmologist in three or more years. Notably, EyeCare America does not directly cover the cost of eyeglasses, but can provide information to patients on where to get help paying for eyeglasses if they are needed.[15,16]

HEARING CARE AND COVERAGE

When Medicare was enacted in 1965, it did not include any coverage for hearing aids. Hearing aids were considered "not routinely needed and low in cost" and many Americans did not live long enough to need them. Today, hearing loss affects one-third of adults over the age of 65 and has a significant impact on health.[17] Traditional Medicare does not cover hearing exams, hearing aids, or aural rehabilitative services. Medicare Advantage charges additional premiums for hearing coverage, with out-of-pocket costs and annual limits varying across plans. Traditional Medicare covers medically reasonable and necessary hearing tests and treatments when ordered by a physician or a non-physician practitioner including diagnostic services related to hearing loss that is treated with surgically implanted hearing devices, and covers cochlear implants if a beneficiary meets specific hearing loss criteria.[18] Starting January 1, 2023 Medicare Part B expanded coverage of audiology services to allow beneficiaries to receive care from an audiologist without a physician or practitioner order once every 12 months for non-acute hearing assessments that are unrelated to disequilibrium, hearing aids, or examinations for the purpose of prescribing, fitting, or changing hearing aids.[19,20,21] AMA policy supports coverage of hearing tests administered by a physician or a physician-led team under Medicare's benefit (H-185.929).

In 2021, the USPSTF reviewed the need to screen asymptomatic adults over the age of 50 for hearing loss and concluded that the current evidence is insufficient to assess the balance of benefits versus the harms of screening for hearing loss in older adults. The USPSTF also stated that additional research was necessary.[22]

In 2022, the Biden Administration issued an executive order for the Food and Drug Administration (FDA) to allow over the counter (OTC) purchase of hearing aids for those with mild to moderate hearing loss. OTC purchase of hearing aids became available in October 2022 and provides an immediate, low-cost option for adults with mild to moderate hearing loss. OTC hearing aids range in price from $99 to $3400 per pair and are readily available at local pharmacies, large retailers, and online. By increasing competition among OTC hearing aid companies, the FDA rule is designed to create more options for those who experience hearing loss and who want to purchase affordable hearing aids.[23,24]

MEDICARE PART B AND BUDGET NEUTRALITY

Medicare law requires that increases and decreases in payment rates by CMS must be budget neutral – i.e., any changes resulting from regulatory changes made by CMS must have no impact on total Medicare spending. Typically, this is done by lowering the Medicare "conversion factor." Increases in total Medicare spending are set by law. Unlike hospitals and nursing homes, Medicare physician payments lack an automatic annual update. As a result, Medicare payments have failed to keep pace with rising inflation.

The Statutory Pay-As-You-Go Act of 2010 (PAYGO) requires that all new legislation changing taxes, fees, or mandatory expenditures, when assessed together, must not increase projected deficits. If legislation is enacted that cuts taxes or increases expenditures without fully offsetting the cost, PAYGO applies a budget enforcement mechanism called sequestration. Sequestration is

the automatic reduction of certain types of spending in the federal budget, generally by a uniform percentage.[25,26]

If Congress adjourns at the end of a session with net costs on the Office of Management and Budget scorecard, the President is required to issue a sequestration order implementing across-the-board cuts to a select group of federal mandatory programs in an amount sufficient to offset the net costs. There are some exemptions from sequestration, such as Social Security, most unemployment benefits, interest on the national debt, federal retirement, and low-income entitlements (i.e., Medicaid, Supplemental Nutrition Assistance Program, and Supplemental Security Income). However, the major remaining mandatory programs are subject to sequestration – including Medicare. If sequestration is ordered, each non-exempt mandatory program is reduced for one year by the same percentage, with one notable exception: Medicare payments subject to sequestration cannot be reduced by more than four percent. If sequestration would require a percent reduction greater than four percent, other non-exempt mandatory programs must make up the difference. To date, a sequester pursuant to PAYGO has not been applied, as Congress has either exempted legislation from PAYGO requirements or otherwise deferred the application of such requirements.[27]

POTENTIAL MEDICARE COVERAGE OPTIONS FOR DENTAL, VISION, AND HEARING SERVICES

Expansion of Medicare coverage to new services has been considered and debated extensively. While many believe that Medicare beneficiaries should have coverage for a wider range of services, there are significant challenges to expanded coverage. Proponents of expanding Medicare coverage for dental, vision, and hearing services have suggested the following:

- Congress could change the law to add dental, vision, and hearing coverage under traditional Medicare Part B. The benefits of this option are that it would impact all 65 million Medicare beneficiaries and could lead to enhanced benefits that are integrated into other Medicare-covered services. The challenges facing this option include determining new claims systems and payment schedules that are independent of the Medicare Physician Payment Schedule. Perhaps the largest challenge to this approach is the price tag assigned by CBO: $358 billion over the next ten years is an enormous sum, especially when the current level of inflation is added to this previous score. Another major challenge involves budget neutrality requirements. If these services were covered under Medicare Part B, the conversion factor would need to be significantly reduced to balance the increased spending, thereby reducing payment for other Medicare Part B services. Alternatively, if the conversion factor were to remain the same and the new funding was independent of the Medicare Physician Payment Schedule, the pool of money allotted for Medicare Part B would still have to increase substantially, which is also untenable. Under either of these scenarios, funding for this option would be diverted from another program and there is potential risk for competing federal priorities for the AMA (i.e., the AMA's Recovery Plan for America's Physicians).

- Beneficiaries could enroll in Medicare Advantage (Part C) plans. Coverage for dental, vision, and hearing services under Medicare Advantage is already an option for most beneficiaries. These services are often offered through supplementary coverage under Medicare Advantage plans. Most Medicare Advantage enrollees are in plans that offer dental (96 percent), vision (99 percent), and hearing (98 percent) coverage. Medicare Advantage plans can vary, but most plans cover both preventive and extensive dental services, access to eye exams and eyewear (contacts and/or glasses), and hearing exams

and hearing aids. Medigap plans may also cover dental, vision, and hearing services to supplement traditional Medicare coverage.

- A new, optional part of Medicare for dental, vision, and hearing coverage that would be similar to Medicare Part D for prescription drug coverage could be created. Beneficiaries would have the option to sign up, likely for an additional premium. While this new part would not be subject to the specific budget neutrality requirements of adding coverage for these services under Medicare Part B, the challenge of how to pay for this coverage still remains. This solution could also further complicate the Medicare system and is largely redundant for Medicare Advantage beneficiaries since the vast majority of Medicare Advantage (Part C) plans already offer coverage for dental, vision, and hearing services for an additional premium. Again, there is also the risk that advocacy for this option would be in competition with other AMA priorities.

- A form of cash assistance or debit card for beneficiaries who do not have access to coverage for dental, vision, and/or hearing services could be established. While this option could be less costly than the others presented, there is still a funding challenge present. Other outstanding questions include the amount of money offered to each beneficiary, the impact on beneficiaries who already have some sort of supplemental coverage, and how government officials would ensure this assistance was only being utilized for covered services. More research would need to be completed before consideration of this option.

AMA POLICY

AMA Policy D-160.925 affirms the importance of oral health care. Policy H-330.872 affirms that the AMA supports continued opportunities to work with the ADA and other interested national organizations to improve access to dental care for Medicare beneficiaries. The policy goes on to affirm AMA support for initiatives to expand health services research on the effectiveness of expanded dental coverage in improving health and preventing disease in the Medicare population, the optimal dental benefit plan designs to cost-effectively improve health and prevent disease in the Medicare population, and the impact of expanded dental coverage on health care costs and utilization.

Policy H-25.990 states that the AMA encourages the development of programs and/or outreach efforts to support periodic eye examinations for elderly patients.

Policy H-185.929 states that the AMA encourages private health plans to offer optional riders that allow their members to add hearing benefits to existing policies to offset the cost of hearing aid purchases, hearing-related exams and related services; supports coverage of hearing tests administered by a physician or physician-led team as part of Medicare's benefit; supports policies that increase access to hearing aids and other technologies and services that alleviate hearing loss and its consequences for the elderly; encourages increased transparency and access for hearing aid technologies through itemization of audiologic service costs for hearing aids; and supports the availability of over the counter hearing aids for the treatment of mild-to-moderate hearing loss.

Policy D-185.972, established with the adoption of Alternate Resolution 113-A-22, affirms that the AMA will promote awareness of hearing impairment as a potential contributor to the development of cognitive impairment or dementia later in life and encourage other stakeholders to promote the conduct and acceleration of research into specific patterns of hearing loss to determine those most linked to cognitive impairment or dementia and amenable to correction. The AMA will work with interested national medical specialty societies and state medical associations to encourage and

promote research into hearing loss as a contributor to cognitive impairment, and to increase patient access to hearing loss identification and remediation services; and promote research into vision and dental health and to increase patient access to vision and dental services.

More broadly, Policy H-185.964 states that the AMA opposes new health benefit mandates unrelated to patient protections, which jeopardize coverage to currently insured populations. Additionally, Policy D-390.946 affirms that the AMA will work towards the elimination of budget neutrality requirements within Medicare Part B; will eliminate, replace, or supplement budget neutrality in Merit-based Incentive Payment System with positive incentive payments; and will advocate strongly to the current administration and Congress that additional funds must be put into the Medicare physician payment system to address increasing costs of physician practices, and that continued budget neutrality is not an option.

Other related policies include D-330.935 and H-425.988, which state that the AMA will collaborate with relevant stakeholders to actively promote the value of the Welcome to Medicare Visit, the Tobacco Cessation Benefit, and other Medicare-covered preventive services, as well as work with the federal government and other stakeholders to support providing preventive service coverage for seniors.

As part of its Recovery Plan for America's Physicians, the AMA has dedicated an entire strategic pillar to reforming the Medicare physician payment system. In February 2023, the AMA led nearly 100 organizations in asking Congress to explore long-term solutions to the Medicare physician payment problems. The AMA is encouraging the 118th Congress to "work with us on long-term, substantive payment reforms and urge congressional hearings as soon as possible to begin exploring potential payment solutions to ensure America's seniors continue to receive access to the high-quality care they deserve."[28]

DISCUSSION

There are several aspects to consider when exploring ways to expand coverage for dental, vision, and hearing services to Medicare beneficiaries, including cost, access, the current political environment, the relevance of these services to overall health, existing AMA efforts to improve Medicare payment to physicians, and the scope of the AMA's influence.

Given the current rate of inflation, the $358 billion projection from CBO in 2019 to include coverage for dental, vision, and hearing services in the Medicare program over the next decade would likely be substantially higher today. In an environment in which Medicare is subject to statutory budget neutrality requirements, the Council believes it is impossible to consider this issue in a vacuum and the AMA must acknowledge the likely impact that adding these services would mean for payment and access to current health care services for Medicare beneficiaries. At the time that this report was written, the bill recently introduced by Senators Casey and Cardin did not have a CBO score nor was the full text of the bill available.

The Council acknowledges the potential value of expanded Medicare benefits. Nonetheless, dental, vision, and hearing services already are frequently offered through supplementary coverage under Medicare Advantage (Part C) or Medigap plans. Veterans can receive coverage for these services through Veterans Health Administration (VHA) plans (including free hearing aids), and low-income individuals can often receive coverage through Medicaid. Other beneficiaries have private coverage offered through an employer or an individually purchased plan.

In terms of the current political environment, at the time that this report was written, Congress had recently failed to prevent a budget neutrality cut to the Medicare physician conversion factor and was facing a stalemate on how to move forward with managing the national debt. At a time when physicians are already fighting to keep practices open amid continued payment cuts due to lack of an annual inflation-based update, frozen Medicare payment rates under the Medicare Access and CHIP Reauthorization Act, and budget neutrality restrictions, pursuing broader Medicare coverage expansions would be extremely challenging. Enacting Medicare physician payment reform remains one of the AMA's highest priorities under our Recovery Plan for America's Physicians.

The Council also reemphasizes the importance of working with the ADA when it comes to strategies to expand dental coverage to Medicare beneficiaries. It is crucial for the ADA and the AMA to work together to navigate the current policy landscape regarding infringements on the Medicare Physician Payment Schedule. While the Council acknowledges that oral health care is a critical part of overall health care, we believe that our dental colleagues are best positioned to assess the payment structures that work best for their needs. Notably, in 2020, the ADA enacted new policy to address dental coverage under Medicare. The AMA will continue to work closely with the ADA to share data on oral health care's impact on overall health, as stated in AMA policy.

The Council believes that the AMA can be most influential in addressing the need for hearing services through improving mechanisms already in place. Physicians should educate and encourage their patients on lower cost hearing aids that are now available over the counter for mild to moderate hearing loss. Additionally, the AMA can encourage the USPSTF to re-evaluate its decision not to recommend screening for hearing loss in asymptomatic adults over age 65, especially considering the new evidence that exists about the connection of hearing loss and dementia. Hearing loss caught and treated early could prevent the onset of dementia and improve quality of life for the aging population.

Finally, the Council believes that AMA policy on vision coverage could be strengthened, and we recommend amendments to Policy H-25.990 to encourage programs and outreach efforts for affordable prescription eyeglasses.

RECOMMENDATIONS

The Council on Medical Service recommends that the following recommendations be adopted in lieu of the referred Resolve clause of Alternate Resolution 113-A-22, and the remainder of the report be filed:

1. That our American Medical Association (AMA) support physician and patient education on the proper role of over the counter hearing aids, including the value of physician-led assessment of hearing loss, and when they are appropriate for patients and when there are possible cost-savings. (New HOD Policy)

2. That our AMA encourage the United States Preventive Services Task Force to re-evaluate its determination not to recommend preventive hearing services and screenings in asymptomatic adults over age 65 in consideration of new evidence connecting hearing loss to dementia. (New HOD Policy)

3. That our AMA amend Policy H-25.990 by addition to read as follows:

   Our AMA (1) encourages the development of programs and/or outreach efforts to support periodic eye examinations <u>and access to affordable prescription eyeglasses</u> for elderly

patients; and (2) encourages physicians to work with their state medical associations and appropriate specialty societies to create statutes that uphold the interests of patients and communities and that safeguard physicians from liability when reporting in good faith the results of vision screenings. (Amend HOD Policy)

4. That our AMA reaffirm Policy D-160.925, which recognizes the importance of managing oral health and the importance of dental care to optimal patient care and supports the exploration of opportunities for collaboration with the American Dental Association (ADA) on comprehensive strategy for improving oral health care and education for clinicians. (Reaffirm HOD Policy)

5. That our AMA reaffirm Policy H-330.872, which supports the American Medical Association's continued work with the ADA to improve access to dental care for Medicare beneficiaries and supports initiatives to expand health services research on the effectiveness of expanded dental coverage in improving health and preventing disease in the Medicare population, the optimal dental benefit plan designs to cost-effectively improve health and prevent disease in the Medicare population, and the impact of expanded dental coverage on health care costs and utilization. (Reaffirm HOD Policy)

6. That our AMA reaffirm Policy H-185.929, which supports coverage of hearing tests administered by a physician or physician-led team as part of Medicare's benefit and policies that increase access to hearing aids and other technologies and services that alleviate hearing loss and its consequences for the elderly and supports the availability of over-the-counter hearing aids for the treatment of mild-to-moderate hearing loss. (Reaffirm HOD Policy)

7. That our AMA reaffirm Policy D-390.946, which supports the American Medical Association's work towards the elimination of budget neutrality requirements within Medicare Part B. (Reaffirm HOD Policy)

Fiscal Note: Less than $500.

APPENDIX

Policies Recommended for Amendment or Reaffirmation

Importance of Oral Health in Patient Care D-160.925
Our AMA: (1) recognizes the importance of (a) managing oral health and (b) access to dental care as a part of optimal patient care; and (2) will explore opportunities for collaboration with the American Dental Association on a comprehensive strategy for improving oral health care and education for clinicians. (Res. 911, I-16; Reaffirmed: CMS Rep. 03, A-19)

Medicare Coverage for Dental Services H-330.872
Our AMA supports: (1) continued opportunities to work with the American Dental Association and other interested national organizations to improve access to dental care for Medicare beneficiaries; and (2) initiatives to expand health services research on the effectiveness of expanded dental coverage in improving health and preventing disease in the Medicare population, the optimal dental benefit plan designs to cost-effectively improve health and prevent disease in the Medicare population, and the impact of expanded dental coverage on health care costs and utilization. (CMS Rep. 03, A-19)

Eye Exams for the Elderly H-25.990
Our AMA (1) encourages the development of programs and/or outreach efforts to support periodic eye examinations for elderly patients; and (2) encourages physicians to work with their state medical associations and appropriate specialty societies to create statutes that uphold the interests of patients and communities and that safeguard physicians from liability when reporting in good faith the results of vision screenings. (Res. 813, I-05; Reaffirmed: CSAPH Rep. 1, A-15)

Hearing Aid Coverage H-185.929
1. Our AMA supports public and private health insurance coverage that provides all hearing-impaired infants and children access to appropriate physician-led teams and hearing services and devices, including digital hearing aids.
2. Our AMA supports hearing aid coverage for children that, at minimum, recognizes the need for replacement of hearing aids due to maturation, change in hearing ability and normal wear and tear.
3. Our AMA encourages private health plans to offer optional riders that allow their members to add hearing benefits to existing policies to offset the costs of hearing aid purchases, hearing-related exams and related services.
4. Our AMA supports coverage of hearing tests administered by a physician or physician-led team as part of Medicare's Benefit.
5. Our AMA supports policies that increase access to hearing aids and other technologies and services that alleviate hearing loss and its consequences for the elderly.
6. Our AMA encourages increased transparency and access for hearing aid technologies through itemization of audiologic service costs for hearing aids.
7. Our AMA supports the availability of over-the-counter hearing aids for the treatment of mild-to-moderate hearing loss. (CMS Rep. 6, I-15; Appended: Res. 124, A-19)

Sequestration D-390.946
Our AMA will: (a) continue to prioritize and actively pursue vigorous and strategic advocacy to prevent sequester and other cuts in Medicare payments due to take effect on January 1, 2022; (b) seek positive inflation-adjusted annual physician payment updates that keep pace with rising practice costs; (c) ensure Medicare physician payments are sufficient to safeguard beneficiary access to care; (d) work towards the elimination of budget neutrality requirements within Medicare Part B; (e) eliminate, replace, or supplement budget neutrality in MIPS with positive incentive

payments; (f) advocate strongly to the current administration and Congress that additional funds must be put into the Medicare physician payment system to address increasing costs of physician practices, and that continued budget neutrality is not an option; and (g) advocate for payment policies that allow the Centers for Medicare & Medicaid Services to retroactively adjust overestimates of volume of services. (Res. 212, I-21; Reaffirmed: Res. 240, A-22)

REPORT 03 OF THE COUNCIL ON MEDICAL SERVICE (A-23)
Private Insurer Payment Integrity
(Reference Committee A)

EXECUTIVE SUMMARY

At the 2022 Annual Meeting, the House of Delegates referred Resolution 110-A-22, which asked the American Medical Association to advocate for private insurers to require, at a minimum, to pay for diagnosis and treatment options that are covered by government payers such as Medicare and seek legislation or regulation to ensure that private insurers shall not be allowed to deny payment for treatment options as "experimental and/or investigational" when they are covered under government plans.

Private insurers may each make their own medical coverage determinations, which can vary across their product lines. Private insurers sometimes are able to deny coverage by labelling a diagnostic or treatment "investigational," "experimental," or "not medically necessary," which may be exacerbated by the burdensome appeals process required to request reconsideration of a denial or adverse determination.

Of government payers, Medicare is typically considered the national benchmark, particularly since it is a federal defined benefit program, with decisions centralized within the Centers for Medicare & Medicaid Services. Medicare develops National Coverage Determinations (NCDs) that are applied for all Medicare beneficiaries meeting the coverage criteria. The NCD process is a transparent, nine-month, evidence-based process with opportunities for public comment and supplemental technological assessment, which may include clinical studies. The supposition that private insurers' medical coverage determinations are more restrictive than Medicare's is not necessarily true and may be based on the perception that traditional Medicare fee-for-service coverage is more robust due to its paucity of prior authorization requirements.

While the Patient Protection and Affordable Care Act (ACA) establishes benefit mandates in the form of essential health benefits (EHB), private ACA marketplace insurers have demonstrated hesitancy in fully embracing the ACA EHB benefit mandate, even as it continues to be challenged by decisions such as *Braidwood Management Inc. et al. v. Becerra et al*.

While maintaining a commitment to minimizing benefit mandates is essential, there is clearly a need for transparency of coverage determinations, specifically regarding disparities across insurer product lines. The NCD process is very robust and might serve as a template for establishing a comprehensive, evidence-based process to allow for consistency in determinations of experimental/investigational status and transparency in coverage determinations from which insurers can develop benefit packages. Use of such a process would eliminate seemingly arbitrary decisions by private insurers to deem a diagnosis and treatment option as "experimental/investigational" in order not to have to pay for it.

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 03-A-23

Subject: Private Insurer Payment Integrity (Resolution 110-A-22)

Presented by: Lynn Jeffers, MD, MBA, Chair

Referred to: Reference Committee A

At the June 2022 Annual Meeting, the House of Delegates referred Resolution 110, which was sponsored by the New York Delegation. Resolution 110-A-22 asked the American Medical Association (AMA) to advocate for private insurers to require, at a minimum, to pay for diagnosis and treatment options that are covered by government payers such as Medicare and seek legislation or regulation to ensure that private insurers shall not be allowed to deny payment for treatment options as "experimental and/or investigational" when they are covered under government plans. Testimony at the June 2022 Annual Meeting regarding the resolution was generally opposed, highlighting the complex issues surrounding private insurer versus governmental coverage, specifically regarding benefit mandates and the differential drivers utilized in making medical coverage determinations. This report focuses on the need for transparency of medical coverage determinations, studies how 'investigational' diagnosis and treatment options are determined, highlights essential AMA policy, and presents new policy recommendations.

BACKGROUND

Coverage Determinations by Private Insurers

Private insurers are a fragmented group of commercial plans operating under a broad range of federal regulations as well as insurance and coverage rules and regulations that vary by state. Some private insurers operate nationally. While they may look to governmental precedent in certain situations, they each make their own medical coverage determinations, which can vary across their product lines. Access to private insurers' medical coverage decisions is limited, but not entirely restricted. For example, on the UnitedHealthcare (UHC) web site, the UHC commercial policy on coverage of "Off-Label/Unproven Specialty Drug Treatment" includes a Food & Drug Administration (FDA) section, noting that it is "to be used for informational purposes only…FDA approval alone is not a basis for coverage."

Private insurers sometimes are able to deny coverage by labelling a diagnostic or treatment "investigational," "experimental," or "not medically necessary," which may be exacerbated by the burdensome appeals process required to request reconsideration of a denial or adverse determination. Patients are typically not aware of their right to appeal or legal due process protections. This health insurance illiteracy is compounded among patients with limited access to technology and other resources, leading to the potential for substantial health inequities across private plans.

Coverage Determinations by the Centers for Medicare & Medicaid Services

Of government payers, Medicare is typically considered the national benchmark, particularly since it is a federal defined benefit program, with decisions centralized within the Centers for Medicare & Medicaid Services (CMS). Title XVIII of the Social Security Act established Medicare with coverage that is limited to items and services that are:

- reasonable and necessary for the diagnosis or treatment of an illness or injury; and
- within the scope of a Medicare defined benefit category.

National Coverage Determinations

The vast majority of Medicare coverage is determined on the local level by clinician contractors (Medicare Administrative Contractors [MACs] making Local Coverage Determinations [LCDs]). However, in some cases, Medicare develops National Coverage Determinations (NCDs) that are applied for all Medicare beneficiaries meeting the coverage criteria.

The NCD process is a nine-month, evidence-based process with opportunities for public comment and supplemental technological assessment by the Medicare Evidence Development & Coverage Advisory Committee (MEDCAC), which may include clinical studies. If the NCD determines coverage of an item or service only in the context of clinical study, it falls under the Coverage with Evidence Development (CED) program. NCDs in the CED program use available evidence to fit that item or service within that benefit category. As such, CMS can act as a coverage gatekeeper via the NCD process. This mechanism has been used over the past few decades and includes evidence-based guidelines for coverage.

Since it has been nearly eight years since the criteria for CED were last evaluated, MEDCAC is currently re-examining the requirements for clinical studies submitted for CMS coverage under CED, acknowledging that the update is needed since technologies have become more complex. MEDCAC also has conveyed "a commitment to greater transparency in decision-making, to making certain that study methodologies are 'fit to purpose' as determined by the topic, questions asked, health outcomes studied, and to making certain that the populations studied are representative of the diversity in the Medicare beneficiary population."[1]

The NCD process has been amended on several occasions (e.g., The Medicare Prescription Drug, Improvement, and Modernization Act of 2003), with updates made to the process for opening, deciding, or reconsidering NCDs under the Social Security Act. The 2013 update developed an expedited administrative process utilizing specific criteria to remove certain NCDs older than ten years, thereby enabling MACs to determine coverage under the Social Security Act for sunset NCDs. For 2023, CMS has updated Medicare coverage policies for colorectal cancer screening in order to align with recent United States Preventive Services Task Force (USPSTF) and national medical specialty society recommendations.[2]

Transparency is a keystone to the process, as CMS issues an annual report listing the NCDs made in the previous calendar year in the form of a report to Congress. Additionally, there is an NCD dashboard, outlining the status of NCDs at each stage of the process (i.e., under review, reviewed but not yet opened, opened and undergoing national coverage analysis, and finalized). CMS houses all Medicare coverage determinations in the Medicare Coverage Database (MCD). The MCD includes LCDs as well as NCDs, along with reports on each.

The supposition that private insurers' medical coverage determinations are more restrictive than Medicare's may be based on the perception that traditional Medicare fee-for-service coverage is more robust due to its paucity of prior authorization requirements. Data indicates otherwise, such as with NCDs for medical devices. For each of the 47 medical devices considered for NCDs between February 1999 and August 2013, it was found that NCDs were equivalent to the corresponding private insurer policies roughly half of the time, more restrictive approximately a quarter of the time, and less restrictive about a quarter of the time.[3]

Food and Drug Administration

The notion that Medicare "adopts" diagnostic and treatment options once approved by the FDA is similarly problematic. Medicare does not automatically cover all FDA-approved devices and drugs. Between 1999 and 2011, Medicare covered FDA-approved drugs or devices only 80 percent of the time.[4] Additionally, Medicare has been found to have more stringent requirements than the FDA, particularly for drugs or devices in patients with comorbidities.

The Medicare Benefit Policy Manual (Chapter 14 – Medical Devices) outlines that Medicare will cover FDA-approved and Institutional Review Board (IRB)-approved investigational devices "provided the investigational device meets certain requirements, including: (1) The device or services associated with the use of a device are provided to the beneficiary within the start and end dates contained in the master file; (2) There are no regulations, national coverage policies, or manual instructions that would otherwise prohibit Medicare coverage."

Medicare Investigational Device Exemption

While Medicare normally does not cover experimental or investigational procedures, it does offer an exemption for investigational devices to allow for coverage under some circumstances. The Medicare Investigational Device Exemption (IDE) was developed as part of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) and includes two categories:

- Category A (Experimental): An innovative/experimental device for which "absolute risk" of the device type has not been established (i.e., initial questions of safety and effectiveness have not been resolved and the FDA is unsure whether the device type can be safe and effective). There is no Medicare coverage for a Category A device but Medicare covers routine care items and services in the trial. An example is the CG-100 Intraluminal ByPass Device.
- Category B (Non-experimental/non-investigational): A device for which the underlying questions of safety and effectiveness of that device type have been resolved. Medicare allows for coverage of the Category B device as well as for routine care items and services in the trial. An example is the Viper Catheter System.

In 2015, CMS shifted responsibility for review and approval of IDE studies from the MACs to a centralized CMS process, which includes a publicly accessible, updated list of Approved IDE Studies.

Medicare Coverage of Innovative Technology and Definition of Reasonable and Necessary

In January 2021, CMS released a final rule on The Medicare Coverage of Innovative Technology and Definition of "Reasonable and Necessary,"[5] which established pathways to payment for innovative technologies supported by high-quality, validated clinical data. The rule automatically

provided four years of coverage for all Medicare beneficiaries for newly approved medical devices, in order to accelerate availability of medical devices approved through the FDA breakthrough pathway for innovative technologies.

As part of the rule, CMS proposed automatically transferring the coverage policy of commercial insurance to Medicare beneficiaries for new products. In two identical comment letters (November 2020 and April 2021), the AMA outlined several concerns with the proposal, namely the potential loss of transparency in Medicare coverage decisions if tied to commercial health insurer policies beholden to shareholder expectations. The independent, public comment process utilized by CMS to make coverage decisions appropriate for the Medicare population would be replaced with coverage decisions based on objectives such as litigation avoidance or competitive advantage. The AMA argued that the focus should remain on what is most suitable and safest for Medicare beneficiaries based on Medicare's determination.

After considering these and other comments, CMS rescinded the rule in November 2021, citing concerns about lack of sufficient patient protections and lack of evidence of clinical benefit for the newly approved medical devices in the Medicare population. At the present time, CMS is working on a new proposed rule to create an accelerated Medicare coverage pathway, building on prior initiatives such as CED.[6]

AFFORDABLE CARE ACT BENEFIT MANDATES

The Patient Protection and Affordable Care Act (ACA) requires non-grandfathered health plans in the individual and small group markets to cover the following essential health benefits (EHB): (1) ambulatory patient services; (2) emergency services; (3) hospitalization; (4) maternity and newborn care; (5) mental health and substance use disorder services including behavioral health treatment; (6) prescription drugs; (7) rehabilitative and habilitative services and devices; (8) laboratory services; (9) preventive and wellness services and chronic disease management; and (10) pediatric services, including oral and vision care. The Department of Health and Human Services (HHS) regulations define EHB using state-specific benchmarks. Since 2020, states have been granted greater flexibility in establishing new standards for their EHB benchmark plans. Non-grandfathered health plans cannot refuse coverage or limit benefits for pre-existing conditions.

Since the passage of the ACA in 2010, there have been more than 2,000 state and federal actions attempting to limit, alter, or repeal it.[7] Most recently, in *Braidwood Management Inc. et al. v. Becerra et al.*, a federal judge ruled that insurers are no longer required to provide preventive services recommended by USPSTF at no cost. While some states have challenged parts or all of the ACA through legislation, others have acted to preserve the ACA by codifying certain provisions into state law.

Private ACA marketplace insurers have demonstrated hesitancy in fully embracing the ACA EHB benefit mandate, even as it continues to be challenged. For example, while insurers were initially required to cover preexposure prophylaxis (PrEP), a medication that prevents the transmission of human immunodeficiency virus in high-risk populations (e.g., gay and bisexual men of color) without cost sharing, not all insurers extended the benefit to the ancillary services (e.g., venipuncture, office visits) required to provide PrEP. HHS had to issue subsequent guidance to clarify that insurers were required to cover PrEP ancillary services under their EHBs. As decisions such as *Braidwood Management Inc. et al. v. Becerra et al.,* erode the ACA EHB benefit mandate, it will become increasingly important that private ACA marketplace insurers are held accountable for covering all current ACA EHB benefit mandates.

AMA POLICY

The AMA's longstanding goals to allow markets to determine benefit packages in order to permit a wide choice of coverage options and to refrain from jeopardizing coverage to currently insured populations are reflected in numerous AMA policies as well as in the AMA Proposal for Reform, which is grounded in AMA policies concerning pluralism, freedom of choice, freedom of practice, and universal access for patients. AMA policy supports the minimization of benefit mandates to allow markets to determine benefit packages, permitting a wide choice of coverage options.

Among the most relevant policies are those that:

- Oppose new health benefit mandates unrelated to patient protections (Policy H-185.964);
- Advocate for the minimization of benefit mandates (Policy H-165.856);
- Support maximization of patient choice (Policy H-165.839) and free market choice of plans (Policy H-330.912);
- Encourage payers to utilize transparent and accountable processes for developing and implementing coverage decisions and policies (Policy D-185.986);
- Assure reasonable payment levels for mandated benefits in health insurance policies (Policy D-385.966); and
- Call for the AMA to develop model legislation and/or regulations to require that commercial insurance companies, state Medicaid agencies, or other third party payers utilize transparent and accountable processes for developing and implementing coverage decisions and policies (Policy D-185.986).

While AMA policy opposes blanket benefit mandates, there is policy on coverage of specific conditions and services. For example, Policy H-185.967 supports that treatment of pediatric congenital or developmental deformities or disorders due to trauma or malignant disease should be covered by all insurers, Policy H-185.957 supports legislation that requires all third party payers that cover surgical benefits to cover all strabismus surgery where medically indicated, and Policy D-185.973 encourages insurance coverage of and payment for reconstructive services for the treatment of physical injury sustained from intimate partner violence. The AMA defended Policy D-185.979 by filing an amicus brief in *Braidwood Management Inc. et al. v. Becerra et al.*, which challenged support for first dollar coverage of preventive services.

The AMA definition of "medical necessity" (Policy H-320.953), urges payers to share third party methodologies for determining medical necessity, and advocates for the opportunity for treating physicians to provide medical evidence toward those determinations (Policy H-320.995). The AMA's definition of medical necessity is included in state model legislation and has been enacted in several states as a required definition, rather than allowing plans to develop their own definitions. Policies H-320.968 and H-320.982 support that denial of medical necessity of services or request for prior authorization be recommended by a physician of the same specialty as the treating physician.

Finally, there is AMA policy to protect patients and physicians and encourage innovation in the context of experimental or investigational treatments. Policy D-460.967 calls for the AMA to study the implementation of expanded access programs, accelerated approval mechanisms, and payment reform models to increase access to investigational therapies. Policy H-460.965 states that the AMA should pursue legislation and regulatory reform to mandate third party payer coverage of patient care costs of nationally approved scientifically based research protocols. Policy H-480.996 supports that regulations be promulgated or interpreted so as to not interfere with the

patient/physician relationship or impose regulatory burdens that may discourage creativity and innovation in advancing device technology.

DISCUSSION

While maintaining a commitment to minimizing benefit mandates is essential, there is clearly a need for transparency of coverage determinations, specifically regarding disparities across insurer product lines. An insurer may cover something considered preventive under one product line yet fail to cover the same thing under another product line. Such arbitrary coverage decisions not only question payer integrity but also introduce superfluous physician administrative burdens, such as prior authorization requirements.

While the AMA advocates for market-based solutions for coverage, there is presently a floor of benefits nationally as ACA plans must cover certain conditions. ACA coverage decisions for non-elective care at a basic level is necessary so that essential care is not determined by a patient's socioeconomic status. While it would be helpful for private and governmental insurers to be cognizant of each other's coverage decisions, it may not be ideal for them to be perfectly aligned given that Medicare is sometimes more restrictive and sometimes less restrictive. However, to encourage innovation, the process for gaining coverage must be transparent and expeditious. It would be beneficial to continue to expand the ability of CMS to proactively engage coverage of breakthrough therapies and devices at product launch – rather than having to wait for an NCD to be established. When CMS requires additional studies prior to coverage, this feedback should ideally be provided during the product development phase, not after the product is approved and available to the public, when finding patients to enroll in trials is more difficult.

The NCD process is very robust and might serve as a template for establishing a comprehensive, evidence-based process to allow for consistency in determinations of experimental/investigational status and transparency in coverage determinations from which insurers can develop benefit packages. The process could include online tools to allow physicians to easily check coverage status rather than requiring completion of a prior authorization form and waiting for a response. Implementation of such a process would not preclude private insurers from offering additional or alternative benefits that would distinguish their products in the marketplace, allowing for a wide choice of coverage options in keeping with AMA policy. In following established precedents, it may amend the base level for what is considered medically necessary care (e.g., USPSTF grade A or B recommendations are covered without cost-sharing under the ACA).

Use of such a process would eliminate seemingly arbitrary decisions by private insurers to deem a diagnosis and treatment option as "experimental/investigational" in order not to have to cover it. There is considerable variation in how "experimental/investigational" diagnosis and treatment options are determined, which only escalates concerns regarding subjective and inequitable decisions. While some insurers may define experimental/investigational services as an intervention that has not yet been determined to be medically effective for the condition being treated, others describe it as something that has undergone basic laboratory testing and received approval from the FDA to be tested in human subjects. The definition of experimental/investigational is a continuum rather than a standard as it is contingent upon discrete, independent evaluations that vary from insurer to insurer. While insurers may profess applying reasonable interpretation of their policy provisions, those are also variable and lacking a standard.

RECOMMENDATIONS

The Council on Medical Service recommends that the following be adopted in lieu of Resolution 110-A-22, and the remainder of the report be filed:

1. That our American Medical Association (AMA) support the development of a comprehensive, evidence-based process to establish consistency in determinations of experimental/investigational status and transparency in coverage determinations from which insurers can develop benefit packages. (New HOD Policy)

2. That our AMA support voluntary programs that expedite review for coverage by private and governmental insurers when requested by either the manufacturer or third parties such as national medical specialty societies. (New HOD Policy)

3. That our AMA amend Policy D-185.986 by the addition of one new clause, as follows: 4. Our AMA will advocate that when clinical coverage protocols are more restrictive than governmental payers, that private insurers and benefit managers should include the clinical rationale substantiating their coverage policies. (Modify Current HOD Policy)

4. That our AMA reaffirm Policy H-185.964, which opposes new health benefit mandates unrelated to patient protections.(Reaffirm HOD Policy)

5. That our AMA reaffirm Policy H-165.856, which advocates for the minimization of benefit mandates. (Reaffirm HOD Policy)

6. That our AMA reaffirm Policy H-320.995, which urges payers to share third party methodologies for determining "medical necessity," and advocates for the opportunity for treating physicians to provide medical evidence toward those determinations. (Reaffirm HOD Policy)

7. That our AMA reaffirm Policy D-460.967, which calls for study of the implementation of expanded access programs, accelerated approval mechanisms, and payment reform models to increase access to investigational therapies. (Reaffirm HOD Policy)

Fiscal Note: Less than $500.

REPORT 04 OF THE COUNCIL ON MEDICAL SERVICE (A-23)
Bundled Payments and Medically Necessary Care
(Resolution 111-A-22)

EXECUTIVE SUMMARY

At the 2022 Annual Meeting, the House of Delegates referred Resolution 111, which asked the American Medical Association (AMA) to 1) advocate that coverage rules for Medicaid "episodes of care" be carefully reviewed to ensure that they do not incentivize limiting medically necessary services for patients to allow better reimbursement for recipients of the bundled payment; 2) study the issue of bundled payments and medically necessary care with a report back to explore the unintended long-term consequences on health care expenditures, physician reimbursement, and patient outcomes; and 3) advocate that functional improvement be a key target outcome for bundled payments.

The Council's review of the literature on select Medicare bundled payment models and Medicaid episodes of care found that lower extremity joint replacement (LEJR) bundles, and some perinatal episodes of care, have produced the most—but still modest—savings without compromising care quality. Because the evidence is clear that the savings accrued under LEJR episodes has been due to decreased spending on skilled nursing and inpatient rehabilitation facilities, some physicians have questioned whether patient access to medically necessary care, including institutional post-acute care, could potentially be limited. The Council believes that performance metrics measuring key patient-centered outcomes, including functional improvements after orthopedic and other procedures, are important and necessary checks on the risk that some models may underserve patients. Because the AMA already has extensive policy on alternative payment models (APMs), we recommend amending Policies H-390.849[2, 3] and D-385.952[1, 2] to address this concern instead of crafting a separate policy statement specific to bundled/episode-based payments.

To address other concerns and obstacles under bundled/episode-based payment models, the Council recommends reaffirmation of Policy H-385.907, which supports fair and accurate risk adjustment systems, and Policy H-385.913, which outlines goals to be pursued as part of physician-focused APMs—including that models be designed by physicians or with significant input from physicians, provide flexibility to physicians to deliver the care patients need, provide adequate and predictable resources, and avoid placing physician practices at substantial financial risk—and directs the AMA to continue to work with national medical specialty societies and state medical associations to educate physicians on APMs. The Council believes that well-designed, patient-centered bundled payment models can improve care quality and patient outcomes in ways that also lower growth in health care spending. Designing these models to work effectively for patients, physicians, and payers remains challenging, and ongoing refinements to models may be needed to ensure optimal patient outcomes as these initiatives continue to expand.

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 04-A-23

Subject: Bundled Payments and Medically Necessary Care (Resolution 111-A-22)

Presented by: Lynn Jeffers, MD, MBA, Chair

Referred to: Reference Committee A

At the 2022 Annual Meeting, the House of Delegates referred Resolution 111, which was cosponsored by the American Academy of Physical Medicine and Rehabilitation and the Ohio delegations. Resolution 111-A-22 asked the American Medical Association (AMA) to 1) advocate that coverage rules for Medicaid "episodes of care" be carefully reviewed to ensure that they do not incentivize limiting medically necessary services for patients to allow better reimbursement for recipients of the bundled payment; 2) study the issue of bundled payments and medically necessary care with a report back to explore the unintended long-term consequences on health care expenditures, physician reimbursement, and patient outcomes; and 3) advocate that functional improvement be a key target outcome for bundled payments.

The Board of Trustees assigned this item to the Council on Medical Service for a report back to the House of Delegates. This report adds to the body of reports developed by the Council on alternative payment models (APMs) by providing background information specific to bundled/episode-based payment models, summarizing the literature on prominent Medicare and Medicaid models, reviewing relevant AMA policy and advocacy, and making policy recommendations.

BACKGROUND

Bundled or episode-based payments are a type of APM in which a single comprehensive payment amount covers services delivered by multiple providers during an episode of care. An episode of care is the care delivery process for a certain condition or procedure delivered within a defined period of time. State Medicaid programs use the term episodes of care to describe payment models in which a single bundled payment is made for services associated with the treatment of a condition or procedure. The models aim to lessen variations in cost and quality by incentivizing providers (e.g., physicians, hospitals, post-acute care facilities, and others providing services during the episode) to work together and manage costs without compromising care quality. Providers able to keep costs below a risk-adjusted target price for an episode may share in any savings and, conversely, those exceeding that threshold may incur financial penalties. Savings can be generated if, as is often the case, the target price is a discount of what has historically been paid, or if lower-cost facilities and providers are utilized during the episode. To guard against underserving patients, some models impose limits on gainsharing payments and/or require that certain quality metrics be met.

Medicare, state Medicaid programs, and many private insurers have adopted bundled or episode-based payment models to varying degrees with perinatal and joint replacement models increasingly prevalent across multiple payers. Although Medicare has administered bundled payments for many years, provisions in the Affordable Care Act (ACA) accelerated their use, along with other APMs,

by establishing the Center for Medicare & Medicaid Innovation (CMMI) and authorizing it to develop and test new payment models without the need for Congressional approval. In 2015, the Department of Health and Human Services announced national goals for transitioning to value-based medicine and APMs; the same year, Congress passed the Medicare Access and CHIP Reauthorization Act (MACRA), which among other things established incentive payments for physicians to participate in advanced APMs. Centers for Medicare & Medicaid Services (CMS) and a handful of states continue to experiment with episode-based payment approaches, such as lengthier and more inclusive episodes and those that span multiple providers and/or sites of service. Importantly, there is substantial variance among bundled/episode payment designs, with larger and more widely implemented models including Medicare's Bundled Payments for Care Improvement (BPCI) Advanced initiative and the Comprehensive Care for Joint Replacement (CJR) model.

Medicare bundles have informed some Medicaid episodes of care although states have generally adapted APMs to suit the unique needs of their Medicaid enrollees and health care in their states.[1] Notably, state Medicaid programs and Medicaid providers are at various stages of implementation of value-based payment reforms and, to address ongoing budget pressures, many states have pursued APMs to reduce cost growth in Medicaid while improving care quality. Because 70 percent of Medicaid enrollees are enrolled in managed care,[2] states often use contracting strategies with managed care organizations (MCOs) to leverage the use of value-based payments, including episodes of care. For example, more than half of states (20 of 37) that contract with MCOs to manage care delivered to Medicaid enrollees require those plans to make a certain percentage of provider payments through APMs, while some states require MCOs to adopt specific models. Several states use financial incentives—and/or penalties—to compel MCOs to pursue value-based payment models. To date, the use of episode-based payments has generally been limited to those states that prescriptively define and require such models, including for joint replacement and perinatal episodes of care.[3] In a 2021 Kaiser Family Foundation survey, eight states (CO, NM, NY, OH, PA, TN, VT, and VA) reported implementing episodes of care in Medicaid, although this number changes as states implement new models while sunsetting others.[4]

Most, but not all, bundled payment models are voluntary; the CJR initiative, which is mandatory in certain areas and voluntary in others, and Medicaid models in some states, are exceptions. Beyond that, bundled payment initiatives differ from each other in terms of duration, payment rules, and the types of services included. Episodes can range from shorter durations to lengthier periods, as for perinatal models that span the prenatal through postpartum periods. Although payments for episodes of care can be determined prospectively or based on fee-for-service with retrospective adjustments, most of the models discussed in this report adjust payments retrospectively. Additionally, add-on payments covering high-cost or outlier cases may be made available to varying degrees, depending on the model design. With respect to outliers, Policy H-385.907 advocates that bundled payments should recognize the differences in patients' needs and payment amounts should be risk stratified to reflect patients who need more resource-intensive services. The menu of services paid for in a bundle also varies significantly across models and affects the types of providers that participate. Notably, the CJR model includes most Part A and Part B services, except for hospice and a few other carve-outs, while other models pay for a narrower set of services.

Physician participation in bundled payment models has increased steadily over the past decade, as evidenced by data from the AMA's Physician Practice Benchmark Surveys, which are nationally representative samples of non-federal physicians who provide care to patients at least 20 hours per week. According to recent Benchmark surveys, 32.0 percent of physicians were in practices involved in bundled payments in 2012. This increased to 34.8 percent in 2016 and topped 40 percent in 2020 and 2022 for a cumulative increase of eight percentage points. Additionally, in

2022, an average of 10 percent of practice revenue (at the physician level) came from bundled payments.[5]

The main obstacles to effective bundled payments are accurately defining care episodes, pricing the bundles, and ensuring adequate payment for care provided by all team members across all sites of service. Physicians have expressed concerns regarding both the financial arrangements and administrative burdens incurred, including the degree of financial risk required to participate, the potential for financial strain if the fixed payment amount does not accurately reflect the costs of the episode, the potential for decreased payments, and administrative hurdles, especially when participating in more than one APM. Additional concerns include high dropout rates among hospitals participating in some models, the potential for some models to become mandatory, and the ability of small physician practices to participate. In the Whereas clauses, the authors of Resolution 111-A-22 highlighted concerns about the occurrence of unrelated—and costly—events during a care episode, increased expenses for complex patients, the need for skilled nursing care by some patients, and possible incentives to lessen costs by decreasing patient access to services they may need.

Defining what is related and unrelated to a bundle can be problematic with episode models, yet decisions about covered services are critical to ensuring appropriate payment. Care for unrelated conditions and procedures that takes place within the duration of an episode can be costly and potentially increase spending beyond the target price of the bundle. Importantly, the AMA maintains that APMs should be designed by physicians or with significant input from physicians in part so they can influence decisions about covered services and advocate that care for unrelated events (e.g., cataract surgery during a 90-day lower extremity joint replacement (LEJR) episode) not be paid for out of the bundled payment. The AMA also advocates that financial risk requirements be limited to costs that physicians participating in an APM are able to influence or control.

An additional shortcoming of many of the larger Medicare bundled payment models is that they start with a hospitalization for a procedure. If, for example, episodes began with an evaluation for hip, knee, or back pain, or other condition, there would be more opportunities to save money and improve quality by, for example, engaging in patient-physician shared decision making strategies that could potentially prevent hospitalizations and procedures altogether. Specific to Medicaid, staffing, resource, and leadership capacity to develop and implement new models can be major obstacles to implementing payment initiatives and, for this reason, state Medicaid directors have asked CMS to provide upfront resources for states to engage in delivery system and payment reforms.[6] Additionally, risk thresholds may dissuade some Medicaid providers, especially those practicing in states with particularly low payment rates, from participating in episode-based payment models if they feel they cannot take on financial risk. Importantly, Medicaid enrollees may have complex care needs and/or experience inequities in social determinants of health—such as housing instability, food insecurity, or lack of transportation—that impact their care and health outcomes. They also face unique barriers to care and may churn in and out of Medicaid, which could lead some Medicaid providers to believe they will be disproportionately penalized under APMs without sufficient risk adjustment.

Many of these obstacles have been addressed in previous reports and policy development by the Council on Medical Service. Council on Medical Service Report 9-A-16 established foundational policy on physician-focused APMs while Council on Medical Service Report 10-A-17 focused on reducing some of the barriers to participating in these models and the need for changes to risk adjustment systems, attribution methods, and performance target setting. AMA policy established by Council on Medical Service Report 10-A-19 addressed concerns raised by many that physicians

serving people who are sicker or experiencing poverty are disproportionately penalized by APMs. Council on Medical Service Report 3-I-19 established new policy on improving risk adjustment in APMs, including that risk stratification systems should use fair and accurate payments based on patient characteristics, and that risk adjustment systems should use fair and accurate outlier payments if spending on an individual patient exceeds a predefined threshold. Concerns about APMs, and AMA advocacy to improve upon value-based payment models, were also discussed in Council on Medical Service Report 2-A-22, which focused on prospective payment model best practices for independent private practice.

EVIDENCE OF EFFECTIVENESS

Select Medicare Bundled Payment Models

Bundled/episode-based payments have been implemented for numerous surgical procedures and medical conditions and remain a leading value-based payment reform in Medicare. Lacking the capacity to thoroughly study the impact of all Medicare bundled payment models implemented over the years, the Council reviewed independent evaluations of the larger CMS initiatives and more recent analyses in the literature examining the impact of multiple bundles on Medicare spending, quality of care, and unintended consequences. Information on a unique episode program for non-hospital physicians developed as part of Maryland's statewide CMMI initiative is also provided.

BPCI: One of the largest Medicare models was the voluntary BPCI initiative—four model designs that offered episode-based payments to over 1,000 hospitals, physicians, and post-acute care providers for 48 different clinical episodes over five years (2013-2018).[7] Consistent with previous findings, the final BPCI evaluation showed that the initiative reduced Medicare spending per episode due primarily to declines in institutional post-acute care utilization and decreases in the number of skilled nursing facility (SNF) days for those that needed SNF care. However, after accounting for reconciliation payments to eligible providers, BPCI did not increase net Medicare savings; instead, the initiative resulted in net increased Medicare spending beyond what it was estimated to be in absence of the model.[8] Evaluations further demonstrated that BPCI generally did not affect quality of care as measured by emergency department visits, mortality, and hospital readmissions. The evidence was mixed and included both positive and negative associations between BPCI models and patient functioning,[9] and fewer BPCI patients reported the highest level of satisfaction with their care.[10] Importantly, two studies analyzing outcomes of high-risk patients found that participation in BPCI did not adversely impact their quality of care.[11,12]

BPCI Advanced: Building on the experiences and lessons learned from BPCI, the BPCI Advanced initiative—which includes bundles with one risk track and a 90-day duration—was launched in 2018 and has been extended to run through 2025. BPCI Advanced links performance on select quality metrics to incentive payments and qualifies as an Advanced APM. Accordingly, participating physicians who meet certain cost thresholds may be eligible for a five percent APM incentive payment. Participation in BPCI Advanced is currently voluntary and notably widespread, with 1,295 hospitals and physician groups participating in years one and two (2018 and 2019) and more than 2,000 participating in year three (2020).[13] CMS continues to use results from its independent evaluations to refine the initiative, which reduced episode payments overall in 2018 and 2019 and produced greater savings ($1,353 per episode) for surgical episodes than for medical episodes ($564 per episode).[14] After accounting for reconciliation payments made to BPCI Advanced providers in 2018 and 2019, the independent evaluator found that the initiative resulted in net Medicare savings for surgical episodes and net increased Medicare spending for medical episodes with an overall increase in Medicare spending of $65.7 million.[15] Consistent with BPCI

and other bundles, episode savings were primarily attributed to lower payments to post-acute care sites, including SNFs and inpatient rehabilitation facilities. Importantly, quality of care was not adversely impacted; in fact, BPCI Advanced has been found by the evaluators to reduce readmissions for surgical episodes and to not worsen mortality rates.[16] A separate study of BPCI Advanced, published in 2022, also found the initiative to be associated with a net increase in Medicare spending because bonuses paid to eligible hospitals exceeded episode payment reductions.[17] This study further found that hospitals caring for historically marginalized populations received large bonuses under BPCI Advanced, possibly due to initial episode target pricing, which was subsequently adjusted by CMS.[18]

CJR: The CJR model pays for care episodes that extend through 90 days after discharge from both inpatient and outpatient settings for some of the most common surgeries among Medicare patients—hip, knee, and, more recently, ankle replacements, also referred to as LEJR.[19] CJR began in 2016 and has been mandatory since 2017 for hospitals in 34 geographic areas where spending had been historically high.[20] Over CJR's first four years, payments across LEJR episodes in CJR's mandatory areas were 5.2 percent lower than the baseline, with payments averaging $1,511 less per episode. An independent evaluation estimated small net savings for the Medicare program in earlier years but was unable to conclude definitively that Medicare realized net savings over the first four years of the initiative. Over the four-year period, independent evaluators estimated that, after accounting for reconciliation payments, net savings ranged from a possible $15.3 million more in Medicare spending to $167.2 million in savings.[21] Similar to other surgical bundles, changes in post-acute care utilization drove the decrease in average episode payments, as fewer patients were discharged to SNFs and rehabilitation facilities, and patients who went to SNFs spent fewer days there. When compared to the control group, a larger proportion of CJR patients were discharged to home health agencies, which cost significantly less than institutional post-acute care.[22] CJR patient care quality, as measured by unplanned readmissions, emergency department use, and mortality rates, was maintained over the four-year period. Furthermore, patients in the CJR and control groups reported similar functional status gains, pain levels, and overall satisfaction, although some CJR patients reported that they required more caregiving help at home and CJR hip replacement patients reported less improvement on three of eight functional status measures.[23] In terms of unintended consequences, evaluators identified a decrease in patient complexity that could indicate some level of risk selection but no evidence of increased LEJR volume.[24] Although a *New England Journal of Medicine* study of CJR's first two years did not find adverse effects on complications, hospital readmissions, or mortality, it did not look at functional status, pain, and patient satisfaction indicators. This study examined whether the CJR program incentivizes hospitals to 1) treat healthier rather than sicker patients (risk selection); and/or 2) reduce the use of SNF and inpatient rehabilitation. With regard to risk selection, the study noted inconsistent evidence in previous studies and no changes in patient selection in the current study other than some evidence that fewer disabled patients underwent procedures.[25] Because CJR did not negatively affect complications, readmissions, or mortality, the study authors concluded that hospitals may have correctly identified patients who could be appropriately discharged home with home health instead of being referred to institutional post-acute settings.[26]

A systemic review of CMS's Acute Care Episode Demonstration (a three-year bundled payment model for inpatient cardiac and orthopedic surgeries), BPCI, and CJR initiatives found no associations between these Medicare models and 1) quality of care—as measured by readmissions, emergency department visits, and mortality—and 2) unintended consequences, such as increased utilization or risk selection.[27] This review further found that, in six out of 16 studies that evaluated spending, bundled payments significantly decreased episode costs; importantly, these six studies focused on orthopedic surgery and four of the six looked at LEJR episodes. Other clinical or medical episodes were not found to be associated with episode savings.[28] A separate review of 16

Medicare bundled payment initiatives similarly found that Medicare spending decreased for LEJR episodes but not for most other bundled payment models unless provider fees were heavily discounted.[29] This review found limited evidence of risk avoidance across models although the evidence was mixed.[30] The authors highlighted the association between bundled payments and post-acute care spending, with payments and service intensity more likely to decrease under bundles that included post-acute care services in the bundle and increased post-acute care utilization in models that did not include post-acute care services in the bundle. Like other studies, no association was found between bundled payments and increased episode volume.[31]

Episode Programs in Maryland: Within its Total Cost of Care All-Payer Model, Maryland has several CMMI-approved advanced payment initiatives specific to that state, including the Episode Quality Improvement Program (EQIP) launched in 2022 for specialist physicians in Medicare.[32] This program provides opportunities for more non-hospital providers to participate in bundles relevant to a range of specialties, including gastroenterology, cardiology, and orthopedics, which were implemented in year one, as well as additional episodes that have been rolled out since. As of January 2023, 43 medical specialties were represented in 45 episodes available under EQIP.[33]

Select Medicaid Episodes of Care

Although Medicaid programs employ a range of value-based payment programs, including episodes of care for various conditions and procedures, they have not been as high profile as some Medicare-focused models. Furthermore, while there is a wealth of published studies of Medicare bundled payment initiatives, the research literature is less robust for Medicaid models and not all states implementing episodes of care make cost and performance data publicly available. Accordingly, the Council reviewed available data from select states that were early adopters of episodes of care, including Tennessee, Ohio, and Arkansas, as well as a Medicaid and CHIP Payment and Access Commission (MACPAC) analysis of perinatal episodes implemented across three states.

Perinatal: Because Medicaid covers nearly half (42 percent in 2020) of all births in the U.S.,[34] several states have implemented episode-based payments for perinatal care. A 2021 MACPAC analysis reviewed perinatal episodes of care implemented in Arkansas, Colorado, and Tennessee. Although the Arkansas and Tennessee models were generally viewed positively in terms of reducing cost variations, Arkansas sunset its model, which had been mandatory, in 2021, due in part to administrative burdens on providers and diminishing returns as cost variations narrowed over time. The Tennessee and Arkansas models reduced costs per episode but produced mixed results on quality measures.[35] Because the Colorado model began later, in 2020, with only a few participants at the start, data on its impact on episode costs was not available at the time this report was written. Although high-risk pregnancies were excluded from episode-based payments in Arkansas and Tennessee, the Colorado model, which is voluntary, includes some high-risk patients, including those with substance use disorders. Importantly, while certain quality measures are tracked by states, there is no published evidence on the impact of perinatal episodes of care on maternal health or birth outcomes. Moreover, incentives are generally not tied to key metrics related to reductions in maternal morbidity and mortality, or impact on health disparities.[36]

Tennessee: Aside from its perinatal model, Tennessee's Medicaid program, known as TennCare, has administered close to 50 episodes of care since 2013. TennCare reported that, in 2018, 22 of the 27 episodes of care tied to incentive payments saved the state an estimated $38.3 million. The five that did not show savings were for acute percutaneous coronary intervention, non-acute percutaneous coronary intervention, gastrointestinal hemorrhage, bariatric surgery, and human immunodeficiency virus episodes, which the state described as low volume, making savings more

difficult to achieve. Episodes producing the most savings in 2018 included the perinatal model ($13.5 million in savings), respiratory infection episode ($6.8 million), and the asthma acute exacerbation episode ($4.2 million).[37] Quality of care, as measured by certain performance metrics, was mostly maintained or improved except for low-volume episodes in which quality metric performance declined.[38] Because TennCare waived all episodes of care incentives through 2021 due to the Covid-19 pandemic, more recent evaluation data was not available for review.

Ohio: Ohio's Department of Medicaid, which has administered 43 episodes of care since 2015, similarly suspended its episodes of care incentives between 2020 and 2022 due to Covid-19's impact on the state's providers. Data from 2019 showed that Ohio's episodes of care covered more than 1.5 million patients that year, or 51 percent of the state's Medicaid enrollees.[39] From 2013 to 2019, Ohio participated in CMMI's State Innovation Model (SIM) initiative, which helped facilitate the design and launch of the state's episodes of care as well as its comprehensive primary care program. Results from the first two years of Ohio's episodes of care program were generally positive and showed reductions in average episode costs overall with no adverse effects on care quality. For the nine episodes linked to incentives in 2017 (asthma exacerbation, chronic obstructive pulmonary disease exacerbation, perinatal, cholecystectomy, upper respiratory infection, gastrointestinal bleed, urinary tract infection, colonoscopy, and esophagogastroduodenoscopy), average non-risk-adjusted spending decreased by 0.9 percent annually, saving an estimated $31.8-$92.2 million.[40] That same year, providers received $4 million in positive incentives and were accountable for $4 million in negative incentives.[41] In its final SIM report issued in 2019, the Ohio Department of Medicaid identified several factors that were key to the successful design and implementation of its episodes of care, including ongoing provider engagement, addressing provider challenges, streamlining reporting burdens, engaging private insurers in the state, facilitating consistency across public and private health plans, and aligning episodes of care with population health priorities. The episodes of care initiative further benefited from strong leadership in the state, a dedicated innovation team, and alignment with federal models. In 2019, Ohio's episodes of care model was approved as an advanced APM.[42]

Arkansas: Support from the federal SIM initiative also helped Arkansas develop new payment models and refine and expand episodes of care that were first implemented by the state's Medicaid program in 2011.[43] By the end of the SIM initiative in 2016, Arkansas had produced 14 episodes of care that were mandatory for Medicaid providers and voluntary for the state's two private payers.[44] Challenges early on ranged from a degree of provider hesitation and pushback to evidence that coding had been used by some providers to avoid triggering certain episodes. The state reported that average costs for attention-deficit/hyperactivity disorder and joint replacement episodes had decreased significantly while the costs of other episodes, and episodes of care overall, remained relatively constant.[45] One of the most prevalent models in Arkansas, for upper respiratory tract infections (URIs), showed significant quality improvements after two years, including greater reductions in antibiotic use and improvements in appropriate care for children, relative to a comparison group. However, emergency department visits increased during that time span and some physicians reported in focus groups using alternate coding to avoid triggering an episode.[46] Between 2011 and 2014, URI-related professional and outpatient spending increased while spending on prescription drugs (antibiotics and others) did not change. Over the same time period, the state's perinatal episode was found to decrease emergency department visits but increase inpatient hospital utilization and, importantly, perinatal expenditures declined, and improvements were made across most quality metrics.[47] A 2020 analysis of perinatal and URI episodes of care in Arkansas concluded that: linking incentives to performance metrics may help improve quality of care; episodes of care may successfully discourage the overuse of services; and unintended consequences are possible, including episode avoidance through coding, a shift of services to outside of the episode, and increased emergency department use.[48]

A study of Arkansas' perinatal episode that included privately insured patients found that spending decreased 3.8 percent when compared to nearby states, with savings due primarily to decreased inpatient care prices.[49] Notably, although some states implementing episodes of care involve commercial payers in their program design and implementation, fewer published analyses have assessed the impact of bundled/episode-based payments among commercially insured patients or across multiple payers. Accordingly, much less is known about the impact of commercial models on spending and care quality. A 2022 meta-analysis looking at various value-based care models in the commercial sector, including nine studies of bundled/episode-based payments, found mixed results on spending and quality but cited significant savings incurred under UnitedHealthcare's cancer bundle.[50] A recent study of the use of bundled payments for certain surgical procedures among self-insured employers found considerable reductions in episode prices.[51] As more research becomes available and models are refined, increased alignment of bundled/episode-based payments across Medicare, Medicaid, and private insurers may help expand successful models and align quality reporting.

AMA POLICY

The AMA has an abundance of policies addressing persistent concerns with value-based payment and APMs (Policies D-385.963, H-385.913, H-385.908, and H-390.849). Under Policy D-385.963, the AMA works with CMS and other payers on evolving payment reforms and ensuring sufficient payments so that patients and families have access to care coordination supports that they need to achieve optimal outcomes. Policy H-385.913 supports goals that should be pursued as part of an APM, including that models be designed by physicians or with significant input from physicians, provide flexibility to physicians to deliver the care their patients need, provide adequate and predictable resources to support the services physician practices need to deliver to patients (and include mechanisms for updating payment amounts), limit physician accountability to aspects of spending and quality that they can reasonably influence, and avoid placing physician practices at substantial financial risk. Policy H-385.913 also directs the AMA to continue to educate physicians about APMs and provide educational resources and support. Policy H-385.908 urges CMS to limit financial risk requirements to costs that physicians participating in an APM have the ability to influence or control and directs the AMA to work with stakeholders to improve risk adjustment systems, attribution methods, and performance target setting. Policy H-390.849 advocates for physician payment reforms that: promote improved patient access to high-quality, cost-effective care; are designed with input from physicians; ensure that physicians have an appropriate level of authority over bonus or shared-savings distributions; and include ongoing evaluations to ensure the reforms are improving patient care and increasing value.

Policy H-390.849 also opposes bundling of payments in ways that limit care or otherwise interfere with a patient's ability to provide high quality care, while Policy H-385.913 supports the provision of flexibility under APMs so that physicians can deliver the care patients need. Policy H-385.908 focuses on reducing barriers to APMs, including limiting financial risk requirements to costs that physicians can control and working with stakeholders to improve attribution methods, risk adjustment systems, and performance target setting. Under Policy H-70.949, the AMA will take steps to ensure that public and private payers do not bundle services inappropriately; Policy D-390.961 directs the AMA to work with appropriate officials to ensure that bundled payments, if implemented, do not lead to hospital-controlled payments to physicians. Additional policy on physician-focused payment reforms includes Policies D-390.953, H-390.844, H-450.931, and H-450.961. Policy H-450.931 directs the AMA to help physician practices address concerns about APMs and harmonize key components of APMs across multiple payers, including performance measures.

Improving risk adjustment across payment models is addressed by Policies H-385.907 and H-285.957, and D-385.952, which also support linking quality measures and payments to outcomes specific to high-risk populations and reductions in health care disparities. Policy H-385.907 supports: 1) risk stratification systems that use fair and accurate payments based on patient characteristics, including socioeconomic factors; 2) risk adjustment systems that use fair and accurate outlier payments if spending on a patient exceeds a pre-defined threshold, and fair and accurate payments for external price changes beyond the physician's control; 3) risk adjustment systems that use risk corridors using fair and accurate payment if spending on all patients exceeds a pre-defined percentage above the payments; 4) accountability measures that exclude from risk adjustment methodologies any services that the physician does not deliver, order, or otherwise have the ability to influence; and 5) risk adjustment mechanisms that allow for flexibility to account for changes in science and practice. Policy H-165.837 advocates for protecting the patient-physician relationship in the context of bundled payments and affirms the obligation of physicians to prioritize patient care above financial interests.

AMA ADVOCACY

Many of the concerns about bundled/episode-based payment models have previously been addressed by AMA policy and advocacy on payment reform and APMs. Key characteristics of value-based care, including that new models and incentives must be tailored to the distinct characteristics of different specialties and practice settings, were also incorporated into the Medicare payment system principles crafted by the AMA in collaboration with 120 other physician and health care organizations. The AMA has worked diligently over the years to improve MACRA and advance the transition to value-based care and now leads the charge to reform Medicare's payment system to increase physician payment stability, reduce burnout, and improve the financial viability of physician practices. Although the Consolidated Appropriations Act of 2023 extended the five percent advanced APM incentive payment for 12 months, the AMA is advocating that it be extended for additional years.

The AMA continues to encourage and enable physician participation in physician-focused APMs, including bundled/episode-based payments. The AMA believes that well-designed, patient-centered APMs can provide significant opportunities to improve the quality and outcomes of patients' care in ways that also lower growth in health care spending. However, the AMA maintains that physicians must be involved in the design of APMs to ensure that models successfully remove certain barriers and do not require physicians to be accountable for spending or outcomes they cannot control. The AMA continues to carefully examine APMs that are proposed by CMS and provide feedback to the agency regarding needed modifications, including when APMs impose unreasonable requirements on physicians or require them to take on excessive financial risk. Because the AMA believes that APMs are significantly improved when physicians are directly and actively involved in their design, the AMA continually advocates for consideration of physician input on models and approval of APMs that have been designed by physicians.

The AMA works closely with national medical specialty societies to review proposed APMs, recommend model improvements, and comment on regulations governing APMs. A more recent example is the AMA's advocacy focused on Medicare's proposed Radiation Oncology (RO) Model, a bundled payment for cancer patients receiving radiotherapy, which the AMA urged be delayed so that CMS could work with radiation oncology specialty societies to redesign some of the model's key features.[52] The RO Model that CMS had previously developed could have had serious unintended consequences for patients because practices would have been mandated to participate and take steep payment cuts. Accordingly, the AMA expressed general support for the creation of a bundled payment model for radiation oncology but advocated that several changes be

made to CMS's proposal, namely that payments be stratified based on patients' clinical characteristics, adjusted to account for the higher costs of delivering services in rural areas, and adjusted annually to reflect changes in evidence, technology, and inflation.[53] The AMA has further urged CMS to conduct a limited scale test of the RO Model on a voluntary basis rather than mandating participation in an untested model.

In 2015, the AMA recommended numerous changes to the proposed CJR model and urged CMS to make participation voluntary and available to physicians in all localities. Among other modifications to its original design, the AMA recommended that payments be risk-adjusted based on patients' functional status and other characteristics that affect the types of post-acute care they need so that physicians could assign patients to one of several acuity/risk levels and receive higher payments for higher-risk patients.[54] Additional advocacy on CJR and other episode-based payment models has repeatedly urged CMS to incorporate input from relevant national medical specialty societies in model design and revisions; listen to affected specialty societies that have experience with the different risks facing patients treated under the models; allow voluntary participation; begin episodes at the time of diagnoses of a condition instead of at hospital admission; and ensure that payment is adequate and predictable while limiting physicians' accountability to costs within their control. More recent AMA advocacy with CMS on episode-based payment models in Medicare included support for bundled payments for office-based management of patients with substance use disorders and bundled payments for chronic pain management.

To be successful, the AMA believes a physician-focused APM needs three key components:

1. Flexibility for physicians to deliver the most appropriate services to meet patients' needs;
2. Adequate payments to support the costs physicians incur in delivering high-quality care; and
3. Accountability by physicians for delivering high-quality services and avoiding unnecessary services, but without penalties for things that physicians cannot control.

The AMA has held educational seminars about APMs for physicians and organized several workshops in which physicians have shared their experiences in designing and implementing APMs. Physicians who want to learn more about episodes of care and other APMs are encouraged to read the following AMA resources: Evaluating Medicaid Value-Based Care Models, Evaluating Bundled or Episode-Based Contracts, and Medicare Alternative Payment Models.

DISCUSSION

Although the concerns highlighted in referred Resolution 111-A-22 focused primarily on Medicaid episodes of care, the Council reviewed available research on both Medicaid and Medicare bundled payment models. Evidence in the literature suggests that certain Medicare bundles may contain overall costs more effectively than fee-for-service payment but, after accounting for provider bonuses, aside from joint replacement models, most have not produced net Medicare savings. Additionally, although studies have been mixed and vary across initiatives, most bundled payment models have neither significantly improved nor worsened quality of care.[55] The Council found that LEJR bundles, and some perinatal episodes of care, have produced the most—but still modest—savings. LEJR episode savings have been driven by reductions in institutional post-acute care (e.g., SNFs and inpatient rehabilitation facilities) spending while hospital pricing contributed to reductions in perinatal episode spending. The Council was unable to locate published studies analyzing the impact of bundled/episode-based payment models on physician payment; however, we reviewed several studies looking at other possible unintended consequences of these models. For example, studies have found some evidence of risk selection across certain Medicare bundles,

although the evidence has been mixed, and no evidence of increased episode volume, which had been an early concern among some stakeholders. A study of episodes of care in Arkansas revealed other possible unintended consequences, including episode avoidance through coding, a shift of some services outside of the bundles, and increased emergency department use.

Because the evidence is clear that the savings accrued under LEJR episodes has been due to decreased spending on SNFs and inpatient rehabilitation facilities, some physicians have questioned whether patient access to medically necessary care, including SNF services, could potentially be limited. The Council believes that performance metrics measuring key patient-centered outcomes, including functional improvements after orthopedic and other procedures, are important and necessary checks on the risk that some models may underserve patients. Because the AMA already has extensive policy on APMs, we recommend amending Policies H-390.849[2, 3] and D-385.952[1, 2] to address this concern instead of crafting a separate policy statement specific to bundled/episode-based payments.

Although evidence across models is limited, high-risk patients have not been found to be adversely impacted under the BPCI initiative; more research is needed on how historically marginalized patients fare, in terms of outcomes, under a broader range of episodes. One study we reviewed found that hospitals serving historically marginalized individuals performed well, and received large bonuses, under BPCI Advanced; however, more studies are needed to ensure that implementation of episode-based models is meaningfully supporting equity goals. The Council previously addressed concerns about the impact of APMs on high-risk populations and points to Policy D-385.952, which we recommend amending. To address other concerns and obstacles under bundled/episode-based payment models, the Council recommends reaffirmation of Policy H-385.907, which supports fair and accurate risk adjustment systems, and Policy H-385.913, which outlines goals to be pursued as part of physician-focused APMs—including that models be designed by physicians or with significant input from physicians, provide flexibility to physicians to deliver the care patients need, provide adequate and predictable resources, and avoid placing physician practices at substantial financial risk—and directs the AMA to continue to work with national medical specialty societies and state medical associations to educate physicians on APMs.

As previously noted, one of the frustrations with episode-based payment models concerns the definition of related or unrelated services. For example, since some LEJR models include most Medicare Part A and Part B services, payment for seemingly unrelated procedures (e.g., eye, skin, or sinus surgeries) completed within 90 days of a joint replacement may be paid for out of the bundled payment. AMA policy addresses this concern by advocating that physician accountability be limited to aspects of spending and quality that they can reasonably influence or control. Notably, the services covered under joint replacement models can vary significantly across payers so that services included in a state Medicaid model may differ from CJR's list of covered services.

Although the Council discussed the need for bundled payment models to clearly define the services included and allow mechanisms for shifting unrelated services outside of the bundle, we believe this is best addressed at the design stage, with meaningful physician involvement, as highlighted by Policy H-385.913. The Council encourages physicians interested in participating in bundled payment models to determine ahead of time which services and Current Procedural Terminology codes are included and not included in an episode, and to review the AMA's Evaluating Bundled or Episode-Based Contracts for more information. Finally, the Council believes well-designed, patient-centered bundled payment models can improve care quality and patient outcomes in ways that also lower growth in health care spending. Designing these models to work effectively for patients, physicians, and payers remains challenging, and ongoing refinements to models may be needed to ensure optimal patient outcomes as these initiatives continue to expand.

RECOMMENDATIONS

The Council on Medical Service recommends that the following be adopted in lieu of Resolution 111-A-22, and that the remainder of the report be filed:

1. That our American Medical Association (AMA) amend Policy H-390.849[2, 3] by addition and deletion to read as follows:

   2. Our AMA opposes bundling of payments in ways that limit medically necessary care, including institutional post-acute care, or otherwise interfere with a physician's ability to provide high quality care to patients.
   3. Our AMA supports payment methodologies that redistribute Medicare payments among providers based on outcomes (including functional improvements, if appropriate), quality and risk-adjustment measures only if measures are scientifically valid, ~~verifiable, accurate, and based on current data~~ reliable, and consistent with national medical specialty society-developed clinical guidelines/standards. (Modify HOD Policy)

2. That our AMA amend Policy D-385.952[1, 2] by addition and deletion to read as follows:

   Our AMA: (1) supports alternative payment models (APMs) that link quality measures and payments to outcomes specific to vulnerable and high-risk populations, ~~and~~ reductions in health care disparities, and functional improvements, if appropriate; (2) will continue to encourage the development and implementation of physician-focused APMs that provide services to improve the health of vulnerable and high-risk populations and safeguard patient access to medically necessary care, including institutional post-acute care. (Modify HOD Policy)

3. That our AMA reaffirm Policy H-385.907, which supports risk stratification systems that use fair and accurate payments based on patient characteristics, including socioeconomic factors; risk adjustment systems that use fair and accurate outlier payments if spending on a patient exceeds a pre-defined threshold, and fair and accurate payments for external price changes beyond the physician's control; and accountability measures that exclude from risk adjustment methodologies any services that the physician does not deliver, order, or otherwise have the ability to influence. (Reaffirm HOD Policy)

4. That our AMA reaffirm Policy H-385.913, which outlines goals for physician-focused APMs—including that models be designed by physicians or with significant input from physicians, provide flexibility to physicians to deliver the care patients need, limit physician accountability to aspects of spending and quality that they can reasonably influence, and avoid placing physician practices at substantial financial risk—and directs the AMA to continue working with national medical specialty societies and state medical associations to educate physicians on APMs. (Reaffirm HOD Policy)

Fiscal Note: Less than $500.

APPENDIX

Policies Recommended for Reaffirmation and Amendment

Improving Risk Adjustment in Alternative Payment Models H-385.907
Our AMA supports: (1) risk stratification systems that use fair and accurate payments based on patient characteristics, including socioeconomic factors, and the treatment that would be expected to result in the need for more services or increase the risk of complications; (2) risk adjustment systems that use fair and accurate outlier payments if spending on an individual patient exceeds a pre-defined threshold or individual stop loss insurance at the insurer's cost; (3) risk adjustment systems that use risk corridors that use fair and accurate payment if spending on all patients exceeds a pre-defined percentage above the payments or support aggregate stop loss insurance at the insurer's cost; (4) risk adjustment systems that use fair and accurate payments for external price changes beyond the physician's control; (5) accountability measures that exclude from risk adjustment methodologies any services that the physician does not deliver, order, or otherwise have the ability to influence; and (6) risk adjustment mechanisms that allow for flexibility to account for changes in science and practice as to not discourage or punish early adopters of effective therapy. (CMS Rep. 03, I-19; Reaffirmed: CMS Rep. 2, A-22)

Physician-Focused Alternative Payment Models H-385.913
1. Our AMA recognizes that the physician is best suited to assume a leadership role in transitioning to alternative payment models (APMs).
2. Our AMA supports that the following goals be pursued as part of an APM:
A. Be designed by physicians or with significant input and involvement by physicians;
B. Provide flexibility to physicians to deliver the care their patients need;
C. Promote physician-led, team-based care coordination that is collaborative and patient-centered;
D. Reduce burdens of Health Information Technology (HIT) usage in medical practice;
E. Provide adequate and predictable resources to support the services physician practices need to deliver to patients, and should include mechanisms for regularly updating the amounts of payment to ensure they continue to be adequate to support the costs of high-quality care for patients;
F. Limit physician accountability to aspects of spending and quality that they can reasonably influence;
G. Avoid placing physician practices at substantial financial risk;
H. Minimize administrative burdens on physician practices; and
I. Be feasible for physicians in every specialty and for practices of every size to participate in.
3. Our AMA supports the following guidelines to help medical societies and other physician organizations identify and develop feasible APMs for their members:
A. Identify leading health conditions or procedures in a practice;
B. Identify barriers in the current payment system;
C. Identify potential solutions to reduce spending through improved care;
D. Understand the patient population, including non-clinical factors, to identify patients suitable for participation in an APM;
E. Define services to be covered under an APM;
F. Identify measures of the aspects of utilization and spending that physicians can control;
G. Develop a core set of outcomes-focused quality measures including mechanisms for regularly updating quality measures;
H. Obtain and analyze data needed to demonstrate financial feasibility for practice, payers, and patients;
I. Identify mechanisms for ensuring adequacy of payment; and
J. Seek support from other physicians, physician groups, and patients.

4. Our AMA encourages CMS and private payers to support the following types of technical assistance for physician practices that are working to implement successful APMs:
A. Assistance in designing and utilizing a team approach that divides responsibilities among physicians and supporting allied health professionals;
B. Assistance in obtaining the data and analysis needed to monitor and improve performance;
C. Assistance in forming partnerships and alliances to achieve economies of scale and to share tools, resources, and data without the need to consolidate organizationally;
D. Assistance in obtaining the financial resources needed to transition to new payment models and to manage fluctuations in revenues and costs; and
E. Guidance for physician organizations in obtaining deemed status for APMs that are replicable, and in implementing APMs that have deemed status in other practice settings and specialties.
5. Our AMA will continue to work with appropriate organizations, including national medical specialty societies and state medical associations, to educate physicians on alternative payment models and provide educational resources and support that encourage the physician-led development and implementation of alternative payment models. (CMS Rep. 09, A-16; Reaffirmed: CMS Rep. 10, A-17; Reaffirmed: CMS Rep. 10, A-19; Reaffirmed: BOT Rep. 13, I-20; Reaffirmed: CMS Rep. 2, A-22)

Alternative Payment Models and Vulnerable Populations D-385.952
Our AMA: (1) supports alternative payment models (APMs) that link quality measures and payments to outcomes specific to vulnerable and high-risk populations and reductions in health care disparities; (2) will continue to encourage the development and implementation of physician-focused APMs that provide services to improve the health of vulnerable and high-risk populations; and (3) will continue to advocate for appropriate risk adjustment of performance results based on clinical and social determinants of health to avoid penalizing physicians whose performance and aggregated data are impacted by factors outside of the physician's control. (CMS Rep. 10, A-19)

Physician Payment Reform H-390.849
1. Our AMA will advocate for the development and adoption of physician payment reforms that adhere to the following principles:
a) promote improved patient access to high-quality, cost-effective care;
b) be designed with input from the physician community;
c) ensure that physicians have an appropriate level of decision-making authority over bonus or shared-savings distributions;
d) not require budget neutrality within Medicare Part B;
e) be based on payment rates that are sufficient to cover the full cost of sustainable medical practice;
f) ensure reasonable implementation timeframes, with adequate support available to assist physicians with the implementation process;
g) make participation options available for varying practice sizes, patient mixes, specialties, and locales;
h) use adequate risk adjustment methodologies;
i) incorporate incentives large enough to merit additional investments by physicians;
j) provide patients with information and incentives to encourage appropriate utilization of medical care, including the use of preventive services and self-management protocols;
k) provide a mechanism to ensure that budget baselines are reevaluated at regular intervals and are reflective of trends in service utilization;
l) attribution processes should emphasize voluntary agreements between patients and physicians, minimize the use of algorithms or formulas, provide attribution information to physicians in a timely manner, and include formal mechanisms to allow physicians to verify and correct attribution data as necessary; and

m) include ongoing evaluation processes to monitor the success of the reforms in achieving the goals of improving patient care and increasing the value of health care services.
2. Our AMA opposes bundling of payments in ways that limit care or otherwise interfere with a physician's ability to provide high quality care to patients.
3. Our AMA supports payment methodologies that redistribute Medicare payments among providers based on outcomes, quality and risk-adjustment measures only if measures are scientifically valid, verifiable, accurate, and based on current data.
4. Our AMA will continue to monitor health care delivery and physician payment reform activities and provide resources to help physicians understand and participate in these initiatives.
5. Our AMA supports the development of a public-private partnership for the purpose of validating statistical models used for risk adjustment. (CMS Rep. 6, A-09; Reaffirmation A-10; Appended: Res. 829, I-10; Appended: CMS Rep. 1, A-11; Appended: CMS Rep. 4, A-11; Reaffirmed in lieu of Res. 119, A-12; Reaffirmed in lieu of Res. 122, A-12; Modified: CMS Rep. 6, A-13; Reaffirmation I-15; Reaffirmation: A-16; Reaffirmed in lieu of: Res. 712, A-17; Reaffirmed: BOT Action in response to referred for decision: Res. 237, I-17; Reaffirmation: A-19; Reaffirmed: BOT Action in response to referred for decision Res. 111, A-19; Reaffirmed: BOT Action in response to referred for decision Res. 132, A-19; Reaffirmed: Res. 212, I-21; Reaffirmed: Res. 240, A-22; Reaffirmation: A-22)

REPORT 07 OF THE COUNCIL ON MEDICAL SERVICE (A-23)
Reporting Multiple Services Performed During a Single Patient Encounter
(Resolution 824-I-22)

EXECUTIVE SUMMARY

At the 2022 Interim Meeting, the House of Delegates referred Resolution 824-I-22, which asked the American Medical Association to recognize that there is greater value to the patient, improved access to care, greater patient satisfaction, and improved overall patient care by advocating for appropriate payment for multiple services (two or more) to be performed during a single patient encounter.

"Multiple services" can refer to two evaluation and management (E/M) services, a procedure plus an E/M service, or two or more procedures provided by the same physician during a single patient encounter, all of which can be appropriately reported with the existing Current Procedural Terminology (CPT®) nomenclature. CPT codes create a uniform language for reporting medical services and procedures to allow accurate and efficient claims processing and adjudication. In addition to codes, CPT includes two-digit modifiers, which are appended to codes to indicate that a service or procedure has been altered by a specific circumstance but not changed in its definition. While CPT includes several modifiers, the one most commonly reported for multiple services is modifier 25, which is appended to an E/M service code on a claim to indicate the code is a significant, separately identifiable E/M service by the same physician or other qualified health care professional on the same day of the procedure or other service. Its use allows two E/M services or a procedure plus an E/M service that are distinctly different but required for the patient's condition to be appropriately reported and, therefore, appropriately paid.

Unfortunately, there is a disconnect between physicians and payers regarding the feasibility of providing, documenting, reporting, and paying for multiple services. This can be confounded further by use of electronic health records (EHR), which can make it difficult to ensure accurate data if codes and medical terms are not used consistently. Therefore, it becomes imperative that both physicians and payers are well educated on the appropriate way to report multiple services as well as the circumstances that justify such reporting. It is also important that the CPT guidelines used to recognize the validity of claims for multiple services are consistently applied, which may be facilitated by the development of EHR tools.

REPORT OF THE COUNCIL ON MEDICAL SERVICE

CMS Report 07-A-23

Subject: Reporting Multiple Services Performed During a Single Patient Encounter (Resolution 824-I-22)

Presented by: Lynn Jeffers, MD, MBA, Chair

Referred to: Reference Committee A

At the November 2022 Interim Meeting, the House of Delegates referred Resolution 824-I-22, which was sponsored by the Private Practice Physicians Section. Resolution 824-I-22 asked the American Medical Association (AMA) to recognize that there is greater value to the patient, improved access to care, greater patient satisfaction, and improved overall patient care by advocating for appropriate payment for multiple services (two or more) to be performed during a single patient encounter. Testimony at the November 2022 Interim Meeting regarding the resolution was mixed, with some speakers offering vignettes to support the need for Resolution 824-I-22 and others questioning the need for it given recent revisions to Current Procedural Terminology (CPT®) Evaluation and Management (E/M) codes that allow physicians to report encounters involving multiple services during a single patient encounter. This report focuses on the need for education of physicians and payers on appropriate reporting of multiple services using CPT nomenclature, provides a snapshot of strategies insurers use to deny claims, highlights AMA advocacy efforts and essential policy, and presents new policy recommendations.

BACKGROUND

As outlined in Resolution 824-I-22, "multiple services" can refer to two E/M services, a procedure plus an E/M service, or two or more procedures provided by the same physician during a single patient encounter. CPT is the most widely accepted US medical nomenclature for reporting singular or multiple medical services and procedures under public and private health insurance programs. In addition to being the code set adopted under the Health Insurance Portability & Accountability Act of 1996 (HIPAA) for outpatient services and procedures[1], CPT codes create a uniform language for reporting medical services and procedures to allow accurate and efficient claims processing and adjudication. In addition to codes, CPT includes two-digit modifiers, which are appended to codes to indicate that a service or procedure has been altered by a specific circumstance but not changed in its definition. The use of modifiers provides supplementary information for payer policy requirements.

While CPT provides a valid way to report multiple services, the resulting claims can result in high rates of denials. Payers may flag all multiple services claims for prepayment claim validation prior to payment or require submission of documentation with the claim, both of which create unjustifiable administrative burden for physicians, an incumbrance exacerbated in rural communities and other areas with limited health care resources. Addressing rural health inequities is a cornerstone of the Centers for Medicare & Medicaid Services' (CMS) effort to improve health

equity,[2] a goal that can be achieved by consistent application of CPT across all payers given its ability to promote health equity.[3]

Unfortunately, there is a disconnect between physicians and payers regarding the feasibility of providing, documenting, reporting, and paying for multiple services. This can be confounded further by use of electronic health records (EHR), which can make it difficult to ensure accurate data if codes and medical terms are not used consistently. Therefore, it becomes imperative that both physicians and payers are well educated on the appropriate way to report multiple services as well as the circumstances that justify such reporting. It is also important that the CPT guidelines used to recognize the validity of claims for multiple services are consistently applied, which may be facilitated by the development of EHR tools.

MODIFIER 25

CPT modifier 25 is appended to an E/M service code on a claim to indicate the code is a significant, separately identifiable E/M service by the same physician or other qualified health care professional on the same day of the procedure or other service.[4] Its use allows two E/M services or a procedure plus an E/M service that are distinctly different but required for the patient's condition to be appropriately reported and, therefore, appropriately paid. The CPT Professional Edition also states that a significant, separately identifiable E/M service is defined or substantiated by documentation that satisfies the relevant criteria for the respective E/M service to be reported.[5] While CPT does not outline required documentation for modifier 25, its use indicates that documentation is available in the patient's record to support the reported E/M service as distinct and separately identifiable. Further, the E/M service may be prompted by the symptom or condition for which the procedure and/or service was provided. As such, different diagnoses are not required for reporting of the E/M services on the same date.

There are two scenarios where modifier 25 is typically used:

1) A Preventive Medicine E/M service provided with a problem-oriented Office or Other Outpatient E/M service:

   This is a common scenario in pre- or non-verbal patients. For example, a 2-year-old is seen for their well child visit and the physician finds otitis media during the physical examination. When a significant problem is encountered while performing a Preventive Medicine E/M service, requiring additional work to perform the key components of the E/M service, the appropriate Office or Other Outpatient E/M code also should be reported for that service with modifier 25 appended. Modifier 25 allows separate payment for these visits without requiring documentation with the claim form.

2) A minor surgical procedure provided with a problem-oriented Office or Other Outpatient E/M service:

   CPT codes for minor surgical procedures include preoperative evaluation services (i.e., assessing the site or problem, explaining the procedure, risks, and benefits, and obtaining consent). Therefore, the E/M service has to involve work "above and beyond" the preoperative evaluation services. For example, when a patient presents with a head laceration, and the physician also performs a neurological examination before repairing the laceration, the neurological exam would merit a separate E/M service reported with modifier 25.

The CPT Professional 2023 codebook definition of a significant, separately identifiable service relies on satisfying the relevant criteria for determining the correct level of E/M service to be reported. The following questions can be used to determine whether an E/M service justifies use of modifier 25 according to CPT guidelines:

- Did the physician perform and document the level of medical decision making or total time necessary to report a problem-oriented Office or Other Outpatient E/M service for the complaint or problem?
- Could the work to address the complaint or problem stand alone as a billable service?
- Did the physician perform extra work that went above and beyond the typical pre- or postoperative work associated with the procedure code?

If all answers are "yes," then use of modifier 25 is consistent with CPT guidelines.

CMS requires that modifier 25 be used:

- Only on claims for E/M services and
- Only when the E/M service is provided by the same physician on the same day as another procedure or service.

While these two requirements are consistent with CPT guidelines, Medicare policy is more restrictive in that it will not pay for more than one E/M service provided by the same physician on the same day unless the visits are for unrelated problems and could not be provided during the same patient encounter. For example, Medicare will not pay separately when a patient is seen for their annual preventive checkup and the physician finds otitis media during the physical examination – even with the use of modifier 25. However, Medicare will pay for a patient who presents for blood pressure medication evaluation and then returns five hours later that same day for evaluation of leg pain following an accident – if modifier 25 is used.

Under certain circumstances, Medicare will allow use of modifier 25 when an E/M service is reported with a global procedure. Global procedures include visits and other physician services provided within 24 hours prior to the service, provision of the service, and visits and other physician services for a specified number of days after the service is provided.

CMS defines global surgical packages based on the number of postoperative days it assigns to the service:

- XXX: Global period does not apply
- 0-day global period: Includes procedure and visit on day of procedure
- 10-day global period: Includes procedure, visit on day of procedure, and visits 10 days immediately following the day of the procedure
- 90-day global period: Includes procedure, visit on day of procedure, and visits 90 days immediately following the day of the procedure

Modifier 25 may be appended to E/M services reported with minor surgical procedures (i.e., 0-day and 10-day global periods) or procedures not covered by a global period (i.e., XXX). Since minor surgical procedures and XXX-global procedures include pre-service, intra-service, and post-service work inherent in the procedure, the physician cannot report an E/M service for this work in most circumstances when the minor surgical procedure or XXX-global is the primary procedure. Furthermore, Medicare policy prevents the reporting of a separate E/M service for the work associated with the decision to perform a minor surgical procedure.

All E/M services provided on the same day as a procedure are considered part of the procedure and Medicare only makes separate payment if an exception applies. Modifier 25 is used to provide

justification for a visit that is "generally not payable," as Medicare payment is made only if the physician indicates that the service is for a significant, separately identifiable E/M service that is above and beyond the usual pre-service and post-service work required on the day of the procedure. Modifier 25 may be used in the rare circumstance of an E/M service the day before a procedure which represents a significant, separately identifiable service; it typically is linked to a different diagnosis than the underlying reason for the procedure (e.g., evaluation of a cough that might contraindicate surgery).[6] Medicare requires that the physician appropriately and sufficiently document both the medically necessary E/M service and the procedure in the patient's medical record to support the claim for these services, even though the documentation is not required to submit with the claim.[7]

CMS has focused on the potential misuse of modifier 25 since 2005, when the Office of the Inspector General (OIG) published an analysis indicating that 35 percent of Medicare claims involving modifier 25 did not meet CMS requirements.[8] Since that time, both Medicare and private payers have increased their scrutiny of claims submitted with modifier 25, which has led to substantial recoupment of physician payments. The OIG continues to maintain modifier 25 as a target of its work plan and is expected to release a report of modifier 25 use in dermatology in late 2023.

OTHER CPT MODIFIERS USED FOR REPORTING MULTIPLE SERVICES

In addition to modifier 25, CPT includes other modifiers to allow the reporting of multiple services:[9]

- Modifier 24: Unrelated E/M service provided by the same physician or other qualified health care professional during a postoperative period
- Modifier 51: Multiple procedures, non-E/M procedures provided by the same individual at the same session
- Modifier 57: Decision for surgery, an E/M service that resulted in the initial decision to perform surgery
- Modifier 58: Staged or related procedure or service by the same physician or other qualified health care professional during the postoperative period
- Modifier 59: Distinct procedural service, an independent non-E/M service performed on the same day Modifier 59 is used to identify non-E/M procedures/services that are not normally reported together but are appropriate under the circumstances. Documentation must support a different session, different procedure or surgery, different site or organ system, separate incision/excision, separate lesion, or separate injury (or area of injury in extensive injuries) not ordinarily encountered or performed on the same day by the same individual. Modifier 59 should only be used if no more descriptive modifier is available, and the use of modifier 59 best explains the circumstances.
- Modifier 78: Unplanned return to the operating/procedure room by the same physician or other qualified health care professional following initial procedure for a related procedure during the postoperative period
- Modifier 79: Unrelated procedure or service performed by the same physician or other qualified health care professional during the postoperative period

CPT CODES AND GUIDELINES THAT FACILITATE THE REPORTING OF MULTIPLE SERVICES

Prolonged Service

There are Prolonged Service CPT codes that permit the reporting of time spent beyond the highest time in the range of total time of the primary E/M service. Prolonged Service CPT codes are reported in 15 minute increments, allowing physicians to be paid for providing extended services during a single patient encounter (even if the time on that date is not continuous) that contribute toward the total time of the visit.

The AMA is currently advocating to align CMS's interpretation of the Prolonged Service codes with the CPT definition as described above. Medicare, however, requires that the physician surpass the maximum time of the highest E/M level by 15 minutes. Until such time that CPT and CMS interpretations are reconciled, Medicare requires reporting of Healthcare Common Procedure Coding System Level II codes in lieu of CPT codes for reporting prolonged services.

Care Management

Care Management CPT codes are E/M codes reported monthly for physician oversight and management of clinical staff in the development and implementation of the care plan and care coordination in patients with one or more complex chronic conditions. Care Management codes can be reported in addition to other E/M codes (e.g., Office or Other Outpatient Services). Time that is spent providing services within the scope of the Care Management service on the same day as an E/M visit can be counted towards Care Management codes, as long as the time is not counted towards the other reported E/M code(s).

Total Visit Time Versus Medical Decision Making

E/M codes are selected based on either the total time spent or medical decision making (MDM) required. The decision of which component to use in selecting the appropriate E/M code is determined by the reporting physician or qualified health care professional based on the available criteria.

MDM includes establishing diagnoses, assessing the status of a condition, and/or selecting a management option. There are three elements to MDM:

- Number and complexity of problems addressed at the encounter
- Amount and/or complexity of data to be reviewed and analyzed
- Risk of complications and/or morbidity or mortality of patient management

Time is based on the total time spent on the date of the encounter. It includes both face-to-face time with the patient and non-face-to-face time spent on things such as care coordination, consulting with other health care professionals, and ordering medications, tests, and procedures.

Caring for a patient with multiple issues is likely to increase the total time of the encounter, which may allow the physician to report a single, higher level E/M code rather than two lower level E/M codes appended with modifier 25.

RESOURCE-BASED RELATIVE VALUE SCALE (RBRVS)

CMS considers recommendations from the AMA/Specialty Society Relative Value Scale Update Committee (RUC) process to determine relative value units (RVUs) for the RBRVS. The RBRVS is based on the principle that payments for physician services should vary with the resource costs for providing those services and is intended to improve and stabilize the payment system while providing physicians an avenue to continuously improve it. Determining RVUs through the RUC ensures that potential overlap is eliminated from the physician work, practice expense, and professional liability insurance (PLI) for services that are frequently provided together. The physician work component accounts for an average of 51 percent of the total RVU for each service while practice expense accounts for 45 percent. PLI accounts for the remaining four percent. The factors used to determine physician work include the time it takes to perform the service, the technical skill and physical effort, the required mental effort and judgment, and stress due to the potential risk to the patient. The practice expense components include clinical staff time, medical supplies, and medical equipment.

The process of valuing CPT codes on the RBRVS contributes to determining whether use of modifier 25 is warranted. Global procedure CPT codes are valued to include pre-service (e.g., evaluation time, patient positioning, scrub/dress/wait time), intra-service (e.g., performing the procedure, also known as "skin-to-skin" time), and post-service (e.g., patient stabilization, communicating with the patient and other professionals) work.

For example, Medicare payment for CPT code 64635 (*Destruction by neurolytic agent, paravertebral facet joint nerve(s), with imaging guidance (fluoroscopy or CT); lumbar or sacral, single facet joint*), includes 28 minutes pre-service time. Reporting a problem-oriented Office or Other Outpatient E/M code in addition to CPT code 64635 when evaluation is limited to assessing the specific problem is essentially double billing for the pre-service evaluation. Therefore, use of modifier 25 would not be appropriate in this situation.

However, when a patient presents for their annual skin examination and a suspicious lesion is discovered, it is appropriate for the physician to proceed with a diagnostic or therapeutic procedure at the same visit after obtaining the patient's medical history, completing a review of systems, and conducting a clinical examination. This situation would warrant the use of modifier 25. The ability to assess and intervene during the same visit is optimal for patients who subsequently may require fewer follow-up visits and experience more immediate relief from their symptoms.

MULTIPLE PROCEDURE PAYMENT REDUCTIONS

In addition to two E/M services or a procedure plus an E/M service, "multiple services" can refer to two or more procedures provided by the same physician during a single patient encounter. Payers may utilize the CMS Multiple Procedure Payment Reduction (MPPR) policy to adjudicate claims involving more than one procedure.

Under the MPPR, Medicare makes full payment for the professional component (PC) and technical component (TC) of the highest priced procedure. Payment is made at 95 percent for subsequent PC services furnished by the same physician to the same patient in the same session on the same day. Payment is made at 50 percent for subsequent TC services furnished by the same physician to the same patient in the same session on the same day.[10]

The rationale behind CMS' MPPR policy is similar to that of its global surgical package definitions in that "most medical and surgical procedures include pre-procedure, intra-procedure, and post-

procedure work. When multiple procedures are performed at the same patient encounter, there is often overlap of the pre-procedure and post-procedure work. Payment methodologies for surgical procedures account for the overlap of the pre-procedure and post-procedure work."[11]

CLAIMS ADJUDICATION AND COMPLIANCE

Policies on payment for multiple services during a single patient encounter are typically communicated via claims adjudication with the use of coding edits. Most private payers utilize customizable, propriety claims edit systems, while Medicare and Medicaid use the coordinated National Correct Coding Initiative (NCCI).

NCCI reinforces Medicare policies, and since it is common for private payers to adopt NCCI as part of their customizable claims editing systems, allowing physicians the opportunity to comment on NCCI takes on increased importance. Through a process coordinated by CMS and the AMA, national medical specialty societies are able to review and comment on proposed NCCI updates on a quarterly basis. In recent years, however, the NCCI review process has become less transparent and the AMA has continued to advocate toward a return to the "solid, transparent, collaborative track among all parties (CMS, AMA and specialty societies) that has been so beneficial in the past." (June 2021 letter, November 2021 letter)

Edits on code pairs may be overridden by appending the appropriate modifier on one of the codes. For example, NCCI includes an edit on the codes for vision screening (CPT code 99173) and a level 3 established patient Office or Other Outpatient visit (CPT code 99213) – but allows override of the edit with use of the appropriate modifier (i.e., modifier 25 appended to 99213). Payers' increased use of claims edits has resulted in a commensurate increase in physicians' use of modifiers in an effort to override restrictive payment polices. However, that strategy may backfire as some payers' code auditing processes will flag all claims billed with modifier 25 for prepayment claim validation prior to payment. Once a claim is validated, it is either released for payment or denied for incorrect use of the modifier. A significant, separately identifiable E/M service is defined or substantiated by documentation that satisfies the relevant criteria for the respective E/M service to be reported. If claim history or assigned diagnosis codes do not indicate that significant, separately identifiable services were performed, payers typically cover the primary procedure or other service and deny the secondary E/M billed with modifier 25.

Some payers have instituted policies where use of modifier 25 triggers an automatic reduction in payment for the second code to account for what they perceive to be "overlap" between the two codes (e.g., a Preventive Medicine Service E/M code reported with an Office or Other Outpatient Service E/M code appended with modifier 25 allows payment of the Preventive Medicine Service code at 100 percent and the Office or Other Outpatient code at 50 percent). While the work associated with performing the history, physical examination, and MDM for the problem-oriented E/M service may include some overlap with those performed as part of the comprehensive preventive medicine E/M service, the physician's use of modifier 25 signals that they performed a significant, separately identifiable problem-oriented E/M service. An insignificant or trivial problem or abnormality is not reported separately from the preventive medicine E/M service.

Reporting both preventive and problem-oriented E/M services during a single patient encounter can produce inconsistent results in terms of claims payment across payers. While some payers will pay the full allowable amount for both the problem-oriented E/M code and the preventive medicine services E/M code, some will assess a co-pay for each service, some will carve out the payment for the problem-oriented E/M service from the payment for the preventive medicine E/M service (which results in a total charge that does not exceed that of a comprehensive preventive

examination alone), and some will reject the claim on the basis that they do not accept coding for both a preventive and problem-oriented service on the same date regardless of the amount of the charge due to the perception of overlap between the two services. In response, physicians may decide to report only one of the services, depending on which of the two is the primary focus of the visit and requires the most amount of physician time and work; however, this is not a tenable solution as it fails to recognize the value of services provided. Alternatively, the physician may ask the patient to return for another visit to address the management of the problem or the preventive care; however, many physicians are hesitant to do this as it places significant burden on patients, particularly those with limited resources, and may risk deterioration of the patient's condition until another appointment can be scheduled.

Certain payers have considered requiring documentation for all modifier 25 claims. Most recently, Cigna proposed a policy requiring practices to send documentation with "a cover sheet indicating the office notes support the use of modifier 25 appended to the E/M code."[12] While advocacy by the California Medical Association and the AMA was initially able to delay implementation, Cigna has re-released the policy, which was scheduled to become effective in May 2023. At the time this report was written, the AMA was preparing a sign-on letter to allow state medical associations and national medical specialty societies to join in opposition against Cigna's policy. Previous AMA advocacy efforts opposing proposed modifier 25 payment reductions by Anthem (November 2017) and UnitedHealthcare (July 2018) have proven successful.

Misunderstanding and/or misuse of modifier 25 has made it a top billing compliance risk area. It has been the focus several False Claims Act and civil monetary penalty settlements,[13] as well as CMS comparative billing reports (CBR). The CMS CBR program is an educational tool intended to encourage accurate reporting and support physicians' internal compliance activities. A CBR tracks a given physician's billing patterns as compared to their peers' patterns within a Medicare service area. Since CBRs are private and shared only with the physician, CMS is able to maintain that "receiving a CBR is not an indication of or precursor to an audit, and it requires no response on a provider's part."[14]

Compliance is impacted by the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA), which only allows extrapolation of overpayments based on statistical sampling when there's "a determination of sustained or high level of payment error, or documentation that educational intervention has failed to correct the payment error."[15] If an audit does not use a random sample of claims, MMA dictates that extrapolation of that sample invalidates any claim of overpayment.

AMA POLICY

The AMA has robust policy to guide advocacy for appropriate payment for multiple services performed during a single patient encounter.

Among the most relevant policies are those that:

- Focus on recognition of modifier 25 by:
    - Advocating for the acceptance of CPT modifiers, particularly modifier 25, and the appropriate alteration of payment based on CPT modifiers (Policy D-70.971);
    - Aggressively and immediately advocating through any legal means possible to ensure that when an E/M code is reported with modifier 25, that both the procedure and E/M codes are paid at the non-reduced, allowable payment rate (Policy D-385.956);

- Supporting insurance company payment for E/M services and procedures performed on the same day (Policy H-385.944); and
- Advocating that a CPT code representing a service or procedure that is covered and paid for separately should also be paid for when performed at the same time as another service or procedure (Policy D-70.959).

- Preserve discrete E/M code levels by:
  - Communicating to CMS and private payers that the current levels of E/M services should be maintained and not compressed, with appropriate payment for each level (Policy D-70.979) and
  - Opposing any health insurance code collapsing policies that result in unfair payment practices (Policy H-70.995).

- Combat bundling and downcoding by:
  - Opposing the bundling of procedure and laboratory services within the E/M services (Policy H-70.985);
  - Opposing the use of time elements to deny or downgrade services submitted based on a cumulative time (Policy H-70.976);
  - Advocating to ensure that public and private payers do not bundle services inappropriately by encompassing individually coded services under other separately coded services (Policy H-70.949);
  - Vigorously opposing the practice of unilateral, arbitrary recoding and/or bundling by all payers (Policy H-70.937);
  - Introducing or supporting legislation that would require managed care plans to be monitored and prohibited from the arbitrary and inappropriate bundling of services to reduce payment (Policy H-70.962); and
  - Working with CMS to provide physician expertise commenting on the medical appropriateness of code bundling initiatives for Medicare payment policies (Policy
  - H-70.980).

AMA policy targets payer policies that deviate from CPT guidelines, such as those that:

- Oppose inappropriate bundling of medical services by third party payers (Policy D-70.983);
- Support the recognition and payment for all CPT codes by all third party payers (Policy H-70.974);
- Seek legislation and/or regulation to ensure that all insurance companies and group payers recognize all published CPT codes including modifiers (Policy H-70.954);
- Intensify efforts to ensure uniform application of coding principles (Policy H-70.986);
- Assure that CMS and local carriers appropriately reimburse all E/M services (Policy H-385.952);
- Develop national (state) standards and model legislation that require full disclosure in plain English of multiple procedure reimbursement policies (Policy H-285.946);
- Step up ongoing review of the proper use of CPT codes in medical billing claims payments by the US Health Insurance Industry (Policy D-385.949);
- Support the elimination of Medicare arbitrary visit frequency parameters (Policy H-280-974); and
- Pursue proper use of CPT codes, guidelines, and modifiers by software claims editing vendors and their customers (Policy H-70.927).

Given that CPT is copyrighted by the AMA, there are many policies that support the development, updating, and maintenance of clinically valid codes in order to accurately reflect current clinical practice and innovation in medicine, including those that:

- Work with CMS to continue to refine E/M coding (Policy H-70.961);
- Advocate that the Department of Health and Human Services designate CPT guidelines and instructions as contained in the CPT codebook and approved by the CPT Editorial Panel as the national implementation standards for CPT codes (Policy D-70.987); and
- Limit future efforts to substantially revise E/M codes to the CPT Editorial Panel (Policy H-70.921) to appropriately allow the accurate reporting of E/M services provided by all physicians (Policy H-70.982).

AMA policy advocates that payer policies must align with CPT guidelines and reduce the burden of documentation for E/M services (Policy H-70.952), including opposition to the requirement that all Level 4 or Level 5 E/M codes require submission of medical record documentation (Policy D-70.991). Furthermore, AMA policy indicates that payer audit tools must be based on the factors for arriving at complexity as defined in the CPT codebook (Policy H-70.918).

The AMA is invested in ensuring that CPT codes are appropriately valued on the RBRVS via the RUC process. AMA policy advocates that annually updated and rigorously validated RBRVS values should provide a basis for physician payment schedules, opposes CMS' policy that reduces payment for additional surgical procedures after the first procedure by more than 50 percent, and encourages third party payers and other public programs to utilize the most current CPT codes, modifiers, and RBRVS relative values (Policy D-400.999). CMS is urged to adopt RUC recommendations for new and revised CPT codes (Policy H-400.969).

AMA policy supports development of CPT educational programs for physicians and health insurance carriers (Policy H-70.993) and working with national medical specialty societies to educate their members concerning CPT coding issues (Policy H-70.973). Policy H-400.972 states that the AMA will take all necessary legal, legislative, and other action to assure that all modifiers are well publicized and include adequate descriptors.

In addition to advocating for compliance with CPT modifier 25 guidelines, AMA policy has addressed other relevant issues:

- Recognition of modifiers 54, 55, and 56 for postoperative care of surgical patients (Policy D-70.955) and modifier 26 to report the professional component separate from the technical component for the interpretation of laboratory tests (Policy D-70.957);
- Appropriate payment for office-based procedures (Policy H-330.925), emergency care (Policy H-130.978), telephone consultations (Policy H-390.889), counseling of serious medical problems (Policy H-385.977), diagnostic and laboratory panel tests (Policy H-390.923 and Policy H-70.950), vaccine administration (Policy D-440.937), consultations (Policy D-70.953 and Policy H-70.939), care plan oversight services (Policy H-70.960), and after hours services (Policy H-385.940);
- Delineation of the physician role and responsibility in supervising patient care in non-office ambulatory settings, including fair and equitable payment for those services (Policy H-70.991);
- Insurer recognition of CPT codes that allow primary care physicians to report and receive payment for physical and behavioral health care services provided on the same date of service (Policy H-385.915);

- Development of coding for non-physician services (Policy H-70.994); and
- Appropriate payment for the additional work and expenses required in treating patients during the COVID-19 pandemic (Policy D-390.947).

DISCUSSION

There is currently robust infrastructure to allow the reporting of multiple services during a single patient encounter. However, there may be a need to ensure that key stakeholders are well educated on the various reporting options. It is essential that both physicians and payers understand the nuanced concepts involved, such as existing CPT nomenclature, how the RUC process eliminates overlap of physician work and practice expense between services and procedures, and how appropriate reporting and payment for multiple services can lead to greater value to the patient, improved access to care, increased patient satisfaction, and improved overall patient care.

With the ongoing development of coding resources, it is imperative that CMS align with CPT guidelines in order to reduce potential confusion. For example, CPT and CMS do not presently agree on the interpretation of the Prolonged Service CPT codes, which have a direct bearing on physicians' ability to accurately report multiple services during a single patient encounter. This has resulted in many payers challenging physicians' use of the Prolonged Service codes or denying them all together. As such, the AMA is strongly advocating for alignment of CMS's interpretation of the Prolonged Service codes with the CPT definition. This approach is consistent with past AMA advocacy initiatives, most of which have been successful in reducing the gaps between CMS and CPT.

A comprehensive education on the appropriate reporting of multiple services should start early in physicians' careers, possibly during residency. A curriculum could focus on concepts such as how to use total visit time to report a higher-level E/M service rather than two E/M codes plus modifier 25, allowing them to bypass the administrative rigor imposed by payers who routinely flag modifier 25 claims. It would be ideal if a similar curriculum could be shared with, and undertaken by, the payer community, possibly through organizations such as America's Health Insurance Plans. With these potential resolutions, both "sides" would be cognizant of the guidelines, fostering full transparency between claims submission and claims adjudication.

As of 2021, 78 percent of office-based physicians used certified EHR systems.[16] Most EHRs include software tools to help physicians determine the appropriate E/M codes for patient encounters and when used correctly, they support accurate coding. However, these EHR-based computer-assisted E/M coding (CAEMC) tools are generally associated with higher levels of E/M coding due to factors such as "cloning" of documentation from the previous visit, which may contribute to restrictive payer policies that require burdensome documentation in order to justify payment. OIG is concerned about EHRs "aiding" providers with coding and documentation decisions, but there has been limited testing of how EHRs capture and use information to recommend E/M codes.

EHR CAEMC tools are limited in their ability to assist physicians in documenting and reporting multiple services. As such, it may be beneficial for EHR CAEMC tools to be developed to facilitate the appropriate reporting of modifier 25. Such tools might include an algorithm to ascertain the potential areas of perceived overlap between two services, which could then be synchronized to the documentation provided for each service.

RECOMMENDATIONS

The Council on Medical Service recommends that the following be adopted in lieu of Resolution 824-I-22, and the remainder of the report be filed:

1. That our American Medical Association (AMA) support mechanisms to report modifiers appropriately with the least administrative burden possible, including the development of electronic health record tools to facilitate the reporting of multiple, medically necessary services supported by modifier 25. (New HOD Policy)

2. That our AMA support comprehensive education for physicians and insurers on the appropriate use of modifier 25. (New HOD Policy)

3. That our AMA reaffirm Policy D-70.971, which advocates for the acceptance of Current Procedural Technology (CPT®) modifiers, particularly modifier 25, and the appropriate alteration of payment based on CPT modifiers. (Reaffirm HOD Policy)

4. That our AMA reaffirm Policy D-385.956, which directs the AMA to aggressively and immediately advocate through any legal means possible to ensure that when an evaluation and management (E/M) code is reported with modifier 25, that both the procedure and E/M codes are paid at the non-reduced, allowable payment rate. (Reaffirm HOD Policy)

5. That our AMA reaffirm Policy H-385.944, which supports insurance company payment for E/M services and procedures performed on the same day. (Reaffirm HOD Policy)

6. That our AMA reaffirm Policy D-70.959, which advocates that a CPT code representing a service or procedure that is covered and paid for separately should also be paid for when performed at the same time as another service or procedure. (Reaffirm HOD Policy)

Fiscal Note: Less than $500.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 101
(A-23)

Introduced by: Young Physicians Section

Subject: Updating Physician Job Description for Disability Insurance

Referred to: Reference Committee A

Whereas, Many disability insurance products contain language and provisions such as “own occupation” and “own specialty” that may not be consistently defined and whose definitions are not readily available in marketing and policy paperwork; and

Whereas, The Department of Labor (DOL) developed the Dictionary of Occupational Titles (DOT), the main source of occupational information, in 1938; however, the DOL stopped updating the DOT in 1991[1]; and

Whereas, The DOL and Social Security Administration (SSA) are developing a new Occupational Information System (OIS),[2] which will replace the DOT as the primary source of occupational information that SSA staff and private insurers commonly use in the disability adjudication process; and

Whereas, This pandemic has led to many physicians contracting COVID-19 with health care workers and their families, representing up to one-sixth of hospitalized COVID-19 patients[3]; and

Whereas, Up to one-third of those infected with COVID-19 will develop Long COVID,[4,5] which can last for a year or more[6]; and

Whereas, Many with Long COVID cannot return to work on a full time basis[7] requiring reliance on long-term disability insurance to supplement income; and

Whereas, While the DOT contains discrete and well-established descriptions of the physical demands of occupations, it does not provide sufficiently specific information on associated mental and cognitive requirements; and

Whereas, Working with the U.S. Bureau of Labor Statistics allows the SSA the unique opportunity to consider including descriptions of the mental and cognitive requirements of work in the new OIS; and

Whereas, In the absence of more specific definitions in the disability insurance application, many long-term disability insurers use a “national economy” standard to establish a job description; and

Whereas, Application of such a national standard may lead to long-term disability denials and financial hardship for physicians; therefore be it

RESOLVED, That our American Medical Association study the most effective approach to developing specialty-specific job descriptions that reflect the true physical and cognitive demands of each given specialty for use in the Occupational Information System under

development by the Social Security Administration so as to ensure that physician disability policies are robust and protective if a coverage trigger occurs. (Directive to Take Action)

Fiscal Note: Not yet determined.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 102
(A-23)

Introduced by: Medical Student Section

Subject: Reforming the Medicare Part B "Buy and Bill" Process to Encourage Biosimilar Use

Referred to: Reference Committee A

Whereas, Medicare Part B spending on physician-administered drugs (PADs), 77% of which are injectable biologics, constitutes a large financial outlay ($39 billion in 2019) and grew at an average annual rate of 9.7% from 2009 to 2019[1]; and

Whereas, Reimbursement for PADs under current Medicare Part B regulations is governed by the "Buy and Bill" system, in which physicians purchase PADs from wholesalers or distributors, stock the drug (incurring the associated inventory costs), and are reimbursed by Medicare (and other commercial insurers) at an amount equal to the Average Sales Price (ASP) of a given drug plus 6% of the ASP [2,3]; and

Whereas, Currently, each individual manufacturer's biosimilar are reimbursed at different amounts based on distinct codes, each with a unique ASP[4]; and

Whereas, Health economists and policymakers note that this remuneration structure removes incentives for physicians to pick the least costly version of the drug (and may even incentivize physicians to pick the most expensive drug in a class) when several biosimilars exist, which allows manufacturers to maintain high ASPs and thus results in elevated part B spending[3,4]; and

Whereas, Biosimilar market penetration is substantially lower in the U.S. than in other high-income countries, in which a large number of biosimilars have been approved and market penetration for approved agents is higher, leading to significant (~60-85%) price reductions[5]; and

Whereas, Medicare Part B's "buy and bill" regulations drive the use of more costly versions of a biologic (often the originator agent) and may thus reduce the market penetration of additional competitor biosimilars that may be less expensive[5,6]; and

Whereas, Greater market penetration and competition of biosimilars in the United States could save between $2 and $7 billion per year (~1% of total Medicare Part B spending and ~30% of Medicare Part B pharmaceutical expenditure)[4]; and

Whereas, Moving towards a fixed-fee structure may expose losses if the costs of acquiring and storing drugs changes significantly from year to year[2]; and

Whereas, Allowing the fixed fee to be modifiable and indexed to an appropriate healthcare cost inflation index can ensure that changes to the PAD remuneration policy cover the costs that physicians bear in purchasing and storing PADs, consistent with AMA policy D-330.960[7]; and

Whereas, At the N-21 Special Meeting of the House of Delegates, our AMA passed new policy "support[ing] legislation that limits Medicare annual drug price increases to the rate of inflation"; therefore be it

RESOLVED, That our American Medical Association encourage the Centers for Medicare and Medicaid Services (CMS) to: (a) identify groups of Physician-Administered Drugs (PADs), each comprised of the reference biologic and its biosimilars (based on FDA approvals), to be reimbursed at the same rate to incentivize selection of less expensive PADs while preserving access for patients and reimbursement for physicians; and (b) determine the method rate by which a group of PADs will be reimbursed such that physicians are compensated appropriately for acquisition, inventory, carrying, and administration costs, including but not limited to creating fixed add-on fees to be used for all PADs in a group and indexing rate increases for a group of PADs to the rate of inflation. (New HOD Policy)

Fiscal Note: Modest - between $1,000 - $5,000

7. AMA Policy Finder. Cuts in Medicare Outpatient Infusion Services. D-330.960

RELEVANT AMA POLICY

Cuts in Medicare Outpatient Infusion Services D-330.960
1. Our AMA will actively support efforts to seek legislation to ensure that Medicare payments for drugs fully cover the physician's acquisition, inventory and carrying cost and that Medicare payments for drug administration and related services are adequate to ensure continued patient access to outpatient infusion services.
2. Our AMA will continue strong advocacy efforts working with relevant national medical specialty societies to ensure adequate physician payment for Part B drugs and patient access to biologic and pharmacologic agents.
Citation: Res. 926, I-03; Reaffirmed and Modified: CMS Rep. 3, I-08; Reaffirmation A-15; Reaffirmed: CMS Rep. 10, A-16; Reaffirmation: I-18;

Opposition to the CMS Medicare Part B Drug Payment Model D-330.904
1. Our AMA will request that the Centers for Medicare & Medicaid Services (CMS) withdraw the proposed Part B Drug Payment Model.
2. Our AMA will support and actively work to advance Congressional action to block the proposed Part B Drug Payment Model if CMS proceeds with the proposal.
3. Our AMA will advocate against policies that are likely to undermine access to the best course of treatment for individual patients and oppose demonstration programs that could lead to lower quality of care and do not contain mechanisms for safeguarding patients.

4. Our AMA will advocate for ensuring that CMS solicits and takes into consideration feedback from patients, physicians, advocates, or other stakeholders in a way that allows for meaningful input on any Medicare coverage or reimbursement policy that impacts patient access to medical therapies, including policies on coverage and reimbursement.
Citation: Res. 241, A-16;

Medicare Part B Competitive Acquisition Program (CAP) H-110.983
Our AMA will advocate that any revised Medicare Part B Competitive Acquisition Program meet the following standards to improve the value of the program by lowering the cost of drugs without undermining quality of care:
(1) it must be genuinely voluntary and not penalize practices that choose not to participate;
(2) it should provide supplemental payments to reimburse for costs associated with special handling and storage for Part B drugs;
(3) it must not reduce reimbursement for services related to provision/administration of Part B drugs, and reimbursement should be indexed to an appropriate healthcare inflation rate;
(4) it should permit flexibility such as allowing for variation in orders that may occur on the day of treatment, and allow for the use of CAP-acquired drugs at multiple office locations;
(5) it should allow practices to choose from multiple vendors to ensure competition, and should also ensure that vendors meet appropriate safety and quality standards;
(6) it should include robust and comprehensive patient protections which include preventing delays in treatment, helping patients find assistance or alternative payment arrangements if they cannot meet the cost-sharing responsibility, and vendors should bear the risk of non-payment of patient copayments in a way that does not penalize the physician;
(7) it should not allow vendors to restrict patient access using utilization management policies such as step therapy; and
(8) it should not force disruption of current systems which have evolved to ensure patient access to necessary medications.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 103
(A-23)

Introduced by: Medical Student Section

Subject: Movement Away from Employer-Sponsored Health Insurance

Referred to: Reference Committee A

Whereas, More than 50% of Americans rely on employer-sponsored health insurance (ESHI), which was first offered as a benefit to attract workers during the wage freeze of WWII[1,2]; and

Whereas, With health insurance linked to employment, job loss can decrease access to healthcare, including important preventative services and chronic disease management[3,4]; and

Whereas, Economic downturns due to global recessions or pandemics can result in millions of people losing their employer-sponsored health insurance, including an estimated 7 million individuals who have lost ESHI due to the COVID-19 pandemic and associated recession[5-11]; and

Whereas, Due to variation in insurer networks, patients who switch jobs and as a result change their health insurance may have to change doctors, creating a barrier to continuity of care[12,13]; and

Whereas, In 2019, 36% of employers offered only a single health insurance plan and an additional 40% of employers offered only two plans, decreasing patient choice and preventing the functioning of a free market[14-16]; and

Whereas, By linking health insurance to employment, employer-sponsored health insurance creates job lock and decreases entrepreneurship[17,18]; and

Whereas, A 2016 study in the Journal of Economic Perspectives found that people in the bottom fifth of family income receive annual benefits of less than $500, while those in the top fifth receive benefits averaging $4,500, demonstrating that employer-sponsored health insurance tax deduction disproportionately benefits the wealthy[19]; and

Whereas, Self-insurance refers to the practice wherein employers collect premiums from employees and pay for healthcare benefits for plan beneficiaries directly, with or without the assistance of third party administrators who may negotiate networks, process claims, and provide other services[20,21]; and

Whereas, Because of financial and legal incentives that favor the practice, between 75-80% of employers self-insure, meaning that many firms become de facto health insurance companies in addition to the main business activities they are engaged in[22,23]; and

Whereas, Self-insured plans have proven incapable of controlling healthcare costs, with one RAND study focusing on predominantly self-insured employer plans showing that hospital costs increased from 236% of Medicare rates to 241% of Medicare rates in the two year period from 2015-2017[23,24]; and

Whereas, The administrative costs of private, employer-based plans far exceed the administrative costs of public plans in the United States and insurance systems in other industrialized peer nations[25-29]; and

Whereas, The excessively fragmented nature of the employer-sponsored health insurance market in the United States is a significant contributor to the higher costs of medical goods and services in the United States relative to other countries[29-31]; and

Whereas, Multiple different models exist for the provision of health insurance coverage, including systems based wholly on individually owned private insurance plans, the Bismarckian model wherein payroll taxes are used to fund competing nonprofit insurance providers, and the national health insurance model wherein government insurance plans funded by taxes contract with privately owned healthcare providers[32,33]; and

Whereas, All of the assorted health insurance systems employed in other industrialized countries outperform the ESHI-based American insurance system on key metrics such as health outcomes, cost, and administrative efficiency[29,30,34-36]; and

Whereas, Under the Affordable Care Act, patients who are offered an "affordable" ESHI plan that meets the minimum value standard are ineligible to receive premium tax credits and cost sharing reductions (a requirement known as the "ESHI firewall"), thus significantly impairing their ability to buy a plan on the ACA's Health Insurance Marketplaces at an affordable rate[37]; and

Whereas, An ESHI plans needs to cover only 60% of the total cost of expected healthcare expenses to meet the minimum value standard, leaving up to 40% of these costs to be covered by the patient[37]; and

Whereas, A survey of employer-sponsored health insurance beneficiaries conducted by the Kaiser Family Foundation in 2019 found that over 40% of beneficiaries had difficulty paying for some aspect of their coverage, including the premium, deductibles, or other expenditures[38]; and

Whereas, Under current law, the cost of individual ESHI coverage is exclusively used to calculate plan affordability even if the employee wants to or needs to purchase a family plan, meaning that millions of Americans are ineligible for premium tax credits but may also be unable to afford a plan through their employer[39-42]; and

Whereas, Eliminating the ESHI firewall would allow individuals who are offered ESHI to still be eligible for premium tax credits and cost sharing reductions, thus enabling them to choose a plan that is the most affordable and best meets their needs from either their employer-sponsored plans or other plans offered on their state's Health Insurance Marketplace[43,44]; and

Whereas, Roughly 10-20 million Americans with ESHI could choose a plan on the ACA Exchanges with lower premiums than their current employer-based plan if the ESHI firewall were eliminated[44,45]; and

Whereas, In 2017, 2.7 million uninsured Americans who otherwise would be eligible for premium tax credits to lower the cost of insurance coverage were ineligible for those tax credits because of an offer of ESHI[46]; and

Whereas, Removing the ESHI firewall could contribute to substantial insurance coverage gains by making insurance options on the ACA Exchanges significantly more affordable for individuals who may not be able to afford insurance offered through their employer[47-50]; and

Whereas, The American Medical Association "supports individually selected and individually-owned health insurance as the preferred method for people to obtain health insurance coverage" (Policy H-165.920), but has not recognized the deficiencies of the employer-sponsored insurance system, nor the need to move towards a health insurance system that does not rely on employer-sponsored insurance; therefore be it

RESOLVED, That our American Medical Association recognize the inefficiencies and complexity of the employer-sponsored health insurance system and the existence of alternative models that better align incentives to facilitate access to high quality healthcare (New HOD Policy); and be it further

RESOLVED, That our AMA support movement toward a healthcare system that does not rely on employer-sponsored health insurance and enables universal access to high quality healthcare (New HOD Policy); and be it further

RESOLVED, That our AMA amend Policy H-165.828, "Health Insurance Affordability", by addition and deletion to read as follows:

HEALTH INSURANCE AFFORDABILITY, H-165.828

1. ~~Our AMA supports modifying the eligibility criteria for premium credits and cost-sharing subsidies for those offered employer-sponsored coverage by lowering the threshold that determines whether an employee's premium contribution is affordable to that which applies to the exemption from the individual mandate of the Affordable Care Act (ACA).~~Our AMA advocates for the elimination of the employer-sponsored insurance firewall such that no individual would be ineligible for premium tax credits and cost-sharing assistance for marketplace coverage solely on the basis of having access to employer-sponsored health insurance.
2. Our AMA supports legislation or regulation, whichever is relevant, to fix the ACA's "family glitch," thus determining the affordability of employer-sponsored coverage with respect to the cost of family-based or employee-only coverage.
3. Our AMA encourages the development of demonstration projects to allow individuals eligible for cost-sharing subsidies, who forego these subsidies by enrolling in a bronze plan, to have access to a health savings account (HSA) partially funded by an amount determined to be equivalent to the cost-sharing subsidy.
4. Our AMA supports capping the tax exclusion for employment-based health insurance as a funding stream to improve health insurance affordability, including for individuals impacted by the inconsistency in affordability definitions, individuals impacted by the "family glitch," and individuals who forego cost-sharing subsidies despite being eligible.
5. Our AMA supports additional education regarding deductibles and cost-sharing at the time of health plan enrollment, including through the use of online prompts and the provision of examples of patient cost-sharing responsibilities for common procedures and services.

6. Our AMA supports efforts to ensure clear and meaningful differences between plans offered on health insurance exchanges.
7. Our AMA supports clear labeling of exchange plans that are eligible to be paired with a Health Savings Account (HSA) with information on how to set up an HSA.
8. Our AMA supports the inclusion of pregnancy as a qualifying life event for special enrollment in the health insurance marketplace.
(Modify Current HOD Policy) and be it further

RESOLVED, That our AMA amend Policy H-165.823, "Options to Maximize Coverage under the AMA Proposal for Reform", by deletion to read as follows:

OPTIONS TO MAXIMIZE COVERAGE UNDER THE AMA PROPOSAL FOR REFORM, H-165.823

1. That our AMA advocate for a pluralistic health care system, which may include a public option, that focuses on increasing equity and access, is cost-conscious, and reduces burden on physicians.
2. Our AMA will advocate that any public option to expand health insurance coverage must meet the following standards:
a. The primary goals of establishing a public option are to maximize patient choice of health plan and maximize health plan marketplace competition.
~~b. Eligibility for premium tax credit and cost-sharing assistance to purchase the public option is restricted to individuals without access to affordable employer-sponsored coverage that meets standards for minimum value of benefits.~~
b~~c~~. Physician payments under the public option are established through meaningful negotiations and contracts. Physician payments under the public option must be higher than prevailing Medicare rates and at rates sufficient to sustain the costs of medical practice.
c~~d~~. Physicians have the freedom to choose whether to participate in the public option. Public option proposals should not require provider participation and/or tie physician participation in Medicare, Medicaid and/or any commercial product to participation in the public option.
d~~e~~. The public option is financially self-sustaining and has uniform solvency requirements.
e~~f~~. The public option does not receive advantageous government subsidies in comparison to those provided to other health plans.
f~~g~~. The public option shall be made available to uninsured individuals who fall into the "coverage gap" in states that do not expand Medicaid – having incomes above Medicaid eligibility limits but below the federal poverty level, which is the lower limit for premium tax credits – at no or nominal cost.
3. Our AMA supports states and/or the federal government pursuing auto-enrollment in health insurance coverage that meets the following standards:
a. Individuals must provide consent to the applicable state and/or federal entities to share their health insurance status and tax data with the entity with the authority to make coverage determinations.
b. Individuals should only be auto-enrolled in health insurance coverage if they are eligible for coverage options that would be of no cost to them after the application of any subsidies. Candidates for

auto-enrollment would, therefore, include individuals eligible for Medicaid/Children's Health Insurance Program (CHIP) or zero-premium marketplace coverage.
c. Individuals should have the opportunity to opt out from health insurance coverage into which they are auto-enrolled.
d. Individuals should not be penalized if they are auto-enrolled into coverage for which they are not eligible or remain uninsured despite believing they were enrolled in health insurance coverage via auto-enrollment.
e. Individuals eligible for zero-premium marketplace coverage should be randomly assigned among the zero-premium plans with the highest actuarial values.
f. Health plans should be incentivized to offer pre-deductible coverage including physician services in their bronze and silver plans, to maximize the value of zero-premium plans to plan enrollees.
g. Individuals enrolled in a zero-premium bronze plan who are eligible for cost-sharing reductions should be notified of the cost-sharing advantages of enrolling in silver plans.
h. There should be targeted outreach and streamlined enrollment mechanisms promoting health insurance enrollment, which could include raising awareness of the availability of premium tax credits and cost-sharing reductions, and establishing a special enrollment period.
4. Our AMA: (a) will advocate that any federal approach to cover uninsured individuals who fall into the "coverage gap" in states that do not expand Medicaid--having incomes above Medicaid eligibility limits but below the federal poverty level, which is the lower limit for premium tax credit eligibility--make health insurance coverage available to uninsured individuals who fall into the coverage gap at no or nominal cost, with significant cost-sharing protections; (b) will advocate that any federal approach to cover uninsured individuals who fall into the coverage gap provide states that have already implemented Medicaid expansions with additional incentives to maintain their expansions; (c) supports extending eligibility to purchase Affordable Care Act (ACA) marketplace coverage to undocumented immigrants and Deferred Action for Childhood Arrivals (DACA) recipients, with the guarantee that health plans and ACA marketplaces will not collect and/or report data regarding enrollee immigration status; and (d) recognizes the potential for state and local initiatives to provide coverage to immigrants without regard to immigration status. (Modify Current HOD Policy)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Individual Health Insurance H-165.920

Our AMA:
(1) affirms its support for pluralism of health care delivery systems and financing mechanisms in obtaining universal coverage and access to health care services;
(2) recognizes incremental levels of coverage for different groups of the uninsured, consistent with finite

resources, as a necessary interim step toward universal access;
(3) actively supports the principle of the individual's right to select his/her health insurance plan and actively support ways in which the concept of individually selected and individually owned health insurance can be appropriately integrated, in a complementary position, into the Association's position on achieving universal coverage and access to health care services. To do this, our AMA will:
(a) Continue to support equal tax treatment for payment of health insurance coverage whether the employer provides the coverage for the employee or whether the employer provides a financial contribution to the employee to purchase individually selected and individually owned health insurance coverage, including the exemption of both employer and employee contributions toward the individually owned insurance from FICA (Social Security and Medicare) and federal and state unemployment taxes;
(b) Support the concept that the tax treatment would be the same as long as the employer's contribution toward the cost of the employee's health insurance is at least equivalent to the same dollar amount that the employer would pay when purchasing the employee's insurance directly;
(c) Study the viability of provisions that would allow individual employees to opt out of group plans without jeopardizing the ability of the group to continue their employer sponsored group coverage; and
(d) Work toward establishment of safeguards, such as a health care voucher system, to ensure that to the extent that employer direct contributions made to the employee for the purchase of individually selected and individually owned health insurance coverage continue, such contributions are used only for that purpose when the employer direct contributions are less than the cost of the specified minimum level of coverage. Any excess of the direct contribution over the cost of such coverage could be used by the individual for other purposes;
(4) will identify any further means through which universal coverage and access can be achieved;
(5) supports individually selected and individually-owned health insurance as the preferred method for people to obtain health insurance coverage; and supports and advocates a system where individually-purchased and owned health insurance coverage is the preferred option, but employer-provided coverage is still available to the extent the market demands it;
(6) supports the individual's right to select his/her health insurance plan and to receive the same tax treatment for individually purchased coverage, for contributions toward employer-provided coverage, and for completely employer provided coverage;
(7) supports immediate tax equity for health insurance costs of self-employed and unemployed persons;
(8) supports legislation to remove paragraph (4) of Section 162(l) of the US tax code, which discriminates against the self-employed by requiring them to pay federal payroll (FICA) tax on health insurance premium expenditures;
(9) supports legislation requiring a "maintenance of effort" period, such as one or two years, during which employers would be required to add to the employee's salary the cash value of any health insurance coverage they directly provide if they discontinue that coverage or if the employee opts out of the employer-provided plan;
(10) encourages through all appropriate channels the development of educational programs to assist consumers in making informed choices as to sources of individual health insurance coverage;
(11) encourages employers, unions, and other employee groups to consider the merits of risk-adjusting the amount of the employer direct contributions toward individually purchased coverage. Under such an approach, useful risk adjustment measures such as age, sex, and family status would be used to provide higher-risk employees with a larger contribution and lower-risk employees with a lesser one;
(12) supports a replacement of the present federal income tax exclusion from employees' taxable income of employer-provided health insurance coverage with tax credits for individuals and families, while allowing all health insurance expenditures to be exempt from federal and state payroll taxes, including FICA (Social Security and Medicare) payroll tax, FUTA (federal unemployment tax act) payroll tax, and SUTA (state unemployment tax act) payroll tax;
(13) advocates that, upon replacement, with tax credits, of the exclusion of employer-sponsored health insurance from employees' federal income tax, any states and municipalities conforming to this federal tax change be required to use the resulting increase in state and local tax revenues to finance health insurance tax credits, vouchers or other coverage subsidies; and
(14) believes that refundable, advanceable tax credits inversely related to income are preferred over public sector expansions as a means of providing coverage to the uninsured.
(15) Our AMA reaffirms our policies committed to our patients and their individual responsibility and freedoms consistent with our United States Constitution.

Universal Health Coverage H-165.904
Our AMA: (1) seeks to ensure that federal health system reform include payment for the urgent and emergent treatment of illnesses and injuries of indigent, non-U.S. citizens in the U.S. or its territories; (2) seeks federal legislation that would require the federal government to provide financial support to any individuals, organizations, and institutions providing legally-mandated health care services to foreign nationals and other persons not covered under health system reform; and (3) continues to assign a high priority to the problem of the medically uninsured and underinsured and continues to work toward national consensus on providing access to adequate health care coverage for all Americans
Citation: Sub. Res. 138, A-94; Appended: Sub. Res. 109, I-98; Reaffirmation A-02; Reaffirmation A-07; Reaffirmation I-07; Reaffirmed: Res. 239, A-12; Reaffirmed: CMS Rep. 1, A-22;

Evaluating Health System Reform Proposals H-165.888
1. Our AMA will continue its efforts to ensure that health system reform proposals adhere to the following principles:
A. Physicians maintain primary ethical responsibility to advocate for their patients' interests and needs.
B. Unfair concentration of market power of payers is detrimental to patients and physicians, if patient freedom of choice or physician ability to select mode of practice is limited or denied. Single-payer systems clearly fall within such a definition and, consequently, should continue to be opposed by the AMA. Reform proposals should balance fairly the market power between payers and physicians or be opposed.
C. All health system reform proposals should include a valid estimate of implementation cost, based on all health care expenditures to be included in the reform; and supports the concept that all health system reform proposals should identify specifically what means of funding (including employer-mandated funding, general taxation, payroll or value-added taxation) will be used to pay for the reform proposal and what the impact will be.
D. All physicians participating in managed care plans and medical delivery systems must be able without threat of punitive action to comment on and present their positions on the plan's policies and procedures for medical review, quality assurance, grievance procedures, credentialing criteria, and other financial and administrative matters, including physician representation on the governing board and key committees of the plan.
E. Any national legislation for health system reform should include sufficient and continuing financial support for inner-city and rural hospitals, community health centers, clinics, special programs for special populations and other essential public health facilities that serve underserved populations that otherwise lack the financial means to pay for their health care.
F. Health system reform proposals and ultimate legislation should result in adequate resources to enable medical schools and residency programs to produce an adequate supply and appropriate generalist/specialist mix of physicians to deliver patient care in a reformed health care system.
G. All civilian federal government employees, including Congress and the Administration, should be covered by any health care delivery system passed by Congress and signed by the President.
H. True health reform is impossible without true tort reform.
2. Our AMA supports health care reform that meets the needs of all Americans including people with injuries, congenital or acquired disabilities, and chronic conditions, and as such values function and its improvement as key outcomes to be specifically included in national health care reform legislation.
3. Our AMA supports health care reform that meets the needs of all Americans including people with mental illness and substance use / addiction disorders and will advocate for the inclusion of full parity for the treatment of mental illness and substance use / addiction disorders in all national health care reform legislation.

4. Our AMA supports health system reform alternatives that are consistent with AMA principles of pluralism, freedom of choice, freedom of practice, and universal access for patients.

Res. 718, I-93; Reaffirmed: CMS Rep. 5, I-93; Res. 124, A-94; Reaffirmed by BOT Rep.1- I-94; CEJA Rep. 3, A-95; Reaffirmed: BOT Rep. 34, I-95; Reaffirmation A-00; Reaffirmation A-01; Reaffirmed: CMS Rep. 10, A-03; Reaffirmed: CME Rep. 2, A-03; Reaffirmed and Modified: CMS Rep. 5, A-04; Reaffirmed with change in title: CEJA Rep. 2, A-05; Consolidated: CMS Rep. 7, I-05; Reaffirmation I-07; Reaffirmed in lieu of Res. 113, A-08; Reaffirmation A-09; Res. 101, A-09; Sub. Res. 110, A-09; Res. 123, A-09; Reaffirmed in lieu of Res. 120, A-12; Reaffirmation: A-17;

Health System Reform Legislation H-165.838
1. Our American Medical Association is committed to working with Congress, the Administration, and other stakeholders to achieve enactment of health system reforms that include the following seven critical components of AMA policy:
a. Health insurance coverage for all Americans
b. Insurance market reforms that expand choice of affordable coverage and eliminate denials for pre-existing conditions or due to arbitrary caps
c. Assurance that health care decisions will remain in the hands of patients and their physicians, not insurance companies or government officials
d. Investments and incentives for quality improvement and prevention and wellness initiatives
e. Repeal of the Medicare physician payment formula that triggers steep cuts and threaten seniors' access to care
f. Implementation of medical liability reforms to reduce the cost of defensive medicine
g. Streamline and standardize insurance claims processing requirements to eliminate unnecessary costs and administrative burdens
2. Our American Medical Association advocates that elimination of denials due to pre-existing conditions is understood to include rescission of insurance coverage for reasons not related to fraudulent representation.
3. Our American Medical Association House of Delegates supports AMA leadership in their unwavering and bold efforts to promote AMA policies for health system reform in the United States.
4. Our American Medical Association supports health system reform alternatives that are consistent with AMA policies concerning pluralism, freedom of choice, freedom of practice, and universal access for patients.
5. AMA policy is that insurance coverage options offered in a health insurance exchange be self-supporting, have uniform solvency requirements; not receive special advantages from government subsidies; include payment rates established through meaningful negotiations and contracts; not require provider participation; and not restrict enrollees' access to out-of-network physicians.
6. Our AMA will actively and publicly support the inclusion in health system reform legislation the right of patients and physicians to privately contract, without penalty to patient or physician.
7. Our AMA will actively and publicly oppose the Independent Medicare Commission (or other similar construct), which would take Medicare payment policy out of the hands of Congress and place it under the control of a group of unelected individuals.
8. Our AMA will actively and publicly oppose, in accordance with AMA policy, inclusion of the following provisions in health system reform legislation:
a. Reduced payments to physicians for failing to report quality data when there is evidence that widespread operational problems still have not been corrected by the Centers for Medicare and Medicaid Services
b. Medicare payment rate cuts mandated by a commission that would create a double-jeopardy situation for physicians who are already subject to an expenditure target and potential payment reductions under the Medicare physician payment system
c. Medicare payments cuts for higher utilization with no operational mechanism to assure that the Centers for Medicare and Medicaid Services can report accurate information that is properly attributed and risk-adjusted
d. Redistributed Medicare payments among providers based on outcomes, quality, and risk-adjustment measurements that are not scientifically valid, verifiable and accurate
e. Medicare payment cuts for all physician services to partially offset bonuses from one specialty to another

f. Arbitrary restrictions on physicians who refer Medicare patients to high quality facilities in which they have an ownership interest
9. Our AMA will continue to actively engage grassroots physicians and physicians in training in collaboration with the state medical and national specialty societies to contact their Members of Congress, and that the grassroots message communicate our AMA's position based on AMA policy.
10. Our AMA will use the most effective media event or campaign to outline what physicians and patients need from health system reform.
11. AMA policy is that national health system reform must include replacing the sustainable growth rate (SGR) with a Medicare physician payment system that automatically keeps pace with the cost of running a practice and is backed by a fair, stable funding formula, and that the AMA initiate a "call to action" with the Federation to advance this goal.
12. AMA policy is that creation of a new single payer, government-run health care system is not in the best interest of the country and must not be part of national health system reform.
13. AMA policy is that effective medical liability reform that will significantly lower health care costs by reducing defensive medicine and eliminating unnecessary litigation from the system should be part of any national health system reform.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 104
(A-23)

Introduced by: Medical Student Section

Subject: Support for Medicare Expansion to Wheelchair Accessibility Home Modifications as Durable Medical Equipment

Referred to: Reference Committee A

Whereas, The 2010 United States Census reported that 3.6 million individuals utilize a wheelchair and 11.6 million used a cane, crutches or walker to assist with ambulation[1]; and

Whereas, A report from the U.S. Department of Housing and Urban Development Office of Policy Development and Research reports that 89.2% of persons with disability live in inaccessible housing[2]; and

Whereas, Over 50% of households with a resident reliant on wheeled mobility equipment have homes with stairs at the front entrance that may inhibit their ability to freely enter their home[2]; and

Whereas, The United Nations Convention on the Rights of Persons with Disabilities, Article 9 safeguards the right of persons with disabilities to live in an accessible environment[5]; and

Whereas, A Joint Statement by the Department of Justice and Department of Housing and Urban Development on the Fair Housing Act requires that passage into and within all premises of covered dwellings may have an accessible route for wheelchair users[14]; and

Whereas, The Fair Housing Act also require usable kitchen and bathrooms such that an individual using a wheelchair can maneuver about and use this space[14]; and

Whereas, One study noted that 16% of injuries from wheelchair accidents from falls required medical intervention, most commonly for fractures and concussions[3]; and

Whereas, A study that employed wheeled mobility device users found that 90% of participants reported that their participation was limited when surfaces higher than their wheeled device were encountered, indicating the value that wheelchair ramps can provide[12]; and

Whereas, Researchers at the National Disability Institute found that on average households containing an adult with a physical disability required 28% more income, or an additional $17,690 a year to obtain the same standard of living [4,11]; and

Whereas, Medicare Part B covers medically necessary equipment defined as Durable Medical Equipment including wheelchairs, scooters, traction equipment, however not including wheelchair ramps as medically necessary[13]; and

Whereas, A single-blind randomized controlled trial in New Zealand found a 31% reduction in the rate of fall injuries at home per year following home stairs modification intervention compared with households in the control group without home modification[7]; and

Whereas, A study that assessed the factors that influence the risk of falling after spinal cord injury found lack of necessary home modification to be a major determinant[9]; and

Whereas, Spinal cord injury patient participants in the 2020 BMJ Open study noted that "egregious cost of home modifications" are reason for lack of proper accommodations and increased incidence of fall[9]; and

Whereas, Independence in mobility, as provided by necessary wheelchair home modifications, has been deemed a key factor in preserving function and maintaining life satisfaction among wheelchair users[6,8,10]; therefore be it

RESOLVED, That our American Medical Association support that Medicare Part B cover wheelchair ramps and associated home installation for beneficiaries for whom using a wheelchair at home is "medically necessary." (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

Received: 3/27/23

RELEVANT AMA POLICY

Support for Housing Modification Policies H-160.890
Our AMA supports improved access to housing modification benefits for populations that require modifications in order to mitigate preventable health conditions, including but not limited to the elderly, the disabled and other persons with physical and/or mental disabilities.
Citation: Res. 806, I-19;

Protect Medicare Beneficiary Access to Complex Rehabilitation Wheelchairs D-330.907
Our AMA strongly encourages the Centers for Medicare and Medicaid Services (CMS) to refrain from implementing policies on January 1, 2016 that would curtail access to complex rehabilitation technology (CRT) wheelchairs and accessories by applying competitively bid prices to these specialized devices. In the event that CMS does not refrain from implementing policies limiting access to CRT wheelchairs, our AMA will encourage Congress to support legislation (e.g. H.R. 3229) that would provide a technical correction to federal law to clarify that CMS cannot apply Medicare competitive bidding pricing to CRT wheelchairs.
Citation: (Res. 816, I-15)

Protecting Patient Access to Seat Elevation and Standing Features in Power Wheelchairs D-330.899
Our AMA will request that the Centers for Medicare and Medicaid Services render a benefit category determination that establishes that the seat elevation and standing features of power wheelchairs are primarily medical in nature and qualify under the definition of durable medical equipment when used in a power wheelchair.
Citation: Res. 808, I-19;

Appropriate Reimbursement for Evaluation and Management Services for Patients with Severe Mobility-Related Impairments H-390.835
Our AMA supports: (1) additional reimbursement for evaluation and management services for patients who require additional time and specialized equipment during medical visits due to severe mobility-related impairments; (2) that no additional cost-sharing for the additional reimbursement will be passed on to patients with mobility disabilities, consistent with Federal Law; (3) that primary and specialty medical providers be educated regarding the care of patients with severely impaired mobility to improve access to care; and (4) additional funding for payment for services provided to patients with mobility related impairments that is not through a budget neutral adjustment to the physician fee schedule.
Citation: Res. 814, I-17;

Community Mobility Devices H-90.978
The AMA urges physicians, who treat patients with impaired mobility outside the home, to work with state medical associations and appropriate medical specialty societies to identify state agencies and community service organizations that provide local transportation assistance to disabled individuals, and that such information be made readily accessible to disabled patients.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 105
(A-23)

Introduced by: Medical Student Section

Subject: Studying Population-Based Payment Policy Disparities

Referred to: Reference Committee A

Whereas, Certain fields of medicine care for distinct patient populations, such as pediatrics, obstetrics and gynecology (OBGYN), geriatrics, infectious disease, urology, addiction medicine, sports medicine, etc.; and

Whereas, Procedures performed for specialized patient populations such as gynecology patients have been shown to be reimbursed at lower rates than those for other specialized patient populations such as urology patients, despite being similar in nature[1]; and

Whereas, The Medicare fee schedule is a leading cause of reimbursement imbalance between specialties due to documented factors, such as discrepancies in valuation of surgical intraoperative time, and different valuation of procedural and physical effort to cognitive effort[2]; and

Whereas, There is evidence to suggest that current work Relative Value Units (RVUs) are misvalued as changes in work RVUs have not reflected changes in technology in some specialties with undervaluation in cognitive effort, such as the management of complex conditions by primary care providers[3,4]; and

Whereas, In comparison to higher paid specialties, lower paid specialties with a single physician serving Medicare recipients are more likely to be completely absent in a given county, such that 92% of counties lack an addiction medicine physician and 80% of counties lack an infectious disease specialist[5]; and

Whereas, Access to care for mental health has persisted as an issue due to provider availability and reimbursement incentives[6]; and

Whereas, Documented racial disparities in reimbursement rates demonstrate statistically significant lower mean reimbursement per RVU for insured black patients within a tertiary hospital Emergency Department compared to their white counterparts, after adjusting for demographic and insurance factors[7]; and

Whereas, An analysis of RVUs reimbursed for gender-specific procedures revealed that procedures predominantly done on men were associated with higher RVUs and compensated at a rate 26.67% higher than procedures done predominantly on women[1]; and

Whereas, Disparity in RVUs reimbursed for similar procedures performed predominantly on women versus men has minimally decreased from 1997 to 2015, with a study reporting 42 of 50 (84%) male-based urologic procedures compensated at a higher rate than the paired female urologic procedures[1]; and

Whereas, OBGYN physicians work comparable hours and perform many surgical procedures similar in number and complexity to other surgical specialties, yet their pay is the lowest amongst all surgical specialties; leading to an estimated OBGYN physician shortage of 17% by 2030, 24% by 2040, and 31% by 2050 [8,9]; and

Whereas, Pediatric subspecialists are compensated at a significantly lower rate than that of internal medicine subspecialists, contributing to a high percentage of vacant seats across pediatric fellowship programs and a resulting shortage of pediatric subspecialists [10-12]; and

Whereas, The compensation of pediatric sub-specialists is lower than general pediatricians, de-incentivizing trainees to pursue fellowships in that realm, with a study finding the salary of pediatric endocrinologists to be 10% lower than that of general pediatricians[13-15]; and

Whereas, Pediatric infectious disease specialists experience the lowest compensation of all physicians, earning $191,735 compared to $265,000 earned by adult infectious disease specialists [13-15]; and

Whereas, Most pediatric subspecialty programs experience a significant fraction of unfilled seats; for example, 40.6% of pediatric nephrologist fellowship seats were not filled in 2019, indicating both trainee disinterest and a lack of provider availability, which can negatively impact access to care and contribute to longer wait times[10,16]; and

Whereas, Medicare and Medicaid often function as a safety net for hospitals by reimbursing institutions for expenses of hospitalizations not paid by patients themselves, and often falls short of covering the hospitals' care-delivery costs[17,18]; and

Whereas, Lower reimbursements for specialties that care for certain underserved patient populations may disincentivize physicians from entering those specialties and providing care for the corresponding patient populations, or disincentivize hospitals to provide such care[19,20]; and

Whereas, Not only is the ratio of specialists to primary care physicians (PCP) higher in the U.S. than in other countries, it has been documented by studies as being due to U.S. ratio of specialist to PCP compensation rates exceeding other countries' specialist to PCP compensation rates[21-24]; and

Whereas, An American College of Physicians position statement holds that "Medicare and other payers should adopt population-based, prospective payment models for primary and comprehensive care that are structured and sufficient to ensure access to needed care and address the needs of individuals experiencing health care disparities and inequities based on personal characteristics and/or are disproportionately affected by social drivers of health. Hybrid models combining fee-for-service with prospective payment should be made available and should prioritize the needs of such individuals"[25]; and

Whereas, The Center for Medicare Services' most recent publication of the Medicare payment schedule came with an official solicitation for comments on how the agency can advance health equity for people with Medicare[26]; and

Whereas, The National Academy of Medicine Committee for Medicare recommends a potential policy remedy to use reimbursements to incentivize care for underserved populations: a per-patient payment adjustment for patients' social risks, deliberately connected to the quality of patient outcomes; an approach that requires separate reporting of quality measures for

hospitals in different categories related to distinct levels of social risk in the populations they serve and includes an additional financial incentive for quality improvement[27,28]; and

Whereas, Financial incentives can reward hospitals for incremental improvements in quality measures against their own historical benchmarks, and promote closing gaps in the quality of care that may be worse among institutions primarily serving disadvantaged populations[27,28]; and

Whereas, Anchor institutions are (organizations that commit themselves to hiring, procuring, and investing in disadvantaged communities) and would earn enriched reimbursement for the patients they serve from those same or similarly disadvantaged communities[29]; and

Whereas, Another policy alternative to use reimbursement to promote care for underserved populations is to promote hospitals that achieve certain metrics in key domains to be qualified as anchor institutions[29]; and

Whereas, A study found that the choice of a higher-income specialty was associated with lower burnout (OR = 0.56, 95% CI 0.32-0.98)[30]; and

Whereas, Medical students have indicated difficulty in completing loan repayments due to increasing tuition rates and lack of financial compensation as deterrents to entering certain fields and caring for certain populations[25, 31]; and

Whereas, Nearly half (48%) of graduating medical students cite income as a strong or moderate influence on their decision to pursue a certain specialty, and only 20% stated that it has no influence on their decision of which specialty to choose[20]; and

Whereas, Current AMA Policy H-65.961 states that the AMA “declares that compensation should be equitable and based on demonstrated competencies and expertise and not based on personal characteristics,” which can include the type of population a physician serves or the specialty they practice; therefore be it

RESOLVED, That our American Medical Association study opportunities to incentivize physicians to select specialties and practice settings which involve delivery of health services to populations experiencing a shortage of providers, such as women, LGBTQ+ patients, children, elder adults, and patients with disabilities, including populations of such patients who do not live in underserved geographic areas (Directive to Take Action); and be it further

RESOLVED, That our AMA study the effects of factors such as valuation and reimbursement rates on physician choice of specialty, degree of institutional support, workforce shortages, burnout, and attrition, especially in specialties and practice settings that primarily care for underserved populations. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

E9.5.5 Gender Discrimination in Medicine
Inequality of professional status **in medicine** among individuals based on **gender** can compromise patient care, undermine trust, and damage the working environment. Physician leaders **in** medical schools and medical institutions should advocate for increased leadership **in medicine** among individuals of underrepresented genders and equitable compensation for all physicians.
Collectively, physicians should actively advocate for and develop family-friendly policies that:
(a) Promote fairness **in** the workplace, including providing for:
(i) retraining or other programs that facilitate re-entry by physicians who take time away from their careers to have a family;
(ii) on-site child care services for dependent children;
(iii) job security for physicians who are temporarily not **in** practice due to pregnancy or family obligations.
(b) Promote fairness **in** academic medical settings by:
(i) ensuring that tenure decisions make allowance for family obligations by giving faculty members longer to achieve standards for promotion and tenure;
(ii) establish more reasonable guidelines regarding the quantity and timing of published material needed for promotion or tenure that emphasize quality over quantity and encourage the pursuit of careers based on individual talent rather than tenure standards that undervalue teaching ability and overvalue research;
(iii) fairly distribute teaching, clinical, research, administrative responsibilities, and access to tenure tracks;
(iv) structuring the mentoring process through a fair and visible system.
(c) Take steps to mitigate **gender** bias **in** research and publication.
Issued: 2016

Principles for Advancing Gender Equity in Medicine H-65.961
Principles for Advancing Gender Equity in Medicine:
Our AMA:
1. declares it is opposed to any exploitation and discrimination in the workplace based on personal characteristics (i.e., gender);
2. affirms the concept of equal rights for all physicians and that the concept of equality of rights under the law shall not be denied or abridged by the U.S. Government or by any state on account of gender;
3. endorses the principle of equal opportunity of employment and practice in the medical field;
4. affirms its commitment to the full involvement of women in leadership roles throughout the federation, and encourages all components of the federation to vigorously continue their efforts to recruit women members into organized medicine;
5. acknowledges that mentorship and sponsorship are integral components of one's career advancement, and encourages physicians to engage in such activities;
6. declares that compensation should be equitable and based on demonstrated competencies/expertise and not based on personal characteristics;
7. recognizes the importance of part-time work options, job sharing, flexible scheduling, re-entry, and contract negotiations as options for physicians to support work-life balance;
8. affirms that transparency in pay scale and promotion criteria is necessary to promote gender equity, and as such academic medical centers, medical schools, hospitals, group practices and other physician employers should conduct periodic reviews of compensation and promotion rates by gender and evaluate protocols for advancement to determine whether the criteria are discriminatory; and
9. affirms that medical schools, institutions and professional associations should provide training on leadership development, contract and salary negotiations and career advancement strategies that include an analysis of the influence of gender in these skill areas.
Our AMA encourages: (1) state and specialty societies, academic medical centers, medical schools, hospitals, group practices and other physician employers to adopt the AMA Principles for Advancing Gender Equity in Medicine; and (2) academic medical centers, medical schools, hospitals, group practices and other physician employers to: (a) adopt policies that prohibit harassment, discrimination and retaliation; (b) provide anti-harassment training; and (c) prescribe disciplinary and/or corrective action should violation of such policies occur.
Citation: BOT Rep. 27, A-19;

Advancing Gender Equity in Medicine D-65.989
1. Our AMA will: (a) advocate for institutional, departmental and practice policies that promote transparency in defining the criteria for initial and subsequent physician compensation; (b) advocate for pay structures based on objective, gender-neutral criteria; (c) encourage a specified approach, sufficient to identify gender disparity, to oversight of compensation models, metrics, and actual total compensation for all employed physicians; and (d) advocate for training to identify and mitigate implicit bias in compensation determination for those in positions to determine salary and bonuses, with a focus on how subtle differences in the further evaluation of physicians of different genders may impede compensation and career advancement.
2. Our AMA will recommend as immediate actions to reduce gender bias: (a) elimination of the question of prior salary information from job applications for physician recruitment in academic and private practice; (b) create an awareness campaign to inform physicians about their rights under the Lilly Ledbetter Fair Pay Act and Equal Pay Act; (c) establish educational programs to help empower all genders to negotiate equitable compensation; (d) work with relevant stakeholders to host a workshop on the role of medical societies in advancing women in medicine, with co-development and broad dissemination of a report based on workshop findings; and (e) create guidance for medical schools and health care facilities for institutional transparency of compensation, and regular gender-based pay audits.
3. Our AMA will collect and analyze comprehensive demographic data and produce a study on the inclusion of women members including, but not limited to, membership, representation in the House of Delegates, reference committee makeup, and leadership positions within our AMA, including the Board of Trustees, Councils and Section governance, plenary speaker invitations, recognition awards, and grant funding, and disseminate such findings in regular reports to the House of Delegates and making recommendations to support gender equity.
4. Our AMA will commit to pay equity across the organization by asking our Board of Trustees to undertake routine assessments of salaries within and across the organization, while making the necessary adjustments to ensure equal pay for equal work.
5. Our AMA will: (a) require all members elected and appointed to national and regional AMA leadership positions to complete AMA Code of Conduct and anti-harassment training, with continued evaluation of the training for effectiveness in reducing harassment within the AMA; and (b) work with the Women Physicians Section, American Medical Women's Association, GLMA: Health Professionals Advancing LGBTQ Equality, and other stakeholders to identify an appropriate, evidence-based anti-harassment and sexual harassment prevention training to administer to leadership.
Citation: Res. 010, A-18; Modified: BOT Rep. 27, A-19; Appended: Res. 615, A-22;

Medical Care of Persons with Disabilities H-90.968
1. Our AMA encourages: (a) clinicians to learn and appreciate variable presentations of complex functioning profiles in all persons with disabilities including but not limited to physical, sensory, developmental, intellectual, learning, and psychiatric disabilities and chronic illnesses; (b) medical schools and graduate medical education programs to acknowledge the benefits of education on how aspects in the social model of disability (e.g. ableism) can impact the physical and mental health of persons with disabilities; (c) medical schools and graduate medical education programs to acknowledge the benefits of teaching about the nuances of uneven skill sets, often found in the functioning profiles of persons with developmental disabilities, to improve quality in clinical care; (d) education of physicians on how to provide and/or advocate for developmentally appropriate and accessible medical, social and living support for patients with disabilities so as to improve health outcomes; (e) medical schools and residency programs to encourage faculty and trainees to appreciate the opportunities for exploring diagnostic and therapeutic challenges while also accruing significant personal rewards when delivering care with professionalism to persons with profound disabilities and multiple co-morbid medical conditions in any setting; (f) medical schools and graduate medical education programs to establish and encourage enrollment in elective rotations for medical students and residents at health care facilities specializing in care for the disabled; and (g) cooperation among physicians, health & human services professionals, and a wide variety of adults with disabilities to implement priorities and quality improvements for the care of persons with disabilities.
2. Our AMA seeks: (a) legislation to increase the funds available for training physicians in the care of individuals with disabilities, and to increase the reimbursement for the health care of these individuals; and (b) insurance industry and government reimbursement that reflects the true cost of health care of individuals with disabilities.
3. Our AMA entreats health care professionals, parents, and others participating in decision-making to be

guided by the following principles: (a) All people with disabilities, regardless of the degree of their disability, should have access to appropriate and affordable medical and dental care throughout their lives; and (b) An individual's medical condition and welfare must be the basis of any medical decision. Our AMA advocates for the highest quality medical care for persons with profound disabilities; encourages support for health care facilities whose primary mission is to meet the health care needs of persons with profound disabilities; and informs physicians that when they are presented with an opportunity to care for patients with profound disabilities, that there are resources available to them.
4. Our AMA will collaborate with appropriate stakeholders to create a model general curriculum/objective that (a) incorporates critical disability studies; and (b) includes people with disabilities as patient instructors in formal training sessions and preclinical and clinical instruction.
5. Our AMA recognizes the importance of managing the health of children and adults with developmental and intellectual disabilities as a part of overall patient care for the entire community.
6. Our AMA supports efforts to educate physicians on health management of children and adults with intellectual and developmental disabilities, as well as the consequences of poor health management on mental and physical health for people with intellectual and developmental disabilities.
7. Our AMA encourages the Liaison Committee on Medical Education, Commission of Osteopathic College Accreditation, and allopathic and osteopathic medical schools to develop and implement a curriculum on the care and treatment of people with a range of disabilities.
8. Our AMA encourages the Accreditation Council for Graduate Medical Education and graduate medical education programs to develop and implement curriculum on providing appropriate and comprehensive health care to people with a range of disabilities.
9. Our AMA encourages the Accreditation Council for Continuing Medical Education, specialty boards, and other continuing medical education providers to develop and implement continuing programs that focus on the care and treatment of people with a range of disabilities.
10. Our AMA will advocate that the Health Resources and Services Administration include persons with disabilities as a medically underserved population.
11. Specific to people with developmental and intellectual disabilities, a uniquely underserved population, our AMA encourages: (a) medical schools and graduate medical education programs to acknowledge the benefits of teaching about the nuances of uneven skill sets, often found in the functioning profiles of persons with developmental and intellectual disabilities, to improve quality in clinical education; (b) medical schools and graduate medical education programs to establish and encourage enrollment in elective rotations for medical students and residents at health care facilities specializing in care for individuals with developmental and intellectual disabilities; and (c) cooperation among physicians, health and human services professionals, and a wide variety of adults with intellectual and developmental disabilities to implement priorities and quality improvements for the care of persons with intellectual and developmental disabilities.

Principles of and Actions to Address Primary Care Workforce H-200.949
1. Our patients require a sufficient, well-trained supply of primary care physicians--family physicians, general internists, general pediatricians, and obstetricians/gynecologists--to meet the nation's current and projected demand for health care services.
2. To help accomplish this critical goal, our American Medical Association (AMA) will work with a variety of key stakeholders, to include federal and state legislators and regulatory bodies; national and state specialty societies and medical associations, including those representing primary care fields; and accreditation, certification, licensing, and regulatory bodies from across the continuum of medical education (undergraduate, graduate, and continuing medical education).
3. Through its work with these stakeholders, our AMA will encourage development and dissemination of innovative models to recruit medical students interested in primary care, train primary care physicians, and enhance both the perception and the reality of primary care practice, to encompass the following components: a) Changes to medical school admissions and recruitment of medical students to primary care specialties, including counseling of medical students as they develop their career plans; b) Curriculum changes throughout the medical education continuum; c) Expanded financial aid and debt relief options; d) Financial and logistical support for primary care practice, including adequate reimbursement, and enhancements to the practice environment to ensure professional satisfaction and practice sustainability; and e) Support for research and advocacy related to primary care.

4. Admissions and recruitment: The medical school admissions process should reflect the specific institution's mission. Those schools with missions that include primary care should consider those predictor variables among applicants that are associated with choice of these specialties.
5. Medical schools, through continued and expanded recruitment and outreach activities into secondary schools, colleges, and universities, should develop and increase the pool of applicants likely to practice primary care by seeking out those students whose profiles indicate a likelihood of practicing in primary care and underserved areas, while establishing strict guidelines to preclude discrimination.
6. Career counseling and exposure to primary care: Medical schools should provide to students career counseling related to the choice of a primary care specialty, and ensure that primary care physicians are well-represented as teachers, mentors, and role models to future physicians.
7. Financial assistance programs should be created to provide students with primary care experiences in ambulatory settings, especially in underserved areas. These could include funded preceptorships or summer work/study opportunities.
8. Curriculum: Voluntary efforts to develop and expand both undergraduate and graduate medical education programs to educate primary care physicians in increasing numbers should be continued. The establishment of appropriate administrative units for all primary care specialties should be encouraged.
9. Medical schools with an explicit commitment to primary care should structure the curriculum to support this objective. At the same time, all medical schools should be encouraged to continue to change their curriculum to put more emphasis on primary care.
10. All four years of the curriculum in every medical school should provide primary care experiences for all students, to feature increasing levels of student responsibility and use of ambulatory and community-based settings.
11. Federal funding, without coercive terms, should be available to institutions needing financial support to expand resources for both undergraduate and graduate medical education programs designed to increase the number of primary care physicians. Our AMA will advocate for public (federal and state) and private payers to a) develop enhanced funding and related incentives from all sources to provide education for medical students and resident/fellow physicians, respectively, in progressive, community-based models of integrated care focused on quality and outcomes (such as the patient-centered medical home and the chronic care model) to enhance primary care as a career choice; b) fund and foster innovative pilot programs that change the current approaches to primary care in undergraduate and graduate medical education, especially in urban and rural underserved areas; and c) evaluate these efforts for their effectiveness in increasing the number of students choosing primary care careers and helping facilitate the elimination of geographic, racial, and other health care disparities.
12. Medical schools and teaching hospitals in underserved areas should promote medical student and resident/fellow physician rotations through local family health clinics for the underserved, with financial assistance to the clinics to compensate their teaching efforts.
13. The curriculum in primary care residency programs and training sites should be consistent with the objective of training generalist physicians. Our AMA will encourage the Accreditation Council for Graduate Medical Education to (a) support primary care residency programs, including community hospital-based programs, and (b) develop an accreditation environment and novel pathways that promote innovations in graduate medical education, using progressive, community-based models of integrated care focused on quality and outcomes (such as the patient-centered medical home and the chronic care model).
14. The visibility of primary care faculty members should be enhanced within the medical school, and positive attitudes toward primary care among all faculty members should be encouraged.
15. Support for practicing primary care physicians: Administrative support mechanisms should be developed to assist primary care physicians in the logistics of their practices, along with enhanced efforts to reduce administrative activities unrelated to patient care, to help ensure professional satisfaction and practice sustainability.
16. There should be increased financial incentives for physicians practicing primary care, especially those in rural and urban underserved areas, to include scholarship or loan repayment programs, relief of professional liability burdens, and Medicaid case management programs, among others. Our AMA will advocate to state and federal legislative and regulatory bodies, among others, for development of public and/or private incentive programs, and expansion and increased funding for existing programs, to further encourage practice in underserved areas and decrease the debt load of primary care physicians. The imposition of specific outcome targets should be resisted, especially in the absence of additional support to the schools.
17. Our AMA will continue to advocate, in collaboration with relevant specialty societies, for the recommendations from the AMA/Specialty Society RVS Update Committee (RUC) related to

reimbursement for E&M services and coverage of services related to care coordination, including patient education, counseling, team meetings and other functions; and work to ensure that private payers fully recognize the value of E&M services, incorporating the RUC-recommended increases adopted for the most current Medicare RBRVS.
18. Our AMA will advocate for public (federal and state) and private payers to develop physician reimbursement systems to promote primary care and specialty practices in progressive, community-based models of integrated care focused on quality and outcomes such as the patient-centered medical home and the chronic care model consistent with current AMA Policies H-160.918 and H-160.919.
19. There should be educational support systems for primary care physicians, especially those practicing in underserved areas.
20. Our AMA will urge urban hospitals, medical centers, state medical associations, and specialty societies to consider the expanded use of mobile health care capabilities.
21. Our AMA will encourage the Centers for Medicare & Medicaid Services to explore the use of telemedicine to improve access to and support for urban primary care practices in underserved settings.
22. Accredited continuing medical education providers should promote and establish continuing medical education courses in performing, prescribing, interpreting and reinforcing primary care services.
23. Practicing physicians in other specialties--particularly those practicing in underserved urban or rural areas--should be provided the opportunity to gain specific primary care competencies through short-term preceptorships or postgraduate fellowships offered by departments of family medicine, internal medicine, pediatrics, etc., at medical schools or teaching hospitals. In addition, part-time training should be encouraged, to allow physicians in these programs to practice concurrently, and further research into these concepts should be encouraged.
24. Our AMA supports continued funding of Public Health Service Act, Title VII, Section 747, and encourages advocacy in this regard by AMA members and the public.
25. Research: Analysis of state and federal financial assistance programs should be undertaken, to determine if these programs are having the desired workforce effects, particularly for students from disadvantaged groups and those that are underrepresented in medicine, and to gauge the impact of these programs on elimination of geographic, racial, and other health care disparities. Additional research should identify the factors that deter students and physicians from choosing and remaining in primary care disciplines. Further, our AMA should continue to monitor trends in the choice of a primary care specialty and the availability of primary care graduate medical education positions. The results of these and related research endeavors should support and further refine AMA policy to enhance primary care as a career choice.
Citation: CME Rep. 04, I-18;

Reimbursement to Physicians and Hospitals for Government Mandated Services H-240.966
(1) It is the policy of the AMA that government mandated services imposed on physicians and hospitals that are peripheral to the direct medical care of patients be recognized as additional practice cost expense.
(2) Our AMA will accelerate its plans to develop quantitative information on the actual costs of regulations.
(3) Our AMA strongly urges Congress that the RBRVS and DRG formulas take into account these additional expenses incurred by physicians and hospitals when complying with governmentally mandated regulations and ensure that reimbursement increases are adequate to cover the costs of providing these services.
(4) Our AMA will advocate to the CMS and Congress that an equitable adjustment to the Medicare physician fee schedule (or another appropriate mechanism deemed appropriate by CMS or Congress) be developed to provide fair compensation to offset the additional professional and practice expenses required to comply with the Emergency Medical Treatment and Labor Act.
Citation: Sub. Res. 810, I-92; Appended by CMS 10, A-98; Reaffirmation I-98; Reaffirmation A-02; Reaffirmation I-07; Reaffirmed in lieu of Res. 126, A-09; Reaffirmed: CMS Rep. 01, A-19;

Adequate Physician Reimbursement for Long-Term Care H-280.979
Our AMA supports: (1) continuing discussion with CMS to improve Medicare reimbursement to physicians for primary care services, specifically including nursing home and home care medical services;
(2) continued efforts to work with the Federation to educate federal and state legislative bodies about the issues of quality from the perspective of attending physicians and medical directors and express AMA's commitment to quality care in the nursing home;

(3) efforts to work with legislative and administrative bodies to assure adequate payment for routine visits and visits for acute condition changes including the initial assessment and ongoing monitoring of care until the condition is resolved; and
(4) assisting attending physicians and medical directors in the development of quality assurance guidelines and methods appropriate to the nursing home setting.

Fair Physician Contracts H-285.946
Our AMA will develop national (state) standards and model legislation for fair managed care/physician contracts, thereby requiring full disclosure in plain English of important information, including but not limited to: (1) disclosure of reimbursement amounts, conversion factors for the RBRVS system or other formulas if applicable, global follow-up times, multiple procedure reimbursement policies, and all other payment policies;
(2) which proprietary "correct coding" CPT bundling program is employed;
(3) grievance and appeal mechanisms;
(4) conditions under which a contract can be terminated by a physician or health plan;
(5) patient confidentiality protections;
(6) policies on patient referrals and physician use of consultants;
(7) a current listing by name and specialty of the physicians participating in the plan; and
(8) a current listing by name of the ancillary service providers participating in the plan.

Cuts in Medicare and Medicaid Reimbursement H-330.932
Our AMA: (1) continues to oppose payment cuts in the Medicare and Medicaid budgets that may reduce patient access to care and undermine the quality of care provided to patients; (2) supports the concept that the Medicare and Medicaid budgets need to expand adequately to adjust for factors such as cost of living, the growing size of the Medicare population, and the cost of new technology; (3) aggressively encourages CMS to affirm the patient's and the physician's constitutional right to privately contract for medical services; (4) if the reimbursement is not improved, the AMA declares the Medicare reimbursement unworkable and intolerable, and seek immediate legislation to allow the physician to balance bill the patient according to their usual and customary fee; and (5) supports a mandatory annual "cost-of-living" or COLA increase in Medicaid, Medicare, and other appropriate health care reimbursement programs, in addition to other needed payment increases.
Citation: Sub. Res. 101, A-97; Reaffirmation A-99 and Reaffirmed: Res. 127, A-99; Reffirmation A-00; Reaffirmation I-00; Reaffirmed: BOT Action in response to referred for decision Res. 215, I-00; Reaffirmation A-01; Reaffirmation and Appended: Res. 113, A-02; Reaffirmation A-05; Reaffirmed in lieu of Res. 207, A-13; Reaffirmed: Res. 212, I-21;

Consultation Follow-Up and Concurrent Care of Referral for Principal Care H-390.917
(1) It is the policy of the AMA that: (a) the completion of a consultation may require multiple encounters after the initial consultative evaluation; and (b) after completion of the consultation, the consultant may be excused from responsibility of the care of the patient or may share with the primary care physician in concurrent care; he/she may also have the patient referred for care and thus become the principal care physician. (2) The AMA communicate the appropriate use of consultation, evaluation and management, and office medical services codes to third party payers and advocate the appropriate reimbursement for these services in order to encourage high quality, comprehensive and appropriate consultations for patients.
Citation: Sub. Res. 42, A-90; Amended: BOT Rep. P, I-92; CMS Rep. 3, A-96; Reaffirmed: CMS Rep. 8, A-06; Reaffirmation I-08; Modified: CMS Rep. 01, A-18;

Appropriate Reimbursement for Evaluation and Management Services for Patients with Severe Mobility-Related Impairments H-390.835
Our AMA supports: (1) additional reimbursement for evaluation and management services for patients who require additional time and specialized equipment during medical visits due to severe mobility-related impairments; (2) that no additional cost-sharing for the additional reimbursement will be passed on to patients with mobility disabilities, consistent with Federal Law; (3) that primary and specialty medical

providers be educated regarding the care of patients with severely impaired mobility to improve access to care; and (4) additional funding for payment for services provided to patients with mobility related impairments that is not through a budget neutral adjustment to the physician fee schedule.
Citation: Res. 814, I-17;

RVS Updating H-400.969
Status Report and Future Plans: The AMA/Specialty Society RVS Update Committee (RUC) represents an important opportunity for the medical profession to maintain professional control of the clinical practice of medicine. The AMA urges each and every organization represented in its House of Delegates to become an advocate for the RUC process in its interactions with the federal government and with its physician members. The AMA (1) will continue to urge CMS to adopt the recommendations of the AMA/Specialty Society RVS Update Committee for physician work relative values for new and revised CPT codes; (2) supports strongly use of this AMA/Specialty Society process as the principal method of refining and maintaining the Medicare RVS; (3) encourages CMS to rely upon this process as it considers new methodologies for addressing the practice expense components of the Medicare RVS and other RBRVS issues; and (4) opposes changes in Relative Value Units that are in excess of those recommended by the AMA/Specialty Society Relative Value Scale Update Committee (RUC).
Citation: (BOT Rep. O, I-92; Reaffirmed by BOT Rep. 8 - I-94; Reaffirmed by BOT Rep. 7, A-98; Reaffirmed: CMS Rep.12, A-99; Reaffirmed: CMS Rep. 4, I-02; Reaffirmed: BOT Rep. 14, A-08; Reaffirmation I-10; Appended: Res. 822, I-12; Reaffirmation I-13; Reaffirmed: Sub. Res. 104, A-14; Reaffirmed in lieu of Res. 216, I-14; Reaffirmation A-15)

Guidelines for the Resource-Based Relative Value Scale H-400.991
(1) The AMA reaffirms its current policy in support of adoption of a fair and equitable Medicare indemnity payment schedule under which physicians would determine their own fees and Medicare would establish its payments for physician services using: (a) an appropriate RVS based on the resource costs of providing physician services; (b) an appropriate monetary conversion factor; and (c) an appropriate set of conversion factor multipliers.
(2) The AMA supports the position that the current Harvard RBRVS study and data, when sufficiently expanded, corrected and refined, would provide an acceptable basis for a Medicare indemnity payment system.
(3) The AMA reaffirms its strong support for physicians' right to decide on a claim-by-claim basis whether or not to accept Medicare assignment and its opposition to elimination of balance billing. (Reaffirmed: Sub. Res. 132, A-94)
(4) The AMA reaffirms its opposition to the continuation of the Medicare maximum allowable actual charge (MAAC) limits.
(5) The AMA promotes enhanced physician discussion of fees with patients as an explicit objective of a Medicare indemnity payment system.
(6) The AMA supports expanding its activities in support of state and county medical society-initiated voluntary assignment programs for low-income Medicare beneficiaries.
(7) The AMA reaffirms its current policy that payments under a Medicare indemnity payment system should reflect valid and demonstrable geographic differences in practice costs, including professional liability insurance premiums. In addition, as warranted and feasible, the costs of such premiums should be reflected in the payment system in a manner distinct from the treatment of other practice costs.
(8) The AMA believes that payment localities should be determined based on principles of reasonableness, flexibility and common sense (e.g., localities could consist of a combination of regions, states, and metropolitan and nonmetropolitan areas within states) based on the availability of high quality data.
(9) The AMA believes that, in addition to adjusting indemnity payments based on geographic practice cost differentials, a method of adjusting payments to effectively remedy demonstrable access problems in specific geographic areas should be developed and implemented.
(10) Where specialty differentials exist, criteria for specialty designation should avoid sole dependence on rigid criteria, such as board certification or completion of residency training. Instead, a variety of general national criteria should be utilized, with carriers having sufficient flexibility to respond to local conditions. In addition to board certification or completion of a residency, such criteria could include, but not be limited to: (a) partial completion of a residency plus time in practice; (b) local peer recognition; and (c) carrier analysis of practice patterns. A provision should also be implemented to protect the patients of physicians who have practiced as specialists for a number of years.

(11) The AMA strongly opposes any attempt to use the initial implementation or subsequent use of any new Medicare payment system to freeze or cut Medicare expenditures for physician services in order to produce federal budget savings.
(12) The AMA believes that whatever process is selected to update the RVS and conversion factor, only the AMA has the resources, experience and umbrella structure necessary to represent the collective interests of medicine, and that it seek to do so with appropriate mechanisms for full participation from all of organized medicine, especially taking advantage of the unique contributions of national medical specialty societies.
Citation: BOT Rep. AA, I-88; Reaffirmed: I-92; Reaffirmed and Modified: CMS Rep. 10, A-03; Reaffirmation A-06; Reaffirmed: CMS Rep. 01, A-16; Reaffirmed: Res. 212, I-21;

Non- Medicare Use of the RBRVS D-400.999
Our AMA will: (1) reaffirm Policy H-400.960 which advocates that annually updated and rigorously validated Resource Based Relative Value Scale (RBRVS) relative values could provide a basis for non-Medicare physician payment schedules, and that the AMA help to ensure that any potential non-Medicare use of an RBRVS reflects the most current and accurate data and implementation methods;.(2) reaffirm Policy H-400.969 which supports the use of the AMA/Specialty Society process as the principal method of refining and maintaining the Medicare relative value scale;(3) continue to identify the extent to which third party payers and other public programs modify, adopt, and implement Medicare RBRVS payment policies;(4) strongly oppose and protests the Centers for Medicare & Medicaid ServicesMedicare multiple surgery reduction policy which reduces payment for additional surgical procedures after the first procedure by more than 50%; and (5) encourage third party payers and other public programs to utilize the most current CPT codes updated by the first quarter of the calendar year, modifiers, and relative values to ensure an accurate implementation of the RBRVS.
Citation: CMS Rep. 12, A-99; Reaffirmation I-03; Reaffirmation I-07; Modified: BOT Rep. 22, A-17;

Decreasing Sex and Gender Disparities in Health Outcomes H-410.946
Our AMA: (1) supports the use of decision support tools that aim to mitigate gender bias in diagnosis and treatment; and (2) encourages the use of guidelines, treatment protocols, and decision support tools specific to biological sex for conditions in which physiologic and pathophysiologic differences exist between sexes.
Citation: Res. 005, A-18;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 106
(A-23)

Introduced by: Medical Student Section

Subject: Billing for Traditional Healing Services

Referred to: Reference Committee A

Whereas, The Indian Health Service (IHS), an agency within the U.S. Department of Health and Human Services, is responsible for providing health services to American Indians and Alaska Natives (AI/AN), as a federal trust responsibility and treaty obligations to American Indian and Alaska Native Tribes and Villages[1-2]; and

Whereas, The IHS is underfunded relative to other federal health programs, IHS per capita health care expenditures are $4,078, while figures for Medicaid and Medicare are $8,109 and $13,185, respectively[3]; and

Whereas, The IHS is considered the payor of last resort and is only utilized after other federal, state, local, or private source of reimbursement for which the patient is eligible have been exhausted[4]; and

Whereas, Reimbursement sources utilized before IHS payment include, but are not limited to, Medicare Part A and B, State Medicaid, State or other federal health programs (e.g., Veterans Health Administration), private insurance, and funds from Tribal health programs[4]; and

Whereas, Payments for IHS patients' medical care received from public programs such as Medicaid and Medicare or from private insurers—increased from about $943 million in fiscal year 2015 to about $1.15 billion in fiscal year 2019 at its federal facilities[5]; and

Whereas, Third-party collections are increasingly important, representing a significant portion of IHS, Tribal, and Urban Indian Health Programs' health care delivery budget, and also used to procure services, supplies, and pharmaceuticals[5]; and

Whereas, The IHS, through offerings of Western medicine and traditional healing services, works to ensure that culturally-appropriate health care services are available and accessible to AI/AN patients[6]; and

Whereas, Traditional medicine is the sum total of the knowledge, skills, and practices based on the theories, beliefs, and experiences specific to different cultures, whether explicable or not, used in the maintenance of health as well as in the prevention, diagnosis, improvement or treatment of physical and mental illness[7]; and

Whereas, In a survey of 150 AI/AN patients at one Urban Indian Health Program, 38% reported seeking medical care from both a physician and a traditional healer in their community[8]; and

Whereas, In another rural, reservation-based setting of 2,595 AI/AN adolescents and adults, 41 to 60% sought biomedical services for physical health concerns; 8 to 23% sought traditional healing services for physical health concerns; and 10-23% used Western and traditional healing services, while 3 to 40% used only traditional healing[9]; and

Whereas, Among AI/AN patients who see both a physician and a traditional healer, more than half (61.4%) trust the advice of their traditional healer(s) over their physician, and may also limit disclosure of their medical history due to medical distrust and poor coordination of care[8,10]; and

Whereas, The American Medical Association recognizes the "medicine man" and other traditional healing figures as an integral and culturally necessary part in delivering health care to AI/AN patients (H-350.976); and

Whereas, A study evaluating the efficacy of many traditional Cherokee medicines found that their use was efficient for treating intended illness, and was adopted by European settlers following their introduction to them[11]; and

Whereas, Connections to traditional culture, including food, has a positive impact on spiritual and physical health and decreases rates of chronic disease within AI/AN populations[12,13]; and

Whereas, The Alaska Native Medical Center, the major referral unit for AI/AN patients within the state of Alaska, offers a Traditional Healing Clinic in conjunction with other health services to provide whole-person care to patients[14]; and

Whereas, The IHS cannot bill private insurance and state Medicaid programs and Medicaid managed care organizations for traditional healing services, limiting reimbursement for and implementation of traditional healing services at IHS, Tribal, and Urban Indian health facilities[15]; and

Whereas, Traditional healing practices and knowledge are widely considered sacred and not shared with outside healthcare practitioners[16]; and

Whereas, The diversity of traditional healing practices between AI/AN Tribes and Villages creates challenges for creating medical billing codes and reimbursement processes; and

Whereas, The state of Arizona, in consultation with Tribes, is seeking Section 1115 demonstration authority to cover traditional healing services furnished by the IHS to AI/AN Medicaid enrollees[17-18]; and

Whereas, The proposed Arizona Section 1115 Medicaid waiver for traditional healing services would (1) allow IHS, Tribal, and Urban Indian Health Programs and AI/AN Tribes and Villages designate and contract with traditional healing providers; (2) coordinate medical care and traditional healing delivery to prevent medical contraindications; and (3) require patient evaluation of traditional healing services[18]; and

Whereas, While the IHS and Congress have long noted their acceptance and respect for AI/AN traditional healing services, the Indian Health Care Improvement Act does not explicitly define or authorize traditional healing services to be paid for by the IHS[17-19]; therefore be it

RESOLVED, That our American Medical Association study the impact of Medicaid waivers for managed care demonstration projects regarding implementation and reimbursement for traditional American Indian and Alaska Native healing practices provided in concert with physician-led healthcare teams. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Indian Health Service H-350.977
The policy of the AMA is to support efforts in Congress to enable the Indian Health Service to meet its obligation to bring American Indian health up to the general population level. The AMA specifically recommends: (1) Indian Population: (a) In current education programs, and in the expansion of educational activities suggested below, special consideration be given to involving the American Indian and Alaska native population in training for the various health professions, in the expectation that such professionals, if provided with adequate professional resources, facilities, and income, will be more likely to serve the tribal areas permanently; (b) Exploration with American Indian leaders of the possibility of increased numbers of nonfederal American Indian health centers, under tribal sponsorship, to expand the American Indian role in its own health care; (c) Increased involvement of private practitioners and facilities in American Indian care, through such mechanisms as agreements with tribal leaders or Indian Health Service contracts, as well as normal private practice relationships; and (d) Improvement in transportation to make access to existing private care easier for the American Indian population.
(2) Federal Facilities: Based on the distribution of the eligible population, transportation facilities and roads, and the availability of alternative nonfederal resources, the AMA recommends that those Indian Health Service facilities currently necessary for American Indian care be identified and that an immediate construction and modernization program be initiated to bring these facilities up to current standards of practice and accreditation.
(3)Manpower: (a) Compensation for Indian Health Service physicians be increased to a level competitive with other Federal agencies and nongovernmental service; (b) Consideration should be given to increased compensation for service in remote areas; (c) In conjunction with improvement of Service facilities, efforts should be made to establish closer ties with teaching centers, thus increasing both the available manpower and the level of professional expertise available for consultation; (d) Allied health professional staffing of Service facilities should be maintained at a level appropriate to the special needs of the population served; (e) Continuing education opportunities should be provided for those health professionals serving these communities, and especially those in remote areas, and, increased peer contact, both to maintain the quality of care and to avert professional isolation; and (f) Consideration should be given to a federal statement of policy supporting continuation of the Public Health Service to reduce the great uncertainty now felt by many career officers of the corps.
(4)Medical Societies: In those states where Indian Health Service facilities are located, and in counties containing or adjacent to Service facilities, that the appropriate medical societies should explore the possibility of increased formal liaison with local Indian Health Service physicians. Increased support from organized medicine for improvement of health care provided under their direction, including professional consultation and involvement in society activities should be pursued.
(5) Our AMA also support the removal of any requirement for competitive bidding in the Indian Health Service that compromises proper care for the American Indian population.
Citation: (CLRPD Rep. 3, I-98; Reaffirmed: CLRPD Rep. 1, A-08; Reaffirmation A-12; Reaffirmed: Res. 233, A-13)

Improving Health Care of American Indians H-350.976
Our AMA recommends that: (1) All individuals, special interest groups, and levels of government recognize the American Indian people as full citizens of the U.S., entitled to the same equal rights and privileges as other U.S. citizens.
(2) The federal government provide sufficient funds to support needed health services for American Indians.
(3) State and local governments give special attention to the health and health-related needs of nonreservation American Indians in an effort to improve their quality of life.
(4) American Indian religions and cultural beliefs be recognized and respected by those responsible for planning and providing services in Indian health programs.
(5) Our AMA recognize the "medicine man" as an integral and culturally necessary individual in delivering health care to American Indians.
(6) Strong emphasis be given to mental health programs for American Indians in an effort to reduce the high incidence of alcoholism, homicide, suicide, and accidents.
(7) A team approach drawing from traditional health providers supplemented by psychiatric social workers, health aides, visiting nurses, and health educators be utilized in solving these problems.
(8) Our AMA continue its liaison with the Indian Health Service and the National Indian Health Board and

establish a liaison with the Association of American Indian Physicians.
(9) State and county medical associations establish liaisons with intertribal health councils in those states where American Indians reside.
(10) Our AMA supports and encourages further development and use of innovative delivery systems and staffing configurations to meet American Indian health needs but opposes overemphasis on research for the sake of research, particularly if needed federal funds are diverted from direct services for American Indians.
(11) Our AMA strongly supports those bills before Congressional committees that aim to improve the health of and health-related services provided to American Indians and further recommends that members of appropriate AMA councils and committees provide testimony in favor of effective legislation and proposed regulations.
Citation: (CLRPD Rep. 3, I-98; Reaffirmed: Res. 221, A-07; Reaffirmation A-12; Reaffirmed: Res. 233, A-13)

Unconventional Medical Care in the United States H-480.973
Our AMA: (1) encourages the National Center for Complementary and Integrative Health (NCCIH) of the National Institutes of Health (NIH) to determine by objective scientific evaluation the efficacy and safety of practices and procedures of unconventional medicine; and encourages its members to become better informed regarding the practices and techniques of such practices; and (2) utilizes the classification system of alternative medicine set forth by the NCCIH at the NIH, “Major Domains of Complementary and Alternative Medicine,” in order to promote future discussion and research about the efficacy, safety, and use of alternative medicine.
Citation: BOT Rep. 15, A-94; Reaffirmed and Modified by Sub. Res. 514, I-95; Appended: Res. 505, A-00; Modified: CSAPH Rep. 1, A-10; Modified: CSAPH Rep. 01, A-20;

Physician-Focused Alternative Payment Models: Reducing Barriers H-385.908
1. Our AMA encourages physicians to engage in the development of Physician-Focused Payment Models by seeking guidance and refinement assistance from the Physician-Focused Payment Model Technical Advisory Committee (PTAC).
2. Our AMA will continue to urge CMS to limit financial risk requirements to costs that physicians participating in an APM have the ability to influence or control.
3. Our AMA will continue to advocate for innovative ways of defining financial risk, such as including start-up investments and ongoing costs of participation in the risk calculation that would alleviate the financial barrier to physician participation in APMs.
4. Our AMA will work with CMS, the Office of the National Coordinator for Health Information Technology (ONC), PTAC, interested medical societies, and other organizations to pursue the following to improve the availability and use of health information technology (IT):
a. Continue to expand technical assistance;
b. Develop IT systems that support and streamline clinical participation;
c. Enable health IT to support bi-directional data exchange to provide physicians with useful reports and analyses based on the data provided;
d. Identify methods to reduce the data collection burden; and
e. Begin implementing the 21st Century Cures Act.
5. Our AMA will work with CMS, PTAC, interested medical societies, and other organizations to design risk adjustment systems that:
a. Identify new data sources to enable adequate analyses of clinical and non-clinical factors that contribute to a patients health and success of treatment, such as disease stage and socio-demographic factors;
b. Account for differences in patient needs, such as functional limitations, changes in medical conditions compared to historical data, and ability to access health care services; and
c. Explore an approach in which the physician managing a patients care can contribute additional information, such as disease severity, that may not be available in existing risk adjustment methods to more accurately determine the appropriate risk stratification.
6. Our AMA will work with CMS, PTAC, interested medical societies, and other organizations to improve attribution methods through the following actions:
a. Develop methods to assign the costs of care among physicians in proportion to the amount of care they provided and/or controlled within the episode;
b. Distinguish between services ordered by a physician and those delivered by a physician;

c. Develop methods to ensure a physician is not attributed costs they cannot control or costs for patients no longer in their care;
d. Explore implementing a voluntary approach wherein the physician and patient agree that the physician will be responsible for managing the care of a particular condition, potentially even having a contract that articulates the patients and physicians responsibility for managing the condition; and
e. Provide physicians with lists of attributed patients to improve care coordination.
7. Our AMA will work with CMS, PTAC, interested medical societies, and other organizations to improve performance target setting through the following actions:
a. Analyze and disseminate data on how much is currently being spent on a given condition, how much of that spending is potentially avoidable through an APM, and the potential impact of an APM on costs and spending;
b. Account for costs that are not currently billable but that cost the practice to provide; and
c. Account for lost revenue for providing fewer or less expensive services.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 107
(A-23)

Introduced by: Medical Student Section

Subject: Reducing the Cost of Centers for Medicare and Medicaid Services Limited Data Sets for Academic Use

Referred to: Reference Committee A

Whereas, Free and affordable sharing of research data among scientists has been shown to confer numerous benefits in the advancement of scientific progress[1-3]; and

Whereas, Limited data sets are defined as those registries and databases that adhere to the Privacy Rule of the Health Insurance Portability and Accountability Act of 1996 (HIPAA) and are stripped of all direct patient identifiers and protected health information (PHI)[4,5]; and

Whereas, The Centers for Medicare and Medicaid Services (CMS) currently maintains de-identified limited data sets that contain outcome, demographic, comorbidity, and cost data for millions of patients across the United States, which have been instrumental in conducting high-quality, population-wide research[6-8]; and

Whereas, Many of these data files, which are already subsidized by taxpayer dollars, can cost tens of thousands of dollars per year of data to acquire, an expense that poses a significant financial barrier to academic and non-profit organizations[6,9]; and

Whereas, There is currently no written justification for these prices on the CMS website[6,10,11]; and

Whereas, Increasing academic and non-profit access to larger datasets for scholarly purposes would greatly increase the sample size, relevance, and power of future studies; and

Whereas, Lowering the cost of this data for academic and non-profit users, and offsetting the resulting loss in revenue with increased prices for for-profit and corporate entities, would aid in increasing access to this data for research purposes[9]; and

Whereas, A tiered pricing scheme (i.e. higher prices for commercial users and lower prices for non-commercial users) has already been implemented in other countries such as the United Kingdom[12,13]; therefore be it

RESOLVED, That our American Medical Association encourage the Centers for Medicare and Medicaid Services to adjust the pricing of limited data sets in order to increase access for academic use. (New HOD Policy)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Medicare Claims Data Release D-406.993
Our AMA will: (1) continue to work with the Centers for Medicare & Medicaid Services to identify appropriate modifications to improve the usefulness and accuracy of any existing or future provider-specific data released by that agency; (2) engage with data experts and other stakeholders to develop guiding principles on the data and transparency efforts that should be pursued in order to assist physicians to improve the quality of care and reduce costs; (3) petition the Centers for Medicare & Medicaid Services and the Office of Health & Human Services to remove practice expense and malpractice expense from reimbursements reported to the public; and (4) in an effort to advance the feasibility of population health research to fulfill the promise of value based care, will request that CMS eliminate the prohibitions on sharing data outside of any CMS model including Accountable Care Organizations that are contained in the CMS Data Use Agreement and allow sharing of that data: (a) in the form of de-identified data sets as permitted by federal, state, and local privacy laws; and (b) for purposes of research as permitted by federal, state, and local privacy laws.

Work of the Task Force on the Release of Physician Data H-406.990
Release of Claims and Payment Data from Governmental Programs

The AMA encourages the use of physician data to benefit both patients and physicians and to improve the quality of patient care and the efficient use of resources in the delivery of health care services. The AMA supports this use of physician data only when it preserves access to health care and is used to provide accurate physician performance assessments.

Raw claims data used in isolation have significant limitations. The release of such data from government programs must be subject to safeguards to ensure that neither false nor misleading conclusions are derived that could undermine the delivery of appropriate and quality care. If not addressed, the limitations of such data are significant. The foregoing limitations may include, but are not limited to, failure to consider factors that impact care such as specialty, geographic location, patient mix and demographics, plan design, patient compliance, drug and supply costs, hospital and service costs, professional liability coverage, support staff and other practice costs as well as the potential for mistakes and errors in the data or its attribution.

Raw claims and payment data resulting from government health care programs, including, but not limited to, the Medicare and Medicaid programs should only be released:

1. when appropriate patient privacy is preserved via de-identified data aggregation or if written authorization for release of individually identifiable patient data has been obtained from such patient in accordance with the requirements of the Health Insurance Portability and Accountability Act (HIPAA) and applicable regulations;
2. upon request of physicians [or their practice entities] to the extent the data involve services that they have provided;
3. to law enforcement and other regulatory agencies when there is reasonable and credible reason to believe that a specific physician [or practice entity] may have violated a law or regulation, and the data is relevant to the agency's investigation or prosecution of a possible violation;
4. to researchers/policy analysts for bona fide research/policy analysis purposes, provided the data do not identify specific physicians [or their practice entities] unless the researcher or policy analyst has (a) made a specific showing as to why the disclosure of specific identities is essential; and, (b) executed a written agreement to maintain the confidentiality of any data identifying specific physicians [or their practice entities];
5. to other entities only if the data do not identify specific physicians [or their practice entities]; or
6. if a law is enacted that permits the government to release raw physician-specific Medicare and/or Medicaid claims data, or allows the use of such data to construct profiles of identified physicians or physician practices. Such disclosures must meet the following criteria:
(a) the publication or release of this information is deemed imperative to safeguard the public welfare;
(b) the raw data regarding physician claims from governmental healthcare programs is:
(i) published in conjunction with appropriate disclosures and/or explanatory statements as to the limitations of the data that raise the potential for specific misinterpretation of such data. These statements should include disclosure or explanation of factors that influence the provision of care including geographic location, specialty, patient mix and demographics, health plan design, patient compliance, drug and supply costs, hospital and service costs, professional liability coverage, support staff and other practice costs as well as the potential for mistakes and errors in the data or its attribution, in addition to other relevant factors.
(ii) safeguarded to protect against the dissemination of inconsistent, incomplete, invalid or inaccurate physician-specific medical practice data.
(c) any physician profiling which draws upon this raw data acknowledges that the data set is not representative of the physicians' entire patient population and uses a methodology that ensures the following:
(i) the data are used to profile physicians based on quality of care provided - never on utilization of resources alone - and the degree to which profiling is based on utilization of resources is clearly identified.
(ii) data are measured against evidence-based quality of care measures, created by physicians across appropriate specialties.
(iii) the data and methodologies used in profiling physicians, including the use of representative and statistically valid sample sizes, statistically valid risk-adjustment methodologies and statistically valid attribution rules produce verifiably accurate results that reflect the quality and cost of care provided by the physicians.
(d) any governmental healthcare data shall be protected and shared with physicians before it is released or used, to ensure that physicians are provided with an adequate and timely opportunity to review, respond and appeal the accuracy of the raw data (and its attribution to individual physicians) and any physician profiling results derived from the analysis of physician-specific medical practice data to ensure accuracy prior to their use, publication or release.

Medical Information and Its Uses H-406.987
DATA TRANSPARENCY PRINCIPLES TO PROMOTE IMPROVEMENTS IN QUALITY AND CARE DELIVERY
Our AMA seeks to help physicians improve the quality reporting of patient care data and adapt to new payment and delivery models to transform our health care system. One means of accomplishing this goal is to increase the transparency of health care data. The principles outlined below ensure that physicians, practices, care systems, physician-led organizations, patients and other relevant stakeholders can access and proactively use meaningful, actionable health care information to achieve care improvements and innovations. These principles do not replace but build upon existing AMA policies H-406.990, H-406.989, H-406.991, and H-406.996 that address safeguards for the release of physician data and physician

profiles, expanding these guidelines to reflect the new opportunities and potential uses of this information.

Transparency Objectives and Goals

Engaging Physicians - Our AMA encourages greater physician engagement in transparency efforts, including the development of physician-led quality measures to ensure that gaps in measures are minimized and that analyses reflect the knowledge and expertise of physicians.

Promoting New Payment and Delivery Models - Our AMA supports appropriate funding and other support to ensure that the data that are used to inform new payment and delivery models are readily available and do not impose a new cost or additional burden on model participants.

Improving Care Choices and Decisions - Our AMA promotes efforts to present data appropriately depending on the objective and the relevant end-user, including transparently identifying what information is being provided, for what purpose, and how the information can or cannot be used to influence care choices.

Informing Physicians - Our AMA encourages the development of user interfaces that allow physicians or their staff to structure simple queries to obtain and track actionable reports related to specific patients, peer comparisons, provider-level resource use, practice patterns, and other relevant information.

Informing Patients - Our AMA encourages patients to consult with physicians to understand and navigate health care transparency and data efforts.

Informing Other Consumers - Our AMA seeks opportunities to engage with other stakeholders to facilitate physician involvement and more proactive use of health care data.

Data Transparency Resources

Data Availability - Our AMA supports removing barriers to accessing additional information from other payers and care settings, focusing on data that is valid, reliable, and complete.

Access to Timely Data - While some datasets will require more frequent updates than others, our AMA encourages use of the most current information and that governmental reports are made available, at a minimum, from the previous quarter.

Accurate Data - Our AMA supports proper oversight of entities accessing and using health care data, and more stringent safeguards for public reporting, so that information is accurate, transparent, and appropriately used.

Use of Quality Data - Our AMA supports definitions of quality based on evidence-based guidelines, measures developed and supported by specialty societies, and physician-developed metrics that focus on patient outcomes and engagement.

Increasing Data Utility - Our AMA promotes efforts by clinical data registries, regional collaborations, Qualified Entities, and specialty societies to develop reliable and valid performance measures, increase data utility and reduce barriers that currently limit access to and use of the health care data.

Challenges to Transparency

Standardization - Our AMA supports improvements in electronic health records (EHRs) and other technology to capture and access data in uniform formats.

Mitigating Administrative Burden - To reduce burdens, data reporting requirements imposed on physicians should be limited to the information proven to improve clinical practice. Collection, reporting, and review of all other data and information should be voluntary.

Data Attribution - Our AMA seeks to ensure that those compiling and using the data avoid attribution

errors by working to correctly assign services and patients to the appropriate provider(s) as well as allowing entities to verify who or where procedures, services, and items were performed, ordered, or otherwise provided. Until problems with the current state of episode of care and attribution methodologies are resolved, our AMA encourages public data and analyses primarily focused at the system-level instead of on individual physicians or providers.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 108
(A-23)

Introduced by: District of Columbia

Subject: Sustainable Reimbursement for Community Practices

Referred to: Reference Committee A

Whereas, Community-based private practices accept insurance reimbursement to provide access to affordable service for people in need; and

Whereas, Small private practices provide neighborhood-based care, often in communities facing health disparities, that may not be readily available elsewhere; and

Whereas, Medicare rates are collaboratively (by AMA, government agencies, and industry) based on the resource-based relative value scale, created by Harvard University in 1985 and published in the *Journal of the American Medical Association* in 1988[1], which incorporates physician work, practice expense, professional liability costs, and geographic variations, with extensive input from physicians and specialty societies; and

Whereas, Reimbursement from private insurers to small practices is often well below Medicare rates and below the level required to cover fixed costs and accompanied by a dramatic increase in required reporting by physician offices; and

Whereas, There are currently no lower limits regarding the reimbursement rates insurers pay to medical practices and no legal requirements that insurers negotiate with practices, provide fair reimbursement, or consider the needs of patients served by community practices; and

Whereas, Payers may refuse to negotiate appropriate reimbursement rates with small private practices; and

Whereas, Private practices are rapidly disappearing, either going out of business or being absorbed by large institutional practices that are able to negotiate with payers (as of January 2021, nearly 70 percent of U.S. physicians reportedly worked for hospitals or corporate entities[2]); and

Whereas, AMA policy supports a pluralistic approach to health care utilization to include small, solo, and medium-sized practices. Despite the well documented outcome-based evidence of the benefit of these treatment options, third-party insurers are forcing market consolidation with unsustainable reimbursement models that are below Medicare reimbursement rates; and

Whereas, Private practices are prohibited from collaborating with each other to request fair reimbursement due to prior anti-trust legal interpretations; and

Whereas, The future of health care is trending towards the concepts of population health management, outcome evidence-based care, and value-based purchasing of health care. These models favor large groups and hospitals, once again excluding private practice physicians in small and medium-sized groups. The AMA should take steps now to establish

both access to patients and appropriate floors for reimbursement which will address these health care models and their potentially deleterious effects on private practice physicians in small and medium-sized groups going forward; and

Whereas, In the same way as the U.S. Government has protected individuals through the Fair Labor Standards Act of 1938 (29 U.S.C. § 203), which set a minimum wage, and states and municipalities have enacted similar measures, governments have the authority to establish minimum levels of reimbursement for medical practices; therefore be it

RESOLVED, That our American Medical Association study small medical practices to assess the prevalence of insurance payments to these practices that are below Medicare rates and to assess the effects of these payment levels on practices' ability to provide care, and report back by the 2024 Annual Meeting (Directive to Take Action); and be it further

RESOLVED, That our AMA study and report back on remedies for such reimbursement rates for physician practices (Directive to Take Action); and be it further

RESOLVED, That our AMA study the impact on small and medium-sized physician practices of being excluded from population health management, outcome evidence-based care, and value-based purchasing arrangements (Directive to Take Action); and be it further

RESOLVED, That our AMA study and report back to the HOD options for model legislation for states and municipalities seeking to correct reimbursement rates for medical practices that are below those required to meet fixed costs. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Insurance Industry Behaviors D-385.949
Our AMA will: (1) step up its ongoing review of the proper use of the AMA CPT Codes in medical billing claims payments and its misuse by the US Health Insurance Industry; (2) undertake as soon as practical a formal, legal review of ongoing grievous behaviors of the health insurance industry, including a search for potential litigation partners across the medical federation; and (3) communicate with AMA members outcomes in litigating egregious behaviors of the health insurance industry.

Health System Reform Legislation H-165.838
1. Our American Medical Association is committed to working with Congress, the Administration, and other stakeholders to achieve enactment of health system reforms that include the following seven critical components of AMA policy:
a. Health insurance coverage for all Americans
b. Insurance market reforms that expand choice of affordable coverage and eliminate denials for pre-existing conditions or due to arbitrary caps

c. Assurance that health care decisions will remain in the hands of patients and their physicians, not insurance companies or government officials
d. Investments and incentives for quality improvement and prevention and wellness initiatives
e. Repeal of the Medicare physician payment formula that triggers steep cuts and threaten seniors' access to care
f. Implementation of medical liability reforms to reduce the cost of defensive medicine
g. Streamline and standardize insurance claims processing requirements to eliminate unnecessary costs and administrative burdens
2. Our American Medical Association advocates that elimination of denials due to pre-existing conditions is understood to include rescission of insurance coverage for reasons not related to fraudulent representation.
3. Our American Medical Association House of Delegates supports AMA leadership in their unwavering and bold efforts to promote AMA policies for health system reform in the United States.
4. Our American Medical Association supports health system reform alternatives that are consistent with AMA policies concerning pluralism, freedom of choice, freedom of practice, and universal access for patients.
5. AMA policy is that insurance coverage options offered in a health insurance exchange be self-supporting, have uniform solvency requirements; not receive special advantages from government subsidies; include payment rates established through meaningful negotiations and contracts; not require provider participation; and not restrict enrollees' access to out-of-network physicians.
6. Our AMA will actively and publicly support the inclusion in health system reform legislation the right of patients and physicians to privately contract, without penalty to patient or physician.
7. Our AMA will actively and publicly oppose the Independent Medicare Commission (or other similar construct), which would take Medicare payment policy out of the hands of Congress and place it under the control of a group of unelected individuals.
8. Our AMA will actively and publicly oppose, in accordance with AMA policy, inclusion of the following provisions in health system reform legislation:
a. Reduced payments to physicians for failing to report quality data when there is evidence that widespread operational problems still have not been corrected by the Centers for Medicare and Medicaid Services
b. Medicare payment rate cuts mandated by a commission that would create a double-jeopardy situation for physicians who are already subject to an expenditure target and potential payment reductions under the Medicare physician payment system
c. Medicare payments cuts for higher utilization with no operational mechanism to assure that the Centers for Medicare and Medicaid Services can report accurate information that is properly attributed and risk-adjusted
d. Redistributed Medicare payments among providers based on outcomes, quality, and risk-adjustment measurements that are not scientifically valid, verifiable and accurate
e. Medicare payment cuts for all physician services to partially offset bonuses from one specialty to another
f. Arbitrary restrictions on physicians who refer Medicare patients to high quality facilities in which they have an ownership interest
9. Our AMA will continue to actively engage grassroots physicians and physicians in training in collaboration with the state medical and national specialty societies to contact their Members of Congress, and that the grassroots message communicate our AMA's position based on AMA policy.
10. Our AMA will use the most effective media event or campaign to outline what physicians and patients need from health system reform.
11. AMA policy is that national health system reform must include replacing the sustainable growth rate (SGR) with a Medicare physician payment system that automatically keeps pace with the cost of running a practice and is backed by a fair, stable funding formula, and that the AMA initiate a "call to action" with the Federation to advance this goal.
12. AMA policy is that creation of a new single payer, government-run health care system is not in the best interest of the country and must not be part of national health system reform.
13. AMA policy is that effective medical liability reform that will significantly lower health care costs by reducing defensive medicine and eliminating unnecessary litigation from the system should be part of any national health system reform.

Consultation Codes and Private Payers D-385.955
1. Our AMA will proactively engage and advocate with any commercial insurance company that discontinues payment for consultation codes or that is proposing to or considering eliminating payment for such codes, requesting that the company reconsider the policy change.
2. Where a reason given by an insurance company for policy change to discontinue payment of consultation codes includes purported coding errors or abuses, our AMA will request the company carry out coding education and outreach to physicians on consultation codes rather than discontinue payment for the codes, and call for release of de-identified data from the company related to purported coding issues in order to help facilitate potential education by physician societies.

Uncoupling Commercial Fee Schedules from Medicare Conversion Factors D-400.990
Our AMA: (1) shall use every means available to convince health insurance companies and managed care organizations to immediately uncouple fee schedules from Medicare conversion factors and to maintain a fair and appropriate level of reimbursement; and (2) will seek legislation and/or regulation to prevent managed care companies from utilizing a physician payment schedule below the updated Medicare professional fee schedule.

National Mandatory Fee Schedule H-385.986
The AMA opposes any type of national mandatory fee schedule.
Citation: (Res. 27, A-85; Reaffirmed: BOT Rep. UU, A-93; Reaffirmed CLRPD Rep. 2, I-95; Reaffirmed: CMS Rep. 7, A-05; Reaffirmed in lieu of Res. 127, A-10; Reaffirmation A-15)

Definition of "Usual, Customary and Reasonable" (UCR) H-385.923
1. Our AMA adopts as policy the following definitions:
(a) "usual; fee means that fee usually charged, for a given service, by an individual physician to his private patient (i.e., his own usual fee);
(b) a fee is 'customary' when it is within the range of usual fees currently charged by physicians of similar training and experience, for the same service within the same specific and limited geographical area; and
(c) a fee is 'reasonable' when it meets the above two criteria and is justifiable, considering the special circumstances of the particular case in question, without regard to payments that have been discounted under governmental or private plans.
2. Our AMA takes the position that there is no relationship between the Medicare fee schedule and Usual, Customary and Reasonable Fees.
Citation: (Res. 109. A-07; Appended: Res. 107, A-13)

Physician Choice of Practice H-385.926
Our AMA: (1) encourages the growth and development of the physician/patient contract; (2) supports the freedom of physicians to choose their method of earning a living (fee-for-service, salary, capitation, etc.); (3) supports the right of physicians to charge their patients their usual fee that is fair, irrespective of insurance/coverage arrangements between the patient and the insurers. (This right may be limited by contractual agreement.) An accompanying responsibility of the physician is to provide to the patient adequate fee information prior to the provision of the service. In circumstances where it is not feasible to provide fee information ahead of time, fairness in application of market-based principles demands such fees be subject, upon complaint, to expedited professional review as to appropriateness; and (4) encourages physicians when setting their fees to take into consideration the out-of-pocket expenses paid by patients under a system of individually selected and owned health insurance.

Payment for Physicians Services H-385.989
Our AMA: (1) supports a pluralistic approach to third party payment methodology under fee-for-service, and does not support a preference for "usual and customary or reasonable" (UCR) or any other specific payment methodology; (2) affirms the following four principles: (a) Physicians have the right to establish their fees at a level which they believe fairly reflects the costs of providing a service and the value of their professional judgment. (b) Physicians should continue to volunteer fee information to patients, to discuss fees in advance of service where feasible, to expand the practice of accepting any third party allowances as payment in full in cases of financial hardship, and to communicate voluntarily to their patients their willingness to make appropriate arrangements in cases of financial need. (c) Physicians should have the right to choose the basic mechanism of payment for their services, and specifically to choose whether or not to participate in a particular insurance plan or method of payment, and to accept or decline a third party allowance as payment in full for a service. (d) All methods of physician payment should incorporate mechanisms to foster increased cost-awareness by both providers and recipients of service; and (3) supports modification of current legal restrictions, so as to allow meaningful involvement by physician groups in: (a) negotiations on behalf of those physicians who do not choose to accept third party allowances as full payment, so that the amount of such allowances can be more equitably determined; (b) establishing additional limits on the amount or the rate of increase in charge-related payment levels when appropriate; and (c) professional fee review for the protection of the public.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 109
(A-23)

Introduced by: American Academy of Pediatrics

Subject: Improved Access to Care For Patients in Custody of Protective Services

Referred to: Reference Committee A

Whereas, In 2020 over 600,000 children were confirmed victims of child abuse of varying types including physical, sexual, neglect, and medical neglect; and

Whereas, In 2020 over 600,000 children were placed into the child protective system; and

Whereas, There were over 1.3 million reports of adult abuse and neglect in 2020; and

Whereas, In most instances children placed into the custody of child protective services are also entered into the Medicaid program for health insurance coverage; and

Whereas, In the majority of states Medicaid payment to physicians is less than that of Medicare payment to physicians; and

Whereas, Children and adults placed into protective services often have complex medical and mental health conditions in addition to the risk of removal from their homes; and

Whereas, Many state protective services require physician visits within a limited number of days of placement to ensure the safety of the protectee; and

Whereas, The American Academy of Pediatrics recent report on children removed from family care delineates the best care for children within the protective services system as including three medical visits within the first three months of placement as a best practice for these complicated patients; and

Whereas, Low Medicaid payment rates are a significant barrier to healthcare often preventing these severely at risk children and adults from receiving timely appropriate care within a medical home; and

Whereas, The amount of work physicians perform when caring for patients under the custody of protective services far outweighs work performed on patients not within this system; and

Whereas, Increased private insurance and Medicaid payment rates for patients placed within the protective services system, such as enhanced Federal Medical Assistance Percentage (FMAP), modifiers to signify additional work required and other mechanisms, would improve access to timely appropriate care for these at-risk patients; therefore be it

RESOLVED, That our American Medical Association study and report back mechanisms to improve payment for physician services provided to patients under protective services custody. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/2/23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 110
(A-23)

Introduced by: Mississippi

Subject: Long-Term Care Coverage for Dementia Patients

Referred to: Reference Committee A

Whereas, More than 6 million patients are living with Alzheimer's disease and by 2050 the number will rise to nearly 13 million; and

Whereas, 1 in 3 seniors die with Alzheimer's or other dementias; and

Whereas, In 2023 Alzheimer's disease and other dementias will cost the US $345 billion and by 2050 nearly $1 trillion; and

Whereas, Over 11 million Americans provide unpaid care for patients with Alzheimer's disease and other dementias; and

Whereas, In 2022 unpaid caregivers provided approximately 18 billion hours of care valued at almost $340 billion; and

Whereas, 6.7 million Americans age 65 or older are living with Alzheimer's disease. 73% of them are 75 or older; and

Whereas, 1 in 9 of the population (10.7%) age 65 and older have Alzheimer's disease; and

Whereas, Almost 2/3 of Americans with Alzheimer's disease are women; and

Whereas, Between 2020 to 2030 an additional 1.2 million direct care workers will be needed to care for the growing dementia population which is the largest worker gap in the United States; and

Whereas, Long-term care is a range of services and support for personal care needs; and

Whereas, Medicare and most health insurance plans including Medicare supplement insurance (Medigap) do not pay for long-term care; and

Whereas, Private insurance plans covering long-term care are scarce and very expensive; and

Whereas, Long-term Medicaid is the only plan The Centers for Medicare and Medicaid Services provide for long-term care; and

Whereas, To qualify for long-term Medicaid patients have to satisfy draconian financial guidelines; therefore be it

RESOLVED, That our American Medical Association work with Centers for Medicare & Medicaid Services and other relevant stakeholders to formulate appropriate medical insurance plans to cover this ever-growing disenfranchised population. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Subject: Potential Negative Consequences of Accountable Care Organizations (ACOs)

Referred to: Reference Committee A

Whereas, Centers for Medicare and Medicaid Services (CMS) has stated that one of its goals is that all patients covered by traditional Medicare are to be in Accountable Care Organizations (ACOs) by 2030[1]; and

Whereas, ACOs may cause financial risk for the physicians directly and/or indirectly; and

Whereas, The structure of ACOs demands that financial penalties to physicians be incurred if the costs attributable to patient care exceed federally determined benchmarks. Without more granular risk adjustment methodologies, there remains a risk of disincentivizing physicians from taking care of patients with more complicated medical care needs; and

Whereas, ACO participation is logistically difficult or impossible for independent small or solo practices; and

Whereas, ACOs create another expensive layer of bureaucratic burden contributing to burnout and possibly impacting the patient-physician relationship; therefore be it

RESOLVED, That our American Medical Association advocate for the provision of health care and reimbursement models that are in the best interest of patients and offer risk adjustment methodologies to prevent financial penalty to the physician and other healthcare team members who provide care for the sickest patients (Directive to Take Action); and be it further

RESOLVED, That our AMA oppose capitation care healthcare systems, such as ACOs, when such systems place physicians and other healthcare team members at financial risk for the overall healthcare costs of their patients, including costs attributable to care provided by other entities (New HOD Policy); and be it further

RESOLVED, That our AMA advocate for flexible pathways for small practice participation in ACOs that greatly mitigate ACO participation-related bureaucratic burdens and help protect small practices from large financial penalties otherwise assigned to large health systems for cost overages (Directive to Take Action); and be it further

RESOLVED, That our AMA oppose CMS mandates that require Medicare beneficiaries to enroll in ACOs (New HOD Policy); and be it further

RESOLVED, That our AMA oppose the expansion of capitation care systems, such as ACOs, as a means of providing coverage and services for all Medicare enrollees. (New HOD Policy)

Fiscal Note: Modest - between $1,000 - $5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 112
(A-23)

Introduced by: American College of Chest Physicians

Subject: Removal of Barriers to Care for Lung Cancer Screening in Medicaid Programs

Referred to: Reference Committee A

Whereas, Lung cancer is the leading cause of cancer deaths in the United States, accounting for approximately 22% of all cancer deaths[1]; and

Whereas, Detecting lung cancer in its early stages is crucial for effective treatment, but only 22% of lung cancer cases are diagnosed early; and

Whereas, Low-dose computed tomography (LDCT) screening has been shown to reduce lung cancer mortality by up to 20% among high-risk populations[2]; and

Whereas, The U.S. Preventive Services Task Force has recommended LDCT screening for high-risk populations; and

Whereas, Studies have shown that uptake of screening is highly dependent on coverage eligibility and no-cost access to preventative measures, screening-eligible Black adults are nearly twice as likely to rely on Medicaid, which may not cover LDCT screening, exacerbating long-standing inequities in lung cancer outcomes[3]; and

Whereas, The American Medical Association has policy recommending coverage of LDCT scans for patients at high risk for lung cancer by Medicare, Medicaid, and private insurance be a required covered benefit (AMA policy H-185.936); and

Whereas, The AMA also encourages state medical associations to provide ongoing feedback regarding barriers to access to their state's Medicaid access monitoring review plan (AMA policy H-290.965); and

Whereas, Many states, including those with Medicaid expansion and traditional Medicaid programs, have created barriers to lung cancer screening such as pre-authorization and co-pays; therefore be it

RESOLVED, That our American Medical Association urge the Centers for Medicare & Medicaid Services (CMS) to encourage and insist that all states, both Medicaid expansion and traditional Medicaid, remove barriers to care for lung cancer screening, including but not limited to pre-authorization and co-pay requirements (Directive to Take Action); and be it further

RESOLVED, That our AMA, and their state medical associations, work with the Centers for Medicare & Medicaid Services (CMS) and State Medicaid Managed Care Organizations to develop and implement strategies to improve access to LDCT screening for high-risk populations in Medicaid programs (Directive to Take Action); and be it further

RESOLVED, That our AMA advocate for increased funding for research and education to further increase awareness and uptake of LDCT screening for lung cancer among high-risk populations (Directive to Take Action); and be it further

RESOLVED, That our AMA urge state medical associations to work with their respective Medicaid programs to ensure that these programs comply with the AMA's policy on LDCT screening for high-risk populations. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Lung Cancer Screening to be Considered Standard Care H-185.936
Our AMA: (1) recommends that coverage of screening low-dose CT (LDCT) scans for patients at high risk for lung cancer by Medicare, Medicaid, and private insurance be a required covered benefit; and (2) will empower the American public with knowledge through an education campaign to raise awareness of lung cancer screening with low-dose CT scans in high-risk patients to improve screening rates and decrease the leading cause of cancer death in the United States.

Affordable Care Act Medicaid Expansion H-290.965
1. Our AMA encourages state medical associations to participate in the development of their state's Medicaid access monitoring review plan and provide ongoing feedback regarding barriers to access.
2. Our AMA will continue to advocate that Medicaid access monitoring review plans be required for services provided by managed care organizations and state waiver programs, as well as by state Medicaid fee-for-service models.
3. Our AMA supports efforts to monitor the progress of the Centers for Medicare and Medicaid Services (CMS) on implementing the 2014 Office of Inspector General's recommendations to improve access to care for Medicaid beneficiaries.
4. Our AMA will advocate that CMS ensure that mechanisms are in place to provide robust access to specialty care for all Medicaid beneficiaries, including children and adolescents.
5. Our AMA supports independent researchers performing longitudinal and risk-adjusted research to assess the impact of Medicaid expansion programs on quality of care.
6. Our AMA supports adequate physician payment as an explicit objective of state Medicaid expansion programs.
7. Our AMA supports increasing physician payment rates in any redistribution of funds in Medicaid expansion states experiencing budget savings to encourage physician participation and increase patient access to care.
8. Our AMA will continue to advocate that CMS provide strict oversight to ensure that states are setting and maintaining their Medicaid rate structures at levels to ensure there is sufficient physician participation so that Medicaid patients can have equal access to necessary services.
9. Our AMA will continue to advocate that CMS develop a mechanism for physicians to challenge payment rates directly to CMS.
10. Our AMA supports extending to states the three years of 100 percent federal funding for Medicaid expansions that are implemented beyond 2016.
11. Our AMA supports maintenance of federal funding for Medicaid expansion populations at 90 percent beyond 2020 as long as the Affordable Care Act's Medicaid expansion exists.

12. Our AMA supports improved communication among states to share successes and challenges of their respective Medicaid expansion approaches.
13. Our AMA supports the use of emergency department (ED) best practices that are evidenced-based to reduce avoidable ED visits.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 113
(A-23)

Introduced by: Georgia

Subject: Cost of Insulin

Referred to: Reference Committee A

Whereas, There are approximately 30.3 million people in the United States with diabetes and about 1.5 million of those require insulin to survive; and

Whereas, Between 2012 and 2016 the price of insulin almost doubled with the average cost of insulin per patient in 2012 at $2,864 per year and in 2016 at $5,705; and

Whereas, The retail price for a 10ml vial of insulin is approximately $330 and some patients need six vials per month; and

Whereas, Americans pay ten times more on average for insulin than people in other developed countries; and

Whereas, A 2018 study found that a vial of insulin could be made for between $3 to $8; and

Whereas, 90% of insulin produced comes from three companies: Eli Lilly, Novo Nordisk, and Sanofi; and

Whereas, The three producers have patient assistance programs to help the uninsured but require a process that can take up to 60 days for review and approval, during which an insulin-dependent-diabetic could die; and

Whereas, The insured are at the mercy of the pharmacy benefit managers (PBMs) who require rebates to have their brand of insulin included in the insurance formulary thus driving up the cost of insulin and all other drugs; and

Whereas, Americans have been skipping doses of insulin, traveling across borders to Canada to purchase affordable insulin, even dying when they could not purchase it, and have medical expenditures 2.3 times higher because of the diagnosis; and

Whereas, COVID-19 is now triggering diabetes in patients who did not previously have it, and in one study COVID-19 survivors were 39% more likely to have a new diabetes diagnosis in the six months after infection; and

Whereas, In 2021 Novo Nordisk made $52 Billion in revenue and in 2020 Eli Lilly made $24 Billion, and Sanofi made $46 Billion; and

Whereas, On April 2, 2022, the House of Representatives passed the Affordable Insulin Now Act that would limit the cost of insulin to $35 a month for insured patients, but even $35 a vial times up to six or more vials of insulin a month could be unaffordable to the most fragile; and

Whereas, The estimated total economic cost of diabetes yearly is in excess of $300 billion; therefore be it

RESOLVED, That our American Medical Association urge Congress to mandate complete coverage of any insulin approved by the FDA (at $0 cost) for any patient, insured or uninsured, who presents to the pharmacy and bypassing all PBMs and disallowing any rebates. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/9/23

RELEVANT AMA POLICY

Insulin Affordability H-110.984
Our AMA will: (1) encourage the Federal Trade Commission (FTC) and the Department of Justice to investigate insulin pricing and market competition and take enforcement actions as appropriate; (2) support initiatives, including those by national medical specialty societies, that provide physician education regarding the cost-effectiveness of insulin therapies; and (3) support state and national efforts to limit the ultimate expenses incurred by insured patients for prescribed insulin.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 114
(A-23)

Introduced by: Illinois

Subject: Physician and Trainee Literacy of Healthcare Costs

Referred to: Reference Committee A

Whereas, The cost of medical care continues to increase, now 18% of U.S. GDP[1,2]; and

Whereas, Meta-analyses estimate extraneous healthcare spending between $706-935 billion USD, about 25% of total healthcare spending[3]; and

Whereas, Price transparency is an important aspect of a functioning market[4]; and

Whereas, Federal mandates to publish hospital chargemasters have largely been ignored[5]; and

Whereas, Federal mandates to publish health insurer billing data have yet to show market adoption[6]; and

Whereas, Many physicians believe they have an obligation to address rising healthcare costs[7]; and

Whereas, Physician literacy on healthcare costs is an important component of informed decision-making which may have a significant impact on future discussions of health system reform; and

Whereas, Medical school accreditation does not require medical schools to teach healthcare financing and the costs associated with care[8]; and

Whereas, Medical students are more price sensitive than their senior colleagues and interested in considering a patient's financial health if given the appropriate information[9,10]; and

Whereas, Residency accreditation requires institutions to cover healthcare finance but not the billing practices of local or any other healthcare organization[11]; and

Whereas, U.S. physicians are bad estimators of health costs[12,13]; and

Whereas, Physicians often guide patients to the best medical decision without accurate estimations for cost[14]; and

Whereas, Patient decisions and health are impacted by whether they can afford the care decided within the physician-patient relationship[15,16]; and

Whereas, Patients who have concerns about the affordability of their prescriptions may skip doses, decrease doses, or not fill their prescription altogether[17]; and

Whereas, The physician-patient relationship is the ideal place for conversations regarding the cost of care and potential affordable alternatives; and

Whereas, New healthcare companies are being created to provide clarity in a variety of health services using information readily available[18,19]; and

Whereas, A northwestern Wisconsin medical group has called for radical healthcare reform through a series of recommendations, including suggesting that healthcare facilities should be required to list their prices[20]; and

Whereas, The Wisconsin Medical Society supports the promotion of healthcare cost transparency, including prices, true costs, Medicare and Medicaid payments for services, drugs, and treatments[21]; and

Whereas, The Australian Medical Association has developed a process for Informed Financial Consent between doctors and patients to encourage shared decision-making about the costs of medical treatment, physicians' fees, and healthcare benefits[22]; therefore be it

RESOLVED, That our American Medical Association endorse price transparency within all sectors of the healthcare market (New HOD Policy); and be it further

RESOLVED, That our AMA encourage all physician employers, including hospitals, to allow their healthcare professionals access to accurate and easily understandable costs of any laboratory test, procedure, medication, medical supply, or any other cost related to medical care within and outside their organization (New HOD Policy); and be it further

RESOLVED, That our AMA advocate for all physician employers, including hospitals, to empower their healthcare professionals to incorporate discussions on healthcare costs during patient counseling (Directive to Take Action); and be it further

RESOLVED, That our AMA advocate for medical education inclusive of price transparency, financial literacy, and the economics and financing of healthcare delivery (Directive to Take Action); and be it further

RESOLVED, That our AMA work with the Commission of Osteopathic College Accreditation (COCA), the Liaison Committee on Medical Education (LCME), the Accreditation Council on Graduate Medical Education (ACGME), and other relevant stakeholders, to include price transparency and healthcare financing in medical education as components of program accreditation (Directive to Take Action); and be it further

RESOLVED, That our AMA study the issues around price transparency, including the feasibility of providing accurate and easily understandable costs of tests, procedures, medications, and other costs related to medical care. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Voluntary Health Care Cost Containment H-155.998

(1) All physicians, including physicians in training, should become knowledgeable in all aspects of patient-related medical expenses, including hospital charges of both a service and professional nature. (2) Physicians should be cost conscious and should exercise discretion, consistent with good medical care, in determining the medical necessity for hospitalization and the specific treatment, tests and ancillary medical services to be provided a patient. (3) Medical staffs, in cooperation with hospital administrators, should embark now upon a concerted effort to educate physicians, including house staff officers, on all aspects of hospital charges, including specific medical tests, procedures, and all ancillary services. (4) Medical educators should be urged to include similar education for future physicians in the required medical school curriculum. (5) All physicians and medical staffs should join with hospital administrators and hospital governing boards nationwide in a conjoint and across-the-board effort to voluntarily contain and control the escalation of health care costs, individually and collectively, to the greatest extent possible consistent with good medical care. (6) All physicians, practicing solo or in groups, independently or in

professional association, should review their professional charges and operating overhead with the objective of providing quality medical care at optimum reasonable patient cost through appropriateness of fees and efficient office management, thus favorably moderating the rate of escalation of health care costs. (7) The AMA should widely publicize and disseminate information on activities of the AMA and state, county and national medical specialty societies which are designed to control or reduce the costs of health care.
Citation: Res. 34, A-78; Reaffirmed: CLRPD Rep. C, A-89; Res. 100, I-89; Res. 822, A-93; Reaffirmed: BOT Rep. 40, I-93; CMS Rep. 12, A-95; Reaffirmed: Res. 808, I-02; Modified: CMS Rep. 4, A-12; Reaffirmed: CMS Rep. 1, A-22;

Controlling Cost of Medical Care H-155.966
The AMA urges the American Hospital Association and all hospitals to encourage the administrators and medical directors to provide to the members of the medical staffs, housestaff and medical students the charges for tests, procedures, medications and durable medical equipment in such a fashion as to emphasize cost and quality consciousness and to maximize the education of those who order these items as to their costs to the patient, to the hospital and to society in general.
Citation: Sub. Res. 75, I-81; Reaffirmed: CLRPD Rep. F, I-91; Res. 801, A-93; CMS Rep. 12, A-95; Reaffirmed by Rules & Credentials Cmt., A-96; Reaffirmed: CMS Rep. 8, A-06; Reaffirmation A-08; Reaffirmed in lieu of Res. 5, A-12; Reaffirmed: CMS Rep. 1, A-22;

Value-Based Decision-Making in the Health Care System D-155.994
1. Our AMA will advocate for third-party payers and purchasers to make cost data available to physicians in a useable form at the point of service and decision-making, including the cost of each alternate intervention, and the insurance coverage and cost-sharing requirements of the respective patient.
2. Our AMA encourages efforts by the Congressional Budget Office to more comprehensively measure the long-term as well as short-term budget deficit reductions and costs associated with legislation related to the prevention of health conditions and effects as a key step in improving and promoting value-based decision-making by Congress.
Citation: (CMS Rep. 7, A-08; Reaffirmed in lieu of Res. 230, I-14; Reaffirmation I-15)

Price of Medicine H-110.991
Our AMA: (1) advocates that pharmacies be required to list the full retail price of the prescription on the receipt along with the co-pay that is required in order to better inform our patients of the price of their medications; (2) will pursue legislation requiring pharmacies, pharmacy benefit managers and health plans to inform patients of the actual cash price as well as the formulary price of any medication prior to the purchase of the medication; (3) opposes provisions in pharmacies' contracts with pharmacy benefit managers that prohibit pharmacists from disclosing that a patient's co-pay is higher than the drug's cash price; (4) will disseminate model state legislation to promote drug price and cost transparency and to prohibit "clawbacks"; (5) supports physician education regarding drug price and cost transparency, manufacturers' pricing practices, and challenges patients may encounter at the pharmacy point-of-sale; and (6) work with relevant organizations to advocate for increased transparency through access to meaningful and relevant information about medication price and out-of-pocket costs for prescription medications sold at both retail and mail order/online pharmacies, including but not limited to Medicare's drug-pricing dashboard.
Citation: CMS Rep. 6, A-03; Appended: Res. 107, A-07; Reaffirmed in lieu of: Res. 207, A-17; Appended: Alt. Res. 806, I-17; Reaffirmed: BOT Rep. 14, A-18; Appended: CMS Rep. 07, A-18; Reaffirmation: A-19; Appended: Res. 126, A-19;

Price Transparency D-155.987
1. Our AMA encourages physicians to communicate information about the cost of their professional services to individual patients, taking into consideration the insurance status (e.g., self-pay, in-network insured, out-of-network insured) of the patient or other relevant information where possible.
2. Our AMA advocates that health plans provide plan enrollees or their designees with complete information regarding plan benefits and real time cost-sharing information associated with both in-network and out-of-network provider services or other plan designs that may affect patient out-of-pocket costs.
3. Our AMA will actively engage with health plans, public and private entities, and other stakeholder groups in their efforts to facilitate price and quality transparency for patients and physicians, and help ensure that entities promoting price transparency tools have processes in place to ensure the accuracy

and relevance of the information they provide.
4. Our AMA will work with states and the federal government to support and strengthen the development of all-payer claims databases.
5. Our AMA encourages electronic health records vendors to include features that assist in facilitating price transparency for physicians and patients.
6. Our AMA encourages efforts to educate patients in health economics literacy, including the development of resources that help patients understand the complexities of health care pricing and encourage them to seek information regarding the cost of health care services they receive or anticipate receiving.
7. Our AMA will request that the Centers for Medicare and Medicaid Services expand its Medicare Physician Fee Schedule Look-up Tool to include hospital outpatient payments.
Citation: CMS Rep. 4, A-15; Reaffirmed in lieu of: Res. 121, A-16; Reaffirmed in lieu of: Res. 213, I-17; Reaffirmed: BOT Rep. 14, A-18; Reaffirmed in lieu of: Res. 112, A-19; Modified: Res. 213, I-19;

Management and Leadership for Physicians D-295.316
1. Our AMA will study advantages and disadvantages of various educational options on management and leadership for physicians with a report back to the House of Delegates; and develop an online report and guide aimed at physicians interested in management and leadership that would include the advantages and disadvantages of various educational options.
2. Our AMA will work with key stakeholders to advocate for collaborative programs among medical schools, residency programs, and related schools of business and management to better prepare physicians for administrative, financial and leadership responsibilities in medical management.
3. Our AMA: (a) will advocate for and support the creation of leadership programs and curricula that emphasize experiential and active learning models to include knowledge, skills and management techniques integral to achieving personal and professional financial literacy and leading interprofessional team care, in the spirit of the AMA's Accelerating Change in Medical Education initiative; and (b) will advocate with the Liaison Committee for Medical Education, Association of American Medical Colleges and other governing bodies responsible for the education of future physicians to implement programs early in medical training to promote the development of leadership and personal and professional financial literacy capabilities.
4. Our AMA will: (a) study the extent of the impact of AMA Policy D-295.316, “Management and Leadership for Physicians,” on elective curriculum; and (b) expand efforts to promote the tenets of health systems science to prepare trainees for leadership roles and address prevalent challenges in the practice of medicine and public health.
Citation: Sub. Res. 918, I-14; Appended: Res. 306, I-16; Reaffirmed in lieu of: Res. 307, A-17; Modified: Res. 313, A-18; Appended: Res. 327, A-22;

Strategies to Address Rising Health Care Costs H-155.960
Our AMA:
(1) recognizes that successful cost-containment and quality-improvement initiatives must involve physician leadership, as well as collaboration among physicians, patients, insurers, employers, unions, and government;
(2) supports the following broad strategies for addressing rising health care costs: (a) reduce the burden of preventable disease;
(b) make health care delivery more efficient; (c) reduce non-clinical health system costs that do not contribute value to patient care; and
(d) promote "value-based decision-making" at all levels;
(3) will continue to advocate that physicians be supported in routinely providing lifestyle counseling to patients through: adequate third-party reimbursement; inclusion of lifestyle counseling in quality measurement and pay-for-performance incentives; and medical education and training;
(4) will continue to advocate that sources of medical research funding give priority to studies that collect both clinical and cost data; use evaluation criteria that take into account cost impacts as well as clinical outcomes; translate research findings into useable information on the relative cost-effectiveness of alternative diagnostic services and treatments; and widely disseminate cost-effectiveness information to physicians and other health care decision-makers;
(5) will continue to advocate that health information systems be designed to provide physicians and other health care decision-makers with relevant, timely, actionable information, automatically at the point of care and without imposing undue administrative burden, including: clinical guidelines and protocols;

relative cost-effectiveness of alternative diagnostic services and treatments; quality measurement and pay-for-performance criteria; patient-specific clinical and insurance information; prompts and other functionality to support lifestyle counseling, disease management, and case management; and alerts to flag and avert potential medical errors;
(6) encourages the development and adoption of clinical performance and quality measures aimed at reducing overuse of clinically unwarranted services and increasing the use of recommended services known to yield cost savings;
(7) encourages third-party payers to use targeted benefit design, whereby patient cost-sharing requirements are determined based on the clinical value of a health care service or treatment. Consideration should be given to further tailoring cost-sharing requirements to patient income and other factors known to impact compliance; and
(8) supports ongoing investigation and cost-effectiveness analysis of non-clinical health system spending, to reduce costs that do not add value to patient care.
(9) Our AMA will, in all reform efforts, continue to identify appropriate cost savings strategies for our patients and the health care system.

Value-Based Decision-Making in the Health Care System H-450.938
PRINCIPLES TO GUIDE PHYSICIAN VALUE-BASED DECISION-MAKING
1. Physicians should encourage their patients to participate in making value-based health care decisions.
2. Physicians should have easy access to and consider the best available evidence at the point of decision-making, to ensure that the chosen intervention is maximally effective in reducing morbidity and mortality.
3. Physicians should have easy access to and review the best available data associated with costs at the point of decision-making. This necessitates cost data to be delivered in a reasonable and useable manner by third-party payers and purchasers. The cost of each alternate intervention, in addition to patient insurance coverage and cost-sharing requirements, should be evaluated.
4. Physicians can enhance value by balancing the potential benefits and costs in their decision-making related to maximizing health outcomes and quality of care for patients.
5. Physicians should seek opportunities to improve their information technology infrastructures to include new and innovative technologies, such as personal health records and other health information technology initiatives, to facilitate increased access to needed and useable evidence and information at the point of decision-making.
6. Physicians should seek opportunities to integrate prevention, including screening, testing and lifestyle counseling, into office visits by patients who may be at risk of developing a preventable chronic disease later in life.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 115
(A-23)

Introduced by: Illinois

Subject: Advocating for All Payer Coverage of Wigs for Patients Undergoing Treatment for Cancer

Referred to: Reference Committee A

Whereas, In 2019, 1,752,735 new cancer cases were reported in the United States[1]; and

Whereas, Cancer treatments may lead to alopecia[2]; and

Whereas, Alopecia affects approximately 65% of patients undergoing chemotherapy, 75- 100% of patients undergoing head and neck radiation, and a variable number of patients undergoing targeted therapies, immunotherapies, stem cell transplants, and endocrine therapies[3]; and

Whereas, Hair loss as a result of cancer treatment may have a variety of manifestations such as patchy hair loss in areas of high friction, diffuse hair loss on the scalp, hair loss accompanied by dermatitis and cutaneous ulceration, and scarring alopecia[2]; and

Whereas, In a cross-sectional survey of breast cancer patients, 55.3% of patients reported higher stress levels due to alopecia which resulted in decreased body image, emotional and social functioning, and depression[4]; and

Whereas, Many female cancer patients associated the experience of hair loss with a loss of femininity and sense of self identity[5]; and

Whereas, For many female cancer patients, hair loss served as a visible sign of their cancer diagnosis and affected their social and personal relationships, with many women expressing concern about the impact alopecia had on their children[5]; and

Whereas, Many patients report feeling poorly prepared for the psychologically distressing nature of hair loss and change of appearance[6]; and

Whereas, A prior study found that participants who were shown photos of individuals with alopecia were less comfortable with having physical contact with or hiring individuals with alopecia compared to those without hair loss[7]; and

Whereas, Many patients with cancer wear wigs to cope with the psychological and societal effects of hair loss[8]; and

Whereas, Wigs are either made from synthetic fiber, human hair, or a mixture of synthetic fiber and human hair; and

Whereas, The best-quality, most natural-appearing wigs are often composed of human hair and cost $800-$3000[9]; and

Whereas, Payers such as Medicare do not deem wigs to be medically necessary[10]; and

Whereas, Medicare (Part A and Part B) and many private insurers do not cover the cost for wigs for patients who experience alopecia as a result of cancer treatment[11]; and

Whereas, While charities may assist with wig donations, many patients pay out of pocket for their wigs; and

Whereas, Wigs help alleviate the psychological effects of hair loss and improve the integration of patients into social contexts during their illness journey[12]; therefore be it

RESOLVED, That our American Medical Association urge all payers to consider that wigs, cold caps, and medically necessary cranial prosthetics may have significant benefits to improve the quality of life for patients with cancer (New HOD Policy); and be it further

RESOLVED, That our AMA work with relevant stakeholders such as the Centers for Medicare and Medicaid Services to encourage payers to cover costs associated with wigs, cold caps, and medically necessary cranial prosthetics for patients with alopecia secondary to cancer treatments (Directive to Take Action); and be it further

RESOLVED, That our AMA work with all relevant medical specialty societies, third party payers, including The Centers for Medicare & Medicaid Services (CMS), and other national stakeholders as deemed appropriate to require third party payers to include reimbursement for wigs, cold caps, and medically necessary cranial prosthetics for patients with alopecia secondary to cancer treatment. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/5/23

RELEVANT AMA POLICY

Definitions of "Cosmetic" and "Reconstructive" Surgery H-475.992
(1) Our AMA supports the following definitions of "cosmetic" and "reconstructive" surgery: Cosmetic surgery is performed to reshape normal structures of the body in order to improve the patient's appearance and self-esteem. Reconstructive surgery is performed on abnormal structures of the body, caused by congenital defects, developmental abnormalities, trauma, infection, tumors or disease. It is generally performed to improve function, but may also be done to approximate a normal appearance. (2) Our AMA encourages third party payers to use these definitions in determining services eligible for coverage under the plans they offer or administer.

Symptomatic and Supportive Care for Patients with Cancer H-55.999
Our AMA recognizes the need to ensure the highest standards of symptomatic, rehabilitative, and supportive care for patients with both cured and advanced cancer. The Association supports clinical research in evaluation of rehabilitative and palliative care procedures for the cancer patient, this to include such areas as pain control, relief of nausea and vomiting, management of complications of surgery, radiation and chemotherapy, appropriate hemotherapy, nutritional support, emotional support, rehabilitation, and the hospice concept. Our AMA actively encourages the implementation of continuing education of the practicing American physician regarding the most effective methodology for meeting the symptomatic, rehabilitative, supportive, and other human needs of the cancer patient.

Prescription Drug Diversion, Misuse and Addiction H-95.945
Our AMA: (1) supports permanent authorization of and adequate funding for the National All Schedules Prescription Electronic Reporting (NASPER) program so that every state, district and territory of the US can have an operational Prescription Drug Monitoring Program (PDMP) for use of clinicians in all jurisdictions; (2) considers PDMP data to be protected health information, and thus protected from release outside the healthcare system unless there is a HIPAA exception or specific authorization from the individual patient to release personal health information, and recommends that others recognize that PDMP data is health information; (3) recommends that PDMP's be designed such that data is immediately available when clinicians query the database and are considering a decision to prescribe a controlled substance; (4) recommends that individual PDMP databases be designed with connectivity among each other so that clinicians can have access to PDMP controlled substances dispensing data across state boundaries; and (5) will promote medical school and postgraduate training that incorporates curriculum topics focusing on pain medicine, addiction medicine, safe prescribing practices, safe medication storage and disposal practices, functional assessment of patients with chronic conditions, and the role of the prescriber in patient education regarding safe medication storage and disposal practices, in order to have future generations of physicians better prepared to contribute to positive solutions to the problems of prescription drug diversion, misuse, addiction and overdose deaths.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 116
(A-23)

Introduced by: New York

Subject: Medicare Coverage of OTC Nicotine Replacement Therapy

Referred to: Reference Committee A

Whereas, Nicotine dependence causes patients to continue smoking despite well-known harms; and

Whereas, Nicotine replacement therapy (NRT), especially dual therapy which is now the evidence-based standard of care is effective at helping smokers to stop smoking essentially doubling or tripling successful quit rates; and

Whereas, Medicare Part D prescription medication plans, by law, do not cover over the counter (OTC) products, Medicare Parts A and B do not cover OTC products, and Medicare Part C (Medicare disadvantage plans) do not cover OTC products or do so in very limited ways; and

Whereas, Many persons who only have Medicare insurance coverage have very limited incomes, and may have limited fixed budgets, yet may have chronic mental illness, both social determinants of health associated with double or triple the national average rate of smoking, and people with psychiatric illnesses have much more difficulties trying to quit smoking; and

Whereas, OTC NRT can be prohibitively expensive to members of lower sociodemographic groups thereby presenting a barrier to facilitating treatment of nicotine dependence; and

Whereas, The expense and harm from tobacco related illnesses is so vast: chronic smoking damages nearly every organ of the body, remains the leading cause of preventable disease, disability, and death in the United States and costs the United States hundreds of billions of dollars each year therefore it is worth carving out; therefore be it

RESOLVED, That our American Medical Association advocate for over the counter (OTC) nicotine replacement therapies, excluding vaping products, to be carved out from the non-coverage by Medicare of OTC products and be specifically covered when prescribed by physicians who care for patients with Medicare, Medicare Part D, or Medicare Part C coverage. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Electronic Cigarettes, Vaping, and Health H-495.972
1. Our AMA urges physicians to: (a) educate themselves about electronic nicotine delivery systems (ENDS), including e-cigarettes, be prepared to counsel patients about the use of these products and the potential for nicotine addiction and the potential hazards of dual use with conventional cigarettes, and be sensitive to the possibility that when patients ask about e-cigarettes, they may be asking for help to quit smoking; (b) consider expanding clinical interviews to inquire about "vaping" or the use of e-cigarettes; (c) promote the use of FDA-approved smoking cessation tools and resources for their patients and caregivers; and (d) advise patients who use e-cigarettes to take measures to assure the safety of children in the home who could be exposed to risks of nicotine overdose via ingestion of replacement e-cigarette liquid that is capped or stored improperly.
2. Our AMA: (a) encourages further clinical and epidemiological research on e-cigarettes; (b) supports education of the public on the health effects, including toxins and carcinogens of electronic nicotine delivery systems (ENDS) including e-cigarettes; and (c) recognizes that the use of products containing nicotine in any form among youth, including e-cigarettes, is unsafe and can cause addiction.
3. Our AMA supports legislation and associated initiatives and will work in coordination with the Surgeon General to prevent e-cigarettes from reaching youth and young adults through various means, including, but not limited to, CDC research, education and a campaign for preventing and reducing use by youth, young adults and others of e-cigarettes, and combustible and emerging tobacco products.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 09-A-23

Subject: Council on Legislation Sunset Review of 2013 House Policies

Presented by: Sandra Adamson Fryhofer, MD, Chair

Referred to: Reference Committee B

Policy G-600.110, "Sunset Mechanism for AMA Policy," calls for the decennial review of American Medical Association (AMA) policies to ensure that our AMA's policy database is current, coherent, and relevant. Policy G-600.010 reads as follows, laying out the parameters for review and specifying the procedures to follow:

1. As the House of Delegates (HOD) adopts policies, a maximum ten-year time horizon shall exist. A policy will typically sunset after 10 years unless action is taken by the HOD to retain it. Any action of our AMA HOD that reaffirms or amends an existing policy position shall reset the sunset "clock," making the reaffirmed or amended policy viable for another 10 years.

2. In the implementation and ongoing operation of our AMA policy sunset mechanism, the following procedures shall be followed: (a) Each year, the Speakers shall provide a list of policies that are subject to review under the policy sunset mechanism; (b) Such policies shall be assigned to the appropriate AMA councils for review; (c) Each AMA council that has been asked to review policies shall develop and submit a report to the HOD identifying policies that are scheduled to sunset; (d) For each policy under review, the reviewing council can recommend one of the following actions: (i) retain the policy; (ii) sunset the policy; (iii) retain part of the policy; or (iv) reconcile the policy with more recent and like policy; (e) For each recommendation that it makes to retain a policy in any fashion, the reviewing council shall provide a succinct, but cogent justification; or (f) The Speakers shall determine the best way for the HOD to handle the sunset reports.

3. Nothing in this policy shall prohibit a report to the HOD or resolution to sunset a policy earlier than its 10-year horizon if it is no longer relevant, has been superseded by a more current policy, or has been accomplished.

4. The AMA councils and the HOD should conform to the following guidelines for sunset: (a) when a policy is no longer relevant or necessary; (b) when a policy or directive has been accomplished; or (c) when the policy or directive is part of an established AMA practice that is transparent to the House and codified elsewhere such as the AMA Bylaws or the AMA HOD Reference Manual: Procedures, Policies and Practices.

5. The most recent policy shall be deemed to supersede contradictory past AMA policies.

6. Sunset policies will be retained in the AMA historical archives.

RECOMMENDATION

The Board of Trustees recommends that the House of Delegates policies that are listed in the appendix to this report be acted upon in the manner indicated and the remainder of this report be filed.

APPENDIX – Recommended Actions

Policy Number	Title	Text	Recommendation
D-100.970	Drug Enforcement Administration Licensure Fees	Our AMA will work through appropriate channels to freeze Drug Enforcement Administration (DEA) licensure fees for physicians. (Res. 219, I-13)	Retain – this policy remains relevant.
D-120.948	FDA Recommendation on Scheduling of Hydrocodone Combination Products	Our AMA will issue a public statement to the US Food and Drug Administration urging the FDA to maintain hydrocodone combination products as Schedule III of the Controlled Substances Act. (Res. 518, A-13)	Sunset this policy. This policy has been completed. See: https://searchlf.ama-assn.org/letter/documentDownload?uri=%2Funstructured%2Fbinary%2Fletter%2FLETTERS%2Ffda-rescheduling-letter-22march2013.pdf and https://searchlf.ama-assn.org/letter/documentDownload?uri=%2Funstructured%2Fbinary%2Fletter%2FLETTERS%2Fdea-coalition-comment-letter-28april2014.pdf
D-145.997	Physicians and the Public Health Issues of Gun Safety	Our AMA will request that the US Surgeon General develop a report and campaign aimed at reducing gun-related injuries and deaths. (Res. 410, A-13)	Sunset this policy. The Surgeon General issued a report on suicide in 2021, "The Surgeon General's Call to Action to Implement the National Strategy for Suicide Prevention." There have been more recent calls on the Surgeon General to develop a report on reducing firearm-related injuries and deaths and our AMA

Policy Number	Title	Text	Recommendation
			has more recent policies supporting government funding for research into preventing firearm injuries and deaths (Firearm Safety and Research, Reduction in Firearm Violence, and Enhancing Access to Mental Health Care H-145.975)
D-150.976	Hazards of Energy Beverages - Their Abuse and Regulation	1. Our AMA will seek necessary regulatory action through the US Food and Drug Administration to regulate potentially hazardous energy beverages (like Red Bull (TM), Rockstar (TM), Monster (TM), Full Throttle (TM)). 2. Our AMA will seek federal regulation to implement warning labels about the side effects of the contents of energy drinks, particularly when combined with alcohol. 3. Our AMA supports a ban on the marketing of "high stimulant/caffeine drinks" to children/adolescents under the age of 18. (Res. 909, I-11; Appended: Res. 409, A-13)	Retain – this policy remains relevant.
D-175.986	Physician Prosecution	Our American Medical Association will consider and take action at the national level on Medicaid fraud prosecutions and related issues. (Res. 212, A-03; Reaffirmed: BOT Rep. 28, A-13)	Retain – this policy remains relevant.
D-190.973	The SAFE Act	Our AMA will seek immediately an opinion and guidance from Health and Human Services Office of Civil Rights regarding how physicians in New York State should handle concerns regarding safety and privacy of patients' protected health information in light of the conflicting standards set forth by the State SAFE Act and federal HIPAA regulations. (Res. 228, A-13)	Sunset this policy. Clarification regarding how physicians in New York State should handle concerns regarding safety and privacy of patients' protected health information in compliance with standards set forth by the State SAFE Act and with federal HIPAA regulations is provided by the New York State Office

Policy Number	Title	Text	Recommendation
			of NICS Appeals & SAFE Act, set forth in FAQs and guidance documents available at: https://nics.ny.gov/safe-act.html Among the above-referenced FAQs is the following information: Q: Are such reports in compliance with HIPAA? A: Under HIPAA, because these informational disclosures are required by law, they can be made without the patient's consent. HIPAA permits disclosures of protected health information without the authorization or consent of the individual to the extent that such disclosure is required by law and the disclosure complies with the requirements of that law.
D-190.982	HIPAA Extension	Our AMA will~~: (1) support necessary legislative and/or regulatory changes to mandate that health plans continue to accept non-standard electronic claims from physicians during a reasonable transition period following October 16, 2003, when the HIPAA transaction rule takes effect, and (2)~~ take steps to assure that Medicare continues to support free software for filing claims to Medicare and that payers continue to accept paper claims from physicians who choose to submit claims on paper. (Res. 224, A-03; Reaffirmed: BOT Rep. 28, A-13)	Retain this policy in part. Delete clause (1). It is no longer relevant as the transition period following October 16, 2003, when the HIPAA transaction rule took effect, has passed.
D-190.983	Protection of Health Care Providers from Unintended Legal	Our AMA will: (1) take appropriate legislative, regulatory, and/or legal action to assure that the unanticipated negative consequences of the Health	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
	Consequences of HIPAA	Insurance Portability and Accountability Act privacy regulations, affecting the patient/doctor relationship and exposing health care providers to legal action, are corrected; and (2) initiate necessary legislative, regulatory, and/or legal action to assure that HIPAA violations that are not malicious in intent and are not directly related to any alleged act of medical negligence may not be attached to such litigation. (Res. 204, A-03; Reaffirmed: BOT Rep. 28, A-13)	
D-330.913	Direct-to-Consumer Advertising of Durable Medical Equipment and Medical Supplies	1. Our AMA will pursue legislation or regulation as appropriate to require that direct-to-consumer advertising and any other media for durable medical equipment (DME) and other medical supplies: (a) include a disclaimer statement to the effect that eligibility for and coverage of the illustrated product is subject to specific criteria and that only a physician can determine if a patient meets those criteria; (b) list the actual criteria (or a summary thereof) from the appropriate source, such as the applicable Certificate of Medical Necessity, DME Information Form (DIF), "Dear Physician Letter" from DME Contractor Medical Directors, Local Coverage Determination or associated policy article; and (c) refrain from statements to the effect that only a physician order or signature is required to obtain the desired items. 2. Our AMA recommends that DME companies stop coercive acts which inappropriately influence physicians to sign these prescriptions for their patients. (BOT Rep. 14, A-13)	Sunset this policy. Our AMA has responded to opportunities to testify on direct-to-consumer (DTC) issues that affect the membership. While this reference is to "examining the drug supply chain," the effect of DTC on the patient-physician is on the record. See: https://searchlf.ama-assn.org/letter/documentDownload?uri=%2Funstructured%2Fbinary%2Fletter%2FLETTERS%2F2018-1-23-Dr-Harmon-Response-to-Pharmaceutical-Disribution-Chain.pdf. In addition, other AMA policy reaffirmed at the I-22 HOD Meeting covers many of the nuances on this issue: See: Direct-to-Consumer Advertising (DTCA) of Prescription Drugs and Implantable Devices H-105.988.

Policy Number	Title	Text	Recommendation
D-35.984	Physician Supervision of Invasive Procedures and the Provision of Fluoroscopy	1. Our AMA will (a) advocate that interventional chronic pain management including those techniques employing radiation (e.g., fluoroscopy or CT) is within the practice of medicine and should be performed only by physicians, and (b) develop appropriate model state legislation with interested state and medical specialty societies that reflects this policy. 2. Our AMA will convene a task force of appropriate AMA councils and interested state and medical specialty societies to develop principles to guide advocacy efforts aimed at addressing the appropriate level of supervision, education, training and provision of other invasive procedures by non-physicians including those employing radiologic imaging and report back to our House of Delegates. (BOT Rep. 10, I-11; Reaffirmed: BOT Rep. 16, A-13)	Retain – this policy remains relevant.
D-35.990	Limiting the Scope of Practice of Specialist Assistants in Radiology	Our AMA supports the efforts of the American College of Radiology and will work with the Scope of Practice Partnership and interested Federation partners to obtain regulation or legislation which would preclude a Specialist Assistant in Radiology or other non-physician practitioner from rendering an official report of any image produced by any diagnostic imaging technique. (Res. 219, A-06; Reaffirmed: BOT Rep. 16, A-13)	Retain – this policy remains relevant.
D-35.996	Scope of Practice Model Legislation	Our AMA Advocacy Resource Center will continue to work with state and specialty societies to draft model legislation that deals with non-physician independent practitioners scope of practice, reflecting the goal of ensuring that non-physician scope of practice is determined by training, experience, and demonstrated competence; and our AMA will distribute to state medical and specialty societies the model legislation	Sunset this policy. This policy has been accomplished. Model legislation has been approved by the Council on Legislation and Board of Trustees and distributed to state and specialty medical societies. Our AMA continues to work

Policy Number	Title	Text	Recommendation
		as a framework to deal with questions regarding non-physician independent practitioners' scope of practice. (Res. 923, I-03; Reaffirmed: BOT Rep. 28, A-13)	with state and specialty medical societies on this legislation as part of our extensive scope of practice advocacy activities and policy.
D-360.993	Recognition of the "Nurse as Agent" of the Prescriber in Long Term Care Settings	Our AMA will urge the US Drug Enforcement Administration to amend its regulations to recognize nursing staff as agents of the prescriber/physician in long term care facilities. (Res. 222, A-09; Reaffirmation A-13)	Sunset this policy. This has been accomplished. See: https://fpnpc.enpnetwork.com/nurse-practitioner-news/2092-dea-announces-policy-change-recognizing-long-term-care-nurses-as-agents-of-the-prescriber.
D-390.955	Flexibility in Medicare Opt-Out and New Safe Harbor	1. Our AMA will seek regulation or legislation to amend the Medicare law to allow physicians to opt out of the Medicare program without a requirement to reaffirm that opt-out. 2. Our AMA will seek legislation and work with the Centers for Medicare & Medicaid Services, as appropriate, to allow for a safe-harbor period for a physician to continue to remain opted out of the Medicare program, without penalty or possibility of recoupment, in those circumstances where the physician has mistakenly not been reaffirming an intention to be opted out. (Res. 234, A-13)	Retain – this policy remains relevant.
D-390.971	Medicare Reimbursement for Anesthesiologists	Our AMA will continue its advocacy to replace the flawed SGR payment formula, resulting in increases to the Medicare conversion factors and payments to all physicians. (BOT Action in response to referred for decision Res. 718, I-05; Reaffirmed in lieu of Res. 207, A-13)	Sunset this policy. The sustainable growth rate (SGR) payment formula was replaced by the Medicare Access and CHIP Reauthorization Act of 2015, which repealed the SGR formula and put in place a new payment system for physicians participating in Medicare.
D-40.993	Inequity in Military Pay for Physicians	Our AMA will work, as appropriate, with other interested organizations, to support immediate reintroduction of a	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		bill based on H.R. 5353 (107th Congress) in this Congress. (BOT Action in response to referred for decision Res. 901, I-03; Reaffirmed: BOT Rep. 28, A-13)	
D-435.988	Family Protection Act	Our AMA will develop a strategy for promoting bankruptcy reform that is consistent with our AMA's efforts to promote medical liability reform. (BOT Rep. 9, I-03; Modified: BOT Rep. 28, A-13)	Retain – this policy remains relevant.
D-478.981	Exchange of Electronic Data Among Clinicians, Public Health Entities and Research Entities	Our AMA will proactively work with the Department of Health and Human Services and appropriate public health and research entities to develop ways to facilitate, as much as possible, seamless, properly regulated, electronic exchange of data generated in the health care setting, including the development of open standards for such data exchange, provided that such technology has intrinsic systems that include the protection of individually identifiable health information that is acceptable to patients, to the extent that law permits. (Res. 827, I-10; Reaffirmation I-13)	Sunset this policy. There has been on-going work in this area across the Department of Health and Human Services, including the Centers for Medicare & Medicaid Services, Office of national Coordinator, Office of Civil Rights, among other federal agencies and research entities. Our AMA consistently comments on this matter as regulations propose changes to HIT standards, existing rules relating to privacy, and interoperability of protected health information. In addition, our AMA has other policy on point: EHR Interoperability D-478.972, Health Information Technology D-478.994, Information Technology Standards and Costs D-478.996, National Health Information Technology D-478.995
H-100.979	Repeal of Federal Regulations	The AMA urges the Drug Enforcement Administration to develop an alternative system for identifying partially filled	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		prescriptions for Schedule II drugs that does not reveal diagnostic information. (Sub. Res. 511, A-92; Reaffirmed: BOT Rep. 28, A-03; Modified: CSAPH Rep. 1, A-13)	
H-120.969	Dispensing Controlled Substances to Long Term Care Patients	The AMA will work with the Drug Enforcement Administration to amend the Code of Federal Regulations to allow for pharmacy service providers to use appropriately authenticated medication orders from patients' charts in place of an original prescription for controlled substances for long term care patients. (Res. 204, A-94; Reaffirmed: BOT Rep. 29, A-04; Reaffirmed: Res. 209, A-11; Reaffirmation A-13)	Retain – this policy remains relevant.
H-15.961	Safety for Passengers in the Back of Pickup Trucks	The AMA supports legislation that would prohibit passengers from riding in the cargo bed of a pickup truck. (Res. 409, I-93; Reaffirmed: BOT Rep. 28, A-03; Reaffirmed: CSAPH Rep. 1, A-13)	Retain – this policy remains relevant.
H-15.966	Preventing Underride Motor Vehicle Crash Injury	The AMA supports a federal action, regulatory or legislative as appropriate, that would require rear and side impact guards on all new tractor trailers. (Res. 426, A-92; Reaffirmed: BOT Rep. 28, A-03; Reaffirmed: CSAPH Rep. 1, A-13)	Retain – this policy remains relevant.
H-150.932	Reform the US Farm Bill to Improve US Public Health and Food Sustainability	Our AMA supports the creation of a new advisory board to review and recommend US Farm Bill budget allocations to ensure any government subsidies are only used to help produce healthy food choices and sustainable foods, and that advisory committee members include physicians, public health officials and other public health stakeholders. (Res. 215, A-13)	Retain – this policy remains relevant.
H-160.931	Health Literacy	Our AMA: (1) recognizes that limited patient literacy is a barrier to effective medical	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		diagnosis and treatment; (2) encourages the development of literacy appropriate, culturally diverse health-related patient education materials for distribution in the outpatient and inpatient setting; (3) will work with members of the Federation and other relevant medical and nonmedical organizations to make the health care community aware that approximately one fourth of the adult population has limited literacy and difficulty understanding both oral and written health care information; (4) encourages the development of undergraduate, graduate, and continuing medical education programs that train physicians to communicate with patients who have limited literacy skills; (5) encourages all third party payers to compensate physicians for formal patient education programs directed at individuals with limited literacy skills; (6) encourages the US Department of Education to include questions regarding health status, health behaviors, and difficulties communicating with health care professionals in all future National Assessment of Adult Literacy studies; (7) encourages the allocation of federal and private funds for research on health literacy; (8) recommends all healthcare institutions adopt a health literacy policy with the primary goal of enhancing provider communication and educational approaches to the patient visit; (9) recommends all healthcare and pharmaceutical institutions adopt the USP prescription standards and provide prescription instructions in the patient's preferred language when available and appropriate; and (10) encourages the development of low-cost community- and health system resources, support state legislation and consider annual initiatives focused on improving health literacy.	

Policy Number	Title	Text	Recommendation
		(CSA Rep. 1, A-98; Appended: Res. 415, I-99; Modified and Reaffirmed: CSAPH Rep. 1, A-09; Appended: Res. 718, A-13)	
H-160.950	Guidelines for Integrated Practice of Physician and Nurse Practitioner	Our AMA endorses the following guidelines and recommends that these guidelines be considered and quoted only in their entirety when referenced in any discussion of the roles and responsibilities of nurse practitioners: (1) The physician is responsible for the supervision of nurse practitioners and other advanced practice nurses in all settings. (2) The physician is responsible for managing the health care of patients in all practice settings. (3) Health care services delivered in an integrated practice must be within the scope of each practitioner's professional license, as defined by state law. (4) In an integrated practice with a nurse practitioner, the physician is responsible for supervising and coordinating care and, with the appropriate input of the nurse practitioner, ensuring the quality of health care provided to patients. (5) The extent of involvement by the nurse practitioner in initial assessment, and implementation of treatment will depend on the complexity and acuity of the patients' condition, as determined by the supervising/collaborating physician. (6) The role of the nurse practitioner in the delivery of care in an integrated practice should be defined through mutually agreed upon written practice protocols, job descriptions, and written contracts. (7) These practice protocols should delineate the appropriate involvement of the two professionals in the care of patients, based on the complexity and acuity of the patients' condition. (8) At least one physician in the integrated practice must be immediately available at all times for supervision and consultation when needed by the nurse practitioner.	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		(9) Patients are to be made clearly aware at all times whether they are being cared for by a physician or a nurse practitioner. (10) In an integrated practice, there should be a professional and courteous relationship between physician and nurse practitioner, with mutual acknowledgment of, and respect for each other's contributions to patient care. (11) Physicians and nurse practitioners should review and document, on a regular basis, the care of all patients with whom the nurse practitioner is involved. Physicians and nurse practitioners must work closely enough together to become fully conversant with each other's practice patterns. (CMS Rep. 15 - I-94; BOT Rep. 6, A-95; Reaffirmed: Res. 240, A-00; Reaffirmation A-00; Reaffirmed: BOT Rep. 28, A-09; Reaffirmed: BOT Rep. 9, I-11; Reaffirmed: Joint CME-CMS Rep., I-12; Reaffirmed: BOT Rep. 16, A-13)	
H-180.970	Expanded State/Federal Regulation Oversight of Multiple Employer Welfare Arrangements	The AMA supports appropriate federal and state initiatives to regulate and oversee health care plans provided through multiple employer welfare arrangements. (Sub. Res. 204, I-92; Reaffirmed: BOT Rep. 28, A-03; Reaffirmed: CMS Rep. 4, A-13)	Retain – this policy remains relevant.
H-180.998	Regulation of Insurance Carriers and Health Plans	Our AMA believes that organizations financing health care services (e.g., insurance companies, Blue Cross, Blue Shield, HMOs, health and welfare trusts) should be certified at the state level on the basis of financial soundness, and plans should be routinely monitored by the same agency to guard against misrepresentation of costs or benefits. All carriers in a given regulatory jurisdiction should be subject to the same standards. (BOT Rep. A, NCCMC Rec. 7, A-78; Reaffirmed: CLRPD Rep. C, A-89;	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		Reaffirmed: Sunset Report, A-00; Reaffirmation I-03; Reaffirmed: CMS Rep. 4, A-13)	
H-190.969	Delay in Payments Due to Disputes in Coordination of Benefits	Our AMA: (1) urges state and federal agencies to exercise their authority over health plans to ensure that beneficiaries' claims are promptly paid and that state and federal legislation that guarantees the timely resolution of disputes in coordination of benefits between health plans is actively enforced; (2) includes the "birthday rule" and the "employer first rule" in any and all future AMA model legislation and model medical service agreements that contain coordination of benefits information and/or guidance on timely payment of health insurance claims; (3) urges state medical associations to advocate for the inclusion of the "employer first rule" and "birthday rule" in state insurance statutes as mechanisms for alleviating disputes in coordination of benefits; (4) includes questions on payment timeliness in its Socioeconomic Monitoring System survey to collect information on the extent of the problem at the national level and to track the success of state legislation on payment delays; (5) continues to encourage state medical associations to utilize the prompt payment provisions contained in the AMA Model Managed Care Medical Services Agreement and in AMA model state legislation; (6) through its Advocacy Resource Center, continue to coordinate and implement the timely payment campaign, including the promotion of the payment delay survey instrument, to assess and communicate the scope of payment delays as well as ensure prompt payment of health insurance claims and interest accrual on late payments by all health plans, including those regulated by ERISA; and	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		(7) urges private sector health care accreditation organizations to (a) develop and utilize standards that incorporate summary statistics on claims processing performance, including claim payment timeliness, and (b) require accredited health plans to provide this information to patients, physicians, and other purchasers of health care services. (CMS Rep. 8, I-98; Reaffirmation I-04; Reaffirmed in lieu of Res. 729, A-13)	
H-260.973	Cost and Benefits of CLIA '88 and Other Health Regulations	The AMA demands from the government any proven evidence, research, study or any data concerning CLIA '88: (a) showing that this law was actually necessary, and (b) indicating in a quantitative way how any potential benefits of this law outweigh this addition to the already overburdened cost of health care. (Res. 245, I-92; Reaffirmed: BOT Rep. 28, A-03; Reaffirmed: BOT Rep. 28, A-13)	Retain – this policy remains relevant.
H-260.975	Repeal of CLIA	The AMA (1) will work through appropriate regulatory, legislative or judicial channels for changes in CLIA '88 or elimination of those portions of the CLIA '88 regulations that do not improve patient care; and (2) will continue to work to achieve changes that markedly reduce or eliminate the obstacles experienced by physicians under CLIA '88, with the understanding that should this not be successful, the Association shall move to seek legislative repeal of CLIA '88. (Sub. Res. 237, I-92; Reaffirmed: BOT Rep. 28, A-03; Reaffirmed: BOT Rep. 28, A-13)	Retain – this policy remains relevant.
H-260.977	Commission on Office Laboratory Accreditation	The AMA, with state medical and national medical specialty societies, will (1) take immediate action to cause CMS to publish the “deeming” regulations under CLIA '88; (2) take immediate action to assure that applications for deemed status under	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		CLIA '88 are processed expeditiously and that potential accrediting organizations capable of complying with the regulations are granted deemed status as quickly as possible; (3) take immediate action to cause CMS to delay sending bills for laboratory certification fees until at least 60 days have passed from the time that at least one alternative private sector accrediting body has been granted deemed status; and (4) publicize information about the Commission on Office Laboratory Accreditation (COLA) and encourage that all physicians seek clinical laboratory accreditation through COLA in lieu of federal or other government certification. (Sub. Res. 264, A-92; Reaffirmation I-99; Reaffirmed: BOT Rep. 28, A-03; Reaffirmed: BOT Rep. 28, A-13)	
H-270.954	Regulatory Modernization	Our AMA will work with regulatory bodies at the national level to identify outdated regulations and modernize them to better reflect the current state of medical practice. (Res. 225, A-13)	Retain – this policy remains relevant.
H-270.955	Allow Physicians to Receive Dual Use Supplies for In-Office Blood Collection	Our AMA supports legislation allowing physicians to receive a limited supply of dual use supplies proportionate with the number of specimens received by a lab each month. (Res. 208, A-13)	Retain – this policy remains relevant.
H-270.974	Acupuncture	It is the policy of the AMA that nonphysician boards should not regulate the clinical practice of medicine. (CME Rep. M, A-93; Modified: CME Rep. 2, A-03; Reaffirmed: CME Rep. 2, A-13)	Retain – this policy remains relevant.
H-270.977	FDA Intrusion into the Practice of Medicine	The AMA strongly opposes the FDA's intrusion into the practice of medicine by making decisions for individual care and mandated informed consent documents	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		written without the input of specialists in the related field of medicine. (Res. 544, A-92; Reaffirmed: BOT Rep. 28, A-03; Reaffirmed: CMS Rep. 4, A-13)	
H-285.985	Discrimination Against Physicians by Health Care Plans	Our AMA: (1) will develop draft federal and model state legislation requiring managed care plans and third party payers to disclose to physicians and the public, the selection criteria used to select, retain, or exclude a physician from a managed care or other provider plans; (2) will request an advisory opinion from the Department of Justice on the application of the Americans with Disabilities Act of 1990 to selective contracting decisions made by managed care plans or other provider plans; (3) will support passage of federal legislation to clarify the Americans With Disabilities Act to assure that coverage for interpreters for the hearing impaired be provided for by all health benefit plans. Such legislation should also clarify that physicians practicing in an office setting should not incur the costs for qualified interpreters or auxiliary aids for patients with hearing loss unless the medical judgment of the treating physician reasonably supports such a need; (4) encourages state medical associations and national medical specialty societies to provide appropriate assistance to physicians at the local level who believe they may be treated unfairly by managed care plans, particularly with respect to selective contracting and credentialing decisions that may be due, in part, to a physician's history of substance abuse; and (5) urges managed care plans and third party payers to refer questions of physician substance abuse to state medical associations and/or county medical societies for review and recommendation as appropriate.	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		(BOT Rep. 18, I-93; Appended by BOT Rep. 28, A-98; Reaffirmation A-99; Reaffirmation A-00; Reaffirmed: BOT Rep. 6, A-10; Reaffirmed in lieu of Res. 110, A-13)	
H-290.988	Monitoring of State Medicaid DUR Programs	The AMA will continue to monitor the progress, quality and problems associated with the Omnibus Budget Reconciliation Act of 1990 mandated state Medicaid Drug Use Review (DUR) programs and assure that DUR programs focus on the quality of patient care and use appropriate scientifically based criteria to evaluate individual patient therapy and the effectiveness of physician and pharmacist activities. (Res. 526, I-92; Reaffirmed: BOT Rep. 28, A-03; Reaffirmed: CMS Rep. 4, A-13)	Sunset this policy. Our AMA has adopted broader Drug Use Review policy. See: Principles of Drug Utilization Review H-120.978 and Drug Utilization Review H-120.981.
H-30.951	Boating Under the Influence	It is the policy of the AMA to support stringent enforcement of regulations regarding boating under the influence of alcohol and other drugs. (Res. 405, I-93; Reaffirmed: CSA Rep. 8, A-03; Modified: CSAPH Rep. 1, A-13)	Retain – this policy remains relevant.
H-315.989	Confidentiality of Computerized Patient Records	The AMA will continue its leadership in protecting the confidentiality, integrity, and security of patient-specific data; and will continue working to ensure that computer-based patient record systems and networks, and the legislation and regulations governing their use, include adequate technical and legal safeguards for protecting the confidentiality, integrity, and security of patient data. (BOT Rep. F, A-93; Reaffirmation I-99; Reaffirmed: BOT Rep. 19, I-06; Reaffirmed: BOT Rep. 19, A-07; Reaffirmed in lieu of Res. 818, I-07; Reaffirmation I-08; Reaffirmation A-10; Reaffirmed: BOT Rep. 17, A-13)	Sunset this policy. This policy has been superseded by more recent policy. See: Ransomware and Electronic Health Records D-478.960, Guiding Principles for the Collection, Use and Warehousing of Electronic Medical Records and Claims Data H-315.973, Code of Medical Ethics 3.3.2 Confidentiality & Electronic Medical Records.

Policy Number	Title	Text	Recommendation
H-330.887	Submitting Recommendations to Medicare	Our AMA will work with the Centers for Medicare & Medicaid Services and seek federal legislation, if necessary, to provide that the Center for Medicare and Medicaid Innovation Center website accept suggestions from physicians to improve health care and/or reduce costs, acknowledge submission by receipt, and notify the individual of the decision on possible implementation with an explanation of the reasons for the decision and, if the decision is deemed worthy, the submitter should be informed and encouraged to participate in further developing the idea if they wish to remain involved. (Res. 226, A-13)	Retain – this policy remains relevant.
H-330.922	Waiver of Copayments of Certain Medicare Patients	Our AMA seek legislative and/or regulatory action that permits physicians in the exercise of their judgment to provide free medical services and/or waive deductibles and co-payments for patients with Medicare, Medicaid, and other health insurance. (Res. 254, A-98; Reaffirmation I-98; Modified: BOT Rep. 12, A-03; Reaffirmed: BOT Rep. 28, A-13	Retain – this policy remains relevant.
H-330.945	Durable Medical Equipment Requirements	Our AMA will: (1) continue to seek legislation to prohibit unsolicited contacts by durable medical equipment suppliers that recommend medically unnecessary durable medical equipment to Medicare beneficiaries; (2) affirm the concept that members of a physician-led interprofessional health care team be enabled to perform delegated medical duties, including ordering durable medical equipment, that they are capable of performing according to their education, training and licensure and at the discretion of the physician team leader; (3) advocate that the initiators of orders for durable medical equipment should be a physician, or a nurse practitioner or physician assistant supervised by a physician within their care team, consistent with state scope of	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		practice laws; and (4) reaffirm the concept that physicians are ultimately responsible for the medical needs of their patients. (Sub. Res. 205, A-94; Reaffirmed: BOT Rep. 29, A-04; Reaffirmation A-04; Reaffirmed: BOT Rep. 14, A-13; Modified in lieu of Res. 802, I-13)	
H-330.951	Non-Routine Waiver of Copayments and Deductibles Under Medicare Part B for Indigent Patients	The AMA will seek promulgation of a safe harbor provision by the Office of Inspector General, U.S. Department of Health and Human Services, for the non-routine waiver of Medicare Part B copayments and deductibles for indigent patients. (Res. 210, I-93; Reaffirmed: BOT Rep. 28, A-03; Reaffirmed: BOT Rep. 28, A-13)	Retain – this policy remains relevant.
H-330.960	Cost of Medically Related Services and Supplies	The AMA legislative or other appropriate department will seek a requirement that CMS and/or their contracted home health agencies, durable medical equipment suppliers, and non-emergency transportation services, provide cost estimates to physicians, to be provided along with the physician authorization form. (Res. 812, A-92; Reaffirmed by Rules & Credentials Cmt., A-96; Reaffirmation A-99; Reaffirmation A-04; Reaffirmation A-08; Reaffirmed: BOT Rep. 14, A-13)	Retain – this policy remains relevant.
H-330.992	Medicare Definition of Physician	The AMA supports limiting the application of the definition of the term "physician" under the Medicare program to doctors of medicine or osteopathy. (Sub. Res. 101, A-86; Reaffirmed: Sunset Report, I-96; Reaffirmed: CMS Rep. 8, A-06; Reaffirmed: Res. 821, I-09; Reaffirmation A-13)	Retain – this policy remains relevant.
H-350.976	Improving Health Care of American Indians	Our AMA recommends that: (1) All individuals, special interest groups, and levels of government recognize the American Indian people as full citizens of the U.S., entitled to the same equal	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		rights and privileges as other U.S. citizens. (2) The federal government provide sufficient funds to support needed health services for American Indians. (3) State and local governments give special attention to the health and health-related needs of nonreservation American Indians in an effort to improve their quality of life. (4) American Indian religions and cultural beliefs be recognized and respected by those responsible for planning and providing services in Indian health programs. (5) Our AMA recognize the "medicine man" as an integral and culturally necessary individual in delivering health care to American Indians. (6) Strong emphasis be given to mental health programs for American Indians in an effort to reduce the high incidence of alcoholism, homicide, suicide, and accidents. (7) A team approach drawing from traditional health providers supplemented by psychiatric social workers, health aides, visiting nurses, and health educators be utilized in solving these problems. (8) Our AMA continue its liaison with the Indian Health Service and the National Indian Health Board and establish a liaison with the Association of American Indian Physicians. (9) State and county medical associations establish liaisons with intertribal health councils in those states where American Indians reside. (10) Our AMA supports and encourages further development and use of innovative delivery systems and staffing configurations to meet American Indian health needs but opposes overemphasis on research for the sake of research, particularly if needed federal funds are diverted from direct services for American Indians. (11) Our AMA strongly supports those	

Policy Number	Title	Text	Recommendation
		bills before Congressional committees that aim to improve the health of and health-related services provided to American Indians and further recommends that members of appropriate AMA councils and committees provide testimony in favor of effective legislation and proposed regulations. (CLRPD Rep. 3, I-98; Reaffirmed: Res. 221, A-07; Reaffirmation A-12; Reaffirmed: Res. 233, A-13)	
H-350.977	Indian Health Service	The policy of the AMA is to support efforts in Congress to enable the Indian Health Service to meet its obligation to bring American Indian health up to the general population level. The AMA specifically recommends: (1) Indian Population: (a) In current education programs, and in the expansion of educational activities suggested below, special consideration be given to involving the American Indian and Alaska native population in training for the various health professions, in the expectation that such professionals, if provided with adequate professional resources, facilities, and income, will be more likely to serve the tribal areas permanently; (b) Exploration with American Indian leaders of the possibility of increased numbers of nonfederal American Indian health centers, under tribal sponsorship, to expand the American Indian role in its own health care; (c) Increased involvement of private practitioners and facilities in American Indian care, through such mechanisms as agreements with tribal leaders or Indian Health Service contracts, as well as normal private practice relationships; and (d) Improvement in transportation to make access to existing private care easier for the American Indian population. (2) Federal Facilities: Based on the distribution of the eligible population, transportation facilities and roads, and	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		the availability of alternative nonfederal resources, the AMA recommends that those Indian Health Service facilities currently necessary for American Indian care be identified and that an immediate construction and modernization program be initiated to bring these facilities up to current standards of practice and accreditation. (3) Manpower: (a) Compensation for Indian Health Service physicians be increased to a level competitive with other Federal agencies and nongovernmental service; (b) Consideration should be given to increased compensation for service in remote areas; (c) In conjunction with improvement of Service facilities, efforts should be made to establish closer ties with teaching centers, thus increasing both the available manpower and the level of professional expertise available for consultation; (d) Allied health professional staffing of Service facilities should be maintained at a level appropriate to the special needs of the population served; (e) Continuing education opportunities should be provided for those health professionals serving these communities, and especially those in remote areas, and, increased peer contact, both to maintain the quality of care and to avert professional isolation; and (f) Consideration should be given to a federal statement of policy supporting continuation of the Public Health Service to reduce the great uncertainty now felt by many career officers of the corps. (4) Medical Societies: In those states where Indian Health Service facilities are located, and in counties containing or adjacent to Service facilities, that the appropriate medical societies should explore the possibility of increased formal liaison with local Indian Health Service physicians. Increased support from organized medicine for improvement of health care provided	

Policy Number	Title	Text	Recommendation
		under their direction, including professional consultation and involvement in society activities should be pursued. (5) Our AMA also support the removal of any requirement for competitive bidding in the Indian Health Service that compromises proper care for the American Indian population. (CLRPD Rep. 3, I-98; Reaffirmed: CLRPD Rep. 1, A-08; Reaffirmation A-12; Reaffirmed: Res. 233, A-13)	
H-355.989	Access to National Practitioner Data Bank "Self-Query" Reports	~~(1) The AMA again requests a written opinion from the Health Resources and Services Administration's Bureau of Health Professions and/or the HHS Office of the Inspector General, as to the confidentiality of National Practitioner Data Bank (NPDB) information that is received directly or indirectly from the NPDB.~~ (~~2~~1) The AMA recommends that physicians who are compelled to release information received from the NPDB to entities not authorized to access the NPDB require that such entity provide them with written documentation that: information disclosed to the entity will be protected from further disclosure under the relevant state peer review immunity statute(s); that the requirements that the physician self-query the NPDB and disclose the information to the entity is in compliance with the intent and protections of the Health Care Quality Improvement Act of 1986; that the information will be used only for and maintained only for those purposes, such as quality assurance activities, that are protected under the relevant state peer review immunity statute(s); and that the entity will protect the confidentiality of the information to the fullest extent permitted by both state law and the Health Care Quality Improvement Act of 1986. (~~3~~2) The AMA will provide model language until such legislation is enacted that physicians can use to protect	Retain this policy in part. Delete clause (1). The National Practitioner Data Bank Guidebook specifies that information reported to the NPDB is confidential and cannot be disclosed except as specified in the NPDB statutes and that the Office of the Inspector General can impose civil money penalties on those who violate the confidentiality provisions.

Policy Number	Title	Text	Recommendation
		confidentiality when they release information received from the NPDB to entities not authorized to access the NPDB. The AMA urges state and county medical societies to develop a mechanism physicians can use to report problems they encounter with these entities. (BOT Rep. L, I-92; Reaffirmed: BOT Rep. 28, A-03; Reaffirmed: CME Rep. 2, A-13)	
H-355.990	National Practitioner Data Bank	(1) The AMA shall continue to pursue vigorously remedial action to correct all operational problems with the National Practitioner Data Bank (NPDB). (2) The AMA requests that the Health Resources and Services Administration ~~(a) prepare and disseminate to physician and hospital organizations a white paper addressing its plans to enhance the confidentiality/security provisions of the reporting and querying process no later than December 1992; (b) conduct a statistically valid sample of health care entities, other than hospitals, on the entity file to determine if entities that are not eligible to query under the statute and regulation have gained access to the NPDB information, and disseminate the results to the NPDB Executive Committee no later than December 1992; (c) implement appropriate steps to ensure and maintain the confidentiality of the practitioner's self-query reports no later than December 1992; (d)~~ recommend to the Congress that small claims payments, less than $30,000, no longer be reported to the NPDB ~~and provide the Executive Committee members the opportunity to attach their comments on the report that goes to the Congress; (e~~b) and allow ~~by January 1, 1993,~~ the practitioner to append an explanatory statement to the disputed report~~; and (f) release the evaluation report, prepared by Dr. Mohammad Akhter, on the NPDB's first year of operation to the AMA by July 1992. (3)~~	Retain this policy in part. Delete clauses (2)(a)(b)(c)(f) and clause (3), which are no longer relevant. Regarding clause (3), Policy H-355.991 was rescinded in 2014.

Policy Number	Title	Text	Recommendation
		~~The AMA will reevaluate at the 1992 Interim Meeting the progress on these issues. If the preceding requests are not met by the established due date and the House of Delegates is not satisfied with the progress on these issues, the AMA will again reevaluate the implementation of Policy H-355.991~~. (BOT Rep. QQ, A-92; Reaffirmed: BOT Rep. 28, A-03; Reaffirmed: CME Rep. 2, A-13)	
H-360.983	Registered Nurse Participation in Epidural Analgesia	Our AMA, consistent with the American Society of Anesthesiologists position statement adopts the following statement on the administration of epidural analgesia: In order to provide optimum patient care, it is essential that registered nurses participate in the management of analgesic modalities. A registered nurse--qualified by education, experience and credentials--who follows a patient-specific protocol written by a qualified physician should be allowed to adjust and discontinue catheter infusions. (Res. 530, A-03; Reaffirmed: CME Rep. 2, A-13)	Retain – this policy remains relevant.
H-360.987	Principles Guiding AMA Policy Regarding Supervision of Medical Care Delivered by Advanced Practice Nurses in Integrated Practice	Our AMA endorses the following principles: (1) Physicians must retain authority for patient care in any team care arrangement, e.g., integrated practice, to assure patient safety and quality of care. (2) Medical societies should work with legislatures and licensing boards to prevent dilution of the authority of physicians to lead the health care team. (3) Exercising independent medical judgment to select the drug of choice must continue to be the responsibility only of physicians. (4) Physicians should recognize physician assistants and advanced practice nurses under physician leadership, as effective physician extenders and valued members of the health care team. (5) Physicians should encourage state	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		medical and nursing boards to explore the feasibility of working together to coordinate their regulatory initiatives and activities. (6) Physicians must be responsible and have authority for initiating and implementing quality control programs for nonphysicians delivering medical care in integrated practices. (BOT Rep. 23, A-96; Reaffirmation A-99; Reaffirmed: Res. 240, and Reaffirmation A-00; Reaffirmed: CMS Rep. 6, A-10; Reaffirmed: BOT Rep. 9, I-11; Reaffirmation A-12; Reaffirmed: BOT Rep. 16, A-13)	
H-360.988	Nurse Practitioner Reimbursement Under Medicare	Our AMA supports provision of payment to the employing physician for all services provided by physician assistants and nurse practitioners under the physician's supervision and direction regardless of whether such services are performed where the physician is physically present, so long as the ultimate responsibility for these services rests with the physician and so long as the services are provided in conformance with applicable state laws. With regard to physician assistants, such supervision in most settings includes the personal presence or participation of the physician. In certain practice settings where the physician assistant may function apart from the supervising physician, such remote function (if permitted by state law) should be approved by the state medical licensing board on an individual basis. Such approval should include requirements for regular reporting to the supervising physician, appropriate site visits by that physician, and arrangements for immediate communication with the supervising physician for consultation at all times. (BOT Rep. UU, A-90; Reaffirmed: CMS Rep. 1, I-934; Reaffirmed: Res. 240 and Reaffirmation A-00; Reaffirmation A-	Retain – this policy remains relevant.

		when disruptions in Medicare claims processing result in undue delays in the normal flow of Medicare payments. (Sub. Res. 242, A-92; Reaffirmed: BOT Rep. 28, A-03; Reaffirmed: BOT Rep. 28, A-13)	
H-400.973	Limited Licensed Practitioners and RBRVS	It is the policy of the AMA to advocate that Medicare expenditure data clearly differentiate between the services of fully licensed physicians and those of limited licensed practitioners and of other Part B services. (Sub. Res. 124, I-91; Reaffirmed: BOT Rep. DD, I-92; Modified: CMS Rep. 10, A-03; Modified: CMS Rep. 4, A-13)	Retain – this policy remains relevant.
H-405.992	"Doctor" as a Title	The AMA encourages state medical societies to oppose any state legislation or regulation that might alter or limit the title "Doctor," which persons holding the academic degrees of Doctor of Medicine or Doctor of Osteopathy are entitled to employ. (Res. 138, I-87; Reaffirmed: Sunset Report, I-97; Reaffirmed: CME Rep. 2, A-07; Reaffirmed: Res. 218, A-12)	Retain – this policy remains relevant.
H-410.950	Pain Management	Our AMA adopts the following guidelines on Invasive Pain Management Procedures for the Treatment of Chronic Pain, Including Procedures Using Fluoroscopy: Interventional chronic pain management means the diagnosis and treatment of pain-related disorders with the application of interventional techniques in managing sub-acute, chronic, persistent, and intractable pain. The practice of pain management includes comprehensive assessment of the patient, diagnosis of the cause of the patient's pain, evaluation of alternative treatment options, selection of appropriate treatment options, termination of prescribed treatment options when appropriate, follow-up care, the diagnosis and management of	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
		complications, and collaboration with other health care providers. Invasive pain management procedures include interventions throughout the course of diagnosing or treating pain which is chronic, persistent and intractable, or occurs outside of a surgical, obstetrical, or post- operative course of care. Invasive pain management techniques include: 1. ablation of targeted nerves; 2. procedures involving any portion of the spine, spinal cord, sympathetic nerves or block of major peripheral nerves, including percutaneous precision needle placement within the spinal column with placement of drugs such as local anesthetics, steroids, and analgesics, in the spinal column under fluoroscopic guidance or any other radiographic or imaging modality; and 3. surgical techniques, such as laser or endoscopic diskectomy, or placement of intrathecal infusion pumps, and/or spinal cord stimulators. At present, invasive pain management procedures do not include major joint injections (except sacroiliac injections), soft tissue injections or epidurals for surgical anesthesia or labor analgesia. When used for interventional pain management purposes such invasive pain management procedures do not consist solely of administration of anesthesia; rather, they are interactive procedures in which the physician is called upon to make continuing adjustments based on medical inference and judgments. In such instances, it is not the procedure itself, but the purpose and manner in which such procedures are utilized, that demand the ongoing application of direct and immediate medical judgment. These procedures are therefore within the practice of medicine, and should be	

Policy Number	Title	Text	Recommendation
		performed only by physicians with appropriate training and credentialing. Invasive pain management procedures require physician-level training. However, certain technical aspects of invasive pain management procedures may be delegated to appropriately trained, licensed or certified, credentialed non-physicians under direct and/or personal supervision of a physician who possesses appropriate training and privileges in the performance of the procedure being supervised, and in compliance with local, state, and federal regulations. Invasive pain management procedures employing radiologic imaging are within the practice of medicine and should be performed only by physicians with appropriate training and credentialing. (BOT Rep. 16, A-13)	
H-410.951	Physician Practice Drift	Our AMA will: (1) continue to work with interested state and national medical specialty societies to advance truth in advertising legislation, and (2) continue to monitor legislative and regulatory activity related to physician practice drift. Policy Number	Title	Text	Recommendation
		assistants, provided the surgeon is an active participant throughout the essential part of the operation. Given the nature of the surgical assistant's role and the potential of risk to the public, it is appropriate to ensure that qualified personnel accomplish this function; (3) policy related to surgical assistants ~~consistent with the American College of Surgeons' Statements on Principles~~ states: (a) The surgical assistant is limited to performing specific functions as defined in the medical staff bylaws, rules and regulations. These generally include the following tasks: aid in maintaining adequate exposure in the operating field, cutting suture materials, clamping and ligating bleeding vessels, and, in selected instances, actually performing designated parts of a procedure. (b) It is the surgeon's responsibility to designate the individual most appropriate for this purpose within the bylaws of the medical staff. The first assistant to the surgeon during a surgical operation should be a credentialed health care professional, preferably a physician, who is capable of participating in the operation, actively assisting the surgeon. (c) Practice privileges of individuals acting as surgical assistants should be based upon verified credentials and the supervising physician's capability and competence to supervise such an assistant. Such privileges should be reviewed and approved by the institution's medical staff credentialing committee and should be within the defined limits of state law. Specifically, surgical assistants must make formal application to the institution's medical staff to function as a surgical assistant under a surgeon's supervision. During the credentialing and privileging of surgical assistants, the medical staff will review and make decisions on the individual's qualifications, experience, credentials, licensure, liability coverage	policy related to surgical assistants.

Policy Number	Title	Text	Recommendation
		and current competence. (d) If a complex surgical procedure requires that the assistant have the skills of a surgeon, the surgical assistant must be a licensed surgeon fully qualified in the specialty area. If a complication requires the skills of a specialty surgeon, or the surgical first assistant is expected to take over the surgery, the surgical first assistant must be a licensed surgeon fully qualified in the specialty area. (e) Ideally, the first assistant to the surgeon at the operating table should be a qualified surgeon or resident in an education program that is accredited by the Accreditation Council for Graduate Medical Education (ACGME) and/or the American Osteopathic Association (AOA). Other appropriately credentialed physicians who are experienced in assisting the responsible surgeon may participate when a trained surgeon or a resident in an accredited program is not available. The AMA recognizes that attainment of this ideal in all surgical care settings may not be practicable. In some circumstances it is necessary to utilize appropriately trained and credentialed unlicensed physicians and non-physicians to serve as first assistants to qualified surgeons. (BOT Rep. 32, A-99; Reaffirmed: Res. 240, 708, and Reaffirmation A-00; Reaffirmed: CMS Rep. 6, A-10; Reaffirmed: BOT Rep. 16, A-13)	
H-475.989	Laser Surgery	Our AMA (1) adopts the policy that laser surgery should be performed only by individuals licensed to practice medicine and surgery or by those categories of practitioners currently licensed by the state to perform surgical services; and (2) encourages state medical associations to support state legislation and rulemaking in support of this policy. (Sub. Res. 39, I-90; Reaffirmed: Sunset Report, I-00; Reaffirmed: CMS Rep. 6, A-10; Reaffirmed: BOT Rep. 16, A-13)	Retain – this policy remains relevant.

Policy Number	Title	Text	Recommendation
H-480.947	Medical Patents and Their Infringement on the Art of Medicine	Our AMA supports for the Ganske Compromise and discourages the medical community from soliciting patents on medical methodology. (BOT Action in response to referred for decision Res. 223, A-03; Modified: CSAPH Rep. 1, A-13)	Sunset this policy. AMA Code of Medical Ethics 7.2.3 Patents & Dissemination of Research Products, modified in 2017, captures the intent of this older policy.
H-520.986	The Future of Genito-Urinary Treatment and Research	1. Our AMA supports legislation and/or regulations to ensure both Active Duty members of the Armed Forces and Veterans suffering from genito-urinary injuries receive the best possible surgical and mental health care. 2. Our AMA, in consultation with relevant medical specialty societies, will promote the study of genito-urinary trauma in members of the Armed Forces and Veterans to improve the diagnosis, prevention and treatment of genito-urinary injuries. (Res. 227, A-13)	Retain – this policy remains relevant.
H-60.959	Uniformity of State Adoption and Child Custody Laws	The AMA urges: (1) state medical societies to support the adoption of a Uniform Adoption Act that places the best interest of the child as the most important criteria; (2) the National Conference of Commissioners on Uniform State Laws to include mandatory pre-consent counseling for birth parents as part of its proposed Uniform Adoption Act; and (3) state medical societies to support adoption of child custody statutes that place the "best interest of the child" as the most important criterion determining custody, placement, and adoption of children. (Sub. Res. 219, I-93; Reaffirmed: BOT Rep. 28, A-03; Reaffirmed: BOT Rep. 28, A-13)	Sunset this policy. The Uniform Adoption Act was retired as an act of the Uniform Law Commission (ULC, previously known as the National Conference of Commissioners on Uniform State Laws) in July 2017. According to ULC meeting minutes, the ULC discontinued the uniform act because it had only been adopted by one state and contained outdated provisions.
H-60.969	Childhood Immunizations	1. REPORT OF THE BOARD OF TRUSTEES

B of T Report 11-A-23

Subject: HPSA and MUA Designation For SNFs (Resolution 224-A-22)

Presented by: Sandra Adamson Fryhofer, MD, Chair

Referred to: Reference Committee B

At the June 2022 Annual Meeting, the House of Delegates referred Resolution 224-A-22, "HPSA and MUA Designation for SNFs," sponsored by the Society for Post-Acute and Long-Term Care Medicine (AMDA). Resolution 224-A-22 asked the American Medical Association (AMA) to advocate for legislative action directing the U.S. Department of Health and Human Services (HHS) to "designate all skilled nursing facilities (SNFs), irrespective of their geographic location, as health professional shortage areas (HPSAs) and/or medically underserved areas (MUAs) to facilitate recruitment and retention of health professionals using the usual and customary support made available for such designations."

Testimony regarding this resolution was generally positive, highlighting the benefits of HPSA and MUA designations to areas in need of additional health care resources. Testimony indicated that, due to a rapidly aging population (along with the lack of commensurate increases in medical school and residency positions, early retirement of health care professionals from burnout and the pandemic, and a lack of direct incentives to practice in senior living communities), there is an acute shortage of health care professionals, including physicians, nurses, and clinical practitioners in nursing facilities. Testimony also indicated that the AMA has ample policy that supports legislation to address the need to enhance resources for physicians practicing in rural counties and other areas where the poverty rate exceeds a certain threshold. In addition, testimony stated that AMA policy includes clear instruction for the AMA to support legislation and encourage federal and state governments to provide financial assistance to assist physician practices in shortage areas. Due to the mixed testimony provided, Resolution 224-A-22 was referred. This report focuses on physician shortages in the U.S. and the need to incentivize physicians to practice in nursing facilities and to facilitate recruitment and retention of health professionals in these settings.

BACKGROUND

Physician shortage is a significant issue in the U.S. To address this issue, the federal government developed HPSA and MUA designations used to identify areas and population groups that experience physician shortages and to improve access to health care for patients in these areas. It is projected that by 2032 there will be a 50 percent growth in the population of those aged 65 and older, compared with only a 3.5 percent growth for those aged 18 or younger.[1] By 2033 it is estimated that there will be a shortage of between 54,100 and 139,000 physicians, which includes a projected primary care physician shortage of between 21,400 and 55,200, as well as a shortage of non-primary care specialty physicians of between 33,700 and 86,700.[2] Furthermore, the COVID-19 pandemic put an incredible strain on our health care system and drastically exacerbated physician shortages in many rural and underserved areas across the country, which forced states to take

extraordinary measures such as recalling retired physicians, expanding scope of practice, and temporarily amending out of state licensing laws.[3] However, none of these adjustments are expected to permanently fill the physician shortage gap in the long term.

HEALTH PROFESSIONAL SHORTAGE AREAS AND MEDICALLY UNDERSERVED AREAS

HPSAs are intended to improve access to health care in areas, population groups, or facilities within the U.S. that experience physician shortages. This designation allows physicians to gain eligibility for financial incentives, such as loan repayment and scholarships, that can help attract and retain physicians in rural and underserved areas, which typically experience physician shortages. However, according to a report by the Government Accountability Office (GAO), only about one-third of primary care shortage areas were designated as HPSAs as of 2019.[4]

MUAs, like HPSAs, allow physicians to be eligible for financial incentives, such as loan repayment and scholarships, to help attract and retain physicians in shortage areas. In addition, MUAs can increase the availability of primary care services in areas with high poverty rates. Similar to HPSAs, MUAs may not cover all shortage areas and the financial incentives may not be enough to attract and retain physicians.

ADDITIONAL CONSIDERATIONS

To provide financial incentives for physicians who work in shortage areas, several programs have been implemented to address the financial burden of medical education, which is a major barrier to physicians choosing to work in shortage areas. In addition, the federal government has implemented several programs to incentivize physicians and other health care providers to work in underserved areas and with underserved populations.

Incentivizing Physicians and Medical Students

The National Health Service Corps (NHSC) is a federal program that provides scholarships to medical students starting at the beginning of medical school, and loan repayment post completion of residency training in a primary care specialty, for a minimum of two years commitment work in HPSAs throughout the United States and United States territories. The NHSC also has scholarship and loan repayment programs for dentists, nurse practitioners, nurse midwives, and physician assistants.[5] In addition to the NHSC, the Indian Health Service (IHS) is a federal program that provides loan repayment and housing assistance to physicians and other health care providers who work in Indian Health Service facilities. The IHS is intended to improve the health status of American Indian and Alaska Native people by increasing access to health care services.[6]

To incentivize medical students, some medical schools offer scholarships to students who commit to working in underserved areas after graduation. For example, the University of Washington School of Medicine offers the WWAMI (Washington, Wyoming, Alaska, Montana, and Idaho) program, which provides scholarships to medical students who commit to certain states that experience physician shortages after graduation.[7] In addition, medical schools may partner with health care facilities in underserved areas to provide clinical experiences for students, which can help attract and retain health care professionals.

J-1 AND H-1B VISAS

As a strategy to help provide additional physicians, international medical graduates (IMGs) often work in rural and underserved areas.[8] In 2017, nearly 30 percent of medical residents were IMGs, with about half working as physicians on non-immigrant visas.[9] The AMA recognizes that it is important to support and create pathways for these physicians to be able to remain in the U.S. and care for their patients.

J-1 visas attract foreign medical graduates with the needed expertise to work in nursing facilities and assisted living facilities where they can help improve the quality of care for patients. By expanding the J-1 visa program to include geriatrics and post-acute and long-term care as designated areas of need, the U.S. can attract more qualified physicians to work in these care settings keeping in mind that J-1 visa programs must have language requirements to ensure that clinicians have a sufficient level of proficiency in English to communicate effectively with patients and other health care workers.

H-1B visas are a type of temporary work visa that allow foreign workers to enter and work in the U.S. in specialty occupations. In health care, this can include physicians who have completed their medical training outside the U.S. and want to practice in the U.S. H-1B visa programs can be effective in addressing the shortage of qualified clinicians in nursing facilities and assisted living, particularly in underserved areas.

LOAN FORGIVENESS INCENTIVES

Loan forgiveness programs can be an effective way to incentivize clinicians to work in nursing facilities. These programs provide financial assistance to clinicians in exchange for a commitment to work in an underserved area. By providing financial incentives, loan forgiveness programs can help address physician shortages in nursing and assisted living facilities.

AMA POLICY

AMA policy supports legislation to extend the 10 percent Medicare payment bonus to physicians practicing in rural counties and other areas where the poverty rate exceeds a certain threshold, regardless of the areas' HPSA status (Policy H-465.981, "Enhancing Rural Physician Practices"). The same policy supports legislation that would allow physician practices in shortage areas to qualify as Rural Health Clinics without the need to employ one or more physician extenders and directs the AMA to undertake a study of structural urbanism, federal payment polices, and the impact on rural workforce disparities. This policy recognizes that many rural and low-income areas may have difficulty attracting and retaining physicians with specialized training, including geriatricians, and seeks to address this issue through targeted financial and non-incentives. Additionally, Policy H-200.972, "Primary Care Physicians in Underserved Areas", provides a plan for the AMA to improve the recruitment and retention of physicians in underserved areas with underserved populations and can also help to address the shortage of physicians, including those with geriatrics training, in these areas.

AMA policy also supports efforts to quantify the geographic maldistribution and physician shortage in many specialties and encourages medical schools and residency programs to consider developing admissions policies, practices, and targeted educational efforts aimed at attracting physicians to practice in shortage areas and to provide care to underserved populations; encourages medical schools and residency programs to continue to provide courses, clerkships, and longitudinal experiences in rural and other shortage areas as a means to support educational

program objectives and to influence the choice of graduates' practice locations; and encourages medical schools to include criteria and processes in the admission of medical students that are predictive of graduates' eventual practice in shortage areas and with underserved populations (Policy H-200.954, "US Physician Shortage.")

AMA policy also supports full appropriation for the NHSC Scholarship Program, with the provision that medical schools serving states with large rural and underserved populations have a priority and significant voice in the selection of recipients for those scholarships (Policy H-465.988, "Educational Strategies for Meeting Rural Health Physician Shortage.")

DISCUSSION

The shortage of physicians and other qualified clinicians in skilled nursing facilities and assisted living facilities is a growing problem that has a significant impact on patient care. Patients in these settings often have complex medical needs and require specialized care from physicians with expertise in geriatrics and post-acute and long-term care (PALTC). Increasing the supply of qualified physicians (e.g. geriatricians) to SNFs will help to improve the quality of care provided, decrease medical errors, and improve outcomes as the need for physicians with additional training in geriatrics and PALTC continues to grow as the population ages.

Further, improving care in underserved areas and populations is a critical issue in our country. However, designating all SNFs, irrespective of their geographic location, as a HPSA or MUA would be a fundamental shift away from viewing geographic areas and populations as a designation criteria to looking at a specific type of facility, including facilities that may be located outside a HPSA/MUA or facilities that are not financially disadvantaged. Also, the goal of the resolution looks beyond facilitating the recruitment and retention of physicians to potentially extend the HPSA/MUA incentive to non-physicians. AMA policy supports a physician-led team with regard to mid-level trained health care workers such as nurse practitioners, nurse midwives, and physician assistants.

Under the current system, HPSA and MUA designations are a valuable tool for identifying areas with a shortage of physicians and other health care providers, which can help allocate resources to improve access to health care services. Rather than designating a specific type of facility, such as SNFs, they provide a broader framework for addressing health care disparities and physician shortage issues. Regarding scope of practice concerns, SNFs often rely on a team-based approach to care, which includes physicians, nurse practitioners, and other health care professionals. However, without a physician leading the care team, there is a risk that the overall quality of care as well as resident training may suffer. Physicians play a critical role in providing guidance and oversight to the care team, ensuring that residents receive appropriate training and education. In this regard, it is important to note that, to the extent that SNF patients are in a HPSA, MUA, or generally in an underserved area, the AMA already has policy[10] in place to incentivize physicians to practice in those areas.

CONCLUSION

The Board of Trustees (Board) recognizes that the shortage of physicians in SNFs is a critical issue and shares the goal of ensuring that patients in SNFs receive high-quality care and believes that Resolution 224-A-22 provides another example of how the shortage of physicians is impacting patient access to care, including in SNFs. However, the solution offered in this resolution would fundamentally change how shortage areas and underserved populations are determined and raises scope of practice concerns. As discussed above, the AMA has existing policy that more broadly

addresses the physician shortage issue and can be applied in a way to address the shortage of physicians practicing in SNFs. These policies include efforts to quantify geographic maldistribution, encourage medical schools and residency programs to provide courses and experiences in underserved areas, and support the NHSC Scholarship Program. The Board, therefore, recommends reaffirmation of existing policy in lieu of adopting Resolution 224-A-22.

RECOMMENDATIONS

The Board of Trustees recommends that the following policies be reaffirmed in lieu of Resolution 224-A-22, and the remainder of the report be filed:

1. That our AMA reaffirm Policy H-465.981, which asks our AMA to:
   a. support legislation to extend the 10% Medicare payment bonus to physicians practicing in rural counties and other areas where the poverty rate exceeds a certain threshold, regardless of the areas' Health Professional Shortage Area (HPSA) status;
   b. encourage federal and state governments to make available low interest loans and other financial assistance to assist physicians with shortage area practices in defraying their costs of compliance with requirements of the Occupational Safety and Health Administration, Americans with Disabilities Act and other national or state regulatory requirements;
   c. explore the feasibility of supporting the legislative and/or regulatory changes necessary to establish a waiver process through which shortage area practices can seek exemption from specific elements of regulatory requirements when improved access, without significant detriment to quality, will result;
   d. supports legislation that would allow shortage area physician practices to qualify as Rural Health Clinics without the need to employ one or more physician extenders; and
   e. undertake a study of structural urbanism, federal payment polices, and the impact on rural workforce disparities. (Reaffirm HOD Policy)

2. That our AMA reaffirm Policy H-200.972, "Primary Care Physicians in Underserved Areas", which provides a plan for the AMA to improve the recruitment and retention of physicians in underserved areas with underserved populations. (Reaffirm HOD Policy)

3. That our AMA reaffirm Policy H-280.979, which asks our AMA to support the following:
   a. continuing discussion with CMS to improve Medicare reimbursement to physicians for primary care services, specifically including nursing home and home care medical services;
   b. continued efforts to work with the Federation to educate federal and state legislative bodies about the issues of quality from the perspective of attending physicians and medical directors and express AMA's commitment to quality care in the nursing home;
   c. efforts to work with legislative and administrative bodies to assure adequate payment for routine visits and visits for acute condition changes including the initial assessment and ongoing monitoring of care until the condition is resolved; and
   d. assisting attending physicians and medical directors in the development of quality assurance guidelines and methods appropriate to the nursing home setting.
   (Reaffirm HOD Policy)

4. That our AMA reaffirm Policy D-200.980, which asks our AMA to advocate for the following:
   a. Continued federal and state support for scholarship and loan repayment programs, including the National Health Service Corps, designed to encourage physician practice in underserved areas and with underserved populations;
   b. Permanent reauthorization and expansion of the Conrad State 30 J-1 visa waiver program;

c. Adequate funding for programs under Title VII of the Health Professions Education Assistance Act that support educational experiences for medical students and resident physicians in underserved areas; and
d. Encourages medical schools and their associated teaching hospitals, as well as state medical societies and other private sector groups, to develop or enhance loan repayment or scholarship programs for medical students or physicians who agree to practice in underserved areas or with underserved populations.
(Reaffirm HOD Policy)

5. That our AMA reaffirm Policy H-200.954, which encourages medical schools and residency programs to consider developing admissions policies and practices and targeted educational efforts aimed at attracting physicians to practice in underserved areas and to provide care to underserved populations. (Reaffirm HOD Policy)

6. That our AMA reaffirm Policy H-465.988, which provides educational strategies for meeting rural health physician shortages. (Reaffirm HOD Policy)

Fiscal Note: Less than $5000.

REPORT OF THE BOARD OF TRUSTEES

B of T Report 12-A-23

Subject:	Promoting Proper Oversight and Reimbursement for Specialty Physician Extenders and Non-Physician Practitioners (Resolution 248-A-22)
Presented by:	Sandra Adamson Fryhofer, MD, Chair
Referred to:	Reference Committee B

INTRODUCTION

At the 2022 Annual Meeting, the American Medical Association (AMA) House of Delegates (HOD), referred Resolution 248-A-22 for report at the 2023 Annual Meeting. The resolution was introduced by the Organized Medical Staff Section and asks:

> [That] our AMA work with state medical boards to improve oversight and coordination of the work done with physician extenders and non-physician practitioners (Directive to Take Action); and be it further
>
> That our AMA adopt the position that Boards of Medical Examiners or its equivalent in each state should have oversight of cases involving specialty care as boards with oversight over physician extenders and non-physician practitioners do not have the training to oversee specialty care (New HOD Policy); and be it further
>
> That our AMA adopt the position that in each state the Board of Medical Examiners or its equivalent should have oversight over physician extenders and non-physician practitioners if billing independently or in independent practice as their respective oversights boards do not have experience providing accurate oversight for specialty care (New HOD Policy).

The Reference Committee heard that our AMA has existing policy and model state legislation that addresses physician supervision of non-physicians, state medical board oversight of physician-led teams, and medical board oversight of physician agreements with non-physicians. This policy, H-35.965, "Regulation of Physician Assistants," H-35.989, "Physician Assistants," and H-360.987, "Principles Guiding AMA Policy Regarding Supervision of Medical Care Delivered by Advanced Practice Nurses in Integrated Practice," not only addresses the first Resolve, but also the sentiment of the entire resolution. Further, there was overall agreement that the intent of the second Resolve was unclear, yet the Board of Trustees notes that clarification was not provided during testimony. Finally, the HOD generally supported the concept of the third Resolve but agreed it was too broad as written. The Reference Committee, as a result, recommended that an alternative resolution be adopted in lieu of Resolution 248. The alternative resolution, offered by our AMA Council on Legislation, sought to focus the language, achieve the goal of the third Resolve, and add to existing AMA policy. Due to the complexity of the issue, the HOD referred Resolution 248 for a report back at the 2023 Annual Meeting.

This report provides background information on the role of health care regulatory boards, including but not limited to state medical boards and boards of nursing. Moreover, this report discusses current state laws allowing for joint oversight of certified nurse practitioners and certified nurse midwives by the state boards of medicine and nursing. This report also includes a summary of AMA policy and model state legislation that supports joint regulatory board oversight of advanced practice registered nurses (APRNs). Finally, this report recommends reaffirmation of existing AMA Policy, H-35.965, "Regulation of Physician Assistants," as well as an amendment to AMA Policy H-360.987, "Principles Guiding AMA Policy Regarding Supervision of Medical Care Delivered by Advanced Practice Nurses in Integrated Practice" by addition and deletion.

BACKGROUND

The role of occupational boards

The licensing and regulation of health care professionals is within the purview of state occupational and regulatory boards. Health care professional regulatory boards ensure that only individuals meeting the minimal qualifications and competencies can obtain a license to practice in the profession. Typically state legislatures or regulatory boards set forth the standards required to obtain a license, such as graduation from an accredited educational program and the requisite degree, certification, passage of a professional examination, and completion of a background check. These measures are in place to protect the public from unqualified health care professionals through licensure. Regulatory boards also ensure that the health care professionals whom they license practice within the applicable standard(s) of care and the scope of practice of their profession. As such, regulatory boards also have the authority to investigate and discipline their licensees who fail to meet these standards.

The role of medical boards

The primary role of a state medical board is to protect the health and safety of the public by licensing physicians, investigating complaints, and disciplining physicians based on the state medical practice act. There are currently 71 state and territorial medical boards, including more than 50 allopathic (MD) and composite (MD and DO) medical boards and 14 osteopathic (DO) boards. In addition to licensing physicians, state medical boards also license several non-physicians, such as physician assistants, podiatrists, chiropractors, respiratory therapists, occupational therapists, genetic counselors, radiologist assistants, certified anesthesiologist assistants, naturopaths, and acupuncturists. The types of non-physicians licensed and regulated by state medical boards varies widely by state.

Regulatory oversight of non-physicians

Non-physicians may be regulated directly by a state medical board, through an advisory committee to a state medical board, or by an entirely separate licensing board. For example, while physician assistants are licensed and regulated by the board of medicine in most states, a few states have a separate physician assistant licensing board, and some states have a physician assistant advisory committee under the board of medicine. Similarly, naturopaths are typically licensed by a separate naturopathic board or the board of medicine in states that license naturopaths. Likewise, acupuncturists may be licensed by the board of medicine or a separate board of acupuncture. In contrast, in most states, psychologists are licensed and regulated by a separate board of psychology, and pharmacists are licensed by the board of pharmacy in each state.

In most states, certified nurse practitioners, certified nurse midwives, certified registered nurse anesthetists, and clinical nurse specialists, often referred to collectively as "Advanced Practice Registered Nurses" (APRNs) are licensed and regulated exclusively by the board of nursing. Every state has at least one nursing regulatory board and four states (California, Georgia, Louisiana and West Virginia) have two nursing boards: one that regulates registered nurses and one that regulates licensed practical nurses and vocational nurses. At least one state, Nebraska, has a board for registered nurses and a separate board for APRNs. Certified nurse midwives, a type of APRN, are regulated by the board of nursing in most states. At least one state, however, has a separate midwifery board responsible for regulating certified nurse midwives and certified professional midwives. In other states, certified nurse midwives may be regulated by the board of medicine or public health, often with a midwifery advisory committee or council.

Similarly, in several states the board of medicine and board of nursing have joint regulation of nurse practitioners and other types of APRNs. For example, in Virginia, nurse practitioners are jointly licensed by the Virginia Boards of Medicine and Nursing. Other states have created a separate joint board for regulatory oversight of nurse practitioners practicing independently. For example, in Arkansas, the Full Independent Credentialing Committee (committee) located in the Department of Health, reviews and approves all applications for nurse practitioners who have met the standards for independent practice and apply for a certificate of full independent practice authority. The committee is comprised of four physicians and four nurse practitioners. In addition to approving or denying all applications, the committee is also responsible for reviewing complaints against nurse practitioners who have a certificate. Finally, in several states, the boards of medicine and nursing have joint oversight of some aspect of advanced practice registered nursing. For example, the Alabama Board of Medical Examiners and Board of Nursing jointly approve collaborative practice agreements between physicians and certified nurse midwives or physicians and certified nurse practitioners.

EXISTING AMA MODEL STATE LEGISLATION AND POLICY

AMA model state legislation

The AMA's "Model Act to Support Physician-Led Team Based Health Care" (Model Act) includes a provision stating that APRNs shall be jointly licensed and regulated by the state board of medicine and board of nursing. The Model Act provides a joint regulatory framework and practice parameters including a requirement that the APRN practice as part of a physician-led patient care team.

AMA policy

The AMA also has existing Policy H-35.965, "Regulation of Physician Assistants," that supports the "authority of medical licensing and regulatory boards to regulate the practice of medicine through oversight of physicians, physician assistants and related medical personnel" and "opposes legislative efforts to establish autonomous regulatory boards meant to license, regulate and discipline physician assistants outside of the existing state medical licensing and regulatory bodies' authority and purview." AMA Policy H-35.989, "Physician Assistants," indicates that state medical boards shall approve physician assistant applications to practice with a licensed physician or group of physicians and provides parameters for such applications. AMA Policy H-360.987, "Principles Guiding AMA Policy Regarding Supervision of Medical Care Delivered by Advanced Practice Nurses in Integrated Practice," states in part that "[p]hysicians should encourage state medical and nursing boards to explore the feasibility of working together to coordinate their regulatory initiatives and activities."

DISCUSSION

Our AMA has existing policy, H-35.965, "Regulation of Physician Assistants," and H-35.989, "Physician Assistants," supporting the licensure and regulatory oversight of physician assistants by state medical boards. These two policies support the current regulatory structure in most states, are aligned with AMA's scope of practice advocacy, and address the sentiment of Resolution 248.Our AMA also has policy encouraging state medical and nursing boards to explore working together to coordinate their regulatory activities, H-360.987, "Principles Guiding AMA Policy Regarding Supervision of Medical Care Delivered by Advanced Practice Nurses in Integrated Practice." While this language provides the basis for a joint state medical and nursing board regulatory model, the Board of Trustees believes these policies should be strengthened to affirmatively support joint state medical and nursing board licensing and regulatory oversight of certified nurse practitioners, certified registered nurse anesthetists, certified nurse midwives, and clinical nurse specialists, when appropriate. The Board of Trustees believes the proffered amendment provides clarity as to the appropriate role of state medical boards in regulating the practice of APRNs seeking scope expansions.

As discussed above, there is precedent in state law for joint state medical and nursing board regulatory oversight of APRNs. Moreover, AMA's Model Act also includes language supporting a joint medical and nursing board regulatory structure. The AMA will continue to work with state, specialty and national medical societies interested in pursuing AMA's Model Act.

RECOMMENDATIONS

The Board of Trustees recommends that the following recommendations be adopted in lieu of Resolution 248-A-22 and that the remainder of the report be filed.

1. That our American Medical Association (AMA) reaffirm existing Policy H-35.965, "Regulation of Physician Assistants," and H-35.989, "Physician Assistants." (Reaffirm HOD Policy)

2. That Policy H-360.987, "Principles Guiding AMA Policy Regarding Supervision of Medical Care Delivered by Advanced Practice Nurses in Integrated Practice" be amended by addition and deletion as follows:

   (5) ~~Physicians should encourage~~ Certified nurse practitioners, certified registered nurse anesthetists, certified nurse midwives, and clinical nurse specialists shall be licensed and regulated jointly by the state medical and nursing boards ~~explore the feasibility of working together to coordinate their regulatory initiatives and activities~~. (Modify Current HOD Policy)

Fiscal Note: Less than $500.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 201
(A-23)

Introduced by: American Association of Clinical Urologists, American Urological Association

Subject: Pharmacists Prescribing for Urinary Tract Infections

Referred to: Reference Committee B

Whereas, American Medical Association Policy D-35.987 Evaluation of the Expanding Scope of Pharmacist's Practice opposes federal and state legislation allowing pharmacists to independently prescribe or dispense prescription medication without a valid order by, or under supervision of a licensed doctor of medicine, osteopathy, dentistry or podiatry; and

Whereas, In 2022/2023 several states including Virginia, Oklahoma, Connecticut, Mississippi, New Mexico and Montana introduced bills to their state legislatures allowing pharmacists to order, test, screen, and treat many health conditions including urinary tract infections; and

Whereas, The diagnosis of urinary tract infections can be extremely nuanced and is one of the most erroneously diagnosed conditions for which physicians are consulted; and

Whereas, Underdiagnosis of the severity of urinary tract infections may miss important associated clinical situations such as: kidney or ureteral stones, ureteropelvic junction obstruction, malignant obstruction, etc., which can lead to urinary sepsis and death; and

Whereas, Misdiagnosis of genitourinary symptoms such as dysuria, pain, or blood in the urine as a common urinary tract infection may miss non-infectious conditions such as interstitial cystitis, overactive bladder, neurogenic bladder, multiple sclerosis, cancer, etc.; and

Whereas, Pharmacists may not recognize clinical symptoms indicating the presence of foreign bodies within the urinary system, infectious stones, urinary fistulae or diverticula, etc.; and

Whereas, Urinary tract infections are also one of the most significant sources of antibiotic resistance due to inappropriately prescribed antibiotics. The inability to follow resistance patterns and trends in laboratory results impairs the ability of pharmacists to appropriately prescribe antibiotics; and

Whereas, AUA guidelines recommend treating urinary tract infections based on a complete patient evaluation including history, pertinent physical examination, appropriate laboratory evaluation and physician follow-up; and

Whereas, Physicians possess the knowledge, training, experience, and tools to responsibly prescribe antibiotics for urinary tract infections without adding to the ongoing issue of bacterial resistance; therefore be it

RESOLVED, That our American Medical Association collaborate with relevant stakeholders including state and specialty societies to oppose legislation or regulation allowing pharmacists to test, diagnose, and treat urinary tract infections (Directive to Take Action); and be it further

RESOLVED, That our AMA advocate that inappropriate treatment of urinary tract infections with antibiotics is a public health concern which can lead to further bacterial antibiotic resistance. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 3/14/23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 202
(A-23)

Introduced by: Medical Student Section

Subject: Support for Mental Health Courts

Referred to: Reference Committee B

Whereas, "Mental health courts" are correctional diversion and rehabilitation programs used by state and local courts to support individuals with mental illness in the justice system[1-7]; and

Whereas, Mental health courts connect individuals with mental illness to mental health treatment, as an alternative to incarceration or other legal sentences and penalties[1-7]; and

Whereas, Two pieces of federal Congressional legislation, the America's Law Enforcement and Mental Health Project of 2000 and the Mentally Ill Offender Treatment and Crime Reduction Act of 2004 (MIOTCRA), were enacted to improve the use of mental health personnel and resources in the justice system and to establish grants to fund mental health court programs[8-9]; and

Whereas, The continued funding of MIOTCRA programs over the last two decades has been dependent on Congressional appropriations[10]; and

Whereas, The US Substance Abuse and Mental Health Services Administration (SAMHSA) in the Department of Health and Human Services and the US Bureau of Justice Assistance (BJA) in the Department of Justice administer grants to fund state and local mental health courts[11,12]; and

Whereas, Research demonstrates that mental health courts appear to be associated with reductions in recidivism, length of incarceration, severity of charges, risk of violence, and rehospitalization among individuals with mental illness in the justice system[3,13-26]; and

Whereas, SAMHSA published a 2015 report noting that because "the vast majority of individuals who come into contact with the criminal justice system appear" before municipal courts and "many of these individuals have mental illness and co-occurring substance use disorders," municipal courts may be an especially effective "and often overlooked" method of diversion of individuals with mental illness from the justice system[26]; and

Whereas, In addition to SAMHSA and BJA, several nonprofit advocacy organizations, including Mental Health America, the National Alliance on Mental Illness, the Treatment Advocacy Center, the National Sheriffs' Association, the Council on State Governments, and the National Center for State Courts, support the use of mental health courts[2,27-32]; and

Whereas, While several hundred mental health courts exist across all 50 states, mental health courts do not exist in all counties and localities, indicating that these programs may not be accessible or available to all individuals who could benefit from them[4]; and

Whereas, Because mental health courts are dependent on participation from national, state, and local governmental agencies, justice systems, and mental health service organizations and on the appropriation of public funds, including federal monies for MIOTCRA programs and grants administered by SAMHSA and BJA[10-12], the AMA can play a role in advocating for the continued support and funding of mental health courts by policymakers; and

Whereas, Courts that connect individuals with mental illness to treatment as an alternative to incarceration exist under many different names, with each focused on different types of mental illness, including "mental health courts" (for mental illness in general), "drug courts" (for substance use disorders), and "sobriety" or "sober courts" (for alcohol use disorder and sometimes certain other substance use disorders)[32-35]; and AMA policy should be inclusive of all these different types; and

Whereas, Existing AMA Policy H-100.955 (passed at A-12) established support for drug courts, which are similar in function to mental health courts but narrower in scope, "for individuals with addictive disease who are convicted of nonviolent crimes"; and

Whereas, Existing AMA Policy H-510.979 (passed at I-19) established support for veteran courts, which are similar in function to mental health courts but narrower in scope, "for veterans who commit criminal offenses that may be related to a neurological or psychiatric disorder"; and

Whereas, At I-19, HOD Reference Committee B originally recommended amending Resolution 202 on veteran courts to limit their use to only nonviolent offenses, to be consistent with previous Policy H-100.955 on drug courts[36-37]; and

Whereas, At I-19, despite the Reference Committee B recommendation, Resolution 202 was extracted in our HOD to remove the restriction on only using veteran courts for nonviolent offenses, and our HOD ultimately passed Policy H-510.979 such that veteran courts could potentially be used for criminal offenses in general and not only for nonviolent offenses[36]; and

Whereas, To be consistent with our HOD's most recent debate on this matter, Policy H-100.955 on drug courts and any future AMA policy on alternatives to incarceration for individuals with mental illness should not be limited to only nonviolent offenses; therefore be it

RESOLVED, That American Medical Association Policy H-100.955, Support for Drug Courts, be amended by addition and deletion as follows:

Support for Mental Health ~~Drug~~ Courts, H-100.955
Our AMA: (1) supports the establishment and use of mental health ~~drug~~ courts, including drug courts and sobriety courts, as an effective method of intervention within a comprehensive system of community-based supports and services for individuals with mental illness involved in the justice system ~~addictive disease who are convicted of nonviolent crimes~~; (2) encourages legislators to establish mental health ~~drug~~ courts at the state and local level in the United States; and (3) encourages mental health ~~drug~~ courts to rely upon evidence-based models of care for those who the judge or court determine would benefit from intervention rather than incarceration. (Modify Current HOD Policy)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Support for Drug Courts H-100.955
Our AMA: (1) supports the establishment of drug courts as an effective method of intervention for individuals with addictive disease who are convicted of nonviolent crimes; (2) encourages legislators to establish drug courts at the state and local level in the United States; and (3) encourages drug courts to rely upon evidence-based models of care for those who the judge or court determine would benefit from intervention rather than incarceration.
Citation: Res. 201, A-12; Appended: BOT Rep. 09, I-19;

Support for Veterans Courts H-510.979
Our AMA supports the use of Veterans Courts as a method of intervention for veterans who commit criminal offenses that may be related to a neurological or psychiatric disorder.
Citation: Res. 202, I-19;

Maintaining Mental Health Services by States H-345.975
Our AMA:
1. supports maintaining essential mental health services at the state level, to include maintaining state inpatient and outpatient mental hospitals, community mental health centers, addiction treatment centers, and other state-supported psychiatric services;
2. supports state responsibility to develop programs that rapidly identify and refer individuals with significant mental illness for treatment, to avoid repeated psychiatric hospitalizations and repeated interactions with the law, primarily as a result of untreated mental conditions;
3. supports increased funding for state Mobile Crisis Teams to locate and treat homeless individuals with mental illness;
4. supports enforcement of the Mental Health Parity Act at the federal and state level; and
5. will take these resolves into consideration when developing policy on essential benefit services.
Citation: Res. 116, A-12; Reaffirmation A-15; Reaffirmed: Res. 414, A-22;

AMA Support for Justice Reinvestment Initiatives H-95.931
Our AMA supports justice reinvestment initiatives aimed at improving risk assessment tools for screening and assessing individuals for substance use disorders and mental health issues, expanding jail diversion and jail alternative programs, and increasing access to reentry and treatment programs.
Citation: Res. 205, A-16;

Prevention of Impaired Driving H-30.936
Our AMA: (1) acknowledges that all alcohol consumption, even at low levels, has a negative impact on driver skills, perceptions, abilities, and performance and poses significant health and safety risks; (2) supports 0.04 percent blood-alcohol level as per se illegal for driving, and urges incorporation of that provision in all state drunk driving laws; and (3) supports 21 as the legal drinking age, strong penalties for providing alcohol to persons younger than 21, and stronger penalties for providing alcohol to drivers younger than 21.

Education: Our AMA: (1) favors public information and education against any drinking by drivers; (2) supports efforts to educate physicians, the public, and policy makers about this issue and urges national, state, and local medical associations and societies, together with public health, transportation safety, insurance, and alcohol beverage industry professionals to renew and strengthen their commitment to preventing alcohol-impaired driving; (3) encourages physicians to participate in educating patients and the public about the hazards of chemically impaired driving; (4) urges public education messages that now use the phrase "drunk driving," or make reference to the amount one might drink without fear of arrest, be replaced with messages that indicate that "all alcohol use, even at low levels, impairs driving performance and poses significant health and safety risks;" (5) encourages state medical associations to participate in educational activities related to eliminating alcohol use by adolescents; and (6) supports and encourages programs in elementary, middle, and secondary schools, which provide information on the dangers of driving while under the influence of alcohol, and which emphasize that teenagers who drive should drink no alcoholic beverages whatsoever; and will continue to work with private and civic groups such as Mothers Against Drunk Driving (MADD) to achieve those goals.
Legislation: Our AMA: (1) supports the development of model legislation which would provide for school education programs to teach adolescents about the dangers of drinking and driving and which would mandate the following penalties when a driver under age 21 drives with any blood alcohol level (except for minimal blood alcohol levels, such as less than .02 percent, only from medications or religious practices): (a) for the first offense - mandatory revocation of the driver's license for one year and (b) for the second offense - mandatory revocation of the driver's license for two years or until age 21, whichever is greater; (2) urges state medical associations to seek enactment of the legislation in their legislatures; (3) urges all states to pass legislation mandating all drivers convicted of first and multiple DUI offenses be screened for alcoholism and provided with referral and treatment when indicated; (4) urges adoption by all states of legislation calling for administrative suspension or revocation of driver licenses after conviction for driving under the influence, and mandatory revocation after a specified number of repeat offenses; and (5) encourages passage of state traffic safety legislation that mandates screening for substance use disorder for all DUI offenders, with those who are identified with substance use disorder being strongly encouraged and assisted in obtaining treatment from qualified physicians and through state and medically certified facilities.
Treatment: Our AMA: (1) encourages that treatment of all convicted DUI offenders, when medically indicated, be mandated and provided but in the case of first-time DUI convictions, should not replace other sanctions which courts may levy in such a way as to remove from the record the occurrence of that offense; and (2) encourages that treatment of repeat DUI offenders, when medically indicated, be mandated and provided but should not replace other sanctions which courts may levy. In all cases where treatment is provided to a DUI offender, it is also recommended that appropriate adjunct services should be provided to or encouraged among the family members actively involved in the offender's life;
Repeat Offenders: Our AMA: (1) recommends the following measures be taken to reduce repeat DUI offenses: (a) aggressive measures be applied to first-time DUI offenders (e.g., license suspension and administrative license revocation), (b) stronger penalties be leveled against repeat offenders, including second-time offenders, (c) such legal sanctions must be linked, for all offenders, to substance abuse assessment and treatment services, to prevent future deaths in alcohol-related crashes and multiple DUI offenses; and (2) calls upon the states to coordinate law enforcement, court system, and motor vehicle departments to implement forceful and swift penalties for second-time DUI convictions to send the message that those who drink and drive might receive a second chance but not a third.
On-board devices: Our AMA: (1) supports further testing of on-board devices to prevent the use of motor vehicles by intoxicated drivers; this testing should take place among the general population of drivers, as well as among drivers having alcohol-related problems; (2) encourages motor vehicle manufacturers and the U.S. Department of Transportation to monitor the development of ignition interlock technology, and plan for use of such systems by the general population, when a consensus of informed persons and studies in the scientific literature indicate the systems are effective, acceptable, reasonable in cost, and

safe; and (3) supports continued research and testing of devices which may incapacitate vehicles owned or operated by DUI offenders without needlessly penalizing the offender's family members.
Citation: (CCB/CLRPD Rep. 3, A-14)

E-9.7.2 Court-Initiated Medical Treatment in Criminal Cases
Court-initiated medical treatments raise important questions as to the rights of prisoners, the powers of judges, and the ethical obligations of physicians. Although convicted criminals have fewer rights and protections than other citizens, being convicted of a crime does not deprive an offender of all protections under the law. Court-ordered medical treatments raise the question whether professional ethics permits physicians to cooperate in administering and overseeing such treatment. Physicians have civic duties, but medical ethics do not require a physician to carry out civic duties that contradict fundamental principles of medical ethics, such as the duty to avoid doing harm.
In limited circumstances physicians can ethically participate in court-initiated medical treatments. Individual physicians who provide care under court order should:
(a) Participate only if the procedure being mandated is therapeutically efficacious and is therefore undoubtedly not a form of punishment or solely a mechanism of social control.
(b) Treat patients based on sound medical diagnoses, not court-defined behaviors. While a court has the authority to identify criminal behavior, a court does not have the ability to make a medical diagnosis or to determine the type of treatment that will be administered. When the treatment involves in-patient therapy, surgical intervention, or pharmacological treatment, the physician's diagnosis must be confirmed by an independent physician or a panel of physicians not responsible to the state. A second opinion is not necessary in cases of court-ordered counseling or referrals for psychiatric evaluations.
(c) Decline to provide treatment that is not scientifically validated and consistent with nationally accepted guidelines for clinical practice.
(d) Be able to conclude, in good conscience and to the best of his or her professional judgment, that to the extent possible the patient voluntarily gave his or her informed consent, recognizing that an element of coercion that is inevitably present. When treatment involves in-patient therapy, surgical intervention, or pharmacological treatment, an independent physician or a panel of physicians not responsible to the state should confirm that voluntary consent was given.
Issued: 2016

E-2.1.2 Decisions for Adult Patients Who Lack Capacity
Respect for patient autonomy is central to professional ethics and physicians should involve patients in health care decisions commensurate with the patient's decision-making capacity. Even when a medical condition or disorder impairs a patient's decision-making capacity, the patient may still be able to participate in some aspects of decision making. Physicians should engage patients whose capacity is impaired in decisions involving their own care to the greatest extent possible, including when the patient has previously designated a surrogate to make decisions on his or her behalf.
When a patient lacks decision-making capacity, the physician has an ethical responsibility to:
(a) Identify an appropriate surrogate to make decisions on the patient's behalf:
(i) the person the patient designated as surrogate through a durable power of attorney for health care or other mechanism; or
(ii) a family member or other intimate associate, in keeping with applicable law and policy if the patient has not previously designated a surrogate.
(b) Recognize that the patient's surrogate is entitled to the same respect as the patient.
(c) Provide advice, guidance, and support to the surrogate.
(d) Assist the surrogate to make decisions in keeping with the standard of substituted judgment, basing decisions on:
(i) the patient's preferences (if any) as expressed in an advance directive or as documented in the medical record;
(ii) the patient's views about life and how it should be lived;
(iii) how the patient constructed his or her life story; and
(iv) the patient's attitudes toward sickness, suffering, and certain medical procedures.
(e) Assist the surrogate to make decisions in keeping with the best interest standard when the patient's preferences and values are not known and cannot reasonably be inferred, such as when the patient has not previously expressed preferences or has never had decision-making capacity. Best interest decisions should be based on:
(i) the pain and suffering associated with the intervention;

(ii) the degree of and potential for benefit;
(iii) impairments that may result from the intervention;
(iv) quality of life as experienced by the patient.
(f) Consult an ethics committee or other institutional resource when:
(i) no surrogate is available or there is ongoing disagreement about who is the appropriate surrogate;
(ii) ongoing disagreement about a treatment decision cannot be resolved; or
(iii) the physician judges that the surrogate's decision:
a. is clearly not what the patient would have decided when the patient's preferences are known or can be inferred;
b. could not reasonably be judged to be in the patient's best interest; or
c. primarily serves the interests of the surrogate or other third party rather than the patient.
Issued: 2016

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 203
(A-23)

Introduced by: Medical Student Section

Subject: Drug Policy Reform

Referred to: Reference Committee B

Whereas, In 2019, 197.5 million Americans (71.8%) aged 12 and over used a substance in the past year, with 179 million using alcohol, 72 million using tobacco, and 57.2 million using an illicit drug, including 9.7 million using prescription opioids, 6 million using hallucinogens, 5.9 million using prescription tranquilizers or stimulants, 5.5 million using cocaine, 2 million using methamphetamine, and 745,000 using heroin[1]; and

Whereas, In 2019, 20.4 million Americans (9.7% of those who used a substance in the past year) aged 12 and over met substance use disorder (SUD) criteria, including 14.5 million Americans with alcohol use disorder and 8.3 million with an SUD involving an illicit drug[1]; and

Whereas, The US classifies controlled substances into five schedules, but significant controversy exists over the schedules of certain drugs deemed to have "no medical use," despite research showing that these drugs may have therapeutic potential[2-5]; and

Whereas, Sentences and penalties for federal and state drug offenses vary depending on the drug's schedule, amount of drug, circumstances of arrest, and previous drug convictions and criminal record[6-8]; and

Whereas, Drug possession is defined as being found with an amount of a drug small enough for personal use (as determined by the government) without legal justification[6-8]; and

Whereas, Under federal statute, drug possession is classified as a criminal misdemeanor and can be punishable by up to 1 year imprisonment and/or at least $1,000 in fines for a first-time offense and up to 3 years imprisonment and/or $5,000 in fines for repeat offenses, with greater sentences and penalties depending on amount of drug, previous drug convictions, and criminal record[7-8]; and

Whereas, State statutes are most commonly used to charge people with drug possession and these statutes vary significantly, with many states (including Indiana, Kentucky, and Oklahoma) reclassifying possession from felonies to misdemeanors over the last decade, lowering mandatory minimums, and using savings from reduced incarceration to fund social services, while many other states (such as Idaho, Missouri, and Nebraska) continue to charge possession as felonies often punished with multiple years of imprisonment[9-13]; and

Whereas, In some states, multiple drug felony convictions can result in being charged with a "violent offense," despite no physical violence being committed against any person, which can further increase sentences and penalties and limit eligibility for parole[14]; and

Whereas, Drug possession arrests comprise 10% of all arrests in the US and make up over 80% of all drug offense arrests, and possession arrests drastically increased alongside

changing policies of the War on Drugs from 538,100 in 1982 to over 1.4 million in 2018, even as arrests for drug distribution and manufacture remained relatively stable since 1990[15-16]; and

Whereas, Of the 2.3 million people incarcerated in the US, 450,000 (20%) are incarcerated for "nonviolent drug offenses," including 120,000 unconvicted awaiting trial[16]; and

Whereas, Defelonization refers to the reclassification of an offense from a felony to a misdemeanor, reduces the probability and potential length of imprisonment and decreasing the long-term harms associated with incarceration[17-19]; and

Whereas, "Decriminalization" is distinct from legalization and only refers to the removal of criminal charges associated with drug possession and its reclassification as a civil infraction, which is a prohibited action that results in civil penalties and sanctions against a person[17-20]; and

Whereas, "Legalization" would move beyond decriminalization by eliminating civil infractions for drug possession and creating a regulatory system to control legal production and sale of drugs to adults without a prescription, as with alcohol and tobacco[17-20]; and

Whereas, AMA Policy H-95.924, "Cannabis Legalization for Adult Use," states that our AMA "supports public health based strategies, rather than incarceration," and the AMA Council on Science & Public Health's Interim 2020 report on cannabis states that "AMA policy supports decriminalization of cannabis (i.e., reduction in the penalty associated with possession of a small amount of cannabis from a criminal offense subject to arrest to a civil infraction)"[21]; and

Whereas, Various states are considering policies to expunge (destroy) certain offenses (such as drug offenses, especially those due to cannabis) from a person's criminal record after completion of sentences and penalties, but expungement processes can still be costly and complicated, hindering eligible people from applying (for example, expungement in Missouri costs $250)[22-26]; and

Whereas, The Marijuana Opportunity Reinvestment & Expungement Act, which was passed by the US House of Representatives in December 2020 but has not yet been considered in the Senate, contains language to "create an automatic process, at no cost to the individual, for the expungement, destruction, or sealing of criminal records for cannabis offenses; and...eliminate violations or other penalties for persons under parole, probation, pre-trial, or other State or local criminal supervision for a cannabis offense"[27-28]; and

Whereas, The US Department of Health & Human Services' Healthy People 2020 initiative considers incarceration a key issue within the broad category of social determinants of health, due to poor physical and mental health outcomes and cross-generational effects on the children of those incarcerated, with evidence demonstrating the disproportionate impact of the "War on Drugs" on minoritized communities[29-31]; and

Whereas, While only 5% of people who use drugs are Black, arrests of Black people comprise nearly 30% of all drug arrests, and Black people are nearly six times more likely to be arrested for a drug offense than a white person, even when controlling for differences in drug use, exacerbating racial injustice[32,33]; and

Whereas, Research shows that incarceration is ineffective and does not significantly reduce recidivism, drug use, drug overdose deaths, or drug arrests, with a 2013 Washington state study finding that overdose was the leading cause of death for people previously incarcerated[34-36]; and

Whereas, Drug criminalization is associated with increased stigma and discrimination against people who use drugs, impairing their mental and physical health and hindering treatment efforts; has fueled the growth of illegal markets, organized crime, and violent injuries; and detrimentally affected public health by increasing overdose deaths due to drug contamination and spreading HIV and hepatitis C[37-41]; and

Whereas, Previous incarceration of people who use drugs is associated with lack of access to health insurance, even after the implementation of the Affordable Care Act, while possession arrests, regardless of conviction, can negatively impact employment, housing, and student loan eligibility, leading to widespread and multifactorial health consequences[42-44]; and

Whereas, Drug felony convictions can lead to lifelong bans from receiving government assistance (such as SNAP and TANF), employment and housing discrimination, and loss of the right to vote or serve on a jury[7,45-48]; and

Whereas, People who are incarcerated are at higher risk of chronic conditions such as cardiovascular disease, hypertension, and cancer compared to the general population, with an important 2013 New York state study finding that each year spent in prison corresponded with a two-year decline in life expectancy[49,50]; and

Whereas, Drug criminalization is costly, ineffective, and stigmatizing, exposing people to incarceration, encouraging more dangerous drug consumption methods, and discouraging people from receiving health services[51-53]; and

Whereas, 83% of Americans believe that the “War on Drugs” has failed, 66% support “eliminating criminal penalties for drug possession,” and 61% of voters support reducing sentences of people currently incarcerated for drug offenses, with similar findings replicated across multiple states[54-58]; and

Whereas, California reclassified drug possession from a felony to misdemeanor in 2014 by passing ballot initiative Proposition 47, “The Safe Neighborhoods and Schools Act,” leading to the release or resentencing of 3,000 people and saving the state $156 million, with a later study finding no associated increase in crime[59-63]; and

Whereas, A 2018 study on cannabis decriminalization in five U.S. states did not find an increase in the prevalence of youth cannabis use as a result of decriminalization[64]; and

Whereas, In 2010 the Czech Republic decriminalized personal drug possession after a comprehensive policy review determined that criminal penalties did not reduce use or harm and were instead costly and unjustifiable, with later studies demonstrating net societal benefits without increased rates of drug use[65,66]; and

Whereas, Drug decriminalization in Portugal resulted in a decrease in heroin- and cocaine-related seizures, HIV and drug-related deaths, and decreased societal costs related to drug use[67,68]; and

Whereas, In 2019 the United Nations Chief Executives Board for Coordination issued a statement calling for the "promot[ion of] alternatives to conviction and punishment in appropriate cases, including the decriminalization of drug possession for personal use"[18,69]; and

Whereas, Decriminalization of personal use and possession of drugs is supported by the World Health Organization, American Public Health Association, Human Rights Watch, Global Commission on Drug Policy, International Federation of Red Cross and Red Crescent Societies, NAACP, and National Latino Congreso[70-76]; therefore be it

RESOLVED, That our American Medical Association advocate for federal and state reclassification of drug possession offenses as civil infractions and the corresponding reduction of sentences and penalties for individuals currently incarcerated, monitored, or penalized for previous drug-related felonies (Directive to Take Action); and be it further

RESOLVED, That our AMA support federal and state efforts to expunge criminal records for drug possession upon completion of a sentence or penalty at no cost to the individual (New HOD Policy); and be it further

RESOLVED, That our AMA support federal and state efforts to eliminate incarceration-based penalties for persons under parole, probation, pre-trial, or other criminal supervision for drug possession. (New HOD Policy)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Federal Drug Policy in the United States H-95.981
The AMA, in an effort to reduce personal and public health risks of drug abuse, urges the formulation of a comprehensive national policy on drug abuse, specifically advising that the federal government and the nation should: (1) acknowledge that federal efforts to address illicit drug use via supply reduction and enforcement have been ineffective (2) expand the availability and reduce the cost of treatment programs for substance use disorders, including addiction; (3) lead a coordinated approach to adolescent drug education; (4) develop community-based prevention programs for youth at risk; (5) continue to fund the Office of National Drug Control Policy to coordinate federal drug policy; (6) extend greater protection against discrimination in the employment and provision of services to drug abusers; (7) make a long-term commitment to expanded research and data collection; (8) broaden the focus of national and local policy from drug abuse to substance abuse; and (9) recognize the complexity of the problem of substance abuse and oppose drug legalization.
Citation: BOT Rep. NNN, A-88; Reaffirmed: CLRPD 1, I-98; Reaffirmed: CSAPH Rep. 2, A-08; Modified: CSAPH Rep. 2, I-13; Reaffirmed: BOT Rep. 14, I-20;

Cannabis Legalization for Adult Use (commonly referred to as recreational use) H-95.924
Our AMA: (1) believes that cannabis is a dangerous drug and as such is a serious public health concern; (2) believes that the sale of cannabis for adult use should not be legalized (with adult defined for these purposes as age 21 and older); (3) discourages cannabis use, especially by persons vulnerable to the drug's effects and in high-risk populations such as youth, pregnant women, and women who are breastfeeding; (4) believes states that have already legalized cannabis (for medical or adult use or both) should be required to take steps to regulate the product effectively in order to protect public health and safety including but not limited to: regulating retail sales, marketing, and promotion intended to encourage use; limiting the potency of cannabis extracts and concentrates; requiring packaging to convey meaningful and easily understood units of consumption, and requiring that for commercially available edibles, packaging must be child-resistant and come with messaging about the hazards about unintentional ingestion in children and youth; (5) laws and regulations related to legalized cannabis use should consistently be evaluated to determine their effectiveness; (6) encourages local, state, and federal public health agencies to improve surveillance efforts to ensure data is available on the short- and long-term health effects of cannabis, especially emergency department visits and hospitalizations, impaired driving, workplace impairment and worker-related injury and safety, and prevalence of psychiatric and addictive disorders, including cannabis use disorder; (7) supports public health based strategies, rather than incarceration, in the handling of individuals possessing cannabis for personal use; (8) encourages research on the impact of legalization and decriminalization of cannabis in an effort to promote public health and public safety; (9) encourages dissemination of information on the public health impact of legalization and decriminalization of cannabis; (10) will advocate for stronger public health messaging on the health effects of cannabis and cannabinoid inhalation and ingestion, with an emphasis on reducing initiation and frequency of cannabis use among adolescents, especially high potency products; use among women who are pregnant or contemplating pregnancy; and avoiding cannabis-impaired driving; (11) supports social equity programs to address the impacts of cannabis prohibition and enforcement

policies that have disproportionately impacted marginalized and minoritized communities; and (12) will coordinate with other health organizations to develop resources on the impact of cannabis on human health and on methods for counseling and educating patients on the use cannabis and cannabinoids.
Citation: CSAPH Rep. 05, I-17; Appended: Res. 913, I-19; Modified: CSAPH Rep. 4, I-20;

Support for Drug Courts H-100.955
Our AMA: (1) supports the establishment of drug courts as an effective method of intervention for individuals with addictive disease who are convicted of nonviolent crimes; (2) encourages legislators to establish drug courts at the state and local level in the United States; and (3) encourages drug courts to rely upon evidence-based models of care for those who the judge or court determine would benefit from intervention rather than incarceration.
Citation: Res. 201, A-12; Appended: BOT Rep. 09, I-19;

Youth Incarceration in Adult Facilities H-60.916
1. Our AMA supports, with respect to juveniles (under 18 years of age) detained or incarcerated in any criminal justice facility: (a) early intervention and rehabilitation services, (b) appropriate guidelines for parole, and (c) fairness in the expungement and sealing of records.
2. Our AMA opposes the detention and incarceration of juveniles (under 18 years of age) in adult criminal justice facilities.
Citation: Alt. Res. 917, I-16;

Ending Money Bail to Decrease Burden on Lower Income Communities H-80.993
Our AMA: (1) recognizes the adverse health effects of pretrial detention; and (2) will support legislation that promotes the use of non-financial release options for individuals charged with nonviolent crimes.
Citation: Res. 408, A-18; Reaffirmed: Res. 234, A-22;

The Reduction of Medical and Public Health Consequences of Drug Abuse H-95.954
Our AMA: (1) encourages national policy-makers to pursue an approach to the problem of drug abuse aimed at preventing the initiation of drug use, aiding those who wish to cease drug use, and diminishing the adverse consequences of drug use; (2) encourages policy-makers to recognize the importance of screening for alcohol and other drug use in a variety of settings, and to broaden their concept of addiction treatment to embrace a continuum of modalities and goals, including appropriate measures of harm reduction, which can be made available and accessible to enhance positive treatment outcomes for patients and society; (3) encourages the expansion of opioid maintenance programs so that opioid maintenance therapy can be available for any individual who applies and for whom the treatment is suitable. Training must be available so that an adequate number of physicians are prepared to provide treatment. Program regulations should be strengthened so that treatment is driven by patient needs, medical judgment, and drug rehabilitation concerns. Treatment goals should acknowledge the benefits of abstinence from drug use, or degrees of relative drug use reduction; (4) encourages the extensive application of needle and syringe exchange and distribution programs and the modification of restrictive laws and regulations concerning the sale and possession of needles and syringes to maximize the availability of sterile syringes and needles, while ensuring continued reimbursement for medically necessary needles and syringes. The need for such programs and modification of laws and regulations is urgent, considering the contribution of injection drug use to the epidemic of HIV infection; (5) encourages a comprehensive review of the risks and benefits of U.S. state-based drug legalization initiatives, and that until the findings of such reviews can be adequately assessed, the AMA reaffirm its opposition to drug legalization; (6) strongly supports the ability of physicians to prescribe syringes and needles to patients with injection drug addiction in conjunction with addiction counseling in order to help prevent the transmission of contagious diseases; and (7) encourages state medical associations to work with state regulators to remove any remaining barriers to permit physicians to prescribe needles for patients.
Citation: (CSA Rep. 8, A-97; Reaffirmed: CSA Rep. 12, A-99; Appended: Res. 416, A-00; Reaffirmation I-00; Reaffirmed: CSAPH Rep. 1, A-10; Modified: CSAPH Rep. 2, I-13)

Syringe and Needle Exchange Programs H-95.958
Our AMA: (1) encourages all communities to establish needle exchange programs and physicians to refer their patients to such programs; (2) will initiate and support legislation providing funding for needle exchange programs for injecting drug users; and (3) strongly encourages state medical associations to initiate state legislation modifying drug paraphernalia laws so that injection drug users can purchase and

possess needles and syringes without a prescription and needle exchange program employees are protected from prosecution for disseminating syringes.

Pilot Implementation of Supervised Injection Facilities H-95.925
Our AMA supports the development and implementation of pilot supervised injection facilities (SIFs) in the United States that are designed, monitored, and evaluated to generate data to inform policymakers on the feasibility, effectiveness, and legal aspects of SIFs in reducing harms and health care costs related to injection drug use.
Citation: Res. 513, A-17;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 204
(A-23)

Introduced by: Medical Student Section

Subject: Supporting Harm Reduction

Referred to: Reference Committee B

Whereas, In 2016 it was estimated that 26.8 million people were living with opioid use disorder (OUD) worldwide, almost 10% of whom (2.1 million) were living in the USA[1,2]; and

Whereas, Those with OUD are at increased risk of long term negative outcomes including overdose; fatal overdoses involving opioids in the USA have almost quadrupled in the past decade with 80,411 deaths in 2021 alone[1,3]; and

Whereas, Medications for OUD (MOUD), which include the opioid agonist treatments (OAT) buprenorphine and methadone in addition to the opioid antagonist naltrexone, are the gold-standard for treating OUD and are associated with decreased risk of negative outcomes including overdose[4,5]; and

Whereas, In the US, over 70% of those who need treatment for OUD do not receive it and this is often a result of a lack of access to adequate (or any) treatment services; only 36% of substance use disorder (SUD) treatment facilities offer at least one MOUD, and just 6.1% offer access to all three[6,7]; and

Whereas, Even if patients gain access to MOUD, not all of them will keep that access long enough for therapeutic efficacy; prior to implementing a low-barrier MOUD chronic treatment philosophy of “MedFirst” in Missouri, only 17% of uninsured patients receiving treatment for OUD were prescribed buprenorphine and of these patients, 78% received the medication for fewer than 5 months[8]; and

Whereas, The COVID-19 pandemic has exacerbated and amplified pre-existing barriers to MOUD access by prompting closures of OUD treatment services, transitions to telehealth visits, fears of COVID-19 exposure during methadone treatments, and changes in MOUD regulations[9]; and

Whereas, Deaths from opioid overdose increased dramatically during the COVID-19 pandemic; for example, the state of Kentucky saw a 50% increase in emergency medical service runs for deaths from suspected overdoses[10,11]; and

Whereas, In one study, only 76% of subjects were able to remain adherent to their buprenorphine regimen during the COVID-19 pandemic with inadequate access to treatment serving as a key obstacle[12]; and

Whereas, One consequence of inadequate treatment access is that people with OUD may attempt to self-medicate with street-purchased MOUD such as buprenorphine for the purposes for treatment; studies have repeatedly demonstrated that the majority of people who use non-

prescribed buprenorphine do so in a manner consistent with therapeutic treatment for withdrawal sickness or attempts to reduce opioid use[13–15]; and

Whereas, Studies show that illicit buprenorphine is rarely used recreationally due to its partial agonist effects and extremely low potential for overdose; US surveys have indicated that of those with OUD who reported using illicit buprenorphine, 97% used it to prevent cravings and 90% used it to prevent withdrawal symptoms[15–23]; and

Whereas, Motivators for use of unprescribed buprenorphine include: to prevent withdrawal, to maintain abstinence or weaning off drugs, to avoid the overly stringent demands of formal treatment, to prepare for formal treatment, to gain a sense of self-determination and agency in recovery, and to use while geographically relocating; the majority of respondents to a global survey indicated they would prefer using prescribed buprenorphine if they could[13,21]; and

Whereas, Some physicians are hesitant to prescribe buprenorphine due to concerns over its potential diversion and potential for subsequent prosecution of those involved, which may hold the prescribing physician accountable[24]; and

Whereas, Current legislation indicates that a person in possession of buprenorphine not prescribed to them is guilty of the misdemeanor crime of possession of a narcotic, which can result in arrest and jail time[25]; and

Whereas, Criminal justice solutions to OUD are not effective and at present only 4.6% of those with OUD referred to treatment by the criminal justice system are given the gold-standard opioid agonist therapies, versus 40.9% of those referred to treatment from elsewhere[26]; and

Whereas, Although people with OUD are overrepresented in the criminal justice system, few criminal justice systems use validated tools to screen those entering for OUD or provide full access to MOUD to those who are incarcerated thereby impairing individuals access to treatment[27–31]; and

Whereas, In 2018, Chittenden County in Vermont implemented several evidence-based interventions including: access to buprenorphine at its syringe exchange and emergency departments, elimination of the waitlist for MOUD, and decriminalization and a non-arrest policy for the possession of non-prescribed buprenorphine; these resulted in a 50% decline in opioid overdose deaths despite overdose deaths increasing by 20% in the remainder of the state[24,25]; and

Whereas, In 2020, following the success of the Chittenden County intervention, the Philadelphia District Attorney's Office announced that people will no longer be arrested or prosecuted for the possession of non-prescribed buprenorphine-based medications[32,33]; and

Whereas, Removal of buprenorphine from the misdemeanor list, as opposed to full decriminalization, would eliminate consequences such as jail time and probation but may still result in an infraction, which burdens the person accused with fines, an appearance in court, and possible remediation requirements[34–36]; and

Whereas, As opposed to misdemeanors and felonies, when charged as a civil infraction, possession of substances are generally not visible under background checks but may still be listed as public records[37]; and

Whereas, Our existing AMA policy (D-95.987) does not address the legal designation of unprescribed buprenorphine possession thus the policy will not allow our AMA to advocate for the decriminalization of buprenorphine nor for its removal from the misdemeanor list; and

Whereas, It is important to update our AMA policy to allow for the most up to date advocacy (such as supporting State bill H.225 introduced in February 2021 from Vermont to decriminalize therapeutic dosage of buprenorphine), especially in the midst of rising number of overdoses during the COVID-19 pandemic[38]; and

Whereas, Another method for harm reduction is safer smoking, wherein tools to more safely consume drugs via smoking, including glass stems and pipes, plastic mouthpieces for burn prevention, screens, wooden push sticks, and alcohol wipes, are provided to patients[39,40]; and

Whereas, Providing safer smoking supplies at syringe service programs provides individuals with a safer alternative to injection drug use, thus reducing risk of overdose, soft tissue infections and endocarditis, and risk of infectious disease transmission (including Hepatitis C and HIV) from injection drug use[39-44]; and

Whereas, Providing safer smoking supplies has been shown to reduce risky smoking behaviors[45,46]; and

Whereas, Lack of access to new pipes is a reported reason why people who use drugs use damaged pipes, report sharing pipes, or use self-made pipes[47,48]; and

Whereas, Self-made pipes increase risk for injury and chemical burns inside the mouth and near the lips since materials such as plastic bottles or tin cans can give off toxic vapors and cause respiratory damage[49,50]; and

Whereas, A 2017 study by Prangnell et al in the *BMC Public Health* journal evaluated rates of health problems associated with crack smoking during the expansion of safer smoking kit distribution in Vancouver, Canada, and found that study participants who obtained safer smoking kits were significantly less likely to report health problems from smoking crack than participants who made their own pipes or acquired them elsewhere[51]; and

Whereas, International studies elsewhere in North America and abroad demonstrate the harm reduction efficacy of safer smoking kits[50-54]; and

Whereas, The sale, import, and export of safer smoking supplies is illegal under Title 21 U.S. Code 863 – Drug paraphernalia, which prevents syringe service programs and other harm reduction programs from distributing them, and prevents the allocation of public funds for their distribution[39,46,55]; and

Whereas, AMA policy D-95.987 supports the “continued study and implementation of appropriate treatments and risk mitigation methods for patients at risk for opioid overdose”; therefore be it

RESOLVED, That our American Medical Association advocate for the removal of buprenorphine from the misdemeanor crime of possession of a narcotic (Directive to Take Action); and be it further

RESOLVED, That our AMA support any efforts to decriminalize the possession of non-prescribed buprenorphine (New HOD Policy); and be it further

RESOLVED, That our AMA amend Policy D-95.987 by addition and deletion to read as follows:

Prevention of Drug-Related Overdose, D-95.987

1. Our AMA: (a) recognizes the great burden that substance use disorders (SUDs) and drug-related overdoses and death places on patients and society alike and reaffirms its support for the compassionate treatment of patients with a SUD and people who use drugs; (b) urges that community-based programs offering naloxone and other opioid overdose and drug safety and prevention services continue to be implemented in order to further develop best practices in this area; (c) encourages the education of health care workers and people who use drugs about the use of naloxone and other harm reduction measures in preventing opioid and other drug-related overdose fatalities; and (d) will continue to monitor the progress of such initiatives and respond as appropriate.

2.Our AMA will: (a) advocate for the appropriate education of at-risk patients and their caregivers in the signs and symptoms of a drug-related overdose; and (b) encourage the continued study and implementation of appropriate treatments and risk mitigation methods for patients at risk for a drug-related overdose.

3. Our AMA will support the development and implementation of appropriate education programs for persons receiving treatment for a SUD or in recovery from a SUD and their friends/families that address harm reduction measures.

4. Our AMA will advocate for and encourage state and county medical societies to advocate for harm reduction policies that provide civil and criminal immunity for the possession, distribution, and use of “drug paraphernalia” designed for harm reduction from drug use, including but not limited to drug contamination testing, safer smoking, and injection drug preparation, use, and disposal supplies.

5. Our AMA will implement an education program for patients with substance use disorder and their family/caregivers to increase understanding of the increased risk of adverse outcomes associated with having a substance use disorder and a serious respiratory illness such as COVID-19.

6. Our AMA will advocate for ~~supports efforts to~~ increased access to and decriminalization of fentanyl test strips, ~~and~~ other drug checking supplies, and safer smoking kits for purposes of harm reduction. (Modify Current HOD Policy)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 3/27/23

RELEVANT AMA POLICY

Prevention of Drug-Related Overdose D-95.987

1. Our AMA: (a) recognizes the great burden that substance use disorders (SUDs) and drug-related overdoses and death places on patients and society alike and reaffirms its support for the compassionate treatment of patients with a SUD and people who use drugs; (b) urges that community-based programs offering naloxone and other opioid overdose and drug safety and prevention services continue to be implemented in order to further develop best practices in this area; (c) encourages the education of health care workers and people who use drugs about the use of naloxone and other harm reduction measures in preventing opioid and other drug-related overdose fatalities; and (d) will continue to monitor the progress of such initiatives and respond as appropriate.

2.Our AMA will: (a) advocate for the appropriate education of at-risk patients and their caregivers in the signs and symptoms of a drug-related overdose; and (b) encourage the continued study and implementation of appropriate treatments and risk mitigation methods for patients at risk for a drug-related overdose.
3. Our AMA will support the development and implementation of appropriate education programs for persons receiving treatment for a SUD or in recovery from a SUD and their friends/families that address harm reduction measures.
4. Our AMA will advocate for and encourage state and county medical societies to advocate for harm reduction policies that provide civil and criminal immunity for the possession, distribution, and use of “drug paraphernalia” designed for harm reduction from drug use, including but not limited to drug contamination testing and injection drug preparation, use, and disposal supplies.
5. Our AMA will implement an education program for patients with substance use disorder and their family/caregivers to increase understanding of the increased risk of adverse outcomes associated with having a substance use disorder and a serious respiratory illness such as COVID-19.
6. Our AMA supports efforts to increase access to fentanyl test strips and other drug checking supplies for purposes of harm reduction.
Citation: Res. 526, A-06; Modified in lieu of Res. 503, A-12; Appended: Res. 909, I-12; Reaffirmed: BOT Rep. 22, A-16; Modified: Res. 511, A-18; Reaffirmed: Res. 235, I-18; Modified: Res. 506, I-21; Appended: Res. 513, A-22; Modified: Res. 211, I-22;

Treating Opioid Use Disorder in Hospitals D-95.967
1. Our AMAs Opioid Task Force will work together with the American Hospital Association and other relevant organizations to identify best practices that are being used by hospitals and others to treat opioid use disorder as a chronic disease, including identifying patients with this condition; initiating or providing opioid agonist or partial agonist therapy in inpatient, obstetric and emergency department settings; providing cognitive and behavioral therapy as well as other counseling as appropriate; establishing appropriate discharge plans, including education about opioid use disorder; and participating in community-wide systems of care for patients and families affected by this chronic medical disease.
2. Our AMA will advocate for states to evaluate programs that currently exist or have received federal or state funding to assist physicians, hospitals and their communities to coordinate care for patients with the chronic disease of opioid use disorder.
3. Our AMA will take all necessary steps to seek clarification of interpretations of 21 CFR 1306.07 by the DEA and otherwise seek administrative, statutory and regulatory solutions that will allow for (a) prescribers with the waiver permitting the prescribing of buprenorphine for opioid use disorder to be able to do so, when indicated, for hospitalized inpatients, using a physician order rather than an outpatient prescription, and (b) hospital inpatient pharmacies to be able to fill such authorizations by prescribers without this constituting a violation of federal regulations.
Citation: Res. 223, A-18;

Expanding Access to Buprenorphine for the Treatment of Opioid Use Disorder D-95.972
1. Our AMAs Opioid Task Force will publicize existing resources that provide advice on overcoming barriers and implementing solutions for prescribing buprenorphine for treatment of Opioid Use Disorder.
2.Our AMA supports eliminating the requirement for obtaining a waiver to prescribe buprenorphine for the treatment of opioid use disorder.
Citation: Res. 506, A-17; Appended: BOT Action in response to referred for decision: Res. 506, A-17;

Third-Party Payer Policies on Opioid Use Disorder Pharmacotherapy H-95.944
Our AMA opposes federal, state, third-party and other laws, policies, rules and procedures, including those imposed by Pharmacy Benefit Managers working for Medicaid, Medicare, TriCare, and commercial health plans, that would limit a patient's access to medically necessary pharmacological therapies for opioid use disorder, whether administered in an office-based opioid treatment setting or in a federal regulated Opioid Treatment Program, by imposing limitations on the duration of treatment, medication dosage or level of care.
Citation: Res. 710, A-13; Reaffirmed in lieu of: Res. 228, I-18;

Opioid Treatment and Prescription Drug Monitoring Programs D-95.980
Our AMA will seek changes to allow states the flexibility to require opioid treatment programs to report to prescription monitoring programs.
Citation: BOT Rep. 11, A-10; Reaffirmed: CSAPH Rep. 01, A-20;

Reduction of Medical and Public Health Consequences of Drug Abuse: Update D-95.999
Our AMA encourages state medical societies to advocate for the expansion of and increased funding for needle and syringe-exchange programs and methadone maintenance and other opioid treatment services and programs in their states.
Citation: CSA Rep. 12, A-99; Modified and Reaffirmed: CSAPH Rep. 1, A-09; Reaffirmed: CSAPH Rep. 01, A-19;

Opioid Mitigation H-95.914
Our AMA urges state and federal policymakers to enforce applicable mental health and substance use disorder parity laws.
Citation: BOT Rep. 09, I-19;

Support the Elimination of Barriers to Medication-Assisted Treatment for Substance Use Disorder D-95.968
1. Our AMA will: (a) advocate for legislation that eliminates barriers to, increases funding for, and requires access to all appropriate FDA-approved medications or therapies used by licensed drug treatment clinics or facilities; and (b) develop a public awareness campaign to increase awareness that medical treatment of substance use disorder with medication-assisted treatment is a first-line treatment for this chronic medical disease.
2. Our AMA supports further research into how primary care practices can implement medication-assisted treatment (MAT) into their practices and disseminate such research in coordination with primary care specialties.
3. The AMA Opioid Task Force will increase its evidence-based educational resources focused on methadone maintenance therapy (MMT) and publicize those resources to the Federation.
Citation: Res. 222, A-18; Appended: BOT Rep. 02, I-19;

Syringe and Needle Exchange Programs H-95.958
Our AMA: (1) encourages all communities to establish needle exchange programs and physicians to refer their patients to such programs; (2) will initiate and support legislation providing funding for needle exchange programs for injecting drug users; and (3) strongly encourages state medical associations to initiate state legislation modifying drug paraphernalia laws so that injection drug users can purchase and possess needles and syringes without a prescription and needle exchange program employees are protected from prosecution for disseminating syringes.
Citation: Res. 231, I-94; Reaffirmed Ref. Cmt. D, I-96; Modified by CSA Rep. 8, A-97; Reaffirmed: CSAPH Rep. 3, A-07; Modified: Res. 203, A-13; Modified: Res. 914, I-16;

The Reduction of Medical and Public Health Consequences of Drug Abuse H-95.954
Our AMA: (1) encourages national policy-makers to pursue an approach to the problem of drug abuse aimed at preventing the initiation of drug use, aiding those who wish to cease drug use, and diminishing the adverse consequences of drug use; (2) encourages policy-makers to recognize the importance of screening for alcohol and other drug use in a variety of settings, and to broaden their concept of addiction treatment to embrace a continuum of modalities and goals, including appropriate measures of harm reduction, which can be made available and accessible to enhance positive treatment outcomes for patients and society; (3) encourages the expansion of opioid maintenance programs so that opioid maintenance therapy can be available for any individual who applies and for whom the treatment is suitable. Training must be available so that an adequate number of physicians are prepared to provide treatment. Program regulations should be strengthened so that treatment is driven by patient needs, medical judgment, and drug rehabilitation concerns. Treatment goals should acknowledge the benefits of abstinence from drug use, or degrees of relative drug use reduction; (4) encourages the extensive application of needle and syringe exchange and distribution programs and the modification of restrictive laws and regulations concerning the sale and possession of needles and syringes to maximize the availability of sterile syringes and needles, while ensuring continued reimbursement for medically necessary needles and syringes. The need for such programs and modification of laws and regulations is

urgent, considering the contribution of injection drug use to the epidemic of HIV infection; (5) encourages a comprehensive review of the risks and benefits of U.S. state-based drug legalization initiatives, and that until the findings of such reviews can be adequately assessed, the AMA reaffirm its opposition to drug legalization; (6) strongly supports the ability of physicians to prescribe syringes and needles to patients with injection drug addiction in conjunction with addiction counseling in order to help prevent the transmission of contagious diseases; and (7) encourages state medical associations to work with state regulators to remove any remaining barriers to permit physicians to prescribe needles for patients. AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 205
(A-23)

Introduced by: Medical Student Section

Subject: Amending H-160.903, Eradicating Homelessness, to Reduce Evictions and Prevent Homelessness

Referred to: Reference Committee B

Whereas, The rates of chronically homeless sheltered individuals have increased by 20% between 2020 and 2021, particularly in high cost cities and suburbs, driven by factors including, but not limited to, the implications of the COVID-19 pandemic, a tightening housing market, and reductions in social services[1–3]; and

Whereas, Housing market demand has exceeded pre-pandemic levels of supply, and new construction cannot fill the large gap in the short term due to increases in second-home buying[2]; and

Whereas, Despite unprecedented levels of federal, state, and local support during the COVID-19 pandemic, the number of individuals experiencing chronic homelessness increased by 15% between 2020 and 2022[4]; and

Whereas, In major metropolitan areas, rents have increased by more than 30% between January 2021 to January 2022, placing lower income families, individuals, and veterans at an increased risk for eviction and homelessness[5–7]; and

Whereas, The Department of Housing and Urban Development found median rent increases of $100 per month were associated with a 9% increase in homelessness in the metropolitan areas they examined[8]; and

Whereas, At-risk populations, including low-income households, minorities, veterans, and adults over the age of 65 are especially vulnerable to the impacts of uncontrolled rent increases, job insecurity in sectors most affected by the pandemic (i.e., leisure and hospitality; food, clothing, and other goods), and medical debt[3,5,9]; and

Whereas, A report by the National Coalition of Asian Pacific American Community Development in March 2021 revealed eviction moratoriums would affect 26% of Asian and 27% of Native Hawaiians or Other Pacific Islander (NHOPI) renters and 16% of Asian and 12% of NHOPI homeowners who are severely cost-burdened (i.e., greater than 50% of their income is spent on housing)[10]; and

Whereas, Severely cost-burdened Asian Pacific Islander American communities are especially at risk for eviction and subsequent homelessness as more than half (54%) of Asian households have limited English proficiency compared to white households (9%)[10]; and

Whereas, Between 2020 and 2021, unaccompanied transgender, gender non-conforming, and Native American youths (under the age of 25) experienced dramatic increases in the rates of homelessness of 29%, 26%, and 21%, respectively[1]; and

Whereas, Youths (under the age of 25) experiencing homelessness who identify as a minority, LGBTQ+, refugee, and/or immigrant are more likely to suffer from an increased number of health disparities, including malnutrition, asthma, obesity, mood disorders, anxiety, physical and emotional abuse, post-traumatic stress, developmental delays, high-risk sexual behaviors, drug use, and rape, compared to their stably housed peers[11,12]; and

Whereas, Maternal and child health is significantly impacted by homelessness with increases in adverse childhood experiences, depressive symptoms, and negative effects on both mental and physical well-being[13]; and

Whereas, The costs of healthcare for individuals suffering from homelessness tend to be disproportionately high when compared to others receiving healthcare with increases in Veterans Affairs and Medicare utilization and cost[14,15]; and

Whereas, One study conducted over six years in California found that connecting frequent users of the emergency department to housing reduced their healthcare costs overall by 59%, decreased their emergency department costs by 61%, and reduced the number of inpatient hospitalizations by 77%[16,17]; and

Whereas, Homelessness is a public health problem associated with increased mortality (where one in three homeless deaths are due to preventable causes), increased prevalence of acute and chronic health conditions, and increased behavioral and mental health conditions with nearly 23% of homeless persons reporting having mental health conditions compared to 3% of never homeless persons[18,19]; and

Whereas, Feasible solutions to the homelessness crisis include rent-control laws that protect tenants that are unable to afford their rental payments and just cause eviction statutes that protect residents from being arbitrarily evicted[20,21]; and

Whereas, Cities that have implemented just cause eviction statutes have lower rates of eviction and filings (-0.808% points and -0.780% points respectively)[21]; and

Whereas, Right to counsel policies would ensure legal counsel representation for tenants in eviction proceedings, and the creation of local, state, and/or national rental registries to monitor tenant and landlord contracts and prevent unlawful evictions[20]; and

Whereas, There are several existing AMA policies (H-160.903, H-160.978, H-160.894, H-20.903, H-345.975, H-440.938) that advocate for and support measures that improve access to adequate health care for people experiencing homelessness through methods such as waiving co-pays, or providing care through free clinics; and

Whereas, H-160.903 specifically asks that the AMA “recognizes adaptive strategies based on regional variations, community characteristics and state and local resources are necessary to address [homelessness] on a long-term basis”, and as such has set precedence for feasibly supporting such measures; therefore be it

RESOLVED, That our American Medical Association recognize and support the use of Street Medicine programs by amending policy H-160.903 Eradicating Homelessness by addition and deletion to read as follows:

Eradicating Homelessness, H-160.903
Our AMA:
(1) supports improving the health outcomes and decreasing the health care costs of treating the chronically homeless through clinically proven, high quality, and cost effective approaches which recognize the positive impact of stable and affordable housing coupled with social services;
(2) recognizes that stable, affordable housing as a first priority, without mandated therapy or services compliance, is effective in improving housing stability and quality of life among individuals who are chronically-homeless;
(3) recognizes adaptive strategies based on regional variations, community characteristics and state and local resources are necessary to address this societal problem on a long-term basis;
(4) supports the use of physician-led, team-based street medicine programs, which travel to individuals who are unhoused or unsheltered and provide healthcare and social services, as well as funds, including Medicaid and other public insurance reimbursement, for their maintenance;
(5) recognizes the need for an effective, evidence-based national plan to eradicate homelessness;
(6) encourages the National Health Care for the Homeless Council to study the funding, implementation, and standardized evaluation of Medical Respite Care for homeless persons;
(7) will partner with relevant stakeholders to educate physicians about the unique healthcare and social needs of homeless patients and the importance of holistic, cost-effective, evidence-based discharge planning, and physicians' role therein, in addressing these needs;
(8) encourages the development of holistic, cost-effective, evidence-based discharge plans for homeless patients who present to the emergency department but are not admitted to the hospital;
(9) encourages the collaborative efforts of communities, physicians, hospitals, health systems, insurers, social service organizations, government, and other stakeholders to develop comprehensive homelessness policies and plans that address the healthcare and social needs of homeless patients;
(10) (a) supports laws protecting the civil and human rights of individuals experiencing homelessness, and (b) opposes laws and policies that criminalize individuals experiencing homelessness for carrying out life-sustaining activities conducted in public spaces that would otherwise be considered non-criminal activity (i.e., eating, sitting, or sleeping) when there is no alternative private space available; and
(11) recognizes that stable, affordable housing is essential to the health of individuals, families, and communities, and supports policies that preserve and expand affordable housing across all neighborhoods;

(12) (a) supports training to understand the needs of housing insecure individuals for those who encounter this vulnerable population through their professional duties; (b) supports the establishment of multidisciplinary mobile homeless outreach teams trained in issues specific to housing insecure individuals; and (c) will make available existing educational resources from federal agencies and other stakeholders related to the needs of housing-insecure individuals~~.~~;
(13) encourages medical schools to implement physician-led, team-based Street Medicine programs with student involvement~~.~~; and
(14) supports federal and state efforts to enact just cause eviction statutes and examine and restructure punitive eviction practices; instate inflation-based rent control; guarantee tenants' right to counsel in housing disputes and improve affordability of legal fees; and create national, state, and/or local rental registries. (Modify Current HOD Policy)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Housing Insecure Individuals with Mental Illness H-160.978
(1) The AMA believes that public policy initiatives directed to the homeless, including the homeless mentally ill population, should include the following components: (a) access to care (e.g., integrated, comprehensive services that permit flexible, individualized treatment; more humane commitment laws that ensure active inpatient treatment; and revisions in government funding laws to ensure eligibility for homeless persons); (b) clinical concerns (e.g., promoting diagnostic and treatment programs that address common health problems of the homeless population and promoting care that is sensitive to the overriding needs of this population for food, clothing, and residential facilities); (c) program development (e.g., advocating emergency shelters for the homeless; supporting a full range of supervised residential placements; developing specific programs for multiproblem patients, women, children, and adolescents; supporting the development of a clearinghouse; and promoting coalition development); (d) educational needs; (e) housing needs; and (f) research needs. (2) The AMA encourages medical schools and residency training programs to develop model curricula and to incorporate in teaching programs content on health problems of the homeless population, including experiential community-based learning experiences. (3) The AMA urges specialty societies to design interdisciplinary continuing medical education training programs that include the special treatment needs of the homeless population.

Maintaining Mental Health Services by States H-345.975
Our AMA:
1. supports maintaining essential mental health services at the state level, to include maintaining state inpatient and outpatient mental hospitals, community mental health centers, addiction treatment centers, and other state-supported psychiatric services;
2. supports state responsibility to develop programs that rapidly identify and refer individuals with significant mental illness for treatment, to avoid repeated psychiatric hospitalizations and repeated interactions with the law, primarily as a result of untreated mental conditions;
3. supports increased funding for state Mobile Crisis Teams to locate and treat homeless individuals with mental illness;
4. supports enforcement of the Mental Health Parity Act at the federal and state level; and
5. will take these resolves into consideration when developing policy on essential benefit services.
Citation: Res. 116, A-12; Reaffirmation A-15; Reaffirmed: Res. 414, A-22;

E-11.1.4 Financial Barriers to Health Care Access
Health care is a fundamental human good because it affects our opportunity to pursue life goals, reduces our pain and suffering, helps prevent premature loss of life, and provides information needed to plan for our lives. As professionals, physicians individually and collectively have an ethical responsibility to ensure that all persons have access to needed care regardless of their economic means.
In view of this obligation,
(a) Individual physicians should:
(i) take steps to promote access to care for individual patients, such as providing pro bono care in their office or through freestanding facilities or government programs that provide health care for the poor, or, when permissible, waiving insurance copayments in individual cases of hardship. Physicians in the poorest communities should be able to turn for assistance to colleagues in more prosperous communities.

(ii) help patients obtain needed care through public or charitable programs when patients cannot do so themselves.
(b) Physicians, individually and collectively through their professional organizations and institutions, should participate in the political process as advocates for patients (or support those who do) so as to diminish financial obstacles to access health care.
(c) The medical profession must work to ensure that societal decisions about the distribution of health resources safeguard the interests of all patients and promote access to health services.
(d) All stakeholders in health care, including physicians, health facilities, health insurers, professional medical societies, and public policymakers must work together to ensure sufficient access to appropriate health care for all people.
Issued: 2016

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 206
(A-23)

Introduced by: Medical Student Section

Subject: Tribal Public Health Authority

Referred to: Reference Committee B

Whereas, American Indian and Alaska Native Tribes and Villages ("Tribal Nations") and Tribal Epidemiology Centers (TECs) are "public health authorities" under federal law at 25 U.S.C. §1621m and federal regulation at 45 C.F.R. § 164.501[1]; and

Whereas, Tribal Nations and TECs have the legal authority to collect, receive, and disseminate public health data as necessary to respond to public health threats[1]; and

Whereas, As such, Tribal Nations and TECs have the same public health authority designation as, for example, the United States (US) Centers for Disease Control and Prevention (CDC), and state and local health departments[1]; and

Whereas, Despite their recognition as public health authorities, Tribal Nations and TECs have varying access to data from the CDC and the Indian Health Service (IHS)[2]; and

Whereas, The U.S. Government Accountability Office, in a 2022 report, found a lack of policies affirming Tribal Nations and TECs' authority to access CDC and IHS data, guidance for TECs on how to request data, and agency procedures on how to respond to such requests[2]; and

Whereas, During the COVID-19 pandemic, reports emerged that county and state public health agencies refused to share case and mortality data with Tribal Nations and TECs in California and the Great Plains Area, citing a lack of authority to access such data and restrictions outlined by the U.S. Health Insurance Portability and Accountability Act of 1996 (HIPAA)[3-4]; and

Whereas, As public health authorities, Tribal Nations and TECs are authorized to access and manage HIPAA-inclusive data, given that they are Covered Entities[5-6]; and

Whereas, By preventing Tribal Nations and TECs from accessing their public health data, local and state governments and federal agencies like the IHS, infringe upon Tribal sovereignty and do not give special attention to the health and health-related needs of American Indians and Alaska Natives, potentially harming their quality of life and healthcare outcomes (AMA Policy H-350.976); therefore be it

RESOLVED, That our American Medical Association advocate to achieve enactment of reforms to reaffirm American Indian and Alaska Native Tribes and Tribal Epidemiology Centers' status as public health authorities (Directive to Take Action); and be it further

RESOLVED, That our AMA make a suggestion to the Department of Health and Human Services to develop sub-agency (e.g, CDC, IHS) guidance on Public Health and Tribal-affiliated data-sharing with American Indian and Alaska Native Tribes and Villages and Tribal Epidemiology Centers (New HOD Policy); and be it further

RESOLVED, That our AMA encourage the use of data-sharing agreements between local and state public health departments and American Indian and Alaska Native Tribes and Villages and Tribal Epidemiology Centers. (New HOD Policy)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 3/27/23

RELEVANT AMA POLICY

Full Commitment by our AMA to the Betterment and Strengthening of Public Health Systems D-440.922
Our AMA will: (1) champion the betterment of public health by enhancing advocacy and support for programs and initiatives that strengthen public health systems, to address pandemic threats, health inequities and social determinants of health outcomes; (2) develop an organization-wide strategy on public health including ways in which the AMA can strengthen the health and public health system infrastructure and report back regularly on progress; (3) work with the Federation and other stakeholders to strongly support the legal authority of health officials to enact reasonable, evidence-based public health measures, including mandates, when necessary to protect the public from serious illness, injury, and death and actively oppose efforts to strip such authority from health officials; and (4) advocate for (a) consistent, sustainable funding to support our public health infrastructure, (b) incentives, including loan forgiveness and debt reduction, to help strengthen the governmental public health workforce in recruiting and retaining staff, (c) public health data modernization and data governance efforts as well as efforts to promote interoperability between health care and public health; and (d) efforts to ensure equitable access to public health funding and programs.

Role of Physicians and Physician Organizations in Efforts to Collect Physician-Specific Health Care Data H-406.998
Our AMA: (1) believes that physicians, as patient advocates and possessing unique qualifications in the review and analysis of health care data, must take the initiative in developing data collection systems at the local level which maintain high standards of confidentiality, accuracy and fairness;
(2) urges state medical societies, national medical specialty societies, hospital medical staffs and individual physicians to: (a) participate in health care data collection programs designed to improve the quality of care; (b) be aware of the limitations of health care data; (c) encourage active involvement of physician organizations and practicing physicians in all aspects of health care data collection and interpretation; and (d) develop strategies to assist state agencies and others in improving the collection and interpretation of health data;
(3) urges health data commissions and other entities that collect, evaluate, and disseminate health care data to: (a) facilitate active involvement of physician organizations and practicing physicians in all aspects of the efforts to collect health care data; (b) provide adequate opportunity for physician organizations and

practicing physicians to review and respond to proposed data interpretations and disclosures; (c) ensure accuracy of information in the data base; and (d) assure valid interpretation and use of health care data;
(4) encourages relevant physician organizations to develop effective mechanisms to assist physicians in evaluating, using, and responding to physician-specific health care data;
(5) encourages medical societies to use this information for educational purposes and for addressing such areas as utilization variation, quality assessment and appropriate cost containment activities;
(6) encourages medical societies to play an active role in appropriate data collection and dissemination activities at the local level; and
(7) urges state medical societies, hospital medical staffs and physicians to propose, monitor, and seek to influence quality of care and cost containment legislation to comply with AMA principles.
Citation: (BOT Rep. Y, I-85; Reaffirmed: CLRPD Rep. 2, I-95; BOT Rep. P, A-91; BOT Rep. Q, I-92; CMS Rep. 10, A-96; Reaffirmation A-01; Reaffirmation A-05; Reaffirmed: CMS Rep. 1, A-15)

Indian Health Service H-350.977
The policy of the AMA is to support efforts in Congress to enable the Indian Health Service to meet its obligation to bring American Indian health up to the general population level. The AMA specifically recommends: (1) Indian Population: (a) In current education programs, and in the expansion of educational activities suggested below, special consideration be given to involving the American Indian and Alaska native population in training for the various health professions, in the expectation that such professionals, if provided with adequate professional resources, facilities, and income, will be more likely to serve the tribal areas permanently; (b) Exploration with American Indian leaders of the possibility of increased numbers of nonfederal American Indian health centers, under tribal sponsorship, to expand the American Indian role in its own health care; (c) Increased involvement of private practitioners and facilities in American Indian care, through such mechanisms as agreements with tribal leaders or Indian Health Service contracts, as well as normal private practice relationships; and (d) Improvement in transportation to make access to existing private care easier for the American Indian population.
(2) Federal Facilities: Based on the distribution of the eligible population, transportation facilities and roads, and the availability of alternative nonfederal resources, the AMA recommends that those Indian Health Service facilities currently necessary for American Indian care be identified and that an immediate construction and modernization program be initiated to bring these facilities up to current standards of practice and accreditation.
(3)Manpower: (a) Compensation for Indian Health Service physicians be increased to a level competitive with other Federal agencies and nongovernmental service; (b) Consideration should be given to increased compensation for service in remote areas; (c) In conjunction with improvement of Service facilities, efforts should be made to establish closer ties with teaching centers, thus increasing both the available manpower and the level of professional expertise available for consultation; (d) Allied health professional staffing of Service facilities should be maintained at a level appropriate to the special needs of the population served; (e) Continuing education opportunities should be provided for those health professionals serving these communities, and especially those in remote areas, and, increased peer contact, both to maintain the quality of care and to avert professional isolation; and (f) Consideration should be given to a federal statement of policy supporting continuation of the Public Health Service to reduce the great uncertainty now felt by many career officers of the corps.
(4)Medical Societies: In those states where Indian Health Service facilities are located, and in counties containing or adjacent to Service facilities, that the appropriate medical societies should explore the possibility of increased formal liaison with local Indian Health Service physicians. Increased support from organized medicine for improvement of health care provided under their direction, including professional consultation and involvement in society activities should be pursued.
(5) Our AMA also support the removal of any requirement for competitive bidding in the Indian Health Service that compromises proper care for the American Indian population.
Citation: (CLRPD Rep. 3, I-98; Reaffirmed: CLRPD Rep. 1, A-08; Reaffirmation A-12; Reaffirmed: Res. 233, A-13)

Improving Health Care of American Indians H-350.976
Our AMA recommends that: (1) All individuals, special interest groups, and levels of government recognize the American Indian people as full citizens of the U.S., entitled to the same equal rights and privileges as other U.S. citizens.
(2) The federal government provide sufficient funds to support needed health services for American Indians.

(3) State and local governments give special attention to the health and health-related needs of nonreservation American Indians in an effort to improve their quality of life.
(4) American Indian religions and cultural beliefs be recognized and respected by those responsible for planning and providing services in Indian health programs.
(5) Our AMA recognize the "medicine man" as an integral and culturally necessary individual in delivering health care to American Indians.
(6) Strong emphasis be given to mental health programs for American Indians in an effort to reduce the high incidence of alcoholism, homicide, suicide, and accidents.
(7) A team approach drawing from traditional health providers supplemented by psychiatric social workers, health aides, visiting nurses, and health educators be utilized in solving these problems.
(8) Our AMA continue its liaison with the Indian Health Service and the National Indian Health Board and establish a liaison with the Association of American Indian Physicians.
(9) State and county medical associations establish liaisons with intertribal health councils in those states where American Indians reside.
(10) Our AMA supports and encourages further development and use of innovative delivery systems and staffing configurations to meet American Indian health needs but opposes overemphasis on research for the sake of research, particularly if needed federal funds are diverted from direct services for American Indians.
(11) Our AMA strongly supports those bills before Congressional committees that aim to improve the health of and health-related services provided to American Indians and further recommends that members of appropriate AMA councils and committees provide testimony in favor of effective legislation and proposed regulations.

Plan for Continued Progress Toward Health Equity H-180.944
Health equity, defined as optimal health for all, is a goal toward which our AMA will work by advocating for health care access, research, and data collection; promoting equity in care; increasing health workforce diversity; influencing determinants of health; and voicing and modeling commitment to health equity.

Universal Access for Essential Public Health Services D-440.924
Our AMA: (1) supports equitable access to the 10 Essential Public Health Services and the Foundational Public Health Services to protect and promote the health of all people in all communities; (2) encourages state, local, tribal, and territorial public health departments to pursue accreditation through the Public Health Accreditation Board (PHAB); (3) will work with appropriate stakeholders to develop a comprehensive list of minimum necessary programs and services to protect the public health of citizens in all state and local jurisdictions and ensure adequate provisions of public health, including, but not limited to clean water, functional sewage systems, access to vaccines, and other public health standards; and (4) will work with the National Association of City and County Health Officials (NACCHO), the Association of State and Territorial Health Officials (ASTHO), the Big Cities Health Coalition, the Centers for Disease Control and Prevention (CDC), and other related entities that are working to assess and assure appropriate funding levels, service capacity, and adequate infrastructure of the nation’s public health system, including for rural jurisdictions.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 207
(A-23)

Introduced by: Medical Student Section

Subject: Ground Ambulance Services and Surprise Billing

Referred to: Reference Committee B

Whereas, Emergency Medical Services (EMS) and ground ambulance services play a critical role in the network of healthcare in each community[1]; and

Whereas, People insured under Medicare or Medicaid are not at risk for surprise billing[2]; and

Whereas, Ten percent of emergency room visits for privately insured individuals require an ambulance ride to the hospital[3]; and

Whereas, Anywhere from 71-86% of ground ambulance rides involve potential surprise bills with patients being charged an aggregate of $129 million per year due to out-of-network charges[1,4]; and

Whereas, 39% of Americans would struggle to cover an unexpected expense of just $400[5]; and

Whereas, Eight percent of all medical debt stems from ambulance charges[6]; and

Whereas, Medical debt disproportionately impacts poor and minority communities, with 80% of medical debt being held by households with zero or negative net worth, and 27% of Black households holding medical debt compared to only 17% of non-black households[7]; and

Whereas, EMS and ambulance service reimbursement from governmental sources is inadequate and subject to significant year-to-year fluctuations[4]; and

Whereas, Patients bear a disproportionate and unintentional financial burden due to out-of-network ambulance service charges[8]; and

Whereas, Financial concerns have been linked to reduced utilization of ground ambulance services, increasing risk of morbidity and mortality[9]; and

Whereas, Low-income patients are 160% more likely to utilize emergency medical services when cost concerns are eliminated[10]; and

Whereas, Only Colorado, Delaware, Florida, Illinois, Maine, Maryland, New York, Ohio, Vermont, West Virginia have protections against ground ambulance surprise billing[11]; and

Whereas, The No Surprises Act supplements existing state surprise billing laws to protect patients from receiving surprise medical bills by requiring private health plans to cover eligible out-of-network costs, and by prohibiting covered healthcare providers from billing more than the in-network cost-sharing amount[12-14]; and

Whereas, The No Surprises Act called for the creation of a "Ground Ambulance and Patient Billing" advisory committee in January 2022 to develop recommendations on how to address surprise billing in the context of ground ambulance services, but has neither chosen representing members nor published a meeting date[11,15]; and

Whereas, The No Surprises Act addresses air ambulance services by including "medical transport by helicopter" and "medical transport by airplane", but does not include ground ambulance services[16-17]; therefore be it

RESOLVED, That our American Medical Association oppose surprise billing practices for ground ambulance services. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

Received: 3/27/23

RELEVANT AMA POLICY

Out-of-Network Care H-285.904
1. Our AMA adopts the following principles related to unanticipated out-of-network care:
A. Patients must not be financially penalized for receiving unanticipated care from an out-of-network provider.
B. Insurers must meet appropriate network adequacy standards that include adequate patient access to care, including access to hospital-based physician specialties. State regulators should enforce such standards through active regulation of health insurance company plans.
C. Insurers must be transparent and proactive in informing enrollees about all deductibles, copayments and other out-of-pocket costs that enrollees may incur.
D. Prior to scheduled procedures, insurers must provide enrollees with reasonable and timely access to in-network physicians.
E. Patients who are seeking emergency care should be protected under the "prudent layperson" legal standard as established in state and federal law, without regard to prior authorization or retrospective denial for services after emergency care is rendered.
F. Out-of-network payments must not be based on a contrived percentage of the Medicare rate or rates determined by the insurance company.
G. Minimum coverage standards for unanticipated out-of-network services should be identified. Minimum coverage standards should pay out-of-network providers at the usual and customary out-of-network charges for services, with the definition of usual and customary based upon a percentile of all out-of-network charges for the particular health care service performed by a provider in the same or similar specialty and provided in the same geographical area as reported by a benchmarking database. Such a benchmarking database must be independently recognized and verifiable, completely transparent, independent of the control of either payers or providers and maintained by a non-profit organization. The non-profit organization shall not be affiliated with an insurer, a municipal cooperative health benefit plan or health management organization.
H. Independent Dispute Resolution (IDR) should be allowed in all circumstances as an option or alternative to come to payment resolution between insurers and physicians.
2. Our AMA will advocate for the principles delineated in Policy H-285.904 for all health plans, including ERISA plans.
3. Our AMA will advocate that any legislation addressing surprise out of network medical bills use an independent, non-conflicted database of commercial charges.
Citation: Res. 108, A-17; Reaffirmation: A-18; Appended: Res. 104, A-18; Reaffirmed in lieu of: Res. 225, I-18; Reaffirmation: A-19; Reaffirmed: Res. 210, A-19; Appended: Res. 211, A-19; Reaffirmed: CMS Rep. 5, A-21; Modified: Res. 236, A-22;

Billing Procedures for Emergency Care H-130.978
(1) Our AMA urges physicians rendering emergency care to ensure that the services they provide are accurately and completely described and coded on the appropriate claim forms. (2) In the interest of high quality care, patients who seek medical attention on an emergency basis should have the benefit of an immediate evaluation of any indicated diagnostic studies. The physician who provides such evaluation is entitled to adequate compensation for his or her services. When such evaluations are provided as an integral part of and in conjunction with other routine services rendered by the emergency physician, ideally an inclusive charge, commensurate with the services provided, should be made. Where the carrier collapses or eliminates CPT-4 coding for payment purposes, the physician may be left with no realistic alternative other than to itemize. Such an itemized bill should not be higher than the amount which would be paid if the appropriate inclusive charge were recognized. The interpretation of diagnostic procedures by a consulting specialist, as a separate and independent service provided the emergency patient, is equally important to good patient care. Physicians who provide such interpretations are also entitled to adequate compensation for their services. (3) Our AMA encourages state and local organizations representing the specialty of emergency medicine to work with both private and public payers in their area to implement payment practices and coding procedures which assure that payment to physicians rendering emergency care adequately reflects the extent of services provided.

Advocacy Efforts to Persuade All Health Payers to Pay for EMTALA-Mandated Services D-130.975
Our AMA will incorporate into any existing or future legislative efforts regarding EMTALA and/or balance billing, language which would require all insurers to assign payments directly to any health care provider who has provided EMTALA-mandated emergency care, regardless of in-network and out-of-network status.
Citation: BOT Rep. 2, I-05; Reaffirmation A-07; Reaffirmed: CMS Rep. 01, A-17;

Balance Billing for All Physicians D-380.996
1. Our AMA will devote the necessary political and financial resources to introduce national legislation at the appropriate time to bring about implementation of Medicare balance billing and to introduce legislation to end the budget neutral restrictions inherent in the current Medicare physician payment structure that interferes with patient access to care.
2. This national legislation will be designed to pre-empt state laws that prohibit balance billing and prohibit inappropriate inclusion of balance billing bans in insurance-physician contracts.
3. Our AMA will develop model language for physicians to incorporate into any insurance contracts that attempt to restrict a physician's right to balance bill any insured patient.
4. Our AMA Board of Trustees will report back to our AMA House of Delegates electronically by March 15, 2008 and at every HOD meeting its progress toward the completion of all of these goals.
Citation: Res. 925, I-07; Reaffirmed: BOT Rep. 22, A-17;

Medicare Balance Billing D-390.986
Our American Medical Association: (1) advocate that physicians be allowed to balance bill Medicare recipients to the full amount of their normal charge with the patient responsible for the difference between the Medicare payment and the physician charges; (2) seek introduction of national legislation to bring about implementation of balance billing of Medicare recipients; and (3) further advocate that such federal laws and regulations pre-empt state laws that prohibit balance billing.
Citation: Res. 713, I-02; Reaffirmation A-04; Reaffirmation A-06; Reaffirmed per BOT Action in response to referred for decision Res. 236, A-06; Reaffirmed: CMS Rep. 5, I-12; Reaffirmed: BOT Rep. 9, A-22;

Balance Billing H-385.991
Our AMA supports the right of the physician to balance bill a patient for any care given, regardless of method of payment, where permissible by law or contractual agreement.
Citation: Sub. Res. 128, I-83; Reaffirmed: CLRPD Rep. 1, I-93; Reaffirmed: Sub. Res. 704, A-01; Reaffirmation A-04; Reaffirmation A-05; Reaffirmation A-06; Reaffirmed per BOT Action in response to referred for decision Res. 236, A-06; Reaffirmed: CMS Rep. 01, A-16;

Freedom of Choice H-390.854
(1) The AMA will seek appropriate cases to challenge the legality and constitutionality of Medicare restrictions on non-participating physicians' medical practice and on patient freedom of choice by such mechanisms as limitations on balance billing and prohibitions on private "opt out" arrangements between physicians and patients. (2) The AMA will strongly resist such restrictions being extended to other payers in national health care reform legislation.
Citation: Res. 117, I-92; Reaffirmed: CMS Rep. 10, A-03; Renumbered: CMS Rep. 7, I-05; Reaffirmation A-06; Reaffirmed: CMS Rep. 01, A-16;

Medicare's Ambulance Service Regulations H-240.978
1. Our AMA supports changes in Medicare regulations governing ambulance service coverage guidelines that would expand the term "appropriate facility" to allow full payment for transport to the most appropriate facility based on the patients needs and the determination made by physician medical direction; and expand the list of eligible transport locations from the current three sites of care (nearest hospital, critical access hospital, or skilled nursing facility) based upon the onsite evaluation and physician medical direction.
2. Our AMA will work with the Centers for Medicare & Medicaid Services (CMS) to pay emergency medical services providers for the evaluation and transport of patients to the most appropriate site of care not limited to the current CMS defined transport locations.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 208
(A-23)

Introduced by: Medical Student Section

Subject: Medicaid Managed Care for Indian Health Care Providers

Referred to: Reference Committee B

Whereas, The Indian Health Service (IHS), an agency within the U.S. Department of Health and Human Services, is responsible for providing health services to American Indians and Alaska Natives (AI/AN)[1]; and

Whereas, The IHS is underfunded relative to other federal health programs, IHS per capita health care expenditures are $4,078, while figures for Veterans Healthcare Administration is $10,692 and Medicaid and Medicare are $8,109 and $13,185, respectively[2]; and

Whereas, The IHS is considered the payor of last resort, ensuring that no payments shall be made from the Indian Health Service to any provider of treatment at an IHS, Tribal, and Urban Indian Health Program to the extent that such provider is eligible to receive payment for the treatment from any other federal, state, local, or private source of reimbursement for which the patient is eligible[3]; and

Whereas, IHS' sources of reimbursement include, but are not limited to, Medicare Part A and B, State Medicaid, State or other federal health programs (e.g., Veterans Health Administration), private insurance, and funds from Tribal health programs[3]; and

Whereas, Payments for IHS patients' medical care received from public programs such as Medicaid and Medicare or from private insurers—increased from about $943 million in fiscal year 2015 to about $1.15 billion in fiscal year 2019 at its federal facilities[4]; and

Whereas, IHS third-party collections are increasingly important, as they represent a significant portion of IHS, Tribal, and Urban Indian Health Programs' health care delivery budget and are also used to procure services, supplies, and pharmaceuticals[4-5]; and

Whereas, An estimated 725,000 AI/AN patients served by the IHS (28.3% of population served) have Medicaid coverage[5]; and

Whereas, As of July 2021, 41 states, including the District of Columbia, contract with Managed Care Organizations (MCO) to provide for the delivery of Medicaid health benefits and additional services[6-7]; and

Whereas, Managed Care Organizations (MCO) play a significant role in the delivery of healthcare to Medicaid enrollees because states choose which populations and services to include in managed care contracts (e.g. persons with disabilities, dual-eligible Medicaid and Medicare beneficiaries)[7]; and

Whereas, There are Indian Health Care Medicaid Managed Care Provisions (42 C.F.R. § 438.14) protecting the rights of Indian Health Care Providers (IHCP) that must be followed by state Medicaid programs or their contracted MCO[8]; and

Whereas, An IHCP is a health care program operated by the IHS or by an Indian Tribe, Tribal Organization, or Urban Indian Organization, as those terms are defined in section 4 of the Indian Health Care Improvement Act (25 U.S.C. 1603)[9]; and

Whereas, These provisions include: (1) allowing AI/AN Medicaid enrollees to obtain MCO-covered services from out-of-network IHCPs; (2) requiring MCOs to pay out-of-network IHCPs that are federally qualified health centers (FQHC) at the same rate that they would pay an in-network FQHC; and (3) requiring MCOs to pay out-of-network IHCPs that are not an FQHC at the IHS rate[8]; and

Whereas, In 2019, the Center for Medicare and Medicaid Services (CMS) Tribal Technical Advisory Group (TTAG) formed a Managed Care Subcommittee to address Medicaid managed care issues identified by IHCPs, AI/AN Medicaid enrollees, and Tribal leaders[8]; and

Whereas, Key issues identified by the CMS TTAG Subcommittee included denying AI/AN enrollees the right to receive services from an IHCP of their choice, denial of claims made by IHCPs to MCOs, inadequate State oversight of MCOs, and incorrect reimbursement from MCOs to IHCPs for their services[8]; and

Whereas, Greater compliance with Indian Health Care Medicaid Managed Care Provisions (42 C.F.R. § 438.14) will improve the availability of health care services offered by IHCPs[9]; therefore be it

RESOLVED, That our American Medical Association urge stronger federal enforcement of Indian Health Care Medicaid Managed Care Provisions and other relevant laws to ensure state Medicaid agencies and their Medicaid managed care organizations (MCO) are complying with their legal obligations to Indian health care providers (New HOD Policy); and be it further

RESOLVED, That our AMA collaborate with other stakeholders to encourage state Medicaid agencies to follow the Center for Medicare and Medicaid Services Tribal Technical Advisory Group's recommendations to improve care coordination and payment agreements between Medicaid managed care organizations and Indian health care providers by, including, but not limited to:

1. Convening Tribal Advisory Committees or hiring Tribal liaisons within state Medicaid agencies.
2. Increasing the utilization of the Center for Medicare and Medicaid Services Indian Managed Care Addendum.
3. Offering employee onboarding and annual refresher training regarding Indian Health Care Medicaid Managed Care Provisions. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 3/27/23

RELEVANT AMA POLICY

Indian Health Service H-350.977

The policy of the AMA is to support efforts in Congress to enable the Indian Health Service to meet its obligation to bring American Indian health up to the general population level. The AMA specifically recommends: (1) Indian Population: (a) In current education programs, and in the expansion of educational activities suggested below, special consideration be given to involving the American Indian and Alaska native population in training for the various health professions, in the expectation that such professionals, if provided with adequate professional resources, facilities, and income, will be more likely to serve the tribal areas permanently; (b) Exploration with American Indian leaders of the possibility of increased numbers of nonfederal American Indian health centers, under tribal sponsorship, to expand the American Indian role in its own health care; (c) Increased involvement of private practitioners and facilities in American Indian care, through such mechanisms as agreements with tribal leaders or Indian Health Service contracts, as well as normal private practice relationships; and (d) Improvement in transportation to make access to existing private care easier for the American Indian population.
(2) Federal Facilities: Based on the distribution of the eligible population, transportation facilities and roads, and the availability of alternative nonfederal resources, the AMA recommends that those Indian Health Service facilities currently necessary for American Indian care be identified and that an immediate construction and modernization program be initiated to bring these facilities up to current standards of practice and accreditation.
(3)Manpower: (a) Compensation for Indian Health Service physicians be increased to a level competitive with other Federal agencies and nongovernmental service; (b) Consideration should be given to increased compensation for service in remote areas; (c) In conjunction with improvement of Service facilities, efforts should be made to establish closer ties with teaching centers, thus increasing both the available manpower and the level of professional expertise available for consultation; (d) Allied health professional staffing of Service facilities should be maintained at a level appropriate to the special needs of the population served; (e) Continuing education opportunities should be provided for those health professionals serving these communities, and especially those in remote areas, and, increased peer contact, both to maintain the quality of care and to avert professional isolation; and (f) Consideration should be given to a federal statement of policy supporting continuation of the Public Health Service to reduce the great uncertainty now felt by many career officers of the corps.
(4)Medical Societies: In those states where Indian Health Service facilities are located, and in counties containing or adjacent to Service facilities, that the appropriate medical societies should explore the possibility of increased formal liaison with local Indian Health Service physicians. Increased support from organized medicine for improvement of health care provided under their direction, including professional consultation and involvement in society activities should be pursued.
(5) Our AMA also support the removal of any requirement for competitive bidding in the Indian Health Service that compromises proper care for the American Indian population.
Citation: (CLRPD Rep. 3, I-98; Reaffirmed: CLRPD Rep. 1, A-08; Reaffirmation A-12; Reaffirmed: Res. 233, A-13)

Improving Health Care of American Indians H-350.976
Our AMA recommends that: (1) All individuals, special interest groups, and levels of government recognize the American Indian people as full citizens of the U.S., entitled to the same equal rights and privileges as other U.S. citizens.
(2) The federal government provide sufficient funds to support needed health services for American Indians.
(3) State and local governments give special attention to the health and health-related needs of nonreservation American Indians in an effort to improve their quality of life.
(4) American Indian religions and cultural beliefs be recognized and respected by those responsible for planning and providing services in Indian health programs.
(5) Our AMA recognize the "medicine man" as an integral and culturally necessary individual in delivering health care to American Indians.
(6) Strong emphasis be given to mental health programs for American Indians in an effort to reduce the high incidence of alcoholism, homicide, suicide, and accidents.
(7) A team approach drawing from traditional health providers supplemented by psychiatric social workers, health aides, visiting nurses, and health educators be utilized in solving these problems.
(8) Our AMA continue its liaison with the Indian Health Service and the National Indian Health Board and establish a liaison with the Association of American Indian Physicians.
(9) State and county medical associations establish liaisons with intertribal health councils in those states where American Indians reside.
(10) Our AMA supports and encourages further development and use of innovative delivery systems and staffing configurations to meet American Indian health needs but opposes overemphasis on research for the sake of research, particularly if needed federal funds are diverted from direct services for American Indians.
(11) Our AMA strongly supports those bills before Congressional committees that aim to improve the health of and health-related services provided to American Indians and further recommends that members of appropriate AMA councils and committees provide testimony in favor of effective legislation and proposed regulations.
Citation: (CLRPD Rep. 3, I-98; Reaffirmed: Res. 221, A-07; Reaffirmation A-12; Reaffirmed: Res. 233, A-13)

Racial and Ethnic Disparities in Health Care H-350.974
1. Our AMA recognizes racial and ethnic health disparities as a major public health problem in the United States and as a barrier to effective medical diagnosis and treatment. The AMA maintains a position of zero tolerance toward racially or culturally based disparities in care; encourages individuals to report physicians to local medical societies where racial or ethnic discrimination is suspected; and will continue to support physician cultural awareness initiatives and related consumer education activities. The elimination of racial and ethnic disparities in health care an issue of highest priority for the American Medical Association.
2. The AMA emphasizes three approaches that it believes should be given high priority:
A. Greater access - the need for ensuring that black Americans without adequate health care insurance are given the means for access to necessary health care. In particular, it is urgent that Congress address the need for Medicaid reform.
B. Greater awareness - racial disparities may be occurring despite the lack of any intent or purposeful efforts to treat patients differently on the basis of race. The AMA encourages physicians to examine their own practices to ensure that inappropriate considerations do not affect their clinical judgment. In addition, the profession should help increase the awareness of its members of racial disparities in medical treatment decisions by engaging in open and broad discussions about the issue. Such discussions should take place in medical school curriculum, in medical journals, at professional conferences, and as part of professional peer review activities.
C. Practice parameters - the racial disparities in access to treatment indicate that inappropriate considerations may enter the decision making process. The efforts of the specialty societies, with the coordination and assistance of our AMA, to develop practice parameters, should include criteria that would preclude or diminish racial disparities
3. Our AMA encourages the development of evidence-based performance measures that adequately identify socioeconomic and racial/ethnic disparities in quality. Furthermore, our AMA supports the use of evidence-based guidelines to promote the consistency and equity of care for all persons.

4. Our AMA: (a) actively supports the development and implementation of training regarding implicit bias, diversity and inclusion in all medical schools and residency programs; (b) will identify and publicize effective strategies for educating residents in all specialties about disparities in their fields related to race, ethnicity, and all populations at increased risk, with particular regard to access to care and health outcomes, as well as effective strategies for educating residents about managing the implicit biases of patients and their caregivers; and (c) supports research to identify the most effective strategies for educating physicians on how to eliminate disparities in health outcomes in all at-risk populations. Citation: CLRPD Rep. 3, I-98; Appended and Reaffirmed: CSA Rep.1, I-02; Reaffirmed: BOT Rep. 4, A-03; Reaffirmed in lieu of Res. 106, A-12; Appended: Res. 952, I-17; Reaffirmed: CMS Rep. 10, A-19; Reaffirmed: CMS Rep. 3, A-21; Reaffirmed: Joint CMS/CSAPH Rep. 1, I-21;

Transforming Medicaid and Long-Term Care and Improving Access to Care for the Uninsured H-290.982
AMA policy is that our AMA: (1) urges that Medicaid reform not be undertaken in isolation, but rather in conjunction with broader health insurance reform, in order to ensure that the delivery and financing of care results in appropriate access and level of services for low-income patients;
(2) encourages physicians to participate in efforts to enroll children in adequately funded Medicaid and State Children's Health Insurance Programs using the mechanism of "presumptive eligibility," whereby a child presumed to be eligible may be enrolled for coverage of the initial physician visit, whether or not the child is subsequently found to be, in fact, eligible.
(3) encourages states to ensure that within their Medicaid programs there is a pluralistic approach to health care financing delivery including a choice of primary care case management, partial capitation models, fee-for-service, medical savings accounts, benefit payment schedules and other approaches;
(4) calls for states to create mechanisms for traditional Medicaid providers to continue to participate in Medicaid managed care and in State Children's Health Insurance Programs;
(5) calls for states to streamline the enrollment process within their Medicaid programs and State Children's Health Insurance Programs by, for example, allowing mail-in applications, developing shorter application forms, coordinating their Medicaid and welfare (TANF) application processes, and placing eligibility workers in locations where potential beneficiaries work, go to school, attend day care, play, pray, and receive medical care;
(6) urges states to administer their Medicaid and SCHIP programs through a single state agency;
(7) strongly urges states to undertake, and encourages state medical associations, county medical societies, specialty societies, and individual physicians to take part in, educational and outreach activities aimed at Medicaid-eligible and SCHIP-eligible children. Such efforts should be designed to ensure that children do not go without needed and available services for which they are eligible due to administrative barriers or lack of understanding of the programs;
(8) supports requiring states to reinvest savings achieved in Medicaid programs into expanding coverage for uninsured individuals, particularly children. Mechanisms for expanding coverage may include additional funding for the SCHIP earmarked to enroll children to higher percentages of the poverty level; Medicaid expansions; providing premium subsidies or a buy-in option for individuals in families with income between their state's Medicaid income eligibility level and a specified percentage of the poverty level; providing some form of refundable, advanceable tax credits inversely related to income; providing vouchers for recipients to use to choose their own health plans; using Medicaid funds to purchase private health insurance coverage; or expansion of Maternal and Child Health Programs. Such expansions must be implemented to coordinate with the Medicaid and SCHIP programs in order to achieve a seamless health care delivery system, and be sufficiently funded to provide incentive for families to obtain adequate insurance coverage for their children;
(9) advocates consideration of various funding options for expanding coverage including, but not limited to: increases in sales tax on tobacco products; funds made available through for-profit conversions of health plans and/or facilities; and the application of prospective payment or other cost or utilization management techniques to hospital outpatient services, nursing home services, and home health care services;
(10) supports modest co-pays or income-adjusted premium shares for non-emergent, non-preventive services as a means of expanding access to coverage for currently uninsured individuals;
(11) calls for CMS to develop better measurement, monitoring, and accountability systems and indices within the Medicaid program in order to assess the effectiveness of the program, particularly under managed care, in meeting the needs of patients. Such standards and measures should be linked to health outcomes and access to care;

(12) supports innovative methods of increasing physician participation in the Medicaid program and thereby increasing access, such as plans of deferred compensation for Medicaid providers. Such plans allow individual physicians (with an individual Medicaid number) to tax defer a specified percentage of their Medicaid income;
(13) supports increasing public and private investments in home and community-based care, such as adult day care, assisted living facilities, congregate living facilities, social health maintenance organizations, and respite care;
(14) supports allowing states to use long-term care eligibility criteria which distinguish between persons who can be served in a home or community-based setting and those who can only be served safely and cost-effectively in a nursing facility. Such criteria should include measures of functional impairment which take into account impairments caused by cognitive and mental disorders and measures of medically related long-term care needs;
(15) supports buy-ins for home and community-based care for persons with incomes and assets above Medicaid eligibility limits; and providing grants to states to develop new long-term care infrastructures and to encourage expansion of long-term care financing to middle-income families who need assistance;
(16) supports efforts to assess the needs of individuals with intellectual disabilities and, as appropriate, shift them from institutional care in the direction of community living;
(17) supports case management and disease management approaches to the coordination of care, in the managed care and the fee-for-service environments;
(18) urges CMS to require states to use its simplified four-page combination Medicaid / Children's Health Insurance Program (CHIP) application form for enrollment in these programs, unless states can indicate they have a comparable or simpler form; and
(19) urges CMS to ensure that Medicaid and CHIP outreach efforts are appropriately sensitive to cultural and language diversities in state or localities with large uninsured ethnic populations.

Monitoring Medicaid Managed Care H-290.985
As managed care plans increasingly become the source of care for Medicaid beneficiaries, the AMA advocates the same policies for the conduct of Medicaid managed care that the AMA advocates for private sector managed care plans. In addition, the AMA advocates that the following criteria be used in federal and/or state oversight and evaluation of managed care plans serving Medicaid beneficiaries, and insists upon their use by the Federation in monitoring the implementation of managed care for Medicaid beneficiaries:
(1) Adequate and timely public disclosure of pending implementation of managed care under a state program, so as to allow meaningful public comment.
(2) Phased implementation to ensure availability of an adequate, sufficiently capitalized managed care infrastructure and an orderly transition for beneficiaries and providers.
(3) Geographic dispersion and accessibility of participating physicians and other providers.
(4) Education of beneficiaries regarding appropriate use of services, including the emergency department.
(5) Availability of off-hours, walk-in primary care.
(6) Coverage for clinically effective preventive services.
(7) Responsiveness to cultural, language and transportation barriers to access.
(8) In programs where more than one plan is available, beneficiary freedom to choose his/her plan, enforcement of standards for marketing/enrollment practices, and clear and comparable disclosure of plan benefits and limitations including financial incentives on providers.
(9) Beneficiary freedom to choose and retain a given primary physician within the plan, and to request a change in physicians when dissatisfied.
(10) Significant participating physician involvement and influence in plan medical policies, including development and conduct of quality assurance, credentialing and utilization review programs.
(11) Ability of plan participating physicians to determine how many beneficiaries and the type of medical problems they will care for under the program.

(12) Adequate identification of plan beneficiaries and plan treatment restrictions to out-of-plan physicians and other providers.
(13) Intensive case management for high utilizers and realistic financial disincentives for beneficiary misuse of services.
(14) Treatment authorization requirements and referral protocols that promote continuity rather than fragment the process of care.
(15) Preservation of private right of action for physicians and other providers and beneficiaries.
(16) Ongoing evaluation and public reporting of patient outcomes, patient satisfaction and service utilization.
(17) Full disclosure of plan physician and other provider selection criteria, and concerted efforts to qualify and enroll traditional community physicians and other existing providers in the plan.
(18) Absence of gag rules.
(19) Fairness in procedures for selection and deselection.
(20) Realistic payment levels based on costs of care and predicted utilization levels.
(21) Payment arrangements that do not expose practitioners to excessive financial risk for their own or referral services, and that tie any financial incentives to performance of the physician group over significant time periods rather than to individual treatment decisions.
(22) Our AMA urges CMS to direct those state Medicaid agencies with Medicaid managed care programs to disseminate data and other relevant information to the state medical associations in their respective states on a timely and regular basis.
Citation: CMS Rep. 5 A-96; Reaffirmed and Appended: Sub. Res. 704, I-97; Reaffirmation A-00; Reaffirmation I-04; Reaffirmed: CMS Rep. 1, A-14; Reaffirmed: CMS Rep. 1, I-22;

Medicaid Waivers for Managed Care Demonstration Projects H-290.987
(1) Our AMA adopts the position that the Secretary of Health and Human Services should determine as a condition for granting waivers for demonstration projects under Section 1115(a) of the Medicaid Act that the proposed project: (i) assist in promoting the Medicaid Act's objective of improving access to quality medical care, (ii) has been preceded by a fair and open process for receiving public comment on the program, (iii) is properly funded, (iv) has sufficient provider reimbursement levels to secure adequate access to providers, (v) does not include provisions designed to coerce physicians and other providers into participation, such as those that link participation in private health plans with participation in Medicaid, and (vi) maintains adequate funding for graduate medical education. (2) Our AMA advocates that CMS establish a procedure which state Medicaid agencies can implement to monitor managed care plans to ensure that (a) they are aware of their responsibilities under EPSDT, (b) they inform patients of entitlement to these services, and (c) they institute internal review mechanisms to ensure that children have access to medically necessary services not specified in the plan's benefit package.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 209
(A-23)

Introduced by: Medical Student Section

Subject: Purchased and Referred Care Expansion

Referred to: Reference Committee B

Whereas, The Indian Health Service (IHS), an agency within the United States (U.S.) Department of Health and Human Services, is responsible for providing health services to American Indians and Alaska Natives (AI/AN)[1]; and

Whereas, The IHS is funded each year through appropriations by the U.S. Congress[1]; and

Whereas, The IHS is underfunded relative to other federal health programs, IHS per capita health care expenditures are $4,078, while the Veterans Healthcare Administration is $10,692 and Medicaid and Medicare are $8,109 and $13,185, respectively[2]; and

Whereas, The IHS is considered the payor of last resort, ensuring that no payments shall be made from the Indian Health Service to any provider of treatment at an IHS, Tribal, and Urban Indian Health Program to the extent that such provider is eligible to receive payment for the treatment from any other federal, state, local, or private source of reimbursement for which the patient is eligible[3]; and

Whereas, These sources of reimbursement include, but are not limited to, Medicare Part A and B, State Medicaid, State or other federal health programs (e.g., Veterans Health Administration), private insurance, and funds from Tribal health programs[3]; and

Whereas, AI/AN individuals have the highest rates of uninsurance compared to other racial and ethnic groups, even after passage of the Affordable Care Act, with 48.7% of people served by the Indian Health Service having no insurance coverage[4]; and

Whereas, IHS, Tribal, and Urban Indian Health Programs are often limited to primary care services due to funding limitations and facility constraints, among other factors[5]; and

Whereas, The IHS operates the Purchased/Referred Care Program (PRCP), a non-entitlement referral program that may cover medical and dental care provided away from an IHS or Tribal Health Program[5,7]; and

Whereas, If the IHS is requested to pay through PRCP, then an AI/AN patient must meet the PRCP residency requirements, notification requirements, medical priority, and use of alternate resources such as private insurance, Medicaid, other sources of health funding[5]; and

Whereas, PRCP funding is limited, restricting access to non-emergent medical specialty care part-way through the fiscal year unless an AI/AN patient is facing a “life-or-limb” situation[6-8]; and

Whereas, Reporting of PRCP claims is limited, but in a recent 2018 report on federal funding shortfalls, the U.S. Commission on Civil Rights reported that in Fiscal Year 2013, the IHS PRCP

denied an estimated 147,000 medical claims as needed by AI/AN patients–amounting to $761 million in unmet need[9]; and

Whereas, Tribal Health Programs often augment PRCP funding with their own funds to increase access to medical specialty care[10]; and

Whereas, More than 70 percent of the AI/AN population lives in Urban Areas, yet Urban Indian Health Programs are not eligible to participate in PRCP, limiting access to care[5,11]; and

Whereas, Community benefit is a legal term for expenditures made by non-profit hospitals to fulfill their charitable obligations as tax-exempt health care institutions[12]; and

Whereas, In 2019, 180 California nonprofit hospitals reported a total of over $6 billion in community benefit expenditures, $2.9 billion of which were attributed to coverage of Medicaid shortfalls, and another $861 million attributed to financial assistance for uninsured patients (63% of all expenditures)[12]; and

Whereas, Community benefit dollars have the potential to increase access to comprehensive, high-quality specialty care for AI/AN patients in states with large AI/AN populations, like California[12]; and

Whereas, Our American Medical Association supports special allocations of community benefit dollars to meet unmet health needs (H-215.961); therefore be it

RESOLVED, That our American Medical Association advocate to Congress to 1) increase funding to the Indian Health Service Purchased/Referred Care Program to enable the program to fully meet the healthcare needs of AI/AN patients and 2) expand eligibility to patients served by Urban Indian Health Programs (Directive to Take Action); and be it further

RESOLVED, That our AMA encourage nonprofit hospitals to allocate community benefit dollars to increase access to specialty care for patients referred from Indian Health Service, Tribal, and Urban Indian Health Programs. (New HOD Policy)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Community Benefit Dollars for Diabetes Prevention H-215.961
1. Our AMA supports allocating community benefit dollars to cover the cost of enrolling patients in an in-person or virtual diabetes prevention program that is part of the Center for Disease Control and Prevention's Diabetes Prevention Recognition Program.
2. Our AMA will work with the American Hospital Association and other stakeholders to develop and disseminate a position paper with guidance for covering the costs of the Center for Disease Control and Prevention's Diabetes Prevention Recognition Program with community benefit dollars.
3. Our AMA encourages each state medical society to work with their respective hospitals and local Diabetes Prevention Program providers to offer the Center for Disease Control and Prevention's Diabetes Prevention Recognition Program to patients.
4. Our AMA encourages that private and public payors offer the Centers for Disease Control and Prevention's Diabetes Prevention Recognition Program to patients as part of their suite of benefits.
Citation: Res. 427, A-16;

Access to Specialty Care H-160.952
The AMA: (1) continues to encourage primary care and other medical specialty organizations to collaborate in developing guidelines to delineate the clinical circumstances under which treatment by primary care physicians, referral for initial or ongoing specialist care, and direct patient self-referral to other specialists are appropriate, timely, and cost-effective; (2) encourages the medical specialty organizations that develop referral guidelines to document the impact of the guidelines on the quality, accessibility, timeliness, and cost-effectiveness of care; and (3) urges all health plans that control access to services through a primary care case manager to cover direct access to and services by a specialist other than the case manager without financial penalty when that access is in conformance with such collaboratively developed guidelines.
Citation: (CMS Rep. 1, A-94; Reaffirmed and Modified: CMS Rep. 7, A-05; Reaffirmation A-09; Reaffirmed in lieu of Res. 815, I-13)

Improving Health Care of American Indians H-350.976
Our AMA recommends that: (1) All individuals, special interest groups, and levels of government recognize the American Indian people as full citizens of the U.S., entitled to the same equal rights and privileges as other U.S. citizens.
(2) The federal government provide sufficient funds to support needed health services for American Indians.
(3) State and local governments give special attention to the health and health-related needs of nonreservation American Indians in an effort to improve their quality of life.
(4) American Indian religions and cultural beliefs be recognized and respected by those responsible for planning and providing services in Indian health programs.
(5) Our AMA recognize the "medicine man" as an integral and culturally necessary individual in delivering health care to American Indians.
(6) Strong emphasis be given to mental health programs for American Indians in an effort to reduce the high incidence of alcoholism, homicide, suicide, and accidents.
(7) A team approach drawing from traditional health providers supplemented by psychiatric social workers, health aides, visiting nurses, and health educators be utilized in solving these problems.
(8) Our AMA continue its liaison with the Indian Health Service and the National Indian Health Board and establish a liaison with the Association of American Indian Physicians.
(9) State and county medical associations establish liaisons with intertribal health councils in those states

where American Indians reside.
(10) Our AMA supports and encourages further development and use of innovative delivery systems and staffing configurations to meet American Indian health needs but opposes overemphasis on research for the sake of research, particularly if needed federal funds are diverted from direct services for American Indians.
(11) Our AMA strongly supports those bills before Congressional committees that aim to improve the health of and health-related services provided to American Indians and further recommends that members of appropriate AMA councils and committees provide testimony in favor of effective legislation and proposed regulations.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 210
(A-23)

Introduced by:	Medical Student Section
Subject:	The Health Care Related Effects of Recent Changes to the US Mexico Border
Referred to:	Reference Committee B

Whereas, The U.S Mexico border extends 1980 miles from San Diego, California to Brownsville, Texas with hundreds of thousands of undocumented immigrants entering the U.S illegally every year[1]; and

Whereas, On January 24th, 2017, President Trump signed the "Border Security and Immigration Enforcement Improvements" Executive Order that resulted in an increase in the height of the border wall from 17 to 30 feet and initiated the addition of 49 miles of new wall[2]; and

Whereas, The Biden administration halted all border wall construction initiated by the Trump administration upon taking office but has recently been approving projects along the border to continue construction [3-5]; and

Whereas, On March 20th, 2020, the Center for Disease Control under the Trump administration issued a public health order, Title 42, a law that allows removals by the U.S. government of persons who have recently been in a country where a communicable disease was present, which effectively shut the border to asylum seekers[6]; and

Whereas, The US has to date expulsed over 1.8 million individuals under Title 42, and the border has experienced a significant increase in repeat and overall crossings at the border[7]; and

Whereas, Crossing the border for many results in injuries requiring medical assistance such as physical trauma, rhabdomyolysis, dehydration, and death[8,9]; and

Whereas, Study comparing cases of fatal injuries from falls sustained when climbing the US Mexico border wall determined that the implication of both lateral and vertical expansion of the wall is increased severity and cost of the trauma [10,11]; and

Whereas, A study found that 55% of migrants crossing the border experienced moderate to grave psychological suffering when screened by Doctors Without Borders[12]; and

Whereas, A study from Arizona described damage to the cranium and spine as a clinically prevalent and costly result of border wall crossing that needs to be addressed to decrease the detrimental impacts felt both by immigrants and surrounding health care systems [9]; and

Whereas, One study of the San Diegan US - Mexico Border compared medical outcomes pre and post changes to the border by the Trump administration and saw a greater than fivefold

increase in admissions, significantly increased hospital and scene mortality, as well as admissions costs in 2021 which exceeded 13 million USD[11]; and

Whereas, A study on the Rio Grande Valley of 121 undocumented immigrants who were injured in their travels incurred a cost of 1.1 million USD to the healthcare system that provided care for this patient population[13]; and

Whereas, One study found the majority of deaths at the US-Mexico border were highly preventable[14]; therefore be it

RESOLVED, That our American Medical Association recognize the health-related effects and humanitarian consequences of increasing the U.S. Mexico border barrier height on immigrant populations and the resulting effects on the U.S. healthcare system (New HOD Policy); and be it further

RESOLVED, That our AMA oppose efforts to increase the height or length of border walls and fences at the US-Mexico border, and other policies that deter people from crossing the border by increasing or creating risks to their health and safety. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Financial Impact of Immigration on American Health System D-160.988
Our AMA will: (1) ask that when the US Department of Homeland Security officials have physical custody of undocumented foreign nationals, and they deliver those individuals to US hospitals and physicians for medical care, that the US Office of Customs and Border Protection, or other appropriate agency, be required to assume responsibility for the health care expenses incurred by those detainees, including detainees placed on "humanitarian parole" or otherwise released by Border Patrol or immigration officials and their agents; and (2) encourage that public policy solutions on illegal immigration to the United States take into consideration the financial impact of such solutions on hospitals, physicians serving on organized medical staffs, and on Medicare, and Medicaid.
Citation: Res. 235, A-06; Reaffirmation I-10; Reaffirmed: BOT Rep. 04, A-20;

Improving Healthcare of Hispanic Populations in the United States H-350.975
It is the policy of our AMA to: (1) Encourage health promotion and disease prevention through educational efforts and health publications specifically tailored to the Hispanic community.
(2) Promote the development of substance abuse treatment centers and HIV/AIDS education and prevention programs that reach out to the Hispanic community.
(3) Encourage the standardized collection of consistent vital statistics on Hispanics by appropriate state and federal agencies.
(4) Urge federal and local governments, as well as private institutions, to consider including Hispanic representation on their health policy development organization.
(5) Support organizations concerned with Hispanic health through research and public acknowledgment of the importance of national efforts to decrease the disproportionately high rates of mortality and morbidity among Hispanics.
(6) Promote research into effectiveness of Hispanic health education methods.
(7) Continue to study the health issues unique to Hispanics, including the health problems associated with the United States/Mexican border.

Separation of Children From Their Caregivers at Border H-440.818
Our AMA will: (1) oppose the practice of separating migrating children from their caregivers in the absence of immediate physical or emotional threats to the childs well-being; and (2) urge the federal government to withdraw its policy of requiring separation of migrating children from their caregivers, and instead, give priority to supporting families and protecting the health and well-being of the children within those families.
Citation: Res. 253, A-18;

Addressing and Banning Nonconsensual Medical Procedures Among Migrant Women at the Border D-350.978
Our AMA: (1) condemns the performance of nonconsensual, invasive medical procedures; (2) will advocate against forced sterilizations of any kind, including against migrant women in detention facilities, and advocate for appropriate associated disciplinary action (including license revocation); and (3) will advocate for safer medical practices and protections for migrant women.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 211
(A-23)

Introduced by: Medical Student Section

Subject: Amending Policy H-80.999, "Sexual Assault Survivors", to Improve Knowledge and Access to No-cost Rape Test Kits

Referred to: Reference Committee B

Whereas, Rape/sexual assault affected 319,950 individuals in the United States in the year 2020, which is a rate of 1.2 individuals per 1,000[1]; and

Whereas, The estimated lifetime cost of rape is $122,461 per victim including but not limited to medical forensic examination, hospitalization/emergency department bills, sexually transmitted infection testing/treatment, criminal justice costs, mental health costs such as depression and/or PTSD treatment, abortion costs, and emergency contraceptive costs[2]; and

Whereas, With more restricted access to abortion, the financial burden to rape/sexual assault victims is likely to increase as patients may now need to cross state lines, obtain a hotel/find temporary housing, take days off work, or incur additional costs to receive appropriate medical care[3-5]; and

Whereas, The mental effect of rape/sexual assault may impact how victims present to the hospital, as victims may be in a vulnerable state with impaired rational thought, memory consolidation, and reduced energy and/or tonic immobility due to trauma[6]; and

Whereas, Medical forensic exams, also known as rape test kits, involve a partnership between the healthcare provider and the crime lab to collect any DNA evidence on the body of the victim or at the scene of the crime, physical examination to look for signs of abuse, and medical history taking to aid in criminal case investigation[7,8]; and

Whereas, Rape test kits, are not financially covered by all states if the provider administering the examination is not a registered Sexual Assault Nurse Examiner (SANE) or Sexual Assault Forensic Examiner (SAFE)[9]; and

Whereas, Receiving care by SANE/SAFEs is associated with better psychological well-being of survivors, increased use of STI prophylaxis and emergency contraception, and higher quality evidence collection resulting in better legal outcomes[10]; and

Whereas, Healthcare staff not trained as SANE/SAFEs have reported discomfort providing sexual assault services due to lack of knowledge about evidence collection and support needs, leading to increased isolation and stigmatization of victims[11]; and

Whereas, The speed at which medical forensic examinations must be done is between 72 and 96 hours after the assault has taken place, making this a time-sensitive examination[12]; and

Whereas, While there are more than 6,000 hospitals nationally; only 800-900 SANE programs have been identified in the United States[9]; and

Whereas, The Department of Justice explains that states are required to work with local medical providers to inform victims of the availability of no-cost forensic exams such that a victim can call their local police department or hotline/crisis center to obtain information about local SANEs/SAFEs[9]; and

Whereas, Victims who do not interact with law enforcement may not know how to access no-cost medical forensic examinations; and

Whereas, Groups of individuals that have historically under-reported rape and sexual assault, such as African-American and Hispanic women and the LGBTQ+ community, are less likely to interact with law enforcement and therefore less likely to be informed about no-cost rape test kits[13-15]; and

Whereas, Information about the availability of SANE/SAFEs is currently limited, and existing databases are only available in certain areas, are outdated, and are often missing information[16]; and

Whereas, Creating and ensuring accessibility to a national database of Sexual Assault Nurse Examiner and Sexual Assault Forensic Examiner providers would allow all victims to quickly access information on where and how to receive a time-sensitive, no-cost medical forensic examination; and

Whereas, Increasing accessibility to information on SANE/SAFE locations and providers would allow minority and other vulnerable populations to have more equal opportunities to receive no-cost medical forensic examination; therefore be it

RESOLVED, That our American Medical Association amend Policy H-80.999, "Sexual Assault Survivors," by addition to read as follows:

Sexual Assault Survivors, H-80.999

1. Our AMA supports the preparation and dissemination of information and best practices intended to maintain and improve the skills needed by all practicing physicians involved in providing care to sexual assault survivors.

2. Our AMA advocates for the legal protection of sexual assault survivors' rights and work with state medical societies to ensure that each state implements these rights, which include but are not limited to, the right to: (a) receive a medical forensic examination free of charge, which includes but is not limited to HIV/STD testing and treatment, pregnancy testing, treatment of injuries, and collection of forensic evidence; (b) preservation of a sexual assault evidence collection kit for at least the maximum applicable statute of limitation; (c) notification of any intended disposal of a sexual assault evidence kit with the opportunity to be granted further preservation; (d) be informed of these rights and the policies governing the sexual assault evidence kit; and (e) access to emergency contraception information and treatment for pregnancy prevention.

3. Our AMA will collaborate with relevant stakeholders to develop recommendations for implementing best practices in the treatment of sexual assault survivors, including through engagement with the joint working group established for this purpose under the Survivor's Bill of Rights Act of 2016.
4. Our AMA will (a) advocate for increased post-pubertal patient access to Sexual Assault Nurse Examiners, and other trained and qualified clinicians, in the emergency department for medical forensic examinations; (b) support and advocate that appropriate stakeholders, such as the Health Resources and Services Administration, the United States Government Accountability Office, and the Office on Violence Against Women, create and implement a national database of Sexual Assault Nurse Examiner and Sexual Assault Forensic Examiner providers.
5. Our AMA will advocate at the state and federal level for (a) the timely processing of all sexual examination kits upon patient consent; (b) timely processing of "backlogged" sexual assault examination kits with patient consent; and (c) additional funding to facilitate the timely testing of sexual assault evidence kits. (Modify Current HOD Policy)

Fiscal Note: Minimal - less than $1,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 212
(A-23)

Introduced by: Oklahoma

Subject: Marijuana Product Safety

Referred to: Reference Committee B

Whereas**,** Physicians prioritize patient safety, and the American Medical Association Code of Medical Ethics underscores its commitment "to promote the art of medicine and the betterment of public health"; and

Whereas, There are many legal implications due to the passage of state marijuana laws and the associated regulations passed by State Departments of Health; and

Whereas, Current American Medical Association policy H-95.952, “Cannabis and Cannabinoid Research” calls for adequate and well-controlled studies of marijuana and urges that marijuana's status as a federal schedule I controlled substance be reviewed with the goal of facilitating the conduct of clinical research; and

Whereas, Current AMA policy D-95.969, “Cannabis Legalization for Medicinal Use” states: Our AMA (3) will develop model legislation requiring the following warning on all cannabis products not approved by the U.S. Food and Drug Administration: "Marijuana has a high potential for abuse. This product has not been approved by the Food and Drug Administration for preventing or treating any disease process."; and

Whereas, To date, the FDA has not approved a marketing application for cannabis for the treatment of any disease or condition[1]; and

Whereas, The FDA has, approved one cannabis-derived drug product: Epidiolex (cannabidiol)(oral solution for the treatment of seizures associated with two rare and severe forms of epilepsy, Lennox-Gastaut syndrome and Dravet syndrome), and three synthetic cannabis-related drug products: Marinol (dronabinol), Syndros (dronabinol), and Cesamet (nabilone)[1,2]; and

Whereas, The FDA is aware that some companies are marketing products containing cannabis and cannabis-derived compounds in ways that violate the Federal Food, Drug and Cosmetic Act (FD&C Act) and that may put the health and safety of consumers at risk[3]; and

Whereas, The FDA is committed to protecting the public health while also taking steps to improve the efficiency of regulatory pathways for the lawful marketing of appropriate cannabis and cannabis-derived products[3]; and

Whereas, Under the drug application process, a sponsor of a nonprescription drug submits a New Drug Application (NDA) or an Abbreviated New Drug Application (ANDA) to FDA for approval with the sponsor not able to market the nonprescription drug until FDA approves the NDA or ANDA[4]; therefore be it

RESOLVED, That our American Medical Association support the policy against marijuana use, either medical or recreational, until such time scientifically valid and well-controlled clinical trials are done to assess the safety and effectiveness as any new drug for medical use, prescription or nonprescription (New HOD Policy); and be it further

RESOLVED, That our AMA Council on Legislation draft state model legislation for states that have legalized "medical" or "recreational" marijuana that (1) prohibit dispensaries from selling marijuana products if they make any misleading health information and/or therapeutic claims, (2) to require dispensaries to include a hazardous warning on all marijuana product labels similar to tobacco and alcohol warnings and (3) ban the advertising of marijuana dispensaries and marijuana products in places that children frequent. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Cannabis and Cannabinoid Research H-95.952

1. Our AMA calls for further adequate and well-controlled studies of marijuana and related cannabinoids in patients who have serious conditions for which preclinical, anecdotal, or controlled evidence suggests possible efficacy and the application of such results to the understanding and treatment of disease.
2. Our AMA urges that marijuana's status as a federal schedule I controlled substance be reviewed with the goal of facilitating the conduct of clinical research and development of cannabinoid-based medicines, and alternate delivery methods. This should not be viewed as an endorsement of state-based medical cannabis programs, the legalization of marijuana, or that scientific evidence on the therapeutic use of cannabis meets the current standards for a prescription drug product.
3. Our AMA urges the National Institutes of Health (NIH), the Drug Enforcement Administration (DEA), and the Food and Drug Administration (FDA) to develop a special schedule and implement administrative procedures to facilitate grant applications and the conduct of well-designed clinical research involving cannabis and its potential medical utility. This effort should include: a) disseminating specific information for researchers on the development of safeguards for cannabis clinical research protocols and the development of a model informed consent form for institutional review board evaluation; b) sufficient funding to support such clinical research and access for qualified investigators to adequate supplies of cannabis for clinical research purposes; c) confirming that cannabis of various and consistent strengths and/or placebo will be supplied by the National Institute on Drug Abuse to investigators registered with the DEA who are conducting bona fide clinical research studies that receive FDA approval, regardless of whether or not the NIH is the primary source of grant support.
4. Our AMA supports research to determine the consequences of long-term cannabis use, especially among youth, adolescents, pregnant women, and women who are breastfeeding.
5. Our AMA urges legislatures to delay initiating the legalization of cannabis for recreational use until further research is completed on the public health, medical, economic, and social consequences of its use.
6. Our AMA will advocate for urgent regulatory and legislative changes necessary to fund and perform research related to cannabis and cannabinoids.
7. Our AMA will create a Cannabis Task Force to evaluate and disseminate relevant scientific evidence to health care providers and the public.

CBD Oil Use and the Marketing of CBD Oil H-95.911
Our AMA supports: (1) banning the advertising of cannabidiol (CBD) as a component of marijuana in places that children frequent; and (2) legislation and regulatory actions at the federal and state level to prohibit companies from selling CBD products if they make any unproven health and therapeutic claims.
Citation: Res. 505, A-22;

Cannabis Legalization for Medicinal Use D-95.969
Our AMA: (1) believes that scientifically valid and well-controlled clinical trials conducted under federal investigational new drug applications are necessary to assess the safety and effectiveness of all new drugs, including potential cannabis products for medical use; (2) believes that cannabis for medicinal use should not be legalized through the state legislative, ballot initiative, or referendum process; (3) will develop model legislation requiring the following warning on all cannabis products not approved by the U.S. Food and Drug Administration: "Marijuana has a high potential for abuse. This product has not been approved by the Food and Drug Administration for preventing or treating any disease process."; (4) supports legislation ensuring or providing immunity against federal prosecution for physicians who certify that a patient has an approved medical condition or recommend cannabis in accordance with their state's laws; (5) believes that effective patient care requires the free and unfettered exchange of information on treatment alternatives and that discussion of these alternatives between physicians and patients should not subject either party to criminal sanctions; (6) will, when necessary and prudent, seek clarification from the United States Justice Department (DOJ) about possible federal prosecution of physicians who participate in a state operated marijuana program for medical use and based on that clarification, ask the DOJ to provide federal guidance to physicians; and (7) encourages hospitals and health systems to: (a) not recommend patient use of non-FDA approved cannabis or cannabis derived products within healthcare facilities until such time as federal laws or regulations permit its use; and (b) educate medical staffs on cannabis use, effects and cannabis withdrawal syndrome.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 213
(A-23)

Introduced by: Senior Physicians Section

Subject: Telemedicine Services and Health Equity

Referred to: Reference Committee B

Whereas, Seniors with complex health conditions increasingly rely on telemedicine to receive specialized care from out-of-state expert physicians; and

Whereas, Telemedicine reciprocity is limited to only 36 states, and some state boards prohibit telemedicine across state lines except in emergencies; and

Whereas, The AMA Principles of Medical Ethics addresses provision of appropriate patient care as well as activities contributing to the betterment of public health for all people[1]; and

Whereas, Telemedicine evaluation and management has been approved at parity with in-person professional visits and accepted positively by the majority of patients and doctors[2]; and

Whereas, Access to virtual care positively affects underserved populations, rural seniors, patients who suffer from chronic conditions, and patients with mobility or transportation issues; and

Whereas, Nationwide telemedicine is increasingly accepted as optimal care under many circumstances, and revised state licensure could improve access to care; and

Whereas, Extension of telehealth coverage and payment parity may expire or be threatened as exemplified by national and some state insurance/support programs; and

Whereas, Some government and other payers require once-a-year in-person physician encounters besides usual telemedicine visits; therefore be it

RESOLVED, That our American Medical Association advocate for preservation of the physician telemedicine waiver and reimbursement at parity with in-person visits beyond December 31, 2024 (Directive to Take Action); and be it further

RESOLVED, That our AMA encourage research to determine the scope and circumstances of telehealth improved health outcomes, especially for underserved populations and seniors with complex health conditions that includes how best to ensure patients have the training in the use of technology needed to maximize its benefits. (New HOD Policy)

Fiscal Note:
First Resolved: Modest - between $1,000 - $5,000
Second Resolved: Minimal - less than $1,000

RELEVANT AMA POLICY

Increasing Access to Broadband Internet to Reduce Health Disparities H-478.980
Our AMA will advocate for the expansion of broadband and wireless connectivity to all rural and underserved areas of the United States while at all times taking care to protecting existing federally licensed radio services from harmful interference that can be caused by broadband and wireless services.
Citation: Res. 208, I-18; Reaffirmed: CMS Rep. 7, A-21; Reaffirmation: A-22; Reaffirmed: CMS Rep. 2, A-22; Reaffirmed: CSAPH Rep. 2, A-22;

Addressing Equity in Telehealth H-480.937
Our AMA:
(1) recognizes access to broadband internet as a social determinant of health;
(2) encourages initiatives to measure and strengthen digital literacy, with an emphasis on programs designed with and for historically marginalized and minoritized populations;
(3) encourages telehealth solution and service providers to implement design functionality, content, user interface, and service access best practices with and for historically minoritized and marginalized communities, including addressing culture, language, technology accessibility, and digital literacy within these populations;
(4) supports efforts to design telehealth technology, including voice-activated technology, with and for those with difficulty accessing technology, such as older adults, individuals with vision impairment and individuals with disabilities;
(5) encourages hospitals, health systems and health plans to invest in initiatives aimed at designing access to care via telehealth with and for historically marginalized and minoritized communities, including improving physician and non-physician provider diversity, offering training and technology support for equity-centered participatory design, and launching new and innovative outreach campaigns to inform and educate communities about telehealth;
(6) supports expanding physician practice eligibility for programs that assist qualifying health care entities, including physician practices, in purchasing necessary services and equipment in order to provide telehealth services to augment the broadband infrastructure for, and increase connected device use among historically marginalized, minoritized and underserved populations;
(7) supports efforts to ensure payers allow all contracted physicians to provide care via telehealth;
(8) opposes efforts by health plans to use cost-sharing as a means to incentivize or require the use of telehealth or in-person care or incentivize care from a separate or preferred telehealth network over the patient's current physicians; and
(9) will advocate that physician payments should be fair and equitable, regardless of whether the service is performed via audio-only, two-way audio-video, or in-person.
Citation: CMS Rep. 7, A-21; Reaffirmation: A-22;

COVID-19 Emergency and Expanded Telemedicine Regulations D-480.963
Our AMA: (1) will continue to advocate for the widespread adoption of telehealth services in the practice of medicine for physicians and physician-led teams post SARS-COV-2; (2) will advocate that the Federal government, including the Centers for Medicare & Medicaid Services (CMS) and other agencies, state governments and state agencies, and the health insurance industry, adopt clear and uniform laws, rules, regulations, and policies relating to telehealth services that: (a) provide equitable coverage that allows patients to access telehealth services wherever they are located, and (b) provide for the use of accessible devices and technologies, with appropriate privacy and security protections, for connecting physicians and patients; (3) will advocate for equitable access to telehealth services, especially for at-risk and under-resourced patient populations and communities, including but not limited to supporting increased funding and planning for telehealth infrastructure such as broadband and internet-connected devices for both physician practices and patients; and (4) supports the use of telehealth to reduce health disparities and promote access to health care.

Citation: Alt. Res. 203, I-20; Reaffirmed: CMS Rep. 7, A-21; Reaffirmed: Res. 239, A-22; Reaffirmation: A-22;

The Promotion of Quality Telemedicine H-480.969
(1) It is the policy of the AMA that medical boards of states and territories should require a full and unrestricted license in that state for the practice of telemedicine, unless there are other appropriate state-based licensing methods, with no differentiation by specialty, for physicians who wish to practice telemedicine in that state or territory. This license category should adhere to the following principles:
(a) exemption from such a licensure requirement for physician-to-physician consultations;
(b) exemption from such a licensure requirement for telemedicine practiced across state lines in the event of an emergent or urgent circumstance, the definition of which for the purposes of telemedicine should show substantial deference to the judgment of the attending and consulting physicians as well as to the views of the patient;
(c) allowances, by exemption or other means, for out-of-state physicians providing continuity of care to a patient, where there is an established ongoing relationship and previous in-person visits, for services incident to an ongoing care plan or one that is being modified; and
(d) application requirements that are non-burdensome, issued in an expeditious manner, have fees no higher than necessary to cover the reasonable costs of administering this process, and that utilize principles of reciprocity with the licensure requirements of the state in which the physician in question practices.
(2) The AMA urges the FSMB and individual states to recognize that a physician practicing certain forms of telemedicine (e.g., teleradiology) must sometimes perform necessary functions in the licensing state (e.g., interaction with patients, technologists, and other physicians) and that the interstate telemedicine approach adopted must accommodate these essential quality-related functions.
(3) The AMA urges national medical specialty societies to develop and implement practice parameters for telemedicine in conformance with: Policy 410.973 (which identifies practice parameters as "educational tools"); Policy 410.987 (which identifies practice parameters as "strategies for patient management that are designed to assist physicians in clinical decision making," and states that a practice parameter developed by a particular specialty or specialties should not preclude the performance of the procedures or treatments addressed in that practice parameter by physicians who are not formally credentialed in that specialty or specialties); and Policy 410.996 (which states that physician groups representing all appropriate specialties and practice settings should be involved in developing practice parameters, particularly those which cross lines of disciplines or specialties).

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 214
(A-23)

Introduced by: Senior Physicians Section

Subject: Advocacy and Action for a Sustainable Medical Care System

Referred to: Reference Committee B

Whereas, Medicare has given financial raises to hospitals, ambulatory care facilities and pharmaceutical companies while physicians and their practices have also experienced rising costs for personnel, supplies, rent and other expenses without similar raises; and

Whereas, Many senior physicians in private practice are financially vulnerable and are contemplating retiring earlier than expected due to inadequate revenue and refusal of Congress to adjust Medicare rates consistent with rising costs and inflation; and

Whereas, Our American Medical Association via the AMA Recovery Plan for America's Physicians, and 120 state medical and national specialty societies, have endorsed ten principles to guide Congress in an overhaul to remedy the financial instabilities affecting physician practices in an unsustainable six-year payment freeze[1]; and

Whereas, Payments to physicians are the only economic segment of the US health care system without inflation-based updates, a 22% lag when adjusted for inflation over the past 20 years; and

Whereas, Small independent practices are more cost-efficient care centers than larger or institutional practices, so loss of independent practices will ultimately cost more,[2,3] reduce competition, and diminish access to care[4,5]; therefore be it

RESOLVED, That our American Medical Association continue to strongly advocate for fair reimbursement of all segments of health care, particularly physicians, to undo inadequate payment relative to inflation (Directive to Take Action); and be it further

RESOLVED, That our AMA seek ongoing reimbursement adjustments for fair physician payment at least on an annual basis in order to match that given to hospitals, extended and ambulatory care facilities, medical device and pharmaceutical companies for rising practice costs and inflation. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Sequestration D-390.946
Our AMA will: (a) continue to prioritize and actively pursue vigorous and strategic advocacy to prevent sequester and other cuts in Medicare payments due to take effect on January 1, 2022; (b) seek positive inflation-adjusted annual physician payment updates that keep pace with rising practice costs; (c) ensure Medicare physician payments are sufficient to safeguard beneficiary access to care; (d) work towards the elimination of budget neutrality requirements within Medicare Part B; (e) eliminate, replace, or supplement budget neutrality in MIPS with positive incentive payments; (f) advocate strongly to the current administration and Congress that additional funds must be put into the Medicare physician payment system to address increasing costs of physician practices, and that continued budget neutrality is not an option; and (g) advocate for payment policies that allow the Centers for Medicare & Medicaid Services to retroactively adjust overestimates of volume of services.
Citation: Res. 212, I-21; Reaffirmed: Res. 240, A-22;

The Site-of-Service Differential D-330.902
1. Our AMA supports Medicare payment policies for outpatient services that are site-neutral without lowering total Medicare payments.
2. Our AMA supports Medicare payments for the same service routinely and safely provided in multiple outpatient settings (eg, physician offices, HOPDs, and ASCs) that are based on sufficient and accurate data regarding the actual costs of providing the service in each setting.
3. Our AMA will urge CMS to update the data used to calculate the practice expense component of the Medicare physician fee schedule by administering a physician practice survey (similar to the Physician Practice Information Survey administered in 2007-2008) every five years, and that this survey collect data to ensure that all physician practice costs are captured.
4. Our AMA encourages CMS to both: a) base disproportionate share hospital payments and uncompensated care payments to hospitals on actual uncompensated care data; and b) study the costs to independent physician practices of providing uncompensated care.
5. Our AMA will collect data and conduct research both: a) to document the role that physicians have played in reducing Medicare spending; and b) to facilitate adjustments to the portion of the Medicare budget allocated to physician services that more accurately reflects practice costs and changes in health care delivery.
6. Our AMA will produce a graphic report illustrating the fiscal losses and inequities that practices without facility fees have endured for decades as a result of the site of service differential factoring in inflation.
7. Our AMA will consider disseminating the resulting educational materials and graphics.
Citation: CMS Rep. 04, I-18; Reaffirmed: BOT Action in response to referred for decision Res. 111, A-19; Reaffirmed: BOT Action in response to referred for decision Res. 132, A-19; Appended: Res. 826, I-22;

Federal EMR and Electronic Prescribing Incentive Program H-478.991
Our AMA: (1) will communicate to the federal government that the Electronic Medical Record (EMR) incentive program should be made compliant with AMA principles by removing penalties for non-compliance and by providing inflation-adjusted funds to cover all costs of implementation and maintenance of EMR systems; (2) supports the concept of electronic prescribing, as well as the offering of financial and other incentives for its adoption, but strongly discourages a funding structure that financially penalizes physicians that have not adopted such technology; and (3) will work with the Centers for Medicaid & Medicare Services and the Department of Defense to oppose programs that unfairly penalize

or create disincentives, including e-prescribing limitations for physicians who provide care to military patients, and replace them with meaningful percentage requirements of e-prescriptions or exemptions of military patients in the percentages, where paper prescriptions are required.
Citation: (Sub. Res. 202, A-09; Reaffirmation I-09; Reaffirmation A-10; Reaffirmation I-10; Reaffirmed in lieu of Res. 237, A-12; Reaffirmed in lieu of Res. 218, I-12; Reaffirmed in lieu of Res. 219, I-12; Reaffirmed in lieu of Res. 226, I-12; Reaffirmed in lieu of Res. 228, I-12; Reaffirmed in lieu of Res. 725, A-13; Appended: Res. 205, A-13; Reaffirmed in lieu of Res. 214, I-13; Reaffirmed in lieu of Res. 221, I-13; Reaffirmed in lieu of Res. 222, I-13; Reaffirmed in lieu of Res. 223, I-14)

Accurate Reporting of Physician Charges H-380.991
The AMA believes that, since actual payment from Medicare and private insurers is substantially lower than submitted charges, it is misleading and inappropriate to draw inferences about physician fee inflation from submitted charge data.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 215
(A-23)

Introduced by: Medical Student Section

Subject: Supporting Legislative and Regulatory Efforts Against Fertility Fraud

Referred to: Reference Committee B

Whereas, Illicit insemination, or fertility fraud, is defined as the failure on the part of a fertility doctor to obtain consent from a patient before inseminating her with his own sperm normally in the context of patients using assisted reproductive technology[1]; and

Whereas, The results of a 1987 survey conducted showed that as many of 2% of fertility doctors polled had used their own sperm to inseminate their patients[2]; and

Whereas, Over the past several years, more than 50 fertility doctors in the United States have been accused of fertility fraud and nearly all of the physicians who have been accused were discovered as a result of DNA tests taken by their offspring[3]; and

Whereas, Physicians' inseminations of nonconsenting and unaware patients represent a gross trespass against all standards of modern practice[4]; and

Whereas, Engaging in illicit insemination exploits patients' ignorance of circumstance, trust, intense desire to conceive, and vulnerability and breaches other ethical obligations, including the duty to disclose all relevant medical information to patients and to deal honestly with them, robbing them of their decision-making autonomy[4]; and

Whereas, Former patients of these physicians speak of feeling violated and assaulted, their personal dignity and bodily integrity trampled, their family plans routed, and their trust broken[5]; and

Whereas, Illicit insemination is a violation of the ethical principle of respecting individual autonomy to make an informed decision regarding the nature of one's health[5]; and

Whereas, Illicit insemination is a violation of the ethical principle and physicians' responsibility to truth-telling[5,6]; and

Whereas, These ethical, medical, and psychological issues patients and their children face as a result of physician actions directly contradicts the medical ethics principle of nonmaleficence[7]; and

Whereas, Only four states specifically penalize physicians for inseminating their own sperm into patients without express consent and there are no federal penalties[2,8]; and

Whereas, In Texas, Senate Bill 1259 classified illicit insemination as a form of sexual assault[9]; and

Whereas, Indiana lawmakers introduced Senate Bill 174, making it legal for victims of fertility fraud to pursue legal action against physicians who commit acts of fertility fraud[10]; and

Whereas, Arizona lawmakers approved Senate Bill 1237 in 2021, giving victims and children conceived from illicit insemination the opportunity to pursue civil damages against the physician committing fertility fraud[11]; and

Whereas, Utah House Bill 192 states that healthcare providers may not knowingly use their own gametes during assisted reproductive treatment without the patient's written consent, otherwise punishable as a third degree felony[12]; and

Whereas, A lack of laws regarding illicit insemination in the majority of states requires people and families affected to seek legal action through application of existing criminal laws, such as those written for criminal deception, sexual battery, or rape, which do not fully apply to or encompass the actions conducted[5,13]; and

Whereas, The use of applicable criminal laws that were written without consideration for illicit insemination may result in relevant cases being a poor fit for existing law, expiring past the statutes of limitation, or lacking evidence due to temporal constraints[5,13]; and

Whereas, The rise of consumer genetic testing is growing in popularity with estimates of 26 million testing kits bought in 2019 and an annual growth rate of 12.25%[14,15]; and

Whereas, Hundreds of people who have been fathered by non-consensual insemination have discovered this information through consumer genetic testing[16,17]; and

Whereas, A number of countries already have legislation that restrict the number of conceptions by an individual sperm donor in order to prevent unintentional consanguinity[7]; and

Whereas, The American Society of Reproductive Medicine recommends restricting conceptions by individual donors to 25 births per population of 800,000 to avoid unintentional consanguinity[7]; and

Whereas, Without measures to prevent illicit insemination by physicians, increased risk of consanguinity in communities can pose a significant threat to public health and lead to medical, psychological and ethical issues patients and their children must face[18]; therefore be it

RESOLVED, That our American Medical Association oppose physicians using their own sperm to artificially inseminate patients without proper explicit and informed patient consent, otherwise known as illicit insemination or fertility fraud (New HOD Policy); and be it further

RESOLVED, That our AMA support legislative and regulatory efforts to protect patients from physicians and healthcare practitioners who inseminate their own sperm into patients without their consent. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

E-4.2.1 Assisted Reproductive Technology

Assisted reproduction offers hope to patients who want children but are unable to have a child without medical assistance. In many cases, patients who seek assistance have been repeatedly frustrated in their attempts to have a child and are psychologically very vulnerable. Patients whose health insurance does not cover assisted reproductive services may also be financially vulnerable. Candor and respect are thus essential for ethical practice.

"Assisted reproductive technology" is understood as all treatments or procedures that include the handling of human oocytes or embryos. It encompasses an increasingly complex range of interventions—such as therapeutic donor insemination, ovarian stimulation, ova and sperm retrieval, in vitro fertilization, gamete intrafallopian transfer—and may involve multiple participants.

Physicians should increase their awareness of infertility treatments and options for their patients. Physicians who offer assisted reproductive services should:

(a) Value the well-being of the patient and potential offspring as paramount.

(b) Ensure that all advertising for services and promotional materials are accurate and not misleading.

(c) Provide patients with all of the information they need to make an informed decision, including investigational techniques to be used (if any); risks, benefits, and limitations of treatment options and alternatives, for the patient and potential offspring; accurate, clinic-specific success rates; and costs.

(d) Provide patients with psychological assessment, support and counseling or a referral to such services.
(e) Base fees on the value of the service provided. Physicians may enter into agreements with patients to refund all or a portion of fees if the patient does not conceive where such agreements are legally permitted.
(f) Not discriminate against patients who have difficult-to-treat conditions, whose infertility has multiple causes, or on the basis of race, socioeconomic status, or sexual orientation or gender identity.
(g) Participate in the development of peer-established guidelines and self-regulation.
Issued: 2016

E-4.2.3 Therapeutic Donor Insemination
Therapeutic donor insemination using sperm from a woman's partner or a third-party donor can enable a woman or couple who might not otherwise be able to do so to fulfill the important life choice of becoming a parent (or parents).
However, the procedure also raises ethical considerations about safety for the woman and potential offspring, donor privacy, and the disposition of frozen semen, as well as the use of screening to select the sex of a resulting embryo.
Physicians who choose to provide artificial insemination should:
(a) Provide therapeutic donor insemination in a nondiscriminatory manner. Physicians should not withhold or refuse services on the basis of nonclinical considerations, such as a patient's marital status.
(b) Obtain informed consent for therapeutic donor insemination, after informing the patient (and partner, if appropriate):
(i) about the risks, benefits, likelihood of success, and costs of the intervention;
(ii) about the need to screen donated semen for infectious disease agents and genetic disorders when an individual proposes to donate sperm specifically for the patient's use in therapeutic donor insemination;
(iii) about the need to address in advance what will be done with frozen sperm (if any) from a known donor in the event the donor dies;
(iv) that state law will govern the status, obligations, and rights of the sperm donor, known or anonymous, in relation to a resulting child.
(c) When sperm is collected specifically for use by an identified patient, obtain informed consent from the prospective donor, after informing the individual:
(i) about the need to test donated semen for infectious disease agents and genetic disorders;
(ii) whether and how the donor will be informed in the event the semen tests positive for infectious disease or genetic disorder;
(iii) that state law will govern the status, obligations, and rights of the donor in relation to a resulting child.
(d) Counsel patients who choose to be inseminated with sperm from an anonymous donor to involve their partner (if any) in the decision.
(e) Provide sex selection of sperm only for purposes of avoiding a sex-linked inheritable disorder. Physicians should not participate in sex selection of sperm for reasons of gender preference.
Issued: 2016

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 216
(A-23)

Introduced by: American Academy of Pediatrics

Subject: Improved Foster Care Services for Children

Referred to: Reference Committee B

Whereas, The Family First Prevention Services Act (FFPSA) was signed into law in February 2018 with a goal within the child welfare system on keeping children safely with their families to avoid the trauma that results when children are placed in out-of-home care; and

Whereas, The FFPSA provides at risk families with access to mental health services, substance use treatment, and/or parenting skills courses; and

Whereas, The FFPSA created the Title IV-E Prevention Services Clearinghouse which maintains a continuously updated and comprehensive list of evaluated and tested prevention services and programs for families at risk for entry into the child welfare system; and

Whereas, States are allowed under FFPSA to use Title IV-E funds toward services which can help prevent family progression into the child welfare system and/or removal of a child from the family unit and must submit a 5-year Title IV-E prevention plan for approval prior to drawing down this funding; and

Whereas, State, territory, and tribe implementation of this Act has been varied and additional state funding is required for administration of the Act in addition to adoption of improved foster care placement avoiding residential placement where possible; therefore be it

RESOLVED, That our American Medical Association encourage and support state, territory, and tribe activities to implement changes to the child welfare system directed toward safely keeping children with their families when appropriate (New HOD Policy); and be it further

RESOLVED, That our AMA support federal and state efforts to expand access to evidence - based services which can prevent foster care and keep families safely together, including mental health, substance use disorder treatment, and in-home parent skills-based services (Directive to Take Action); and be it further

RESOLVED, That our AMA encourage and support state efforts expanding use of kinship and family foster care placement and state efforts to eliminate the use of non-therapeutic congregate foster care placement (New HOD Policy); and be it further

RESOLVED, That our AMA support both federal and state funding for improvements to the child welfare system which minimize harm to the child and help provide additional services to families that will safely prevent child separation from the family (New HOD Policy); and be it further

RESOLVED, That our AMA urge the development and promotion of a continuously updated and comprehensive list of evaluated and tested prevention services and programs for families at risk for entry into the child welfare system. (New HOD Policy)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/2/23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 217
(A-23)

Introduced by: American Academy of Child and Adolescent Psychiatry, American Academy of Psychiatry and the Law, American Association for Geriatric Psychiatry, American Psychiatric Association, American Society of Addiction Medicine

Subject: Increase Access to Naloxone in Schools Including by Allowing Students to Carry Naloxone in Schools

Referred to: Reference Committee B

Whereas, Our American Medical Association with other interested organizations declare the opioid epidemic as one of the many factors within the National Child Mental Health Crisis; and

Whereas, Drug overdose deaths in youths from ages 10 to 19 years of age increased 109% from 2019-2021; and

Whereas, There is increased access of illicit manufactured fentanyl (IMF) pills associated with higher risk of adolescent overdose, with IMF deaths increasing 182% from 2019-2021; and

Whereas, The increased morbidity and mortality of adolescent substance use is a national crisis; and

Whereas, Naloxone is a life-saving medication that can reverse an overdose from opioids; and

Whereas, Opioid overdose reversal must be immediate as opioid overdose can quickly result in death; and

Whereas, Naloxone is a safe medicine and only reverses overdoses in people with opioids in their systems; and

Whereas, Our AMA supports legislative, regulatory, and national advocacy efforts to increase access to affordable naloxone, including but not limited to collaborative practice agreements with pharmacists and standing orders for pharmacies and, where permitted by law, community-based organizations, law enforcement agencies, correctional settings, schools, and other locations that do not restrict the route of administration for naloxone delivery; and

Whereas, Our AMA supports the widespread implementation of easily accessible Naloxone rescue stations (public availability of Naloxone through wall-mounted display/storage units that also include instructions) throughout the country following distribution and legislative edicts similar to those for Automated External Defibrillators; and

Whereas, All 50 states and the District of Columbia have enacted laws permitting pharmacy-based naloxone dispensing; and

Whereas, Most states have enacted laws that provide laypersons with civil and criminal immunity for good faith administration of naloxone; and

Whereas, Roughly half of US states have statutory language regarding access to naloxone in schools; therefore be it

RESOLVED, That our American Medical Association encourage states, including communities and school districts therein, to adopt legislative and regulatory policies that allow schools to make naloxone readily accessible to school staff, teachers, and students to prevent opioid overdose deaths on school campuses (New HOD Policy); and be it further

RESOLVED, That our AMA encourage states, including communities and school districts therein, to eliminate barriers that preclude students from carrying naloxone in school. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

RELEVANT AMA POLICY

Increasing Availability of Naloxone H-95.932

1. Our AMA supports legislative, regulatory, and national advocacy efforts to increase access to affordable naloxone, including but not limited to collaborative practice agreements with pharmacists and standing orders for pharmacies and, where permitted by law, community-based organizations, law enforcement agencies, correctional settings, schools, and other locations that do not restrict the route of administration for naloxone delivery.
2. Our AMA supports efforts that enable law enforcement agencies to carry and administer naloxone.
3. Our AMA encourages physicians to co-prescribe naloxone to patients at risk of overdose and, where permitted by law, to the friends and family members of such patients.
4. Our AMA encourages private and public payers to include all forms of naloxone on their preferred drug lists and formularies with minimal or no cost sharing.
5. Our AMA supports liability protections for physicians and other health care professionals and others who are authorized to prescribe, dispense and/or administer naloxone pursuant to state law.
6. Our AMA supports efforts to encourage individuals who are authorized to administer naloxone to receive appropriate education to enable them to do so effectively.
7. Our AMA encourages manufacturers or other qualified sponsors to pursue the application process for over the counter approval of naloxone with the Food and Drug Administration.
8. Our AMA supports the widespread implementation of easily accessible Naloxone rescue stations (public availability of Naloxone through wall-mounted display/storage units that also include instructions) throughout the country following distribution and legislative edicts similar to those for Automated External Defibrillators.
9. Our AMA supports the legal access to and use of naloxone in all public spaces regardless of whether the individual holds a prescription.

Citation: BOT Rep. 22, A-16; Modified: Res. 231, A-17; Modified: Speakers Rep. 01, A-17; Appended: Res. 909, I-17; Reaffirmed: BOT Rep. 17, A-18; Modified: Res. 524, A-19; Reaffirmed: BOT 09, I-19; Reaffirmed: Res. 219, A-21;

Prevention of Drug-Related Overdose D-95.987

1. Our AMA: (a) recognizes the great burden that substance use disorders (SUDs) and drug-related overdoses and death places on patients and society alike and reaffirms its support for the compassionate treatment of patients with a SUD and people who use drugs; (b) urges that community-based programs offering naloxone and other opioid overdose and drug safety and prevention services continue to be implemented in order to further develop best practices in this area; (c) encourages the education of health care workers and people who use drugs about the use of naloxone and other harm reduction measures in preventing opioid and other drug-related overdose fatalities; and (d) will continue to monitor the progress of such initiatives and respond as appropriate.

2.Our AMA will: (a) advocate for the appropriate education of at-risk patients and their caregivers in the signs and symptoms of a drug-related overdose; and (b) encourage the continued study and implementation of appropriate treatments and risk mitigation methods for patients at risk for a drug-related overdose.

3. Our AMA will support the development and implementation of appropriate education programs for persons receiving treatment for a SUD or in recovery from a SUD and their friends/families that address harm reduction measures.

4. Our AMA will advocate for and encourage state and county medical societies to advocate for harm reduction policies that provide civil and criminal immunity for the possession, distribution, and use of “drug paraphernalia” designed for harm reduction from drug use, including but not limited to drug contamination testing and injection drug preparation, use, and disposal supplies.

5. Our AMA will implement an education program for patients with substance use disorder and their family/caregivers to increase understanding of the increased risk of adverse outcomes associated with having a substance use disorder and a serious respiratory illness such as COVID-19.

6. Our AMA supports efforts to increase access to fentanyl test strips and other drug checking supplies for purposes of harm reduction.

Citation: Res. 526, A-06; Modified in lieu of Res. 503, A-12; Appended: Res. 909, I-12; Reaffirmed: BOT Rep. 22, A-16; Modified: Res. 511, A-18; Reaffirmed: Res. 235, I-18; Modified: Res. 506, I-21; Appended: Res. 513, A-22; Modified: Res. 211, I-22;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 218
(A-23)

Introduced by: Mississippi

Subject: Hold Accountable the Regulatory Bodies, Hospital Systems, Staffing Organizations, Medical Staff Groups, and Individual Physicians Supporting Systems of Care Promoting Direct Supervision of Emergency Departments by Nurse Practitioners

Referred to: Reference Committee B

Whereas, "Direct supervision of emergency services" refers to an individual actively practicing clinical medicine in the emergency department and overseeing all medical decisions in the emergency department at the point of care[1]; and

Whereas, Direct supervision of emergency care is distinct from medical direction; and

Whereas, Only 10% of nurse practitioners nationwide are trained in emergency care[2]; and

Whereas, Nursing and medical leaders strongly recommend that, because of variations in training, licensure, and certification, nurse practitioners should not work alone in emergency departments[2-4]; and

Whereas, Centers for Medicare & Medicaid Services (CMS) provides clear regulations on the direct supervision of emergency care in hospitals[1], and

Whereas, In the conditions of participation, CMS requires that for a hospital to provide emergency care, all emergency departments must have direct supervision by a qualified member of medical staff present in the hospital at all hours emergency services are provided[1]; and

Whereas, "Direct supervision for emergency services" is defined as being physically in the hospital and not telemedicine[1]; and

Whereas, The word "must" indicates without exception; and

Whereas, The words "qualified member" are clearly proscribed by the American College of Emergency Physicians (ACEP) and American Association of Emergency Medicine (AAEM)[2,3]; and

Whereas, While the words "medical staff," according to CMS, may include physicians, nurse practitioners, and physicians assistants[1], there is a clear requirement for additional specialized training; and

Whereas, it is the responsibility of the national organizations of emergency medicine physicians ACEP and AAEM to set standards for the practice of emergency medicine[3,4]; and

Whereas, ACEP and AAEM determine standards for the practice of emergency medicine and explicitly set the standard that nurse practitioners are unqualified to directly supervise medical care (i.e. work alone) in emergency departments[2,3]; and

Whereas, When a nurse practitioner directly supervises the emergency department (i.e. works alone), they are in violation of CMS regulations, and

Whereas, The risk of nurse practitioners directly supervising emergency care in emergency departments puts patients at risk of misdiagnosis, incorrect treatment, delay in care, or inadequate care when time-sensitive diseases present[2-4]; and

Whereas, A waiver for telemedicine can mitigate staffing shortages, but it remains a temporary solution and does not change the CMS regulation or standards defined by AAEM or ACEP[5]; and

Whereas, The American Medical Association acknowledges that it cannot directly hold regulatory bodies accountable, but will advocate for the enforcement of CMS regulations and the adoption of standards set by national organizations of emergency medicine physicians; therefore be it

RESOLVED, That our American Medical Association, in accordance with Centers for Medicare & Medicaid Services (CMS) Regulations and standards of practice for emergency medicine as defined by American College of Emergency Physicians and American Association of Emergency Medicine, advocate for the enforcement of CMS regulations and the adoption of standards set by national organizations of emergency medicine physicians, and hold accountable hospital systems, staffing organizations, medical staff groups, and individual physicians supporting systems of care that promote direct supervision of emergency departments by nurse practitioners. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 219
(A-23)

Introduced by: Mississippi

Subject: Repealing the Ban on Physician-Owned Hospitals

Referred to: Reference Committee B

Whereas, The COVID-19 pandemic has highlighted the importance of physician leadership in healthcare and the critical need for innovation and flexibility during times of crisis; and

Whereas, Physician-owned hospitals (POHs)often specialize in specific areas of medicine, leading to better outcomes for patients and promoting innovation in healthcare delivery; and

Whereas, Physician ownership of hospitals can foster innovation and improve competition in the healthcare market, which could help to reduce healthcare costs and improve access to care, particularly in underserved areas; and

Whereas, There are concerns that physician-owned hospitals may be more likely to engage in self-referral or overutilization of services, which could lead to higher costs and lower quality of care; and

Whereas, Safeguards and regulations can be put in place to ensure that physician-owned hospitals are operating in the best interests of patients; and

Whereas, Physician leadership is critical in healthcare, particularly during times of crisis, such as the COVID-19 pandemic; and

Whereas, Restrictions on physician ownership of hospitals may limit access to quality care for patients in underserved areas; and

Whereas, The American Medical Association has a longstanding policy of supporting the role of physicians in healthcare leadership and advocating for policies that promote physician ownership of healthcare facilities; and

Whereas, It is critical to ensure that physicians are able to provide the highest quality care and make decisions based solely on the best interests of their patients; and

Whereas, Allowing physicians to have ownership in hospitals can provide incentives for quality improvement, cost control, and greater coordination of care, leading to better patient outcomes and satisfaction; and

Whereas, The Affordable Care Act and other healthcare policy reforms have emphasized the importance of value-based care and alternative payment models, which align with the goals of POHs and their emphasis on quality, efficiency, and cost-effectiveness; and

Whereas, Physician ownership of hospitals is common in many other countries, including Canada, Germany, and the United Kingdom, and has not been associated with negative consequences for patient care or healthcare costs; and

Whereas, POHs have played a critical role in providing essential services during natural disasters and pandemics, as demonstrated by their response to Hurricanes Katrina and Rita in 2005 and the COVID-19 pandemic in 2020; and

Whereas, POHs provide valuable opportunities for physician training and education, research, and innovation; and

Whereas, Physicians have a unique perspective and expertise that can be valuable in hospital governance and decision-making, and can help to ensure that the patient's best interests are always at the forefront of hospital operations; therefore be it

RESOLVED, That our American Medical Association advocate for policies that alleviate any restriction upon physicians from owning, constructing, and/or expanding any hospital facility type - in the name of patient safety, fiscal responsibility, transparency, and in acknowledgment of physicians dedication to patient care (Directive to Take Action); and be it further

RESOLVED, That our AMA advocate for the implementation of safeguards and regulations to ensure that physician-owned hospitals are operating in the best interests of patients (Directive to Take Action); and be it further

RESOLVED, That our AMA encourage further study and research into the benefits and drawbacks of physician-owned hospitals and their impact on patient care, as well as the potential impact of regulatory safeguards to ensure transparency and accountability in physician-owned hospitals (New HOD Policy); and be it further

RESOLVED, That our AMA work with policymakers to develop regulations that promote transparency and accountability in physician-owned hospitals, and protect against any potential conflicts of interest, while also fostering competition and innovation in the healthcare market (Directive to Take Action); and be it further

RESOLVED, That our AMA continue to support physician leadership in healthcare and advocate for policies that enable physicians to provide the highest quality care to their patients, including policies that remove unnecessary barriers to physician ownership of hospitals (Directive to Take Action); and be it further

RESOLVED, That our AMA work to educate its members and the public on the potential benefits of physician ownership of hospitals and the need for policies that support such ownership (Directive to Take Action); and be it further

RESOLVED, That our AMA collaborate with other stakeholders, including hospital associations, patient advocacy groups, and government agencies, to develop and promote policies that support physician ownership of hospitals (Directive to Take Action); and be it further

RESOLVED, That our AMA direct the appropriate stakeholders to report back to the AMA on the progress made in implementing these resolutions, with recommendations for future action as appropriate. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Hospital Consolidation H-215.960
Our AMA: (1) affirms that: (a) health care entity mergers should be examined individually, taking into account case-specific variables of market power and patient needs; (b) the AMA strongly supports and encourages competition in all health care markets; (c) the AMA supports rigorous review and scrutiny of proposed mergers to determine their effects on patients and providers; and (d) antitrust relief for physicians remains a top AMA priority; (2) will continue to support actions that promote competition and choice, including: (a) eliminating state certificate of need laws; (b) repealing the ban on physician-owned hospitals; (c) reducing administrative burdens that make it difficult for physician practices to compete; and (d) achieving meaningful price transparency; and (3) will work with interested state medical associations to monitor hospital markets, including rural, state, and regional markets, and review the impact of horizontal and vertical health system integration on patients, physicians and hospital prices.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 220
(A-23)

Introduced by:	Connecticut; Maine; Massachusetts; New Hampshire; Rhode Island; Vermont; Maryland; American College of Radiation Oncology; American Society for Radiation Oncology; American Society of Clinical Oncology; Association of University Radiologists
Subject:	Coverage of Routine Costs in Clinical Trials by Medicare Advantage Organizations
Referred to:	Reference Committee B

Whereas, Our American Medical Association is a powerful advocate for clinical research; and

Whereas, Our AMA believes it is an inherent obligation of managed care organizations to invest in broad-based clinical research (AMA policy H-460.930, “Importance of Clinical Research”); and

Whereas, Our AMA advocates that the Centers for Medicare and Medicaid Services (CMS) regulate Medicare Advantage Plans to assure the same treatment and authorization guidelines are followed for both fee-for-service Medicare and Medicare Advantage patients (AMA policy D-285.959, “Prevent Medicare Advantage Plans from Limiting Care”); and

Whereas, Our AMA supports that Medicare Advantage plans, at a minimum, must provide enrollees with coverage for all Part A and Part B original Medicare services, if the enrollee is entitled to benefits under both parts (AMA policy H-330.878, “Medicare Advantage Policies”); and

Whereas, In contrast, current Medicare policy states, “For clinical trials covered under the Clinical Trials National Coverage Determination 310.1, original Medicare covers the routine costs of qualifying clinical trials for all Medicare enrollees, including those enrolled in MA [Medicare Advantage] plans… [Emphasis added.]” (Medicare Managed Care Manual, Chapter 4, Section 10.7.1); and

Whereas, Current Medicare policy only holds that the Medicare Advantage Organization (MAO) is responsible for paying the enrollee the cost-sharing portion that was incurred with the original Medicare coverage for qualified clinical trial items (paragraph 3 of Section 10.7.1); and

Whereas, For the enrollee to receive reimbursement from the MAO for this cost-sharing portion, current Medicare policy states, “To be eligible for reimbursement, an enrollee must notify their plan that the enrollee received a qualified clinical trial service and provide documentation of the cost-sharing incurred, as a provider bill” (paragraph 4 of section 10.7.1); and

Whereas, This means that a Medicare Advantage enrollee who enters a qualified clinical trial is obligated to pay the cost-sharing portion of their standard-of-care services, and then to seek reimbursement from the MAO, even though the enrollee would otherwise never have been billed by the MAO for such standard services, including the cost-sharing portion; and

Whereas, The cost-sharing portion of standard services for patients enrolling on clinical trials (trials that address critical questions in oncology, heart disease, and a host of other serious conditions) can amount to tens of thousands of dollars across months of treatment for a single patient; and

Whereas, These policies annually affect many thousands of patients enrolling on large-scale clinical trials (including many funded by NIH and its individual Institutes); and

Whereas, These policies punish public-spirited patients who enter clinical trials that will provide future generations with better medical treatments and improved health outcomes, even though that individual has no rational expectation of benefit, given the clinical equipoise inherent in a clinical trial; and

Whereas, These policies create a profound financial disincentive for patients to enter clinical trials, who thereby incur many thousands of dollars in liabilities in exchange only for the promise of potential future reimbursement, making trial enrollment very unattractive; and

Whereas, Most Medicare Advantage patients will not enroll in clinical trials if they are informed of these financial liabilities; and

Whereas, Such policies effectively provide the MAO these sums free-of-charge for many months, even though the MAO ultimately will be liable to pay these sums – in short, a “loan” from the enrollee to the MAO; and

Whereas, A recent inquiry across member organizations of the Association of American Cancer Institutes (AACI) identified numerous institutions across the country that reported increasing difficulties with billing and reimbursement for their MAO patients; and

Whereas, At least one of these institutions (namely, Dartmouth Cancer Center) has incurred significant costs to employ additional financial services staff to advise and support patients who are wrestling with these payment difficulties, a fact that vividly demonstrates the needs of these vulnerable, public-spirited patients and the demands on institutions attempting to support them; and

Whereas, Such individual institutional interventions can only serve as temporary stopgaps and cannot serve as long-term solutions to this issue, inasmuch as they create unsustainable costs at the single institutional level and would engender massive expenditures if implemented across larger systems and disease types; therefore be it

RESOLVED, That our American Medical Association advocate that the Centers for Medicare and Medicaid Services require that Medicare Advantage Organizations (MAOs) pay for routine costs for services that are provided as part of clinical trials covered under the Clinical Trials National Coverage Determination 310.1, just as the MAO would have been required to do so had the patient not enrolled in the qualified clinical trial. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Importance of Clinical Research H-460.930
(1) Given the profound importance of clinical research as the transition between basic science discoveries and standard medical practice of the future, the AMA will a) be an advocate for clinical research; and b) promote the importance of this science and of well-trained researchers to conduct it.
(2) Our AMA continues to advocate vigorously for a stable, continuing base of funding and support for all aspects of clinical research within the research programs of all relevant federal agencies, including the National Institutes of Health, the Agency for Healthcare Research and Quality, the Centers for Medicare & Medicaid Services, the Department of Veterans Affairs and the Department of Defense.
(3) The AMA believes it is an inherent obligation of capitation programs and managed care organizations to invest in broad-based clinical research (as well as in health care delivery and outcomes research) to assure continued transition of new developments from the research bench to medical practice. The AMA strongly encourages these groups to make significant financial contributions to support such research.
(4) Our AMA continues to encourage medical schools a) to support clinical research; b) to train and develop clinical researchers; c) to recognize the contribution of clinical researchers to academic medicine; d) to assure the highest quality of clinical research; and e) to explore innovative ways in which clinical researchers in academic health centers can actively involve practicing physicians in clinical research.
(5) Our AMA encourages and supports development of community and practice-based clinical research networks.
Citation: CSA Rep. 2, I-96; Reaffirmed: CSA Rep. 13, I-99; Reaffirmation A-00; Reaffirmed: CME Rep. 4, I-08; Modified: CSAPH Rep. 01, A-18;

Prevent Medicare Advantage Plans from Limiting Care D-285.959
Our AMA will: (1) ask the Centers for Medicare and Medicaid Services to further regulate Medicare Advantage Plans so that the same treatment and authorization guidelines are followed for both fee-for-service Medicare and Medicare Advantage patients, including admission to inpatient rehabilitation facilities; and (2) advocate that proprietary criteria shall not supersede the professional judgment of the patient's physician when determining Medicare and Medicare Advantage patient eligibility for procedures and admissions.
Citation: Res. 706, A-21;

Medicare Advantage Policies H-330.878
1. Our AMA supports that Medicare Advantage plans must provide enrollees with coverage for, at a minimum, all Part A and Part B original Medicare services, if the enrollee is entitled to benefits under both parts.
2. Our AMA will advocate: (a) for better enforcement of Medicare Advantage regulations to hold the Centers for Medicare & Medicaid Services (CMS) accountable for presenting transparency of minimum standards and to determine if those standards are being met for physicians and their patients; (b) that Medicare Advantage plans be required to post all components of Medicare covered and not covered in all plans across the US on their website along with the additional benefits provided; and (c) that CMS maintain a publicly available database of physicians in network under Medicare Advantage and the status of each of these physicians in regard to accepting new patients in a manner least burdensome to physicians.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 221
(A-23)

Introduced by: Pennsylvania

Subject: In Support for Fentanyl Test Strips as a Harm Reduction and Overdose-Prevention Tool

Referred to: Reference Committee B

Whereas, The Center for Disease Control and Prevention (CDC) reports that over the past 12 months alone, 100,000 Americans have died from opioid-related overdoses[1]; and

Whereas, The medical community recognizes Opioid Use Disorder (OUD) as a condition necessitating treatment and comprehensive preventative measures to curtail the harms associated with it[3]; and

Whereas, The presence of highly potent synthetic opioid adulterants, namely fentanyl and its analogues[4], in the illicit drug market has fueled a national public health crisis and increase in opioid overdoses[5]; and

Whereas, The US Drug Enforcement Administration's 2020 National Drug Threat Assessment reports an increasing number of deaths attributable to fentanyl contamination of the illicit drug supply ("lacing") in 38 states[6]; and

Whereas, In 2021, the United Nations Global Commission on Drug Policy called for the inclusion of drug checking services, such as Fentanyl Test Strips (FTS), as an additional harm-reduction tool in combating overdoses[8]; and

Whereas, A study of self-reported drug-using adults in Rhode Island demonstrated that approximately 50% of individuals who used FTS and whose drug tested positive for fentanyl took steps to reduce their risk of overdose, including decreasing their dose, not using alone, having Naloxone nearby, or discarding the supply[10]; and

Whereas, A multi-site analysis concluded that FTS, compared to other portable drug checking technologies, have the lowest detection threshold and highest specificity for fentanyl, detecting over 10-fentanyl analogs[11,12]; and

Whereas, The CDC and the Substance Abuse and Mental Health Services Administration approved the use of federal funding for the purchase and distribution of FTS[13]; and

Whereas, FTS remain classified as drug paraphernalia in a majority of states under the Controlled Substance, Drug, Device and Cosmetic Act[14]—which is a hindrance to their widespread adoption, distribution, and acceptance; and

Whereas, A 2021 correspondence[15] between the American Medical Association and the White House's Acting Director of the Office of National Drug Control Policy, as well as a 2021 JAMA Network report, shared this concern regarding the impact of FTS's legality on their accessibility[16]; therefore be it

RESOLVED, That our American Medical Association amend AMA Policy D-95.987, "Prevention of Drug-Related Overdose," by addition to read as follows:

1. Our AMA: (a) recognizes the great burden that substance use disorders (SUDs) and drug-related overdoses and death places on patients and society alike and reaffirms its support for the compassionate treatment of patients with a SUD and people who use drugs; (b) urges that community-based programs offering naloxone and other opioid overdose and drug safety and prevention services continue to be implemented in order to further develop best practices in this area; (c) encourages the education of health care workers and people who use drugs about the use of naloxone and other harm reduction measures in preventing opioid and other drug-related overdose fatalities; and (d) will continue to monitor the progress of such initiatives and respond as appropriate.
2. Our AMA will: advocate for the removal of FTS from the legal definition of drug paraphernalia.
3. Our AMA will: (a) advocate for the appropriate education of at-risk patients and their caregivers in the signs and symptoms of a drug-related overdose; and (b) encourage the continued study and implementation of appropriate treatments and risk mitigation methods for patients at risk for a drug-related overdose.
4. Our AMA will support the development and implementation of appropriate education programs for persons receiving treatment for a SUD or in recovery from a SUD and their friends/families that address harm reduction measures.
5. Our AMA will advocate for and encourage state and county medical societies to advocate for harm reduction policies that provide civil and criminal immunity for the possession, distribution, and use of "drug paraphernalia" designed for harm reduction from drug use, including but not limited to drug contamination testing and injection drug preparation, use, and disposal supplies.
6. Our AMA will implement an education program for patients with substance use disorder and their family/caregivers to increase understanding of the increased risk of adverse outcomes associated with having a substance use disorder and a serious respiratory illness such as COVID-19.
7. Our AMA supports efforts to increase access to fentanyl test strips and other drug checking supplies for purposes of harm reduction by supporting both legalization of FTS use by patients, as well as training in FTS use, by pertinent professionals. (Modify Current HOD Policy)

Fiscal Note: Minimal - less than $1,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 222
(A-23)

Introduced by: Pennsylvania

Subject: Physician Ownership of Hospital Blocked by the ACA

Referred to: Reference Committee B

Whereas, The Affordable Care Act (ACA) has prohibited physician ownership of new hospitals as well as placing onerous restrictions on previously existing physician-owned facilities; and

Whereas, Consolidation in the healthcare space has lowered the number of hospitals available to treat patients; and

Whereas, Lack of competition results in higher prices, fewer choices, and potentially longer wait times for Americans seeking inpatient care; and

Whereas, Data shows that physician-owned specialty hospitals and surgical centers have superior safety and quality metrics as well as overall outcomes compared to similar non-physician owned entities; and

Whereas, The ban on physician ownership of new hospitals both harms patient access to care and unfairly restricts physician participation in potential solutions to the multiple healthcare crises facing our population; therefore be it

RESOLVED, That our American Medical Association explore and report back to the House of Delegates at the 2024 Annual Meeting, the feasibility of filing judicial or legislative challenges to the ban on physician ownership of new hospitals under the relevant provisions of the Affordable Care Act. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 223
(A-23)

Introduced by: The Endocrine Society, American Association of Clinical Endocrinology, American Society for Reproductive Medicine

Subject: Protecting Access to Gender Affirming Care

Referred to: Reference Committee B

Whereas, Gender-affirming care is defined by the United States Department of Health and Human Services as a "supportive form of healthcare" consisting of "an array of services that may include medical, surgical, mental health, and non-medical services for transgender and nonbinary people"[1]; and

Whereas, Gender incongruence refers to when the gender identity of a person does not align with the gender assigned at birth, and gender dysphoria is a condition in which a person with gender incongruence experiences significant burden associated with DSM classification; people experiencing gender incongruence and/or gender dysphoria may or may not identify as transgender or non-binary[2]; and

Whereas, World Professional Association for Transgender Health (WPATH) establishes standards of care for children and adolescents that allow for puberty suppressing hormones (a fully reversible intervention) at onset of puberty, hormone replacement therapy for adolescents who have begun the physical changes of puberty, and limited gender-affirming surgical treatments in some cases[3]; and

Whereas, The Endocrine Society recommends that gender-affirming hormone therapy, which is partially reversible, be offered to adolescents who continue to demonstrate gender incongruence with pubertal hormone suppression, and who demonstrate the ability to provide informed consent, usually beginning at 16 years old[4]; and

Whereas, The American Academy of Pediatrics (AAP) states that gender-affirming medical care for gender-diverse and transgender adolescents may include puberty blockers during puberty and/or cross-sex hormone therapy from early adolescence onward[5]; and

Whereas, Data from the AAP showed that 50% of transgender male teens, 30% of transgender female teens, and 42% of nonbinary youth reported attempting suicide in their lifetime[6]; and

Whereas, Studies of transgender and non-binary youth and adults show that those receiving gender-affirming hormone therapy or puberty blockers have decreased anxiety and depression symptoms, reduced suicidality, and increased appearance congruence, positive affect, and life satisfaction[7-10]; and

Whereas, The ACLU is currently tracking several hundred anti-LGBTQ bills in the United States, many of which are targeted towards transgender youth and directly outline, ban, and/or criminalize gender-affirming medical and surgical procedures, name them as child abuse, prohibit physicians from providing said procedures by subjecting them to felony charges and/or

other legal repercussions, and/or deny public funding or insurance coverage for their provision[11,12]; and

Whereas, As of April 2023, laws that prohibit or restrict access to gender-affirming care for transgender youth have already passed at the state-level in twelve states, and Florida has banned gender-affirming care for minors via votes of the Florida Board of Medicine and Florida Board of Osteopathic Medicine[12-14]; and

Whereas, Some proposed bills extend restrictions on gender-affirming care to include transgender young adults up to 21-26 years old in addition to transgender minors and/or effectively ban gender affirming care for all adults by restricting reimbursement for providers or prohibiting coverage with public funds[15-17]; and

Whereas, The Human Rights Campaign reports that over half of transgender youth, ages 13 to 17, have lost or are at risk of losing access to medically necessary gender-affirming care in their state[18]; and

Whereas, Surveys of transgender and gender-diverse youth and parents of these youth show that debates about the rights of transgender people and proposed legislation restricting access to gender-affirming care have negatively impacted mental health and led to increased discrimination for youth[19,20]; and

Whereas, Several states, including Minnesota, Illinois, New Mexico, Vermont, and New Jersey, have enacted bills or policies that protect physicians and patients providing and receiving gender-affirming care and/or declared themselves as “safe haven” states, and several other states have similar bills being introduced[21,22]; and

Whereas, In 2022, Boston Children’s Hospital and Akron Children’s Hospital received threats of violence due to the fact that these hospitals provide gender-affirming care for youth, and the AMA and AAP spoke out against these instances[23-25]; and

Whereas, Several other medical organizations, including the American Academy of Child and Adolescent Psychiatry, American College of Physicians, American Psychiatric Association, American Psychological Association, Endocrine Society, and Pediatric Endocrine Society, have spoken against these bills restricting gender-affirming care for transgender youth[26-31]; and

Whereas, Over the last few years, the AMA has written several correspondences to state governments and the National Governors Association to oppose legislative efforts to restrict and criminalize gender-affirming care for minors[32-38]; and

Whereas, The American Medical Association supports “treatment models for gender diverse people that promotes informed consent, personal autonomy, increased access for gender affirming treatments and eliminates unnecessary third party involvement outside of the physician-patient relationship in the decision making process” (AMA Policy H-140.824); therefore be it

RESOLVED, That our American Medical Association work with state and specialty societies and other interested organizations to oppose any and all criminal and other legal penalties against patients seeking gender-affirming care and against parents and guardians who support minors seeking and receiving gender-affirming care; including the penalties of loss of custody and the inappropriate characterization of gender-affirming care as child abuse (Directive to Take Action); and be it further

RESOLVED, That our AMA advocate for protections from violence, criminal or other legal penalties, adverse medical licensing actions, and liability, including responsibility for future medical costs, for (a) healthcare facilities that provide gender-affirming care; (b) physicians and other healthcare providers who provide gender-affirming care; and (c) patients seeking and receiving gender-affirming care (Directive to Take Action); and be it further

RESOLVED, That our AMA work with state and specialty societies and other interested organizations to advocate against state and federal legislation that would prohibit or limit gender-affirming care (Directive to Take Action); and be it further

RESOLVED, That our AMA work with other interested organizations to communicate with the Federation of State Medical Boards about the importance of preserving gender-affirming care despite government intrusions (Directive to Take Action); and be it further

RESOLVED, That our AMA amend policy H-185.927, "Clarification of Medical Necessity for Treatment of Gender Dysphoria," by insertion and deletion as follows:

> **Clarification of Medical Necessity for Treatment of Gender Dysphoria, H-185.927**
> Our AMA: (1) recognizes that medical and surgical treatments for gender dysphoria and gender incongruence, as determined by shared decision making between the patient and physician, are medically necessary as outlined by generally-accepted standards of medical and surgical practice; (2) will advocate for federal, state, and local policies to provide medically necessary care for gender dysphoria and gender incongruence; and (3) ~~opposes the criminalization and otherwise undue restriction of evidence-based gender-affirming care~~ will support legislation, ballot initiatives and state and federal policies to protect access to gender affirming care. (Modify Current HOD Policy)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Removing Financial Barriers to Care for Transgender Patients H-185.950
Our AMA supports public and private health insurance coverage for treatment of gender dysphoria as recommended by the patient's physician.
Citation: Res. 122; A-08; Modified: Res. 05, A-16; Reaffirmed: Res. 012, A-22;

Clarification of Medical Necessity for Treatment of Gender Dysphoria H-185.927
Our AMA: (1) recognizes that medical and surgical treatments for gender dysphoria, as determined by shared decision making between the patient and physician, are medically necessary as outlined by generally-accepted standards of medical and surgical practice; (2) will advocate for federal, state, and local policies to provide medically necessary care for gender dysphoria; and (3) opposes the criminalization and otherwise undue restriction of evidence-based gender-affirming care.
Citation: Res. 05, A-16; Modified: Res. 015, A-21;

Healthcare Equity Through Informed Consent and a Collaborative Healthcare Model for the Gender Diverse Population H-140.824
Our AMA supports: (1) shared decision making between gender diverse individuals, their health care team, and, where applicable, their families and caregivers; and (2) treatment models for gender diverse people that promotes informed consent, personal autonomy, increased access for gender affirming treatments and eliminates unnecessary third party involvement outside of the physician-patient relationship in the decision making process.
Citation: Res. 014, A-22;

Affirming the Medical Spectrum of Gender H-65.962
Our AMA opposes any efforts to deny an individual’s right to determine their stated sex marker or gender identity.
Citation: Res. 005, I-18;

Health Care Needs of Lesbian, Gay, Bisexual, Transgender and Queer Populations H-160.991
1. Our AMA: (a) believes that the physician's nonjudgmental recognition of patients' sexual orientations, sexual behaviors, and gender identities enhances the ability to render optimal patient care in health as well as in illness. In the case of lesbian, gay, bisexual, transgender, queer/questioning, and other (LGBTQ) patients, this recognition is especially important to address the specific health care needs of people who are or may be LGBTQ; (b) is committed to taking a leadership role in: (i) educating physicians on the current state of research in and knowledge of LGBTQ Health and the need to elicit relevant gender and sexuality information from our patients; these efforts should start in medical school, but must also be a part of continuing medical education; (ii) educating physicians to recognize the physical and psychological needs of LGBTQ patients; (iii) encouraging the development of educational programs in LGBTQ Health; (iv) encouraging physicians to seek out local or national experts in the health care needs of LGBTQ people so that all physicians will achieve a better understanding of the medical needs of these populations; and (v) working with LGBTQ communities to offer physicians the opportunity to better understand the medical needs of LGBTQ patients; and (c) opposes, the use of "reparative" or "conversion" therapy for sexual orientation or gender identity.
2. Our AMA will collaborate with our partner organizations to educate physicians regarding: (i) the need for sexual and gender minority individuals to undergo regular cancer and sexually transmitted infection screenings based on anatomy due to their comparable or elevated risk for these conditions; and (ii) the need for comprehensive screening for sexually transmitted diseases in men who have sex with men; (iii) appropriate safe sex techniques to avoid the risk for sexually transmitted diseases; and (iv) that individuals who identify as a sexual and/or gender minority (lesbian, gay, bisexual, transgender, queer/questioning individuals) experience intimate partner violence, and how sexual and gender minorities present with intimate partner violence differs from their cisgender, heterosexual peers and may have unique complicating factors.
3. Our AMA will continue to work alongside our partner organizations, including GLMA, to increase physician competency on LGBTQ health issues.

4. Our AMA will continue to explore opportunities to collaborate with other organizations, focusing on issues of mutual concern in order to provide the most comprehensive and up-to-date education and information to enable the provision of high quality and culturally competent care to LGBTQ people.
Citation: CSA Rep. C, I-81; Reaffirmed: CLRPD Rep. F, I-91; CSA Rep. 8 - I-94; Appended: Res. 506, A-00; Modified and Reaffirmed: Res. 501, A-07; Modified: CSAPH Rep. 9, A-08; Reaffirmation A-12; Modified: Res. 08, A-16; Modified: Res. 903, I-17; Modified: Res. 904, I-17; Res. 16, A-18; Reaffirmed: CSAPH Rep. 01, I-18;

Access to Basic Human Services for Transgender Individuals H-65.964
Our AMA: (1) opposes policies preventing transgender individuals from accessing basic human services and public facilities in line with ones gender identity, including, but not limited to, the use of restrooms; and (2) will advocate for the creation of policies that promote social equality and safe access to basic human services and public facilities for transgender individuals according to ones gender identity.
Citation: Res. 010, A-17;

Preventing Anti-Transgender Violence H-65.957
Our AMA will: (1) partner with other medical organizations and stakeholders to immediately increase efforts to educate the general public, legislators, and members of law enforcement using verified data related to the hate crimes against transgender individuals highlighting the disproportionate number of Black transgender women who have succumbed to violent deaths: (2) advocate for federal, state, and local law enforcement agencies to consistently collect and report data on hate crimes, including victim demographics, to the FBI; for the federal government to provide incentives for such reporting; and for demographic data on an individual's birth sex and gender identity be incorporated into the National Crime Victimization Survey and the National Violent Death Reporting System, in order to quickly identify positive and negative trends so resources may be appropriately disseminated; (3) advocate for a central law enforcement database to collect data about reported hate crimes that correctly identifies an individual's birth sex and gender identity, in order to quickly identify positive and negative trends so resources may be appropriately disseminated; (4) advocate for stronger law enforcement policies regarding interactions with transgender individuals to prevent bias and mistreatment and increase community trust; and (5) advocate for local, state, and federal efforts that will increase access to mental health treatment and that will develop models designed to address the health disparities that LGBTQ individuals experience.
Citation: Res. 008, A-19;

Reducing Suicide Risk Among Lesbian, Gay, Bisexual, Transgender, and Questioning Youth Through Collaboration with Allied Organizations H-60.927
Our AMA will partner with public and private organizations dedicated to public health and public policy to reduce lesbian, gay, bisexual, transgender, and questioning (LGBTQ) youth suicide and improve health among LGBTQ youth.
Citation: Res. 402, A-12; Reaffirmed: CSAPH Rep. 1, A-22;

Establishing A Task Force to Preserve the Patient-Physician Relationship When Evidence-Based, Appropriate Care Is Banned or Restricted G-605.009
1. Our AMA will convene a task force of appropriate AMA councils and interested state and medical specialty societies, in conjunction with the AMA Center for Health Equity, and in consultation with relevant organizations, practices, government bodies, and impacted communities for the purpose of preserving the patient-physician relationship.
2. This task force, which will serve at the direction of our AMA Board of Trustees, will inform the Board to help guide organized medicine's response to bans and restrictions on abortion, prepare for widespread criminalization of other evidence-based care, implement relevant AMA policies, and identify and create implementation-focused practice and advocacy resources on issues including but not limited to:
a. Health equity impact, including monitoring and evaluating the consequences of abortion bans and restrictions for public health and the physician workforce and including making actionable recommendations to mitigate harm, with a focus on the disproportionate impact on under-resourced, marginalized, and minoritized communities;
b. Practice management, including developing recommendations and educational materials for addressing reimbursement, uncompensated care, interstate licensure, and provision of care, including telehealth and care provided across state lines;
c. Training, including collaborating with interested medical schools, residency and fellowship programs,

academic centers, and clinicians to mitigate radically diminished training opportunities;
d. Privacy protections, including best practice support for maintaining medical records privacy and confidentiality, including under HIPAA, for strengthening physician, patient, and clinic security measures, and countering law enforcement reporting requirements;
e. Patient triage and care coordination, including identifying and publicizing resources for physicians and patients to connect with referrals, practical support, and legal assistance;
f. Coordinating implementation of pertinent AMA policies, including any actions to protect against civil, criminal, and professional liability and retaliation, including criminalizing and penalizing physicians for referring patients to the care they need; and
g. Anticipation and preparation, including assessing information and resource gaps and creating a blueprint for preventing or mitigating bans on other appropriate health care, such as gender affirming care, contraceptive care, sterilization, infertility care, and management of ectopic pregnancy and spontaneous pregnancy loss and pregnancy complications.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 224
(A-23)

Introduced by: American Society for Metabolic and Bariatric Surgery
Society of American Gastrointestinal and Endoscopic Surgeons

Subject: Advocacy Against Obesity-Related Bias by Insurance Providers

Referred to: Reference Committee B

Whereas, Our American Medical Association has recognized obesity as a disease; and

Whereas, Obesity is the most common chronic disease in adulthood; and

Whereas, Untreated obesity leads to significant morbidity, premature mortality, and an enormous financial burden to society from health care costs and lost productivity; and

Whereas, Our AMA is committed to promoting the highest standards of medical care and improving public health; and

Whereas, Effective treatment of the disease obesity requires a comprehensive multi-disciplinary approach delivered lifelong, including lifestyle therapy, anti-obesity medications, and metabolic and bariatric surgery, either sequentially or in an adjuvant fashion; and

Whereas, Our AMA recognizes the importance of bariatric surgery as an effective treatment for obesity and related comorbidities; and

Whereas, Metabolic Bariatric Surgery in the United States is associated with consistently low mortality and morbidity rates, and

Whereas, The practice of Metabolic Bariatric Surgery in the United States is overwhelmingly subjected to accreditation and oversight by the American College of Surgeons and the Society for Metabolic and Bariatric Surgeons; and

Whereas, Studies have shown that access to bariatric surgery reduces healthcare costs and improves patient outcomes; and

Whereas, Studies have shown that Metabolic Bariatric Surgery results in a reduction on the incidence of several cancers and improves survivorship in patients with cancer; and

Whereas, In 2022, the American Society for Metabolic and Bariatric Surgery established baseline criteria for the indications for the practice of metabolic surgery based on the available scientific evidence; and

Whereas, Despite ample evidence to the contrary, many public and private insurance providers currently impose arbitrary restrictions and discriminatory practices that limit or deny coverage for metabolic surgery, such as mandatory preoperative weight management programs and time-based delays. Such tactics discourage patients from completing preoperative programs and lead to continued comorbidity related to the disease of obesity; and

Whereas, Recent AMA policy D-440.954, "*Addressing Adult and Pediatric Obesity*," establishes the AMA as working to improve national understanding of the obesity epidemic and address gaps in medical obesity education and health disparities, and the lack of insurance coverage for obesity treatment; therefore be it

RESOLVED, That our American Medical Association urge individual state delegations to directly advocate for their state insurance agencies and insurance providers in their jurisdiction to

1. Revise their policies to ensure that bariatric surgery is covered for patients who meet the appropriate medical criteria.
2. Eliminate criteria that place unnecessary time-based mandates that are not clinically supported nor directed by the patient's medical provider
3. Ensure that insurance policies in their states do not discriminate against potential metabolic surgery patients based on age, gender, race, ethnicity, socioeconomic status.
4. Advocate for the cost-effectiveness of all obesity treatment modalities in reducing healthcare costs and improving patient outcomes (Directive to Take Action); and be it further

RESOLVED, That the AMA support and provide resources to state delegations in their efforts to advocate for the reduction of bias against patients that suffer from obesity for the actions listed. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/2/23

RELEVANT AMA POLICY

Addressing Adult and Pediatric Obesity D-440.954
1. Our AMA will: (a) assume a leadership role in collaborating with other interested organizations, including national medical specialty societies, the American Public Health Association, the Center for Science in the Public Interest, and the AMA Alliance, to discuss ways to finance a comprehensive national program for the study, prevention, and treatment of obesity, as well as public health and medical programs that serve vulnerable populations; (b) encourage state medical societies to collaborate with interested state and local organizations to discuss ways to finance a comprehensive program for the study, prevention, and treatment of obesity, as well as public health and medical programs that serve vulnerable populations; and (c) continue to monitor and support state and national policies and regulations that encourage healthy lifestyles and promote obesity prevention.
2. Our AMA, consistent with H-440.842, Recognition of Obesity as a Disease, will work with national specialty and state medical societies to advocate for patient access to and physician payment for the full continuum of evidence-based obesity treatment modalities (such as behavioral, pharmaceutical, psychosocial, nutritional, and surgical interventions).
3. Our AMA will work with interested national medical specialty societies and state medical associations to increase public insurance coverage of and payment for the full spectrum of evidence-based adult and pediatric obesity treatment.
4. Our AMA will: (a) work with state and specialty societies to identify states in which physicians are restricted from providing the current standard of care with regards to obesity treatment; and (b) work with interested state medical societies and other stakeholders to remove out-of-date restrictions at the state and federal level prohibiting healthcare providers from providing the current standard of care to patients affected by obesity.
5. Our AMA will leverage existing channels within AMA that could advance the following priorities:
· Promotion of awareness amongst practicing physicians and trainees that obesity is a treatable chronic disease along with evidence-based treatment options.

· Advocacy efforts at the state and federal level to impact the disease obesity.
· Health disparities, stigma and bias affecting people with obesity.
· Lack of insurance coverage for evidence-based treatments including intensive lifestyle intervention, anti-obesity pharmacotherapy and bariatric and metabolic surgery.
· Increasing obesity rates in children, adolescents and adults.
· Drivers of obesity including lack of healthful food choices, over-exposure to obesogenic foods and food marketing practices.
6. Our AMA will conduct a landscape assessment that includes national level obesity prevention and treatment initiatives, and medical education at all levels of training to identify gaps and opportunities where AMA could demonstrate increased impact.
7. Our AMA will convene an expert advisory panel once, and again if needed, to counsel AMA on how best to leverage its voice, influence and current resources to address the priorities listed in item 5. above.
Citation: BOT Rep. 11, I-06; Reaffirmation A-13; Appended: Sub. Res. 111, A-14; Modified: Sub. Res. 811, I-14; Appended: Res. 201, A-18; BOT Action in response to referred for decision: Res. 415, A-22; Modified: Res. 818, I-22;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 225
(A-23)

Introduced by: American Thoracic Society

Subject: Regulation of “Cool/Non-Menthol” Tobacco Products

Referred to: Reference Committee B

Whereas, Smoking leads to disease and disability and harms nearly every organ of the body; and

Whereas, Cigarette smoking remains the leading cause of preventable disease, disability, and death in the United States; and

Whereas, The tobacco industry spends billions of dollars each year on marketing cigarettes; and

Whereas, In 2020, 12.5% of U.S. adults (an estimated 30.8 million people) currently smoked cigarettes: 14.1% of men, 11% of women; and

Whereas, Each day, about 1,600 youth try their first cigarette; and

Whereas, The Food and Drug Administration has proposed rules to ban menthol flavored cigarettes and flavored cigars; and

Whereas, The state of California has enacted legislation banning menthol cigarettes; and

Whereas, Several tobacco companies have introduced new tobacco products that produce the same “cooling” sensation of a menthol product, but does not include a menthol taste; and

Whereas, The flavoring additives used to achieve the cooling sensation work on the same receptors as does the menthol flavors; and

Whereas, The tobacco industry has marketed these new “cooling/non-menthol” products using terms like “cool” and “fresh” – the same terms used to describe menthol tobacco products; and

Whereas, Documents released as a result of the tobacco action master settlement showed the tobacco industry knowingly and intentionally used flavored tobacco products to lure children and marginalized communities into tobacco addiction; and

Whereas, The tobacco industry appears to be designing new products to intentionally evade menthol bans and to continue marketing flavored tobacco products to youth and marginalized populations; therefore be it

RESOLVED, That our American Medical Association advocate that tobacco products that use additives that create a “cooling effect” should be treated as a tobacco product with a characterizing flavor for legal and regulatory purposes. (Directive to Take Action)

Fiscal Note: Minimal - less than $1,000

Received: 5/8/23

RELEVANT AMA POLICY

Opposition to Exempting the Addition of Menthol to Cigarettes H-495.976
Our AMA: (1) will continue to support a ban on the use and marketing of menthol in cigarettes as a harmful additive; and (2) encourages and will assist its members to seek state bans on the sale of menthol cigarettes.
Citation: BOT Action in response to referred for decision Res. 436, A-08; Modified: CSAPH Rep. 01, A-18;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 226
(A-23)

Introduced by: Michigan

Subject: Vision Qualifications for Driver's License

Referred to: Reference Committee B

Whereas, Current vision qualifications for operating motor vehicles were derived by various states in the 1920s and 1930s; and

Whereas, The American Medical Association (2003) in its Physician's Guide to Assessing and Counseling Older Drivers stated, "Although many states currently require far visual acuity of 20/40 for an unrestricted license, current research indicates that there is no scientific basis for this cut-off. In fact, studies undertaken in some states have demonstrated that there is no increased crash risk between 20/40 and 20/70 resulting in several new state requirements;" and

Whereas, Good data exists to recommend reconsideration of visual acuity standards in many states; and

Whereas, It has been well known that some persons with reduced acuity continue to drive safely; and

Whereas, Persons with significant visual field defects that violate state licensure requirements can be taught to drive safely; and

Whereas, Tests for cognitive well-being are generally not used in motor vehicle licensure testing protocols in most states; and

Whereas, Denying drivers licensure without evidence to support that denial frequently causes isolation, depression, and increased expenses for ill-advised and unnecessary medical visits; and

Whereas, Crash avoidance systems, unimagined one century ago, are routinely incorporated in automotive and roadway systems; and

Whereas, Autonomous vehicle technology is in advanced stages of development and has been supported by the Michigan State Medical Society (MSMS), the AMA, and the National Highway Traffic and Safety Administration (NHTSA); and

Whereas, It is well known that a large proportion of mortality involved auto crashes are accompanied by "driver error;" and

Whereas, Studies have been performed that show that drivers with the visual acuity less than 20/50 can be safe and competent drivers; and

Whereas, The Michigan Society of Eye Physicians and Surgeons (MiSEPS) has submitted a Council Advisory Recommendation (CAR: 21-03) to the American Academy of Ophthalmology

(AAO) urging state ophthalmologic societies to approach their legislators to consider reviewing, perhaps relaxing, the visual acuity / visual field requirements for licensure while simultaneously advocating for simple appropriate tests where cognitive decline is suspected; therefore be it

RESOLVED, That our American Medical Association engage with stakeholders including, but not limited to, the American Academy of Ophthalmology, National Highway Traffic Safety Commission, and interested state medical societies, to make recommendations on standardized vision requirements for unrestricted and restricted driver's licensing privileges. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

2. American Medical Association, (2003) Physicians guide to assessing and counseling older drivers. pp. 1-49. a. Essential Quote: "Although many states currently require far visual acuity for 20/40 for an unrestricted license, current research indicates that there is no scientific basis for this cut-off. In fact, studies undertaken in some states have demonstrated that there is no increased crash risk between 20/40 and 20/70 resulting in several new state requirements" page 45.
3. Rubin, G., Ng, E., et al., (2007) A prospective, population-based study of the role of visual impairment in motor vehicle crashes among older drivers: the SEE Study. (Investigative Ophthalmology & Visual Sciences) 48, (4) :1483-1491. a. Essential Quote: "Conclusions: Glare sensitivity, visual field loss and UFOV (useful field of vision) were significant predictors of crash involvement. Acuity, contrast sensitivity and stereo acuity were not associated with crashes. These results suggest that current vision screening for driver's licensure, based primarily on visual acuity, may miss important aspects of visual impairment." Owsley, C., Mc Gwin, G., (2010) Vision and driving. (Vision Research) 50:2348-2361. a. Essential Quote: "Based upon the research to date it is clear that if there is an association between visual acuity and driver safety, it is at best weak,...how does one rectify this conclusion in light of the significant findings from performance-based studies? One important consideration in this regard is that visual acuity related driving skill (e.g., sign recognition many not be crucial to the safe operation of a vehicle. Reading signage may be important for route planning or maintaining regulatory compliance with the "rule of the road" but it may not be critical for collision avoidance. " Owsley, C., Wood,. RELEVANT AMA POLICY

E8.2 Impaired Drivers & Their Physicians
A variety of medical conditions can impair an individual's ability to operate a motor vehicle safely, whether a personal car or boat or a commercial vehicle, such as a bus, train, plane, or commercial vessel. Those who operate a vehicle when impaired by a medical condition pose threats to both public safety and their own well-being. Physicians have unique opportunities to assess the impact of physical and mental conditions on patients' ability to drive safely and have a responsibility to do so in light of their professional obligation to protect public health and safety. In deciding whether or how to intervene when a patient's medical condition may impair driving, physicians must balance dual responsibilities to promote the welfare and confidentiality of the individual patient, and to protect public safety.

Not all physicians are in a position to evaluate the extent or effect of a medical condition on a patient's ability to drive, particularly physicians who treat patients only on a short-term basis. Nor do all physicians necessarily have appropriate training to identify and evaluate physical or mental conditions in relation to the ability to drive. In such situations, it may be advisable to refer a potentially at-risk patient for assessment.

To serve the interests of their patients and the public, within their areas of expertise physicians should: (a) Assess at-risk patients individually for medical conditions that might adversely affect driving ability, using best professional judgment and keeping in mind that not all physical or mental impairments create an obligation to intervene. (b) Tactfully but candidly discuss driving risks with the patient and, when appropriate, the family when a medical condition may adversely affect the patient's ability to drive safely. Help the patient (and family) formulate a plan to reduce risks, including options for treatment or therapy if available, changes in driving behavior, or other adjustments. (c) Recognize that safety standards for those who operate commercial transportation are subject to governmental medical standards and may differ from standards for private licenses. (d) Be aware of applicable state requirements for reporting to the licensing authority those patients whose impairments may compromise their ability to operate a motor vehicle safely. (e) Prior to reporting, explain to the patient (and family, as appropriate) that the physician may have an obligation to report a medically at-risk driver: (i) when the physician identifies a medical condition clearly related to the ability to drive; (ii) when continuing to drive poses a clear risk to public safety or the patient's own well-being and the patient ignores the physician's advice to discontinue driving; or (iii) when required by law.(f) Inform the patient that the determination of inability to drive safely will be made by other authorities, not the physician. (g) Disclose only the minimum necessary information when reporting a medically at-risk driver, in keeping with ethics guidance on respect for patient privacy and confidentiality.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 227
(A-23)

Introduced by: Michigan

Subject: Reimbursement for Postpartum Depression Prevention

Referred to: Reference Committee B

Whereas, The Centers for Disease Control and Prevention (CDC) reports that more than one in eight women with a recent live birth experience postpartum depression; and

Whereas, Untreated mood and anxiety disorders amongst pregnant women and new mothers cost approximately $14.2 billion over five years, with more than half the costs occurring within the first year due to pregnancy and birth complications; and

Whereas, The United States Preventive Services Task Force (USPSTF) recommends prevention of depression in pregnant and postpartum women by a wide range of providers in standard prenatal care settings and provides a grade of B; and

Whereas, Section 2713 of the Affordable Care Act requires private insurers to cover preventive services recommended by the USPSTF with a grade of A or B, along with those recommended by the Advisory Committee on Immunization Practices (ACIP), Bright Futures, and the Health Resources and Services Administration’s (HRSA's) guidelines for women's health; and

Whereas, The Affordable Care Act requires insurers to cover these services with no cost-sharing (i.e., no deductible and no co-pay); and

Whereas, Given this USPSTF recommendation to provide postpartum depression prevention, these services should be reimbursable under the Affordable Care Act; and

Whereas, The USPSTF recommends two postpartum depression prevention programs, including the Reach Out, Stay Strong, Essentials for Mothers of Newborns (ROSE) Program and the Mothers & Babies (MB) Program; and

Whereas, Research has shown that receiving either the MB or ROSE intervention during pregnancy reduces the odds of developing postpartum depression by 53 percent and 50 percent respectively; and

Whereas, Prenatal health care providers currently must provide a mental health diagnosis code to bill for postpartum depression prevention, and thus primary prevention does not qualify; and

Whereas, Useful Current Procedural Terminology Codes (CPT) for postpartum depression prevention include but are not limited to 98960-98962 regarding a “non-physician health care professional uses a standard curriculum to educate a patient about his or her disease or disorder to enable the patients and caregivers to effectively manage disease;” and

Whereas, California reimburses for these services, but is currently the only state that has done so; and

Whereas, Administration of postpartum prevention interventions by nurses, health educators, community health workers, and other paraprofessionals has been shown to be non-inferior to licensed mental health providers in reducing rates of postpartum depression; therefore be it

RESOLVED, That our American Medical Association amend Policy H-420.95, "*Improving Mental Health Services for Pregnant and Postpartum Mothers*," by addition and deletion to read as follows:

Improving Mental Health Services for Pregnant and Postpartum Mothers H-420.953
Our AMA: (1) supports improvements in current mental health services for women during pregnancy and postpartum; (2) supports advocacy for inclusive insurance coverage of mental health services during gestation, and extension of postpartum mental health services coverage to one year postpartum; (3) supports appropriate organizations working to improve awareness and education among patients, families, and providers of the risks of mental illness during gestation and postpartum; ~~and~~ (4) will continue to advocate for funding programs that address perinatal and postpartum depression, anxiety and psychosis, and substance use disorder through research, public awareness, and support programs; and (5) will advocate for evidence-based postpartum depression prevention services to be recognized as the standard of care for all federally-funded health care programs for pregnant women. (Modify Current HOD Policy)

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 228
(A-23)

Introduced by: Michigan

Subject: Reducing Stigma for Treatment of Substance Use Disorder

Referred to: Reference Committee B

Whereas, Treatment and services for substance use disorders are health care and should not be considered a “carve out” or an exception to health care; and

Whereas, Medicaid benefits may provide coverage for transportation costs for patients traveling to/from an office visit for general health care or mental health care visits; and

Whereas, Treatment of substance use disorder (SUD) may also require transportation to office visits for treatment with medication for opioid use disorder (MOUD) and/or for counseling; and

Whereas, The cost of transportation may be a barrier to ongoing participation in the treatment and recovery process for patients with SUD; and

Whereas, The cost of transportation (and lack of access) may be an added barrier to accessing MOUD for the uninsured, underinsured, or patients insured through Medicaid; and

Whereas, This lack of coverage for transportation costs for patients seeking treatment for SUD potentially adds to the stigma for SUD and may discourage people from accessing treatment; therefore be it

RESOLVED, That our American Medical Association support and advocate for coverage for transportation costs for all Medicaid or Medicare health care services without a “carve out” for patients diagnosed with a substance use disorder who are being treated with medication for opioid use disorder. (Directive to Take Action)

Fiscal Note: Minimal - less than $1,000

Received: 5/3/23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 229
(A-23)

Introduced by: Michigan

Subject: Firearm Regulation for Persons Charged with or Convicted of a Violent Offense

Referred to: Reference Committee B

Whereas, Title 18 U.S. Code Section 3553 “Imposition of a Sentence” defines “violent offense” as “a crime of violence, as defined in [Title18, Part I, Chapter 1,] Section 16 [Crime of Violence Defined], that is punishable by imprisonment;” and

Whereas, A “crime of violence” under the U.S. Code of Public Law of the 98th Congress under Title 18, Part I, Chapter 1, Section 16, Subsection (a) is defined as “an offense that has as an element the use, attempted use, or threatened use of physical force against the person or property of another;” and

Whereas, The Gun Control Act of 1988 only prohibits the sale to, and possession of firearms by, a person indicted or convicted of misdemeanors punishable by more than two years of imprisonment; and

Whereas, “Handgun possession is prohibited for people who have committed a violent misdemeanor punishable by less than 1 year of imprisonment” in five states including California, Hawaii, New York, Connecticut, and Maryland since 2016; and

Whereas, Aggravated assaults accounted for 68.2 percent of violent crimes reported to law enforcement in 2019; and

Whereas, California saw a “37% lower gun death rate than the national average” as of June 2022 since enacting firearm safety laws; and

Whereas, Hawaii had the lowest gun death rate at 2.5 deaths per capita in 2019 following its history of strict firearm legislation; and

Whereas, 15 states have adopted a similar policy which bans the purchase of firearms for those that have been convicted of a violent misdemeanor; and

Whereas, States like California and Hawaii have subsequently rescinded firearm possession for periods of 10 years up to indefinite suspension of possession, respectively; and

Whereas, Adoption of this and similar policies by other states have correlated in an 18 percent reduction in total homicide rates; and

Whereas, The American Medical Association has set precedent for supporting firearm restrictions in purchasing and possession in the cases of domestic violence; therefore be it

RESOLVED, That our American Medical Association study the effect of including a rescindment period of 10 years for the possession of a firearm by persons convicted of a violent offense in accordance with other established rescindment periods adopted by other states. (Directive to Take Action)

RELEVANT AMA POLICY

Firearm Safety and Research, Reduction in Firearm Violence, and Enhancing Access to Mental Health Care H-145.975

1. Our AMA supports: a) federal and state research on firearm-related injuries and deaths; b) increased funding for and the use of state and national firearms injury databases, including the expansion of the National Violent Death Reporting System to all 50 states and U.S. territories, to inform state and federal health policy; c) encouraging physicians to access evidence-based data regarding firearm safety to educate and counsel patients about firearm safety; d) the rights of physicians to have free and open communication with their patients regarding firearm safety and the use of gun locks in their homes; e) encouraging local projects to facilitate the low-cost distribution of gun locks in homes; f) encouraging physicians to become involved in local firearm safety classes as a means of promoting injury prevention and the public health; and g) encouraging CME providers to consider, as appropriate, inclusion of presentations about the prevention of gun violence in national, state, and local continuing medical education programs.
2. Our AMA supports initiatives to enhance access to mental and cognitive health care, with greater focus on the diagnosis and management of mental illness and concurrent substance use disorders, and work with state and specialty medical societies and other interested stakeholders to identify and develop standardized approaches to mental health assessment for potential violent behavior.
3. Our AMA (a) recognizes the role of firearms in suicides, (b) encourages the development of curricula and training for physicians with a focus on suicide risk assessment and prevention as well as lethal means safety counseling, and (c) encourages physicians, as a part of their suicide prevention strategy, to discuss lethal means safety and work with families to reduce access to lethal means of suicide.
4. Our AMA and other organizations will develop and disseminate a formal educational program to enable clinicians to effectively and efficiently address suicides with an emphasis on seniors and other high-risk populations.
5. Our AMA will develop with other interested organizations a toolkit for clinicians to use addressing

Extreme Risk Protection Orders in their individual states.
6. Our AMA will partner with other groups interested in firearm safety to raise public awareness of the magnitude of suicide in seniors and other high-risk populations, and interventions available for suicide prevention.
7. Our AMA and all interested medical societies will: (a) educate physicians about firearm epidemiology, anticipatory guidance, and lethal means screening for and exploring potential restrictions to access to high-lethality means of suicide such as firearms. Health care clinicians, including trainees, should be provided training on the importance of anticipatory guidance and lethal means counseling to decrease firearm injuries and deaths and be provided training introducing evidence-based techniques, skills and strategies for having these discussions with patients and families; (b) educate physicians about lethal means counseling in health care settings and intervention options to remove lethal means, either permanently or temporarily from the home.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 230
(A-23)

Introduced by: Michigan

Subject: Address Disproportionate Sentencing for Drug Offenses

Referred to: Reference Committee B

Whereas, Crack cocaine is no more dangerous than powdered cocaine, it presents different dangers because it is smoked or injected while powder cocaine is snorted; and

Whereas, Current sentencing disparities would land a powder-cocaine offender in prison for one day and put a crack-cocaine offender behind bars for 18 days (1:18) for possession of the same amount; and

Whereas, Five grams of crack cocaine is punished like 90 grams of powder cocaine; and

Whereas, The crack and powder cocaine sentencing disparity has disproportionately impacted people of color for the past three decades, a vestige of the War on Drugs; and

Whereas, 85 percent of offenders convicted under the crack cocaine sentencing law (Anti-Drug Abuse Act of 1986) are Black Americans; and

Whereas, The War on Drugs continues to disproportionately consume human potential and inflict trauma and suffering on communities of color despite wide-ranging evidence of its misguided origins and devastating impacts; and

Whereas, Incarceration is linked to adverse health effects extending far beyond prison walls; and

Whereas, People who have been incarcerated face higher rates of mental illness, substance use disorder, communicable diseases, and chronic diseases; and

Whereas, Individuals incarcerated have lower life expectancies, with each year in prison taking two years of life; and

Whereas, The majority of an estimated five hundred thousand people incarcerated for drug offenses are arrested for simple possession, a nonviolent crime; and

Whereas, 74 percent of the public (majorities across the political spectrum) support ending the sentencing disparity between crack and powder cocaine offenses; therefore be it

RESOLVED, That our American Medical Association actively lobby for federal and state legislation aimed at eliminating the national crack and powder cocaine sentencing disparity (from 18:1 to 1:1) and apply it retroactively to those already convicted or sentenced (Directive to Take Action); and be it further

RESOLVED, That our AMA collaborate with appropriate stakeholders, including, but not limited to, courts, government agencies, professional organizations, and criminal/social justice organizations to advocate for addressing excessive legal punishments for low-level, nonviolent drug crimes at state and federal levels. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Expungement, Destruction, and Sealing of Criminal Records for Legal Offenses Related to Cannabis Use or Possession H-95.910

1. Our AMA supports automatic expungement, sealing, and similar efforts regarding an arrest or conviction for a cannabis-related offense for use or possession that would be legal or decriminalized under subsequent state legalization or decriminalization of adult use or medicinal cannabis.
2. Our AMA supports automatic expungement, sealing, and similar efforts regarding an arrest or conviction of a cannabis-related offense for use or possession for a minor upon the minor reaching the age of majority.
3. Our AMA will inquire to the Association of American Medical Colleges, Accreditation Council for Graduate Medical Education, Federation of State Medical Boards, and other relevant medical education and licensing authorities, as to the effects of disclosure of a cannabis related offense on a medical school, residency, or licensing application.
4. Our AMA supports ending conditions such as parole, probation, or other court-required supervision because of a cannabis-related offense for use or possession that would be legal or decriminalized under subsequent state legalization or decriminalization of adult use or medicinal cannabis.
Citation: BOT Rep. 17, A-22;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 231
(A-23)

Introduced by: Michigan

Subject: Equitable Interpreter Services and Fair Reimbursement

Referred to: Reference Committee B

Whereas, All patients deserve equitable, fair, and high-level care in a language in which they can comprehend; and

Whereas, More than 25 million Americans speak English “less than very well,” according to the U.S. Census Bureau, and the National Center for Health Statistics reports about 37.6 million adults have difficulty with their hearing; and

Whereas, This population is less able to access health care and is at higher risk of adverse outcomes such as medication complications, noncompliance, and decreased patient satisfaction; and

Whereas, Title VI of the Civil Rights Act and Executive Order 13166 mandate that interpreter services be provided for patients with limited English proficiency (LEP) who need this service, and Section 1557 of the Affordable Care Act has also created protections for medical interpreter services as part of its protections from discrimination on the basis of race, color, or country of origin; and

Whereas, Unfortunately, there are currently only 14 states and 1 district that offer reimbursements for this service, including Connecticut, District of Columbia, Iowa, Idaho, Kansas, Maine, Minnesota, Montana, New Hampshire, New York, Texas (only sign language interpreters), Utah, Vermont, Washington, and Wyoming; and

Whereas, In the aforementioned states, providers can claim an administrative match for 50-75 percent of translation and interpretation claimed as an administrative expense if they are not already reimbursed as part of the direct service rates; and

Whereas, As of 2009, oral interpreter services can be claimed using billing code T-1013 along with the Current Procedural Terminology (CPT) Code appropriate for the clinical encounter; and

Whereas, In the 36 other states in which reimbursement for interpreter services is not codified, physicians sometimes have to bear the burden of the cost, which can cost up to $150.00/hour; and

Whereas, Studies have shown enforcement of hospital regulations to provide interpreters is inconsistent, and lack of reimbursement decreases hospital incentive to comply and many hospitals are not providing language services in a manner consistent with related CLAS standards; and

Whereas, Although coding methods are available, their use is limited because payers expect physicians to absorb the cost of interpretation services as part of their business expenses; and

Whereas, In 2000, the CPT Editorial Panel responded to a request of the House of Delegates to review the development of a CPT Code for use of medical interpreters by using the modifier "32;" and

Whereas, In addition to accrued cost, physicians often spend more time per visit with patients requiring medical interpreters due to initial set-up, dialogue in multiple languages, as well as additional clarifications; therefore be it

RESOLVED, That our American Medical Association support the standardization of physician reimbursement in regard to interpreter services, whether it be through the usage of a Current Procedural Terminology (CPT) code or direct reimbursement by payers including Medicaid programs and Medicaid managed care plans (New HOD Policy); and be it further

RESOLVED, That our AMA reaffirm Policy D-385.957, "*Certified Translation and Interpreter Services,"* which advocates for legislative and/or regulatory changes to require that payers including Medicaid programs and Medicaid managed care plans cover interpreter services and directly pay interpreters for such services and relieve the burden of the costs associated with translation services. (Reaffirm HOD Policy)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/5/23

RELEVANT AMA POLICY

Certified Translation and Interpreter Services D-385.957
Our AMA will: (1) work to relieve the burden of the costs associated with translation services implemented under Section 1557 of the Affordable Care Act; and (2) advocate for legislative and/or regulatory changes to require that payers including Medicaid programs and Medicaid managed care plans cover interpreter services and directly pay interpreters for such services, with a progress report at the 2017 Interim Meeting of the AMA House of Delegates.
Citation: Res. 703, A-17; Reaffirmed: CMS Rep. 7, A-21;

Interpreter Services and Payment Responsibilities H-385.917
Our AMA supports efforts that encourage hospitals to provide and pay for interpreter services for the follow-up care of patients that physicians are required to accept as a result of that patient's emergency room visit and Emergency Medical Treatment and Active Labor Act (EMTALA)-related services.
Citation: CMS Rep. 5, A-11; Reaffirmed: CMS Rep. 1, A-21;

Language Interpreters D-385.978
Our AMA will: (1) continue to work to obtain federal funding for medical interpretive services;
(2) redouble its efforts to remove the financial burden of medical interpretive services from physicians;
(3) urge the Administration to reconsider its interpretation of Title VI of the Civil Rights Act of 1964 as requiring medical interpretive services without reimbursement;
(4) consider the feasibility of a legal solution to the problem of funding medical interpretive services; and
(5) work with governmental officials and other organizations to make language interpretive services a covered benefit for all health plans inasmuch as health plans are in a superior position to pass on the cost of these federally mandated services as a business expense.
Citation: Res. 907, I-03; Reaffirmed in lieu of Res. 722, A-07; Reaffirmation A-09; Reaffirmation A-10; Reaffirmed: CMS Rep. 5, A-11; Reaffirmed in lieu of Res. 110, A-13; Reaffirmation: A-17;

Appropriate Reimbursement for Language Interpretive Services D-160.992
1. Our AMA will seek legislation to eliminate the financial burden to physicians, hospitals and health care providers for the cost of interpretive services for patients who are hearing impaired or do not speak English.
2. Our AMA will seek legislation and/or regulation to require health insurers to fully reimburse physicians and other health care providers for the cost of providing sign language interpreters for hearing impaired patients in their care.
Citation: Res. 209, A-03; Reaffirmation A-09; Reaffirmation A-10; Appended: Res. 114, A-12; Reaffirmed: Res. 702, A-12; Reaffirmation A-14; Reaffirmation: A-17;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution:232
(A-23)

Introduced by: Minnesota

Subject: Supervised Injection Facilities (SIFs) Allowed by Federal Law

Referred to: Reference Committee B

Whereas, Drug overdose deaths have risen fivefold in the past 20 years in the United States[1]; and

Whereas, Between 2020 and 2021, in the wake of the COVID-19 pandemic, the age-adjusted rate of drug overdose deaths rose more than 14% in the United States, with 106,699 drug overdose deaths occurring in 2021[2]; and,

Whereas, A rigid, treatment-only approach to substance use disorder (SUD) is not sufficient to reduce drug overdoses among people with SUD who (a) are not accepting of treatment, or (b) have accepted treatment but have since relapsed on a difficult road to recovery; and

Whereas, People with SUD who die from drug overdose will never have the opportunity to successfully enter or complete treatment; and

Whereas, In other countries, the introduction of supervised injection facilities (SIFs), or facilities that allow people who use drugs to use previously obtained substances under the supervision of healthcare professionals, has been associated with lower rates of overdose-induced mortality and morbidity, safer injection behavior, greater take-up of addiction treatment programs, and constant, or lower, rates of crime and drug-related public nuisance[3,4]; and

Whereas, While the evidence supporting SIFs in other countries may not be generalizable to the United States, it supports the reasonableness of conducting American-based SIF pilot programs and evaluations; and

Whereas, Any operation of an SIF, including SIF pilot programs and evaluations, are prohibited under federal law[5]; and

Whereas, In 2021, a federal appellate court ruled in favor of a lawsuit originally filed by the Trump Administration against a Philadelphia-based SIF in 2019[6]; and

Whereas, The Biden Administration has not actively filed suit against, or actively permitted, the operation of two SIFs in New York City that have been operating since November 2021[7]; and

Whereas, Between November 2021 and December 2022, the two operating SIFs in New York City served more than 2,300 people with substance use disorder and reversed more than 700 overdoses[8]; and

Whereas, The uncertainty about Executive Branch enforcement of the federal law prohibiting SIFs deters the potential operators of American-based SIF pilot programs and evaluations; and

Whereas, While the current policy of this American Medical Association supports American-based SIF pilot programs and evaluations, it does not sufficiently address the need for this American Medical Association to pursue the amendments to federal law, and/or commitments from the Executive Branch, necessary to address the legal concerns of potential operators of American-based SIF pilot programs and evaluations[9]; therefore be it

RESOLVED, That our American Medical Association amend policy H-95.925, "*Pilot Implementation of Supervised Injection Facilities,"* by addition to read as follows:

Pilot Implementation of Supervised Injection Facilities H-95.925
"Our AMA supports the development and implementation of pilot supervised injection facilities (SIFs) in the United States that are designed, monitored, and evaluated to generate data to inform policymakers on the feasibility, effectiveness, and legal aspects of SIFs in reducing harms and health care costs related to injection drug use, including supporting changes to federal law to permit the operation of pilot SIFs in the United States. Until federal law permits the operation of pilot SIFs in the United States, our AMA will regularly pursue explicit commitments from each active presidential administration that federal lawsuits will not be filed against operators of pilot SIFs. (Modify Current HOD Policy)

Fiscal Note: Minimal - less than $1,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 233
(A-23)

Introduced by: Missouri

Subject: Dobbs – EMTALA Medical Emergency

Referred to: Reference Committee B

Whereas, The U.S. Supreme Court's decision in *Dobbs v Jackson Women's Health Organization* found that no constitutional right to abortion of a pregnancy was found to exist under Constitution of the United States; and

Whereas, The matter of what types of abortions of pregnancies would be considered legal versus what types of abortions of pregnancies would be considered illegal was therefore left to the states, each of which could define these matters independently; and

Whereas, The diagnosis of the existence of certain abnormal conditions of pregnancy represents *upon their recognition* a threat to the life and/or reproductive potential of a woman, because delays in remediating these conditions increases the risks to the mother of morbidity and mortality; and

Whereas, The federal law that provides the greatest clarity on this matter, and which governs the obligations of physicians and medical teams as well as those who manage or operate the facilities at which care of pregnant women is rendered, is the Emergency Medical Treatment and Active Labor Act, or "EMTALA"; and

Whereas, EMTALA codifies that an "emergency medical condition" is defined to exist *upon the recognition of the threat* of loss of life or loss of function of any bodily system; and

Whereas, It is incontrovertible that conditions including those such as ectopic pregnancies, premature rupture of membranes, and other conditions represent a clear danger to the life and health of the mother, *upon the recognition of these conditions*, even before the development of "unstable" vital signs such as tachycardia or hypotension; and

Whereas, EMTALA not only clearly defines the obligations of the medical care team, but also supersedes any state laws to the contrary due to the "Supremacy Clause" of the United States Constitution; therefore be it

RESOLVED, That our American Medical Association advocate for policies to ensure that all patients receive prompt, complete and unbiased emergency health care that is medically sound and evidence-based, in compliance with the federal Emergency Medical Treatment and Active Labor Act (EMTALA). (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 234
(A-23)

Introduced by: American Academy of Dermatology, Pennsylvania, The American Society of Dermatopathology, Society for Investigative Dermatology, American Contact Dermatitis Society, American Society for Dermatologic Surgery

Subject: Medicare Physician Fee Schedule Updates and Grassroots Campaign

Referred to: Reference Committee B

Whereas, Since 1992, Medicare payment to physicians has been based on the Medicare Physician Fee Schedule (PFS), whether those services are provided in physician offices, hospitals, ambulatory surgical centers, skilled nursing facilities, hospices, outpatient dialysis facilities, clinical laboratories, or beneficiaries' homes. Payment to physicians for services provided in a physician's office is based on a single rate, while payment for services provided in other facilities is proportioned according to the resources available to the physician; and

Whereas, The required statutory update to the conversion factor of 0% for calendar year (CY) 2023, the expiration of the 3% supplemental increase to Medicare PFS for 2022, and a budget neutrality adjustment of 1.47%, the final Medicare PFS CF for CY 2023 decreased by 2% from CY 2022 to CY 2023 from $34.60 to $33.88. Despite this cut, Medicare stated "The CY 2023 Medicare PFS final rule is one of several rules that reflect a broader Administration-wide strategy to create a more equitable health care system that results in better accessibility, quality, affordability, and innovation;" and

Whereas, Payments and administrative burdens on physician practices are eroding physicians' ability to focus on patients, driving burnout among physicians generally, and threatening physicians ability to practice; and

Whereas, Our American Medical Association and myriad other medical organizations support HR 2474, "Strengthening Medicare for Patients and Providers Act"; therefore be it

RESOLVED, That our American Medical Association's top priority be to advocate for positive annual updates to the Medicare Physician Fee Schedule (PFS) to accurately account for annual inflation, cost of living, and practice expense increases (Directive to Take Action); and be it further

RESOLVED, That our AMA actively engage in an AMA-organized and sponsored national grassroots campaign that educates patients about how lack of sufficient positive updates to the physician fee schedule places physician practice survivability and access to quality health care at risk (Directive to Take Action); and be it further

RESOLVED, That this newly-created AMA grassroots campaign actively engage America's patients, as constituents, to use their influence to lobby Congress in favor of positive Medicare PFS updates to help ensure the survivability of physician practices and access to quality health care for all. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/10/23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 235
(A-23)

Introduced by: American College of Emergency Physicians

Subject: EMS as an Essential Service

Referred to: Reference Committee B

Whereas, Longer delays for ambulances for emergency and non-emergency calls for service is associated with an increase in mortality[1]; and

Whereas, Delays for ambulances have been increasing in the past few years, in part due to increasing loss of workforce which started prior to the COVID-19 pandemic and has been exacerbated by the pandemic[2]; and

Whereas, 70% of Emergency Medical Services (EMS) clinicians plan to leave the field in the next 4 years[3]; and

Whereas, 26% of those leaving cited compensation as the reason for their leaving and 45% felt that this was the main problem impacting retention[3]; and

Whereas, EMS clinician turnover is as high has 40% in 2022[4], compared to almost half that rate within the publicly funded fire department based EMS model[5]; and

Whereas, Every state defines fire departments and fire protections as an essential function of government and provides a funding mechanism for the same[6]; and

Whereas, Only 11 states define EMS as an essential service, limiting funding and access to federal funds for the services that are provided[6], indicating that declaring EMS as essential service alongside fire protection could help improve funding, salaries, and provider retention; therefore be it

RESOLVED, That our American Medical Association recognize that the provision of Emergency Medical Services is an essential service of government and is best overseen by physicians with specialized training in medical direction for Emergency Medical Services (New HOD Policy); and be it further

RESOLVED, That our AMA work with the American College of Emergency Physicians (ACEP), the National Registry of Emergency Medical Technicians (NREMT), the National Association of EMS Physicians (NAEMSP), the National Association of State EMS Officials (NASEMSO), and other relevant stakeholders to create model legislation at the state level to establish funding for Emergency Medical Services as an essential service (Directive to Take Action); and be it further

RESOLVED, That our AMA advocate for federal funding of Emergency Medical Services as an essential service. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

On-Site Emergency Care H-130.976
(1) The AMA reaffirms its policy endorsing the concept of appropriate medical direction of all prehospital emergency medical services. (2) The following factors should be considered by prehospital personnel in making the decision either to provide extended care in the field or to evacuate the trauma victim rapidly: (a) the type, severity and anatomic location of the injury; (b) the proximity and capabilities of the receiving hospital; (c) the efficiency and skill of the paramedic team; and (d) the nature of the environment (e.g., rural or urban). (3) Because of the variability of these factors, no single methodology or standard can be applied to all accident situations. Trauma management differs markedly between locales, settings, and types of patients receiving care. For these reasons, physician supervision of prehospital services is essential to ensure that the critical decision to resuscitate in the field or to transfer the patient rapidly is made swiftly and correctly.

Overcrowding and Hospital EMS Diversion H-130.945
It is the policy of the AMA:
(1) that the overall capacity of the emergency health care system needs to be increased through facility and emergency services expansions that will reduce emergency department overcrowding and ambulance diversions; incentives for recruiting, hiring, and retaining more nurses; and making available additional hospital beds;
(2) to advocate for increased public awareness as to the severity of the emergency department crisis, as well as the development and distribution of patient-friendly educational materials and a physician outreach campaign to educate patients as to when it is appropriate to go to the emergency department;
(3) to support the establishment of local, multi-organizational task forces, with representation from hospital medical staffs, to devise local solutions to the problem of emergency department overcrowding, ambulance diversion, and physician on-call coverage, and encourage the exchange of information among these groups;
(4) that hospitals be encouraged to establish and use appropriate criteria to triage patients arriving at emergency departments so those with simpler medical needs can be redirected to other appropriate ambulatory facilities;
(5) that hospitals be encouraged to create nurse-staffed and physician-supervised telephone triage programs to assist patients by guiding them to the appropriate facility; and
(6) to work with the American Hospital Association and other appropriate organizations to encourage hospitals and their medical staffs to develop diversion policy that includes the criteria for diversion; monitor the frequency of diversion; identify the reasons for diversion; and develop plans to resolve and/or reduce emergency department overcrowding and the number of diversions.
Citation: CMS Rep. 1, A-02; Reaffirmed: BOT Rep. 3, I-02; Modified: BOT Rep. 15, I-04; Reaffirmation A-07; Reaffirmation A-08; Reaffirmed: CMS Rep. 2, A-08; Reaffirmed: CMS Rep. 3, A-11; Reaffirmed: CMS Rep. 1, A-21;

Addressing Payment and Delivery in Rural Hospitals D-465.998
1. Our AMA will advocate that public and private payers take the following actions to ensure payment to rural hospitals is adequate and appropriate:
a. Create a capacity payment to support the minimum fixed costs of essential services, including surge capacity, regardless of volume;
b. Provide adequate service-based payments to cover the costs of services delivered in small communities;
c. Adequately compensate physicians for standby and on-call time to enable very small rural hospitals to deliver quality services in a timely manner;
d. Use only relevant quality measures for rural hospitals and set minimum volume thresholds for measures to ensure statistical reliability;
e. Hold rural hospitals harmless from financial penalties for quality metrics that cannot be assessed due to low statistical reliability; and
f. Create voluntary monthly payments for primary care that would give physicians the flexibility to deliver services in the most effective manner with an expectation that some services will be provided via telehealth or telephone.
2. Our AMA encourages transparency among rural hospitals regarding their costs and quality outcomes.
3. Our AMA supports better coordination of care between rural hospitals and networks of providers where services are not able to be appropriately provided at a particular rural hospital.
4. Our AMA encourages employers and rural residents to choose health plans that adequately and appropriately reimburse rural hospitals and physicians.
Citation: CMS Rep. 9, A-21;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 236
(A-23)

Introduced by: American College of Cardiology

Subject: AMA Support for Nutrition Research

Referred to: Reference Committee B

Whereas, The Office of Nutrition Research (ONR) focuses on advancing nutrition science to promote health, and to reduce the burden of diet-related diseases and nutrition health disparities. In January 2021, ONR was relocated to the National Institutes of Health (NIH) Office of the Director (OD) to better coordinate and lead research functions across NIH institutes and centers; and

Whereas, Nutrition research has been chronically underfunded. A 2019 NIH analysis compared the amount of dedicated NIH funding for risk factors of death and disability and concluded that large disparities exist between the top causes of poor health and the research funding allocated to address them—with the largest gap existing for nutrition. Despite this pressing need for more investment, funding levels for nutrition research and training have remained flat since FY2015; and

Whereas, The President's budget includes $121 million to support nutrition research, including investments that will advance the goals of the White House National Strategy on Hunger, Nutrition, and Health. Resources will expand the efforts of the NIH Common Fund Community Partnerships to Advance Science for Society, and help to ensure diversity and inclusion in nutrition, health, and food security research. Funding will also allow NIH to focus on expanding and diversifying the nutrition science workforce and investing in creative new approaches to advance research regarding the prevention and treatment of diet-related diseases, including the Food is Medicine initiative; and

Whereas, Poor nutrition is a major driver of diet-related diseases, including heart disease, type 2 diabetes, obesity, hypertension, and some cancers, and has staggering costs to society. Diet-related diseases are the number one cause of death and disability in the United States. The combined health care spending and lost productivity from suboptimal diets costs the economy $1.1 trillion each year. A strong investment in NIH ONR would expand and accelerate scientific discoveries that positively impact public health, health care costs, equity, the economy, national security, and the nation's resilience to new threats; and

Whereas, The nutrition security crisis in this country is deeply inequitable, with people of color facing higher rates of diabetes, obesity, stroke, and heart disease than white people. Properly investing in nutrition research in this country is essential to understanding and combatting the drivers of this inequitable harm and to building a more diverse nutrition science workforce. Both of these steps are essential to improving health equity in this country; and

Whereas, Diet-related illness also undermines our country's military readiness. A striking 77% of young adults are ineligible for military service, with obesity as the largest disqualifier; therefore be it

RESOLVED, That our American Medical Association seek national legislation in support of the President's FY24 Budgetary request that the National Institutes of Health's (NIH's) Office of Nutrition Research (ONR) receive at least $121,000,000, as this level of funding would enable ONR to secure the leadership, organizational structure, and resources to effectively fulfill its important mission. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 237
(A-23)

Introduced by: California, American Academy of Family Physicians, American Association of Neurological Surgeons, American College of Surgeons, Congress of Neurological Surgeons, The Society of Thoracic Surgeons

Subject: Prohibiting Covenants Not-To-Compete in Physician Contracts

Referred to: Reference Committee B

Whereas, Non-compete agreements are contracts whereby an employee agrees not to enter direct competition with their employer once the employment term is over, regardless of which party terminates the contract; and

Whereas, While intention of such agreements is to reduce competition, it has also been shown to negatively impact wages and employment mobility; and

Whereas, The Federal Trade Commission (FTC) has proposed banning non-compete contracts in order to reduce wage suppression and stimulate the flow of workers between employers, and increase competition, which could result in increased earnings for workers by $250-$290 billion annually[1]; and

Whereas, The use of non-compete agreements has been extensive in the healthcare system, affecting 37-45% of physicians, including those in residency and fellowship training[2,3]; and

Whereas, The elimination of non-compete contracts could lead to a reduction in consumer health care costs by approximately $148 billion a year, increasing affordability and access to healthcare services for patients[1]; and

Whereas, Allowing physicians to work for multiple hospitals can enhance the availability of specialist coverage in a community, improving patient access to care and reducing healthcare disparities; and

Whereas, Recently graduating trainees entering the workforce are especially vulnerable to the negative effects of non-compete contracts, which can limit their opportunities for career advancement and restrict their ability to provide care in underserved areas; and

Whereas, Although the Accreditation Council for Graduate Medical Education (ACGME) currently prohibits restrictive covenants as a contingency for residents or fellows participating within any GME training program, there are non-ACGME fellowship programs which require trainees to sign restrictive covenants as a condition for employment; and

Whereas, During the COVID-19 pandemic physicians advocating for healthcare worker safety and adequate personal protective equipment (PPE) were threatened with termination, which due to non-compete clauses meant months or years of unemployment or geographic relocation; and

Whereas, When physicians are legally restrained from terminating a contract of employment, employers are not incentivized to create supportive work environment or respond to physician advocacy, further contributing to physician burnout; and

Whereas, Some employers offer recruitment and retention incentives, such as sign-on bonuses, student loan reimbursement, moving expenses or housing fees that become "de facto" non-compete covenants because employers require these expenses to be repaid upon contract termination; and

Whereas, Our AMA's Code of Ethics E-11.2.3.1, *Restrictive Covenants*, recognizes that "Covenants-not-to-compete restrict competition, can disrupt continuity of care, and may limit access to care" and further advises physicians not to enter agreements that "unreasonably restrict a physician's right to practice medicine for a specified period of time or in a specified geographic area on termination of a contractual relationship"; and

Whereas, Current AMA policy D-383.978, *Restrictive Covenants of Large Health Care Systems,* speaks to the need to "educate medical students, physicians-in-training and physicians entering employment contracts with large healthcare systems on the dangers of aggressive restrictive covenants"; and

Whereas, The AMA has not supported elimination or prohibition of covenants not-to-compete, despite the overwhelming harm non-compete clauses bear in the current healthcare landscape and has been criticized for its "noncommittal approach" that fails to protect physicians (H-383.987, *Restrictive Covenants in Physician Contracts);* and

Whereas, Covenants not-to-compete are already prohibited outright in several states including California, North Dakota, Oklahoma and Washington D.C; and additional states such as New Hampshire, Delaware, Massachusetts and Rhode Island ban non-compete covenants specifically for physicians, but they remain legal in 38 states; and

Whereas, Many national specialty and state societies supported the Federal Trade Commission's (FTC) recent proposed ban on non-compete agreements to protect employed physicians but also urged FTC to include non-profit hospital employers which comprise 58% of the nation's hospitals (AHA); and

Whereas, Non-compete bans 1) allow physicians the autonomy to advocate on behalf of their patients without inappropriate interference and protects the sanctity of the physician-patient relationship; 2) protect patient access to care, particularly in rural and underserved areas, by allowing physicians to change jobs but remain in those areas to care for their communities; and 3) can discourage consolidation which can lead to increased health care costs; therefore be it

RESOLVED, That our American Medical Association support policies, regulations, and legislation that prohibits covenants not-to-compete for all physicians in clinical practice who hold employment contracts with for-profit or non-profit hospital, hospital system, or staffing company employers (New HOD Policy); and be it further

RESOLVED, That our AMA oppose the use of restrictive covenants not-to-compete as a contingency of employment for any physician-in-training, regardless of the ACGME accreditation status of the residency/fellowship training program (New HOD Policy), and be it further

RESOLVED, That our AMA study and report back on current physician employment contract terms and trends with recommendations to address balancing legitimate business interests of physician employers while also protecting physician employment mobility and advancement, competition, and patient access to care - such recommendations to include the appropriate regulation or restriction of 1) Covenants not to compete in physician contracts with independent physician groups that include time, scope, and geographic restrictions; and 2) De facto non-compete restrictions that allow employers to recoup recruiting incentives upon contract termination. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Restrictive Covenants in Physician Contracts H-383.987
Our AMA will provide guidance, consultation, and model legislation concerning the application of restrictive covenants to physicians upon request of state medical associations and national medical specialty societies.
Citation: BOT Rep. 13, A-16;

Restrictive Covenants of Large Health Care Systems D-383.978
Our AMA, through its Organized Medical Staff Section, will educate medical students, physicians-in-training, and physicians entering into employment contracts with large health care system employers on the dangers of aggressive restrictive covenants, including but not limited to the impact on patient choice and access to care.
Citation: Res. 026, A-19; Modified: Speakers Rep. 1, A-21

Covenants Not to Compete D-265.988
Our AMA will create a state restrictive covenant legislative template to assist state medical associations, national medical specialty societies and physician members as they navigate the intricacies of restrictive covenant policy at the state level.
Citation: BOT Rep. 06, I-20;

E-11.2.3.1 Restrictive Covenants
Competition among physicians is ethically justifiable when it is based on such factors as quality of services, skill, experience, conveniences offered to patients, fees, or credit terms.

Covenants-not-to-compete restrict competition, can disrupt continuity of care, and may limit access to care.

Physicians should not enter into covenants that:
(a) Unreasonably restrict the right of a physician to practice medicine for a specified period of time or in a specified geographic area on termination of a contractual relationship; and
(b) Do not make reasonable accommodation for patients' choice of physician.

Physicians in training should not be asked to sign covenants not to compete as a condition of entry into any residency or fellowship program.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 238
(A-23)

Introduced by: Arizona

Subject: Eliminate Mandatory Medicare Budget Cuts

Referred to: Reference Committee B

Whereas, The 2023 Medicare payments are to cut physician pay; and

Whereas, Medicare payments to physicians have not been consistent with inflation and have not increased in 20 years[1]; and

Whereas, Practice costs and consumer prices have increased during that time frame; and

Whereas, Medicare physician payments have declined 22% over the last two decades when adjusted for inflation[2]; therefore be it

RESOLVED, That our American Medical Association continue to advocate for new legislation on Medicare physician payment reform. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/9/23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 239
(A-23)

Introduced by: Arizona

Subject: Creating an AMA Taskforce Dedicated to the Alignment of Specialty Designations for Advanced Practice Providers with their Supervising Physicians

Referred to: Reference Committee B

Whereas, Advanced Practice Providers (APP's: PA's and NP's) have an established scope of practice directly determined by the specialty of their supervisory physician and their practice site; and

Whereas, Advanced Practice Providers in collaboration with their supervisory physicians provide care commensurate with the specialty training and board certification of the physician; and

Whereas, Currently Advanced Practice Providers do not have any established standard for a residency or apprenticeship requirement or specialization process after graduation that aligns them with the specialty training of their supervisory physicians; and

Whereas, This absence of specialty designation for Advanced Practice Providers creates the following harms to the practice of medicine and the quality of care for our patients:

1. Advanced Practice Providers can completely change their professional specialty focus overnight creating major training requirements and costs for the practice that hires them.
2. Lower income physician specialties like primary care are disproportionately impacted by the frequent departure of APP's for higher income specialties.
3. Costly training periods for APP's can take a minimum of one year, for example, for primary care based specialties.
4. The current "non-specialty designated" APP system creates a financially exploitative system. Specialties with higher physician salaries unfairly lure away APP's from the practices of lower salaried physicians. Those practices are unable to compete with salaries offered by disparate higher income specialties.
5. Primary care practices, for example, are thus left with untenable training cost losses and exponentially high turnover in an already volatile and predatory market; and

Whereas, If residency and specialty training make sense for physicians, some type of established apprenticeship training program within established specialties must also make sense for APP's; and

Whereas, Current severe healthcare workforce shortages in the setting of an inflationary economy and reduced physician payments for our services, makes an alignment of APP salary and specialty competition particularly critical; therefore be it

RESOLVED, That our American Medical Association Board of Trustees study and report back at the 2023 Interim meeting on the economic impact to primary care and other lower tier income

medical specialties of specialty switching by Advanced Practice Providers (Directive to Take Action); and be it further

RESOLVED, That our AMA Board of Trustees study and report back at the 2023 Interim meeting about possible options on how APP's can best be obligated to stay in a specialty tract that is tied to the specialty area of their supervising physician in much the same way their supervisory physicians are tied to their own specialty, with an intent for the study to look at how the house of medicine can create functional barriers that begin to make specialty switching by Advanced Practice Providers appropriately demanding. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 240
(A-23)

Introduced by: Illinois

Subject: Attorneys' Retention of Confidential Medical Records and Controlled Medical Expert's Tax Returns After Case Adjudication

Referred to: Reference Committee B

Whereas, Medical records are extremely confidential records governed by the Health Insurance Portability and Accountability Act of 1996 (HIPAA) and can only be disclosed under certain circumstances; and

Whereas, It is recommended that any documentation that may be required in a personal injury or breach of contract dispute is retained for as long as necessary. "As long as necessary" will depend on the relevant statute of limitations in force in the state. In many cases, statutes of limitation are longer than any HIPAA record retention periods; and

Whereas, The filing of a civil lawsuit provides the mechanism for the issuance of subpoenas for witnesses and subpoenas duces tecum to produce documents that often involve medical records; and

Whereas, The Circuit Court of Cook County amended its Health Insurance Portability and Accountability Act (HIPAA) Protective Order following the Illinois Supreme Court's recent determination of an insurer's obligations with a plaintiff's protected health information (PHI). In short, PHI obtained by insurance companies during litigation cannot be used outside the litigation context, and it must be returned/destroyed at its conclusion. (*See Haage v. Zavala*, 2021 IL 125918); and

Whereas, The amended HIPAA Protective Order requires return or destruction of all records within 60 days of the close of the case. This prohibits parties, counsel, *and the parties' insurers* from using PHI for any purpose other than the litigation in which the order was entered; and

Whereas, The American Bar Association is generally silent regarding attorney's retention of medical records after the case is adjudicated; and

Whereas, Courts have required controlled expert witnesses to produce personal financial records, including federal 1099 tax forms related to legal work as well as personal income tax returns, even when they include information concerning the expert's spouse; and

Whereas, In *Grant v. Rancour*, 2020 IL App (2d) 190802 (June 12, 2020), the court stated that: "Opposing parties may cross-examine an expert witness about the amount and percentage of his or her income generated as an expert witness, the frequency with which he or she testifies, and the frequency with which he or she testifies for a particular side."; and

Whereas, Personal tax returns of medical experts obtained by attorneys should be afforded similar HIPPA type protections after the close of the case; and

Whereas, Attorney's prolonged retention of these confidential and private documents can only be utilized in an adversarial intent; therefore be it further

RESOLVED, That our American Medical Association advocate that attorney requests for controlled medical expert personal tax returns should be limited to 1099-MISC forms (miscellaneous income) and that entire personal tax returns (including spouse's) should not be forced by the court to be disclosed (Directive to Take Action); and be it further

RESOLVED, That our AMA advocate through legislative or other relevant means the proper destruction by attorneys of medical records (as suggested by *Haage v. Zavala*, 2021 IL 125918) and medical expert's personal tax returns within sixty days of the close of the case. (Directive to Take Action)

Fiscal Note: TBD

RELEVANT AMA POLICY

Expert Witness Testimony H-265.994

(1) Regarding expert witnesses in clinical matters, as a matter of public interest the AMA encourages its members to serve as impartial expert witnesses.

(2) Our AMA is on record that it will not tolerate false testimony by physicians and will assist state, county and specialty medical societies to discipline physicians who testify falsely by reporting its findings to the appropriate licensing authority.

(3) Existing policy regarding the competency of expert witnesses and their fee arrangements (BOT Rep. SS, A-89) is reaffirmed, as follows:

(a) The AMA believes that the minimum statutory requirements for qualification as an expert witness in medical liability issues should reflect the following: (i) that the witness be required to have comparable education, training, and occupational experience in the same field as the defendant or specialty expertise in the disease process or procedure performed in the case; (ii) that the occupational experience include active medical practice or teaching experience in the same field as the defendant; (iii) that the active medical practice or teaching experience must have been within five years of the date of the occurrence giving rise to the claim; and (iv) that the witness be certified by a board recognized by the American Board of Medical Specialties or the American Osteopathic Association or by a board with equivalent standards.

(b) The AMA opposes payment of contingent fees for all types of medicolegal consultations, including management services provided by firms engaged in locating physician consultants. Where necessary, the AMA supports state legislation making it illegal for medicolegal consulting firms to take a contingent fee in personal injury litigation. Such arrangements threaten the integrity and the compensation goals of the civil justice system. Like the individual expert witness, the role of the medicolegal consulting firm which locates and supplies experts should be one of limited service to the judicial process. Contingent fee arrangements are plainly inconsistent with the scope of this responsibility.

(c) The AMA supports the right to cross examine physician expert witnesses on the following issues: (i) the amount of compensation received for the expert's consultation and testimony; (ii) the frequency of the physician's expert witness activities; (iii) the proportion of the physician's professional time devoted to and income derived from such activities; and (iv) the frequency with which he or she testified for either

plaintiffs or defendants. The AMA supports laws consistent with its model legislation on expert witness testimony.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 241
(A-23)

Introduced by: Illinois

Subject: Allow Viewing Access to Prescription Drug Monitoring Programs Through EHR for Clinical Medical Students and Residents

Referred to: Reference Committee B

Whereas, The majority of physicians reported that prescription drug monitoring programs (PDMPs) improved their opioid prescribing by decreasing the amount administered and increasing comfort in prescribing[2]; and

Whereas, A systematic review showed a significant correlation between appropriate utilization of PDMPs and reduced rate of opioid abuse[3]; and

Whereas, Expanding accessibility of PDMPs may further amplify PDMPs effectiveness and allow the clinical care team to be more efficient, particularly in an academic setting[4]; and

Whereas, Accessibility of PDMPs to front-line health care workers allows its utilization as a screening tool instead of postemptive verification[4]; and

Whereas, Deficits of the PDMPs include ineffective data utilization, such as resistance to use of systems by providers experiencing an increased workload[2,5]; and

Whereas, Medical and pharmaceutical students are afforded fewer patient loads and more patient-centered time than their resident and attending physician team members, allowing more focus on a patient's nuanced prescription history; and

Whereas, Medical and pharmaceutical students have access to patient health information through electronic health record (EHR) in their clinical years, providing access to PDMPs will impart comprehensive job training in their role as future physicians; and

Whereas, Our American Medical Association has existing policy (H-95.939, *Development and Promotion of Single National Prescription Drug Monitoring Program*) in support of a physician's ability to designate a delegate to check information on the Prescription Drug Monitor Program, depending on state law; and

Whereas, Our AMA acknowledges that Prescription Drug Monitoring Program data is health information and promotes medical school training that incorporates safe prescribing practices, safe medication storage and disposal practices, and functional assessment of patients with chronic conditions in order for the future generation of physicians to contribute to positive solutions to the problems of prescription drug diversion, misuse, addiction and overdose deaths (H-95.945, *Prescription Drug Diversion, Misuse and Addiction*); therefore be it

RESOLVED, That our American Medical Association amend Policy H-95.945, *Prescription Drug Diversion, Misuse and Addiction*, to include prescription drug monitoring program (PDMP)

viewing access as a mainstay of appropriate and comprehensive medical training for clinical medical students and residents. (Modify Current HOD Policy)

RELEVANT AMA POLICY

Development and Promotion of Single National Prescription Drug Monitoring Program H-95.939
Our American Medical Association (1) supports the voluntary use of state-based prescription drug monitoring programs (PDMP) when clinically appropriate; (2) encourages states to implement modernized PDMPs that are seamlessly integrated into the physician's normal workflow, and provide clinically relevant, reliable information at the point of care; (3) supports the ability of physicians to designate a delegate to perform a check of the PDMP, where allowed by state law; (4) encourage states to foster increased PDMP use through a seamless registration process; (5) encourages all states to determine how to use a PDMP to enhance treatment for substance use disorder and pain management; (6) encourages states to share access to PDMP data across state lines, within the safeguards applicable to protected health information; and (7) encourages state PDMPs to adopt uniform data standards to facilitate the sharing of information across state lines.
Citation: BOT Rep. 12, A-15; Reaffirmed: BOT Rep. 5, I-15; Reaffirmation A-16;

Prescription Drug Diversion, Misuse and Addiction H-95.945
Our AMA: (1) supports permanent authorization of and adequate funding for the National All Schedules Prescription Electronic Reporting (NASPER) program so that every state, district and territory of the US can have an operational Prescription Drug Monitoring Program (PDMP) for use of clinicians in all jurisdictions; (2) considers PDMP data to be protected health information, and thus protected from release outside the healthcare system unless there is a HIPAA exception or specific authorization from the individual patient to release personal health information, and recommends that others recognize that PDMP data is health information; (3) recommends that PDMP's be designed such that data is immediately available when clinicians query the database and are considering a decision to prescribe a controlled substance; (4) recommends that individual PDMP databases be designed with connectivity among each other so that clinicians can have access to PDMP controlled substances dispensing data across state boundaries; and (5) will promote medical school and postgraduate training that incorporates curriculum topics focusing on pain medicine, addiction medicine, safe prescribing practices, safe medication storage and disposal practices, functional assessment of patients with chronic conditions, and the role of the prescriber in patient education regarding safe medication storage and disposal practices, in order to have future generations of physicians better prepared to contribute to positive solutions to the problems of prescription drug diversion, misuse, addiction and overdose deaths.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 242
(A-23)

Introduced by: Illinois

Subject: Peer to Peer Reviewer Must be of Same Specialty as Physician Requesting Procedure

Referred to: Reference Committee B

Whereas, Peer to peer reviews, the purpose of which is to determine if a patient should have a certain procedure, frequently involve physicians that are not of the same specialty as the requesting physician; and

Whereas, Denials of necessary procedures benefiting the patient unfortunately occur during peer to peer reviews where the physician reviewer is not of the same specialty as the physician recommending a particular procedure; therefore be it

RESOLVED, That our American Medical Association adopt policy in support of and cause to be introduced legislation requiring any peer to peer review require a physician from the same specialty as the physician requesting a procedure for their patient, be involved in the peer to peer phone call and decision process. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

Received: 5/5/23

RELEVANT AMA POLICY

Managed Care H-285.998
(1) Introduction The needs of patients are best served by free market competition and free choice by physicians and patients between alternative delivery and financing systems, with the growth of each system determined not by preferential regulation and subsidy, but by the number of persons who prefer that mode of delivery or financing.
(2) Definition "Managed care" is defined as those processes or techniques used by any entity that delivers, administers, and/or assumes risk for health care services in order to control or influence the quality, accessibility, utilization, or costs and prices or outcomes of such services provided to a defined enrollee population.
(3) Techniques Managed care techniques currently employed include any or all of the following: (a) prior, concurrent, or retrospective review of the quality, medical necessity, and/or appropriateness of services or the site of services; (b) controlled access to and/or coordination of services by a case manager; (c) efforts to identify treatment alternatives and to modify benefits for patients with high cost conditions; (d) provision of services through a network of contracting providers, selected and deselected on the basis of standards related to cost-effectiveness, quality, geographic location, specialty, and/or other criteria; (e) enrollee financial incentives and disincentives to use such providers, or specific service sites; and (f) acceptance by participating providers of financial risk for some or all of the contractually obligated services, or of discounted fees.
(4) Case Management Health plans using the preferred provider concept should not use coverage arrangements which impair the continuity of a patient's care across different treatment settings.
With the increased specialization of modern health care, it is advantageous to have one individual with overall responsibility for coordinating the medical care of the patient. The physician is best suited by

professional preparation to assume this leadership role.
The primary goal of high-cost case management or benefits management programs should be to help to arrange for the services most appropriate to the patient's needs; cost containment is a legitimate but secondary objective. In developing an alternative treatment plan, the benefits manager should work closely with the patient, attending physician, and other relevant health professionals involved in the patient's care.
Any health plan which makes available a benefits management program for individual patients should not make payment for services contingent upon a patient's participation in the program or upon adherence to treatment recommendations.
(5) Utilization Review The medical protocols and review criteria used in any utilization review or utilization management program must be developed by physicians. Public and private payers should be required to disclose to physicians on request the screening and review criteria, weighting elements, and computer algorithms utilized in the review process, and how they were developed.
A physician of the same specialty must be involved in any decision by a utilization management program to deny or reduce coverage for services based on questions of medical necessity. All health plans conducting utilization management or utilization review should establish an appeals process whereby physicians, other health care providers, and patients may challenge policies restricting access to specific services and decisions to deny coverage for services, and have the right to review of any coverage denial based on medical necessity by a physician independent of the health plan who is of the same specialty and has appropriate expertise and experience in the field.
A physician whose services are being reviewed for medical necessity should be provided the identity of the reviewing physician on request. Any physician who makes judgments or recommendations regarding the necessity or appropriateness of services or site of services should be licensed to practice medicine and actively practicing in the same jurisdiction as the practitioner who is proposing or providing the reviewed service and should be professionally and individually accountable for his or her decisions.
All health benefit plans should be required to clearly and understandably communicate to enrollees and prospective enrollees in a standard disclosure format those services which they will and will not cover and the extent of coverage for the former. The information disclosed should include the proportion of plan income devoted to utilization management, marketing, and other administrative costs, and the existence of any review requirements, financial arrangements or other restrictions that may limit services, referral or treatment options, or negatively affect the physician's fiduciary responsibility to his or her patients. It is the responsibility of the patient and his or her health benefits plan to inform the treating physician of any coverage restrictions imposed by the plan.

All health plans utilizing managed care techniques should be subject to legal action for any harm incurred by the patient resulting from application of such techniques. Such plans should also be subject to legal action for any harm to enrollees resulting from failure to disclose prior to enrollment any coverage provisions; review requirements; financial arrangements; or other restrictions that may limit services, referral, or treatment options, or negatively affect the physician's fiduciary responsibility to his or her patient.

When inordinate amounts of time or effort are involved in providing case management services required by a third party payer which entail coordinating access to other health care services needed by the patient, or in complying with utilization review requirements, the physician may charge the payer or the patient for the reasonable cost incurred. "Inordinate" efforts are defined as those "more costly, complex and time-consuming than the completion of standard health insurance claim forms, such as obtaining preadmission certification, second opinions on elective surgery, certification for extended length of stay, and other authorizations as a condition of payer coverage."

Any health plan or utilization management firm conducting a prior authorization program should act within two business days on any patient or physician request for prior authorization and respond within one business day to other questions regarding medical necessity of services. Any health plan requiring prior authorization for covered services should provide enrollees subject to such requirements with consent forms for release of medical information for utilization review purposes, to be executed by the enrollee at the time services requiring prior authorization are recommended by the physicians.
In the absence of consistent and scientifically established evidence that preadmission review is cost-saving or beneficial to patients, the AMA strongly opposes the use of this process.

Approaches to Increase Payer Accountability H-320.968
Our AMA supports the development of legislative initiatives to assure that payers provide their insureds with information enabling them to make informed decisions about choice of plan, and to assure that payers take responsibility when patients are harmed due to the administrative requirements of the plan. Such initiatives should provide for disclosure requirements, the conduct of review, and payer accountability.
(1) Disclosure Requirements. Our AMA supports the development of model draft state and federal legislation to require disclosure in a clear and concise standard format by health benefit plans to prospective enrollees of information on (a) coverage provisions, benefits, and exclusions; (b) prior authorization or other review requirements, including claims review, which may affect the provision or coverage of services; (c) plan financial arrangements or contractual provisions that would limit the services offered, restrict referral or treatment options, or negatively affect the physician's fiduciary responsibility to his or her patient; (d) medical expense ratios; and (e) cost of health insurance policy premiums. (Ref. Cmt. G, Rec. 2, A-96; Reaffirmation A-97)
(2) Conduct of Review. Our AMA supports the development of additional draft state and federal legislation to: (a) require private review entities and payers to disclose to physicians on request the screening criteria, weighting elements and computer algorithms utilized in the review process, and how they were developed; (b) require that any physician who recommends a denial as to the medical necessity of services on behalf of a review entity be of the same specialty as the practitioner who provided the services under review; (c) Require every organization that reviews or contracts for review of the medical necessity of services to establish a procedure whereby a physician claimant has an opportunity to appeal a claim denied for lack of medical necessity to a medical consultant or peer review group which is independent of the organization conducting or contracting for the initial review; (d) require that any physician who makes judgments or recommendations regarding the necessity or appropriateness of services or site of service be licensed to practice medicine in the same jurisdiction as the practitioner who is proposing the service or whose services are being reviewed; (e) require that review entities respond within 48 hours to patient or physician requests for prior authorization, and that they have personnel available by telephone the same business day who are qualified to respond to other concerns or questions regarding medical necessity of services, including determinations about the certification of continued length of stay; (f) require that any payer instituting prior authorization requirements as a condition for plan coverage provide enrollees subject to such requirements with consent forms for release of medical information for utilization review purposes, to be executed by the enrollee at the time services requiring such prior authorization are recommended or proposed by the physician; and (g) require that payers compensate physicians for those efforts involved in complying with utilization review requirements that are more costly, complex and time consuming than the completion of standard health insurance claim forms. Compensation should be provided in situations such as obtaining preadmission certification, second opinions on elective surgery, and certification for extended length of stay.
(3) Accountability. Our AMA believes that draft federal and state legislation should also be developed to impose similar liability on health benefit plans for any harm to enrollees resulting from failure to disclose prior to enrollment the information on plan provisions and operation specified under Section 1 (a)-(d) above.

Prior Authorization and Utilization Management Reform H-320.939
1. Our AMA will continue its widespread prior authorization (PA) advocacy and outreach, including promotion and/or adoption of the Prior Authorization and Utilization Management Reform Principles, AMA model legislation, Prior Authorization Physician Survey and other PA research, and the AMA Prior Authorization Toolkit, which is aimed at reducing PA administrative burdens and improving patient access to care.
2. Our AMA will oppose health plan determinations on physician appeals based solely on medical coding and advocate for such decisions to be based on the direct review of a physician of the same medical specialty/subspecialty as the prescribing/ordering physician.
3. Our AMA supports efforts to track and quantify the impact of health plans' prior authorization and utilization management processes on patient access to necessary care and patient clinical outcomes, including the extent to which these processes contribute to patient harm.
4. Our AMA will advocate for health plans to minimize the burden on patients, physicians, and medical centers when updates must be made to previously approved and/or pending prior authorization requests.
Citation: CMS Rep. 08, A-17; Reaffirmation: I-17; Reaffirmed: Res. 711, A-18; Appended: Res. 812, I-18; Reaffirmed in lieu of: Res. 713, A-19; Reaffirmed: CMS Rep. 05, A-19; Reaffirmed: Res. 811, I-19; Reaffirmed: CMS Rep. 4, A-21; Appended: CMS Rep. 5, A-21; Reaffirmation: A-22;

Promoting Accountability in Prior Authorization D-285.960
Our AMA will: (1) advocate that peer-to-peer (P2P) prior authorization (PA) determinations must be made and actionable at the end of the P2P discussion notwithstanding mitigating circumstances, which would allow for a determination within 24 hours of the P2P discussion; (2) advocate that the reviewing P2P physician must have the clinical expertise to treat the medical condition or disease under review and have knowledge of the current, evidence-based clinical guidelines and novel treatments; (3) advocate that P2P PA reviewers follow evidence-based guidelines consistent with national medical specialty society guidelines where available and applicable; (4) continue to advocate for a reduction in the overall volume of health plans' PA requirements and urge temporary suspension of all PA requirements and the extension of existing approvals during a declared public health emergency; (5) advocate that health plans must undertake every effort to accommodate the physician's schedule when requiring peer-to-peer prior authorization conversations; and (6) advocate that health plans must not require prior authorization on any medically necessary surgical or other invasive procedure related or incidental to the original procedure if it is furnished during the course of an operation or procedure that was already approved or did not require prior authorization.
Citation: CMS Rep. 4, A-21;

Medical Necessity Determinations H-320.995
(1) Our AMA urges: (a) health insurance carriers and government health care financing agencies to rely on appropriate medical peer review programs for adjudication and resolution of all matters concerning quality or utilization of medical services requiring professional judgment, and (b) that peer review programs have as their goal both improved quality of care and more efficient delivery of medical service.
(2) Our AMA urges health insurance carriers, government financing agencies, physicians and medical societies to explore ways of improving communications, such as the following: (a) In furtherance of past Association recommendations that policyholders be thoroughly and clearly informed as to the extent of their coverage, more detailed information explaining the "medical necessity" exclusion should be provided, especially when the exclusion refers more to the site of the service than to the service itself. (b) Insurers should develop formal protocols as to their methodology for determining "medical necessity," including distinctions between those instances where in-house medical expertise is considered sufficient and those where outside consultation is considered necessary; (c) Third party methodologies for determining "medical necessity" should be made available to medical societies and to individual physicians, as well as listings of those specific situations (such as the ordering of either experimental or outdated procedures or questionable hospital admissions) where additional data may be required; (d) In "medical necessity" decisions where the determination may be modified by additional medical evidence, there should be an opportunity for the treating physician to provide such evidence before a final decision not to pay is made.

Prescription Drug Diversion, Misuse and Addiction H-95.945
Our AMA: (1) supports permanent authorization of and adequate funding for the National All Schedules Prescription Electronic Reporting (NASPER) program so that every state, district and territory of the US can have an operational Prescription Drug Monitoring Program (PDMP) for use of clinicians in all jurisdictions; (2) considers PDMP data to be protected health information, and thus protected from release outside the healthcare system unless there is a HIPAA exception or specific authorization from the individual patient to release personal health information, and recommends that others recognize that PDMP data is health information; (3) recommends that PDMP's be designed such that data is immediately available when clinicians query the database and are considering a decision to prescribe a controlled substance; (4) recommends that individual PDMP databases be designed with connectivity among each other so that clinicians can have access to PDMP controlled substances dispensing data across state boundaries; and (5) will promote medical school and postgraduate training that incorporates curriculum topics focusing on pain medicine, addiction medicine, safe prescribing practices, safe medication storage and disposal practices, functional assessment of patients with chronic conditions, and the role of the prescriber in patient education regarding safe medication storage and disposal practices, in order to have future generations of physicians better prepared to contribute to positive solutions to the problems of prescription drug diversion, misuse, addiction and overdose deaths.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 243
(A-23)

Introduced by: Illinois

Subject: Replacing the Frye Standard for the Daubert Standard in Expert Witness Testimony

Referred to: Reference Committee B

Whereas, The use of expert witnesses has become an integral and indispensable aspect of American litigation, and it is often the side with the best expert who wins the day; and

Whereas, Federal Rule of Evidence 702 provides: *Testimony by Expert Witnesses: A witness who is qualified as an expert by knowledge, skill, experience, training, or education may testify in the form of an opinion or otherwise if: (a) the expert's scientific, technical, or other specialized knowledge will help the trier of fact to understand the evidence or to determine a fact in issue; (b) the testimony is based on sufficient facts or data; (c) the testimony is the product of reliable principles and methods; and (d) the expert has reliably applied the principles and methods to the facts of the case;* and

Whereas, Medical experts make up about 40% of testifying experts at the federal level; and

Whereas, There are generally two standards that govern admissibility of expert testimony: The Frye Standard (1923) and the Daubert Standard (1993); and

Whereas, The Frye standard or Frye test (or general acceptance test as it became to be known) is a test to determine the admissibility of scientific evidence providing that expert opinion based on a scientific technique is admissible only where the technique is generally accepted as reliable in the relevant scientific community. A court applying the Frye standard must determine whether or not the method by which that evidence was obtained was generally accepted by experts in the particular field in which it belongs; and

Whereas, Under the Daubert standard, the factors that may be considered in determining whether the methodology is valid are: (1) whether the theory or technique in question can be and has been tested; (2) whether it has been subjected to peer review and publication; (3) its known or potential error rate; (4) the existence and maintenance of standards controlling its operation; and (5) whether it has attracted widespread acceptance within a relevant scientific community; and

Whereas, The United States Supreme Court further clarified that an expert must "employ in the courtroom the same level of intellectual rigor that characterizes the practice of an expert in the relevant field;" and

Whereas, In most jurisdictions (and all federal courts), the Frye standard has been superseded by the Daubert standard. States still following Frye include California, Illinois, Maryland, Minnesota, New Jersey, New York, Pennsylvania, and Washington (Florida switched in May 2019); and

Whereas, In Kumho Tire Co. v. Carmichael, 526 U.S. 137, 147 (1999), the U.S. Supreme Court extended its Daubert reasoning to all expert testimony, not simply that which was considered "scientific;" and

Whereas, The second sentence of Illinois Rule of Evidence 702 enunciates the core principles of the Frye test for admissibility of scientific evidence as set forth in Donaldson v. Central Illinois Public Service Co., 767 N.E.2d 314 (Ill. 2002); and

Whereas, A court applying the traditional (Frye) standard of care is less interested in the methodology underlying the expert's opinion and more interested in the experience and education of the expert; and

Whereas, By applying a Daubert analysis to an expert's testimony on the standard of care, the testimony becomes a scientifically based testimony rather than an expert's notion of what is common practice in the medical profession; and

Whereas, Daubert challenges do present an opportunity to keep frivolous testimony out of a trial; and

Whereas, Using a dataset of all medical malpractice payouts reported between 2004 and 2018 to the U.S. Department of Health and Human Services, using a difference-in-differences approach to examine the effect of adopting the Daubert standard in state courts that previously adhered to the Frye standard, it was found that adopting Daubert is associated with a modest increase in settlement amounts (7.44% or $25,578) and a decrease in the filing rate (.44 fewer claims filed per 100,000; mean filing rate in Daubert and Frye jurisdictions was 4.8 and 6.1, respectively; This result is statistically significant at the 5% level); and

Whereas, The Daubert standard is a higher standard than the Frye standard for admissibility of expert witness testimony; therefore be it

RESOLVED, That our American Medical Association advocate through legislative or other relevant means the use of the Daubert Standard to replace the Frye Standard for Expert Witness Testimony. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 244
(A-23)

Introduced by: American Association of Public Health Physicians

Subject: Recidivism

Referred to: Reference Committee B

Whereas, Recidivism has constantly risen and is now 44% of those released from a correctional facility[1]; and

Whereas, There are many factors causing recidivism including untreated mental health disorders, untreated substance use disorders, homelessness, and inadequate discharge planning by the correctional facility[1,2]; and

Whereas, These factors result from insufficient personnel to treat mental health conditions during persons' incarceration; insufficient mental health care community workers; and insufficient substance use disorder treatment programs in correctional facilities[1]; and

Whereas, There are insufficient mental health and drug rehabilitation programs and counselors in the community[1]; and

Whereas, There is inadequate low-cost housing for persons recently released from a correctional facility[2]; and

Whereas, There are insufficient shelters and rehabilitation facilities in the community; and

Whereas, With proper post-release medical care, recidivism can be reduced; therefore be it

RESOLVED, That our American Medical Association advocate and encourage federal, state, and local legislators and officials to increase the number of community mental health facilities to meet the need of indigent, homeless, and released previously incarcerated persons (Directive to Take Action); and be it further

RESOLVED, That our AMA advocate and encourage federal, state, and local legislators and officials to increase the number of community drug rehabilitation facilities to meet the needs of indigent, homeless, and released previously incarcerated persons (Directive to Take Action); and be it further

RESOLVED, That our AMA advocate and encourage federal, state, and local legislators and officials to ensure there are enough residential/rehabilitation facilities for formerly incarcerated persons to live (Directive to Take Action); and be it further

RESOLVED, That our AMA advocate and encourage federal, state, and local legislators and officials to ensure that correctional facilities have adequate well-trained personnel who can ensure that those incarcerated persons released from their facility are able to immediately have access to mental health, drug and residential rehabilitation facilities at an appropriate level (Directive to Take Action); and be it further

RESOLVED, That our AMA advocate and encourage federal, state, and local legislators and officials to advocate prompt reinstatement in governmental medical programs and insurance for those being released from incarceration facilities. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Standards of Care for Inmates of Correctional Facilities H-430.997
Our AMA believes that correctional and detention facilities should provide medical, psychiatric, and substance use disorder care that meets prevailing community standards, including appropriate referrals for ongoing care upon release from the correctional facility in order to prevent recidivism.
Citation: Res. 60, A-84; Reaffirmed by CLRPD Rep. 3 - I-94; Amended: Res. 416, I-99; Reaffirmed: CEJA Rep. 8, A-09; Reaffirmation I-09; Modified in lieu of Res. 502, A-12; Reaffirmation: I-12; Modified: CSAPH Rep. 1, A-22;

Juvenile Justice System Reform H-60.919
Our AMA:
1. Supports school discipline policies that permit reasonable discretion and consideration of mitigating circumstances when determining punishments rather than "zero tolerance' policies that mandate out-of-school suspension, expulsion, or the referral of students to the juvenile or criminal justice system.
2. Encourages continued research to identify programs and policies that are effective in reducing disproportionate minority contact across all decision points within the juvenile justice system.
3. Encourages states to increase the upper age of original juvenile court jurisdiction to at least 17 years of age.
4. Supports reforming laws and policies to reduce the number of youth transferred to adult criminal court.
5. Supports the re-authorization of federal programs for juvenile justice and delinquency prevention, which should include incentives for: (a) community-based alternatives for youth who pose little risk to

public safety, (b) reentry and aftercare services to prevent recidivism, (c) policies that promote fairness to reduce disparities, and (d) the development and implementation of gender-responsive, trauma-informed programs and policies across juvenile justice systems.
6. Encourages juvenile justice facilities to adopt and implement policies to prohibit discrimination against youth on the basis of their sexual orientation, gender identity, or gender expression in order to advance the safety and well-being of youth and ensure equal access to treatment and services.
7. Encourages states to suspend rather than terminate Medicaid coverage following arrest and detention in order to facilitate faster reactivation and ensure continuity of health care services upon their return to the community.
8. Encourages Congress to enact legislation prohibiting evictions from public housing based solely on an individual's relationship to a wrongdoer, and encourages the Department of Housing and Urban Development and local public housing agencies to implement policies that support the use of discretion in making housing decisions, including consideration of the juvenile's rehabilitation efforts.
9. Will create a policy to establish minimal age of 14 years for juvenile justice jurisdiction in the United States.
10. Will develop model legislation to establish minimal age of 14 for juvenile justice jurisdiction in the United States.

Access to Mental Health Services H-345.981
Our AMA advocates the following steps to remove barriers that keep Americans from seeking and obtaining treatment for mental illness:
(1) reducing the stigma of mental illness by dispelling myths and providing accurate knowledge to ensure a more informed public;
(2) improving public awareness of effective treatment for mental illness;
(3) ensuring the supply of psychiatrists and other well trained mental health professionals, especially in rural areas and those serving children and adolescents;
(4) tailoring diagnosis and treatment of mental illness to age, gender, race, culture and other characteristics that shape a person's identity;
(5) facilitating entry into treatment by first-line contacts recognizing mental illness, and making proper referrals and/or to addressing problems effectively themselves; and
(6) reducing financial barriers to treatment.
Citation: CMS Rep. 9, A-01; Reaffirmation A-11; Reaffirmed: CMS Rep. 7, A-11; Reaffirmed: BOT action in response to referred for decision Res. 403, A-12; Reaffirmed in lieu of Res. 804, I-13; Reaffirmed in lieu of Res. 808, I-14; Reaffirmed: Res. 503, A-17; Reaffirmation: I-18;

Medicaid Coverage of Adults in Psychiatric Hospitals H-345.976
1. Our AMA will monitor the Medicaid Emergency Psychiatric Demonstration Project established by the Patient Protection and Affordable Care Act for consistency with AMA policy, especially the impact on access to psychiatric care and treatment of substance use disorders.
2. Our AMA supports the evolution of psychiatrist-supervised mental health care homes.
3. Our AMA encourages states that maintain low numbers of inpatient psychiatric beds per capita to strive to offer more comprehensive community based outpatient psychiatric services.
Citation: CMS Rep. 3, A-11; Reaffirmed: CMS Rep. 1, A-21;

Community-Based Treatment Centers H-160.963
Our AMA supports the use of community-based treatment centers for substance use disorders, mental health disorders and developmental disabilities.
Citation: BOT Rep. F, I-91; Reaffirmed: Sunset Report, I-01; Modified: CSAPH Rep. 1, A-11; Modified: CSAPH Rep. 1, A-21;

Support for Health Care Services to Incarcerated Persons D-430.997
Our AMA will:
(1) express its support of the National Commission on Correctional Health Care Standards that improve the quality of health care services, including mental health services, delivered to the nation's correctional facilities;
(2) encourage all correctional systems to support NCCHC accreditation;

(3) encourage the NCCHC and its AMA representative to work with departments of corrections and public officials to find cost effective and efficient methods to increase correctional health services funding;
(4) continue support for the programs and goals of the NCCHC through continued support for the travel expenses of the AMA representative to the NCCHC, with this decision to be reconsidered every two years in light of other AMA financial commitments, organizational memberships, and programmatic priorities;
(5) work with an accrediting organization, such as National Commission on Correctional Health Care (NCCHC) in developing a strategy to accredit all correctional, detention and juvenile facilities and will advocate that all correctional, detention and juvenile facilities be accredited by the NCCHC no later than 2025 and will support funding for correctional facilities to assist in this effort; and
(6) support an incarcerated person's right to: (a) accessible, comprehensive, evidence-based contraception education; (b) access to reversible contraceptive methods; and (c) autonomy over the decision-making process without coercion.
Citation: Res. 440, A-04; Amended: BOT Action in response to referred for decision Res. 602, A-00; Reaffirmation I-09; Reaffirmation A-11; Reaffirmed: CSAPH Rep. 08, A-16; Reaffirmed: CMS Rep, 02, I-16; Appended: Res. 421, A-19; Appended: Res. 426, A-19;

Statement of Principles on Mental Health H-345.999
(1) Tremendous strides have already been made in improving the care and treatment of patients with psychiatric illness, but much remains to be done. The mental health field is vast and includes a network of factors involving the life of the individual, the community and the nation. Any program designed to combat psychiatric illness and promote mental health must, by the nature of the problems to be solved, be both ambitious and comprehensive.
(2) The AMA recognizes the important stake every physician, regardless of type of practice, has in improving our mental health knowledge and resources. The physician participates in the mental health field on two levels, as an individual of science and as a citizen. The physician has much to gain from a knowledge of modern psychiatric principles and techniques, and much to contribute to the prevention, handling and management of emotional disturbances. Furthermore, as a natural community leader, the physician is in an excellent position to work for and guide effective mental health programs.
(3) The AMA will be more active in encouraging physicians to become leaders in community planning for mental health.
(4) The AMA has a deep interest in fostering a general attitude within the profession and among the lay public more conducive to solving the many problems existing in the mental health field.
Citation: A-62; Reaffirmed: CLRPD Rep. C, A-88; Reaffirmed: Sunset Report, I-98; Reaffirmation A-99; Reaffirmed: CSAPH Rep. 1, A-09; Modified: CSAPH Rep. 01, A-19;

Increasing Detection of Mental Illness and Encouraging Education D-345.994
1. Our AMA will work with: (A) mental health organizations, state, specialty, and local medical societies and public health groups to encourage patients to discuss mental health concerns with their physicians; and (B) the Department of Education and state education boards and encourage them to adopt basic mental health education designed specifically for preschool through high school students, as well as for their parents, caregivers and teachers.
2. Our AMA will encourage the National Institute of Mental Health and local health departments to examine national and regional variations in psychiatric illnesses among immigrant, minority, and refugee populations in order to increase access to care and appropriate treatment.
Citation: Res. 412, A-06; Appended: Res. 907, I-12; Reaffirmed in lieu of: Res. 001, I-16; Reaffirmed: Res. 425, A-22;

Physicians, Psychotherapy and Mental Health Care H-345.996
Our AMA supports efforts to inform physicians, the public and third party payers that physicians in the private sector are at the forefront of mental health care in their office practices and provide significant amounts of direct and preventive mental health services to the public.
Citation: Res. 17, I-81; Reaffirmed: CLRPD Rep. F, I-91; Reaffirmed: Sunset Report, I-01; Reaffirmed: CSAPH Rep. 1, A-11; Reaffirmed: CSAPH Rep. 1, A-21;

Maintaining Mental Health Services by States H-345.975
Our AMA:
1. supports maintaining essential mental health services at the state level, to include maintaining state inpatient and outpatient mental hospitals, community mental health centers, addiction treatment centers, and other state-supported psychiatric services;

2. supports state responsibility to develop programs that rapidly identify and refer individuals with significant mental illness for treatment, to avoid repeated psychiatric hospitalizations and repeated interactions with the law, primarily as a result of untreated mental conditions;
3. supports increased funding for state Mobile Crisis Teams to locate and treat homeless individuals with mental illness;
4. supports enforcement of the Mental Health Parity Act at the federal and state level; and
5. will take these resolves into consideration when developing policy on essential benefit services.
Citation: Res. 116, A-12; Reaffirmation A-15; Reaffirmed: Res. 414, A-22;

Mental Health Crisis Interventions H-345.972
Our AMA: (1) continues to support jail diversion and community based treatment options for mental illness; (2) supports implementation of law enforcement-based crisis intervention training programs for assisting those individuals with a mental illness, such as the Crisis Intervention Team model programs; (3) supports federal funding to encourage increased community and law enforcement participation in crisis intervention training programs; (4) supports legislation and federal funding for evidence-based training programs by qualified mental health professionals aimed at educating corrections officers in effectively interacting with people with mental health and other behavioral issues in all detention and correction facilities; and (5) supports: (a) increased research on non-violent de-escalation tactics for law enforcement encounters with people who have mental illness and/or developmental disabilities; and (b) research of fatal encounters with law enforcement and the prevention thereof.
Citation: Res. 923, I-15; Appended: Res. 220, I-18; Reaffirmed: CSAPH Rep. 2, A-21; Reaffirmed: BOT Rep. 2, I-21; Appended: Res. 408, A-22;

Parity for Mental Health and Substance Use Disorders in Health Insurance Programs H-185.974
1. Our AMA supports parity of coverage for mental, health, and substance use disorders.
2. Our AMA supports federal legislation, standards, policies, and funding that enforce and expand the parity and non-discrimination protections of the Paul Wellstone and Peter Domenici Mental Health Parity and Addiction Equity Act of 2008 to Medicare (Parts A, B, C and D).
3. Our AMA supports federal legislation, standards, policies, and funding that require Medicare coverage (Parts A, B, C, and D) of all levels of mental health and substance use disorder care, consistent with nationally recognized medical professional organization level of care criteria for mental health or substance use disorders.
Citation: Res. 212, A-96; Reaffirmation A-97; Reaffirmed: Res. 215, I-98; Reaffirmation A-99; Reaffirmed: BOT Action in response to referred for decision Res. 612, I-99; Reaffirmation A-00; Reaffirmed: CMS Rep. 9, A-01; Reaffirmation A-02; Reaffirmation I-03; Modified: CMS Rep. 2, A-08; Reaffirmed: CMS Rep. 5, I-12; Reaffirmed in lieu of Res. 804, I-13; Reaffirmation A-15; Modified: Res. 113, A-16; Modified: Res. 216, I-22;

Increased Funding for Substance Use Disorder Treatment H-95.973
Our AMA (1) urges Congress to substantially increase its funding for substance use disorder treatment programs; (2) urges Congress to increase funding for the expansion and creation of new staff training programs; and (3) urges state medical societies to press for greater commitment of funds by state and local government to expand the quantity and improve the quality of the substance use disorder treatment system.

Referral of Patients to Substance Use Disorder Treatment Programs H-95.991
Our AMA urges its members to acquaint themselves with the various substance use disorder treatment programs available for the medical treatment of alcohol and drug use and, where appropriate, to refer their patients to them promptly.
Citation: Res. 31, I-79; Reaffirmed: CLRPD Rep. B, I-89; Reaffirmed: Sunset Report, A-00; Modified: CSAPH Rep. 1, A-10; Modified: CSAPH Rep. 01, A-20;

Drug Abuse in the United States - Treatment Effectiveness And Capacity - A Preliminary Report H-95.969
Given the need throughout the health care delivery field for more effective and efficient forms of treatment, it is important to investigate the potential for better patient-treatment matching in treating alcohol and drug abusers. Researchers usually try to isolate each element of treatment in order to study it scientifically. In practice, however, several treatment approaches are typically used simultaneously or sequentially. In general, there have been too few well-controlled studies of combined interventions to permit final conclusions about their overall effectiveness in alcohol and drug abuse patients. The available findings are somewhat unimpressive, however, given the scope and intensity of the many combined treatment programs. One reason for the lack of impressive findings may have to do with patient characteristics which determine the amount of change which will occur with any treatment, and perhaps the degree to which additional treatment will result in additional measurable change. In highly motivated good-prognosis patients, for example, one well-chosen intervention - or even standard treatment - may produce maximal amounts of change, making the impact of additional interventions unmeasurable and, by implication, unnecessary. In poor-prognosis patients, on the other hand, the overall amount of change possible may be very limited, making a significant difference between one or many interventions difficult to demonstrate. Finding patient variables (i.e., prior drinking pattern, psychiatric morbidity) that are strongly predictive of treatment outcome may help identify patients expected to benefit least - and most - from multiple interventions. The AMA believes immediate attention should be given to all of these areas of urgently needed action, and commits itself to continued participation in the formulation, dissemination, and evaluation of the national responses to the problems of alcohol and drug abuse.
Citation: BOT Rep. Y, A-90; Reaffirmed: CME Rep. 10, I-98; Reaffirmed: CME Rep. 11, A-07; Reaffirmed: CSAPH Rep. 01, A-17;

Disease Prevention and Health Promotion in Correctional Institutions H-430.989
Our AMA urges state and local health departments to develop plans that would foster closer working relations between the criminal justice, medical, and public health systems toward the prevention and control of HIV/AIDS, substance abuse, tuberculosis, hepatitis, and other infectious diseases. Some of these plans should have as their objectives: (a) an increase in collaborative efforts between parole officers and drug treatment center staff in case management aimed at helping patients to continue in treatment and to remain drug free; (b) an increase in direct referral by correctional systems of parolees with a recent, active history of intravenous drug use to drug treatment centers; and (c) consideration by judicial authorities of assigning individuals to drug treatment programs as a sentence or in connection with sentencing.
Citation: CSA Rep. 4, A-03; Modified: CSAPH Rep. 1, A-13; Modified: Alt. Res. 404, I-20;

Disclosure of Drug Use and Addiction Treatment History in Public Assistance Programs H-270.966
Our AMA opposes: a) requiring that housing applicants consent to the disclosure of medical information about alcohol and other drug abuse treatment as a condition of renting or receiving Section 8 assistance; and b) requiring applicants and/or beneficiaries of Temporary Assistance for Needy Families (TANF, "welfare") and/or the Supplemental Nutrition Assistance Program (SNAP, "food stamps") to disclose medical information, including alcohol and other drug use or treatment for addiction, or to deny assistance from these programs based on substance use status.
Citation: Res. 245, A-97; Reaffirmed: BOT Rep. 33, A-07; Modified: Res. 203, A-16;

Survey of Addiction Treatment Centers' Availability H-95.926
Our AMA: (1) encourages the Substance Abuse and Mental Health Services Administration (SAMHSA) to use its national surveys to increase the information available on the type of insurance (e.g., Medicaid, Medicare, private insurance) accepted by substance use disorder treatment programs listed in SAMHSAs treatment locators; (2) encourages physicians who are authorized to provide medication assisted treatment to opt in to be listed publicly in SAMHSAs treatment locators; and (3) encourages SAMHSA to include private and group practice physicians in its online treatment locator for addiction treatment facilities.
Citation: CMS Rep. 04, A-17;

Eradicating Homelessness H-160.903
Our AMA:
(1) supports improving the health outcomes and decreasing the health care costs of treating the chronically homeless through clinically proven, high quality, and cost effective approaches which recognize the positive impact of stable and affordable housing coupled with social services;
(2) recognizes that stable, affordable housing as a first priority, without mandated therapy or services compliance, is effective in improving housing stability and quality of life among individuals who are chronically-homeless;
(3) recognizes adaptive strategies based on regional variations, community characteristics and state and local resources are necessary to address this societal problem on a long-term basis;
(4) supports the use of physician-led, team-based street medicine programs, which travel to individuals who are unhoused or unsheltered and provide healthcare and social services, as well as funds, including Medicaid and other public insurance reimbursement, for their maintenance;
(5) recognizes the need for an effective, evidence-based national plan to eradicate homelessness;
(6) encourages the National Health Care for the Homeless Council to study the funding, implementation, and standardized evaluation of Medical Respite Care for homeless persons;
(7) will partner with relevant stakeholders to educate physicians about the unique healthcare and social needs of homeless patients and the importance of holistic, cost-effective, evidence-based discharge planning, and physicians' role therein, in addressing these needs;
(8) encourages the development of holistic, cost-effective, evidence-based discharge plans for homeless patients who present to the emergency department but are not admitted to the hospital;
(9) encourages the collaborative efforts of communities, physicians, hospitals, health systems, insurers, social service organizations, government, and other stakeholders to develop comprehensive homelessness policies and plans that address the healthcare and social needs of homeless patients;
(10) (a) supports laws protecting the civil and human rights of individuals experiencing homelessness, and (b) opposes laws and policies that criminalize individuals experiencing homelessness for carrying out life-sustaining activities conducted in public spaces that would otherwise be considered non-criminal activity (i.e., eating, sitting, or sleeping) when there is no alternative private space available; and
(11) recognizes that stable, affordable housing is essential to the health of individuals, families, and communities, and supports policies that preserve and expand affordable housing across all neighborhoods;
(12) (a) supports training to understand the needs of housing insecure individuals for those who encounter this vulnerable population through their professional duties; (b) supports the establishment of multidisciplinary mobile homeless outreach teams trained in issues specific to housing insecure individuals; and (c) will make available existing educational resources from federal agencies and other stakeholders related to the needs of housing-insecure individuals.
(13) encourages medical schools to implement physician-led, team-based Street Medicine programs with student involvement.
Citation: Res. 401, A-15; Appended: Res. 416, A-18; Modified: BOT Rep. 11, A-18; Appended: BOT Rep. 16, A-19; Appended: BOT Rep. 28, A-19; Appended: Res. 414, A-22; Appended: Res. 931, I-22;

Increased Funding for Drug-Related Programs H-95.980
The AMA supports the expansion of those drug rehabilitation programs which provide an environment for medical and other professional counseling, education and behavior change, and voluntary HIV testing for persons at risk for HIV.
Citation: Res. 35, I-88; Reaffirmed: Sunset Report, I-98; Reaffirmed: CSAPH Rep. 2, A-08; Reaffirmed: CSAPH Rep. 01, A-18;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 245
(A-23)

Introduced by: Association for Clinical Oncology

Subject: Biosimilar/Interchangeable Terminology

Referred to: Reference Committee B

Whereas, Biosimilars are a type of biologic medication that is safe and effective for treating many illnesses; and

Whereas, A biosimilar and its original biologic have no clinically meaningful differences in terms of quality, safety, and efficacy; and

Whereas, Biosimilars and biologics have the same treatment risks and benefits[1]; and

Whereas, Biosimilars may be available at a lower cost than the original biologic reference product and studies show that savings improve when biosimilars are used in place of reference biologics during the treatment of cancer malignancies, resulting in savings to the Medicare program and decreased out-of-pocket costs for patients; and

Whereas, An interchangeable product is not superior in quality to a biosimilar and would have to meet the same regulatory requirements as a biosimilar; and

Whereas, Interchangeability is simply a legislative term that has created confusion about the inherent lack of clinically meaningful difference among biosimilars; and

Whereas, If a biosimilar is equivalent in structure, function, safety, and efficacy to the reference product, by definition the two are interchangeable; and

Whereas, Despite the Food and Drug Administration's (FDA) efforts to provide clarity on the meaning of "interchangeable" (a new legislative term), including the release of guidance on interchangeability, confusion and misinformation remain; and

Whereas, By creating a divide between a biosimilar and an interchangeable biosimilar for regulatory purposes at the pharmacy level, the United States further exacerbates clinician and patient education and access barriers[2]; therefore be it

RESOLVED, That our American Medical Association repeal policy H-125.976, *Biosimilar Interchangeability Pathway* (Rescind HOD Policy); and be it further

RESOLVED, That our AMA advocate for state and federal laws and regulations that support patient and physician choice of biosimilars and remove the "interchangeable" designation from the FDA's regulatory framework. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/10/23

REFERENCES
1. Food and Drug Administration. Biosimilar Basics for Patients. (2023). https://www.fda.gov/drugs/biosimilars/biosimilar-basics-patients

RELEVANT AMA POLICY

Biosimilar Interchangeability Pathway H-125.976
Our AMA will: (1) strongly support the pathway for demonstrating biosimilar interchangeability that was proposed in draft guidance by the FDA in 2017, including requiring manufacturers to use studies to determine whether alternating between a reference product and the proposed interchangeable biosimilar multiple times impacts the safety or efficacy of the drug; and (2) issue a request to the FDA that the agency finalize the biosimilars interchangeability pathway outlined in its draft guidance Considerations in Demonstrating Interchangeability With a Reference Productwith all due haste, so as to allow development and designation of interchangeable biosimilars to proceed, allowing transition to an era of less expensive biologics that provide safe, effective, and accessible treatment options for patients.
Citation: Res. 523, A-18;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 246
(A-23)

Introduced by: Association for Clinical Oncology, American College of Rheumatology

Subject: Modification of CMS Interpretation of Stark Law

Referred to: Reference Committee B

Whereas, The physician self-referral law, commonly referred to as the Stark Law (42 U.S.C. 1395nn):

1. Prohibits a physician from making referrals for certain designated health services payable by Medicare to an entity with which he or she (or an immediate family member) has a financial relationship (ownership, investment, or compensation), unless an exception applies;
2. Prohibits the entity from presenting or causing to be presented claims to Medicare (or billing another individual, entity, or third-party payer) for those referred services; and
3. Establishes a number of specific exceptions and grants the Secretary the authority to create regulatory exceptions for financial relationships that do not pose a risk of program or patient abuse[1]; and

Whereas, Exceptions under the Stark law include in-office ancillary services so that physicians can furnish designated health services to practice patients; and

Whereas, Medically integrated pharmacy services increase patient adherence and allow physicians to trust that their patients receive intended drug treatment with appropriate instructions[2,3]; and

Whereas, Many physician practices have in-office pharmacies as part of the delivery of health care; and

Whereas, Physician office pharmacies have been able to have a trusted surrogate pick up prescriptions on behalf of a patient when the patient is unable to come into the office for whatever reason, including illness or lack of transportation; and

Whereas, Physician office pharmacies have been able to mail or otherwise send a prescription securely to a patient when the patient is unable to come into the office for whatever reason, including illness or lack of transportation; and

Whereas, A set of frequently asked questions (FAQs) issued by the Center for Medicare & Medicaid Services (CMS)[4] states that the delivery of a medicine to a patient using the Postal Service, a commercial package service, or by a trusted surrogate violates the in-office exception of the Stark Law, because that the drug was not dispensed to the patient in the physician office because the patient was not physically present; and

Whereas, CMS guidance may have a negative impact on timely access to treatment for patients and may increase the administrative burden for physicians; therefore be it

RESOLVED, That our American Medical Association request that the Center for Medicare & Medicaid Services retract the determination that delivery of medicine to a patient using the Postal Service, a commercial package service, or by a trusted surrogate violates the in-office exception of the Stark Law (Directive to Take Action); and be it further

RESOLVED, That our AMA advocate for legislation to clarify that a surrogate may deliver medicine dispensed at a physician-owned pharmacy without being in violation of the Stark Law if the Center for Medicare & Medicaid Services does not change its position on disallowing the delivery of medicine to a patient using the Postal Service or a commercial package service. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/10/23

RELEVANT AMA POLICY

Physician Ownership and Referral for Imaging Services D-270.995
Our AMA will work collaboratively with state medical societies and specialty societies to actively oppose any and all federal and state legislative and regulatory efforts to repeal the in-office ancillary exception to physician self-referral laws, including as they apply to imaging services.
Citation: (Res. 235, A-04; Reaffirmed in lieu of Res. 901, I-05; Reaffirmed: BOT Rep. 10, A-15; Reaffirmed in lieu of Res. 213, A-15)

Access to In-Office Administered Drugs H-330.884
1. Our American Medical Association will advocate that physician access to in-office administered drugs, including drugs dispensed by pharmacies, be preserved.
2. Our AMA will work with the Center for Medicare & Medicaid Services, The Joint Commission, America's Health Insurance Plans, Federation of State Medical Boards, National Association of Boards of Pharmacy, and other involved stakeholders to improve and support patient access to in-office administered drugs.
3. Our AMA will advocate for coverage for in-office administered drugs and related delivery services for patients who are physically unable to self-administer the drug.
Citation: Res. 702, A-15; Reaffirmed: CMS Rep. 10, A-16; Reaffirmation: A-18; Reaffirmation: I-18;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 247
(A-23)

Introduced by: Albert L. Hsu, MD, Delegate

Subject: Assessing the Potentially Dangerous Intersection Between AI and Misinformation

Referred to: Reference Committee B

Whereas, Our American Medical Association has extensive policy on Augmented Intelligence (AI), including H-480.939, H-480.940, 11.2.1, H-295.857; and

Whereas, In AMA policy H-480.939, *Augmented Intelligence in Health Care,* "our AMA will advocate that

1. Oversight and regulation of health care AI systems must be based on risk of harm and benefit accounting for a host of factors, including but not limited to: intended and reasonably expected use(s); evidence of safety, efficacy, and equity including addressing bias; AI system methods; level of automation; transparency; and, conditions of deployment.
7. Liability and incentives should be aligned so that the individual(s) or entity(ies) best positioned to know the AI system risks and best positioned to avert or mitigate harm do so through design, development, validation, and implementation. Our AMA will further advocate:
a. Where a mandated use of AI systems prevents mitigation of risk and harm, the individual or entity issuing the mandate must be assigned all applicable liability.
b. Developers of autonomous AI systems with clinical applications (screening, diagnosis, treatment) are in the best position to manage issues of liability arising directly from system failure or misdiagnosis and must accept this liability with measures such as maintaining appropriate medical liability insurance and in their agreements with users.
c. Health care AI systems that are subject to non-disclosure agreements concerning flaws, malfunctions, or patient harm (referred to as gag clauses) must not be covered or paid and the party initiating or enforcing the gag clause assumes liability for any harm"; and

Whereas, In AMA policy H-480-940, *Augmented Intelligence in Health Care*, "our AMA has a unique opportunity to ensure that the evolution of augmented intelligence (AI) in medicine benefits patients, physicians, and the health care community. To that end our AMA will seek to:

1. Leverage its ongoing engagement in digital health and other priority areas for improving patient outcomes and physicians' professional satisfaction to help set priorities for health care AI.
2. Identify opportunities to integrate the perspective of practicing physicians into the development, design, validation, and implementation of health care AI.
3. Promote development of thoughtfully designed, high-quality, clinically validated health care AI that:
a. is designed and evaluated in keeping with best practices in user-centered design, particularly for physicians and other members of the health care team;
b. is transparent;
c. conforms to leading standards for reproducibility;

d. identifies and takes steps to address bias and avoids introducing or exacerbating health care disparities including when testing or deploying new AI tools on vulnerable populations; and
e. safeguards patients' and other individuals' privacy interests and preserves the security and integrity of personal information.
4. Encourage education for patients, physicians, medical students, other health care professionals, and health administrators to promote greater understanding of the promises and limitations of health care AI.
5. Explore the legal implications of health care AI, such as issues of liability or intellectual property, and advocate for appropriate professional and governmental oversight for safe, effective, and equitable use of and access to health care AI"; and

Whereas, In AMA policy 11.2.1, "Clinical prediction models, decision support tools, and similar tools such as those that rely on AI technology must rest on the highest-quality data and be independently validated in relevantly similar populations of patients and care settings;" and

Whereas, AI may have the potential to augment medical and public health misinformation; and

Whereas, AI may have the potential to propagate negative anonymous cyberspace evaluations of physicians; therefore be it

RESOLVED, That our American Medical Association study the potential for AI to augment medical and public health misinformation, as well as the potential to augment cyber-libel, cyber-slander, cyber-bullying, and dissemination of internet misinformation about physicians; and that our AMA propose appropriate state and federal regulations and legislative remedies, with a report back at the 2023 Annual meeting. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/10/23

RELEVANT AMA POLICY

Anonymous Cyberspace Evaluations of Physicians D-478.980
Our AMA will: (1) work with appropriate entities to encourage the adoption of guidelines and standards consistent with AMA policy governing the public release and accurate use of physician data; (2) continue pursuing initiatives to identify and offer tools to physicians that allow them to manage their online profile and presence; (3) seek legislation that supports the creation of laws to better protect physicians from cyber-libel, cyber-slander, cyber-bullying and the dissemination of Internet misinformation and provides for civil remedies and criminal sanctions for the violation of such laws; and (4) work to secure legislation that would require that the Web sites purporting to offer evaluations of physicians state prominently on their Web sites whether or not they are officially endorsed, approved or sanctioned by any medical regulatory agency or authority or organized medical association including a state medical licensing agency, state Department of Health or Medical Board, and whether or not they are a for-profit independent business and have or have not substantiated the authenticity of individuals completing their surveys.
Citation: (BOT action in response to referred for decision Res. 709, A-10, Res. 710, A-10, Res. 711, A-10 and BOT Rep. 17, A-10; Reaffirmed in lieu of Res. 717, A-12; Reaffirmation A-14)

Medical and Public Health Misinformation in the Age of Social Media D-440.915
Our AMA: (1) encourages social media companies and organizations to further strengthen their content moderation policies related to medical and public health misinformation, including, but not limited to enhanced content monitoring, augmentation of recommendation engines focused on false information, and stronger integration of verified health information; (2) encourages social media companies and organizations to recognize the spread of medical and public health misinformation over dissemination networks and collaborate with relevant stakeholders to address this problem as appropriate, including but not limited to altering underlying network dynamics or redesigning platform algorithms; (3) will continue to support the dissemination of accurate medical and public health information by public health organizations and health policy experts; and (4) will work with public health agencies in an effort to establish relationships with journalists and news agencies to enhance the public reach in disseminating accurate medical and public health information.
Citation: Res. 421, A-21; Reaffirmed: BOT Rep. 15, A-22;

Augmented Intelligence in Health Care H-480.939
Our AMA supports the use and payment of augmented intelligence (AI) systems that advance the quadruple aim. AI systems should enhance the patient experience of care and outcomes, improve population health, reduce overall costs for the health care system while increasing value, and support the professional satisfaction of physicians and the health care team. To that end our AMA will advocate that:
1. Oversight and regulation of health care AI systems must be based on risk of harm and benefit accounting for a host of factors, including but not limited to: intended and reasonably expected use(s); evidence of safety, efficacy, and equity including addressing bias; AI system methods; level of automation; transparency; and, conditions of deployment.
2. Payment and coverage for all health care AI systems must be conditioned on complying with all appropriate federal and state laws and regulations, including, but not limited to those governing patient safety, efficacy, equity, truthful claims, privacy, and security as well as state medical practice and licensure laws.
3. Payment and coverage for health care AI systems intended for clinical care must be conditioned on (a) clinical validation; (b) alignment with clinical decision-making that is familiar to physicians; and (c) high-quality clinical evidence.
4. Payment and coverage for health care AI systems must (a) be informed by real world workflow and human-centered design principles; (b) enable physicians to prepare for and transition to new care delivery models; (c) support effective communication and engagement between patients, physicians, and the health care team; (d) seamlessly integrate clinical, administrative, and population health management functions into workflow; and (e) seek end-user feedback to support iterative product improvement.
5. Payment and coverage policies must advance affordability and access to AI systems that are designed for small physician practices and patients and not limited to large practices and institutions. Government-conferred exclusivities and intellectual property laws are meant to foster innovation, but constitute interventions into the free market, and therefore, should be appropriately balanced with the need for competition, access, and affordability.
6. Physicians should not be penalized if they do not use AI systems while regulatory oversight, standards, clinical validation, clinical usefulness, and standards of care are in flux. Furthermore, our AMA opposes:
a. Policies by payers, hospitals, health systems, or governmental entities that mandate use of health care AI systems as a condition of licensure, participation, payment, or coverage.
b. The imposition of costs associated with acquisition, implementation, and maintenance of healthcare AI systems on physicians without sufficient payment.
7. Liability and incentives should be aligned so that the individual(s) or entity(ies) best positioned to know the AI system risks and best positioned to avert or mitigate harm do so

through design, development, validation, and implementation. Our AMA will further advocate:
a. Where a mandated use of AI systems prevents mitigation of risk and harm, the individual or entity issuing the mandate must be assigned all applicable liability.
b. Developers of autonomous AI systems with clinical applications (screening, diagnosis, treatment) are in the best position to manage issues of liability arising directly from system failure or misdiagnosis and must accept this liability with measures such as maintaining appropriate medical liability insurance and in their agreements with users.
c. Health care AI systems that are subject to non-disclosure agreements concerning flaws, malfunctions, or patient harm (referred to as gag clauses) must not be covered or paid and the party initiating or enforcing the gag clause assumes liability for any harm.
8. Our AMA, national medical specialty societies, and state medical associations—
a. Identify areas of medical practice where AI systems would advance the quadruple aim;
b. Leverage existing expertise to ensure clinical validation and clinical assessment of clinical applications of AI systems by medical experts;
c. Outline new professional roles and capacities required to aid and guide health care AI systems; and
d. Develop practice guidelines for clinical applications of AI systems.
9. There should be federal and state interagency collaboration with participation of the physician community and other stakeholders in order to advance the broader infrastructural capabilities and requirements necessary for AI solutions in health care to be sufficiently inclusive to benefit all patients, physicians, and other health care stakeholders. (New HOD Policy)
10. AI is designed to enhance human intelligence and the patient-physician relationship rather than replace it.
Citation: BOT Rep. 21, A-19; Reaffirmation: A-22;

Augmented Intelligence in Medical Education H-295.857
Our AMA encourages:
(1) accrediting and licensing bodies to study how AI should be most appropriately addressed in accrediting and licensing standards;
(2) medical specialty societies and boards to consider production of specialty-specific educational modules related to AI;
(3) research regarding the effectiveness of AI instruction in medical education on learning and clinical outcomes;
(4) institutions and programs to be deliberative in the determination of when AI-assisted technologies should be taught, including consideration of established evidence-based treatments, and including consideration regarding what other curricula may need to be eliminated in order to accommodate new training modules;
(5) stakeholders to provide educational materials to help learners guard against inadvertent dissemination of bias that may be inherent in AI systems;
(6) the study of how differences in institutional access to AI may impact disparities in education for students at schools with fewer resources and less access to AI technologies;
(7) enhanced training across the continuum of medical education regarding assessment, understanding, and application of data in the care of patients;
(8) the study of how disparities in AI educational resources may impact health care disparities for patients in communities with fewer resources and less access to AI technologies;
(9) institutional leaders and academic deans to proactively accelerate the inclusion of nonclinicians, such as data scientists and engineers, onto their faculty rosters in order to assist learners in their understanding and use of AI; and
(10) close collaboration with and oversight by practicing physicians in the development of AI applications.
Citation: CME Rep. 04, A-19;

Augmented Intelligence in Health Care H-480.940
As a leader in American medicine, our AMA has a unique opportunity to ensure that the evolution of augmented intelligence (AI) in medicine benefits patients, physicians, and the health care community.
To that end our AMA will seek to:
1. Leverage its ongoing engagement in digital health and other priority areas for improving patient outcomes and physicians professional satisfaction to help set priorities for health care AI.
2. Identify opportunities to integrate the perspective of practicing physicians into the development, design, validation, and implementation of health care AI.
3. Promote development of thoughtfully designed, high-quality, clinically validated health care AI that:
a. is designed and evaluated in keeping with best practices in user-centered design, particularly for physicians and other members of the health care team;
b. is transparent;
c. conforms to leading standards for reproducibility;
d. identifies and takes steps to address bias and avoids introducing or exacerbating health care disparities including when testing or deploying new AI tools on vulnerable populations; and
e. safeguards patientsand other individualsprivacy interests and preserves the security and integrity of personal information.
4. Encourage education for patients, physicians, medical students, other health care professionals, and health administrators to promote greater understanding of the promise and limitations of health care AI.
5. Explore the legal implications of health care AI, such as issues of liability or intellectual property, and advocate for appropriate professional and governmental oversight for safe, effective, and equitable use of and access to health care AI.
Citation: BOT Rep. 41, A-18;

E.11.2.1 Professionalism in Health Care Systems
Containing costs, promoting high-quality care for all patients, and sustaining physician professionalism are important goals. Models for financing and organizing the delivery of health care services often aim to promote patient safety and to improve quality and efficiency. However, they can also pose ethical challenges for physicians that could undermine the trust essential to patient-physician relationships.
Payment models and financial incentives can create conflicts of interest among patients, health care organizations, and physicians. They can encourage undertreatment and overtreatment, as well as dictate goals that are not individualized for the particular patient.
Structures that influence where and by whom care is delivered—such as accountable care organizations, group practices, health maintenance organizations, and other entities that may emerge in the future—can affect patients' choices, the patient-physician relationship, and physicians' relationships with fellow health care professionals.
Formularies, clinical practice guidelines, decision support tools that rely on augmented intelligence, and other mechanisms intended to influence decision making, may impinge on physicians' exercise of professional judgment and ability to advocate effectively for their patients, depending on how they are designed and implemented.
Physicians in leadership positions within health care organizations and the profession should:
(a) Ensure that decisions to implement practices or tools for organizing the delivery of care are transparent and reflect input from key stakeholders, including physicians and patients.
(b) Recognize that over reliance on financial incentives or other tools to influence clinical decision making may undermine physician professionalism.
(c) Ensure that all such tools:
(i) are designed in keeping with sound principles and solid scientific evidence.

a. Financial incentives should be based on appropriate comparison groups and cost data and adjusted to reflect complexity, case mix, and other factors that affect physician practice profiles.

b. Practice guidelines, formularies, and similar tools should be based on best available evidence and developed in keeping with ethics guidance.

c. Clinical prediction models, decision support tools, and similar tools such as those that rely on AI technology must rest on the highest-quality data and be independently validated in relevantly similar populations of patients and care settings.

(ii) are implemented fairly and do not disadvantage identifiable populations of patients or physicians or exacerbate health care disparities;

(iii) are implemented in conjunction with the infrastructure and resources needed to support high-value care and physician professionalism;

(iv) mitigate possible conflicts between physicians' financial interests and patient interests by minimizing the financial impact of patient care decisions and the overall financial risk for individual physicians.

(d) Encourage, rather than discourage, physicians (and others) to:

(i) provide care for patients with difficult to manage medical conditions;

(ii) practice at their full capacity, but not beyond.

(e) Recognize physicians' primary obligation to their patients by enabling physicians to respond to the unique needs of individual patients and providing avenues for meaningful appeal and advocacy on behalf of patients.

(f) Ensure that the use of financial incentives and other tools is routinely monitored to:

(i) identify and address adverse consequences;

(ii) identify and encourage dissemination of positive outcomes.

All physicians should:

(g) Hold physician-leaders accountable to meeting conditions for professionalism in health care systems.

(h) Advocate for changes in how the delivery of care is organized to promote access to high-quality care for all patients.

Issued: 2016; Amended: 2021; Amended: 2022

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 248
(A-23)

Introduced by: Indiana

Subject: Supervised Consumption Sites

Referred to: Reference Committee B

Whereas, Supervised Consumption Sites (also known as overdose prevention sites, safe injection sites, harm reduction centers, etc.), are sites where people can use controlled substances while being monitored by staff; and

Whereas, Such government-sanctioned sites are now operating in New York City, D.B.A. Insite, North America's first legal supervised sites having more than 100 sites around the world, and Vancouver's Insite averaged 312 injection room visits per day in 2019; and

Whereas, Only a few such sites now operate in the U.S. and may soon expand without much knowledge or concern by the medical community; and

Whereas, It is reported that the U.S. Department of Justice is evaluating the establishment of such sites and conferring with regulators about appropriate guardrails; and

Whereas, AMA policy H-95.925, *Pilot Implementation of Supervised Injection Facilities,* supports the development and implementation of "pilot supervised injection facilities", but the current preferred terms for these sites is "overdose prevention site" or "harm reduction center"; therefore be it

RESOLVED, That our American Medical Association seek information and consider policy and legislation regarding the federal legalization of overdose prevention sites (Directive to Take Action); and be it further

RESOLVED, That our AMA amend policy H-95.925, *Pilot Implementation of Supervised Injection Facilities,* to replace the references to "supervised injection facilities" with "overdose prevention sites". (Modify Current HOD Policy)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/10/23

RELEVANT AMA POLICY

Pilot Implementation of Supervised Injection Facilities H-95.925
Our AMA supports the development and implementation of pilot supervised injection facilities (SIFs) in the United States that are designed, monitored, and evaluated to generate data to inform policymakers on the feasibility, effectiveness, and legal aspects of SIFs in reducing harms and health care costs related to injection drug use.
Citation: Res. 513, A-17;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 249
(A-23)

Introduced by: Indiana

Subject: Restrictions on Social Media Promotion of Drugs

Referred to: Reference Committee B

Whereas, Many of our youth have access and exposure to social media outlets that have great potential to influence our young people regarding drugs; and

Whereas, A recent study published in the Journal of Studies on Alcohol and Drug reported on popular alcohol videos on the social networking site TikTok and noted - 98% of the videos expressed pro-alcohol sentiment; nearly half were guide videos demonstrating drink recipes; 61% depicted consuming multiple drinks quickly; 69% conveyed positive experiences; 55% contained humor; nearly half associated alcohol with camaraderie but only 4% of the videos depicted alcohol with negative associations; and

Whereas, Similar results could be anticipated with social media networks with other drugs; therefore be it

RESOLVED, That our American Medical Association seek policy and legislation that would limit social media's promotion and dissemination of corporate advertisement on usage of commercial and illicit drugs to our youth. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/10/23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 250
(A-23)

Introduced by: Indiana

Subject: Medicare Budget Neutrality

Referred to: Reference Committee B

Whereas, Medicare physician payments have not had regular positive updates; and

Whereas, Medical practice expenses have gone up significantly every year; and

Whereas, Medicare physician payments have lagged behind and have not kept up with inflation and practice costs; and

Whereas, Every year physicians must advocate to prevent a Medicare payment cut; and

Whereas, Other health care entities like the hospitals and insurance companies are not subject to budget neutrality; and

Whereas, The physician payments are subject to budget neutrality, which results in a threatened pay cut every year; therefore be it

RESOLVED, That our American Medical Association reaffirm its position supporting removal of budget neutrality for Medicare physician payments, which would result in regular positive updates for physicians so that the payments can keep up with inflation and practice expenses. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

Received: 5/10/23

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 251
(A-23)

Introduced by: Maryland

Subject: Federal Government Oversight of Augmented Intelligence

Referred to: Reference Committee B

Whereas, Safety of patients is of physicians' utmost concern; and

Whereas**,** The applications for augmented intelligence have grown exponentially in the last decade; and

Whereas**,** There may be positive applications for improved human health such as in PTSD or pain management; and

Whereas**,** Without appropriate oversight, the developing applications could also have detrimental impacts to human health; and

Whereas, The U.S. Food and Drug Administration (FDA) protects public health by regulating human drugs and biological products, animal drugs, medical devices, tobacco products, food (including animal food), cosmetics, and electronic products that emit radiation; and

Whereas**,** The U.S. Department of Agriculture (USDA) protects public health by regulating food, agriculture, natural resources, rural development, nutrition, and related issues based on public policy, the best available science, and effective management; and

Whereas**,** There is no federal agency at present which is charged with oversight of augmented intelligence and social media and their effect on health; therefore be it

RESOLVED**,** That our American Medical Association study and develop recommendations on how to best protect public health by regulation and oversight of the development and implementation of augmented intelligence and its applications in the healthcare arena. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/1/23

RELEVANT AMA POLICY

Augmented Intelligence in Health Care H-480.939
Our AMA supports the use and payment of augmented intelligence (AI) systems that advance the quadruple aim. AI systems should enhance the patient experience of care and outcomes, improve population health, reduce overall costs for the health care system while increasing value, and support the professional satisfaction of physicians and the health care team. To that end our AMA will advocate that:
1. Oversight and regulation of health care AI systems must be based on risk of harm and benefit

accounting for a host of factors, including but not limited to: intended and reasonably expected use(s); evidence of safety, efficacy, and equity including addressing bias; AI system methods; level of automation; transparency; and, conditions of deployment.
2. Payment and coverage for all health care AI systems must be conditioned on complying with all appropriate federal and state laws and regulations, including, but not limited to those governing patient safety, efficacy, equity, truthful claims, privacy, and security as well as state medical practice and licensure laws.
3. Payment and coverage for health care AI systems intended for clinical care must be conditioned on (a) clinical validation; (b) alignment with clinical decision-making that is familiar to physicians; and (c) high-quality clinical evidence.
4. Payment and coverage for health care AI systems must (a) be informed by real world workflow and human-centered design principles; (b) enable physicians to prepare for and transition to new care delivery models; (c) support effective communication and engagement between patients, physicians, and the health care team; (d) seamlessly integrate clinical, administrative, and population health management functions into workflow; and (e) seek end-user feedback to support iterative product improvement.
5. Payment and coverage policies must advance affordability and access to AI systems that are designed for small physician practices and patients and not limited to large practices and institutions. Government-conferred exclusivities and intellectual property laws are meant to foster innovation, but constitute interventions into the free market, and therefore, should be appropriately balanced with the need for competition, access, and affordability.
6. Physicians should not be penalized if they do not use AI systems while regulatory oversight, standards, clinical validation, clinical usefulness, and standards of care are in flux. Furthermore, our AMA opposes:
a. Policies by payers, hospitals, health systems, or governmental entities that mandate use of health care AI systems as a condition of licensure, participation, payment, or coverage.
b. The imposition of costs associated with acquisition, implementation, and maintenance of healthcare AI systems on physicians without sufficient payment.
7. Liability and incentives should be aligned so that the individual(s) or entity(ies) best positioned to know the AI system risks and best positioned to avert or mitigate harm do so through design, development, validation, and implementation. Our AMA will further advocate:
a. Where a mandated use of AI systems prevents mitigation of risk and harm, the individual or entity issuing the mandate must be assigned all applicable liability.
b. Developers of autonomous AI systems with clinical applications (screening, diagnosis, treatment) are in the best position to manage issues of liability arising directly from system failure or misdiagnosis and must accept this liability with measures such as maintaining appropriate medical liability insurance and in their agreements with users.
c. Health care AI systems that are subject to non-disclosure agreements concerning flaws, malfunctions, or patient harm (referred to as gag clauses) must not be covered or paid and the party initiating or enforcing the gag clause assumes liability for any harm.
8. Our AMA, national medical specialty societies, and state medical associations—
a. Identify areas of medical practice where AI systems would advance the quadruple aim;
b. Leverage existing expertise to ensure clinical validation and clinical assessment of clinical applications of AI systems by medical experts;
c. Outline new professional roles and capacities required to aid and guide health care AI systems; and
d. Develop practice guidelines for clinical applications of AI systems.
9. There should be federal and state interagency collaboration with participation of the physician community and other stakeholders in order to advance the broader infrastructural capabilities and requirements necessary for AI solutions in health care to be sufficiently inclusive to benefit all patients, physicians, and other health care stakeholders. (New HOD Policy)
10. AI is designed to enhance human intelligence and the patient-physician relationship rather than replace it.
Citation: BOT Rep. 21, A-19; Reaffirmation: A-22;

Augmented Intelligence in Health Care H-480.940
As a leader in American medicine, our AMA has a unique opportunity to ensure that the evolution of augmented intelligence (AI) in medicine benefits patients, physicians, and the health care community. To that end our AMA will seek to:
1. Leverage its ongoing engagement in digital health and other priority areas for improving patient outcomes and physiciansprofessional satisfaction to help set priorities for health care AI.

2. Identify opportunities to integrate the perspective of practicing physicians into the development, design, validation, and implementation of health care AI.
3. Promote development of thoughtfully designed, high-quality, clinically validated health care AI that:
a. is designed and evaluated in keeping with best practices in user-centered design, particularly for physicians and other members of the health care team;
b. is transparent;
c. conforms to leading standards for reproducibility;
d. identifies and takes steps to address bias and avoids introducing or exacerbating health care disparities including when testing or deploying new AI tools on vulnerable populations; and
e. safeguards patientsand other individualsprivacy interests and preserves the security and integrity of personal information.
4. Encourage education for patients, physicians, medical students, other health care professionals, and health administrators to promote greater understanding of the promise and limitations of health care AI.
5. Explore the legal implications of health care AI, such as issues of liability or intellectual property, and advocate for appropriate professional and governmental oversight for safe, effective, and equitable use of and access to health care AI.
Citation: BOT Rep. 41, A-18;

Augmented Intelligence in Medical Education H-295.857
Our AMA encourages:
(1) accrediting and licensing bodies to study how AI should be most appropriately addressed in accrediting and licensing standards;
(2) medical specialty societies and boards to consider production of specialty-specific educational modules related to AI;
(3) research regarding the effectiveness of AI instruction in medical education on learning and clinical outcomes;
(4) institutions and programs to be deliberative in the determination of when AI-assisted technologies should be taught, including consideration of established evidence-based treatments, and including consideration regarding what other curricula may need to be eliminated in order to accommodate new training modules;
(5) stakeholders to provide educational materials to help learners guard against inadvertent dissemination of bias that may be inherent in AI systems;
(6) the study of how differences in institutional access to AI may impact disparities in education for students at schools with fewer resources and less access to AI technologies;
(7) enhanced training across the continuum of medical education regarding assessment, understanding, and application of data in the care of patients;
(8) the study of how disparities in AI educational resources may impact health care disparities for patients in communities with fewer resources and less access to AI technologies;
(9) institutional leaders and academic deans to proactively accelerate the inclusion of nonclinicians, such as data scientists and engineers, onto their faculty rosters in order to assist learners in their understanding and use of AI; and
(10) close collaboration with and oversight by practicing physicians in the development of AI applications.
Citation: CME Rep. 04, A-19;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 252
(A-23)

Introduced by: Maryland

Subject: Strengthening Patient Privacy

Referred to: Reference Committee B

Whereas, The Health Insurance Portability and Accountability Act of 1996 (HIPAA) established the Privacy Rule in order to protect the use and transmission of "individually identifiable health information" and now sets the federal guideline and industry-wide standard for privacy and security of protected health information (PHI)[1]; and

Whereas, In recognition of the increasing adoption and potential utility of health information in life sciences research, policy assessment, health operations studies, and more, the Privacy Rule permits a covered entity to use and disclose health information if it is de-identified or does not provide a reasonable basis to identify an individual[1]; and

Whereas, Since federal HIPAA regulations do not regulate de-identified health information as it is not considered PHI, thereby allowing for its unrestricted use and distribution by covered entities[2]; and

Whereas, A systematic literature review revealed that anonymization of PHI does not eliminate the risk data re-identification risk and that different de-identification techniques have different re-identification risks[3]; and

Whereas, Re-identification of de-identified datasets is possible and third party data brokers such as McKinsey have been shown to leverage complex algorithms and data triangulation in order to re-identify patient data without ever having documented consent from the individuals[4]; and

Whereas, Sweeney demonstrated that publicly and semi-publicly available health data from various agencies including the Agency for Healthcare Research and Quality, when linked to publicly available data from the US census summary, could potentially allow for re-identification of all unique hospitalized patients, although risk of re-identification varied widely depending on the identifiers studied[5]; and

Whereas, Current de-identification practices of prescription records in Canada, similar to ones in the U.S., were found to have a high likelihood of re-identification with other publicly available information if stronger de-identification measures were not implemented[6]; and

Whereas, A machine learning algorithm successfully reidentified 85.6% of adults' physical activity data and demographic to individual-specific health record numbers with previously recorded physical activity data[7]; and

Whereas, The previously outlined information highlights the growing concerns of re-identification of patient's protected health information using de-identified datasets and publicly available information[9,10]; and

Whereas, AMA Principles of Medical Ethics 3.1.1, *Privacy in Health Care*, calls upon physicians to "protect patient privacy in all settings to the greatest extent possible" and AMA policy H-480.940, *Augmented Intelligence in Health Care,* calls upon the AMA to “safeguards patients’ and other individuals’ privacy interests and preserves the security and integrity of personal information” in the context of AI; therefore be it

RESOLVED, That our American Medical Association study the modern threats to patient privacy, especially in the context of augmented intelligence, and generate recommendations to guide AMA advocacy in this area for the betterment of patient rights. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

3.1.1 Privacy in Health Care

Protecting information gathered in association with the care of the patient is a core value in health care. However, respecting patient privacy in other forms is also fundamental, as an expression of respect for patient autonomy and a prerequisite for trust.

Patient privacy encompasses a number of aspects, including personal space (physical privacy), personal data (informational privacy), personal choices including cultural and religious affiliations (decisional privacy), and personal relationships with family members and other intimates (associational privacy).

Physicians must seek to protect patient privacy in all settings to the greatest extent possible and should:

(a) Minimize intrusion on privacy when the patient’s privacy must be balanced against other factors.

(b) Inform the patient when there has been a significant infringement on privacy of which the patient would otherwise not be aware.

(c) Be mindful that individual patients may have special concerns about privacy in any or all of these areas.

Augmented Intelligence in Health Care H-480.940

As a leader in American medicine, our AMA has a unique opportunity to ensure that the evolution of augmented intelligence (AI) in medicine benefits patients, physicians, and the health care community.

To that end our AMA will seek to:
1. Leverage its ongoing engagement in digital health and other priority areas for improving patient outcomes and physicians professional satisfaction to help set priorities for health care AI.
2. Identify opportunities to integrate the perspective of practicing physicians into the development, design, validation, and implementation of health care AI.
3. Promote development of thoughtfully designed, high-quality, clinically validated health care AI that:
a. is designed and evaluated in keeping with best practices in user-centered design, particularly for physicians and other members of the health care team;
b. is transparent;
c. conforms to leading standards for reproducibility;
d. identifies and takes steps to address bias and avoids introducing or exacerbating health care disparities including when testing or deploying new AI tools on vulnerable populations; and
e. safeguards patients and other individuals privacy interests and preserves the security and integrity of personal information.
4. Encourage education for patients, physicians, medical students, other health care professionals, and health administrators to promote greater understanding of the promise and limitations of health care AI.
5. Explore the legal implications of health care AI, such as issues of liability or intellectual property, and advocate for appropriate professional and governmental oversight for safe, effective, and equitable use of and access to health care AI.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 253
(A-23)

Introduced by: New York

Subject: Appropriate Compensation for Non-Visit Care (Remote or Care of Coordination)

Referred to: Reference Committee B

Whereas, Physicians provide a great deal of work outside the tradition patient visit, including asynchronous remote care – such as phone calls, coordination of care with subspecialists and pharmacists, electronic messaging, and review of laboratory data (outside of face to face and remote visit); and

Whereas, The volume of asynchronous remote work continues to increase, and was accelerated in 2020-2022 during the COVID-19 pandemic[1]; and

Whereas, Uncompensated work is a significant contributor to physician burnout and a driver of the loss of primary care workforce and shortages in care[1,2]; and

Whereas, Access to care coordination is greatly impacted by social determinants of health, and disparities or inequities exist in patient access to care coordination[3,4]; and

Whereas, Care coordination by physicians involves frequent and ongoing contact with home health and care management services, usually on days other than the actual clinical office visit, and using separate electronic systems outside of the physician's electronic health record[4-6]; and

Whereas, The Centers for Medicare & Medicaid Services (CMS) and private insurers have reimbursed for some aspects of care coordination, but these reimbursements are likely to end with, or shortly after, the end of the COVID-19 public health emergency declaration[7]; therefore be it

RESOLVED, That our American Medical Association create a policy stating that payors should compensate physicians for asynchronous (outside the day of a patient visit) non-visit or remote care, such phone calls, electronic messaging, and review of laboratory data (New HOD Policy); and be it further

RESOLVED, That our AMA advocate for expansion of Current Procedural Terminology (CPT) codes 99441-99445 into telemedicine parity law, that will include reimbursement similar to other CPT codes. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

RELEVANT AMA POLICY

Evolving Impact of Telemedicine H-480.974

Our AMA:
(1) will evaluate relevant federal legislation related to telemedicine;
(2) urges CMS, AHRQ, and other concerned entities involved in telemedicine to fund demonstration projects to evaluate the effect of care delivered by physicians using telemedicine-related technology on costs, quality, and the physician-patient relationship;
(3) urges professional organizations that serve medical specialties involved in telemedicine to develop appropriate practice parameters to address the various applications of telemedicine and to guide quality assessment and liability issues related to telemedicine;
(4) encourages professional organizations that serve medical specialties involved in telemedicine to develop appropriate educational resources for physicians for telemedicine practice;
(5) encourages development of a code change application for CPT codes or modifiers for telemedical services, to be submitted pursuant to CPT processes;
(6) will work with CMS and other payers to develop and test, through these demonstration projects, appropriate reimbursement mechanisms;
(7) will develop a means of providing appropriate continuing medical education credit, acceptable toward the Physician's Recognition Award, for educational consultations using telemedicine;
(8) will work with the Federation of State Medical Boards and the state and territorial licensing boards to develop licensure guidelines for telemedicine practiced across state boundaries; and
(9) will leverage existing expert guidance on telemedicine by collaborating with the American Telemedicine Association (www.americantelemed.org) to develop physician and patient specific content on the use of telemedicine services--encrypted and unencrypted.

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 254
(A-23)

Introduced by:	American College of Surgeons, American Academy of Otolaryngology – Head and Neck Surgery, American Academy of Orthopaedic Surgeons, American Academy of Ophthalmology, American Society of Plastic Surgeons
Subject:	Eliminating the Party Statement Exception in Quality Assurance Proceedings
Referred to:	Reference Committee B

Whereas, Quality Assurance (QA) is an essential, legally required process for the practice of surgery and medicine; and

Whereas, Proceedings and records from QA meetings, including Morbidity and Mortality conferences, have been protected from discovery (QAP; QA Privilege) for nearly 50 years by provisions in the Education Law (§ 6527(3)) and the Public Health Law (§2805-m(2)); and

Whereas, QA meetings allow physicians to identify best practices and improve the delivery of health care services; and

Whereas, Comments made during a QA meeting by a person who is a named party in a malpractice case may be discoverable and do not benefit from the same protections (known as a *party-statement exception, PSE);* and

Whereas, A recent legal case, Siegel v. Snyder 202 A.D. 3d 125, 161 N.Y.S.3d 159 (2nd Dept, 2021), has challenged the quality-assurance privilege in committee meeting minutes or materials in which a speaker is not identified; and

Whereas, The recent decision in Siegel v. Snyder 202 A.D. 3d 125, 161 N.Y.S.3d 159 (2nd Dept, 2021) sets a new precedent of discoverability of QA meeting minutes when each speaker in a QA meeting fails to be identified; and

Whereas, New York physicians or institutions currently seeking to assert a QA privilege now have the burden of demonstrating that the QA committee meeting minutes were not party statements subject to disclosure; and

Whereas, In response to the decision of this case and the PSE, professional organizations representing hospitals have suggested limiting the involvement of named parties in QA efforts; and

Whereas, In response to the decision of this case and the PSE, a growing number of New York medical centers have limited the involvement of named parties in QA efforts; and

Whereas, Widespread knowledge of the recent judicial interpretation of the PSE discourages open, transparent reporting and discussion of opportunities for improvement in patient care; and

Whereas, In response to diminished QA proceedings, the educational and performance improvement value of QA conferences is eroding; and

Whereas, The PSE creates inappropriate adverse incentives for plaintiffs to name residents, departmental leaders and QA officers as parties to legal proceedings for the sole purpose of discovery; therefore be it

RESOLVED, That our American Medical Association reaffirm the importance of meaningful Quality Assurance proceedings that are unhindered by legal discovery concerns (New HOD Policy); and be it further

RESOLVED, That our AMA strongly support and advocate for eliminating the Party Statement Exception to confidentiality at Quality Assurance meetings in all applicable laws. (Directive to Take Action)

Fiscal Note: Minimal - less than $1,000

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 255
(A-23)

Introduced by: Georgia

Subject: Correctional Medicine

Referred to: Reference Committee B

Whereas, Detained and/or incarcerated patients have the right to medical neutrality from their treating physician regardless of their status as a detained or incarcerated person[1]; and

Whereas, Detained and/or incarcerated persons have the right to speak with their provider confidentially[1]; and

Whereas, Detained and/or incarcerated persons have the right to removal of physical restraints for the purpose of a physical exam at the discretion of the treating physician[3]; and

Whereas, Detained and/or incarcerated persons have the right to medical care at a facility that has a protocol for and supports ongoing quality improvement of medical care for the incarcerated patient[1]; and

Whereas, Detained and/or incarcerated persons have the right to privacy and protection from inquiry regarding charges, conviction, or duration of sentence unless immediately pertinent to patient care[1]; and

Whereas, Detained and/or incarcerated persons have the right to informed consent; to be adequately informed of diagnoses, treatment options, risks and alternatives, and follow-up plans with respect to educational status and literacy as necessary[1]; and

Whereas, Detained and/or incarcerated persons have the right to refuse care, diagnostic testing, nutrition, laboratory studies, medications, and procedures, for as long as the patient has medical decision making capacity as deemed by the treating physician or is not at immediate risk of harm to self or others[4]; and

Whereas, Detained and/or incarcerated persons have the right to timely administration of all interventions and necessary consultations while in the emergency department as deemed by the attending physician[1]; and

Whereas, Detained and/or incarcerated persons have the right to make their healthcare decisions independent of law enforcement officials when competent, and to appoint an appropriate surrogate medical decision-maker in the event they become incompetent. Wardens, sheriffs, guards, police officers, prison administrators, and other law enforcement officials are not eligible medical decision-makers[2]; and

Whereas, Detained and/or incarcerated persons have the right to consultation by their medical decision-maker according to state laws regardless of the policies of law enforcement or carceral institutions[1]; now therefore be it

RESOLVED, That our American Medical Association work with interested parties and key stake holders, including the American College of Emergency Physicians, to develop model federal legislation requiring health care facilities to inform patients in custody about their rights as a patient under applicable federal and state law. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 5/9/23

Referral Change
Was Resolution 504

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 256
(A-23)

Introduced by: American Society for Surgery of the Hand, American Association of Hand Surgery

Subject: Regulating Misleading AI Generated Advice to Patients

Referred to: Reference Committee B

Whereas, A generative pretrained transformer (GPT) is an AI tool that produces text resembling human writing, allowing users to interact with AI almost as if they are communicating with another person; and

Whereas, GPT is prone to errors and omissions that can fail at simple tasks, such as basic arithmetic, or insidiously commit errors that go unnoticed without scrutiny by subject matter experts; and

Whereas, Patients might benefit from using GPT as a medical resource; however, unless its advice is filtered through health care practitioners, false or misleading information could endanger their safety; and

Whereas, When consumers directly ask AI for emotional support or medical advice, they act outside the patient-physician relationship, and few guardrails exist; and

Whereas, Most health care laws do not apply in the consumer context, however, the Federal Trade Commission (FTC) could designate false and misleading AI-generated medical advice *as unfair or deceptive business practices* that violate the FTC act, and the US Food and Drug Administration could hold software developers responsible if GPT makes false medical claims; therefore be it

RESOLVED**,** That our American Medical Association commence a study of the benefits and unforeseen consequences to the medical profession of GPTs, with report back to the HOD at the 2023 interim meeting (Directive to Take Action); and be it further

RESOLVED**,** That our AMA consider working with the Federal Trade Commission and other appropriate organizations to protect patients from false or misleading AI-generated medical advice (Directive to Take Action); and be it further

RESOLVED, That our AMA encourage physicians to educate our patients about the benefits and risks of consumers facing generative pretrained transformers. (New HOD Policy)

Fiscal Note: Modest - between $1,000 - $5,000

REPORT OF THE COUNCIL ON MEDICAL EDUCATION

CME Report 01-A-23

Subject:	Council on Medical Education Sunset Review of 2013 House of Delegates' Policies
Presented by:	John P. Williams, MD, Chair
Referred to:	Reference Committee C

Policy G-600.110, "Sunset Mechanism for AMA Policy," calls for the decennial review of American Medical Association (AMA) policies to ensure that our AMA's policy database is current, coherent, and relevant:

1. As the House of Delegates adopts policies, a maximum ten-year time horizon shall exist. A policy will typically sunset after ten years unless action is taken by the House of Delegates to retain it. Any action of our AMA House that reaffirms or amends an existing policy position shall reset the sunset "clock," making the reaffirmed or amended policy viable for another 10 years.

2. In the implementation and ongoing operation of our AMA policy sunset mechanism, the following procedures shall be followed: (a) Each year, the Speakers shall provide a list of policies that are subject to review under the policy sunset mechanism; (b) Such policies shall be assigned to the appropriate AMA councils for review; (c) Each AMA council that has been asked to review policies shall develop and submit a report to the House of Delegates identifying policies that are scheduled to sunset; (d) For each policy under review, the reviewing council can recommend one of the following actions: (i) retain the policy; (ii) sunset the policy; (iii) retain part of the policy; or (iv) reconcile the policy with more recent and like policy; (e) For each recommendation that it makes to retain a policy in any fashion, the reviewing council shall provide a succinct, but cogent justification; (f) The Speakers shall determine the best way for the House of Delegates to handle the sunset reports.

3. Nothing in this policy shall prohibit a report to the HOD or resolution to sunset a policy earlier than its 10-year horizon if it is no longer relevant, has been superseded by a more current policy, or has been accomplished.

4. The AMA councils and the House of Delegates should conform to the following guidelines for sunset: (a) when a policy is no longer relevant or necessary; (b) when a policy or directive has been accomplished; or (c) when the policy or directive is part of an established AMA practice that is transparent to the House and codified elsewhere such as the AMA Bylaws or the AMA House of Delegates Reference Manual: Procedures, Policies and Practices.

5. The most recent policy shall be deemed to supersede contradictory past AMA policies.

6. Sunset policies will be retained in the AMA historical archives.

RECOMMENDATION

The Council on Medical Education recommends that the House of Delegates policies listed in the appendix to this report be acted upon in the manner indicated and the remainder of this report be filed. (Directive to Take Action)

Fiscal Note: $1,000.

APPENDIX: RECOMMENDED ACTIONS

Policy Number	Title	Text	Recommendation
D-295.960	Clinical Skills Training in Medical Schools	Our AMA: (1) encourages medical schools to reevaluate their educational programs to ensure appropriate emphasis of clinical skills training in medical schools; (2) encourages medical schools to include longitudinal clinical experiences for students during the "preclinical" years of medical education; (3) will evaluate the cost/value equation, benefits, and consequences of the implementation of standardized clinical exams as a step for licensure, along with the barriers to more meaningful examination feedback for both examinees and US medical schools, and provide recommendations based on these findings; and (4) will evaluate the consequences of the January 2013 changes to the USMLE Step II Clinical Skills exam and their implications for US medical students and international medical graduates. (Res. 324, A-03; Appended: Res. 309, A-11; Appended: Res. 904, I-13)	Retain clause 2, which is still relevant and not superseded by other AMA policy, and sunset clauses 1, 3, and 4, to read as follows: "Our AMA~~: (1) encourages medical schools to reevaluate their educational programs to ensure appropriate emphasis of clinical skills training in medical schools; (2)~~ encourages medical schools to include longitudinal clinical experiences for students during the "preclinical" years of medical education~~; (3) will evaluate the cost/value equation, benefits, and consequences of the implementation of standardized clinical exams as a step for licensure, along with the barriers to more meaningful examination feedback for both examinees and US medical schools, and provide recommendations based on these findings; and (4) will evaluate the consequences of the January 2013 changes to the USMLE Step II Clinical Skills exam and their implications for US medical students and international medical graduates~~." The contents of clause 1 are required of medical school programs with accreditation from the Liaison Committee on Medical Education (LCME) and is reviewed periodically, and are reflected in H-295.995 (12) (17a) (17b), "Recommendations for Future Directions for Medical Education," which read: "(12) The curriculum of a medical school should be designed to provide students with experience in clinical medicine ranging from primary to tertiary care in a variety of inpatient and outpatient settings, such as university hospitals, community hospitals, and other health care facilities. Medical schools should establish standards and apply them to all components of the clinical educational program regardless of where they are conducted. Regular evaluation of the quality of each experience and its

			contribution to the total program should be conducted." "(17a) Faculties of medical schools should reevaluate the current elements of their fourth or final year with the intent of increasing the breadth of clinical experience through a more formal structure and improved faculty counseling. An appropriate number of electives or selected options should be included. (17b) Counseling of medical students by faculty and others should be directed toward increasing the breadth of clinical experience. Students should be encouraged to choose experience in disciplines that will not be an integral part of their projected graduate medical education." Clauses 3 and 4 have been accomplished and are reflected in other AMA policy, such as D-295.988, "Clinical Skills Assessment During Medical School," which reads in part: "2. Our AMA will work with the Federation of State Medical Boards, National Board of Medical Examiners, state medical societies, state medical boards, and other key stakeholders to pursue the transition from and replacement for the current United States Medical Licensing Examination (USMLE) Step 2 Clinical Skills (CS) examination and the Comprehensive Osteopathic Medical Licensing Examination (COMLEX) Level 2-Performance Examination (PE) with a requirement to pass a Liaison Committee on Medical Education-accredited or Commission on Osteopathic College Accreditation-accredited medical school-administered, clinical skills examination. "3. Our AMA will work to: (a) ensure rapid yet carefully considered changes to the current examination process to reduce costs, including travel expenses, as well as time away from educational pursuits, through immediate steps by the Federation of State Medical Boards and National Board of Medical Examiners; (b) encourage a significant and expeditious increase in the number of available testing sites; (c) allow

			international students and graduates to take the same examination at any available testing site; (d) engage in a transparent evaluation of basing this examination within our nation's medical schools, rather than administered by an external organization; and (e) include active participation by faculty leaders and assessment experts from U.S. medical schools, as they work to develop new and improved methods of assessing medical student competence for advancement into residency. . . . "5. Our AMA will continue to work with appropriate stakeholders to assure the processes for assessing clinical skills are evidence-based and most efficiently use the time and financial resources of those being assessed. "6. Our AMA encourages development of a post-examination feedback system for all USMLE test-takers that would: (a) identify areas of satisfactory or better performance; (b) identify areas of suboptimal performance; and (c) give students who fail the exam insight into the areas of unsatisfactory performance on the examination."
D-295.982	Model Pain Management Program For Medical School Curricula	Our AMA will collect, synthesize, and disseminate information about effective educational programs in pain management and palliative care in medical schools and residency programs. (Res. 308, A-01; Reaffirmed: CME Rep. 2, A-11; Reaffirmed: CME Rep. 6, A-13)	Sunset; this directive has been accomplished.
D-300.999	Registration of Accredited CME Sponsors	1. Our AMA will continue cooperative efforts to assure that accredited sponsors of continuing medical education adhere to AMA Physician's Recognition Award (PRA) policy when designating AMA PRA credit. 2. Our AMA will remind all accredited CME providers of their responsibility, as stated in the AMA PRA requirements, to provide documentation to participating physicians of the	Retain clause 1. Still relevant. Sunset clause 2. Accomplished though the publication of the PRA booklet in 2017. New version to read as follows: ~~"1.~~ Our AMA will continue cooperative efforts to assure that accredited sponsors of continuing medical education adhere to AMA Physician's Recognition Award (PRA) policy when designating AMA PRA credit. ~~2. Our AMA will remind all accredited~~

		credit awarded at the request of the physician. (CME Rep. 4, A-00; Reaffirmed: CME Rep. 2, A-10; Appended: CME Rep. 7, A-13)	~~CME providers of their responsibility, as stated in the AMA PRA requirements, to provide documentation to participating physicians of the credit awarded at the request of the physician.~~"
D-305.960	Loan Repayment for Physicians in State Designated Shortage Areas	Our AMA: (1) will educate membership about various opportunities surrounding loan repayment through mechanisms including but not limited to: a designated state contact, web resources, and informative meetings, so that residents can make an informed decision regarding employment; (2) will advocate equal tax benefits for physicians who practice in either state-designated or federally-designated shortage areas; and (3) acknowledges and continues to support initiatives that facilitate recruitment of physicians to designated shortage areas. (Res. 328, A-09; Reaffirmation A-13)	Sunset; still relevant, but superseded by and reflected in other AMA policy, such as H-305.925, "Principles of and Actions to Address Medical Education Costs and Student Debt" and H-200.949 (16), "Principles of and Actions to Address Primary Care Workforce."
D-305.973	Proposed Revisions to AMA Policy on the Financing of Medical Education Programs	Our AMA will work with: (1) the federal government, including the Centers for Medicare and Medicaid Services, and the states, along with other interested parties, to bring about the following outcomes: (a) ensure adequate Medicaid and Medicare funding for graduate medical education; (b) ensure adequate Disproportionate Share Hospital funding; (c) make the Medicare direct medical education per-resident cost figure more equitable across teaching hospitals while assuring adequate funding of all residency positions; (d) revise the Medicare and Medicaid funding formulas for graduate medical education to recognize the resources utilized for training in non-hospital settings; (e) stabilize funding for pediatric residency training in	Retain; still relevant, with name change as shown below: ~~Proposed Revisions to AMA Policy on the~~ Financing of Medical Education Programs

		children's hospitals; (f) explore the possibility of extending full direct medical education per-resident payment beyond the time of first board eligibility for specialties/subspecialties in shortage/defined need; (g) identify funding sources to increase the number of graduate medical education positions, especially in or adjacent to physician shortage/underserved areas and in undersupplied specialties; and (h) act on existing policy by seeking federal legislation requiring all health insurers to support graduate medical education through an all-payer trust fund created for this purpose; and (2) other interested parties to ensure adequate funding to support medical school educational programs, including creating mechanisms to fund additional medical school positions. (CME Rep. 7, A-05; Reaffirmation I-06; Reaffirmation I-07; Reaffirmed: Res. 921, I-12; Reaffirmation A-13; Reaffirmed: CME Rep. 5, A-13)	
D-305.986	Recognizing Spouse and Dependent Care Expenses in Determining Medical Education Financial Aid	Our AMA will: (1) work with the Liaison Committee on Medical Education to require, as part of the accreditation standards for medical schools, that dependent health insurance, dependent care, and dependent living expenses be included both as part of the "cost of attendance" and as an educational expense for the purposes of student budgets and financial aid in medical schools; and (2) encourage medical schools to include spouse and dependent health insurance, dependent care, and dependent living expenses as part of the "cost of attendance"	Sunset. The LCME does not mandate school policies at this level of specificity. Further, elements included in defining "cost of attendance" are relevant to and guided by lenders and financial aid rules.

		and as an educational expense for the purposes of student budgets and financial aid. (Res. 301, A-03; Modified: CME Rep. 2, A-13)	
D-310.953	Exploring the Feasibility of Clinic-Based Residency Programs	Our AMA: (1) advocates that key stakeholders, such as the Accreditation Council for Graduate Medical Education, explore the feasibility of extending residency programs through a pilot study placing medical graduates in integrated physician-led practices in order to expand training positions and increase the number of physicians providing healthcare access; and (2) encourages that pilot studies of clinic-based residency program expansion be funded by private sources. (Res. 906, I-13)	Sunset; this directive has been accomplished.
D-310.954	Training in Reproductive Health Topics as a Requirement for Accreditation of Family Residencies	Our AMA: (1) will work with the Accreditation Council for Graduate Medical Education to protect patient access to important reproductive health services by advocating for all family medicine residencies to provide comprehensive women's health including training in contraceptive counseling, family planning, and counseling for unintended pregnancy; and (2) encourages the ACGME to ensure greater clarity when making revisions to the educational requirements and expectations of family medicine residents in comprehensive women's health topics. (Res. 317, A-13)	Retain; still relevant, but rescind and append to H-295.890, "Medical Education and Training in Women's Health," to read as follows. Also, note editorial changes to clauses 6 and 7: "Our AMA: (1) encourages the coordination and synthesis of the knowledge, skills, and attitudinal objectives related to women's health/gender-based biology that have been developed for use in the medical school curriculum. Medical schools should include attention to women's health throughout the basic science and clinical phases of the curriculum; (2) does not support the designation of women's health as a distinct new specialty; (3) that each specialty should define objectives for residency training in women's health, based on the nature of practice and the characteristics of the patient population served; (4) that surveys of undergraduate and graduate medical education, conducted by the AMA and other groups, should periodically collect data on the inclusion of women's health in medical school and residency training; (5) encourages the development of a curriculum inventory and database in

			women's health for use by medical schools and residency programs; (6) encourages physicians to include continuing education in women's health/gender-based biology as part of their continuing professional development; ~~and~~ (7) encourages its representatives to the Liaison Committee on Medical Education, the Accreditation Council for Graduate Medical Education (ACGME), and the various ACGME ~~Residency~~ Review Committees to promote attention to women's health in accreditation standards~~.~~; (8) will work with the ACGME to protect patient access to important reproductive health services by advocating for all family medicine residencies to provide comprehensive women's health, including training in contraceptive counseling, family planning, and counseling for unintended pregnancy; and (9) encourages the ACGME to ensure clarity when making revisions to the educational requirements and expectations of family medicine residents in comprehensive women's health topics."
D-35.980	Primary Care Physician Supply	Our AMA will continue to work with interested stakeholders to gather and disseminate data regarding the primary care physician supply. (Res. 217, I-13)	Sunset; still relevant, but already reflected in H-200.949 (25), "Principles of and Actions to Address Primary Care Workforce," which reads as follows: "Research: Analysis of state and federal financial assistance programs should be undertaken, to determine if these programs are having the desired workforce effects, particularly for students from disadvantaged groups and those that are underrepresented in medicine, and to gauge the impact of these programs on elimination of geographic, racial, and other health care disparities. Additional research should identify the factors that deter students and physicians from choosing and remaining in primary care disciplines. Further, our AMA should continue to monitor trends in the choice of a primary care specialty and the availability of primary care graduate medical education positions. The results of these and related research endeavors should support and further refine AMA policy to enhance primary care as a career choice."

H-200.992	Designation of Areas of Medical Need	The AMA urges the federal government to: (1) consolidate the federal designation process for identifying areas of medical need; (2) coordinate the federal designation process with state agencies to obviate duplicative activities; and (3) ask for state and local medical society approval of said designated underserved areas. (Res. 24, A-82; CLRPD Rep. A, I-92; CME Rep. 2, A-03; CME Rep. 2, A-13)	Sunset. Accomplished through the Health Resources and Services Administration's consolidation of federal shortage area designations.
H-200.994	Health Workforce	The AMA endorses the following principle on health manpower: Both physicians and allied health professionals have legal and ethical responsibilities for patient care, even though ultimate responsibility for the individual patient's medical care rests with the physician. To assure quality patient care, the medical profession and allied health professionals should have continuing dialogue on patient care functions that may be delegated to allied health professionals consistent with their education, experience and competency. (BOT Rep. C, I-81; Reaffirmed: Sunset Report, I-98; Modified: CME Rep. 2, I-03; Reaffirmed: CME Rep. 2, A-13)	Sunset; still relevant, but reflected in other, more recent policies, including H-160.950, "Guidelines for Integrated Practice of Physician and Nurse Practitioner"; H-160.906, "Models / Guidelines for Medical Health Care Teams"; and "Code of Medical Ethics 10.5."
H-255.970	Employment of Non-Certified IMGs	Our AMA will: (1) oppose efforts to employ graduates of foreign medical schools who are neither certified by the Educational Commission for Foreign Medical Graduates, nor have met state criteria for full licensure; and (2) encourage states that have difficulty recruiting doctors to underserved areas to explore the expanded use of incentive programs such as the National Health Service Corps or J1 or other visa waiver programs.	Retain; still relevant, with editorial changes as shown below. All physicians practicing medicine should be licensed. The ECFMG (a member of Intealth) is the organization that evaluates the credentials of international physicians, so it is important that all physicians training in non-U.S.-based medical schools be vetted through the ECFMG. "Our AMA will: (1) oppose efforts to employ graduates of foreign medical schools who are neither certified by the ~~Educational Commission for Foreign Medical Graduates,~~ ECFMG (a member of Intealth) nor have met state criteria for full licensure; and

		(Res. 309, A-03; Reaffirmed: CME Rep. 2, A-13)	"(2) encourage states that have difficulty recruiting doctors to underserved areas to explore the expanded use of incentive programs such as the National Health Service Corps or J-1 or other visa waiver programs."
H-255.976	Speech Tests for International Medical Graduates	The AMA encourages state licensing boards to accept ECFMG certification in satisfaction of requirements for demonstrating English language competence. (CME Rep. B, A-93; Reaffirmed: CME Rep. 2, A-03; Reaffirmed: CME Rep. 2, A-13)	Retain, as state medical boards have differing policies. Note editorial change below, to ensure congruence in terminology with the policy above: "The AMA encourages state licensing boards to accept ~~ECFMG~~ certification by the ECFMG (a member of Intealth) as satisfying the ~~in satisfaction of~~ requirements for demonstrating English language competence."
H-255.985	Graduates of Foreign Health Professional Schools	(1) Any United States or alien graduate of a foreign health professional education program must, as a requirement for entry into graduate education and/or practice in the United States, demonstrate entry-level competence equivalent to that required of graduates of United States' programs. Agencies recognized to license or certify health professionals in the United States should have mechanisms to evaluate the entry-level competence of graduates of foreign health professional programs. The level of competence and the means used to assess it should be the same or equivalent to those required of graduates of U.S. accredited programs. (2) All health care facilities, including governmental facilities, should adhere to the same or equivalent licensing and credentialing requirements in their employment practices. (BOT Rep. NN, A-87; Reaffirmed: Sunset Report, I-97; Reaffirmed: Res. 320 and Res. 305, A-03; Reaffirmed: CME Rep. 1, I-03; Reaffirmed: CME Rep. 2, A-13)	Sunset. Still relevant, but already reflected in other policy, such as H-255.988, "AMA Principles on International Medical Graduates," which reads in part: "6. Working with the Accreditation Council for Graduate Medical Education (ACGME) and the Federation of State Medical Boards (FSMB) to assure that institutions offering accredited residencies, residency program directors, and U.S. licensing authorities do not deviate from established standards when evaluating graduates of foreign medical schools." "8. The AMA continues to support the activities of the ECFMG related to verification of education credentials and testing of IMGs." Also superseded by H-255.966, "Abolish Discrimination in Licensure of IMGs," which reads in part as shown (also note editorial change to clause 3, below): "A. State medical boards should ensure uniformity of licensure requirements for IMGs and graduates of U.S. and Canadian medical schools, including eliminating any disparity in the years of graduate medical education (GME) required for licensure and a uniform standard for the allowed number of administrations of licensure examinations. . . ."

			"2. Our AMA will continue to work with the FSMB to encourage parity in licensure requirements for all physicians, whether U.S. medical school graduates or international medical graduates. "3. Our AMA will continue to work with the Educational Commission for Foreign Medical Graduates (a member of Intealth) and other appropriate organizations in developing effective methods to evaluate the clinical skills of IMGs. "4. Our AMA will work with state medical societies in states with discriminatory licensure requirements between IMGs and graduates of U.S. and Canadian medical schools to advocate for parity in licensure requirements, using the AMA International Medical Graduate Section licensure parity model resolution as a resource."
H-275.959	Cognitive Exams	It is the policy of the AMA to oppose the use of cognitive exams as the major means of evaluating a physician's clinical competence. (Sub. Res. 205, A-90; Modified: Sunset Report, I-00; Reaffirmed: CME Rep. 2, A-10; Reaffirmed: CME Rep. 2, A-13)	Sunset; still relevant, but superseded by H-275.916, "Guiding Principles and Appropriate Criteria for Assessing the Competency of Physicians Across the Professional Continuum."
H-275.998	Physician Competence	Our AMA urges: (1) The members of the profession of medicine to discover and rehabilitate if possible, or to exclude if necessary, the physicians whose practices are incompetent. (2) All physicians to fulfill their responsibility to the public and to their profession by reporting to the appropriate authority those physicians who, by being impaired, need help, or whose practices are incompetent. (3) The appropriate committees or boards of the medical staffs of hospitals which have the responsibility to do so, to restrict or remove the privileges of physicians whose practices are known to be incompetent, or whose capabilities are impaired, and to restore such	Retain; still relevant.

		physicians to limited or full privileges as appropriate when corrective or rehabilitative measures have been successful. (4) State governments to provide to their state medical licensing boards resources adequate to the proper discharge of their responsibilities and duties in the recognition and maintenance of competent practitioners of medicine. (5) State medical licensing boards to discipline physicians whose practices have been found to be incompetent. (6) State medical licensing boards to report all disciplinary actions promptly to the Federation of State Medical Boards and to the AMA Physician Masterfile. (Failure to do so simply allows the incompetent or impaired physician to migrate to another state, even after disciplinary action has been taken against him, and to continue to practice in a different jurisdiction but with the same hazards to the public.) (CME Rep. G, A-79; Reaffirmed: CLRPD Rep. B, I-89; Reaffirmed: Sunset Report, A-00; Reaffirmation I-03; Reaffirmed: CME Rep. 2, A-13)	
H-295.900	Creating an Effective Environment for Medical Student Education	1. The AMA encourages the development of a model student orientation program that includes workshops that address health awareness for students and standards of behavior for teachers and learners. 2 .Our AMA will: (A) ask the Liaison Committee on Medical Education to ensure that medical schools have policies to protect medical students from retaliation based on reporting incidents of mistreatment; and (B) through	Sunset. This has already been accomplished, and clause 2 is an LCME requirement, as stipulated in LCME standard 3.6, Student Mistreatment: “A medical school develops effective written policies that define mistreatment, has effective mechanisms in place for a prompt response to any complaints, and supports educational activities aimed at preventing mistreatment. Mechanisms for reporting mistreatment are understood by medical students, including visiting medical students, and ensure that any violations can be registered and investigated without fear of retaliation.”

		the Learning Environment Study, conduct research and disseminate findings on the medical education learning environment including the positive and negative elements of that environment that impact the teacher-learner relationship; and (C) encourage the Association of American Medical Colleges and the American Association of Colleges of Osteopathic Medicine to identify best practices and strategies to assure an appropriate learning environment for medical students. (CME Rep. 9, A-98; Reaffirmed: CME Rep. 2, A-08; Appended: CME Rep. 9, A-13)	
H-295.927	Medical Student Health and Well-Being	The AMA encourages the Association of American Medical Colleges, Liaison Committee on Medical Education, medical schools, and teaching hospitals to address issues related to the health and well-being of medical students, with particular attention to issues such as HIV infection that may have long-term implications for health, disability and medical practice, and consider the feasibility of financial assistance for students with disabilities. (BOT Rep. 1, I-934; Modified with Title Change: CSA Rep. 4, A-03; Reaffirmed: CME Rep. 2, A-13)	Sunset. LCME Element 12.8, "Student Exposure Policies/Procedures," (see below) addresses this policy, except for "feasibility of financial assistance" (in this regard, LCME requires disability insurance for medical students). "A medical school has policies in place that effectively address medical student exposure to infectious and environmental hazards, including the following: - The education of medical students about methods of prevention - The procedures for care and treatment after exposure, including a definition of financial responsibility - The effects of infectious and environmental disease or disability on medical student learning activities "All registered medical students (including visiting students) are informed of these policies before undertaking any educational activities that would place them at risk."
H-295.933	Medical School Affiliations With VA Medical Centers	The AMA will work to ensure that the successful relationships between VA academic medical centers and the nation's medical schools are maintained. (Sub. Res. 313, A-93; Modified: CME Rep. 2, A-03;	Retain, still relevant, with editorial change to title and policy to specify the acronym "VA," as shown below: Medical School Affiliations With Veterans Affairs (VA) Medical Centers

		Reaffirmed: CME Rep. 2, A-13)	"The AMA will work to ensure that the successful relationships between Veterans Affairs (VA) academic medical centers and the nation's medical schools are maintained."
H-295.940	Recruiting Students of Medicine at the Elementary and High School Levels	The AMA will work with state and local medical societies to encourage teachers at primary and secondary schools to alert their students to the potential for professional and personal satisfaction from service to others through a career in medicine. (Res. 319, A-92; Reaffirmed: CME Rep. 2, A-03; Reaffirmed: CME Rep. 2, A-13)	Retain; still relevant, as reflected in the AMA's Doctors Back to School program.
H-295.984	Family Medicine as a Fundamental Subject in Medical Schools	The AMA recommends that U.S. medical schools include family medicine as a clinical subject. (Res. 14, I-84; Reaffirmed: CMS Rep. L, A-93; Reaffirmed: CME Rep. 2, A-03; Reaffirmed: CME Rep. 2, A-13)	Retain; still relevant. As of the 2021-22 academic year, 23 (15 percent) of the 155 LCME-accredited schools did not report that they offered family medicine as a separate required clerkship or as part of a longitudinal integrated clerkship. Family medicine is a required element of all COCA-accredited medical schools.
H-300.964	Medical Ethics and Continuing Medical Education	The AMA encourages accredited continuing medical education sponsors to plan and conduct programs and conferences emphasizing ethical principles in medical decision making. (Res. 323, I-92; Reaffirmed: CME Rep. 2, A-03; Reaffirmed: CME Rep. 2, A-13)	Retain. Still relevant.
H-300.966	Continuing Medical Education for Physicians in the Hospital Setting	It is the policy of the AMA that the continuing medical educational programs offered physicians in the hospital setting be the responsibility of the hospital medical staff and directed by the medical staff as defined in the hospital bylaws. (Res. 318, A-92; Reaffirmed: CME Rep. 2, A-03; Reaffirmed: CME Rep. 2, A-13)	Retain. Still relevant.
H-300.983	Community Hospital Continuing Medical Education	1. The AMA believes that quality, patient-centered, cost-effective continuing medical education is important for hospital medical staffs, and that	Retain; still relevant.

		the cooperative efforts of hospitals, state and county medical societies, and academic medical centers contribute to achieving this goal. 2. Our AMA will advocate for the availability of accessible, affordable, high-quality continuing medical education for small rural and community hospitals. (CME Rep. D, A-85; Reaffirmed by CLRPD Rep. 2, I-95; Reaffirmed: CME Rep. 2, A-05; Appended: Res. 316, A-13)	
H-310.908	Support for Residents and Fellows During Family and Medical Leave Time	Our AMA encourages specialty boards, the Accreditation Council for Graduate Medical Education and residency review committees to study alternative mechanisms and pathways based on competency evaluation to ensure that individuals who have taken family and medical leave graduate as close to their original completion date as possible. (Res. 307, A-13)	Sunset; still relevant, but superseded by and reflected in H-405.960, "Policies for Parental, Family and Medical Necessity Leave."
H-310.913	Physician Extenders	1. In academic environments, our AMA will only support payment models for non-physician practitioners that do not interfere with graduate medical training. 2. Our AMA supports the concept that procedural training is a critical portion of resident education and the augmentation of patient care by non-physician practitioners should not interfere with a resident's ability to achieve competence in the performance of required procedures. (Res. 208, I-10; Appended: CME Rep. 8, A-13)	Retain; still relevant.
H-310.946	Training Physicians in Non-Traditional Sites	It is the policy of the AMA to promote and support the training of physicians in non-traditional sites, including nursing homes. (Res. 301, I-93; Reaffirmed: CME Rep. 2, A-03;	Retain, still relevant, but incorporate into the more expansive Policy H-200.949 (13), "Principles of and Actions to Address Primary Care Workforce," which reads:

		Reaffirmed: CME Rep. 2, A-13)	"13. The curriculum in primary care residency programs and training sites should be consistent with the objective of training generalist physicians. Our AMA will encourage the Accreditation Council for Graduate Medical Education to (a) support primary care residency programs, including community hospital-based programs and those in non-traditional sites, including nursing homes, and (b) develop an accreditation environment and novel pathways that promote innovations in graduate medical education, using progressive, community-based models of integrated care focused on quality and outcomes (such as the patient-centered medical home and the chronic care model)."
H-310.952	Housestaff Input During the ACGME Review Process	The AMA asks its representatives to the Accreditation Council for Graduate Medical Education to support a requirement that site visitors to both residency training programs and institutions conduct interviews with residents, including peer-selected residents, as well as with administrators and faculty. (Res. 314, I-92; Reaffirmed: CME Rep. 2, A-03; Reaffirmed: CME Rep. 2, A-13)	Sunset; this has been accomplished and is in place at the ACGME, through resident surveys during program site visits.
H-310.976	Gender-Based Questioning in Residency Interviews	The AMA (1) opposes gender-based questioning during residency interviews in both public and private institutions for the purpose of sexual discrimination; (2) supports inclusion in the AMA Fellowship and Residency Interactive Database Access (FREIDA) system information on residency Family and Medical Leave policies; and (3) supports monitoring the Accreditation Council for Graduate Medical Education as it proposes changes to the "Common Requirements" and the "Institutional Requirements" of the "Essentials of Accredited Residencies," to ensure that there is no gender-based bias.	Retain clause 1; still relevant, and sunset clauses 2 and 3 for the reasons noted below. Updated version to read: "The AMA opposes gender-based questioning during residency interviews in both public and private institutions for the purpose of sexual discrimination." Sunset clause 2, as this has been accomplished, with FREIDA including program data on the maximum number of paid and unpaid days for family/medical leave as well as a hyperlink to programs' leave policies. Sunset clause 3, as the Council on Medical Education reviews all proposed changes to program and institutional requirements and provides feedback as needed. The ACGME has also placed

		(Res. 125, I-88; Reaffirmed: Sunset Report, I-98; Modified and Reaffirmed: CME Rep. 2, A-08; Reaffirmed: CCB/CLRPD Rep. 4, A-13)	significant emphasis on equity, including the elimination of bias across the board.
H-310.997	Accreditation of Graduate Medical Education Programs	(1) The AMA believes that (a) accreditation and certification programs in graduate medical education should be designed and operated to objectively evaluate the educational quality and content of such programs and to assure a high level of professional training, achievement, and competence; (b) accreditation and certification programs in graduate medical education should not be administered as a means of regulating or restricting the number of physicians entering any specialty or field of medical practice; and (c) qualified physicians who possess the essential prerequisites are entitled to compete for training and subsequently to practice in the specialty or type of practice of their choice upon successful completion of their training. (2) The AMA opposes use of the accreditation and certification process as a means of controlling the number of physicians in any specialty or field of medical practice. (Res. 14, A-82; Reaffirmed: CLRPD Rep. A, I-92; Reaffirmed: CME Rep. 2, A-03; Reaffirmed: CME Rep. 2, A-13)	Retain, still relevant, with editorial changes as shown below, in that (1)(b) and (2) are essentially the same. "~~(1)~~ The AMA believes that (a) accreditation and certification programs in graduate medical education should be designed and operated to objectively evaluate the educational quality and content of such programs and to assure a high level of professional training, achievement, and competence; (b) accreditation and certification programs in graduate medical education should not be administered as a means of regulating or restricting the number of physicians entering any specialty or field of medical practice; and (c) qualified physicians who possess the essential prerequisites are entitled to compete for training and subsequently to practice in the specialty or type of practice of their choice upon successful completion of their training. ~~(2) The AMA opposes use of the accreditation and certification process as a means of controlling the number of physicians in any specialty or field of medical practice.~~"
H-330.950	Post-Licensure Assessment as a Condition for Physician Participation in Medicare	The AMA opposes proposals for periodic post-licensure assessment as a condition for physician participation in the Medicare program or other health-related entitlement program. (Res. 231, I-93; Reaffirmed: BOT Rep. 28, A-03; Reaffirmed: CME Rep. 2, A-13)	Retain; still relevant. The AMA continues to oppose extraneous evaluations of physicians that create burdens and are not based on evidence that they will improve care quality or patient safety. In addition, physicians are already subject to multiple assessments of their competence and ability to practice medicine, through maintaining licensure, certification, and credentials/privileges, such that any additional assessment would be duplicative. Finally, imposing an assessment as a requirement for Medicare

			participation may create additional burden that would drive some physicians to end their Medicare participation, threatening access to care for some of the nation's most vulnerable populations.
H-35.978	Education Programs Offered to, for or by Allied Health Professionals Associated with a Hospital	The AMA encourages hospital medical staffs to have a process whereby physicians will have input to and provide review of education programs provided by their hospital for the benefit of allied health professionals working in that hospital, for the education of patients served by that hospital, and for outpatient educational programs provided by that hospital. (BOT Rep. B, A-93; Adopts Res. 317, A-92; Reaffirmed: CME Rep. 2, A-03; Reaffirmed: CME Rep. 2, A-13)	Retain; still relevant.
H-360.997	Nursing Education	The AMA (1) supports all levels of nursing education, including baccalaureate, diploma, associate degree and practical nursing in order that individuals may be able to choose from a number of alternatives, each of which legitimately fulfills the purpose of meeting the health care needs of the nation; (2) affirms that there is no substitute for bedside teaching and practical learning in any education program for nurses; and (3) recommends strong support of multiple levels of nursing education in order to make available career ladders in the various levels of nursing education without dead-ends or repetitions of education. (Res. 4, A-82; Reaffirmed: CLRPD Rep. A, I-92; Reaffirmed: CME Rep. 2, A-03; Reaffirmed: CME Rep. 2, A-13)	Retain; still relevant.

D-630.974	Health Care Recovery Fund	Our AMA will: (1) convey to the AMA Foundation its desire that medical students, resident physicians and fellows, and young physicians be given special consideration and priority, along with all other physicians, beyond rebuilding medical practices, based on their degree of need, in distributions from any special disaster recovery funds; and (2) work with interested state and national medical specialty societies to publicize the existence of any special AMA Foundation disaster recovery funds and to identify and encourage applications from deserving recipients, especially among those who are medical students, resident physicians and fellows, and young physicians, and that these names be shared with the AMA Foundation as it considers grants from such funds. (Res. 605, A-06; Reaffirmed: CCB/CLRPD Rep. 3, A-12)	Sunset; this has been accomplished.

REPORT 02 OF THE COUNCIL ON MEDICAL EDUCATION (A-23)
Financing Medical Education (Resolution 306-A-22)
(Reference Committee C)

EXECUTIVE SUMMARY

As the cost of medical education continues to rise, it is imperative to understand the factors that impact this investment. These factors include the type of institution one attends, the cost of attendance, and a student's education and noneducation debt. Private institutions tend to cost more than public institutions, with private nonprofit institutions being more expensive than private for-profit institutions. Cost of attendance is determined by the published tuition and required fees; books and supplies; and the weighted average cost for room, board, and other expenses for four years at each institution. Education debt encompasses both premedical and medical education debt. Education debt incurred before starting medical school remains remarkably stable, as is the percentage of graduates reporting such debt. While private medical school graduates are slightly less likely to have debt, their individual debt levels are typically higher than public school graduates as private schools tend to be more expensive to attend than public schools. The Council on Medical Education recognizes that cost and debt is not necessarily a 1:1 relationship and believes these factors should not be conflated.

While costs to attend medical school are rising, another interesting trend is also emerging—a decline in the percentage of graduates who have debt. The proportion of those reporting no debt seems to be clustered among students from wealthy backgrounds. Earlier research supports that household income and education levels are tightly linked in the United States. Specifically, higher levels of education are correlated with higher household income and vice versa.

There are also variations in student indebtedness by race and ethnicity. In 2019, Black allopathic and osteopathic medical graduates had the highest median education debt. Asian allopathic and osteopathic medical graduates had the lowest median education debt. In that same year, 91 percent of Black allopathic medical graduates, 84 percent of Hispanic allopathic medical graduates, and 80 percent of American Indian allopathic medical graduates reported having medical education debt compared to 75 percent of white allopathic medical graduates and 61 percent of Asian allopathic medical graduates. Among all osteopathic graduates who reported debt in 2019, 92 percent were Black, 84 percent were Hispanic, 85 percent were white, and 74 percent were Asian.

While indebtedness impacts most graduates, the majority do not enter loan forgiveness programs. While the time to pay off debt varies, compensation after residency is enough to repay all levels of educational debt. The cost of medical education and student debt are likely to be barriers to diversity in the physician workforce and deterrents for potential applicants with fewer financial resources. However, the cost of medical education does not appear to be a factor in limiting the overall size of the applicant pool as the majority applicants tend to come from backgrounds with higher socioeconomic status.

The Council on Medical Education recommends reaffirming AMA Policy D-305.952, "Medical Student Debt and Career Choice"; amending Policy D-295.316, "Management and Leadership for Physicians"; amending Policy H-305.925, "Principles of and Actions to Address Medical Education Costs and Student Debt"; and adopting new policy encouraging higher utilization of financial information available through medical education organizations in addition to federal, state, and local financial resources.

REPORT OF THE COUNCIL ON MEDICAL EDUCATION

CME Report 02-A-23

Subject: Financing Medical Education (Resolution 306-A-22)

Presented by: John P. Williams, MD, Chair

Referred to: Reference Committee C

American Medical Association (AMA) Policy D-305.951, "Medical Education Debt Cancellation in the Face of a Physician Shortage During the COVID-19 Pandemic," directs our AMA to:

> Study the issue of medical education debt cancellation and consider the opportunities for integration of this into a broader solution addressing debt for all medical students and physicians.

In addition, Resolution 306-A-22, "Creating a More Accurate Accounting of Medical Education Financial Costs," introduced by the Illinois Delegation and the American Society of Anesthesiologists, asked that the AMA "study the costs of medical education, taking into account medical student tuition and accrued loan interest, to come up with a more accurate description of medical education financial costs." This item was referred by the House of Delegates (HOD) to explore the issue of debt cancellation further and develop recommendations for broader solutions to medical student and physician indebtedness. This integrated report is in response to both the policy directive and the referral.

BACKGROUND

The price of medical education

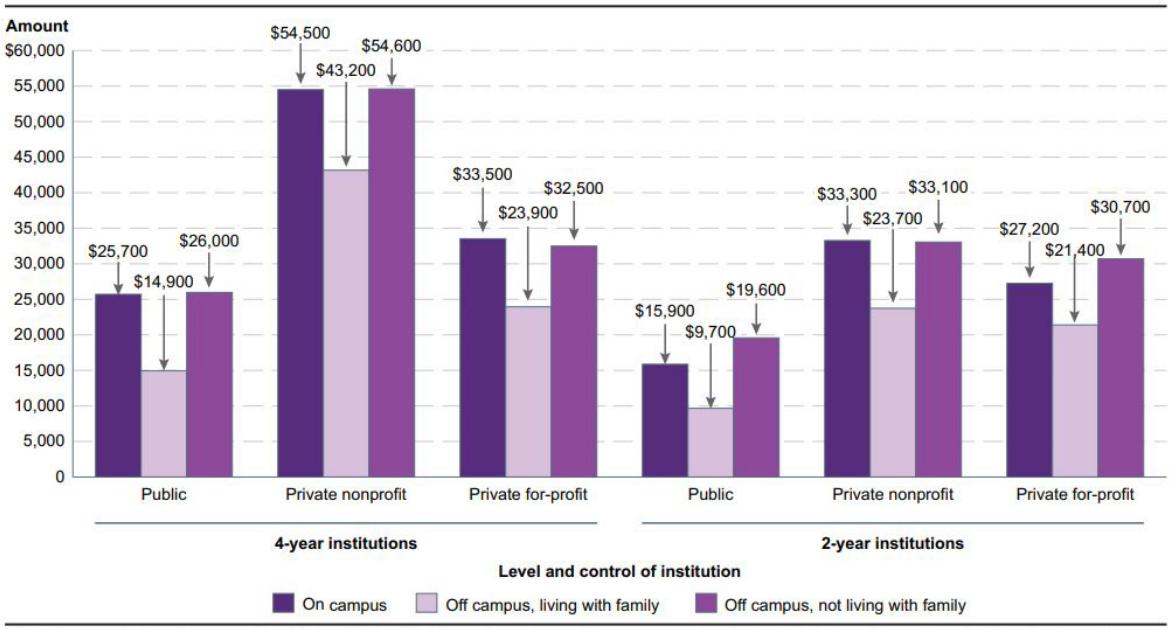
The road to becoming a physician has increasingly become an expensive one, with each step having associated costs. For some, the road includes private tutoring, test preparation courses, and/or postbaccalaureate premedical programs. Beyond tuition and student fees, costs toward becoming a physician also include the Medical College Admission Test® (MCAT®); applications to medical school; the United States Medical Licensing Examination® (USMLE®) and/or the Comprehensive Osteopathic Medical Licensing Examination of the United States (COMLEX-USA); and applications for residency, board certification, and state licensure. Some physicians also assume responsibility for the cost of their education beginning with their undergraduate education; this has been factored into the discussion of premedical education debt to create a more comprehensive description of medical education financial costs. It is also important to emphasize that cost and debt are not necessarily a 1:1 relationship, and the Council believes these factors should not be conflated.

Several studies have attempted to determine the cost of education for medical students. A study conducted in 1997 at the University of Texas-Houston Medical School found that the annual total cost (instructional, educational, and research) of the educational program was $90,660 per student in the 1994-95 academic year.[1] This same study developed a cost-construction model to assess the cost for educating undergraduate medical education (UME) students at the institution. The study

identified the cost of the entire program as well as instructional costs (direct-contact teaching), educational costs (instructional costs plus supervision), and milieu costs (educational costs plus research costs) and provides a glimpse into some of the costs tuition covers. Another study that same year reviewed 20 years of published data and determined that total educational resource costs fell into a range of $72,000 to $93,000 per student per year in 1996 dollars, or approximately $136,800 - $176,700 in 2023.[2]

The National Center for Education Statistics monitors cost trends for undergraduate institutions. Total cost of attendance (COA) is determined by the published tuition and required fees; books and supplies; and the weighted average cost for room, board, and other expenses for four years at each institution. The average COA can be varied when considering a student's living arrangement (e.g., a student may live on campus; off campus with family; or off campus but not with family). To demonstrate the range in COA for students, the average COA for a full-time student enrolled in a baccalaureate program at a four-year public institution living off campus with family was $14,900 in academic year (AY) 2020-2021. In that same year, the average COA for a full-time student enrolled in a baccalaureate program at a four-year private nonprofit living off campus, not with family, was $54,600.[3] Figure 1 further illustrates the range of total costs for baccalaureate programs by type of institution and student living situation.

Figure 1. Average total cost of attending degree-granting institutions for first-time, full-time undergraduate students, by level and control of institution and student living arrangement: Academic year 2020–21. Reprinted from the National Center for Education Statistics. (2020). Price of attending an undergraduate institution. The Condition of Education. Accessed January 2023. https://nces.ed.gov/programs/coe/pdf/2022/cua_508.pdf.



NOTE: Data are for the 50 states and the District of Columbia. The total cost of attending a postsecondary institution includes tuition and required fees; books and supplies; and the average cost for room, board, and other expenses. Student charges data for 2019–20 were collected prior to the outbreak of the coronavirus pandemic and therefore do not reflect any adjustments institutions might have made later in the academic year due to the pandemic. Tuition and fees at public institutions are the lower of either in-district or in-state tuition and fees. Excludes students who previously attended another postsecondary institution or who began their studies on a part-time basis. Data are weighted by the number of students at the institution who were awarded Title IV aid. Title IV aid includes grant aid, work-study aid, and loan aid. Although rounded numbers are displayed, the figures are based on unrounded data.
SOURCE: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System (IPEDS), Winter 2020–21, Student Financial Aid component; and Fall 2020, Institutional Characteristics component. See *Digest of Education Statistics 2021*, table 330.40.

The variation in COA continues through medical school. According to the Association of American Medical Colleges (AAMC), the median four-year COA in 2019 at a public allopathic medical school was $250,222 and $330,180 at a private allopathic medical school.[4] For osteopathic medical colleges, in AY 2021-2022, the average four-year COA at a public osteopathic medical college was $281,946 and $337,144 at a private osteopathic medical college.[5] As of 2022, of the

total 155 allopathic medical schools, 93 are public and 62 are private.[6] Of the 38 accredited colleges of osteopathic medicine, 31 of the schools are private and seven of the schools are public.[7]

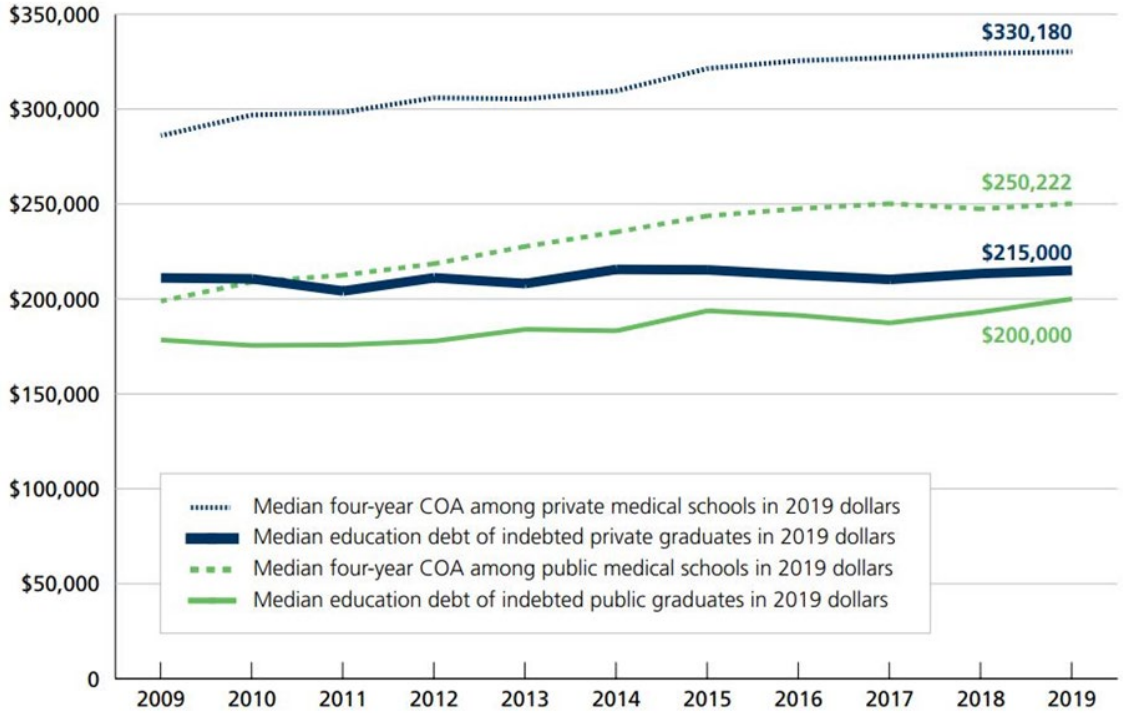
Data on cost of attendance and education debt

The AAMC utilizes several tools to assess trends related to COA and education debt, including the Tuition and Student Fees Questionnaire (TSF), the AAMC Medical School Graduation Questionnaire (GQ) and the Liaison Committee on Medical Education (LCME) Part 1B Student Financial Aid Questionnaire. The TSF is administered to all allopathic medical schools to assess tuition, fees, and health insurance costs for both resident and nonresident students reported by accredited medical education programs. The GQ is administered annually to all graduating medical students to evaluate the medical school programs and medical student experiences, including financial aid and indebtedness. The LCME Part 1B Student Financial Aid Questionnaire is administered annually to allopathic medical schools and incorporated into the AAMC's Medical School Profile System to provide schools with benchmarking reports. The American Association of Colleges of Osteopathic Medicine (AACOM) also assesses trends related to COA and education debt through its Annual Osteopathic Medical School Questionnaire and Graduating Seniors Survey. The Osteopathic Medical School Questionnaire is administered to osteopathic medical colleges.

When discussing medical student debt and the resolution of that debt, the terms loan forgiveness and debt cancelation are often used interchangeably. According to the U.S. Federal Student Aid website, the terms "mean nearly the same thing," with the difference being mainly in the circumstances surrounding the termination of requirements to repay the loan.

The type of school a student attends is a factor in determining their potential debt level. Further, costs of attending medical school may vary by year at the same school due to fluctuation in tuition and fees and tends to be more expensive in the third and fourth year.[8] While private medical school graduates are slightly less likely to have debt, their individual debt levels are typically higher than those of public school graduates as private schools tend to cost more to attend than public schools. Additionally, public schools generally enroll more students. Figure 2 highlights the median COA among private and public schools compared to the education debt of allopathic medical school graduates who attended private and public schools.

Figure 2. Inflation-adjusted median education debt levels and four-year cost of attendance (COA), 2009-2019 (in constant 2019 dollars). Reprinted from Youngclaus J, Fresne JA. Physician Education Debt and the Cost to Attend Medical School: 2020 Update. Washington, DC: AAMC; 2020. Accessed January 2023.

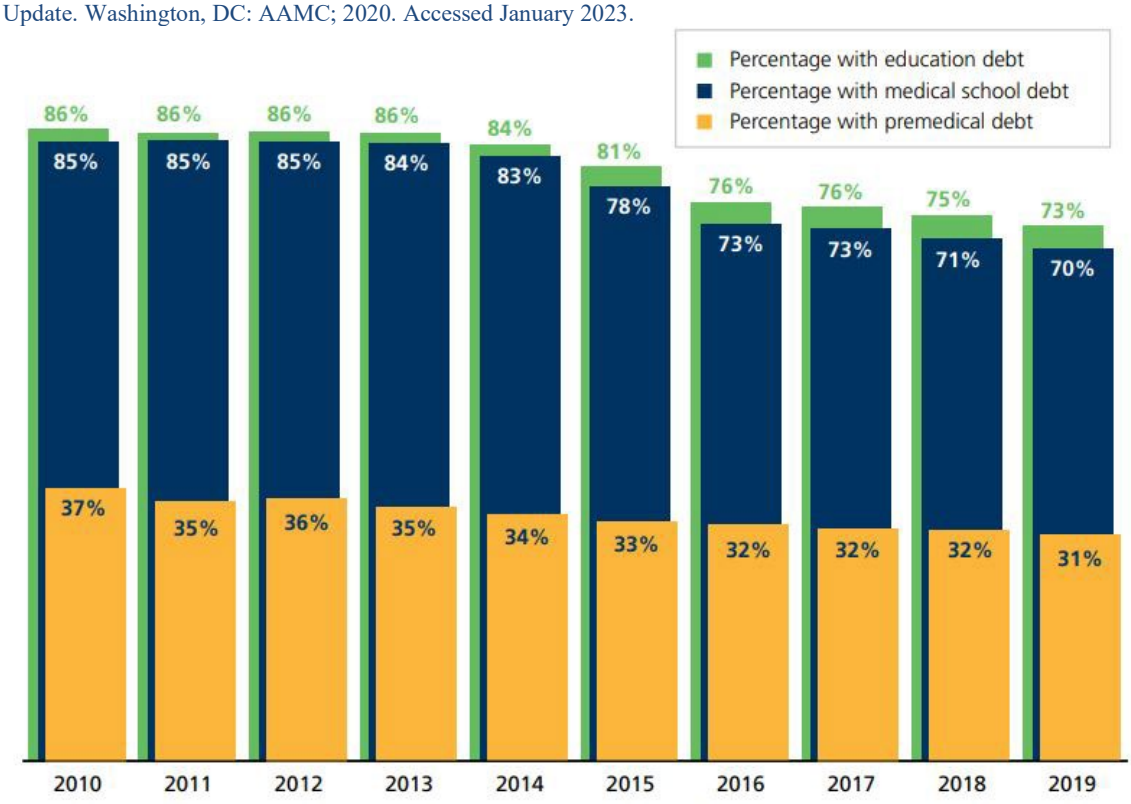


Source: AAMC Medical School Graduation Questionnaire (GQ) and Tuition and Student Fees Questionnaire (TSF).

While costs to attend medical school are rising, another emerging trend indicates a decline in the percentage of graduates who have debt. In 2013, the AAMC found that 14 percent of graduates had no debt. This percentage nearly doubled to 27 percent in 2019.[9] While the proportion of those reporting no debt seems to be clustered among students from wealthy backgrounds, several other variables have been identified to explain this decline, including the impact of new allopathic medical schools, changes to federal loan programs, increased use of scholarships, and changes in self-reported parental income. Additionally, a 2021 report by the Council on Medical Education, "Medical Student Debt and Career Choice," revealed that the data in aggregate may conceal the actual debt load faced by individual students and that a significant subset of students have outside funding sources to offset debt.

Annual levels of premedical school debt, which is education debt incurred before starting medical school, are remarkably stable, as is the percentage of graduates reporting such debt. According to the AAMC GQ, roughly one-third of allopathic medical graduates reported having premedical school debt, and the median premedical school debt amount was exactly $25,000 in each of the past four years. Osteopathic medical graduates reported higher levels of pre-medical education debt: $51,116 in 2021, $51,230 in 2020, and $52,348 in 2019.[10] Figure 3 illustrates the percentage of U.S. allopathic medical school graduates with education, medical school, and premedical school debt from 2010 to 2019.

Figure 3. Percentage of U.S. medical school graduates with education, medical school, and premedical debt, 2010-2019. Reprinted from Youngclaus J, Fresne JA. Physician Education Debt and the Cost to Attend Medical School: 2020 Update. Washington, DC: AAMC; 2020. Accessed January 2023.



Source: AAMC Medical School Graduation Questionnaire (GQ).

The education debt of graduates varies by family income level. In 2019, the AAMC Matriculating Student Questionnaire (MSQ) found that as the level of family income increases, the percentage of funds projected to come from personal/family sources rises and the percentage from loans and scholarships declines. This finding is consistent with data from the AACOM Graduating Seniors Survey. For the past 30 years, data regarding debt and family income have been consistent, with more than half of medical school graduates belonging to families in the top quintile of U.S. family income. Earlier research supports that household income and education levels are tightly linked in the United States. Specifically, higher levels of education are correlated with higher household income and vice versa.[11,12] This is consistent with the 2019 AAMC GQ data, which found that the higher the family income level, the less likely graduates are to have premedical debt. Figure 4 illustrates the relationship between family income and premedical debt.

Figure 4 . Percentage of 2019 medical school graduates with premedical debt and median premedical debt amount by quintile of family income. Reprinted from Youngclaus J, Fresne JA. Physician Education Debt and the Cost to Attend Medical School: 2020 Update. Washington, DC: AAMC; 2020. Accessed January 2023.

Quintile of U.S. Income	Sample in this family income quintile	With premedical debt	Median premedical debt for those with such debt
1st (Lowest)	4%	51%	$30,000
2nd	7%	49%	$27,000
3rd	10%	51%	$25,000
4th	23%	45%	$25,000
5th, top 81%-95%	30%	30%	$25,000
5th (Highest), top 5%	26%	12%	$27,750
Family income not provided	N/A	28%	$27,000

Source: AAMC Medical School Graduation Questionnaire (GQ), 2019, and corresponding Matriculating Student Questionnaire (MSQ). Family income quintiles are based on U.S. Census data.

There are also variations in student indebtedness by race and ethnicity. In 2019, 91 percent of Black allopathic medical graduates, 84 percent of Hispanic allopathic medical graduates, and 80 percent of American Indian allopathic medical graduates reported having medical education debt compared to 75 percent of white allopathic medical graduates and 61 percent of Asian allopathic medical graduates. Among allopathic medical school graduates who reported multiple combinations of race and ethnicity or "other," 71 percent reported having educational debt.[1] In that same year and among all osteopathic graduates who reported debt, 92 percent were Black, 84 percent were Hispanic, 85 percent were white, and 74 percent were Asian. Those who indicated they were American Indian and Alaska Native, Native Hawaiian and Pacific Islander or multiple races were categorized as "all others" and in this group 74 percent reported debt.[5] Due to the limited number of AI/NA osteopathic medical graduates, their median education debt is unknown.

In 2019, Black allopathic and osteopathic medical graduates had the highest median education debt, of $230,000 and $304,908, respectively. Asian allopathic and osteopathic medical graduates had the lowest median education debt, at $180,000 and $229,921, respectively. Hispanic allopathic and osteopathic medical graduates had median education debt of $190,000 and $299,946, respectively. White allopathic and osteopathic medical graduates had a median education debt of $200,000 and $270,000, respectively. AI/AN allopathic medical graduates had the second highest median education debt, at $212,375.[1,5]

The Council on Medical Education recently reported that claims that education debt influences specialty choice are unfounded and "a comprehensive review of the academic literature yielded numerous research reports indicating little to no connection between specialty choice and economic factors such as debt and income potential.[13] Phillips et al. found that "students from lower-income families are more likely to eventually practice primary care. Additionally, public school graduates were 30 percent more likely to choose primary care and twice as likely to select family medicine" as a subspecialty.[14] Additionally, Kahn and Nelling found that "pursuing a medical degree is financially beneficial" and "the numbers of physicians graduating each year has begun to increase due to gradual expansion of class sizes and the establishment of new medical schools."[15] For instance, 16 allopathic medical schools, and 12 osteopathic medical schools have opened in the past 10 years. This finding is further supported by the AAMC and AACOM, as both have witnessed an increase in the number of applicants and overall enrollments over the last decade for allopathic and osteopathic medical school programs.[16,17]

Data from the AAMC demonstrate that the number of applicants to allopathic medical schools has increased from 48,014 in AY 2013-14 to 62,443 in AY2021-22 for an increase of 30 percent. For

the same period, matriculants increased from 20,055 to 22,666 for an increase of 13 percent. The same data demonstrate a matriculant to applicant ratio of 0.41 in 2013-14 decreasing to 0.36 in 2021-22 despite an increase in the number of schools and total number of admissions. Collectively, these data suggest that increasing cost of medical education and rising student debt are not limiting interest or enrollment in medical education.

Data on Noneducation Debt

The AAMC GQ also analyzes noneducation debt in five categories: credit card, car, residency relocation loan, mortgage, and other. The AAMC GQ data from 2019 highlight that noneducation debt is not common and the median amounts (excluding mortgages) are significantly lower than the median education debt amounts. Figure 5 provides an overview of the noneducation debt data for allopathic medical school graduates in 2019.

Figure 5. Noneducation debt data for medical school graduates, 2019. Reprinted from Youngclaus J, Fresne JA. Physician Education Debt and the Cost to Attend Medical School: 2020 Update. Washington, DC: AAMC; 2020. Accessed January 2023.

Type of noneducation debt	Percentage with this debt	Median amount for graduates with this debt
Credit card	13%	$5,000
Car loan	7%	$10,000
Residency relocation loan	3%	$10,000
Other debt	1%	$9,000
Sum of all four nonmortgage debt categories	18%	$10,000
Mortgage	4%	$150,000

Source: AAMC Medical School Graduation Questionnaire (GQ), 2019.

Note: The percentage values were rounded off.

The following combinations were the most reported in the subset of graduates with noneducation debt: 45 percent reported having credit card debt only, 18 percent reported having car debt only, 17 percent reported having both credit card and car debt, and 7 percent reported having both credit card and residency relocation debt. All other possible combinations occurred less than 3 percent of the time. These findings were consistent with the 2018 data. Additionally, nonmortgage, noneducation debt was more common among graduates who identified as married or having dependents. Figure 6 divides allopathic medical graduates into four groups based on their marital status and whether they have dependents and shows their debt characteristics.

Figure 6. Percentage of selected debt characteristics of 2019 graduates by marital and dependents status. Reprinted from Youngclaus J, Fresne JA. Physician Education Debt and the Cost to Attend Medical School: 2020 Update. Washington, DC: AAMC; 2020. Accessed January 2023.

Debt Characteristic	No Dependents (93%)		With Dependents (8%)	
	Single (76%)	Married (17%)	Married (7%)	Single (1%)
Percentage of all nonmortgage, noneducation debt held	55%	21%	21%	3%
Percentage with nonmortgage, noneducation debt	15%	21%	37%	43%
Median nonmortgage, noneducation debt	$8,000	$10,000	$15,000	$15,500
Percentage of females/males	52%/48%	49%/51%	31%/69%	44%/56%
Percentage graduating from public/private medical schools	58%/42%	69%/31%	70%/30%	73%/27%
Percentage of group with education debt	72%	75%	77%	91%
Median education debt of indebted graduates	$200,000	$200,000	$210,000	$250,000

Source: AAMC Medical School Graduation Questionnaire (GQ), 2019.

Note: Nonmortgage, noneducation debt = credit card + car + residency relocation + other. Single = single (never legally married) or divorced, widowed, or separated but still legally married. Married = legally married, common law, or civil union.

Another pattern has emerged while surveying medical education debt. That is, the average level of medical school debt per graduate increases as the types of debt held increases. Only 30 percent of medical school graduates have no medical school debt at all. For those who do have debt, 36 percent have medical school debt only, 19 percent have medical school debt and premedical school debt, and 9 percent have medical school debt, premedical school debt, and noneducation debt. Only 6 percent of graduates have both medical school debt and noneducation debt. Figure 7 shows the average amount of debt among each of these groups.

Figure 7. Average medical school debt by type of debt held by 2019 indebted graduates. Noneducation debt excludes mortgage data and includes credit card, car, residency relocation, and other debt. Not shown are the 30 percent of graduates with no medical school debt. Reprinted from Youngclaus J, Fresne JA. Physician Education Debt and the Cost to Attend Medical School: 2020 Update. Washington, DC: AAMC; 2020. Accessed January 2023.

AACOM monitors non-educational debt in aggregate, categorized by graduates of public and private schools. Table 1 outlines the reported non-educational debt of graduating seniors for the most recent three years for which data are available.

Table 1: Median non-educational debt – graduating seniors

Reported non-educational debt	Debt#			% in debt		
	All schools	Public	Private	All schools	Public	Private
2020-2021	$30,486	$28,011	$30,881	33%	33%	33%
2019-2020	$25,205	$23,518	$25,537	37%	36%	37%
2018-2019	$24,731	$24,834	$24,712	38%	36%	38%

*All debt data are self-reported by respondents of the survey.
#Mean taken from responses greater than zero.

Understanding the impact of accrued interest on debt

Paying off education debt takes a considerable amount of time. A 2019 survey of physicians who had graduated from medical school in 2015 or earlier found that 35 percent had paid off their student loans. Of the respondents that still reported debt, 80 percent had more than $100,000 in debt and 32 percent had more than $250,000.[18] Assessing the impact of accrued interest on education debt is complicated, beginning with interest rates. Congress sets the interest rates for federal student loans, while private lenders establish their own rates. Borrowers also have the option of fixed or variable rates for their loans. Fixed loan rates remain the same for the duration of

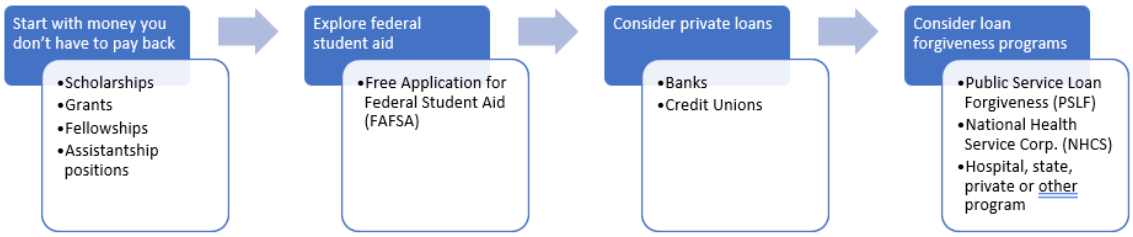
the repayment term. Variable interest rates are based on debt market conditions and can fluctuate over time. Like fixed rate loans, payments on variable rate loans are initially applied to the interest and then the principle. Variable interest rates tend to initially be lower than fixed interest rates, but they can increase significantly depending on market conditions, which makes them a riskier option for borrowers.[19] At the time of this report, federal student loans offer fixed interest rates of 6.54 percent or 7.54 percent, while private lenders offer fixed or variable interest rates ranging between 3.5 to 15 percent.[20] If a borrower is on an extended payment plan or has deferred their payments, the interest continues to accrue. Negative amortization occurs when the monthly interest accruing is higher than the monthly loan payment one makes. Negative amortization can occur during residency; however, with rare exceptions, compensation after residency is enough to repay all levels of educational debt.

Mechanisms to pay for medical education

As discussed in an earlier Council report on medical student debt and career choice, the relative lack of financial education among medical students is a concern. A study of first- and fourth-year medical students by Jayakumar et al. found low levels of financial literacy and lack of preparedness for managing personal finances, including strategies for effective saving and investing and practice management.[21] Equally concerning, the study's authors describe the lack of improvement in financial literacy between entering and graduating medical students, regardless of whether their medical school offered such education.

The AAMC Financial Information, Resources, Services, and Tools (FIRST) program provides free resources, including publications, videos, webinars, infographics, and charts to help students and residents make informed financial decisions related to their education. In addition, colleges and universities have offices of financial aid to support and assist students with their financial concerns. Sallie Mae provides guidance on how to create a plan to pay for aspiring physicians. They offer a three-step approach to help inform students how to control costs associated with medical school. The model below outlines these three steps and includes a fourth step to include loan forgiveness programs, which have been historically underutilized.

Figure 8. Creating a plan to pay for medical school



Source: Sallie Mae, Paying for Medical School, https://www.salliemae.com/student-loans/graduate-school-information/ways-to-pay-for-graduate-school/paying-for-medical-school/. Accessed March 20, 2023.

Loan forgiveness opportunities and limitations

There are a variety of loan forgiveness programs at the federal, state and local level. The most popular program among medical school graduates is the Public Service Loan Forgiveness (PSLF) program. A 2017 Council report, "Expansion of Public Service Loan Forgiveness," provides additional background on the PSLF program, which promises cancellation of remaining federal

student loan balances after 10 years' worth of payments made while employed by an eligible nonprofit or government agency. Payment amounts during the 10-year period are income-based. Physicians can use their time in residency toward the 10-year requirement if they make regular payments during those years and their employer is a nonprofit teaching hospital. Following residency, physicians can continue in a nonprofit for the remaining payment years.

While indebtedness impacts most graduates, the majority do not enter loan forgiveness programs. Only 34 percent of indebted allopathic medical graduates report plans to pursue PSLF. Among indebted osteopathic medical graduates, this percentage is higher, with 50 percent reporting they will participate in a loan forgiveness program and, of those, 70 percent reporting they plan to pursue PSLF.[2,5] Figure 9 breaks down the various details of indebted allopathic medical graduates' plans to enter loan forgiveness programs.

Figure 9. Various Details of Indebted Graduates by Plans to Enter a Loan Forgiveness Program, 2019 Only. Reprinted from Youngclaus J, Fresne JA. Physician Education Debt and the Cost to Attend Medical School: 2020 Update. Washington, DC: AAMC; 2020. Accessed January 2023.

Plan to Enter	Percentage of sample	Median education debt	Percentage of graduates of public/ private schools	Education debt level		
				Lowest third <$160,000	Middle third $160,000-$246,000	Highest third >$246,000
Public Service Loan Forgiveness (PSLF)	34%	$240,000	57%/43%	16%	36%	48%
Other Federal, including National Health Service Corps (NHSC)	3%	$200,000	66%/34%	3%	2%	3%
Hospital, state, private, or other program	8%	$220,000	70%/30%	6%	8%	9%
No plans to enter a program	56%	$175,000	63%/37%	75%	53%	40%
Total percentage, median education debt, and overall percentage of respondents in public/private schools	100%	$200,000	61%/39%	100%	100%	100%

Source: AAMC Medical School Graduation Questionnaire (GQ), 2019.

Note: Total percentages might not equal 100 percent due to rounding. The "Other Federal" category is for the National Health Service Corps (NHSC), the Indian Health Service Corps, the armed services (Navy, Army, Air Force), and other uniformed services. Public Service Loan Forgiveness (PSLF) is a Department of Education program.

The business of medical education

The true cost of undergraduate medical education is difficult to determine for several reasons. Medical education programs are typically imbedded in increasingly complex medical schools. Medical schools often have multiple mission areas and educational programs that share common resources and infrastructure. Faculty within the schools often have roles and responsibilities beyond the educational program, with some having minimal contribution to the education of medical students. The funding models for schools and faculty vary widely, often with funds flowing in opposing directions between medical schools and clinical affiliates. Teaching students,

engagement in faculty governance of the educational program, faculty development as teachers, and other roles result in decreased clinical and research productivity, which in turn results in opportunity cost for the medical school, clinical affiliates, and other providers. The models for funding these opportunity costs vary across and within institutions, rendering an accurate cost analysis difficult at best.

The effects of the increasing cost of medical education and increasing student debt on health care costs in general are even more difficult to determine but may be negligible in the totality of the nation's health care costs. As noted above, there are opportunity costs for clinical faculty who teach medical students by way of decreased productivity. Approximately 18 percent of physicians in the U.S. have faculty appointments,[22] but the number of these physicians who make a significant contribution to medical student teaching is unknown, as is the percentage of their time spent teaching medical students and the funding source for these activities. Further, physician incomes make up only 10 percent of total health care spending.[23] Taking all these factors into consideration, educating medical students probably has minimal impact on current health care costs. There are also direct costs incurred to support medical students in clinical settings, but these are also very small in the context of a health system. Downstream, medical school graduates in clinical practice have little control over clinical income by way of reimbursements, as these are largely set by third party payers. In summary, while the actual effect of the cost of medical student education on the health care system is not known, the contribution is probably relatively small in comparison to other drivers of health care costs.

While the cost of medical education and student debt are likely to be barriers to diversity in the physician workforce and deterrents for potential applicants with fewer financial resources, the cost of medical education does not appear to be a factor in limiting the overall size of the applicant pool.

Return on educational investment for physicians

Another consideration is the reality and perception of educational debt for physicians versus physician income, compared to nonphysicians. According to the U.S. Bureau of Labor Statistics May 2021 report on Occupational Employment and Wage Statistics, the annual mean income for physicians in general was $252,480, with a range across specialties of $198,420 for pediatricians to $353,970 for cardiologists. By comparison, the average income for four-year college degree graduates was $59,600, versus $44,100 for an associate degree and $36,600 for high school graduates.[24] For physicians, using the general annual mean income and a 30-year full-time practice life, the projected lifetime income amount would be $7.574 million in 2021 dollars. By comparison, the average tuition (not COA) for an MBA degree in 2022 was $62,460, and the annual average salary for holders of MBA degrees was approximately $115,000,[25,26] for a projected 30-year lifetime income of $3.450 million in 2022 dollars. Further, debt repayment as a percentage of income is highly likely to decrease over time, as overall income increases with inflation and cost-of-living increases in income, while the amount of fixed loan repayments remains constant. Taken in the context of anticipated income and the effects of inflation on the value and payments of long-term loans, medical education costs and student loans are still a good long-term investment.

Of course, these calculations do not take into consideration the length of the training program and the positive and negative effects of medical education on lifestyle and family. Nor do they factor the disproportionate effect that the cost of medical education, and debt, may have on the development of a diverse workforce. But the data clearly show that the investment in medical education, even with educational debt, is a good one. Given the many benefits, both tangible (e.g., financial) and intangible (societal standing afforded physicians in the U.S.), the medical community and society in general must consider if the cost of medical education and educational

debt of medical students is misaligned with the ability to repay the debt and with the levels of income that typically follow.

SUMMARY AND RECOMMENDATIONS

Like medical school tuition, medical education debt is rising. A closer look at the data demonstrates that rising education debt represents a greater burden for specific demographics of medical school graduates, including those whose are in the lower quintiles of U.S. family income and marginalized racial groups. Efforts to diversify the physician workforce may benefit by focusing support for these groups most negatively impacted, as their experiences may contribute to improve both quality of care and access to care. That said, there is little solid evidence for a strong link between debt and career choice. Although the average amount of education debt for medical school graduates is in the six figures, the most indebted medical school graduates do not enter loan forgiveness programs and can repay any amount borrowed regardless of specialty practice or where they live, in part due to the flexible nature of federal repayment plans that link payments to income and expectations for income after completion of training.[27]

The AMA has extensive policy in support of debt relief programs, including federal programs such as the National Health Service Corps and Indian Health Service, along with comparable programs from states and the private sector, in that "the costs of medical education should never be a barrier to the pursuit of a career in medicine nor to the decision to practice in a given specialty" (H-305.925, "Principles of and Actions to Address Medical Education Costs and Student Debt"). Additionally, the AMA has numerous policies that address medical schools and the cost of medical education, including tuition and loans. Policy H-305.925(16) states that the AMA will continue to study medical education financing, so as to identify long-term strategies to mitigate the debt burden for medical students. The issue of medical education financial costs was recently studied in Council on Medical Education Report 4-N-21, "Medical Student Debt and Career Choice," which was adopted at the November 2021 Meeting. While the AMA also advocates for the "development of personal financial literacy capabilities" (D-295.316, "Management and Leadership for Physicians"), there continues to be a need to increase medical students' financial literacy as they plan for their future. In support of this need, the AMA continues to help individual medical students and physicians gain this financial education by offering medical school debt management solutions through Laurel Road as well as other loans and financial services.

The Council on Medical Education therefore recommends that the following recommendations be adopted in lieu of Resolution 306-A-22 and the remainder of this report be filed:

1. That Policy D-305.952, "Medical Student Debt and Career Choice," be reaffirmed. (Reaffirm HOD Policy)

2. That Policy H-305.925, "Principles of and Actions to Address Medical Education Costs and Student Debt," be amended by addition of a new point (23), to read "(23) continue to monitor opportunities to reduce additional expense burden upon medical students including reduced-cost or free programs for residency applications, virtual or hybrid interviews, and other cost-reduction initiatives aimed at reducing non-educational debt." (Amend HOD Policy)

3. That our AMA encourage medical students, residents, fellows and physicians in practice to take advantage of available loan forgiveness programs and grants and scholarships that have been historically underutilized, as well as financial information and resources available through the Association of American Medical Colleges and American Association of Colleges of Osteopathic Medicine, as required by the Liaison Committee on Medical Education and

Commission on Osteopathic College Accreditation, and resources available at the federal, state and local levels. (New HOD Policy)

4. That Policy D-305.984 (5), "Reduction in Student Loan Interest Rates," be rescinded, as having been fulfilled by this report:

~~"Work with appropriate organizations, such as the Accreditation Council for Graduate Medical Education and the Association of American Medical Colleges, to collect data and report on student indebtedness that includes total loan costs at completion of graduate medical education training."~~ (Rescind HOD Policy)

Fiscal note: minimal

APPENDIX: RELEVANT AMA POLICIES

Principles and Actions to Address Medical Education Costs and Student Debt H-305.925
The costs of medical education should never be a barrier to the pursuit of a career in medicine nor to the decision to practice in a given specialty. To help address this issue, our American Medical Association (AMA) will:
1. Collaborate with members of the Federation and the medical education community, and with other interested organizations, to address the cost of medical education and medical student debt through public- and private-sector advocacy.
2. Vigorously advocate for and support expansion of and adequate funding for federal scholarship and loan repayment programs--such as those from the National Health Service Corps, Indian Health Service, Armed Forces, and Department of Veterans Affairs, and for comparable programs from states and the private sector--to promote practice in underserved areas, the military, and academic medicine or clinical research.
3. Encourage the expansion of National Institutes of Health programs that provide loan repayment in exchange for a commitment to conduct targeted research.
4. Advocate for increased funding for the National Health Service Corps Loan Repayment Program to assure adequate funding of primary care within the National Health Service Corps, as well as to permit: (a) inclusion of all medical specialties in need, and (b) service in clinical settings that care for the underserved but are not necessarily located in health professions shortage areas.
5. Encourage the National Health Service Corps to have repayment policies that are consistent with other federal loan forgiveness programs, thereby decreasing the amount of loans in default and increasing the number of physicians practicing in underserved areas.
6. Work to reinstate the economic hardship deferment qualification criterion known as the “20/220 pathway,” and support alternate mechanisms that better address the financial needs of trainees with educational debt.
7. Advocate for federal legislation to support the creation of student loan savings accounts that allow for pre-tax dollars to be used to pay for student loans.
8. Work with other concerned organizations to advocate for legislation and regulation that would result in favorable terms and conditions for borrowing and for loan repayment, and would permit 100% tax deductibility of interest on student loans and elimination of taxes on aid from service-based programs.
9. Encourage the creation of private-sector financial aid programs with favorable interest rates or service obligations (such as community- or institution-based loan repayment programs or state medical society loan programs).
10. Support stable funding for medical education programs to limit excessive tuition increases, and collect and disseminate information on medical school programs that cap medical education debt, including the types of debt management education that are provided.
11. Work with state medical societies to advocate for the creation of either tuition caps or, if caps are not feasible, pre-defined tuition increases, so that medical students will be aware of their tuition and fee costs for the total period of their enrollment.
12. Encourage medical schools to (a) Study the costs and benefits associated with non-traditional instructional formats (such as online and distance learning, and combined baccalaureate/MD or DO programs) to determine if cost savings to medical schools and to medical students could be realized without jeopardizing the quality of medical education; (b) Engage in fundraising activities to increase the availability of scholarship support, with the support of the Federation, medical schools, and state and specialty medical societies, and develop or enhance financial aid opportunities for medical students, such as self-managed, low-interest loan programs; (c) Cooperate with postsecondary institutions to establish collaborative debt counseling for entering first-year medical students; (d) Allow for flexible scheduling for medical students who encounter financial difficulties that can be remedied only by employment, and consider creating opportunities for paid

employment for medical students; (e) Counsel individual medical student borrowers on the status of their indebtedness and payment schedules prior to their graduation; (f) Inform students of all government loan opportunities and disclose the reasons that preferred lenders were chosen; (g) Ensure that all medical student fees are earmarked for specific and well-defined purposes, and avoid charging any overly broad and ill-defined fees, such as but not limited to professional fees; (h) Use their collective purchasing power to obtain discounts for their students on necessary medical equipment, textbooks, and other educational supplies; (i) Work to ensure stable funding, to eliminate the need for increases in tuition and fees to compensate for unanticipated decreases in other sources of revenue; mid-year and retroactive tuition increases should be opposed.
13. Support and encourage state medical societies to support further expansion of state loan repayment programs, particularly those that encompass physicians in non-primary care specialties.
14. Take an active advocacy role during reauthorization of the Higher Education Act and similar legislation, to achieve the following goals: (a) Eliminating the single holder rule; (b) Making the availability of loan deferment more flexible, including broadening the definition of economic hardship and expanding the period for loan deferment to include the entire length of residency and fellowship training; (c) Retaining the option of loan forbearance for residents ineligible for loan deferment; (d) Including, explicitly, dependent care expenses in the definition of the "cost of attendance"; (e) Including room and board expenses in the definition of tax-exempt scholarship income; (f) Continuing the federal Direct Loan Consolidation program, including the ability to "lock in" a fixed interest rate, and giving consideration to grace periods in renewals of federal loan programs; (g) Adding the ability to refinance Federal Consolidation Loans; (h) Eliminating the cap on the student loan interest deduction; (i) Increasing the income limits for taking the interest deduction; (j) Making permanent the education tax incentives that our AMA successfully lobbied for as part of Economic Growth and Tax Relief Reconciliation Act of 2001; (k) Ensuring that loan repayment programs do not place greater burdens upon married couples than for similarly situated couples who are cohabitating; (l) Increasing efforts to collect overdue debts from the present medical student loan programs in a manner that would not interfere with the provision of future loan funds to medical students.
15. Continue to work with state and county medical societies to advocate for adequate levels of medical school funding and to oppose legislative or regulatory provisions that would result in significant or unplanned tuition increases.
16. Continue to study medical education financing, so as to identify long-term strategies to mitigate the debt burden of medical students, and monitor the short-and long-term impact of the economic environment on the availability of institutional and external sources of financial aid for medical students, as well as on choice of specialty and practice location.
17. Collect and disseminate information on successful strategies used by medical schools to cap or reduce tuition.
18. Continue to monitor the availability of and encourage medical schools and residency/fellowship programs to (a) provide financial aid opportunities and financial planning/debt management counseling to medical students and resident/fellow physicians; (b) work with key stakeholders to develop and disseminate standardized information on these topics for use by medical students, resident/fellow physicians, and young physicians; and (c) share innovative approaches with the medical education community.
19. Seek federal legislation or rule changes that would stop Medicare and Medicaid decertification of physicians due to unpaid student loan debt. The AMA believes that it is improper for physicians not to repay their educational loans, but assistance should be available to those physicians who are experiencing hardship in meeting their obligations.
20. Related to the Public Service Loan Forgiveness (PSLF) Program, our AMA supports increased medical student and physician participation in the program, and will: (a) Advocate that all resident/fellow physicians have access to PSLF during their training years; (b) Advocate against a monetary cap on PSLF and other federal loan forgiveness programs; (c) Work with the United

States Department of Education to ensure that any cap on loan forgiveness under PSLF be at least equal to the principal amount borrowed; (d) Ask the United States Department of Education to include all terms of PSLF in the contractual obligations of the Master Promissory Note; (e) Encourage the Accreditation Council for Graduate Medical Education (ACGME) to require residency/fellowship programs to include within the terms, conditions, and benefits of program appointment information on the employer's PSLF program qualifying status; (f) Advocate that the profit status of a physician's training institution not be a factor for PSLF eligibility; (g) Encourage medical school financial advisors to counsel wise borrowing by medical students, in the event that the PSLF program is eliminated or severely curtailed; (h) Encourage medical school financial advisors to increase medical student engagement in service-based loan repayment options, and other federal and military programs, as an attractive alternative to the PSLF in terms of financial prospects as well as providing the opportunity to provide care in medically underserved areas; (i) Strongly advocate that the terms of the PSLF that existed at the time of the agreement remain unchanged for any program participant in the event of any future restrictive changes; (j) Monitor the denial rates for physician applicants to the PSLF; (k) Undertake expanded federal advocacy, in the event denial rates for physician applicants are unexpectedly high, to encourage release of information on the basis for the high denial rates, increased transparency and streamlining of program requirements, consistent and accurate communication between loan servicers and borrowers, and clear expectations regarding oversight and accountability of the loan servicers responsible for the program; (l) Work with the United States Department of Education to ensure that applicants to the PSLF and its supplemental extensions, such as Temporary Expanded Public Service Loan Forgiveness (TEPSLF), are provided with the necessary information to successfully complete the program(s) in a timely manner; and (m) Work with the United States Department of Education to ensure that individuals who would otherwise qualify for PSLF and its supplemental extensions, such as TEPSLF, are not disqualified from the program(s).

21. Advocate for continued funding of programs including Income-Driven Repayment plans for the benefit of reducing medical student load burden.

22. Strongly advocate for the passage of legislation to allow medical students, residents and fellows who have education loans to qualify for interest-free deferment on their student loans while serving in a medical internship, residency, or fellowship program, as well as permitting the conversion of currently unsubsidized Stafford and Graduate Plus loans to interest free status for the duration of undergraduate and graduate medical education.

Cost and Financing of Medical Education and Availability of First-Year Residency Positions H-305.988

Our AMA:

1. believes that medical schools should further develop an information system based on common definitions to display the costs associated with undergraduate medical education;
2. in studying the financing of medical schools, supports identification of those elements that have implications for the supply of physicians in the future;
3. believes that the primary goal of medical school is to educate students to become physicians and that despite the economies necessary to survive in an era of decreased funding, teaching functions must be maintained even if other commitments need to be reduced;
4. believes that a decrease in student enrollment in medical schools may not result in proportionate reduction of expenditures by the school if quality of education is to be maintained;
5. supports continued improvement of the AMA information system on expenditures of medical students to determine which items are included, and what the ranges of costs are;
6. supports continued study of the relationship between medical student indebtedness and career choice;

7. believes medical schools should avoid counterbalancing reductions in revenues from other sources through tuition and student fee increases that compromise their ability to attract students from diverse backgrounds;
8. supports expansion of the number of affiliations with appropriate hospitals by institutions with accredited residency programs;
9. encourages for profit-hospitals to participate in medical education and training;
10. supports AMA monitoring of trends that may lead to a reduction in compensation and benefits provided to resident physicians;
11. encourages all sponsoring institutions to make financial information available to help residents manage their educational indebtedness; and
12. will advocate that resident and fellow trainees should not be financially responsible for their training.

Reduction in Student Loan Interest Rates D-305.984
1. Our AMA will actively lobby for legislation aimed at establishing an affordable student loan structure with a variable interest rate capped at no more than 5.0%.
2. Our AMA will work in collaboration with other health profession organizations to advocate for a reduction of the fixed interest rate of the Stafford student loan program and the Graduate PLUS loan program.
3. Our AMA will consider the total cost of loans including loan origination fees and benefits of federal loans such as tax deductibility or loan forgiveness when advocating for a reduction in student loan interest rates.
4. Our AMA will advocate for policies which lead to equal or less expensive loans (in terms of loan benefits, origination fees, and interest rates) for Grad-PLUS loans as this would change the status quo of high-borrowers paying higher interest rates and fees in addition to having a higher overall loan burden.
5. Our AMA will work with appropriate organizations, such as the Accreditation Council for Graduate Medical Education and the Association of American Medical Colleges, to collect data and report on student indebtedness that includes total loan costs at completion of graduate medical education training.

Principles of and Actions to Address Primary Care Workforce H-200.949
1. Our patients require a sufficient, well-trained supply of primary care physicians--family physicians, general internists, general pediatricians, and obstetricians/gynecologists--to meet the nation's current and projected demand for health care services.
2. To help accomplish this critical goal, our American Medical Association (AMA) will work with a variety of key stakeholders, to include federal and state legislators and regulatory bodies; national and state specialty societies and medical associations, including those representing primary care fields; and accreditation, certification, licensing, and regulatory bodies from across the continuum of medical education (undergraduate, graduate, and continuing medical education).
3. Through its work with these stakeholders, our AMA will encourage development and dissemination of innovative models to recruit medical students interested in primary care, train primary care physicians, and enhance both the perception and the reality of primary care practice, to encompass the following components: a) Changes to medical school admissions and recruitment of medical students to primary care specialties, including counseling of medical students as they develop their career plans; b) Curriculum changes throughout the medical education continuum; c) Expanded financial aid and debt relief options; d) Financial and logistical support for primary care practice, including adequate reimbursement, and enhancements to the practice environment to ensure professional satisfaction and practice sustainability; and e) Support for research and advocacy related to primary care.

4. Admissions and recruitment: The medical school admissions process should reflect the specific institution's mission. Those schools with missions that include primary care should consider those predictor variables among applicants that are associated with choice of these specialties.
5. Medical schools, through continued and expanded recruitment and outreach activities into secondary schools, colleges, and universities, should develop and increase the pool of applicants likely to practice primary care by seeking out those students whose profiles indicate a likelihood of practicing in primary care and underserved areas, while establishing strict guidelines to preclude discrimination.
6. Career counseling and exposure to primary care: Medical schools should provide to students career counseling related to the choice of a primary care specialty, and ensure that primary care physicians are well-represented as teachers, mentors, and role models to future physicians.
7. Financial assistance programs should be created to provide students with primary care experiences in ambulatory settings, especially in underserved areas. These could include funded preceptorships or summer work/study opportunities.
8. Curriculum: Voluntary efforts to develop and expand both undergraduate and graduate medical education programs to educate primary care physicians in increasing numbers should be continued. The establishment of appropriate administrative units for all primary care specialties should be encouraged.
9. Medical schools with an explicit commitment to primary care should structure the curriculum to support this objective. At the same time, all medical schools should be encouraged to continue to change their curriculum to put more emphasis on primary care.
10. All four years of the curriculum in every medical school should provide primary care experiences for all students, to feature increasing levels of student responsibility and use of ambulatory and community-based settings.
11. Federal funding, without coercive terms, should be available to institutions needing financial support to expand resources for both undergraduate and graduate medical education programs designed to increase the number of primary care physicians. Our AMA will advocate for public (federal and state) and private payers to a) develop enhanced funding and related incentives from all sources to provide education for medical students and resident/fellow physicians, respectively, in progressive, community-based models of integrated care focused on quality and outcomes (such as the patient-centered medical home and the chronic care model) to enhance primary care as a career choice; b) fund and foster innovative pilot programs that change the current approaches to primary care in undergraduate and graduate medical education, especially in urban and rural underserved areas; and c) evaluate these efforts for their effectiveness in increasing the number of students choosing primary care careers and helping facilitate the elimination of geographic, racial, and other health care disparities.
12. Medical schools and teaching hospitals in underserved areas should promote medical student and resident/fellow physician rotations through local family health clinics for the underserved, with financial assistance to the clinics to compensate their teaching efforts.
13. The curriculum in primary care residency programs and training sites should be consistent with the objective of training generalist physicians. Our AMA will encourage the Accreditation Council for Graduate Medical Education to (a) support primary care residency programs, including community hospital-based programs, and (b) develop an accreditation environment and novel pathways that promote innovations in graduate medical education, using progressive, community-based models of integrated care focused on quality and outcomes (such as the patient-centered medical home and the chronic care model).
14. The visibility of primary care faculty members should be enhanced within the medical school, and positive attitudes toward primary care among all faculty members should be encouraged.
15. Support for practicing primary care physicians: Administrative support mechanisms should be developed to assist primary care physicians in the logistics of their practices, along with enhanced

efforts to reduce administrative activities unrelated to patient care, to help ensure professional satisfaction and practice sustainability.
16. There should be increased financial incentives for physicians practicing primary care, especially those in rural and urban underserved areas, to include scholarship or loan repayment programs, relief of professional liability burdens, and Medicaid case management programs, among others. Our AMA will advocate to state and federal legislative and regulatory bodies, among others, for development of public and/or private incentive programs, and expansion and increased funding for existing programs, to further encourage practice in underserved areas and decrease the debt load of primary care physicians. The imposition of specific outcome targets should be resisted, especially in the absence of additional support to the schools.
17. Our AMA will continue to advocate, in collaboration with relevant specialty societies, for the recommendations from the AMA/Specialty Society RVS Update Committee (RUC) related to reimbursement for E&M services and coverage of services related to care coordination, including patient education, counseling, team meetings and other functions; and work to ensure that private payers fully recognize the value of E&M services, incorporating the RUC-recommended increases adopted for the most current Medicare RBRVS.
18. Our AMA will advocate for public (federal and state) and private payers to develop physician reimbursement systems to promote primary care and specialty practices in progressive, community-based models of integrated care focused on quality and outcomes such as the patient-centered medical home and the chronic care model consistent with current AMA Policies H-160.918 and H-160.919.
19. There should be educational support systems for primary care physicians, especially those practicing in underserved areas.
20. Our AMA will urge urban hospitals, medical centers, state medical associations, and specialty societies to consider the expanded use of mobile health care capabilities.
21. Our AMA will encourage the Centers for Medicare & Medicaid Services to explore the use of telemedicine to improve access to and support for urban primary care practices in underserved settings.
22. Accredited continuing medical education providers should promote and establish continuing medical education courses in performing, prescribing, interpreting and reinforcing primary care services.
23. Practicing physicians in other specialties--particularly those practicing in underserved urban or rural areas--should be provided the opportunity to gain specific primary care competencies through short-term preceptorships or postgraduate fellowships offered by departments of family medicine, internal medicine, pediatrics, etc., at medical schools or teaching hospitals. In addition, part-time training should be encouraged, to allow physicians in these programs to practice concurrently, and further research into these concepts should be encouraged.
24. Our AMA supports continued funding of Public Health Service Act, Title VII, Section 747, and encourages advocacy in this regard by AMA members and the public.
25. Research: Analysis of state and federal financial assistance programs should be undertaken, to determine if these programs are having the desired workforce effects, particularly for students from disadvantaged groups and those that are underrepresented in medicine, and to gauge the impact of these programs on elimination of geographic, racial, and other health care disparities. Additional research should identify the factors that deter students and physicians from choosing and remaining in primary care disciplines. Further, our AMA should continue to monitor trends in the choice of a primary care specialty and the availability of primary care graduate medical education positions. The results of these and related research endeavors should support and further refine AMA policy to enhance primary care as a career choice.

Diversity in the Physician Workforce and Access to Care D-200.982
Our AMA will: (1) continue to advocate for programs that promote diversity in the US medical workforce, such as pipeline programs to medical schools; (2) continue to advocate for adequate funding for federal and state programs that promote interest in practice in underserved areas, such as those under Title VII of the Public Health Service Act, scholarship and loan repayment programs under the National Health Services Corps and state programs, state Area Health Education Centers, and Conrad 30, and also encourage the development of a centralized database of scholarship and loan repayment programs; and (3) continue to study the factors that support and those that act against the choice to practice in an underserved area, and report the findings and solutions at the 2008 Interim Meeting.

Strategies for Enhancing Diversity in the Physician Workforce D-200.985
1. Our AMA, independently and in collaboration with other groups such as the Association of American Medical Colleges (AAMC), will actively work and advocate for funding at the federal and state levels and in the private sector to support the following: (a) Pipeline programs to prepare and motivate members of underrepresented groups to enter medical school; (b) Diversity or minority affairs offices at medical schools; (c) Financial aid programs for students from groups that are underrepresented in medicine; and (d) Financial support programs to recruit and develop faculty members from underrepresented groups.
2. Our AMA will work to obtain full restoration and protection of federal Title VII funding, and similar state funding programs, for the Centers of Excellence Program, Health Careers Opportunity Program, Area Health Education Centers, and other programs that support physician training, recruitment, and retention in geographically-underserved areas.
3. Our AMA will take a leadership role in efforts to enhance diversity in the physician workforce, including engaging in broad-based efforts that involve partners within and beyond the medical profession and medical education community.
4. Our AMA will encourage the Liaison Committee on Medical Education to assure that medical schools demonstrate compliance with its requirements for a diverse student body and faculty.
5. Our AMA will develop an internal education program for its members on the issues and possibilities involved in creating a diverse physician population.
6. Our AMA will provide on-line educational materials for its membership that address diversity issues in patient care including, but not limited to, culture, religion, race and ethnicity.
7. Our AMA will create and support programs that introduce elementary through high school students, especially those from groups that are underrepresented in medicine (URM), to healthcare careers.
8. Our AMA will create and support pipeline programs and encourage support services for URM college students that will support them as they move through college, medical school and residency programs.
9. Our AMA will recommend that medical school admissions committees and residency/fellowship programs use holistic assessments of applicants that take into account the diversity of preparation and the variety of talents that applicants bring to their education with the goal of improving health care for all communities.
10. Our AMA will advocate for the tracking and reporting to interested stakeholders of demographic information pertaining to URM status collected from Electronic Residency Application Service (ERAS) applications through the National Resident Matching Program (NRMP).
11. Our AMA will continue the research, advocacy, collaborative partnerships and other work that was initiated by the Commission to End Health Care Disparities.
12. Our AMA opposes legislation that would undermine institutions' ability to properly employ affirmative action to promote a diverse student population.
13. Our AMA will work with the AAMC and other stakeholders to create a question for the AAMC

electronic medical school application to identify previous pipeline program (also known as pathway program) participation and create a plan to analyze the data in order to determine the effectiveness of pipeline programs.

Management and Leadership for Physicians, D-295.316

1. Our AMA will study advantages and disadvantages of various educational options on management and leadership for physicians with a report back to the House of Delegates; and develop an online report and guide aimed at physicians interested in management and leadership that would include the advantages and disadvantages of various educational options.
2. Our AMA will work with key stakeholders to advocate for collaborative programs among medical schools, residency programs, and related schools of business and management to better prepare physicians for administrative, financial and leadership responsibilities in medical management.
3. Our AMA: (a) will advocate for and support the creation of leadership programs and curricula that emphasize experiential and active learning models to include knowledge, skills and management techniques integral to achieving personal and professional financial literacy and leading interprofessional team care, in the spirit of the AMA's Accelerating Change in Medical Education initiative; and (b) will advocate with the Liaison Committee for Medical Education, Association of American Medical Colleges and other governing bodies responsible for the education of future physicians to implement programs early in medical training to promote the development of leadership and personal and professional financial literacy capabilities.
4. Our AMA will: (a) study the extent of the impact of AMA Policy D-295.316, “Management and Leadership for Physicians,” on elective curriculum; and (b) expand efforts to promote the tenets of health systems science to prepare trainees for leadership roles and address prevalent challenges in the practice of medicine and public health.

REPORT OF THE COUNCIL ON MEDICAL EDUCATION

CME Report 03-A-23

Subject: Financial Burdens and Exam Fees for International Medical Graduates (Resolution 305-A-22)

Presented by: John P. Williams, MD, Chair

Referred to: Reference Committee C

At the 2022 Annual Meeting of the American Medical Association (AMA) House of Delegates (HOD), Resolution 305-A-22 was introduced by the Resident and Fellow Section. It asks:

> That our American Medical Association work with all relevant stakeholders to reduce application, exam, licensing fees and related financial burdens for international medical graduates (IMGs) to ensure cost equity with U.S. MD and DO trainees (Directive to Take Action); and be it further
>
> That our AMA amend current policy H-255.966, "Abolish Discrimination in Licensure of IMGs," by addition to read as follows:
>
> 2. Our AMA will continue to work with the FSMB to encourage parity in licensure requirements, and associated costs, for all physicians, whether U.S. medical school graduates or international medical graduates. (Modify Current HOD Policy)

Testimony on this item noted concern for an unintended consequence that could stimulate debate on the total costs of medical education, of which licensing fees constitute a small portion. The Council on Medical Education offered substitute language for the first resolve, asking the AMA to study the most equitable approach to achieving parity between U.S. MD and DO trainees and international medical graduates with regard to application, exam, and licensing fees and related financial burdens; the Council also suggested that the second resolve not be adopted. The Reference Committee supported study and encouraged the Council to consider the presence and nature of varying application and examination costs for U.S. medical graduate and IMG applicants. The HOD agreed, and this item was referred for study.

This report is a result of that referral. It aims to explain the steps an IMG must take to practice in the U.S. and related financial burdens to obtaining the ability to practice in the U.S., compare these IMG costs to that of non-IMG MD and DO trainees, and offer recommendations to address cost disparities.

BACKGROUND

An international medical graduate (IMG) is defined as a "physician who received a basic medical degree from a medical school located outside the United States and Canada that is not accredited by a U.S. accrediting body, the Liaison Committee on Medical Education, or the American

Osteopathic Association."[1] It is the location/accreditation of the medical school that determines if the graduate is an IMG (as opposed to the citizenship of the physician). Thus, U.S. citizens who graduated from medical schools outside the United States and Canada are considered IMGs, while non-U.S. citizens who graduated from medical schools in the United States and Canada are not considered IMGs.

A recent report from the Council on Medical Education, "Expediting Entry of Qualified IMG Physicians to U.S. Medical Practice" (CME Report 4-J-21) states, "IMGs currently represent a quarter of the physician workforce and physicians-in-training in the United States. They have long been an integral part of the U.S. health care system, contributing substantially to primary care disciplines and providing care to underserved populations, and their foreign language proficiency can be invaluable when communicating with patients from the same country of origin. The diversity of IMGs contributes to the many ethnicities and cultures represented in the health care workforce. This diversity is likely to be a factor enhancing health outcomes, considering the equally diverse nature of the U.S. patient population."[2]

Further, this Council report indicates that compared with U.S. medical school graduates, IMGs provide care to a disproportionate number of socioeconomically disadvantaged patients, and certain states and specialties disproportionately depend on these physicians. These physicians play a critical role in providing health care in areas of the country with higher rates of poverty and chronic disease. Many IMGs have been practicing at institutions that are on the front line of the COVID-19 pandemic. The Health Resources and Services Administration (HRSA) offers a map of Medically Underserved Areas/Populations (MUA/P). The Association of American Medical Colleges (AAMC) State Physician Workforce Data Report provides related information.

While the intent of this report is to address application, exam, and licensing fees and related financial burdens for IMGs as compared to U.S. medical school trainees, it is important to note that U.S. trainees incur costs that IMGs may not. For example, the cost to maintain Liaison Committee on Medical Education (LCME) or Commission on Osteopathic College Accreditation (COCA) and Accreditation Council for Graduate Medical Education (ACGME) accreditation may be passed onto U.S. trainees in their medical school tuition. This is a cost not borne by foreign medical schools, although they may also have accreditation costs related to their own countries.

DISCUSSION

The pathway to medical licensure in the U.S. for all trainees involves many steps with specific timelines and deadlines. For IMGs, it is even more complicated. Some IMGs have attended private medical schools outside the U.S., while others have attended public medical schools, resulting in varied costs. Further, there have been problems with credentialing and primary source verification from some countries. The Council on Medical Education has authored a report for the Annual 2023 meeting addressing these challenges for IMGs resulting from international conflict that will provide more detail on these issues.

Before addressing the cost differences between IMGs vs U.S. medical school graduates, it is important to note that costs between MD and DO applicants to GME programs also vary. This problem was recently addressed in an AMA issue brief entitled "Single Pathway to Licensure." In addition, there are further cost differences for IMGs. For example, the United States Medical Licensing Examination® (USMLE®) Steps 1 and 2 cost IMGs $1,000[3] per exam, versus $660[4] for MD students and $715[5] for DO students. IMGs also pay international surcharges related to Steps 1 and 2 as well as application and certification fees from Educational Commission for Foreign

Medical Graduates (ECFMG, a member of Intealth). See Appendix A for a more detailed review of this information.

The Federation of State Medical Boards (FSMB) provides a useful visual aid illuminating the pathway to licensure for U.S. MD and DO students and IMGs; it also includes definitions of the various related organizations, their acronyms, and links to their websites. In addition to these required steps outlined in the FSMB guide, there are many associated costs, including exam preparations and travel. When it comes to licensure, there is cost variance across states, independent of U.S. medical graduate or IMG status. Additionally, there may be different threshold qualifications for IMGs that could have their own costs[6] along with additional steps for IMGs. For example, Michigan requires IMGs seeking licensure by endorsement to have an existing license from another U.S. jurisdiction. North Carolina and New York require IMGs to have a profile set up with the FSMB Federation Credentials Verification Service.[7]

Appendix A has further detail as to the costs of the steps necessary to pursue medical education and training, as well as additional associated costs and how they vary among MD students, DO students, and IMGs. Besides the steps described in this Appendix, non-U.S. citizen IMGs undergo additional hurdles that U.S. citizen MD and DO students do not, such as visa applications for non-citizens and tests of English language proficiency.

Visa process and barriers

Approximately 50 percent of IMGs in GME are U.S. citizens or permanent residents.[8] The remaining IMGs need to obtain a visa to enter the U.S. to train and/or practice medicine. This is also true for the 0.6 percent of students in U.S. medical schools that are non-U.S. citizens.[9] For non-citizen medical school graduates, the following protocols must be accomplished:

- The U.S. employer must obtain foreign labor certification from the U.S. Department of Labor (DOL), prior to filing a petition with U.S. Citizenship and Immigration Services (USCIS).
- The USCIS must approve the petition or application (The required petition or application depends on the visa category applied for).
- The program approval must be entered in the Student and Exchange Visitor Information System (SEVIS) of the U.S. Immigration and Customs Enforcement (ICE).

Foreign physicians can work in the U.S. on four major types of visas: H-1B, J-1, O-1, and TN; the J-1 Exchange Visitor program and the H-1B Temporary Worker classification are the most common. The AMA's IMG toolkit provides additional information to understand the types of visas. Once obtained, all visas need to be renewed for the duration of residency and fellowship training, and each visa type has a different renewal schedule.

In addition to the challenges and costs of the visa application process, there have been recent political changes and public health emergencies that have caused further delays and compounded expenses. For example, on Jan 27, 2017, former President Donald J. Trump signed an executive order, "Protecting the Nation from Foreign Terrorist Entry into the United States," that resulted in travel bans impacting many IMGs and their ability to travel to the U.S. The AMA raised its concerns to the Department of Homeland Security and others, given the detrimental impact on the health care workforce and access to care. During his first day in office, President Biden issued a proclamation on "Ending Discriminatory Bans on Entry to The United States" to revoke his predecessor's Executive Order. Also, the COVID-19 pandemic impacted many IMGs by causing additional delays in travel and the processing of documents that affected their ability to start their residency, continue their training or practice, or transition from training to practice. On January 25,

2021, President Biden issued a proclamation on "the Suspension of Entry as Immigrants and Non-Immigrants of Certain Additional Persons Who Pose a Risk of Transmitting Coronavirus Disease." The Council on Medical Education has been attentive to such issues, with related reports released in 2010 and 2017, "Rationalize Visa and Licensure Process for IMG Residents" (CME 11-A-10) and "Impact of Immigration Barriers on the Nation's Health" (CME 3-I-17).

English language proficiency

Since the removal of the Clinical Skills exam component of the USMLE, IMGs are now required to prove their ability to communicate effectively in English by passing the Occupational English Test (OET). The OET is an English language test designed for health care professionals, owned by Cambridge Assessment English and the Box Hill Institute. OET has been developed to cover 12 different health care professions, including medicine. The test assesses language skills in listening, reading, writing, and speaking, utilizing typical communication scenarios from the health care industry. OET is recognized by health care organizations, hospitals, universities, boards, and councils across the world including the U.S. Passing the OET is a requirement for certification by ECFMG for all IMGs, regardless of country of origin and currently costs $455[10]; see Appendix A.

Key stakeholders

The ECFMG provides IMGs with the process for certification before they enter U.S. GME. This certification is a requirement for IMGs to take Step 3 of USMLE and to obtain an unrestricted license to practice medicine in the U.S. ECFMG programs and web services assist IMGs with the visa process, applying for GME, and verification services to obtain primary-source verification of credentials.

The Federation of State Medical Boards (FSMB) supports the state and territorial medical boards in the U.S. that license, discipline, and regulate physicians and other health care professionals. This includes exam services related to USMLE Step 3 and the Special Purpose Examination (SPEX®), as well as credentialing and licensure services. According to the FSMB, SPEX is an examination of "current knowledge requisite for the general, undifferentiated practice of medicine. State boards may require SPEX for endorsement of licensure, reinstatement of a license, or reactivation of a license after a period of inactivity."[11] The FSMB has developed a useful table of state-by-state information regarding licensure of IMGs, updated in August 2022.

American Medical Association

The AMA advocates at the federal and state levels to inform, guide, and generate support for policies that advance initiatives addressing the concerns most relevant to all physicians. Examples of current initiatives relevant to IMGs include supporting the Conrad 30 waiver program, advocating to Congress about the importance of IMGs in the physician workforce, and vetting legislation and monitoring regulations related to IMGs. At the 2023 AMA Advocacy Agenda webinar in January, hosted by the Board of Trustees, AMA staff leaders spoke to the importance of advancing bills to support IMGs.

The AMA's International Medical Graduates Section (IMGS) advocates for issues that impact IMGs, provides resources and assistance, and gives voice and representation to IMGs in the AMA House of Delegates. Resources for IMGs from the section include toolkits, FAQs, and a listing of observership programs, as well as policy and advocacy opportunities.

In 2022, the Council on Medial Education published an issue brief, "Support for IMGs practicing in the US," which addresses potential alternative pathways for licensure for IMGs from select countries including recognition of residency training outside the United States with completion of

at least one year of graduate medical education in an accredited U.S. program and unfettered travel for IMGs for the duration of their legal stay in the U.S. in order to complete their residency or fellowship training to prevent disruption of patient care.

RELEVANT AMA POLICIES

The AMA has a number of policies that demonstrate strong support for IMGs during and after training, as well as for those who do not match, as provided in Appendix B. For example:

- Policy H-255.988, "AMA Principles on International Medical Graduates," lists the AMA's position on key IMG issues.
- Policy H-255.966, "Abolish Discrimination in Licensure of IMGs," encourages the FSMB and state medical boards to evaluate the progress of programs aimed at reducing barriers to licensure—including successes, failures, and barriers to implementation.
- Policy D-310.977, "National Resident Matching Program Reform," encourages the ECFMG and other interested stakeholders to study the personal and financial consequences of ECFMG-certified U.S. IMGs who do not match.

SUMMARYAND RECOMMENDATIONS

IMGs face costly and time-consuming steps in their pursuit of U.S. medical training, licensure and practice that are not required of their U.S. MD and DO counterparts. These costs can present barriers and delays to their training and practice that impact IMGs, their training programs and employers, and possibly the health of patients who rely on them for care. Key stakeholders, including the AMA, recognize the additional challenges IMGs face and have been engaged in assisting IMGs in meeting these challenges. The AMA continues to be engaged in such efforts.

The Council on Medical Education therefore recommends that the following recommendations be adopted in lieu of Resolution 305-A-22, and the remainder of this report be filed:

1. That our American Medical Association (AMA) encourage key stakeholders, such as the National Board of Medical Examiners, Federation of State Medical Boards, Educational Commission for Foreign Medical Graduates (a member of Intealth), Cambridge Assessment English and Box Hill Institute, and others to (a) study the most equitable approach for achieving parity across U.S. MD and DO trainees and international medical graduates with regard to application, exam, and licensing fees and related financial burdens; and (b) share this information with the medical education and IMG communities. (Directive to Take Action)

2. That our AMA encourage relevant stakeholders to work together to achieve cost equivalency for exams required of all medical students and trainees, including IMGs. (Directive to Take Action)

3. That AMA policy H-255.988, "AMA Principles on International Medical Graduates," be reaffirmed. (Reaffirm HOD Policy)

Fiscal note: $1,000

APPENDIX A

Medical Education steps and associated costs, 2022-2023

Requirement	MD	DO	IMG	Associated costs
Undergraduate program (average 4 years)	Tuition, books, and related fees. Completion of bachelor's degree, inclusive of prerequisite courses.		• Some countries offer undergraduate programs at no cost. • Some countries allow students to go directly to medical school after high school (i.e., no undergraduate).	Expenses related to travel, housing, meals, health care.
Medical College Admissions Test® (MCAT®)	$330 standard fee $135 FAP* fee $120 nonrefundable international fee (for examinees testing outside the U.S., Canada, or U.S. Territories; in addition to the standard fee).		N/A	Expenses related to test preparation tools/courses
Occupational English Test® (OET)	None	None	$455[d]	Expenses related to test preparation, travel, lodging, etc.
Primary medical school application fee	American Medical College Application Service® (AMCAS®): $170 first school and $43 for each additional school. Some schools do not use AMCAS.	American Association of Colleges of Osteopathic Medicine Application Service (AACOMAS): $198 first school and $50 for each additional school.	N/A	Expenses related to application preparation tools, college service fees (e.g., transmit transcript and/or letters of recommendation.
Secondary application fee	Average $50-100 per school		N/A	

Access to database about medical schools	Many applicants purchase a subscription to Medical School Admission Requirements® (MSAR®) database to learn detailed information about allopathic medical schools. $28 for one-year, $36 for 2 years. Free for FAP*.	The free Choose DO Explorer allows applicant to learn detailed information about osteopathic medical schools.	N/A	
Medical school interviews	Costs may vary depending on whether the interview is virtual or in person. If in person, costs include mode of travel, lodging, attire, and meals per interview location. Costs for virtual interviews include the cost of internet access and the use of a computer or other electronic device.			
Medical school (average 4 years)	Tuition, books, and related fees — inclusive of medical school costs to achieve LCME accreditation.	Tuition, books, and related fees — inclusive of medical school costs to achieve COCA accreditation.	Tuition, books, and related fees — may include medical school costs to achieve accreditation.	Expenses related to travel, housing, meals, health care.
USMLE Step 1/ COMLEX-USA Level 1	$660[4]	$715[5]	• $1,000[3]: exam fees for Step 1 and Step 2 for each exam registration. • $195: Step 1 International Test Delivery surcharge. • $220: Step 2 CK International Test Deliver Surcharge. Additional fees for ECFMG exam chart, Clinical Skills Assessment (CSA) history chart.	Expenses related to preparation tools for the United States Medical Licensing Examination (USMLE) or Comprehensive Osteopathic Medical Licensing Examination of the United States (COMLEX-USA), extension of eligibility period, rescheduling fee, score recheck, transcript, etc.
USMLE Step 2 CK/ COMLEX-USA Level 2-CE	$660[4]	$715[5]		

USMLE Step 3/ COMLEX-USA Level 3	$915	$910	$915 (USMLE Step 3 required for training/practice in US).	
Application for Pathway for ECFMG certification for Match	None	None	$925 Note: Canadian medical school graduates do not need to obtain ECFMG certification since the schools are LCME accredited until June 30, 2025. After such time, graduates will have to be ECFMG certified.	$250 medical school transcript.
ECFMG certification	None	None	$160	$370 annual application fee for J-1 Visa waiver sponsorship for non-U.S. citizens or permanent residents. Additional $220 SEVIS fee, payable to the Department of Homeland Security, is required of initial applicants for J-1 sponsorship.
Application for licensure in state(s) of intended practice	Licensure requirements for domestic and international medical graduates differ between the states.			Expenses related to proof of education, training and licensure exam completion, dues structure, maintenance of licensure, continuing medical education.
Electronic Residency Application Services® (ERAS®)	• $99 (up to 10 programs) • $19 each (11-20) • $23 each (21-30) • $26 each (31 or more)			$165 ERAS token, $80 transcript assessment.

Residency (average 3-7 years)	Varies	Varies Note: All state licensing jurisdictions require a graduate of a foreign medical school to complete at least one year of accredited U.S. or Canadian graduate medical education before licensure.	Expenses related to relocation, travel, housing.
ABMS board certification	Member board certification exam fees vary per board. Some physicians may pursue more than one board.		Expenses related to proof of medical degree from a qualified medical school, completion of 3-5 years of full-time experience in an ACGME-accredited residency program, unrestricted medical license to practice in the U.S. or Canada, continuing board certification and/or recertification.
Fellowship (average 1-3 years)	Varies		Expenses related to relocation, travel, housing.
Credential verification for practice	Many employers require proof of credentials.		

*The AAMC Fee Assistance Program (FAP) assists those who, without financial assistance, would be unable to take the Medical College Admission Test® (MCAT®), apply to medical schools that use the American Medical College Application Service® (AMCAS®), and more. Participation in this program may decrease or eliminate fees above. AACOM has a similar program called Fee Waiver Program.

APPENDIX B

Relevant AMA Policy

H-255.988, AMA Principles on International Medical Graduates
Our AMA supports:
1. Current U.S. visa and immigration requirements applicable to foreign national physicians who are graduates of medical schools other than those in the United States and Canada.
2. Current regulations governing the issuance of exchange visitor visas to foreign national IMGs, including the requirements for successful completion of the USMLE.
3. The AMA reaffirms its policy that the U.S. and Canada medical schools be accredited by a nongovernmental accrediting body.
4. Cooperation in the collection and analysis of information on medical schools in nations other than the U.S. and Canada.
5. Continued cooperation with the ECFMG and other appropriate organizations to disseminate information to prospective and current students in foreign medical schools. An AMA member, who is an IMG, should be appointed regularly as one of the AMA's representatives to the ECFMG Board of Trustees.
6. Working with the Accreditation Council for Graduate Medical Education (ACGME) and the Federation of State Medical Boards (FSMB) to assure that institutions offering accredited residencies, residency program directors, and U.S. licensing authorities do not deviate from established standards when evaluating graduates of foreign medical schools.
7. In cooperation with the ACGME and the FSMB, supports only those modifications in established graduate medical education or licensing standards designed to enhance the quality of medical education and patient care.
8. The AMA continues to support the activities of the ECFMG related to verification of education credentials and testing of IMGs.
9. That special consideration be given to the limited number of IMGs who are refugees from foreign governments that refuse to provide pertinent information usually required to establish eligibility for residency training or licensure.
10. That accreditation standards enhance the quality of patient care and medical education and not be used for purposes of regulating physician manpower.
11. That AMA representatives to the ACGME, residency review committees and to the ECFMG should support AMA policy opposing discrimination. Medical school admissions officers and directors of residency programs should select applicants on the basis of merit, without considering status as an IMG or an ethnic name as a negative factor.
12. The requirement that all medical school graduates complete at least one year of graduate medical education in an accredited U.S. program in order to qualify for full and unrestricted licensure. State medical licensing boards are encouraged to allow an alternate set of criteria for granting licensure in lieu of this requirement: (a) completion of medical school and residency training outside the U.S.; (b) extensive U.S. medical practice; and (c) evidence of good standing within the local medical community.
13. Publicizing existing policy concerning the granting of staff and clinical privileges in hospitals and other health facilities.
14. The participation of all physicians, including graduates of foreign as well as U.S. and Canadian medical schools, in organized medicine. The AMA offers encouragement and assistance to state, county, and specialty medical societies in fostering greater membership among IMGs and their participation in leadership positions at all levels of organized medicine, including AMA committees and councils, the Accreditation Council for Graduate Medical Education and its review committees, the American Board of Medical Specialties and its specialty boards, and state boards of medicine, by providing guidelines and non-financial incentives, such as recognition for

outstanding achievements by either individuals or organizations in promoting leadership among IMGs.
15. Support studying the feasibility of conducting peer-to-peer membership recruitment efforts aimed at IMGs who are not AMA members.
16. AMA membership outreach to IMGs, to include a) using its existing publications to highlight policies and activities of interest to IMGs, stressing the common concerns of all physicians; b) publicizing its many relevant resources to all physicians, especially to nonmember IMGs; c) identifying and publicizing AMA resources to respond to inquiries from IMGs; and d) expansion of its efforts to prepare and disseminate information about requirements for admission to accredited residency programs, the availability of positions, and the problems of becoming licensed and entering full and unrestricted medical practice in the U.S. that face IMGs. This information should be addressed to college students, high school and college advisors, and students in foreign medical schools.
17. Recognition of the common aims and goals of all physicians, particularly those practicing in the U.S., and support for including all physicians who are permanent residents of the U.S. in the mainstream of American medicine.
18. Its leadership role to promote the international exchange of medical knowledge as well as cultural understanding between the U.S. and other nations.
19. Institutions that sponsor exchange visitor programs in medical education, clinical medicine and public health to tailor programs for the individual visiting scholar that will meet the needs of the scholar, the institution, and the nation to which he will return.
20. Informing foreign national IMGs that the availability of training and practice opportunities in the U.S. is limited by the availability of fiscal and human resources to maintain the quality of medical education and patient care in the U.S., and that those IMGs who plan to return to their country of origin have the opportunity to obtain GME in the United States.
21. U.S. medical schools offering admission with advanced standing, within the capabilities determined by each institution, to international medical students who satisfy the requirements of the institution for matriculation.
22. The Federation of State Medical Boards, its member boards, and the ECFMG in their willingness to adjust their administrative procedures in processing IMG applications so that original documents do not have to be recertified in home countries when physicians apply for licenses in a second state.
23. Continued efforts to protect the rights and privileges of all physicians duly licensed in the U.S. regardless of ethnic or educational background and opposes any legislative efforts to discriminate against duly licensed physicians on the basis of ethnic or educational background.
24. Continued study of challenges and issues pertinent to IMGs as they affect our country's health care system and our physician workforce.
25. Advocacy to Congress to fund studies through appropriate agencies, such as the Department of Health and Human Services, to examine issues and experiences of IMGs and make recommendations for improvements.

H-255.966, Abolish Discrimination in Licensure of IMGs
1. Our AMA supports the following principles related to medical licensure of international medical graduates (IMGs):
A. State medical boards should ensure uniformity of licensure requirements for IMGs and graduates of U.S. and Canadian medical schools, including eliminating any disparity in the years of graduate medical education (GME) required for licensure and a uniform standard for the allowed number of administrations of licensure examinations.
B. All physicians seeking licensure should be evaluated on the basis of their individual education, training, qualifications, skills, character, ethics, experience and past practice.

C. Discrimination against physicians solely on the basis of national origin and/or the country in which they completed their medical education is inappropriate.
D. U.S. states and territories retain the right and responsibility to determine the qualifications of individuals applying for licensure to practice medicine within their respective jurisdictions.
E. State medical boards should be discouraged from a) using arbitrary and non-criteria-based lists of approved or unapproved foreign medical schools for licensure decisions and b) requiring an interview or oral examination prior to licensure endorsement. More effective methods for evaluating the quality of IMGs' undergraduate medical education should be pursued with the Federation of State Medical Boards (FSMB) and other relevant organizations. When available, the results should be a part of the determination of eligibility for licensure.
2. Our AMA will continue to work with the FSMB to encourage parity in licensure requirements for all physicians, whether U.S. medical school graduates or international medical graduates.
3. Our AMA will continue to work with the Educational Commission for Foreign Medical Graduates and other appropriate organizations in developing effective methods to evaluate the clinical skills of IMGs.
4. Our AMA will work with state medical societies in states with discriminatory licensure requirements between IMGs and graduates of U.S. and Canadian medical schools to advocate for parity in licensure requirements, using the AMA International Medical Graduate Section licensure parity model resolution as a resource.
5. Our AMA will: (a) encourage states to study existing strategies to improve policies and processes to assist IMGs with credentialing and licensure to enable them to care for patients in underserved areas; and (b) encourage the FSMB and state medical boards to evaluate the progress of programs aimed at reducing barriers to licensure--including successes, failures, and barriers to implementation.

D-310.977, National Resident Matching Program Reform
Our AMA:
(1) will work with the National Resident Matching Program (NRMP) to develop and distribute educational programs to better inform applicants about the NRMP matching process, including the existing NRMP waiver and violations review policies;
(2) will actively participate in the evaluation of, and provide timely comments about, all proposals to modify the NRMP Match;
(3) will request that the NRMP explore the possibility of including the Osteopathic Match in the NRMP Match;
(4) will continue to review the NRMP's policies and procedures and make recommendations for improvements as the need arises, to include making the conditions of the Match agreement more transparent while assuring the confidentiality of the match;
(5) will work with the Accreditation Council for Graduate Medical Education (ACGME) and other appropriate agencies to assure that the terms of employment for resident physicians are fair and equitable and reflect the unique and extensive amount of education and experience acquired by physicians;
(6) does not support the current the "All-In" policy for the Main Residency Match to the extent that it eliminates flexibility within the match process;
(7) will work with the NRMP, and other residency match programs, in revising Match policy, including the secondary match or scramble process to create more standardized rules for all candidates including application timelines and requirements;
(8) will work with the NRMP and other external bodies to develop mechanisms that limit disparities within the residency application process and allow both flexibility and standard rules for applicants;
(9) encourages the National Resident Matching Program to study and publish the effects of implementation of the Supplemental Offer and Acceptance Program on the number of residency

spots not filled through the Main Residency Match and include stratified analysis by specialty and other relevant areas;
(10) will work with the NRMP and ACGME to evaluate the challenges in moving from a time-based education framework toward a competency-based system, including: a) analysis of time-based implications of the ACGME milestones for residency programs; b) the impact on the NRMP and entry into residency programs if medical education programs offer variable time lengths based on acquisition of competencies; c) the impact on financial aid for medical students with variable time lengths of medical education programs; d) the implications for interprofessional education and rewarding teamwork; and e) the implications for residents and students who achieve milestones earlier or later than their peers;
(11) will work with the Association of American Medical Colleges (AAMC), American Osteopathic Association (AOA), American Association of Colleges of Osteopathic Medicine (AACOM), and National Resident Matching Program (NRMP) to evaluate the current available data or propose new studies that would help us learn how many students graduating from US medical schools each year do not enter into a US residency program; how many never enter into a US residency program; whether there is disproportionate impact on individuals of minority racial and ethnic groups; and what careers are pursued by those with an MD or DO degree who do not enter residency programs;
(12) will work with the AAMC, AOA, AACOM and appropriate licensing boards to study whether US medical school graduates and international medical graduates who do not enter residency programs may be able to serve unmet national health care needs;
(13) will work with the AAMC, AOA, AACOM and the NRMP to evaluate the feasibility of a national tracking system for US medical students who do not initially match into a categorical residency program;
(14) will discuss with the National Resident Matching Program, Association of American Medical Colleges, American Osteopathic Association, Liaison Committee on Medical Education, Accreditation Council for Graduate Medical Education, and other interested bodies potential pathways for reengagement in medicine following an unsuccessful match and report back on the results of those discussions;
(15) encourages the Association of American Medical Colleges to work with U.S. medical schools to identify best practices, including career counseling, used by medical schools to facilitate successful matches for medical school seniors, and reduce the number who do not match;
(16) supports the movement toward a unified and standardized residency application and match system for all non-military residencies;
(17) encourages the Educational Commission for Foreign Medical Graduates (ECFMG) and other interested stakeholders to study the personal and financial consequences of ECFMG-certified U.S. IMGs who do not match in the National Resident Matching Program and are therefore unable to get a residency or practice medicine;
(18) encourages the AAMC, AACOM, NRMP, and other key stakeholders to jointly create a no-fee, easily accessible clearinghouse of reliable and valid advice and tools for residency program applicants seeking cost-effective methods for applying to and successfully matching into residency; and
(19) will work with appropriate stakeholders to study options for improving transparency in the resident application process.

REPORT 04 OF THE COUNCIL ON MEDICAL EDUCATION (A-23)
Decreasing Bias in Assessments of Medical Student Clinical Clerkship Performance (Resolution 309-A-22, Resolve 2)
(Reference Committee C)

EXECUTIVE SUMMARY

Per a directive from the House of Delegates (HOD), the American Medical Association (AMA) has been asked to study and report back on the impact of two-interval clinical clerkship grading systems on residency application outcomes, clinical performance during residency, and bias.

This report defines two-interval grading (binary pass/fail with no other hierarchical ranking) and notes existing policy regarding pass/fail in non-clinical curricula. This report offers the theoretical background for the importance of pass/fail grading within competency-based medical education and formative assessment. It also highlights the competitive medical education system and the ongoing demand for summative assessment and ranking, particularly due to applicant selection challenges impacting both learners and program directors.

Due to a need for additional future research combining the multiple factors indicated by the HOD's directive, this report instead summarizes research on each relevant topic individually, including significant variability and bias within clinical clerkship grading; existing recommendations toward improving reliability in this area; background on how grading system data is collected; proportions of two-interval pass/fail grading systems across medical schools; and current overall research on residency application outcomes, longitudinal performance tracking, and bias issues. This report emphasizes the diverse factors and potential unintended consequences that may arise when hierarchy is eliminated in one area of medical education and ranking decisions are shifted to other areas.

This report proposes reaffirmation of current AMA policy and offers new recommendations that continue to encourage work in support of the Coalition for Physician Accountability's Undergraduate Medical Education-Graduate Medical Education Review Committee "Recommendations for Comprehensive Improvement of the UME-GME Transition"; encourage and support UME institutions' investment in a) developing more valid, reliable, and unbiased summative assessments for clinical clerkships, including development of assessors' awareness regarding structural inequities in education and wider society, and b) providing standardized and meaningful competency data to program directors; encourage institutions to publish information related to clinical clerkship grading systems and residency match rates, with subset data for learners from varied groups, including those that have been historically underrepresented in medicine or may be affected by bias; and encourage UME institutions to include grading system methodology with grades shared with residency programs.

REPORT OF THE COUNCIL ON MEDICAL EDUCATION

CME Report 04-A-23

Subject: Decreasing Bias in Assessments of Medical Student Clinical Clerkship Performance (Resolution 309-A-22, Resolve 2)

Presented by: John P. Williams, MD, Chair

Referred to: Reference Committee C

Resolution 309-A-22, "Decreasing Bias in Evaluations of Medical Student Performance," was introduced by the Medical Student Section at the 2022 Annual Meeting of the American Medical Association (AMA). While Resolve 1 was adopted into AMA Policy D-295.307, Resolve 2 was referred for study. The referred clause asked that our AMA:

> Study the impact of two-interval clinical clerkship grading systems on residency application outcomes and clinical performance during residency.

Testimony emphasized the current difficulty in accessing data needed to inform such a study and work underway via the AMA ChangeMedEd initiative toward longitudinal tracking. Testimony also highlighted challenges faced by program directors, the delicate balance of wanting more data versus ensuring unbiased data, and equity concerns regarding current grading models and diverse learners. Reference Committee C and the House of Delegates (HOD) felt that these concerns warranted further study. This report is in response to this referral.

BACKGROUND

Clinical Clerkships and Two-Interval Grading

In clinical clerkships, medical students are immersed in learning experiences involving direct patient care and application of clinical sciences.[1] This comprises both core and elective rotations, beginning in the third year of medical school, and with significant variability between clerkship experiences based on seasonal infectious disease cycles, electives chosen, and other considerations.

Two-interval grading refers to grading structures with only two options, either pass or fail, though these grades may also be accompanied by narrative information. Two-interval pass/fail grading is distinct from generalized pass/fail grading insofar as some pass/fail grading structures offer opportunities for grading with honors and other hierarchies, such as "high pass," as opposed to the binary pass/fail. While AMA Policy H-295.866, "Supporting Two-Interval Grading Systems for Medical Education," encourages "the establishment of a two-interval grading system in medical colleges and universities in the United States for the non-clinical curriculum," current policy does not address clinical curriculum.

Competency-Based Medical Education and the "Growth Mindset"

The current rationale for two-interval grading centers around learner trust and growth within the move toward competency-based medical education, or CBME (see also AMA policy D-295.317).

Specifically, for medical education to focus on outcomes via a developmental approach, vulnerability for learners must be acknowledged and institutional culture must demonstrate trustworthiness, as learner gaps and needs may only be addressed if acknowledged rather than hidden due to performance pressure.[2] Thus, two-interval pass/fail frees the learner from striving for a specific performative grade, allowing more transparency around gaps. This redirects focus to effectively meeting required competencies (passing) after careful consideration of areas for improvement, rather than concealing difficulties to rank higher. Equity between learners is complex and not inherently achieved by grading system changes alone, as discussed in later sections. Biases related to race, gender, disability, or other factors exist in a wider societal structure, and interventions require a multi-pronged approach.[3] However, even highly rigorous and non-biased assessments would drive undesired behaviors (concealment versus transparency toward growth) if graded or ranked.[4] Nonetheless, larger medical education and societal structures currently create a demand for ranking, as discussed below.

Applicant Selection Challenges

A significant concern regarding possible elimination of tiered rankings in clerkship grades involves the increasing number of residency applications and growing challenges for programs when selecting from an overwhelming number of candidates. The United States Medical Licensing Examination® (USMLE®) Step 1 examination's shift to pass/fail in January 2022 sparked concerns in this regard from residency program directors: a study of internal medicine program directors found that, in the absence of graded Step 1 examination scores, program personnel would be increasingly likely to weight such variables as ranked clerkship grades, Step 2 exam scores, personal knowledge of the applicant, and audition electives; respondents also expressed the belief that osteopathic applicants may potentially be further disadvantaged.[5] Data regarding actual impact is unknown because not enough time has passed. Without an overhaul of the application process and infrastructure supportive of the time necessary for holistic review of applicants[6] or transition away from competition-based processes (i.e., randomization via lottery), eliminating rankings in certain areas may indeed pose challenges. However, clerkship grades are an unreliable measure for evaluating residency applicants and challenged by inconsistencies and bias, as further described in the next section.

Unreliability and Variability in Clinical Clerkship Grades

Despite perceptions of their importance in selecting program applicants, clinical clerkship grades are generally found to be inconsistent and unreliable.[7] In one study, most students believed that clerkship grades were unfair and that being liked by specific supervisors most influenced grading[8]; further data confirms the detachment of clerkship grades from useful assessment criteria. One study noted that most medical schools used a four-tier system of fail, pass, high pass, or honors, but all defined these words subjectively and inconsistently, even within the same programs; this variability across schools and even within programs poses a challenge to accurate stratification of applicants.[9] U.S. News & World Report Top 20 medical schools were also more likely to disproportionately assign the highest clerkship grade to a higher percentage of students than other medical schools,[10] even though these schools were also less likely to implement grade comparison at all.[11] Clerkship grades often suggest the "illusion of objectivity," despite no standard approach to assigning grades or rank, flawed data not based on actual observations, high stress for students, and time-based grading paradigms that promote inequities.[12]

Equity and Diversity Concerns Within Medical School Assessment

Beyond concerns of general unreliability, equity and diversity concerns also arise within clinical clerkship assessment. One 2018 study (which defined "underrepresented in medicine" narrowly as students from the racial or ethnic groups Black, Latina/o/x, Native American, and Alaska Native) demonstrated differences in clerkship director ratings that consistently favored non-underrepresented students, and while these differences were small, they created an amplification cascade later in the educational experience, compounding challenges already faced by these students due to structural racism.[13] Another 2019 study demonstrated that, even after accounting for confounding variables, grades were more likely to favor white students above both underrepresented and non-underrepresented students of color.[14] Even prior to grading itself, the training environment and overall social environment already hinders students from marginalized racial/ethnic groups, depleting cognitive resources and interfering with learning,[15] such that even with more "objective" grading standards, societal bias already creates an inequitable environment for learning. Finally, while research that addresses the specific topic of clinical clerkship assessment for other marginalized identities/experiences is limited, learners are subjected to systemic biases in many realms, such as LGBTQ issues,[16] socioeconomic status[17], and disability.[18]

DISCUSSION

Course grades perform two purported functions: giving students a summative evaluation of their course performance and providing a standardized means of communicating student performance to third parties. Grades should be distinguished from formative assessments, which are focused on improving student learning. As a summative evaluation, grades should be based on valid and reliable data and contain sufficient information to be useful to students and third parties, with attention to the ways larger systemic bias and inequitable assignment of merit influences even otherwise reliable data.[19] Current data demonstrated above indicates significant reliability concerns in current grading systems.

Little data exists to demonstrate the impact of two-interval clinical clerkship grading on residency application outcomes and clinical performance during residency, and even less data that includes analysis by race, gender, socioeconomic class, disability, or other relevant demographics. This report seeks to split the question into its various components, provide background on how some data is collected and reported, offer currently available research, and offer suggestions on how this data might be gathered in the future.

Current Data and Challenges Regarding Pass/Fail in Clinical Clerkships

Much current research suggests that two-interval pass/fail grading systems improve learner well-being in the preclinical years,[20] and academic performance remains similar, with an increased opportunity for a reduction of stress and less competitive learning environment.[21] Proponents of CBME also generally advocate to reframe two-interval pass/fail as two-interval "only pass/not yet pass" and to utilize criterion-referenced assessment such that learners will pass in time.[22] Support for CBME is inherently linked to removing hierarchical grading structures in all aspects of medical education.[23]

Data around usage of pass/fail grading systems in clinical clerkships is collected by the Liaison Committee on Medical Education (LCME) for allopathic schools and by the American Association of Colleges of Osteopathic Medicine (AACOM) for osteopathic schools, but few analyses of impact exist.

The LCME's files indicated the following data for each portion of the curriculum:

LCME Part II Totals: Type of Grading System Used (2019-2020)			
Grading system	**Required clinical clerkships**	**Fourth-year selectives/sub-internships**	**Electives**
Pass-fail	11	32	84
Honors-pass-fail	26	27	21
Honors-high pass-pass-fail	85	68	57
Numerical grade	6	1	0
Letter grade	24	19	10
Other	13	8	7

LCME Part II Totals: Type of Grading System Used (2020-2021)			
Grading system	**Required clinical clerkships**	**Fourth-year selectives/sub-internships**	**Electives**
Pass-fail	24	37	92
Honors-pass-fail	25	27	22
Honors-high pass-pass-fail	81	72	54
Numerical grade	7	4	7
Letter grade	20	18	9
Other	11	10	12

LCME Part II Totals: Type of Grading System Used (2021-2022)			
Grading system	**Required clinical clerkships**	**Fourth-year selectives/sub-internships**	**Electives**
Pass-fail	20	37	90
Honors-pass-fail	26	27	18
Honors-high pass-pass-fail	82	73	55
Numerical grade	3	0	0
Letter grade	19	15	10
Other	9	8	10

As seen above, within required clinical clerkships, two-interval pass/fail accounted for only about seven percent of grading systems in 2019-2020 and 14 percent in 2020-2021, with a slight decline in 2021-2022 to 20 schools out of 155, or about 13 percent. In fourth-year medical selective rotations, two-interval pass/fail grading systems accounted for about 21 percent in 2019-2020, 22 percent in 2020-2021, and 23 percent in 2021-2022. Elective clerkships were more likely to be two-interval pass/fail than other clerkships, as this accounted for about 47 percent of grading systems in both 2019-2020 and 2020-2021, and about 49 percent in 2021-2022.

The most recent AACOM data available showed that 28 schools used pass/fail to grade required clinical clerkships, while 21 schools used pass/fail for elective/selective grading.[24] However, this data reflects multi-interval pass/fail variants including honors and does not indicate which, if any, use two-interval grading. Looking closer, a 2020 study of transcripts indicated that osteopathic medical schools' grading system distribution in clinical years was 59.5 percent honors, 29.7 percent letter grade, and 10.8 percent other systems. Only one of the 37 osteopathic medical

schools participating in this study used two-interval pass/fail systems without tiered indicators such as "high pass" in the clinical years.[25] This study demonstrated the variability between grading systems, both within and between allopathic and osteopathic schools, and the rarity of two-interval pass/fail in clerkship years.

Given limited implementation of two-interval pass/fail, research on the impact of this grading mechanism is even more limited. In 2021, faculty from one institution responded to the elimination of tiered clerkship grades with optimism for well-being and the learning environment, as well as hesitations, such as lack of readiness for hierarchies in later educational structures and concerns about the residency selection process.[26] Students in a different 2021 qualitative study shared that implementation of two-interval pass/fail core clerkship grading, in combination with enhanced formative feedback, resulted in benefits to intrinsic motivation, increased ability to seek feedback and improvements, lowered stress, and perceived mitigation of equity concerns.[27] However, this perceived mitigation was not confirmed with outcomes-based data, nor are these perceptions disaggregated by respondent demographics. In another study from 2022, transitioning to two-interval clinical clerkship grades with enhanced feedback was related to moderate to large improvements in students' perceptions of grading and the learning environment, toward that of "mastery-oriented learning" rather than performative behavior. Simultaneously, deeper learner concerns around bias in evaluators and inequitable narrative summaries remained.[28]

Current Clinical Clerkship Recommendations for Eliminating Grading Bias

Grappling with known equity issues, the Alliance for Academic Internal Medicine's 2021 report, "Aiming for Equity in Clerkship Grading: Recommendations for Reducing the Effects of Structural and Individual Bias" indicated the scarcity of evidence-based resources for eliminating bias in clinical clerkship grading. Using a socioecological model, the authors suggest several possible interventions for further implementation and study, including but not limited to faculty development, non-normative competency-based grading, and refraining from standardized cut-off scores to designate honors in grading, though recommendations do not explicitly suggest removal of honors within grading.[29]

Also regarding systemic bias concerns in grading, the Coalition for Physician Accountability's Undergraduate Medical Education-Graduate Medical Education Review Committee recommended the following in 2021: "To eliminate systemic biases in grading, medical schools must perform initial and annual exploratory reviews of clinical clerkship grading, including patterns of grade distribution based on race, ethnicity, gender identity/expression, sexual identity/orientation, religion, visa status, ability, and location (e.g., satellite or clinical site location), and perform regular faculty development to mitigate bias. Programs across the UME-GME continuum should explore the impact of bias on student and resident evaluations, match results, attrition, and selection to honor societies."[30]

In 2022, Russo et al. demonstrated the bias present within clinical clerkship grades and suggested that two-interval pass/fail grading as one component may mitigate the impact of bias, though it will not eliminate bias itself. "Shifting to a competence-based assessment model will give the learner multiple opportunities over time to demonstrate their mastery of skills and knowledge, thereby reducing the power of a single biased assessment."[31]

Due to the complexities of bias within clinical clerkship grading systems, the need for innovation is clear, but additional evidence is required to understand whether two-interval pass/fail grading effectively addresses these challenges.

Current Data and Challenges Regarding Pass/Fail and Residency Application Outcomes

When considering how to understand the impact two-interval pass/fail in clinical clerkships may have on residency application outcomes, especially regarding bias and equity, one must first consider what data is needed, and how this data is currently collected.

Match results from applications to residency programs are reported in aggregate by both the National Resident Matching Program (NRMP) and by medical schools. While it might be possible to determine some correlation between the schools that use two-interval pass/fail in clinical clerkships and their aggregate Match results, all other confounding factors would need to be considered, including other aspects of the school and all other determining factors considered in applications, both on larger-scale and individual learner levels. When also considering learner diversity and any potential impacts of bias, information would need to be disaggregated into multiple categories, such as race, ethnicity, disability, gender identity, sexual orientation, socioeconomic status, and more. Some of this information is currently collected in aggregate ways, such as through the Association of American Medical Colleges' (AAMC) Medical School Graduation Questionnaire,[32] but not all aspects of bias are addressed; these results are not tied to specific application outcomes or individuals due to privacy concerns. Further insights on two-interval pass/fail grading systems' impact on bias in residency application outcomes would require the limited number of schools with two-interval pass/fail in clinical clerkship to study this specifically, comparing archival data before two-interval grading with current data, and with a student population large enough to ensure confidentiality for participants. This data would then need to be published. Multiple schools would need to achieve this to provide sufficient numbers to allow for comparison between institutions, and between allopathic versus osteopathic programs.

Outside of medical schools, in a related field, a 2019 study found that for Doctor of Pharmacy students within advanced pharmacy practice experiences, there was little statistical difference in residency match rates between applicants with two-interval pass/fail grades and tiered grades to assess clinical experiences. However, pharmacy education exists in a different context than medical education, and extrapolations cannot necessarily be made.

As discussed in earlier sections, it is well-known that bias is a concern in residency application outcomes. A 2019 study found no statistically significant differences in residency application outcomes in one institution when pre-clinical grades are pass/fail,[33] but no such research currently exists for clinical clerkships. Current research merely indicates that clinical clerkship grades overall are not useful for ranking residency applications.[34] A 2021 study suggested that receiving honors in clinical clerkship grading contributed to matching into the applicant's top five programs in OB/GYN[35] where honors were available, but that minority and male students were less likely to receive honors, suggesting further need for research into grading disparities.

Residency programs must currently create a rank list of applicants for admission, and in numerous specialties and for many residency programs, the number of qualified applicants to be evaluated greatly exceeds the number of positions available. Medical school clerkship grades are among several factors used by residency programs to determine the ranking of applicants. Though these grades are currently unreliable, as discussed above, conversion to two-interval pass/fail grading systems for clerkships without other interventions will require residency programs to weigh other data points more heavily when reviewing applications, such as recommendation letters or perceived medical school reputation. It is uncertain if these alternative factors are more valid or subject to less bias than clerkship grades, and the impacts on diverse student groups are still uncertain. While further knowledge is gathered, medical schools can invest in improving their grading systems to

decrease bias, provide transparency to residency programs regarding their grading system methodologies, and invest in methods of providing more useful information to residency programs.

Current Data and Challenges Regarding Longitudinal Tracking into Residency

Additional challenges arise when seeking data on how two-interval pass/fail grades in clinical clerkship and bias may impact residency performance outcomes. For longitudinal tracking into residency, current data sources include feedback from program directors to school deans, either sent by the school or coordinated by the AAMC Resident Readiness Survey.[36] However, information published by the AAMC does not track comparatively across schools, and even comparative school data would need to account for confounding factors, not merely each school's clinical clerkship grading system. As with application outcome challenges, residency performance outcome challenges also include the need to collect and disaggregate demographic information for learners without violating learner privacy.

There is currently no pre-existing research to draw from on the direct impact of two-interval pass/fail clinical clerkship grading systems on residency performance outcomes, with or without the consideration of equity and bias. One 2019 study that begins to approach the topic is a meta-analysis of program directors' perceptions of residency performance among residents from schools using two-interval pass/fail versus tiered clerkship grading, which found no significant difference in perceptions of overall performance between these groups.[37] However, perceptions of performance do not inherently translate to actual actions taken nor actual criterion-referenced performance and carry the additional limitation of reflecting only on those who were already admitted into residency.

Some progress has been made on overall development of longitudinal tracking, though not related to these topics specifically. For instance, the AMA Accelerating Change in Medical Education Consortium created a personalized graduate profile for 32 medical schools, addressing three core questions of workforce, clinical exposure, and quality of care. This may serve as "a proof of concept" for further research into the topics of this report.[38] The Accreditation Council for Graduate Medical Education (ACGME) also collects milestone data by specialty,[39] but this data is not currently compared with data on pass/fail grading systems in clinical clerkships. There is also evidence to suggest that racial and ethnic biases may impact milestone levels. For instance, a 2022 study in pediatric programs found race and gender disparities in assessments of trainees in residency programs.[40]

RELEVANT AMA POLICY

The AMA has extensive policy related to grading systems and mitigating bias in medical education. Some examples are as follows:

- D-200.985, "Strategies for Enhancing Diversity in the Physician Workforce," recommends that residency/fellowship programs use holistic assessments of applicants that take into account the diversity of preparation and the variety of talents that applicants bring to their education.
- D-310.945, "Mitigating Demographic and Socioeconomic Inequities in the Residency and Fellowship Selection Process," encourages medical schools, medical honor societies, and residency/fellowship programs to work toward ethical, equitable, and transparent recruiting processes, which are made available to all applicants.

- D-295.988, "Clinical Skills Assessment During Medical School," works with appropriate stakeholders to assure the processes for assessing clinical skills are evidence-based and most efficiently use the time and financial resources of those being assessed.
- D-295.317, "Competency Based Medical Education Across the Continuum of Education and Practice," continues to study and identify challenges and opportunities and critical stakeholders in achieving a competency-based curriculum across the medical education continuum and other health professions that provides significant value to those participating in these curricula and their patients.
- D-295.318, "Competency-Based Portfolio Assessment of Medical Students," develops pilot projects to study the impact of competency-based frameworks on student graduation, the residency match process, and off-cycle entry into residency programs.
- D-295.963, "Continued Support for Diversity in Medical Education," works with appropriate stakeholders to commission and enact the recommendations of a forward-looking, cross-continuum, external study of 21st century medical education focused on reimagining the future of health equity and racial justice in medical education.
- D-295.307, "Decreasing Bias in Evaluations of Medical Student Performance," works with appropriate stakeholders to promote efforts to evaluate methods for decreasing the impact of bias in medical student performance evaluation as well as reducing the impact of bias in the review of disciplinary actions.
- D-295.983, "Fostering Professionalism During Medical School and Residency Training," continues to study the clinical training environment to identify the best methods and practices used by medical schools and residency programs to foster the development of professionalism.
- H-350.979, "Increase the Representation of Minority and Economically Disadvantaged Populations in the Medical Profession," supports increasing the representation of minorities in the physician population.
- D-295.322, "Increasing Demographically Diverse Representation in Liaison Committee on Medical Education Accredited Medical Schools," studies medical school implementation of the Liaison Committee on Medical Education (LCME) Standard IS-16 and share the results with appropriate accreditation organizations and all state medical associations for action on demographic diversity.
- H-295.866, "Supporting Two-Interval Grading Systems for Medical Education," works with stakeholders to encourage the establishment of a two-interval grading system in medical colleges and universities in the United States for the non-clinical curriculum.

These policies are listed in full detail in Appendix A.

SUMMARY AND RECOMMENDATIONS

Fair and equitable assessment in medical school improves career opportunities for medical students and benefits the public which deserves a more diverse physician workforce. Grades are one form of summative assessment of student performance, and summative assessment should provide third parties with important information about learner competencies and readiness. Current research demonstrates that despite the weighting of clinical clerkship grades in residency applicant selection, these grades are currently inconsistent, unreliable, and biased. Thus, medical schools should invest in developing valid, reliable, unbiased, and informative assessments for clerkships. Two-interval pass/fail clinical clerkship grading systems are rare in allopathic and osteopathic schools alike, and understanding their impacts on residency application outcomes and clinical performance during residency, especially from an equity lens, will require significant effort by researchers and medical education stakeholders. Efforts toward longitudinal tracking in general are

also still in the early stages. However, both AMA policy and pre-existing research do support overall well-being and learning environment improvements related to two-interval pass/fail grading systems in the pre-clinical years. Not all schools have implemented this grading structure, and continued encouragement to do so is warranted.

Learners, including learners experiencing systemic oppression in one or many domains, are not a monolith, and the need for nuance is paramount as these issues are addressed. Inequity in clinical clerkship assessment may be one symptom of the wider culture of systemic bias as well as a reflection of the current learning environment of competition within medical education. The "bottleneck" within the popularity of certain specialties over others also amplifies the competitive environment. Without a greater shift within medical education's values, or without tending to the entire landscape of medical education, modifying one component piece may send varying intended and unintended ripple effects outwards to the other components of learner assessment—potentially shifting pressure and bias from one area to another, and having unknown and heterogeneous effects on a variety of learners. It is difficult to assess only one piece of the overall system to reflect an understanding of overall equity in assessment, and even more challenging to correct only one piece of a much wider puzzle. Despite these challenges, further gathering of data and the exploration of innovations across the continuum of medical education is beneficial, with an emphasis on attention to the needs of unique populations, especially those that are underrepresented in medicine or experience bias. An evidence base for best practices and interventions can and should be gathered. Strategies must focus on the wider whole, including evaluating the benefits and challenges of moving to a competency-based system with equity at the forefront, rather than a time-based and competitive system.

The Council on Medical Education therefore recommends that the following recommendations be adopted in lieu of Resolution 309-A-22, Resolve 2, and the remainder of this report be filed:

That our American Medical Association (AMA):

1. Continue to encourage work in support of the Coalition for Physician Accountability's Undergraduate Medical Education-Graduate Medical Education Review Committee "Recommendations for Comprehensive Improvement of the UME-GME Transition." (Directive to Take Action)

2. Encourage and support UME institutions' investment in a) developing more valid, reliable, and unbiased summative assessments for clinical clerkships, including development of assessors' awareness regarding structural inequities in education and wider society, and b) providing standardized and meaningful competency data to program directors. (New HOD Policy)

3. Encourage institutions to publish information related to clinical clerkship grading systems and residency match rates, with subset data for learners from varied groups, including those that have been historically underrepresented in medicine or may be affected by bias. (New HOD Policy)

4. Encourage UME institutions to include grading system methodology with grades shared with residency programs. (New HOD Policy)

5. Reaffirm the following policies:

- D-295.307, "Decreasing Bias in Evaluations of Medical Student Performance"

- H-295.866, "Supporting Two-Interval Grading Systems for Medical Education"
- D-295.317, "Competency Based Medical Education Across the Continuum of Education and Practice"
- D-295.318, "Competency-Based Portfolio Assessment of Medical Students"

Fiscal note: TBD

APPENDIX A: RELEVANT AMA POLICY

Strategies for Enhancing Diversity in the Physician Workforce D-200.985

1. Our AMA, independently and in collaboration with other groups such as the Association of American Medical Colleges (AAMC), will actively work and advocate for funding at the federal and state levels and in the private sector to support the following: (a) Pipeline programs to prepare and motivate members of underrepresented groups to enter medical school; (b) Diversity or minority affairs offices at medical schools; (c) Financial aid programs for students from groups that are underrepresented in medicine; and (d) Financial support programs to recruit and develop faculty members from underrepresented groups.
2. Our AMA will work to obtain full restoration and protection of federal Title VII funding, and similar state funding programs, for the Centers of Excellence Program, Health Careers Opportunity Program, Area Health Education Centers, and other programs that support physician training, recruitment, and retention in geographically-underserved areas.
3. Our AMA will take a leadership role in efforts to enhance diversity in the physician workforce, including engaging in broad-based efforts that involve partners within and beyond the medical profession and medical education community.
4. Our AMA will encourage the Liaison Committee on Medical Education to assure that medical schools demonstrate compliance with its requirements for a diverse student body and faculty.
5. Our AMA will develop an internal education program for its members on the issues and possibilities involved in creating a diverse physician population.
6. Our AMA will provide on-line educational materials for its membership that address diversity issues in patient care including, but not limited to, culture, religion, race and ethnicity.
7. Our AMA will create and support programs that introduce elementary through high school students, especially those from groups that are underrepresented in medicine (URM), to healthcare careers.
8. Our AMA will create and support pipeline programs and encourage support services for URM college students that will support them as they move through college, medical school and residency programs.
9. Our AMA will recommend that medical school admissions committees and residency/fellowship programs use holistic assessments of applicants that take into account the diversity of preparation and the variety of talents that applicants bring to their education with the goal of improving health care for all communities.
10. Our AMA will advocate for the tracking and reporting to interested stakeholders of demographic information pertaining to URM status collected from Electronic Residency Application Service (ERAS) applications through the National Resident Matching Program (NRMP).
11. Our AMA will continue the research, advocacy, collaborative partnerships and other work that was initiated by the Commission to End Health Care Disparities.
12. Our AMA opposes legislation that would undermine institutions' ability to properly employ affirmative action to promote a diverse student population.
13. Our AMA will work with the AAMC and other stakeholders to create a question for the AAMC electronic medical school application to identify previous pipeline program (also known as

pathway program) participation and create a plan to analyze the data in order to determine the effectiveness of pipeline programs.

Mitigating Demographic and Socioeconomic Inequities in the Residency and Fellowship Selection Process D-310.945

Our AMA will: 1. encourage medical schools, medical honor societies, and residency/fellowship programs to work toward ethical, equitable, and transparent recruiting processes, which are made available to all applicants.

2. advocate for residency and fellowship programs to avoid using objective criteria available in the Electronic Residency Application Service (ERAS) application process as the sole determinant for deciding which applicants to offer interviews.

3. advocate to remove membership in medical honor societies as a mandated field of entry on the Electronic Residency Application Service (ERAS)—thereby limiting its use as an automated screening mechanism—and encourage applicants to share this information within other aspects of the ERAS application.

4. advocate for and support innovation in the undergraduate medical education to graduate medical education transition, especially focusing on the efforts of the Accelerating Change in Medical Education initiative, to include pilot efforts to optimize the residency/fellowship application and matching process and encourage the study of the impact of using filters in the Electronic Residency Application Service (ERAS) by program directors on the diversity of entrants into residency.

5. encourage caution among medical schools and residency/fellowship programs when utilizing novel online assessments for sampling personal characteristics for the purpose of admissions or selection and monitor use and validity of these tools.

Clinical Skills Assessment During Medical School D-295.988

1. Our AMA will encourage its representatives to the Liaison Committee on Medical Education (LCME) to ask the LCME to determine and disseminate to medical schools a description of what constitutes appropriate compliance with the accreditation standard that schools should "develop a system of assessment" to assure that students have acquired and can demonstrate core clinical skills.

2. Our AMA will work with the Federation of State Medical Boards, National Board of Medical Examiners, state medical societies, state medical boards, and other key stakeholders to pursue the transition from and replacement for the current United States Medical Licensing Examination (USMLE) Step 2 Clinical Skills (CS) examination and the Comprehensive Osteopathic Medical Licensing Examination (COMLEX) Level 2-Performance Examination (PE) with a requirement to pass a Liaison Committee on Medical Education-accredited or Commission on Osteopathic College Accreditation-accredited medical school-administered, clinical skills examination.

3. Our AMA will work to: (a) ensure rapid yet carefully considered changes to the current examination process to reduce costs, including travel expenses, as well as time away from educational pursuits, through immediate steps by the Federation of State Medical Boards and National Board of Medical Examiners; (b) encourage a significant and expeditious increase in the number of available testing sites; (c) allow international students and graduates to take the same examination at any available testing site; (d) engage in a transparent evaluation of basing this examination within our nation's medical schools, rather than administered by an external organization; and (e) include active participation by faculty leaders and assessment experts from U.S. medical schools, as they work to develop new and improved methods of assessing medical student competence for advancement into residency.

4. Our AMA is committed to assuring that all medical school graduates entering graduate medical education programs have demonstrated competence in clinical skills.

5. Our AMA will continue to work with appropriate stakeholders to assure the processes for assessing clinical skills are evidence-based and most efficiently use the time and financial resources of those being assessed.
6. Our AMA encourages development of a post-examination feedback system for all USMLE test-takers that would: (a) identify areas of satisfactory or better performance; (b) identify areas of suboptimal performance; and (c) give students who fail the exam insight into the areas of unsatisfactory performance on the examination.
7. Our AMA, through the Council on Medical Education, will continue to monitor relevant data and engage with stakeholders as necessary should updates to this policy become necessary.

Competency Based Medical Education Across the Continuum of Education and Practice D-295.317
1. Our AMA Council on Medical Education will continue to study and identify challenges and opportunities and critical stakeholders in achieving a competency-based curriculum across the medical education continuum and other health professions that provides significant value to those participating in these curricula and their patients.
2. Our AMA Council on Medical Education will work to establish a framework of consistent vocabulary and definitions across the continuum of health sciences education that will facilitate competency-based curriculum, andragogy and assessment implementation.
3. Our AMA will continue to explore, with the Accelerating Change in Medical Education initiative and with other stakeholder organizations, the implications of shifting from time-based to competency-based medical education on residents' compensation and lifetime earnings.

Competency-Based Portfolio Assessment of Medical Students D-295.318
1. Our AMA will work with the Association of American Medical Colleges, the American Osteopathic Association and the Accreditation Council for Graduate Medical Education, and other organizations to examine new and emerging approaches to medical student evaluation, including competency-based portfolio assessment.
2. Our AMA will work with the NRMP, ACGME and the 11 schools in the AMA's Accelerating Change in Medical Education consortium to develop pilot projects to study the impact of competency-based frameworks on student graduation, the residency match process and off-cycle entry into residency programs.

Continued Support for Diversity in Medical Education D-295.963
Our AMA will: (1) publicly state and reaffirm its stance on diversity in medical education; (2) request that the Liaison Committee on Medical Education regularly share statistics related to compliance with accreditation standards IS-16 and MS-8 with medical schools and with other stakeholder groups; (3) work with appropriate stakeholders to commission and enact the recommendations of a forward-looking, cross-continuum, external study of 21st century medical education focused on reimagining the future of health equity and racial justice in medical education, improving the diversity of the health workforce, and ameliorating inequitable outcomes among minoritized and marginalized patient populations; and (4) advocate for funding to support the creation and sustainability of Historically Black College and University (HBCU), Hispanic-Serving Institution (HSI), and Tribal College and University (TCU) affiliated medical schools and residency programs, with the goal of achieving a physician workforce that is proportional to the racial, ethnic, and gender composition of the United States population.

Decreasing Bias in Evaluations of Medical Student Performance D-295.307
Our AMA will work with appropriate stakeholders to promote efforts to evaluate methods for decreasing the impact of bias in medical student performance evaluation as well as reducing the impact of bias in the review of disciplinary actions.

Fostering Professionalism During Medical School and Residency Training D-295.983
(1) Our AMA, in consultation with other relevant medical organizations and associations, will work to develop a framework for fostering professionalism during medical school and residency training. This planning effort should include the following elements: (a) Synthesize existing goals and outcomes for professionalism into a practice-based educational framework, such as provided by the AMA's Principles of Medical Ethics.
(b) Examine and suggest revisions to the content of the medical curriculum, based on the desired goals and outcomes for teaching professionalism.
(c) Identify methods for teaching professionalism and those changes in the educational environment, including the use of role models and mentoring, which would support trainees' acquisition of professionalism.
(d) Create means to incorporate ongoing collection of feedback from trainees about factors that support and inhibit their development of professionalism.
(2) Our AMA, along with other interested groups, will continue to study the clinical training environment to identify the best methods and practices used by medical schools and residency programs to fostering the development of professionalism, to include an evaluation of professional behavior, carried out at regular intervals and employing methods shown to be valuable in adding to the information that can be obtained from observational reports. An ideal system would utilize multiple evaluation formats and would build upon educational experiences that are already in place. The results of such evaluations should be used both for timely feedback and appropriate interventions for medical students and resident physicians aimed at improving their performance and for summative decisions about progression in training.

Increase the Representation of Minority and Economically Disadvantaged Populations in the Medical Profession H-350.979
Our AMA supports increasing the representation of minorities in the physician population by: (1) Supporting efforts to increase the applicant pool of qualified minority students by: (a) Encouraging state and local governments to make quality elementary and secondary education opportunities available to all; (b) Urging medical schools to strengthen or initiate programs that offer special premedical and precollegiate experiences to underrepresented minority students; (c) urging medical schools and other health training institutions to develop new and innovative measures to recruit underrepresented minority students, and (d) Supporting legislation that provides targeted financial aid to financially disadvantaged students at both the collegiate and medical school levels.
(2) Encouraging all medical schools to reaffirm the goal of increasing representation of underrepresented minorities in their student bodies and faculties.
(3) Urging medical school admission committees to consider minority representation as one factor in reaching their decisions.
(4) Increasing the supply of minority health professionals.
(5) Continuing its efforts to increase the proportion of minorities in medical schools and medical school faculty.
(6) Facilitating communication between medical school admission committees and premedical counselors concerning the relative importance of requirements, including grade point average and Medical College Aptitude Test scores.
(7) Continuing to urge for state legislation that will provide funds for medical education both directly to medical schools and indirectly through financial support to students.
(8) Continuing to provide strong support for federal legislation that provides financial assistance for able students whose financial need is such that otherwise they would be unable to attend medical school.

Increasing Demographically Diverse Representation in Liaison Committee on Medical Education Accredited Medical Schools D-295.322
Our AMA will continue to study medical school implementation of the Liaison Committee on Medical Education (LCME) Standard IS-16 and share the results with appropriate accreditation organizations and all state medical associations for action on demographic diversity.

Supporting Two-Interval Grading Systems for Medical Education H-295.866
Our AMA will work with stakeholders to encourage the establishment of a two-interval grading system in medical colleges and universities in the United States for the non-clinical curriculum.

REPORT OF THE COUNCIL ON MEDICAL EDUCATION

CME Report 05-A-23

Subject: Support for Institutional Policies for Personal Days for Undergraduate Medical Students (Resolution 314-A-22)

Presented by: John P. Williams, MD, Chair

Referred to: Reference Committee C

Resolution 314-A-22, "Support for Institutional Policies for Personal Days for Undergraduate Medical Students," was authored by the American Medical Association (AMA) Medical Student Section and submitted to the 2022 Annual Meeting of the House of Delegates (HOD). The resolution reads as follows:

> RESOLVED, That our American Medical Association encourage medical schools to accept flexible uses for excused absences from clinical clerkships (New HOD Policy); and be it further
>
> RESOLVED, That our AMA support a clearly defined number of easily accessible personal days for medical students per academic year, which should be explained to students at the beginning of each academic year and a subset of which should be granted without requiring an explanation on the part of the students. (New HOD Policy)

The resolution was subsequently referred by the HOD for a report back to the House; this report is in response to the referral.

BACKGROUND

Concerns expressed by the resolution's author

The resolution stresses the frequency of burnout and its impact on the professional development and mental health of medical students and identifies a lack of protected time as the prominent barrier preventing medical students from accessing mental health treatment. The author expresses concern regarding the inconsistency and lack of standardization of institutional policies for the implementation of excused absences and the level of disclosure required by the students, recognizing that students may not feel comfortable sharing mental health concerns due to professional stigma, shame, or fear of repercussion.

Reference Committee C testimony on the resolution

The Reference Committee C report at the 2022 Annual Meeting reflected mixed testimony on this item of business. Some testimony indicated support for this resolution, while others recommended referral for further study due to concerns that using excessive personal days during a given clerkship would have significant repercussions on the quality of education. While there was support for the use of personal days by medical students, it was noted that determining a defined number of personal days per academic year may be difficult given the variances across medical

schools. For these reasons, the resolution was recommended for referral by the reference committee; the HOD subsequently concurred with this recommendation.

Council on Medical Education testimony on the resolution

In its testimony, the AMA Council on Medical Education stated that the AMA has a large amount of policy on burnout in medical students, but nothing specific to personal days or less restrictive excused absences. The Council recommended that the resolution be amended by adding the language of the first resolve to current policy D-310.968 (3), "Physician and Medical Student Burnout," and adding a new resolve that the AMA support a clearly defined number of easily accessible personal days for medical students per academic year, which should be explained to students at the beginning of each academic year and a subset of which should be granted without requiring an explanation on the part of the students. The Council recognized the possibility of misuse of these days but noted that providing for but limiting the number of personal days provides for both greater flexibility as well as privacy for students.

DISCUSSION

The goal of undergraduate medical education and awarding of the medical degree is to ensure that medical students have acquired the knowledge, skills, and professional behaviors that prepare them for a spectrum of career choices in medicine. Medical schools need to create an educational environment that assures that graduating medical students meet the standards for achieving the medical degree with the flexibility to meet the individual needs of their students.

Time constraints as a barrier to medical student mental health care and well-being

Burnout among medical students and the need for initiatives to counter burnout are well-documented. Approximately half of U.S. medical students report experiencing burnout, and medical students are more likely than their same-age peers outside of medicine to experience depression or depressive symptoms (a prevalence of 27.2 percent)[1] and suicidal ideation (overall prevalence of 11.1 percent).[2] Until recently, studies into obtaining timely mental health care treatment and obstacles to care for students have been limited. However, one of the most frequently cited barriers in this earlier research is lack of time.[3]

To gain a more thorough understanding, the University of Michigan conducted a study in 2020 of current and recently graduated medical students, including pre-clinical, core clinical, and clinical elective students. The goal of the study was to identify rates of burnout, barriers to treatment, and program preferences for medical students.[4] The results demonstrated the negative impact that lack of time had on medical student access to mental health services as time constraints were the most commonly reported barrier to accessing care. Of the participants who identified barriers to obtaining care (77 of 312 respondents), 60 percent noted lack of time. In addition, 43 percent of respondents felt that their schedule did not leave them with enough time for personal or family life, another aspect of well-being impacted by time constraints. Students in the study were given the option to provide suggestions for improvement, with flexibility in pre-clinical and core clerkship schedules the most frequently mentioned theme.

Concerns regarding stigma and potential career impact

Stigma and fear of professional consequences also influence whether medical students seek mental health treatment. In a 1994 study of first- and second-year medical students at the University of California, San Francisco, School of Medicine, approximately one third of the students identified

as depressed cited the stigma associated with using mental health services and lack of confidentiality as reasons for not seeking treatment.[3] (The questionnaire was constructed to identify the medical students' severity of depression by using the 13-item Beck Depression Inventory, a standardized measure of depression symptoms.) In a 2009 cross-sectional student survey at a large Midwestern medical school, most students cited potential embarrassment and the adverse effects that disclosing mental illness could have on their professional development.[5]

The 2020 University of Michigan study also identified similar sentiments among its medical students. The aspect of mental health services that students most endorsed was the guarantee that seeking mental health care would have no negative impact on a student's future career (78 percent). The study noted that policies concerning the reporting of mental health treatment to residency programs and questions asked by licensing boards are variable and unclear, with many students avoiding treatment for fear that future employers would view such treatment unfavorably.[4]

Medical education accreditation standards related to student mental health

The Liaison Committee on Medical Education (LCME) and the Commission on Osteopathic College Accreditation (COCA) have assessed the need for addressing medical student mental health and have issued specific requirements on standards for accreditation to allopathic and osteopathic medical schools, respectively.

LCME standards (Element 12.3 – Personal Counseling/Mental Health/Well-Being Programs, Element 12.4 – Student Access to Health Care Services, and Element 12.5 Non-Involvement of Providers of Student Health Services in Student Assessment/Location of Student Health Records) require that health professionals providing any services, including psychiatric or psychological counseling, should not be involved in the academic assessment or promotion of students in a medical school program. Legal requirements for security, privacy, confidentiality, and accessibility should be met when maintaining medical student health records. Furthermore, these standards state that diagnostic, preventive, and therapeutic health services must be accessible to medical school students near the site of their required educational experiences, which may include classroom facilities, rotation sites, etc. Policies should be in place that allow students to be excused to seek necessary health care.[6]

COCA standards (Element 5.3 – Safety, Health, and Wellness, Element 9.8 – Mental Health Services, and Element 9.9 Physical Health Services) require that medical schools publish and follow policies related to student, faculty, and staff mental health and wellness and fatigue mitigation; provide students with confidential access to an effective system of counseling and mental health care, with a mental health representative accessible 24 hours a day, 365 days a year, from all locations where students receive education from the medical school; and provide students with access to diagnostic, preventive, and therapeutic health services 24 hours a day, 365 days a year, accessible in all locations where students receive education from the medical school.[7]

Medical school attendance policies and impact of absences on education

Medical school policies regarding excused absences and the use of personal days vary as schools set policy to fit their specific curriculum structure. Therefore, standardization of these policies would prove difficult.

In a sampling of medical school attendance policies regarding health-related excused absences,[8-15] acceptable reasons included: illness affecting one's ability to report to the scheduled session and necessary health care services which cannot be rescheduled, such as preventive health services,

care for chronic illnesses, physical therapy, and counseling/psychological services. In some instances, students were not required to disclose the specific type of health care being sought. Students were strongly encouraged to schedule non-emergency health care appointments during times that do not conflict with classroom and clinical activities.

The number and timing of absences can impact the quality of the education, and there are many issues to consider, including the potential for accumulation and use of absences over one or more experiences; the active participation required by some curricular and clinical experiences over a limited number of days; the impact on individual vs. team learning; and student responsibility for the content or experiences missed. Medical schools should recognize that some students will be absent during any curricular component and should develop alternative, timely means for students to achieve curricular goals affected by an absence and avoid educational delays.

School policy varied regarding the number and timing of excused absences allowed, usually limiting the number of absences per course, block, or year, and with restrictions on use, such as during testing, orientation, or critical learning experiences.[8,9,10,11] Some schools allowed these excused absences to be applicable equally across all phases of training (foundational and clinical), while for others absence from clinical duties was more restricted because it would decrease the total amount of time in clinical service and thus impact a valid assessment of clerkship performance .[12,13]

In addition to excused absences, several of the schools in the sampling had personal day policies. One school had core clerkship personal days, with a personal day defined as a day during a required clerkship in the third year when a medical student would be excused from the rotation and not required to state the reason. This policy allowed two personal days in the third year, and no more than one personal day could be taken on any individual clerkship. Personal days were restricted in some instances, such as exams, orientation, and assignments in which a student has responsibilities that would impact the clerkship, i.e., overnight or weekend call.[14] Another school allowed students up to three personal day passes during the pre-clerkship phase to attend to personal business. Personal day passes were restricted in some instances, such as exams and interprofessional activities, and a specific reason for using a personal day pass was not required.[15]

RELEVANT AMA POLICY

The AMA has policy in support of identification and management of stress and burnout in students and prioritizing self-care. The most specific policies related to the topic of this report are as follows:

- D-345.983, "Study of Medical Student, Resident, and Physician Suicide," which supports the education of faculty members, residents, and medical students in the recognition of the signs and symptoms of burnout and depression and access to free, confidential, and immediately available stigma-free mental health and substance use disorder services.

- D-405.978, "Access to Confidential Health Care Services for Physicians and Trainees," which includes advocating that medical students maintain self-care and are supported by their institutions in their self-care efforts.

- H-295.858, "Access to Confidential Health Services for Medical Students and Physicians," which in part asks that accreditation bodies encourage medical schools to make available confidential health care in reasonable proximity to the education/training site and consider

designating some segment of already-allocated personal time off specifically for routine health screening and preventive services.

- H-405.960, "Policies for Parental, Family and Medical Necessity Leave," which in part encourages medical schools to develop written policies on parental leave, family leave, and medical leave for medical students, including how time can be made up in order for medical students to be eligible for graduation with minimal or no delays, and whether schedule accommodations are allowed.

These policies are listed in full detail in Appendix A.

SUMMARY AND RECOMMENDATIONS

Resolution 314-A-22 requests that the AMA 1) encourage medical schools to accept flexible uses for excused absences from clinical clerkships and 2) support a clearly defined number of easily accessible personal days for medical students per academic year, some of which should be granted without requiring an explanation on the part of the students.

Time constraints and the fear of stigma and negative professional consequences are key barriers to medical student access to care. Existing AMA policy supports the identification and management of medical student burnout and the prioritization of self-care by medical students and their institutions, including the allocation of time and access to services. However, the impact of excused absences on medical student education must be considered carefully, including their use, quantity, and timing, as medical schools create and implement policy with their own curriculum structures in mind.

The Council on Medical Education therefore recommends that the following recommendation be adopted in lieu of Resolution 314-A-22 and the remainder of this report be filed:

1. That our AMA support a requirement that each medical school have policy defining 1) the number of days a medical student may be excused from each curricular component; 2) the processes for using excused absences, providing alternative, timely means of achieving curricular goals when absent from a curricular component; and 3) effective mechanisms to communicate these policies at appropriate times throughout the curriculum; and that schools be encouraged to create a mechanism by which at least some portion of such days can be used without requiring explanation. (New HOD Policy)

Fiscal note: TBD

APPENDIX: RELEVANT AMA POLICY

D-345.983, "Study of Medical Student, Resident, and Physician Suicide"

Our AMA will: (1) explore the viability and cost-effectiveness of regularly collecting National Death Index (NDI) data and confidentially maintaining manner of death information for physicians, residents, and medical students listed as deceased in the AMA Physician Masterfile for long-term studies; (2) monitor progress by the Association of American Medical Colleges, the American Association of Colleges of Osteopathic Medicine, and the Accreditation Council for Graduate Medical Education (ACGME) to collect data on medical student and resident/fellow suicides to identify patterns that could predict such events; (3) support the education of faculty members, residents and medical students in the recognition of the signs and symptoms of burnout and depression and supports access to free, confidential, and immediately available stigma-free mental health and substance use disorder services; (4) collaborate with other stakeholders to study the incidence of and risk factors for depression, substance misuse and substance use disorders, and attempted and completed suicide among physicians, residents, and medical students; and (5) work with appropriate stakeholders to explore the viability of developing a standardized reporting mechanism for the collection of current wellness initiatives that institutions have in place to inform and promote meaningful mental health and wellness interventions in these populations.

(CME Rep. 06, A-19; Modified: Res. 326, A-22)

D-405.978, "Access to Confidential Health Care Services for Physicians and Trainees"

1. Our AMA will advocate that: (a) physicians, medical students and all members of the health care team (i) maintain self-care, (ii) are supported by their institutions in their self-care efforts, and (iii) in order to maintain the confidentiality of care, have access to affordable health care, including mental and physical health care, outside of their place of work or education; and (b) employers support access to mental and physical health care including but not limited to providing access to out-of-network in person and/or via telemedicine, thereby reducing stigma, eliminating discrimination, and removing other barriers to treatment.
2. Our AMA will advocate for best practices to ensure physicians, medical students and all members of the health care teams have access to appropriate behavioral, mental, primary, and specialty health care and addiction services.

(Res. 7, I-20)

H-295.858, "Access to Confidential Health Services for Medical Students and Physicians"

1. Our AMA will ask the Liaison Committee on Medical Education, Commission on Osteopathic College Accreditation, American Osteopathic Association, and Accreditation Council for Graduate Medical Education to encourage medical schools and residency/fellowship programs, respectively, to:
A. Provide or facilitate the immediate availability of urgent and emergent access to low-cost, confidential health care, including mental health and substance use disorder counseling services, that: (1) include appropriate follow-up; (2) are outside the trainees' grading and evaluation pathways; and (3) are available (based on patient preference and need for assurance of confidentiality) in reasonable proximity to the education/training site, at an external site, or through telemedicine or other virtual, online means;
B. Ensure that residency/fellowship programs are abiding by all duty hour restrictions, as these regulations exist in part to ensure the mental and physical health of trainees;

C. Encourage and promote routine health screening among medical students and resident/fellow physicians, and consider designating some segment of already-allocated personal time off (if necessary, during scheduled work hours) specifically for routine health screening and preventive services, including physical, mental, and dental care; and
D. Remind trainees and practicing physicians to avail themselves of any needed resources, both within and external to their institution, to provide for their mental and physical health and well-being, as a component of their professional obligation to ensure their own fitness for duty and the need to prioritize patient safety and quality of care by ensuring appropriate self-care, not working when sick, and following generally accepted guidelines for a healthy lifestyle.
2. Our AMA will urge state medical boards to refrain from asking applicants about past history of mental health or substance use disorder diagnosis or treatment, and only focus on current impairment by mental illness or addiction, and to accept "safe haven" non-reporting for physicians seeking licensure or relicensure who are undergoing treatment for mental health or addiction issues, to help ensure confidentiality of such treatment for the individual physician while providing assurance of patient safety.
3. Our AMA encourages medical schools to create mental health and substance abuse awareness and suicide prevention screening programs that would:
A. be available to all medical students on an opt-out basis;
B. ensure anonymity, confidentiality, and protection from administrative action;
C. provide proactive intervention for identified at-risk students by mental health and addiction professionals; and
D. inform students and faculty about personal mental health, substance use and addiction, and other risk factors that may contribute to suicidal ideation.
4. Our AMA: (a) encourages state medical boards to consider physical and mental conditions similarly; (b) encourages state medical boards to recognize that the presence of a mental health condition does not necessarily equate with an impaired ability to practice medicine; and (c) encourages state medical societies to advocate that state medical boards not sanction physicians based solely on the presence of a psychiatric disease, irrespective of treatment or behavior.
5. Our AMA: (a) encourages study of medical student mental health, including but not limited to rates and risk factors of depression and suicide; (b) encourages medical schools to confidentially gather and release information regarding reporting rates of depression/suicide on an opt-out basis from its students; and (c) will work with other interested parties to encourage research into identifying and addressing modifiable risk factors for burnout, depression and suicide across the continuum of medical education.
6. Our AMA encourages the development of alternative methods for dealing with the problems of student-physician mental health among medical schools, such as: (a) introduction to the concepts of physician impairment at orientation; (b) ongoing support groups, consisting of students and house staff in various stages of their education; (c) journal clubs; (d) fraternities; (e) support of the concepts of physical and mental well-being by heads of departments, as well as other faculty members; and/or (f) the opportunity for interested students and house staff to work with students who are having difficulty. Our AMA supports making these alternatives available to students at the earliest possible point in their medical education.
7. Our AMA will engage with the appropriate organizations to facilitate the development of educational resources and training related to suicide risk of patients, medical students, residents/fellows, practicing physicians, and other health care professionals, using an evidence-based multidisciplinary approach.

(CME Rep. 01, I-16; Appended: Res. 301, A-17; Appended: Res. 303, A-17; Modified: CME Rep. 01, A-18; Appended: Res. 312, A-18; Reaffirmed: BOT Rep. 15, A-19; Reaffirmed: Res. 228, I-22)

H-405.960, "Policies for Parental, Family and Medical Necessity Leave"

AMA adopts as policy the following guidelines for, and encourages the implementation of, Parental, Family and Medical Necessity Leave for Medical Students and Physicians:
1. Our AMA urges residency training programs, medical specialty boards, the Accreditation Council for Graduate Medical Education, and medical group practices to incorporate and/or encourage development of leave policies, including parental, family, and medical leave policies, as part of the physician's standard benefit agreement.
2. Recommended components of parental leave policies for physicians include: (a) duration of leave allowed before and after delivery; (b) category of leave credited; (c) whether leave is paid or unpaid; (d) whether provision is made for continuation of insurance benefits during leave, and who pays the premium; (e) whether sick leave and vacation time may be accrued from year to year or used in advance; (f) how much time must be made up in order to be considered board eligible; (g) whether make-up time will be paid; (h) whether schedule accommodations are allowed; and (i) leave policy for adoption.
3. AMA policy is expanded to include physicians in practice, reading as follows: (a) residency program directors and group practice administrators should review federal law concerning maternity leave for guidance in developing policies to assure that pregnant physicians are allowed the same sick leave or disability benefits as those physicians who are ill or disabled; (b) staffing levels and scheduling are encouraged to be flexible enough to allow for coverage without creating intolerable increases in other physicians' workloads, particularly in residency programs; and (c) physicians should be able to return to their practices or training programs after taking parental leave without the loss of status.
4. Our AMA will study the impact on and feasibility of medical schools, residency programs, specialty boards, and medical group practices incorporating into their parental leave policies a 12-week minimum leave allowance, with the understanding that no parent be required to take a minimum leave.
5. Our AMA recommends that medical practices, departments and training programs strive to provide 12 weeks of paid parental, family and medical necessity leave in a 12-month period for their attending and trainee physicians as needed.
6. Residency program directors should review federal and state law for guidance in developing policies for parental, family, and medical leave.
7. Medical students and physicians who are unable to work because of pregnancy, childbirth, abortion or stillbirth, and other related medical conditions should be entitled to such leave and other benefits on the same basis as other physicians who are temporarily unable to work for other medical reasons.
8. Residency programs should develop written policies on leave for physicians. Such written policies should include the following elements: (a) leave policy for birth or adoption; (b) duration of leave allowed before and after delivery; (c) duration of leave allowed after abortion or stillbirth; (d) category of leave credited (e.g., sick, vacation, parental, unpaid leave, short term disability); (e) whether leave is paid or unpaid; (f) whether provision is made for continuation of insurance benefits during leave and who pays for premiums; (g) whether sick leave and vacation time may be accrued from year to year or used in advance; (h) extended leave for resident physicians with extraordinary and long-term personal or family medical tragedies for periods of up to one year, without loss of previously accepted residency positions, for devastating conditions such as terminal illness, permanent disability, or complications of pregnancy that threaten maternal or fetal life; (i) how time can be made up in order for a resident physician to be considered board eligible; (j) what period of leave would result in a resident physician being required to complete an extra or delayed year of training; (k) whether time spent in making up a leave will be paid; and (l) whether schedule accommodations are allowed, such as reduced hours, no night call, modified rotation schedules, and permanent part-time scheduling.

9. Medical schools should develop written policies on parental leave, family leave, and medical leave for medical students. Such written policies should include the following elements: (a) leave policy for birth or adoption; (b) duration of leave allowed before and after delivery; (c) extended leave for medical students with extraordinary and long-term personal or family medical tragedies, without loss of previously accepted medical school seats, for devastating conditions such as terminal illness, permanent disability, or complications of pregnancy that threaten maternal or fetal life; (d) how time can be made up in order for a medical students to be eligible for graduation with minimal or no delays; (e) what period of leave would result in a medical student being required to complete an extra or delayed year of training; and (f) whether schedule accommodations are allowed, such as modified rotation schedules, no night duties, and flexibility with academic testing schedules.
10. Our AMA endorses the concept of equal parental leave for birth and adoption as a benefit for resident physicians, medical students, and physicians in practice regardless of gender or gender identity.
11. Staffing levels and scheduling are encouraged to be flexible enough to allow for coverage without creating intolerable increases in the workloads of other physicians, particularly those in residency programs.
12. Physicians should be able to return to their practices or training programs after taking parental leave, family leave, or medical leave without the loss of status.
13. Residency program directors must assist residents in identifying their specific requirements (for example, the number of months to be made up) because of leave for eligibility for board certification and must notify residents on leave if they are in danger of falling below minimal requirements for board eligibility. Program directors must give these residents a complete list of requirements to be completed in order to retain board eligibility.
14. Our AMA encourages flexibility in residency programs and medical schools incorporating parental leave and alternative schedules for pregnant trainees.
15. In order to accommodate leave protected by the federal Family and Medical Leave Act, our AMA encourages all specialties within the American Board of Medical Specialties to allow graduating residents to extend training up to 12 weeks after the traditional residency completion date while still maintaining board eligibility in that year.
16. Our AMA will work with appropriate stakeholders to encourage that residency programs annually publish and share with FREIDA and other appropriate stakeholders, (a) self-identified and other demographic data, including but not limited to the composition of their program over the last 5 years by age; historically marginalized, minoritized, or excluded status; sexual orientation and gender identity.
17. Our AMA will encourage the Accreditation Council for Graduate Medical Education and other relevant stakeholders to annually collect data on childbirth and parenthood from all accredited US residency programs and publish this data with disaggregation by gender identity and specialty.
18. These policies as above should be freely available online through FREIDA and in writing to all current trainees and applicants to medical school, residency or fellowship.

REPORT OF THE COUNCIL ON MEDICAL EDUCATION

CME Report 06-A-23

Subject: Modifying Financial Assistance Eligibility Criteria for Medical School Applicants

Presented by: John P. Williams, MD, Chair

Referred to: Reference Committee C

At its 2022 Annual Meeting, the American Medical Association (AMA) House of Delegates (HOD) adopted Policy D-305.950, "Modifying Financial Assistance Eligibility Criteria for Medical School Applicants," which directs the AMA to:

> work with the Association of American Medical Colleges, American Association of Colleges of Osteopathic Medicine, and other appropriate stakeholders to study process reforms that could help mitigate the high cost of applying to medical school for low-income applicants, including better targeting application fee waivers through broadened eligibility criteria.

Testimony during the meeting expressed concern that applicants to medical school are often required to disclose their parental financial information, regardless of whether the applicant would individually meet a lower income threshold or are eligible for extensive financial aid through federal programs. This report will review the application process as well as the fee assistance programs and discuss reforms and resources to further aid individuals struggling to afford the high costs of application to medical school.

BACKGROUND

Journey into medical school and associated costs

The preparation to apply to medical school begins well before filling out an application form, starting with completion of high school education or General Education Development test (GED), as required for entry into an undergraduate degree program. According to the National Center for Education Statistics (NCES), 86 percent of students earned a diploma at the end of the 2018-2019 school year — an all-time high. Asian/Pacific Islander students had the highest adjusted cohort graduation rate (93 percent), followed by White (89 percent), Hispanic (82 percent), Black (80 percent), and American Indian/Alaska Native (74 percent) students.[1]

The following table provides detail regarding the related steps for entry into medical school and their related costs (as of 2023):

Requirement	MD	DO	Associated costs
Undergraduate program (average 4 years)	Tuition, books, and related fees. Completion of bachelor's degree, inclusive of prerequisite courses. Some students may qualify for scholarships or waivers.		Expenses related to travel, housing, food, health care, electronic device, internet access.
Medical College Admissions Test® (MCAT®)	$330 standard fee[2] $120 nonrefundable international fee (for examinees testing outside the U.S., Canada, or U.S. Territories; in addition to the standard fee).[2] Students who qualify for the Association of American Medical Colleges' Fee Assistance Program (FAP) pay a reduced fee of $135.[2]		Expenses related to test preparation tools/courses; travel to test site, lodging, food.
Primary medical school application fee	American Medical College Application Service® (AMCAS®): $170 for first school.[3] $43 for each additional school.* Some schools do not use AMCAS.	American Association of Colleges of Osteopathic Medicine Application Service (AACOMAS) $198 for first school.[4] $50 for each additional school.	Expenses related to application preparation tools, electronic device, internet access, college service fees (e.g., transmit transcript and/or letters of recommendation.
Secondary application fee	Average $50-100 per school*		Electronic device, internet access.
Access to database about medical schools	Optional subscription to Medical School Admission Requirements® (MSAR®) database to view information about allopathic medical schools. $28 for one year, $36 for two years, free to FAP students.[5]	Optional free access to Choose DO Explorer to view information about osteopathic medical schools.	Electronic device, internet access.
Medical school interviews (virtual or in person)	Costs may vary depending on mode of travel, lodging, attire, meals per interview location.		Electronic device, internet access.

*2022 data indicates an average of 18 primary applications per applicant (990,790 applications were submitted by 55,188 applicants).[6]

Acceptance into medical school is an expensive and time-consuming endeavor. Many applicants are financially assisted by others (parents, guardians) to pursue this process; however, some students are not financially dependent on their parents — for a variety of reasons. Yet the applications often require the applicant to disclose parental financial information. Further, this requirement does not seem to consider whether the applicant would individually without parental income meet a lower income threshold or be eligible for financial aid.

Financial assistance for medical school applications fees

AMCAS® application to allopathic medical school

The Association of American Medical Colleges (AAMC) offers the American Medical College Application Service® (AMCAS®), a centralized medical school application processing service used by most U.S. medical schools as the primary application method for their first-year entering classes. The subsection of the application called "Childhood Information" asks questions about the applicant's "parents and guardians" as well as how the applicant paid for an undergraduate education. It asks about percent scholarship, percent parental contribution, and percent of contribution from self. The applicant is able to respond "don't know" or "decline to answer" to the question about family income. According to the 2023 AMCAS® Applicant Guide, it uses such terms as "immediate family," "medically underserved," "state or federal assistance programs," and "Pell Grants." See Appendix A for examples of relevant questions in the AMCAS application.

The AAMC's Fee Assistance Program (FAP) assists those who, without financial assistance, would otherwise be unable to take the Medical College Admission Test® (MCAT®), apply to medical schools that use the American Medical College Application Service® (AMCAS®), etc. This program requires the applicant, if under age 26, to provide their parents' financial information and supporting tax documentation regardless of the applicant's marital status, tax filing status (independent or dependent), parents' country of residence, or whether their parents are willing to provide documentation. Exemptions from providing parental information include if the applicant:

- is legally emancipated,
- does not know if a parent is living,
- does not have a relationship with a parent and does not communicate with them,
- was in foster care or in the care of a legal guardian at the time they reached the age of majority,
- another circumstance that prohibits the obtaining of parent's financial information.[7]

In addition, exemption will be made if the parent is deceased, incarcerated, institutionalized, or permanently incapacitated or hospitalized.

AACOMAS application to osteopathic medical school

Similar to AMCAS, the American Association of Colleges of Osteopathic Medicine (AACOM) offers their own Application Service (AACOMAS). This application has a section entitled "Family Information" which requires the applicant to provide parents' names, note if parents are living or deceased, and provide any relatives who are DOs or MDs. It also asks optional questions about parents' occupation, residency, education, and household. A section called "Other information" collects "background information" that includes questions related to family income. Explanations are provided in the Applicant Help Center. See Appendix B for examples of relevant questions in the AACOMAS application.

AACOM offers the Fee Waiver Program. Students must apply to this program and receive approval, if applicable, before submitting their AACOMAS application. Applicant Help Center provides additional information on eligibility. Applicants who are not listed as a "dependent" on a previously filed Federal Income Tax Return Form 1040 are classified as "independent applicants." AACOM requires the applicant to submit both their own and their parent or guardian's 1040 forms.

Federal financial assistance requirements

Definition of "low-income"

The U.S. Department of Health and Human Services (HHS) defines "low-income levels" used for various health professions as authorized in Titles III, VII, and VIII of the Public Health Service Act. This information is periodically published in the Federal Register. Effective January 12, 2022, a "low-income family/household" is defined as having an annual income that does not exceed 200 percent of HHS's poverty guidelines.[8] "A family is a group of two or more individuals related by birth, marriage, or adoption who live together. Most HRSA programs use the income of a student's parent(s) to compute low-income status. However, a 'household' may potentially be only one person."[8] Low-income levels are adjusted annually based on poverty thresholds published by the U.S. Census Bureau.

Free Application for Federal Student Aid

The Free Application for Federal Student Aid (FASFA®), offered by the U.S. Department of Education, is a mechanism for students to apply for federal grants, work-study, and loans before each year of college. Such institutions use FAFSA data to determine an applicant's federal aid eligibility. The FASFA form makes clear that the student is the one applying for financial aid. Dependent students and their parents/guardians must both create FASFA IDs online and provide parental information in the application. If a parent does not have a Social Security number (SSN), they will not be able to create an FASFA ID (which requires an SSN). Unfortunately, this presents challenges for many parents who are not U.S. citizens. The FASFA program currently defines an "independent student" as one of the following:

- born before Jan. 1, 1999
- married
- a graduate or professional student
- a veteran
- a member of the armed forces
- an orphan
- a ward of the court
- someone with legal dependents other than a spouse
- an emancipated minor
- someone who is homeless or at risk of becoming homeless.[9]

DISCUSSION

Recent changes

Changes to application forms as well as the programs that create and maintain the forms are likely to impact the students who apply, or wish to apply, to medical school. Recent examples of changes are explained below.

FAP reforms

In 2022, the AAMC introduced the following changes to the FAP:

- Free and discounted items related to the MCAT and MSAR as noted in the table above.
- Open to everyone with a permanent U.S. address. Reference to U.S. citizenship and certain visa status eligibility requirements have been removed.
- Parental financial information is NOT required for applicants over age 26 on the day the application is submitted. Eligibility depends on income and poverty guidelines.
- Benefits are not retroactive. If awarded fee assistance, the applicant cannot apply benefits to previous registrations or purchases.
- Fee for secondary applications may be waived at some medical schools.[10]

Of note, many medical students apply and enter when they are younger than 26 (likely ages 22-24). Therefore, this benefit may not help most applicants.

Blockage of the Biden Administration debt relief program

Due to the economic challenges created by the COVID-19 pandemic, the Biden-Harris Administration issued a debt relief program to

- extend the pause on student loan repayments a few times, whereby no one with a federally held loan has had make a loan payments since President Biden took office,
- "provide up to $20,000 in debt relief to Pell Grant recipients with loans held by the Department of Education (DOE) and up to $10,000 in debt relief to non-Pell Grant recipients. Borrowers are eligible for this relief if their individual income is less than $125,000 or $250,000 for households. In addition, borrowers who are employed by non-profits, the military, or federal, state, Tribal, or local government may be eligible to have all of their student loans forgiven through the Public Service Loan Forgiveness (PSLF) program,"
- propose a rule change to create a new income-driven repayment plan to reduce future monthly payments for lower- and middle-income applicants.[11]

However, courts have issued orders blocking this student debt relief program and, as a result, applications are not being accepted at this time. This halt to the application process is likely having a real impact on medical school applicants. The Administration is seeking to overturn those orders. Thus, the student loan payment pause is extended until the DOE is permitted to implement the program or the litigation is resolved; if not resolved by June 30, 2023, then payments will resume 60 days after that.[11]

RELEVANT AMA POLICIES

The AMA has several related policies in place addressing medical school cost, debt, and diversity; however, none specifically address the cost and aspects of the application form itself. Related policies are listed here, and full text is available in Appendix C.

- H-295.888, Progress in Medical Education: the Medical School Admission Process
- D-200.985, Strategies for Enhancing Diversity in the Physician Workforce
- H-305.925, Principles of and Actions to Address Medical Education Costs and Student Debt
- H-305.988, Cost and Financing of Medical Education and Availability of First Year Residency Positions

- H-350.979, Increase the Representation of Minority and Economically Disadvantaged Populations in the Medical Profession
- D-295.303, Support Hybrid Interview Techniques for Entry to Graduate Medical Education
- H-255.968, Advance Tuition Payment Requirements for International Students Enrolled in US Medical Schools

SUMMARY AND RECOMMENDATIONS

The entire process surrounding acceptance into medical school is costly and time-consuming. The application itself is a significant expense and may require the student to disclose information about their parents and related income, even if the student is not being financially supported by them. Some families may financially support students but struggle to do so. Given limited resources, financial programs should prioritize low-income families and/or independent students. Further study is needed in order to propose equitable process reforms that could help mitigate the high cost of applying to medical school, particularly for low-income students.

The Council on Medical Education therefore recommends that the following recommendations be adopted, and the remainder of this report be filed:

1. That AMA policy D-305.950, Modifying Financial Assistance Eligibility Criteria for Medical School Applicants, be amended by addition and deletion to read as follows:

   1. Our AMA will ~~work with~~ encourage the Association of American Medical Colleges~~,~~ and American Association of Colleges of Osteopathic Medicine~~, and other appropriate stakeholders~~ to study process reforms ~~that could help~~ to mitigate the high cost of applying to medical school ~~for low-income applicants, including better targeting application fee waivers through broadened eligibility criteria,~~ and ensure cost parity among applicants to DO and MD granting institutions.

   2. Our AMA will encourage the Association of American Medical Colleges, American Association of Colleges of Osteopathic Medicine, and U.S. Department of Education to reevaluate application forms to financial aid programs such as the Fee Assistance Program (FAP), Fee Waiver Program (FWP), and Free Application for Federal Aid (FASFA) to broaden eligibility criteria for low-income students.

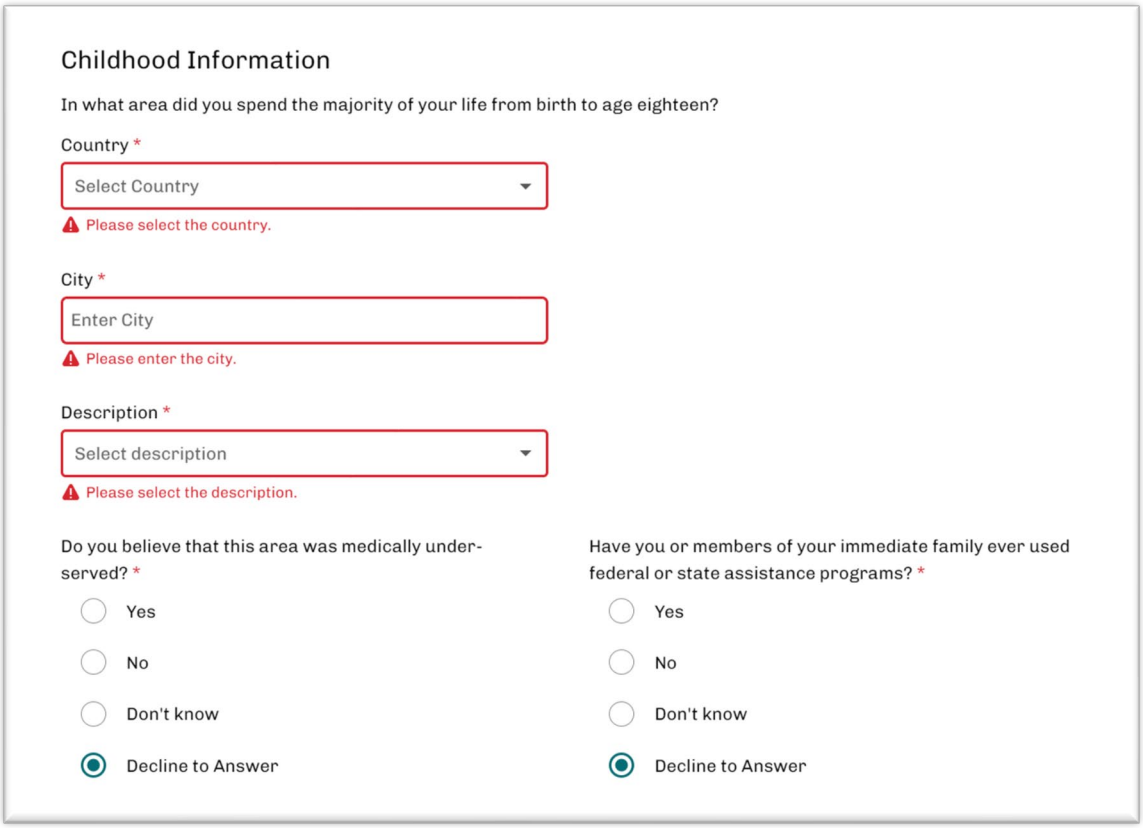
   3. Our AMA will commend the U.S. Department of Education for removing references to parental/guardian income for all medical students in the Free Application for Federal Aid (FASFA).

   4. Our AMA will encourage the Association of American Medical Colleges and American Association of Colleges of Osteopathic Medicine as well as medical school and state-based financial aid programs to remove references to parental/guardian income for all medical students and follow the U.S. Department of Education's definition of "independent student" as described in the Free Application for Federal Aid (FASFA). (Modify Current HOD Policy)

Fiscal note: $1,000.

APPENDIX A

Relevant AMCAS application questions



Childhood Information

In what area did you spend the majority of your life from birth to age eighteen?

Country *

Select Country

Please select the country.

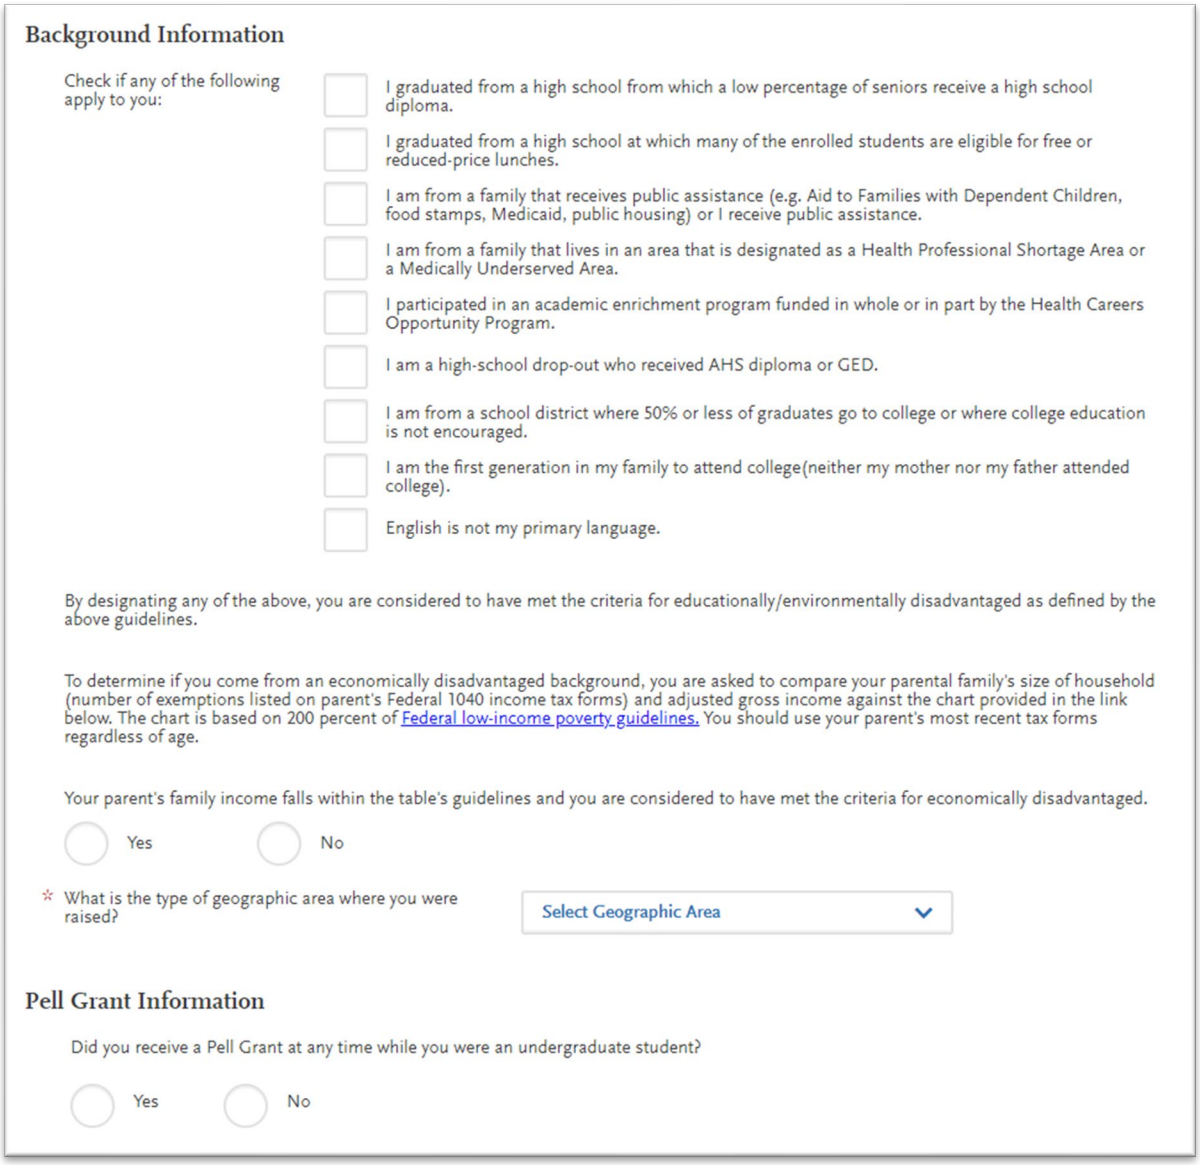
APPENDIX B

Relevant AACOMAS application questions



Background Information

Check if any of the following apply to you:

- ☐ I graduated from a high school from which a low percentage of seniors receive a high school diploma.
- ☐ I graduated from a high school at which many of the enrolled students are eligible for free or reduced-price lunches.
- ☐ I am from a family that receives public assistance (e.g. Aid to Families with Dependent Children, food stamps, Medicaid, public housing) or I receive public assistance.
- ☐ I am from a family that lives in an area that is designated as a Health Professional Shortage Area or a Medically Underserved Area.
- ☐ I participated in an academic enrichment program funded in whole or in part by the Health Careers Opportunity Program.
- ☐ I am a high-school drop-out who received AHS diploma or GED.
- ☐ I am from a school district where 50% or less of graduates go to college or where college education is not encouraged.
- ☐ I am the first generation in my family to attend college(neither my mother nor my father attended college).
- ☐ English is not my primary language.

By designating any of the above, you are considered to have met the criteria for educationally/environmentally disadvantaged as defined by the above guidelines.

To determine if you come from an economically disadvantaged background, you are asked to compare your parental family's size of household (number of exemptions listed on parent's Federal 1040 income tax forms) and adjusted gross income against the chart provided in the link below. The chart is based on 200 percent of Federal low-income poverty guidelines. You should use your parent's most recent tax forms regardless of age.

Your parent's family income falls within the table's guidelines and you are considered to have met the criteria for economically disadvantaged.

○ Yes ○ No

* What is the type of geographic area where you were raised? Select Geographic Area

Pell Grant Information

Did you receive a Pell Grant at any time while you were an undergraduate student?

○ Yes ○ No

APPENDIX C

Relevant policies

H-295.888, Progress in Medical Education: the Medical School Admission Process
1. Our AMA encourages: (A) research on ways to reliably evaluate the personal qualities (such as empathy, integrity, commitment to service) of applicants to medical school and support broad dissemination of the results. Medical schools should be encouraged to give significant weight to these qualities in the admissions process; (B) premedical coursework in the humanities, behavioral sciences, and social sciences, as a way to ensure a broadly-educated applicant pool; and (C) dissemination of models that allow medical schools to meet their goals related to diversity in the context of existing legal requirements, for example through outreach to elementary schools, high schools, and colleges.
2. Our AMA: (A) will continue to work with the Association of American Medical Colleges (AAMC) and other relevant organizations to encourage improved assessment of personal qualities in the recruitment process for medical school applicants including types of information to be solicited in applications to medical school; (B) will work with the AAMC and other relevant organizations to explore the range of measures used to assess personal qualities among applicants, including those used by related fields; (C) encourages the development of innovative methodologies to assess personal qualities among medical school applicants; (D) will work with medical schools and other relevant stakeholder groups to review the ways in which medical schools communicate the importance of personal qualities among applicants, including how and when specified personal qualities will be assessed in the admissions process; (E) encourages continued research on the personal qualities most pertinent to success as a medical student and as a physician to assist admissions committees to adequately assess applicants; and (F) encourages continued research on the factors that impact negatively on humanistic and empathetic traits of medical students during medical school.

D-200.985, Strategies for Enhancing Diversity in the Physician Workforce
1. Our AMA, independently and in collaboration with other groups such as the Association of American Medical Colleges (AAMC), will actively work and advocate for funding at the federal and state levels and in the private sector to support the following: (a) Pipeline programs to prepare and motivate members of underrepresented groups to enter medical school; (b) Diversity or minority affairs offices at medical schools; (c) Financial aid programs for students from groups that are underrepresented in medicine; and (d) Financial support programs to recruit and develop faculty members from underrepresented groups.
2. Our AMA will work to obtain full restoration and protection of federal Title VII funding, and similar state funding programs, for the Centers of Excellence Program, Health Careers Opportunity Program, Area Health Education Centers, and other programs that support physician training, recruitment, and retention in geographically-underserved areas.
3. Our AMA will take a leadership role in efforts to enhance diversity in the physician workforce, including engaging in broad-based efforts that involve partners within and beyond the medical profession and medical education community.
4. Our AMA will encourage the Liaison Committee on Medical Education to assure that medical schools demonstrate compliance with its requirements for a diverse student body and faculty.
5. Our AMA will develop an internal education program for its members on the issues and possibilities involved in creating a diverse physician population.
6. Our AMA will provide on-line educational materials for its membership that address diversity issues in patient care including, but not limited to, culture, religion, race and ethnicity.

7. Our AMA will create and support programs that introduce elementary through high school students, especially those from groups that are underrepresented in medicine (URM), to healthcare careers.
8. Our AMA will create and support pipeline programs and encourage support services for URM college students that will support them as they move through college, medical school and residency programs.
9. Our AMA will recommend that medical school admissions committees and residency/fellowship programs use holistic assessments of applicants that take into account the diversity of preparation and the variety of talents that applicants bring to their education with the goal of improving health care for all communities.
10. Our AMA will advocate for the tracking and reporting to interested stakeholders of demographic information pertaining to URM status collected from Electronic Residency Application Service (ERAS) applications through the National Resident Matching Program (NRMP).
11. Our AMA will continue the research, advocacy, collaborative partnerships and other work that was initiated by the Commission to End Health Care Disparities.
12. Our AMA opposes legislation that would undermine institutions' ability to properly employ affirmative action to promote a diverse student population.
13. Our AMA will work with the AAMC and other stakeholders to create a question for the AAMC electronic medical school application to identify previous pipeline program (also known as pathway program) participation and create a plan to analyze the data in order to determine the effectiveness of pipeline programs.

H-305.925, Principles of and Actions to Address Medical Education Costs and Student Debt
The costs of medical education should never be a barrier to the pursuit of a career in medicine nor to the decision to practice in a given specialty. To help address this issue, our American Medical Association (AMA) will:
1. Collaborate with members of the Federation and the medical education community, and with other interested organizations, to address the cost of medical education and medical student debt through public- and private-sector advocacy.
2. Vigorously advocate for and support expansion of and adequate funding for federal scholarship and loan repayment programs--such as those from the National Health Service Corps, Indian Health Service, Armed Forces, and Department of Veterans Affairs, and for comparable programs from states and the private sector--to promote practice in underserved areas, the military, and academic medicine or clinical research.
3. Encourage the expansion of National Institutes of Health programs that provide loan repayment in exchange for a commitment to conduct targeted research.
4. Advocate for increased funding for the National Health Service Corps Loan Repayment Program to assure adequate funding of primary care within the National Health Service Corps, as well as to permit: (a) inclusion of all medical specialties in need, and (b) service in clinical settings that care for the underserved but are not necessarily located in health professions shortage areas.
5. Encourage the National Health Service Corps to have repayment policies that are consistent with other federal loan forgiveness programs, thereby decreasing the amount of loans in default and increasing the number of physicians practicing in underserved areas.
6. Work to reinstate the economic hardship deferment qualification criterion known as the “20/220 pathway,” and support alternate mechanisms that better address the financial needs of trainees with educational debt.
7. Advocate for federal legislation to support the creation of student loan savings accounts that allow for pre-tax dollars to be used to pay for student loans.
8. Work with other concerned organizations to advocate for legislation and regulation that would result in favorable terms and conditions for borrowing and for loan repayment, and would permit

100% tax deductibility of interest on student loans and elimination of taxes on aid from service-based programs.
9. Encourage the creation of private-sector financial aid programs with favorable interest rates or service obligations (such as community- or institution-based loan repayment programs or state medical society loan programs).
10. Support stable funding for medical education programs to limit excessive tuition increases, and collect and disseminate information on medical school programs that cap medical education debt, including the types of debt management education that are provided.
11. Work with state medical societies to advocate for the creation of either tuition caps or, if caps are not feasible, pre-defined tuition increases, so that medical students will be aware of their tuition and fee costs for the total period of their enrollment.
12. Encourage medical schools to (a) Study the costs and benefits associated with non-traditional instructional formats (such as online and distance learning, and combined baccalaureate/MD or DO programs) to determine if cost savings to medical schools and to medical students could be realized without jeopardizing the quality of medical education; (b) Engage in fundraising activities to increase the availability of scholarship support, with the support of the Federation, medical schools, and state and specialty medical societies, and develop or enhance financial aid opportunities for medical students, such as self-managed, low-interest loan programs; (c) Cooperate with postsecondary institutions to establish collaborative debt counseling for entering first-year medical students; (d) Allow for flexible scheduling for medical students who encounter financial difficulties that can be remedied only by employment, and consider creating opportunities for paid employment for medical students; (e) Counsel individual medical student borrowers on the status of their indebtedness and payment schedules prior to their graduation; (f) Inform students of all government loan opportunities and disclose the reasons that preferred lenders were chosen; (g) Ensure that all medical student fees are earmarked for specific and well-defined purposes, and avoid charging any overly broad and ill-defined fees, such as but not limited to professional fees; (h) Use their collective purchasing power to obtain discounts for their students on necessary medical equipment, textbooks, and other educational supplies; (i) Work to ensure stable funding, to eliminate the need for increases in tuition and fees to compensate for unanticipated decreases in other sources of revenue; mid-year and retroactive tuition increases should be opposed.
13. Support and encourage state medical societies to support further expansion of state loan repayment programs, particularly those that encompass physicians in non-primary care specialties.
14. Take an active advocacy role during reauthorization of the Higher Education Act and similar legislation, to achieve the following goals: (a) Eliminating the single holder rule; (b) Making the availability of loan deferment more flexible, including broadening the definition of economic hardship and expanding the period for loan deferment to include the entire length of residency and fellowship training; (c) Retaining the option of loan forbearance for residents ineligible for loan deferment; (d) Including, explicitly, dependent care expenses in the definition of the “cost of attendance”; (e) Including room and board expenses in the definition of tax-exempt scholarship income; (f) Continuing the federal Direct Loan Consolidation program, including the ability to “lock in” a fixed interest rate, and giving consideration to grace periods in renewals of federal loan programs; (g) Adding the ability to refinance Federal Consolidation Loans; (h) Eliminating the cap on the student loan interest deduction; (i) Increasing the income limits for taking the interest deduction; (j) Making permanent the education tax incentives that our AMA successfully lobbied for as part of Economic Growth and Tax Relief Reconciliation Act of 2001; (k) Ensuring that loan repayment programs do not place greater burdens upon married couples than for similarly situated couples who are cohabitating; (l) Increasing efforts to collect overdue debts from the present medical student loan programs in a manner that would not interfere with the provision of future loan funds to medical students.

15. Continue to work with state and county medical societies to advocate for adequate levels of medical school funding and to oppose legislative or regulatory provisions that would result in significant or unplanned tuition increases.
16. Continue to study medical education financing, so as to identify long-term strategies to mitigate the debt burden of medical students, and monitor the short-and long-term impact of the economic environment on the availability of institutional and external sources of financial aid for medical students, as well as on choice of specialty and practice location.
17. Collect and disseminate information on successful strategies used by medical schools to cap or reduce tuition.
18. Continue to monitor the availability of and encourage medical schools and residency/fellowship programs to (a) provide financial aid opportunities and financial planning/debt management counseling to medical students and resident/fellow physicians; (b) work with key stakeholders to develop and disseminate standardized information on these topics for use by medical students, resident/fellow physicians, and young physicians; and (c) share innovative approaches with the medical education community.
19. Seek federal legislation or rule changes that would stop Medicare and Medicaid decertification of physicians due to unpaid student loan debt. The AMA believes that it is improper for physicians not to repay their educational loans, but assistance should be available to those physicians who are experiencing hardship in meeting their obligations.
20. Related to the Public Service Loan Forgiveness (PSLF) Program, our AMA supports increased medical student and physician participation in the program, and will: (a) Advocate that all resident/fellow physicians have access to PSLF during their training years; (b) Advocate against a monetary cap on PSLF and other federal loan forgiveness programs; (c) Work with the United States Department of Education to ensure that any cap on loan forgiveness under PSLF be at least equal to the principal amount borrowed; (d) Ask the United States Department of Education to include all terms of PSLF in the contractual obligations of the Master Promissory Note; (e) Encourage the Accreditation Council for Graduate Medical Education (ACGME) to require residency/fellowship programs to include within the terms, conditions, and benefits of program appointment information on the employer's PSLF program qualifying status; (f) Advocate that the profit status of a physician's training institution not be a factor for PSLF eligibility; (g) Encourage medical school financial advisors to counsel wise borrowing by medical students, in the event that the PSLF program is eliminated or severely curtailed; (h) Encourage medical school financial advisors to increase medical student engagement in service-based loan repayment options, and other federal and military programs, as an attractive alternative to the PSLF in terms of financial prospects as well as providing the opportunity to provide care in medically underserved areas; (i) Strongly advocate that the terms of the PSLF that existed at the time of the agreement remain unchanged for any program participant in the event of any future restrictive changes; (j) Monitor the denial rates for physician applicants to the PSLF; (k) Undertake expanded federal advocacy, in the event denial rates for physician applicants are unexpectedly high, to encourage release of information on the basis for the high denial rates, increased transparency and streamlining of program requirements, consistent and accurate communication between loan servicers and borrowers, and clear expectations regarding oversight and accountability of the loan servicers responsible for the program; (l) Work with the United States Department of Education to ensure that applicants to the PSLF and its supplemental extensions, such as Temporary Expanded Public Service Loan Forgiveness (TEPSLF), are provided with the necessary information to successfully complete the program(s) in a timely manner; and (m) Work with the United States Department of Education to ensure that individuals who would otherwise qualify for PSLF and its supplemental extensions, such as TEPSLF, are not disqualified from the program(s).
21. Advocate for continued funding of programs including Income-Driven Repayment plans for the benefit of reducing medical student load burden.

22. Strongly advocate for the passage of legislation to allow medical students, residents and fellows who have education loans to qualify for interest-free deferment on their student loans while serving in a medical internship, residency, or fellowship program, as well as permitting the conversion of currently unsubsidized Stafford and Graduate Plus loans to interest free status for the duration of undergraduate and graduate medical education.

H-305.988, Cost and Financing of Medical Education and Availability of First Year Residency Positions

Our AMA:
1. believes that medical schools should further develop an information system based on common definitions to display the costs associated with undergraduate medical education;
2. in studying the financing of medical schools, supports identification of those elements that have implications for the supply of physicians in the future;
3. believes that the primary goal of medical school is to educate students to become physicians and that despite the economies necessary to survive in an era of decreased funding, teaching functions must be maintained even if other commitments need to be reduced;
4. believes that a decrease in student enrollment in medical schools may not result in proportionate reduction of expenditures by the school if quality of education is to be maintained;
5. supports continued improvement of the AMA information system on expenditures of medical students to determine which items are included, and what the ranges of costs are;
6. supports continued study of the relationship between medical student indebtedness and career choice;
7. believes medical schools should avoid counterbalancing reductions in revenues from other sources through tuition and student fee increases that compromise their ability to attract students from diverse backgrounds;
8. supports expansion of the number of affiliations with appropriate hospitals by institutions with accredited residency programs;
9. encourages for profit-hospitals to participate in medical education and training;
10. supports AMA monitoring of trends that may lead to a reduction in compensation and benefits provided to resident physicians;
11. encourages all sponsoring institutions to make financial information available to help residents manage their educational indebtedness; and
12. will advocate that resident and fellow trainees should not be financially responsible for their training.

H-350.979, Increase the Representation of Minority and Economically Disadvantaged Populations in the Medical Profession

Our AMA supports increasing the representation of minorities in the physician population by: (1) Supporting efforts to increase the applicant pool of qualified minority students by: (a) Encouraging state and local governments to make quality elementary and secondary education opportunities available to all; (b) Urging medical schools to strengthen or initiate programs that offer special premedical and precollegiate experiences to underrepresented minority students; (c) urging medical schools and other health training institutions to develop new and innovative measures to recruit underrepresented minority students, and (d) Supporting legislation that provides targeted financial aid to financially disadvantaged students at both the collegiate and medical school levels.
(2) Encouraging all medical schools to reaffirm the goal of increasing representation of underrepresented minorities in their student bodies and faculties.
(3) Urging medical school admission committees to consider minority representation as one factor in reaching their decisions.
(4) Increasing the supply of minority health professionals.

(5) Continuing its efforts to increase the proportion of minorities in medical schools and medical school faculty.
(6) Facilitating communication between medical school admission committees and premedical counselors concerning the relative importance of requirements, including grade point average and Medical College Aptitude Test scores.
(7) Continuing to urge for state legislation that will provide funds for medical education both directly to medical schools and indirectly through financial support to students.
(8) Continuing to provide strong support for federal legislation that provides financial assistance for able students whose financial need is such that otherwise they would be unable to attend medical school.

D-295.303, Support Hybrid Interview Techniques for Entry to Graduate Medical Education
Our AMA will:
1. work with relevant stakeholders to study the advantages and disadvantages of an online medical school interview option for future medical school applicants, including but not limited to financial implications and potential solutions, long term success, and well-being of students and residents.
2. encourage appropriate stakeholders, such as the Association of American Medical Colleges, American Association of Colleges of Osteopathic Medicine, Intealth, and Accreditation Council for Graduate Medical Education, to study the feasibility and utility of videoconferencing for graduate medical education (GME) interviews and examine interviewee and program perspectives on incorporating videoconferencing as an adjunct to GME interviews, in order to guide the development of equitable protocols for expansion of hybrid GME interviews.

H-255.968, Advance Tuition Payment Requirements for International Students Enrolled in US Medical Schools
Our AMA:
1. supports the autonomy of medical schools to determine optimal tuition requirements for international students;
2. encourages medical schools and undergraduate institutions to fully inform international students interested in medical education in the US of the limited options available to them for tuition assistance;
3. supports the Association of American Medical Colleges (AAMC) in its efforts to increase transparency in the medical school application process for international students by including school policy on tuition requirements in the Medical School Admission Requirements (MSAR); and
4. encourages medical schools to explore alternative means of prepayment, such as a letter of credit, for four years of medical school.

REPORT 07 OF THE COUNCIL ON MEDICAL EDUCATION (A-23)
Management and Leadership Training in Medical Education
(Reference Committee C)

EXECUTIVE SUMMARY

At the 2022 Annual Meeting, the American Medical Association (AMA) House of Delegates (HOD) adopted policy directing the AMA to "4.(a) study the extent of the impact of AMA Policy D-295.316, 'Management and Leadership for Physicians,' on elective curriculum; and (b) expand efforts to promote the tenets of health systems science to prepare trainees for leadership roles and address prevalent challenges in the practice of medicine and public health."

This report is written in response to these directives. While there is no clear way to study the extent of the impact of AMA policy on elective curricula, this report provides background on Policy D-295.316, describes efforts made to advance learning opportunities regarding physician management and leadership, and discusses how this topic relates to the foundational platform of health systems science.

Policy D-295.316 was originally adopted at the 2014 Interim Meeting. Since that time, it was amended at I-16 and A-18, reaffirmed at A-17, and amended at A-22 with the addition of a fourth clause, as noted above, which is the impetus for this report. Appendix A cites the various actions taken to accomplish this policy over the years. It also provides a listing of all the AMA programs, courses, and initiatives that address physician leadership and management. Further, this report describes the educational standards, competencies, and organizations that foster such knowledge and skills and analyzes data from the Liaison Committee on Medical Education and National GME Census related to leadership and health systems science.

This report recommends that policy D-295.316 be amended to clarify the ongoing efforts of the AMA, rescind clauses accomplished by this report, and add new directives related to data collection and analysis as well as the creation of an online directory of AMA resources.

REPORT OF THE COUNCIL ON MEDICAL EDUCATION

CME Report 07-A-23

Subject: Management and Leadership Training in Medical Education

Presented by: John P. Williams, MD, Chair

Referred to: Reference Committee C

At the 2022 Annual Meeting, the American Medical Association (AMA) House of Delegates (HOD) adopted new policy directing the AMA to:

> (a) study the extent of the impact of AMA Policy D-295.316, "Management and Leadership for Physicians," on elective curriculum; and (b) expand efforts to promote the tenets of health systems science to prepare trainees for leadership roles and address prevalent challenges in the practice of medicine and public health.

Testimony on this item supported the need for physician leaders and the development of necessary leadership and communication skills. This is in alignment with the AMA's work to inculcate health systems science throughout the medical education curriculum as part of its Accelerating Change in Medical Education initiative (now renamed ChangeMedEd).

This report is written in response to these newly adopted directives. While there is no clear way to study the extent of the impact of AMA policy on elective curricula, this report provides background on Policy D-295.316, describes efforts made to advance learning opportunities regarding physician management and leadership, and discusses how this topic relates to the foundational platform of health systems science.

BACKGROUND

AMA Policy D-296.316, Management and Leadership for Physicians"

Policy D-295.316 was originally adopted at the 2014 Interim Meeting (I-14). It was amended at I-16 and A-18 and most recently at A-22 with the addition of a fourth clause, which is the impetus for this report. The policy was also reaffirmed at A-17. Currently, the full policy contains four clauses and reads as follows:

1. Our AMA will study advantages and disadvantages of various educational options on management and leadership for physicians with a report back to the House of Delegates; and develop an online report and guide aimed at physicians interested in management and leadership that would include the advantages and disadvantages of various educational options.
2. Our AMA will work with key stakeholders to advocate for collaborative programs among medical schools, residency programs, and related schools of business and management to better

prepare physicians for administrative, financial and leadership responsibilities in medical management.

3. Our AMA: (a) will advocate for and support the creation of leadership programs and curricula that emphasize experiential and active learning models to include knowledge, skills and management techniques integral to achieving personal and professional financial literacy and leading interprofessional team care, in the spirit of the AMA's Accelerating Change in Medical Education initiative; and (b) will advocate with the Liaison Committee on Medical Education, Association of American Medical Colleges and other governing bodies responsible for the education of future physicians to implement programs early in medical training to promote the development of leadership and personal and professional financial literacy capabilities.
4. Our AMA will: (a) study the extent of the impact of AMA Policy D-295.316, "Management and Leadership for Physicians," on elective curriculum; and (b) expand efforts to promote the tenets of health systems science to prepare trainees for leadership roles and address prevalent challenges in the practice of medicine and public health.

From 2014-2016, AMA conducted a qualitative study and environmental scan to evaluate the market for physician leadership training and development and to test the potential demand for AMA-led programs. As a result of this research, the AMA launched the development of leadership-related content for physicians specific to topics where the AMA has unique expertise at both the individual and practice levels. Given the evolution of this policy from 2014 to 2022, several actions were taken over the years to accomplish the directives in clauses (1)-(3). These actions are enumerated in Appendix A and further addressed in the report's recommendations.

Educational Standards, Competencies, and Resources

Many organizations and institutions are responsible for the education of future physicians. They may implement programs in medical training to promote the development of leadership as well as personal and professional financial literacy capabilities. The Liaison Committee on Medical Education (LCME) and Association of American Medical Colleges (AAMC), while not "governing bodies" as stated in clause 3b of AMA policy D-295.316, do play a role. Likewise, the American Osteopathic Association (AOA), Commission on Osteopathic College Accreditation (COCA), American Association of Colleges of Osteopathic Medicine (AACOM), and Accreditation Council for Graduate Medical Education (ACGME) also play important roles.

The LCME determines the standards an allopathic medical school must meet to maintain accreditation. Such standards include Self-Directed and Life-Long Learning (6.3), Interprofessional Collaborative Skills (7.9), and Financial Aid/Debt Management Counseling/Student Educational Debt (12.1) — all of which address and support the topics raised in Policy D-295.316 clause (3a).[1] Similarly, COCA's standards include Curriculum Design and Management (6.1), Self-Directed Learning (6.7), Interprofessional Education for Collaborative Practice (6.8), Financial Aid and Debt Management Counseling (9.7), Student Debt Outcomes (11.3), and Title IV Responsibility (12.9).[2]

The AAMC offers 15 competencies for entering medical students that lend themselves toward the development of skills necessary for effective leadership.[3] The AAMC's Group on Student Affairs (GSA) supports professional development, inclusive of leadership skills, and offers a framework to provide performance benchmarks.[4] Further, the GSA provides various resources and a downloadable, interactive catalog to identify which resources best suit the individual. For example, the Leadership Education and Development (LEAD) Certificate Program is designed to foster leaders in academic medicine.

The AACOM's Leadership Institute supports leadership development through a variety of resources suitable for DOs at all career stages and pursuits, including a Senior Leadership Development Program as well as a fellowship and internship in osteopathic health policy.

The ACGME Common Program Requirements, effective July 2022, establish that the qualifications of a program director include leadership skills (II.A.3.a) and professionalism (II.A.4.a).[5] Likewise, a program coordinator should possess skills in management and leadership. The requirements acknowledge that programs may place different emphasis on some skills such as leadership. The "core competencies" of the ACGME and American Board of Medical Specialties (ABMS) provide the foundation for residency milestones as well as board certification standards (initial and continuing).[6] These competencies address aspects of leadership:

- Patient Care and Procedural Skills
- Medical Knowledge
- Practice-based Learning and Improvement
- Interpersonal and Communication Skills
- Professionalism
- Systems-based Practice

DISCUSSION

Management and leadership skills are complementary and may overlap but their ultimate functions differ. The concept of "leadership" seeks to move an organization toward achieving a strategic vision though change. "Management" is a newer concept focused on organizational efficiency and effectiveness while also addressing its complexity. In short, "leadership can be said to craft the vision and strategy, and management is necessary to operationalize."[7] Management training usually includes topics such as business/practice management, organizational skills, time, and stress management; whereas leadership training often addresses such topics as communication, interpersonal skills, cultural sensitivity, facilitation, problem solving, team building, and conflict resolution. It is important for good leaders to understand management principles to achieve their vision. Leadership will be further explored in Council on Medical Education Report 9-A-23 addressing accreditation standards for competency in leading interprofessional health care teams.

AMA Management and Leadership Opportunities

The AMA's focused work in Medical Education as well as Physician Satisfaction and Practice Sustainability offers a wide range of learning opportunities and resources that address the broad and diverse topic of physician leadership.

- The AMA Undergraduate Medical Education Curricular Enrichment Program (UCEP), a series of online educational modules designed to complement undergraduate medical school curricula including modules on leadership.
- The AMA Medical Student Leadership Learning Series offers interactive modules that provide realistic scenarios and resources to help medical students become skilled in core competencies of leadership.
- The Succeeding in Medical School series provides medical students and international medical graduates with medical school tips and other guidance on a wide range of critical topics, including preparing for the United States Medical Licensing Examination® (USMLE®), navigating clinical rotations, publishing scientific research, and maintaining optimal health and wellness. It also provides opportunities for physicians to develop leadership skills and advocate for patients and the profession.

- The AMA's Accelerating Change in Medical Education initiative, recently renamed ChangeMedEd, works across the education continuum with visionary partners to create bold innovations in undergraduate and graduate medical education. It offers transformative resources for learners and educators, as well as national events that disseminate innovations to better train physicians to meet the needs of patients today and in the future. Members of the Accelerating Change in Medical Education Consortium actively collaborate on the development of leadership curricula at the undergraduate medical education level. This includes resources to address shaping tomorrow's leaders. This initiative also created the Health Systems Science framework, described in more detail below.
- The AMA GME Competency Education Program (GCEP) offers a robust series of online educational courses that complement teachings in residency and fellowship programs with meaningful, nonclinical knowledge that is easy to digest, understand, and apply. Built for busy residents, fellows, and faculty, GCEP offers flexible, self-paced learning with convenient anytime, anywhere access. It covers pertinent topics in GME such as resident well-being, sleep deprivation, the basics of health equity, and more. This award-winning program can help residents and fellows meet core program requirements and prepare for practice.
- The Reimagining Residency initiative is developing leadership training for residents. Efforts include curricula in professional identity formation.
- The Resident Diversity Leadership Program, supported by the AMA and administered through the University of Cincinnati, is a yearlong program for a cohort of 40 residents from backgrounds that have been historically excluded from medicine that meets monthly and works through a leadership curriculum.
- The STEPS Forward® practice innovation strategies offer real-world solutions to the challenges that physicians face every day. It provides tools to address barriers and restore joy in the practice of medicine. Further, STEPS Forward® offers proven approaches on how to successfully lead and manage change initiatives, empower the team, and drive tangible results. It offers a toolkit of resources and information on leadership in practice and a pertinent webinar entitled "Leading Through a Crisis: Communication During COVID-19 Times." STEPS Forward also features a module, entitled "Cultivating Leadership: Measure and Assess Leader Behaviors to Improve Professional Well-Being," that guides learners in the importance of leadership in promoting well-being and emphasizes ways to improve leadership in practice. Further, the Joy in Medicine Health System Recognition program honors organizations that have demonstrated organizational investment in promoting leadership development.
- The AMA Ed Hub™ online learning platform provides high-quality education for physicians and other medical professionals to stay current and continuously improve the care they provide. It brings together education from trusted sources including the JAMA Network™ and the AMA Journal of Ethics® as well as curated content from external providers including access to the Stanford Leadership Virtual Journal Club. This platform offers many educational opportunities (e.g., articles, podcasts, learning activities) that address leadership, many of which offer CME credit.
- The AMA Foundation's Leadership Development Institute offers a unique opportunity for physicians to gain individualized insight into the skills needed to foster their careers and the future of medicine. Participants receive professional development opportunities as well as mentoring throughout the course of the program. Activities include a weekend retreat, monthly training webinars, a year-long formal mentorship program and culminating workshops held in conjunction with the AMA Annual Meeting.

- The AMA Political Action Committee (AMPAC) is a bipartisan committee whose mission is to support candidates who will help medicine in Congress. In addition, AMPAC offers two political education training programs to encourage and support more members of the medical community to either seek public office or get involved in others' political campaigns. AMPAC has proudly offered these programs for over 30 years and has trained thousands of physicians to be successful candidates and activists.
- The AMA's Councils recommend educational policies to the AMA House of Delegates and have written many reports that discuss leadership in varying capacities. For example, the Council on Medical Education offered a report on the "The Structure and Function of Interprofessional Health Care Teams" that addresses the role of the physician leader.
- Participation in the AMA HOD, whether as a delegate/alternate delegate, ambassador, and/or member of a section, council, or board, demonstrates proactive physician leadership.

This rich variety of resources is available to students, trainees, physicians, and the medical education community; members and institutions are encouraged to avail themselves of these leadership training programs.

Health Systems Science

Health systems science (HSS) is a foundational platform and framework for understanding how health care is delivered, how health care professionals work together to deliver that care, and how the health system can improve patient care.

At the formation of the Accelerating Change in Medical Education initiative, the AMA called for innovations in "Promoting exemplary methods to achieve patient safety, performance improvement and patient-centered team-based care; and improving medical students' understanding of the health care system and health care financing."[8] Member medical schools of the Accelerating Change in Medical Education Consortium collaborated to create and develop a replete framework for HSS. The framework rests upon systems thinking to unify domains such as leadership, teaming, change agency, health care structure and processes, policies and economics, value, improvement, and more.

The consortium has developed multiple resources to support faculty development and the integration of training in HSS into UME and then GME. Resources include a textbook (now in its second edition), online modules hosted on the AMA Ed Hub™, a faculty scholars program, and an implementation guidebook. A full inventory of resources is displayed on a public landing page. The AMA also hosted a Health Systems Science Summit in 2022 to promote dissemination in UME and GME with over 250 participants.

A 2018 inventory of MD-granting medical schools conducted by the AMA demonstrated that most schools have incorporated some elements of HSS, and over 50 percent use the AMA textbook as a faculty resource. AMA staff and external partners continue to promote dissemination across UME and GME.

Data on related curricula and training

LCME Part II Annual Medical School Questionnaire

This LCME questionnaire collects data on both leadership and health systems science within the medical school curriculum. The following data are from the 2021-2022 questionnaire with responses from all 155 LCME-accredited medical education programs.[9]

	# of schools where topics are included	
Topic	**Required course in the pre-clerkship phase (Years 1 &2)**	**Required clerkship/ clinical discipline**
Leadership	103	93
Health systems science	135	120

National GME Census

Starting in 2019, the program survey of the National GME Census, which provides information for FREIDA™, the AMA's Residency and Fellowship Database®, asked if programs provided "Curriculum to develop health systems leadership skills (e.g., QI project leadership, community/organizational advocacy)."

Type of program		*Number and percent of programs with leadership development curriculum**						
	2019-2020	**%**	**2020-2021**	**%**	**2021-2022**	**%**	**2022-2023**	**%**
Residency	1421	27.2	1550	29.0	1547	28.4	1542	28.0
Fellowship	1181	16.9	1206	16.9	1135	15.4	1260	17.0
Program setting								
University hospital	1530	20.6	1593	21.3	1555	20.5	1535	20.4
Community hospital/ university affiliated	796	23.9	861	24.7	799	22.0	841	22.7
Community hospital	262	21.3	282	21.8	312	23.4	294	22.2
Other setting	14	6.0	20	8.6	16	6.8	132	35.5

Analysis of the American Medical Association's GME Database.
*Programs responding affirmatively to the question "Does the program offer… curriculum to develop health systems leadership skills (e.g., QI project leadership, community/organizational advocacy" in the National GME Census.

There does not appear to be significant growth in the number of programs providing leadership training over the past four years. Residency programs appear more likely to report having the curriculum compared to fellowship programs. Community-based programs are slightly more likely to report having a curriculum compared to university-based programs.

Medical subspecialty proposal

The certifying boards of multiple specialties, including the American Board of Emergency Medicine (ABEM), American Board of Anesthesiology, American Board of Preventive Medicine, and American Board of Family Medicine, recently received approval from the ABMS Committee on Certification (COCERT) for a subspecialty certification in Health Care Administration, Leadership and Management (HALM). The ABEM application indicated the purpose of the proposed certification is "to recognize expertise held by physicians with sophisticated, comprehensive knowledge that covers the broad, system-based leadership needs of health care environments, including those related to patient care as well as other health system administrative and management needs. HALM integrates expertise from medicine, health systems science, quality improvement, patient safety, business, public health, communication, computer science, economics, law, and other disciplines in a singular subspecialty certification."[10] The ACGME has approved program requirements for GME training programs in HALM, which can have accredited lengths of either 12 or 24 months. While there are not yet any accredited programs, there are similar programs already in existence that are likely to seek accreditation.

RELEVANT AMA POLICIES

In addition to Policy D-295.316, the AMA has other policies related to physician leadership and management as listed here. These full policies are provided in Appendix B.

- H-235.981, Qualifications, Selection, and Role of Medical Directors, Chief Medical Officers, Vice Presidents for Medical Affairs, and Others Employed by or Under Contract with Hospitals/Health Systems to Provide Medical Management Services
- H-405.990, Physician Managers
- H-445.984, Training Physicians and Physicians-in-Training in the Art of Public Speaking

SUMMARY AND RECOMMENDATIONS

The AMA has made significant efforts in the last 10-plus years to address, support, and advocate for physician leadership. These efforts align with the educational standards regarding leadership set by the accrediting bodies and are complemented by the many partnerships that have been forged to advance physician leadership. It is very difficult to study the "extent of the impact" (as stated in the new fourth clause of D-295.316) of a policy on elective curriculum with any degree of accuracy or thoroughness given the wide scope of the resources offered, as described above. The research conducted for this report indicates that the efforts made by the AMA, its partners, and other external stakeholders continue to advance physician leadership by way of curricula, training programs, resources, and development of a possible subspecialty. The AMA has made great strides to embed leadership into the tenets of HSS to prepare trainees for leadership roles and address prevalent challenges in the practice of medicine and public health. The AMA is committed to continuing such efforts and promoting them accordingly.

The Council on Medical Education therefore recommends that the following recommendations be adopted, and the remainder of this report be filed:

1. That clause (1) of AMA policy D-295.316 be rescinded as such directives have been accomplished per the actions, programs, and resources summarized in this report.

    ~~1. "Our AMA will study advantages and disadvantages of various educational options on management and leadership for physicians with a report back to the House of Delegates; and develop an online report and guide aimed at physicians interested in management and leadership that would include the advantages and disadvantages of various educational options."~~ (Rescind HOD Policy)

2. That clauses (2) and (3) of AMA policy D-295.316 be amended by addition and deletion to read as follows:

    2. "Our AMA supports ~~will work with key stakeholders to advocate for~~ collaborative programs among medical schools, residency programs, and related schools of business and management to ~~better~~ give physicians the opportunity to assume ~~for~~ administrative, financial, and leadership responsibilities in medical management."

    3. "Our AMA: (a) ~~will advocate for and~~ supports and participates in the creation and promotion of management and leadership programs and curricula that emphasize experiential and active learning models to include knowledge, skills, and management techniques integral to achieving ~~personal and professional~~ financial literacy and leading interprofessional ~~team~~ health care teams~~, in the spirit of the AMA's Accelerating Change in Medical Education initiative~~; and (b) encourages ~~will advocate with the Liaison Committee for Medical Education, Association of American Medical Colleges and other to~~ the organizations ~~governing bodies~~ responsible for the education of future physicians to implement programs ~~early in~~ throughout medical training to ~~promote the~~ develop~~ment of~~ management and leadership competencies and ~~personal and professional~~ financial literacy capabilities." (Modify Current HOD Policy)

3. That AMA policy D-295.316 be amended by addition of new clause (3c) to read as follows:

    Our AMA: (c) encourages key stakeholders to collect and analyze data on the effectiveness of management and leadership training and share such information with the medical education community. (Directive to Take Action)

4. That clause (4a) of AMA policy D-295.316 be rescinded, as having been accomplished by the writing of this report.

    Our AMA will: ~~(a) study the extent of the impact of AMA Policy D-295.316, "Management and Leadership for Physicians," on elective curriculum; and (b)~~ expand efforts to promote the tenets of health systems science to prepare trainees for leadership roles and address prevalent challenges in the practice of medicine and public health. (Rescind HOD Policy)

5. That AMA policy D-295.316 be amended by addition of a new clause (5), to read as follows:

    Our AMA will create a central online directory of its management and leadership resources that is searchable on the AMA website and promote the directory and these resources to AMA members and the medical education community.

Fiscal note: $1000

APPENDIX A

History and evolution of AMA Policy D-295.316 prior to A-22

This policy is rooted in Resolution 918-I-14 whose genesis was inspired by the desire to build upon BOT 28-A-14, "Qualifications, Selection, and Role of Hospital Medical Directors and Others Providing Medical Management Services"; this BOT report recommended extensive amendments to Policy H-235.981.

Timeline for D-295.316:

- Substitute Resolution 918, I-14
- Appended: Res. 306, I-16
- Reaffirmed in lieu of: Res. 307, A-17
- Modified: Res. 313, A-18
- Appended: Res. 327, A-22

CLAUSE	HOD ACTION	ACCOMPLISHMENTS
1. "Our AMA will study advantages and disadvantages of various educational options on management and leadership for physicians with a report back to the House of Delegates; and develop an online report and guide aimed at physicians interested in management and leadership that would include the advantages and disadvantages of various educational options."	Adopted at I-14. This resolve from substitute Resolution 918 was adopted in lieu of original 918 at I-14. It became the first clause of D-295.316.	2014-2016: Conducted qualitative study to evaluate the market for physician leadership training and development and test potential demand for an AMA-led program. Study revealed an interest for this type of curriculum, that leadership training programs already exist, and that such programs would be best delivered to medical students and residents before they start their careers. Also determined saturation of physician leadership training market from state and specialty medical associations that offer courses, regional programs (e.g., The Physician Leadership Project), physician-specific MBAs (e.g., University of Tennessee), and membership (e.g., American Association for Physician Leadership). Conducted an environmental scan to identify physician-focused leadership programs offered through state and specialty associations. Findings noted several organizations offer leadership training, CME, conferences, programs, and other types of development for physicians. Many states partner with universities to offer programs. While there seems to be strong interest in "physician leadership training," the definition and scope of this term varies. Interests range from mentoring, coaching, webinars, and

		certificate programs to an MBA. Likewise, topical interests range from traditional leadership topics such as management to broader issues around finance, revenue cycle, and quality outcomes. As a result of this research, AMA to develop leadership-related content for physicians specific to topics where the AMA has unique expertise at both at the individual and practice levels. In 2015, partnered with the American Association for Physician Leadership (AAPL) in a joint leadership initiative to develop multiple leadership courses and organize a large conference in early 2016. Registration for the conference was extremely low, and the event was cancelled. The partnership with AAPL was discontinued.
2. "Our AMA will work with key stakeholders to advocate for collaborative programs among medical schools, residency programs, and related schools of business and management to better prepare physicians for administrative, financial and leadership responsibilities in medical management."	Adopted at I-14 and amended at A-18. This resolve from substitute Resolution 918 was adopted in lieu of original 918 at I-14. It became the second clause of D-295.316. Resolution 313 at A-18 amended this clause by addition.	In 2014, AMA contacted the AAMC, AOA, and AACOM to inform them of the new policy. It was also transmitted to each medical school, residency program director, directors of medical education at U.S. teaching hospitals, and other interested groups via the AMA MedEd Update e-newsletter. Further, the AMA Section on Medical Schools (now called the Academic Physician Section) was encouraged to advocate on behalf of the issue.
3a. "Our AMA will advocate for and support the creation of leadership programs and curricula that emphasize experiential and active learning models to include knowledge, skills and management techniques integral to achieving personal and professional financial	This clause from substitute resolution 306 was adopted in lieu of original 306 at I-16, and subsequently appended to D-295.316 as clause 3a.	In 2016, AMA contacted the AAMC, ACGME, and LCME to inform them of the new policy. It was also communicated to each medical school, residency program director, directors of medical education at U.S. teaching hospitals, and other interested groups via an article in the AMA MedEd Update e-newsletter.

literacy and leading interprofessional team care, in the spirit of the AMA's Accelerating Change in Medical Education initiative;"	Resolution 313 at A-18 amended this clause by addition.	In 2018, amended policy was communicated to the HOD, AMA members, and interested organizations via an AMA Wire article.
3b. "Our AMA will advocate with the Liaison Committee for Medical Education, Association of American Medical Colleges and other governing bodies responsible for the education of future physicians to implement programs early in medical training to promote the development of leadership and personal and professional financial literacy capabilities."	Adopted at I-16 and amended at A-18. This clause from resolution 306 was adopted as amended at I-16, and subsequently appended to D-295.316 as clause 3b. Resolution 313 at A-18 amended this clause by addition.	

APPENDIX B

Relevant AMA Policy

H-235.981, Qualifications, Selection, and Role of Medical Directors, Chief Medical Officers, Vice Presidents for Medical Affairs, and Others Employed by or Under Contract with Hospitals/Health Systems to Provide Medical Management Services

1. Our AMA supports the following guidelines regarding the qualifications and selection of individuals employed by or under contract with a hospital/health system to provide medical management services, such as medical directors, chief medical officers, and vice presidents for medical affairs:

a. The hospital governing body, management, and medical staff should jointly: (i) determine if there is a need to employ or contract with one or more individuals to provide medical management services; (ii) establish the purpose, duties, and responsibilities of these positions; (iii) establish the qualifications for these positions; and (iv) establish and sustain a mechanism for input from and participation by elected leaders of the medical staff in the selection, evaluation, and termination of individuals holding these positions.

b. An individual employed by or under contract with a hospital or health system to provide medical management services should be a physician (MD/DO).

c. A physician providing medical management services at a single hospital should be licensed to practice medicine in the same state as the hospital for which he or she provides such services. Additionally, he or she should be a member in good standing of the organized medical staff of the hospital for which he or she provides medical management services.

d. Where feasible, a physician providing medical management services at the system level for a multi-hospital health system should be licensed to practice medicine in each of the states in which the health system has a hospital that will be influenced by the physician's work. At a minimum, the physician should be licensed in at least one state in which the health system has a hospital over which the physician will exert influence, and in as many other states as may be required by state licensing law.

e. Where feasible, a physician providing medical management services at the system level for a multi-hospital health system should be a member in good standing of the medical staff of each of the hospitals that will be influenced by the physician's work. At a minimum, the physician should: (i) be a member in good standing of at least one of the medical staffs of the hospitals that will be influenced by the physician's work; and (ii) work in collaboration with elected medical staff leaders throughout the system and with any individuals who provide medical management services at the hospital level.

2. Our AMA supports the following guidelines regarding the role of the organized medical staff vis-a-vis individuals employed by or under contract with hospitals/health systems to provide medical management services:

a. The purpose, duties, and responsibilities of individuals employed by or under contract with the hospital/health system to provide medical management services should be included in the medical staff bylaws and in the hospital/health system corporate bylaws.

b. The organized medical staff should maintain overall responsibility for the quality of care provided to patients by the hospital, including the quality of the professional services provided by individuals with clinical privileges, and should have the responsibility of reporting to the governing body.

c. The chief elected officer of the medical staff should represent the medical staff to the administration, governing body, and external agencies.

d. Government regulations that would mandate that any individual not elected or appointed by the medical staff would have authority over the medical staff should be opposed.

H-405.990, Physician Managers
The AMA advocates (1) compiling and making available to interested medical students, residents, and practicing physicians information on management career opportunities and educational programs; (2) liaison activities with recognized national organizations that represent the interests of physician managers, and (3) continued efforts to collect and disseminate relevant and useful data pertaining to physician managers.

H-445.984, Training Physicians and Physicians-in-Training in the Art of Public Speaking H-445.984
1. Physicians who want to learn more about public speaking can leverage existing resources both within and outside the AMA. AMA can make public speaking tips available through online tools and resources that would be publicized on our website. Physicians and physicians-in-training who want to publicly communicate about the AMA's ongoing work are invited to learn more through the AMA Ambassador program. Meanwhile, STEPS Forward provides helpful tips to physicians and physicians-in-training wanting to improve communication within their practice and AMPAC is available for physicians and physicians-in-training who want to advocate and communicate about the needs of patients, physicians, and physicians-in-training in the pursuit of public office. There are also resources provided to physicians and physicians-in-training at various Federation organizations and through the American Association of Physician Leadership (AAPL) to support those who are interested in training of this nature. Because public speaking is a skill that is best learned through practice and coaching in a small group or one-on-one setting, we also encourage individuals to pursue training through their state or specialty medical society or through a local chapter of Toastmasters International. The Board of Trustees recommends that the AMA's Enterprise Communications and Marketing department work to develop online tools and resources that would be published on the AMA website to help physicians and physicians-in-training learn more about public speaking.
2. Our AMA will offer live education sessions at least annually for AMA members to develop their public speaking skills.

REPORT OF THE COUNCIL ON MEDICAL EDUCATION

CME Report 08-A-23

Subject:	Challenges to Primary Source Verification of International Medical Graduates Resulting from International Conflict
Presented by:	John P. Williams, MD, Chair
Referred to:	Reference Committee C

American Medical Association (AMA) Policy D-255.975, "Hardship for International Medical Graduates from Russia and Belarus," calls for the following action:

> "Our AMA will study the impact of the current political crisis on international medical graduates with medical degrees from Russia and Belarus who are already in the U.S. either in training or practicing in regards to their ability to obtain primary source verification and report back during the 2022 Interim House of Delegates meeting."

The resolution that led to the policy was adopted at the 2022 Annual Meeting of the AMA House of Delegates (HOD). This report is in response to that policy.

BACKGROUND

Russia, with the support of Belarus, invaded Ukraine on February 24, 2022. This action precipitated sanctions of the invading countries by the international community, including the U.S., which significantly reduced communication to and from organizations in Belarus and Russia, to include postal mail, internet, and receipt and origination of electronic payments. These gaps in communications may affect international medical graduates (IMGs) in the U.S. who completed medical school in Russia or Belarus, and who may require primary source verification for purposes of obtaining licensure or credentialing.

One of the key organizations involved in such verification and assistance of IMGs is the Educational Commission for Foreign Medical Graduates (ECFMG), a member of Intealth, an integrated organization that also includes the Foundation for Advancement of International Medical Education and Research (FAIMER™). Certification by ECFMG is the standard for evaluating the qualifications of these physicians before they enter U.S. graduate medical education (GME). ECFMG Certification also is a requirement for IMGs to take Step 3 of the three-step United States Medical Licensing Examination® (USMLE®) and to obtain an unrestricted license to practice medicine in the United States.

The ECFMG provides other programs for IMGs pursuing U.S. GME, including those that 1) assist them with the process of applying for U.S. GME positions and 2) sponsor foreign nationals for the J-1 visa for the purpose of participating in such programs. The ECFMG also offers a verification service that allows GME programs, state medical boards, hospitals, and credentialing agencies in the United States to obtain primary-source confirmation that their IMG applicants are ECFMG-certified.[1]

A little over a month after the invasion, on March 31, 2022, the ECFMG announced that it was pausing certification services requested by Russian citizens residing in Russia.[2] The ECFMG statement reflected concern for the health and safety of all medical school students and graduates as they pursue their medical education and training. The statement also noted that 30 Russian physicians and 10 Ukrainian physicians were selected in the 2022 Match for positions in U.S. training programs; ECFMG noted that it would do its best to assist those seeking J-1 visas.

RELEVANT AMA POLICIES

The AMA has a number of policies reflecting support for IMGs and their significant role in providing health care services in the U.S., as highlighted in the appendix. That said, AMA policy does not specifically address the issue of physicians in the U.S. who are from countries that are sanctioned by the international community and the resulting impact on primary source verification of their medical education for the purposes of licensure, certification, and credentialing.

Existing policy D-275.989, "Credentialing Issues," asks that the AMA encourage "state medical licensing boards, the Federation of State Medical Boards, and other credentialing entities to accept the Educational Commission for Foreign Medical Graduates certification as proof of primary source verification of an IMG's international medical education credentials." If credentialing organizations follow this recommendation, that obviates the need for communication to foreign schools or government agencies to obtain the requested documentation.

RELEVANT POLICY FROM THE WORLD MEDICAL ASSOCIATION

Founded in 1947, the World Medical Association (WMA) is a non-governmental, not-for-profit voluntary organization representing 9 million physicians from 115 national medical associations. The WMA's areas of interest comprise ethical, educational, social, public health, and medical practice concerns, among others. The AMA has a delegation to the WMA and is involved in proposing and revising WMA policies, which help inform global health policy.[3]

A recent search of WMA policy found nothing that specifically mentions primary source verification or support for IMGs from Russia and Belarus. The policy "Ethical Guidelines for the International Migration of Health Workers"[4] includes the following recommendations:

> 5) Physicians should not be prevented from leaving their home or adopted country to pursue career opportunities in another country.
>
> 8) Nothing should prevent countries from entering into bilateral agreements and agreements of understanding, as provided for in international law and with due cognizance of international human rights law, so as to effect meaningful co-operation on health care delivery, including the exchange of physicians.

The above policy also underscores the World Health Organization (WHO) Global Code of Practice on the International Recruitment of Health Personnel,[5] which specifies ethical and equitable recruitment principles, but again no specific mention is made of primary source verification or challenges to such recruitment and verification of credentials in the case of war and/or conflict.

Other tangentially relevant WMA policies include two resolutions (both adopted in October 2022) on humanitarian and medical aid[6] and support for medical personnel and citizens[7] that specifically mention the Russian invasion and the resulting impact on Ukraine.

DISCUSSION

Policy D-255.975 stipulates the study of IMGs "with medical degrees from Russia and Belarus who are already in the U.S. either in training or practicing" in regard to concerns for primary source verification of their education. The ECFMG statement, in contrast, specifically paused certification services requested by Russian citizens residing in Russia (not Belarus)—it was not directed at those Russian citizens already in the U.S., as described in the resolution.

In the case of the invasion of Ukraine, damages to and interruptions of the country's technological infrastructure would seem to present even greater challenges to the provision of needed documents to the U.S. than those of Russia and Belarus. The resolution does not mention this aspect.

It is important to note that, if a physician is already in GME, that individual is primary source verified, as such verification is a requirement for entry to GME (personal communication with senior ECFMG staff, February 7, 2023). Even those IMGs arriving this year to commence GME are likely to have already had their documents verified when they started the certification process (which typically takes place over a three-year period). In other words, the impact on credentials verification arising from any international conflict or cessation of diplomatic relations between the U.S. and another country is delayed, so if the situation continues past three years, the negative impacts to primary source verification rise.

ECFMG staff also indicated that the ECFMG pursues alternative options if the customary primary source verification process is not workable—for example, when there is international conflict or the medical school or ministry of health in a given country is not responding to ECFMG queries. Through one alternative option, the applicant for ECFMG certification can request that three medical school classmates or faculty who are now practicing in the U.S. swear on their U.S. medical license that the applicant did indeed graduate. This process requires completion of a notarized form and submission of a letter describing the facts of the matter. The ECFMG tries to assist individual applicants throughout the certification process (while maintaining the integrity of its procedures), to include postponement of examinations and refunding fees, where appropriate.

Because of the relatively low number of IMGs currently in U.S. GME programs from Russia, Belarus, and Ukraine—217, 36, and 115, respectively, according to 2022 data from the AMA GME Database—the extent of the impact of the Ukraine conflict on primary source verification is limited in scope. ECFMG staff noted that, from a historical perspective, the cessation of communication from Russia to any U.S. agency during the 1990s, the embargo with Cuba, and the Gulf wars in Iraq and Iran presented significantly greater difficulties to obtaining primary source verification of medical education. Nonetheless, due to the history of challenges associated with primary source verification for IMGs, the Council on Medical Education—with input from the IMG Section—will regularly engage with the ECFMG to monitor the impact of conflicts on primary source verification of medical education and report back to the HOD as needed.

SUMMARY AND RECOMMENDATIONS

Even aside from international conflict and war, and public health disruptions such as the COVID-19 pandemic, there are many challenges to primary source verification of IMGs. Despite the internet and email technologies, the obstacles of international communication and retention of appropriate educational records by countries of origin continue to present difficulties for IMGs. The cessation of international bank payments and transfers, due to sanctions put in place by the international community in response to the invasion, can also hinder requests for primary source documentation.

The impacts of the war in Ukraine on primary source verification of physicians from Russia and Belarus have been relatively limited—in part due to the small number of IMGs in the U.S. from those countries. In addition, the ECFMG has been responsive to the situation and has in place multiple alternative methods for verifying an IMG's medical education credentials. That said, the Council on Medical Education will continue to monitor this situation, as well as other conflicts or wars that may delay primary source verification of IMGs' medical education, and report back to the HOD as needed.

As noted above, existing AMA policy D-275.989, "Credentialing Issues," is the most relevant policy to the question posed by the resolution and is therefore recommended for reaffirmation through this report. Widespread acceptance by credentialing agencies of ECFMG certification would provide relief to ECGMG-certified IMGs from any country as they seek initial or renewed medical certification, licensure, or credentials in the U.S.

The Council on Medical Education therefore recommends that the following recommendations be adopted and the remainder of this report be filed:

1. That American Medical Association (AMA) Policy D-275.989, "Credentialing Issues," be amended as follows:

   Our AMA encourages state medical licensing boards, the Federation of State Medical Boards, and other credentialing entities to accept ~~the Educational Commission for Foreign Medical Graduates~~ certification by the Educational Commission for Foreign Medical Graduates (a member of Intealth) as proof of primary source verification of an IMG's international medical education credentials. (Modify Current HOD Policy)

2. That AMA Policy D-255.975, "Hardship for International Medical Graduates from Russia and Belarus," be rescinded, as having been fulfilled by this report:

   ~~"Our AMA will study the impact of the current political crisis on international medical graduates with medical degrees from Russia and Belarus who are already in the U.S. either in training or practicing in regards to their ability to obtain primary source verification and report back during the 2022 Interim House of Delegates meeting."~~ (Rescind HOD Policy)

Fiscal note: $1,000.

APPENDIX: RELEVANT AMA POLICY

H-255.966, "Abolish Discrimination in Licensure of IMGs"

1. Our AMA supports the following principles related to medical licensure of international medical graduates (IMGs): . . .

C. Discrimination against physicians solely on the basis of national origin and/or the country in which they completed their medical education is inappropriate. . . .

(BOT Rep. 25, A-15; Appended: CME Rep. 4, A-21)

H-255.988, "AMA Principles on International Medical Graduates"

Our AMA supports: . . .

8. The AMA continues to support the activities of the ECFMG related to verification of education credentials and testing of IMGs.

9. That special consideration be given to the limited number of IMGs who are refugees from foreign governments that refuse to provide pertinent information usually required to establish eligibility for residency training or licensure. . . .

22. The Federation of State Medical Boards, its member boards, and the ECFMG in their willingness to adjust their administrative procedures in processing IMG applications so that original documents do not have to be recertified in home countries when physicians apply for licenses in a second state. . . .

24. Continued study of challenges and issues pertinent to IMGs as they affect our country's health care system and our physician workforce. . . .

(BOT Rep. Z, A-86; Reaffirmed: Res. 312, I-93; Modified: CME Rep. 2, A-03; Reaffirmation I-11; Reaffirmed: CME Rep. 1, I-13; Modified: BOT Rep. 25, A-15; Modified: CME Rep. 01, A-16; Appended: Res. 304, A-17; Modified: CME Rep. 01, I-17; Reaffirmation: A-19; Modified: CME Rep. 2, A-21; Modified: CME Rep. 1, A-22; Modified: CCB/CLRPD Rep. 1, A-22)

D-275.989, "Credentialing Issues"

Our AMA encourages state medical licensing boards, the Federation of State Medical Boards, and other credentialing entities to accept the Educational Commission for Foreign Medical Graduates certification as proof of primary source verification of an IMG's international medical education credentials.

(CME Rep. 3, A-02 Appended: CME Rep. 10, A-11 Modified: CME Rep. 1, A-21)

H-275.978, "Medical Licensure"

Our AMA . . . (20) urges that documentation of graduation from a foreign medical school be maintained by boards providing an initial license, and that the documentation be provided on request to other licensing boards for review in connection with an application for licensure by endorsement;

(CME Rep. A, A-87; BOT Rep. I-93-13; CME Rep. 10 - I-94; Modified: Sunset Report, I-97; Reaffirmation A-04; Reaffirmed: CME Rep. 3, A-10; Reaffirmation I-10; Reaffirmed: CME Rep. 6, A-12; Appended: Res. 305, A-13; Reaffirmed: BOT Rep. 3, I-14; Modified: CME Rep. 1, A-18; Appended: CME Rep. 3, I-19; Modified: CME Rep. 2, A-21)

D-275.975, "Sharing of Medical Disciplinary Data Among Nations"

Our AMA will, in conjunction with the Federation of State Medical Boards, support the efforts of the International Association of Medical Regulatory Authorities in its current efforts toward the exchange of information among medical regulatory authorities worldwide.

(Res. 318, A-05; Reaffirmed: CME Rep. 1, A-15)

REPORT 09 OF THE COUNCIL ON MEDICAL EDUCATION (A-23)
The Impact of Midlevel Providers on Medical Education (Resolution 201-A-22)
(Reference Committee C)

EXECUTIVE SUMMARY

Resolution 201-A-22, "The Impact of Midlevel Providers on Medical Education," was authored by the American Medical Association (AMA) Resident and Fellow Section and submitted to the 2022 Annual Meeting of the House of Delegates (HOD). The resolution, which was subsequently referred by the HOD, requests that the AMA conduct several studies related to the education of physicians in interprofessional teams and the training and continuing education requirements of nurse practitioners and physician assistants.

This report, which is in response to the referral, addresses the multiple facets of the resolution, to include the challenges in studying bias in interprofessional education and developing a rigorous, statistically valid, and high-quality study suitable for publication by a peer-reviewed journal. This report concludes that such research is beyond the scope of the AMA, although the AMA can encourage investigators to study how interprofessional learning and team-building work promotes the development of physician leadership in team-based care.

This report describes the growth in team-based care and widespread adoption of the physician-led team as the preferred model for high-quality health care, underscoring the need for incorporating interprofessional principles into medical education and training. In addition, existing medical education accreditation standards related to interprofessional education in undergraduate and graduate medical education are highlighted. The report recommends that these standards be expanded and strengthened to state that physicians' education and training make them uniquely qualified to lead the health care team, as reflected in AMA policy.

In addition, this report notes that the AMA does not directly oversee the education and training of nonphysician health care professionals, which makes adoption of Resolves 3 and 4 of the referred resolution neither feasible nor enforceable.

Relevant AMA policies are highlighted (and noted in the appendix). In particular, H-160.912, "The Structure and Function of Interprofessional Health Care Teams," provides a road map to the appropriate interprofessional education of medical students and resident/fellow physicians to take on the pivotal responsibility of leadership of the interprofessional health care team.

REPORT OF THE COUNCIL ON MEDICAL EDUCATION

CME Report 09-A-23

Subject: The Impact of Midlevel Providers on Medical Education (Resolution 201-A-22)

Presented by: John P. Williams, MD, Chair

Referred to: Reference Committee C

Resolution 201-A-22, "The Impact of Midlevel Providers on Medical Education," was authored by the American Medical Association (AMA) Resident and Fellow Section and submitted to the 2022 Annual Meeting of the House of Delegates (HOD). The resolution reads as follows:

> RESOLVED, That our American Medical Association study, using surveys among other tools that protect identities, how commonly bias against physician-led healthcare is experienced within undergraduate medical education and graduate medical education, interprofessional learning and team building work and publish these findings in peer-reviewed journals (Directive to Take Action); and be it further
>
> RESOLVED, That our AMA work with the Liaison Committee on Medical Education and the Accreditation Council for Graduate Medical Education to ensure all physician undergraduate and graduate training programs recognize and teach physicians that they are the leaders of the healthcare team and are adequately equipped to diagnose and treat patients independently only because of the intensive, regulated, and standardized education they receive (Directive to Take Action); and be it further
>
> RESOLVED, That our AMA study the harms and benefits of establishing mandatory postgraduate clinical training for nurse practitioners and physician assistants prior to working within a specialty or subspecialty field (Directive to Take Action); and be it further
>
> RESOLVED, That our AMA study the harms and benefits of establishing national requirements for structured and regulated continued education for nurse practitioners and physician assistants in order to maintain licensure to practice. (Directive to Take Action)

The resolution was subsequently referred by the HOD for a report back the House; this report is in response to the referral.

BACKGROUND

Concerns expressed by the resolution's authors

The resolution stipulates concerns with interprofessional education as well as the training and practice of nonphysicians. For example, the authors claim that physicians are being reprimanded or fired for speaking out about discrepancies between physician and nonphysician training. In addition, concern is expressed about the growth in the number of graduate-level training programs for nonphysicians, even though they are not required to pursue such training, as well as the lack of

any requirement for equivalent continuing education by nonphysicians, versus the need for physicians to pursue such education to maintain board certification, state licensure, and often hospital credentials. Finally, the resolution notes that midlevel providers are free to move between various fields of medicine without any formal, regulated training or education, but physicians are limited to the scope of their specialty of medicine by credentialing and board certification.

Note: The term "advanced practice providers," including but not limited to nurse practitioners (NPs) and physician assistants (PAs), is often used instead of "midlevel providers." This report is primarily concerned with these two fields.

Reference Committee C testimony on the resolution

The report of Reference Committee B at the 2022 Annual Meeting reflected the mixed testimony on this item of business, including input from multiple specialties. Testimony highlighted that the AMA has extensive policy on scope of practice, including support for physician-led team-based care, as well as policy that medical education should prepare students to practice in physician-led teams and that physician-led interprofessional education should be incorporated into medical education and residency programs. Support was also expressed for interprofessional collaboration and the role of nonphysicians as important members of the care team. General support was heard for further studies about scope of practice, but testimony did note that the AMA already has extensive information and existing resources outlining the differences in graduate education and training of nonphysicians versus physicians. It was also noted that the directives in Resolution 201 were not feasible or could be costly to implement. In addition, the AMA does not have direct authority over graduate clinical training or continuing education requirements for nonphysicians. These requirements are set by each health profession's accrediting, certifying, and licensing bodies, who may not align themselves with AMA policies. For these reasons, the resolution was recommended for referral by Reference Committee C; the HOD concurred with this decision.

Council on Medical Education testimony on the resolution

In its testimony before Reference Committee B, the AMA Council on Medical Education stated its opposition to adoption of Resolution 201-A-22, noting the lack of feasibility of performing a study regarding bias against physician-led teams in medical education and practice. In addition, the Council noted that having such a study accepted and published in a peer-reviewed journal is outside the AMA's purview and control. Similarly, the AMA has no authority over the education or licensure of other health care professionals, such that study of the education of these professionals, as requested in the third and fourth resolved clauses, would be difficult to accomplish and the recommendations from such a study are unlikely to be adopted by the affected professions. Finally, the Council noted that its Report 5-A-22, "Education, Training, and Credentialing Of Non-Physician Health Care Professionals and Their Impact on Physician Education and Training (Resolution 305-J-21, Resolve 8)," addressed some of the issues outlined in Resolution 201-A-22. This report led to AMA policy regarding learning about educational differences between physicians and nonphysician health care professionals as well as supporting institutional oversight of training programs of nonphysicians and their impact on medical education.

DISCUSSION

Difficulty in fielding a study of bias in interprofessional education

Resolve 1 of the referred resolution asks that the AMA "study, using surveys among other tools that protect identities, how commonly bias against physician-led healthcare is experienced within

undergraduate medical education and graduate medical education, interprofessional learning and team building work and publish these findings in peer-reviewed journals." Investigators studying this issue would first need to perform qualitative analyses of episodes of interprofessional learning and team building work in medical education settings to describe the degree and nature of bias against physician-led health care, if any. These findings would then inform surveys of medical students and resident/fellow physicians of their experience with interprofessional learning and team building work to determine the scope of the biases described by the qualitative research. Investigators would require financial support to perform rigorous, statistically valid, high-quality studies that would be accepted for publication by peer-reviewed journals. This research is beyond the scope of the AMA; however, the AMA can encourage investigators to study how interprofessional learning and team building work promotes the development of physician leadership in team-based care.

"Team sport:" The rise of the health care team

Since World War II, medicine has seen the rapid development of new diagnostic, therapeutic, and procedural techniques to improve the quality of patient care. Similarly, medicine has recognized other factors influencing health outcomes, including population health,[1] structural and social determinants of health,[2] and other key domains of health systems science.[3] To address both the rapid growth in medical science and technology and increased complexity of delivering high quality health care, medicine has become increasingly specialized,[4] with concordant expansion of nonphysician members of the health care team. Accordingly, as team leader, the physician must understand the appropriate role of each team member and ensure appropriate communication and coordination of care for the patient's benefit.[5] Hospitals, academic practices, and health care systems have increasingly adopted the physician-led team as the preferred model for high-quality health care, highlighting the need for incorporating these principles into medical education and training.

As physicians became increasingly specialized, PA and NP programs were established in the 1960s, followed by the founding of the American Board of Family Medicine in 1969, to address the workforce shortage in primary care. In addition, with the advances in the care of acute health conditions, chronic disease management and the "new morbidities," [6] conditions arising from social, behavioral, and developmental issues, began to dominate medical practice, demanding multi-disciplinary teams to deliver high-quality care. Research on high-performing primary care showed that access to primary care improved health outcomes, lowered health care spending, and decreased health disparities.[7] The benefits of high-performing primary care depend on patients having a trusted, continuous relationship with a personal primary care physician who leads and coordinates the patients' health care team, also referred to as the medical home as defined in policy H-160.919, "Principles of the Patient-Centered Medical Home."

Central to achieving optimal health outcomes is the need to define the role of the physician in team-based care as the leader of the health care team. Because of the longer, more intensive education and evaluation requirements in the medical profession compared to other health care fields, a physician is the most qualified health professional to lead the care team in education and practice. The AMA has extensive policy supporting physician-led team-based care and believes it is appropriate to reinforce this concept within medical education, through which the privilege of leadership is earned. In addition, the AMA's ChangeMedEd initiative provides a real-life laboratory for investigation of educational approaches to teach the primacy of the physician-led team in medical education as the optimal model for ensuring quality of patient care.

Medical education accreditation standards related to interprofessional education

To ensure the quality of medical education and to implement recommended educational revisions in response to the needs of medical students and resident/fellow physicians, as well as society and patients, is a key role of accrediting bodies, including the Liaison Committee on Medical Education (LCME) and Accreditation Council for Graduate Medical Education (ACGME) in undergraduate and graduate medical education, respectively. Resolve 2 of the referred resolution asks the AMA to "work with the Liaison Committee on Medical Education and the Accreditation Council for Graduate Medical Education to ensure all physician undergraduate and graduate training programs recognize and teach physicians that they are the leaders of the healthcare team and are adequately equipped to diagnose and treat patients independently only because of the intensive, regulated, and standardized education they receive." Interprofessional education and practice are intended to ensure that all members of the team learn to practice as part of a physician-led health care team.

Physicians, as team leaders, need to understand other members of the health care team's roles as well as their differences in education and training. Medical education should include knowledge of the differences in the education and professional standards of other health professionals in the health care team.

Current LCME and ACGME accreditation standards support interprofessional education. LCME standards[8] include two pertinent elements:

- 6.7 Academic Environments

  The faculty of a medical school ensure that medical students have opportunities to learn in academic environments that permit interaction with students enrolled in other health professions, graduate and professional degree programs, and in clinical environments that provide opportunities for interaction with physicians in graduate medical education programs and in continuing medical education programs.

- 7.9 Interprofessional Collaborative Skills

  The faculty of a medical school ensure that the core curriculum of the medical education program prepares medical students to function collaboratively on health care teams that include health professionals from other disciplines as they provide coordinated services to patients. These curricular experiences include practitioners and/or students from the other health professions.

The ACGME Common Program Requirements[9] contain multiple references to interprofessional education:

- Residents must demonstrate competence in . . . working in interprofessional teams to enhance patient safety and improve patient care quality;

- The program must have a structure that promotes safe, interprofessional, team-based care

- Optimal patient safety occurs in the setting of a coordinated interprofessional learning and working environment.

- Residents must participate as team members in real and/or simulated interprofessional clinical patient safety activities, such as root cause analyses or other activities that include analysis, as well as formulation and implementation of actions

- Residents must have the opportunity to participate in interprofessional quality improvement activities

- Residents must care for patients in an environment that maximizes communication. This must include the opportunity to work as a member of effective interprofessional teams that are appropriate to the delivery of care in the specialty and larger health system.

Both sets of standards help underscore that interprofessional education is a priority in medical education. That said, these standards could be expanded and strengthened to state that physicians' education and training make them uniquely qualified to lead the health care team, as reflected in AMA policy. In addition, it would be within the scope of the AMA to advocate for insertion of qualifying modifiers in these standards where warranted—for example, inclusion of the phrase "physician-led" to modify "interprofessional teams." This report includes a recommendation to that effect. Personal communication with LCME staff indicates that this change would be appropriate.

While interprofessional education is important, residency programs and their sponsoring institutions need to ensure that the presence of other health professionals in the clinical setting does not negatively impact resident education, including ensuring that residents have the appropriate responsibility for patient care, case numbers, and case mix to prepare them for independent practice. The ACGME's Common Program Requirements state, in this regard, that "The presence of other learners and other care providers, including, but not limited to, residents from other programs, subspecialty fellows, and advanced practice providers, must enrich the appointed residents' education."[10] This concept is reflected in Policy H-310.913, "Physician Extenders," which notes in part that "procedural training is a critical portion of resident education and the augmentation of patient care by nonphysician practitioners should not interfere with a resident's ability to achieve competence in the performance of required procedures."

Education and training of other health professionals

The AMA does not directly oversee the education and training of nonphysician health care professionals. For several decades, beginning in the 1930s, the Council on Medical Education did have oversight over accreditation of a significant number of allied health education programs including physician assistants through its Committee on Allied Health Education and Accreditation, or CAHEA. By the early to mid-1990s, that work was seen as outside the scope of the AMA and ceased, leading to development of the Commission on Accreditation of Allied Health Education Programs and other accreditation bodies to continue this essential role.

Despite this lack of direct oversight, the AMA can call on standard-setting organizations, such as the American Board of Medical Specialties, to play a more active role in communicating with policymakers the standards to which physicians are held, including maintenance of certification, and why these standards serve as the basis for physician leadership of the health care team.

Resolves 3 and 4 of the referred resolution encompass AMA study of establishing "mandatory postgraduate clinical training for nurse practitioners and physician assistants prior to working within a specialty or subspecialty field" and "national requirements for structured and regulated continued education for nurse practitioners and physician assistants in order to maintain licensure to practice."

For NPs, five different certifying bodies offer 19 different certificates in various fields of medicine.[11] Certification is required to obtain state licensure for practice as an NP. Similarly, PAs seeking to practice must obtain the PA-C certification. In addition, the National Commission on Certification of Physician Assistants currently offers 10 certificates of added qualifications (CAQs) in various fields (the CAQ is a voluntary credential and does not replace PA-C certification).[12] To obtain one of these CAQs, a PA-C must have between 2 to 4 years of experience in the field. Since 2011, nearly 2,800 PA-Cs have earned CAQs in seven different specialties.

In summary, the third and fourth Resolves of the referred resolution are neither feasible nor enforceable as our AMA does not have the authority or purview over post-graduate clinical training or continuing education requirements for nonphysicians. These requirements are set by the individual profession's accrediting, certifying, and licensing bodies. In addition, the AMA does not have the ability to conduct a study on harms and benefits of additional training and certification requirements for NPs and PAs to work as licensed professionals.

RELEVANT AMA POLICY

The AMA has several policies in support of interprofessional education. For example, Policy D-295.934, "Encouragement of Interprofessional Education Among Health Care Professions Students," specifies the phrase "physician-led" in its verbiage:

> 2. Our AMA supports the concept that medical education should prepare students for practice in physician-led interprofessional teams.

In addition, the policy (most recently amended via Council on Medical Education Report 5-A-22) includes language that encompasses the spirit of and obviates the need for Resolve 3 of Resolution 201-A-22:

> Our AMA supports a clear mechanism for medical school and appropriate institutional leaders to intervene when undergraduate and graduate medical education is being adversely impacted by undergraduate, graduate, and postgraduate clinical training programs of non-physicians.

Other relevant policies are noted in the appendix, to include H-160.912, "The Structure and Function of Interprofessional Health Care Teams," which uses the term "physician-led" in three of its six clauses. Indeed, this policy provides a road map to the appropriate interprofessional education of medical students and resident/fellow physicians to take on the pivotal responsibility of leadership:

> 4. Our AMA adopts the following principles to guide physician leaders of health care teams:
> a. Focus the team on patient and family-centered care.
> b. Make clear the team's mission, vision and values.
> c. Direct and/or engage in collaboration with team members on patient care.
> d. Be accountable for clinical care, quality improvement, efficiency of care, and continuing education.
> e. Foster a respectful team culture and encourage team members to contribute the full extent of their professional insights, information and resources.
> f. Encourage adherence to best practice protocols that team members are expected to follow.
> g. Manage care transitions by the team so that they are efficient and effective, and transparent to the patient and family.

h. Promote clinical collaboration, coordination, and communication within the team to ensure efficient, quality care is provided to the patient and that knowledge and expertise from team members is shared and utilized.
i. Support open communication among and between the patient and family and the team members to enhance quality patient care and to define the roles and responsibilities of the team members that they encounter within the specific team, group, or network.
j. Facilitate the work of the team and be responsible for reviewing team members' clinical work and documentation.
k. Review measures of 'population health' periodically when the team is responsible for the care of a defined group.

It should also be noted that existing AMA policy supports advocacy and action to allow for appropriate intervention when undergraduate and graduate medical education are adversely affected by undergraduate, graduate, and postgraduate clinical training programs for nonphysicians (as stated in Policy D-295.934 (6), "Encouragement of Interprofessional Education Among Health Care Professions Students," which resulted from CME Report 5-A-22).

In short, the AMA has clear and extensive policy supporting physician-led team-based care, as well as policy that medical education should prepare students to practice in physician-led teams and that physician-led interprofessional education should be incorporated into medical education and residency programs. Our AMA also supports interprofessional collaboration and the unique skills all health care professionals bring to the health care team.

SUMMARY AND RECOMMENDATIONS

Resolution 201-A-22 requests that the AMA conduct several studies related to the education of physicians in interprofessional teams and the training and continuing education requirements of nurse practitioners and physician assistants. The Council on Medical Education would note that to perform the requested investigations such that they meet the standard for peer-reviewed publication would involve significant effort and resources that are beyond the scope of the AMA. While the findings from such research could inform policymakers, it should be noted that the AMA does not have direct oversight over nonphysician education, training, and practice to directly implement changes based on such research.

Reinforcing the principle that interprofessional teams in education and practice are led by physicians is within the scope of the AMA and is a key element of its work to protect patients. A number of AMA policies encompass interprofessional education, such as D-295.934, "Encouragement of Interprofessional Education Among Health Care Professions Students," and provide the policy basis for the AMA to advocate for the physician as the leader of the health care team. In addition, the AMA, through its Advocacy unit, plays an active and essential role in preventing inappropriate expansion of practice among nonphysician health care professionals. Part of this work is ensuring that health care teams are led by physicians and that nonphysicians have requisite physician supervision. For this reason, the Council makes the recommendations below to ensure use of the phrase "physician-led" to modify "interprofessional teams" in medical education accreditation standards.

As noted in this report, if preparation for physician practice does not include leadership of teams as a component, then this element should be incorporated into medical education. Toward this end, the Council would refer interested delegates to a second report slated for the 2023 Annual Meeting, Council on Medical Education Report 7-A-23, "Management and Leadership Training in Medical Education." This report seeks to "study the extent of the impact of AMA Policy D-295.316,

'Management and Leadership for Physicians,' on elective curriculum and "expand efforts to promote the tenets of health systems science to prepare trainees for leadership roles and address prevalent challenges in the practice of medicine and public health."

The Council on Medical Education therefore recommends that the following recommendations be adopted in lieu of Resolution 201-A-22 and the remainder of the report be filed:

1. That the American Medical Association (AMA) encourage appropriate medical education accreditation organizations in allopathic and osteopathic medicine including the Liaison Committee on Medical Education, Commission on Osteopathic College Accreditation, American Osteopathic Association, and Accreditation Council for Graduate Medical Education to:

   A) Incorporate the phrase "physician-led" as a modifier for "interprofessional education" into their relevant medical education accreditation standards, where appropriate;

   B) Require education in and evaluation of competency in physician-led interprofessional health care team leadership as part of the systems-based practice competency in medical education accreditation standards. (New HOD Policy)

2. That the AMA encourage medical educators to study how interprofessional learning and teamwork promote the development of physician leadership in team-based care. (New HOD Policy)

3. Amend D-295.934 (2) by addition as follows: "Our AMA supports the concept that medical education should prepare students for practice in, and leadership of, physician-led interprofessional health care teams." (New HOD Policy)

4. That the AMA encourage medical standards-setting organizations, including the American Board of Medical Specialties and its member boards, to inform policymakers of the standards physicians are held to for independent practice in order to protect patients and that these standards make physicians the appropriate leaders of the interprofessional health care team. (Modify Current HOD Policy)

Fiscal note: $1,000

APPENDIX: RELEVANT AMA POLICY

D-295.934, "Encouragement of Interprofessional Education Among Health Care Professions Students"

1. Our AMA recognizes that interprofessional education and partnerships are a priority of the American medical education system.
2. Our AMA supports the concept that medical education should prepare students for practice in physician-led interprofessional teams.
3. Our AMA will encourage health care organizations that engage in a collaborative care model to provide access to an appropriate mix of role models and learners.
4. Our AMA will encourage the development of skills for interprofessional education that are applicable to and appropriate for each group of learners.
5. Our AMA supports the concept that interprofessional education include a mechanism by which members of interdisciplinary teams learn about, with, and from each other; and that this education include learning about differences in the depth and breadth of their educational backgrounds, experiences, and knowledge and the impact these differences may have on patient care.
6. Our AMA supports a clear mechanism for medical school and appropriate institutional leaders to intervene when undergraduate and graduate medical education is being adversely impacted by undergraduate, graduate, and postgraduate clinical training programs of non-physicians.

(Res. 308, A-08; Appended: CME Rep. 1, I-12; Modified: CME Rep. 1, A-22; Appended: CME Rep. 5, A-22)

H-160.912, "The Structure and Function of Interprofessional Health Care Teams"

1. Our AMA defines 'team-based health care' as the provision of health care services by a physician-led team of at least two health care professionals who work collaboratively with each other and the patient and family to accomplish shared goals within and across settings to achieve coordinated, high-quality, patient-centered care.

2. Our AMA will advocate that the physician leader of a physician-led interprofessional health care team be empowered to perform the full range of medical interventions that she or he is trained to perform.

3. Our AMA will advocate that all members of a physician-led interprofessional health care team be enabled to perform medical interventions that they are capable of performing according to their education, training and licensure and the discretion of the physician team leader in order to most effectively provide quality patient care.

4. Our AMA adopts the following principles to guide physician leaders of health care teams:
   a. Focus the team on patient and family-centered care.
   b. Make clear the team's mission, vision and values.
   c. Direct and/or engage in collaboration with team members on patient care.
   d. Be accountable for clinical care, quality improvement, efficiency of care, and continuing education.
   e. Foster a respectful team culture and encourage team members to contribute the full extent of their professional insights, information and resources.
   f. Encourage adherence to best practice protocols that team members are expected to follow.
   g. Manage care transitions by the team so that they are efficient and effective, and transparent to the patient and family.

h. Promote clinical collaboration, coordination, and communication within the team to ensure efficient, quality care is provided to the patient and that knowledge and expertise from team members is shared and utilized.
i. Support open communication among and between the patient and family and the team members to enhance quality patient care and to define the roles and responsibilities of the team members that they encounter within the specific team, group or network.
j. Facilitate the work of the team and be responsible for reviewing team members' clinical work and documentation.
k. Review measures of 'population health' periodically when the team is responsible for the care of a defined group.

5. Our AMA encourages independent physician practices and small group practices to consider opportunities to form health care teams such as through independent practice associations, virtual networks or other networks of independent providers.

6. Our AMA will advocate that the structure, governance and compensation of the team should be aligned to optimize the performance of the team leader and team members.

(Joint CME-CMS Rep., I-12; Reaffirmation I-13; Reaffirmed: CMS Rep. 1, I-15; Reaffirmed: BOT Action in response to referred for decision: Res. 718, A-17)

D-35.985, "Support for Physician Led, Team Based Care"

Our AMA:

1. Reaffirms, will proactively advance at the federal and state level, and will encourage state and national medical specialty societies to promote policies H-35.970, H-35.973, H-35.974, H-35.988, H-35.989, H-35.992, H-35.993, H-160.919, H-160.929, H-160.947, H-160.949, H-160.950, H-360.987, H 405.969 and D-35.988.

2. Will identify and review available data to analyze the effects on patients? access to care in the opt-out states (states whose governor has opted out of the federal Medicare physician supervision requirements for anesthesia services) to determine whether there has been any increased access to care in those states.

3. Will identify and review available data to analyze the type and complexity of care provided by all non-physician providers, including CRNAs in the opt-out states (states whose governor has opted out of the federal Medicare physician supervision requirements for anesthesia services), compared to the type and complexity of care provided by physicians and/or the anesthesia care team.

4. Will advocate to policymakers, insurers and other groups, as appropriate, that they should consider the available data to best determine how non-physicians can serve as a complement to address the nation's primary care workforce needs.

5. Will continue to recognize non-physician providers as valuable components of the physician-led health care team.

6. Will continue to advocate that physicians are best qualified by their education and training to lead the health care team.

7. Will call upon the Robert Wood Johnson Foundation to publicly announce that the report entitled, "Common Ground: An Agreement between Nurse and Physician Leaders on Interprofessional Collaboration for the Future of Patient Care" was premature; was not released officially; was not signed; and was not adopted by the participants.

(BOT Rep. 9, I-11; Reaffirmed: CMS Rep. 1, A-12; Reaffirmed: CMS Rep. 07, A-17; Reaffirmed: CMS Rep. 10, A-19; Reaffirmed: CMS Rep. 6, A-21)

H-160.950, "Guidelines for Integrated Practice of Physician and Nurse Practitioner"

Our AMA endorses the following guidelines and recommends that these guidelines be considered and quoted only in their entirety when referenced in any discussion of the roles and responsibilities of nurse practitioners:

(1) The physician is responsible for the supervision of nurse practitioners and other advanced practice nurses in all settings.

(2) The physician is responsible for managing the health care of patients in all practice settings.

(3) Health care services delivered in an integrated practice must be within the scope of each practitioner's professional license, as defined by state law.

(4) In an integrated practice with a nurse practitioner, the physician is responsible for supervising and coordinating care and, with the appropriate input of the nurse practitioner, ensuring the quality of health care provided to patients.

(5) The extent of involvement by the nurse practitioner in initial assessment, and implementation of treatment will depend on the complexity and acuity of the patients' condition, as determined by the supervising/collaborating physician.

(6) The role of the nurse practitioner in the delivery of care in an integrated practice should be defined through mutually agreed upon written practice protocols, job descriptions, and written contracts.

(7) These practice protocols should delineate the appropriate involvement of the two professionals in the care of patients, based on the complexity and acuity of the patients' condition.

(8) At least one physician in the integrated practice must be immediately available at all times for supervision and consultation when needed by the nurse practitioner.

(9) Patients are to be made clearly aware at all times whether they are being cared for by a physician or a nurse practitioner.

(10) In an integrated practice, there should be a professional and courteous relationship between physician and nurse practitioner, with mutual acknowledgment of, and respect for each other's contributions to patient care.

(11) Physicians and nurse practitioners should review and document, on a regular basis, the care of all patients with whom the nurse practitioner is involved. Physicians and nurse practitioners must work closely enough together to become fully conversant with each other's practice patterns.

(CMS Rep. 15 - I-94; BOT Rep. 6, A-95; Reaffirmed: Res. 240, A-00; Reaffirmation A-00; Reaffirmed: BOT Rep. 28, A-09; Reaffirmed: BOT Rep. 9, I-11; Reaffirmed: Joint CME-CMS Rep., I-12; Reaffirmed: BOT Rep. 16, A-13)

H-160.906, "Models / Guidelines for Medical Health Care Teams"

1. Our AMA defines 'physician-led' in the context of team-based health care as the consistent use by a physician of the leadership knowledge, skills and expertise necessary to identify, engage and elicit from each team member the unique set of training, experience, and qualifications needed to help patients achieve their care goals, and to supervise the application of these skills.

2. Our AMA supports the following elements that should be considered when planning a team-based care model according to the needs of each physician practice:

Patient-Centered:
a. The patient is an integral member of the team.
b. A relationship is established between the patient and the team at the onset of care, and the role of each team member is explained to the patient.
c. Patient and family-centered care is prioritized by the team and approved by the physician team leader.
d. Team members are expected to adhere to agreed-upon practice protocols.
e. Improving health outcomes is emphasized by focusing on health as well as medical care.
f. Patients' access to the team, or coverage as designated by the physician-led team, is available twenty-four hours a day, seven days a week.
g. Safety protocols are developed and followed by all team members.

Teamwork:
h. Medical teams are led by physicians who have ultimate responsibility and authority to carry out final decisions about the composition of the team.
i. All practitioners commit to working in a team-based care model.
j. The number and variety of practitioners reflects the needs of the practice.
k. Practitioners are trained according to their unique function in the team.
l. Interdependence among team members is expected and relied upon.
m. Communication about patient care between team members is a routine practice.
n. Team members complete tasks according to agreed-upon protocols as directed by the physician leader.

Clinical Roles and Responsibilities:
o. Physician leaders are focused on individualized patient care and the development of treatment plans.
p. Non-physician practitioners are focused on providing treatment within their scope of practice consistent with their education and training as outlined in the agreed upon treatment plan or as delegated under the supervision of the physician team leader.
q. Care coordination and case management are integral to the team's practice.
r. Population management monitors the cost and use of care, and includes registry development for most medical conditions.

Practice Management:
s. Electronic medical records are used to the fullest capacity.
t. Quality improvement processes are used and continuously evolve according to physician-led team-based practice assessments.

u. Data analytics include statistical and qualitative analysis on cost and utilization, and provide explanatory and predictive modeling.
v. Prior authorization and precertification processes are streamlined through the adoption of electronic transactions.

(CMS Rep. 6, A-14; Reaffirmed: CMS Rep. 07, A-16; Reaffirmed: CMS Rep. 05, A-17)

H-360.987, "Principles Guiding AMA Policy Regarding Supervision of Medical Care Delivered by Advanced Practice Nurses in Integrated Practice"

Our AMA endorses the following principles: (1) Physicians must retain authority for patient care in any team care arrangement, e.g., integrated practice, to assure patient safety and quality of care.H-35.

(2) Medical societies should work with legislatures and licensing boards to prevent dilution of the authority of physicians to lead the health care team.

(3) Exercising independent medical judgment to select the drug of choice must continue to be the responsibility only of physicians.

(4) Physicians should recognize physician assistants and advanced practice nurses under physician leadership, as effective physician extenders and valued members of the health care team.

(5) Physicians should encourage state medical and nursing boards to explore the feasibility of working together to coordinate their regulatory initiatives and activities.

(6) Physicians must be responsible and have authority for initiating and implementing quality control programs for nonphysicians delivering medical care in integrated practices.

(BOT Rep. 23, A-96; Reaffirmation A-99; Reaffirmed: Res. 240, and Reaffirmation A-00; Reaffirmed: CMS Rep. 6, A-10; Reaffirmed: BOT Rep. 9, I-11; Reaffirmation A-12; Reaffirmed: BOT Rep. 16, A-13)

10.5, "Allied Health Professionals"

Physicians often practice in concert with optometrists, nurse anesthetists, nurse midwives, and other allied health professionals. Although physicians have overall responsibility for the quality of care that patients receive, allied health professionals have training and expertise that complements physicians'. With physicians, allied health professionals share a common commitment to patient well-being.

In light of this shared commitment, physicians' relationships with allied health professionals should be based on mutual respect and trust. It is ethically appropriate for physicians to:

(a) Help support high quality education that is complementary to medical training, including by teaching in recognized schools for allied health professionals.
(b) Work in consultation with or employ appropriately trained and credentialed allied health professionals.
(c) Delegate provision of medical services to an appropriately trained and credentialed allied health professional within the individual's scope of practice.
AMA Principles of Medical Ethics: I,V,VII

The Opinions in this chapter are offered as ethics guidance for physicians and are not intended to establish standards of clinical practice or rules of law.

(Issued: 2016)

H-35.989, "Physician Assistants"

1. Our AMA opposes legislation to increase public funding for programs to train physician assistants and supports a careful reevaluation of the need for public funding at the time that present legislative authorities expire.

2. A physician assistant should provide patient care services only in accord with the medical practice act and other applicable state law, and such law should provide that the physician assistant's utilization by a physician or group of physicians be approved by the medical licensing board. A licensed physician or group of physicians seeking to utilize a physician assistant should submit to the medical licensing board an application for utilization that identifies: the qualifications and experience of the physician assistant, the qualifications and experience of the supervising physician and a description of his or her practice, and a description of the manner and the health care settings in which the assistant will be utilized, and the arrangements for supervision by the responsible physician. Such an application should also specify the number of physician assistants that the physician or group of physicians plans to employ and supervise. A physician assistant should be authorized to provide patient care services only so long as the assistant is functioning under the direction and supervision of a physician or group of physicians whose application for utilization has been approved by the medical licensing board. State medical licensing boards, in their review of applications for utilization of a physician assistant, should take special care to insure that the proposed physician assistant functions not be of a type which: (a) would unreasonably expand the professional scope of practice of the supervising physician, (b) cannot be performed safely and effectively by the physician assistant, or (c) would authorize the unlicensed practice of medicine.

3. The physician assistant should function under the direction of and supervision by a duly qualified licensed physician. The physician must always maintain the ultimate responsibility to assure that high quality care is provided to every patient. In discharging that responsibility, the physician should exercise that amount of control or supervision over a physician assistant which is appropriate for the maintenance of quality medical care and in accord with existing state law and the rules and regulations of the medical licensing authority. Such supervision in most settings includes the personal presence or participation of the physician. In certain instances, such as remote practice settings, where the physician assistant may function apart from the supervising physician, such remote function (if permitted by state law) should be approved by the state medical licensing board on an individual basis. Such approval should include requirements for regular reporting to the supervising physician, frequent site visits by that physician, and arrangements for immediate communication with the supervising physician for consultation at all times. The physician assistant may serve the patients of the supervising physician in all types of health care settings, including but not limited to: physician's office, ambulatory or outpatient facility, clinic, hospital, patient's home, long-term care facility or nursing home. The state medical licensing board should determine on an individual basis the number of physician assistants that a particular physician may supervise or a group of physicians may employ.

4. While it is preferable and desirable that the physician assistant be employed by a physician or group of physicians so as to ensure appropriate physician supervision in the interests of the patient, where a physician assistant is employed by a hospital, the physician assistant must provide patient

care services in accordance with the rules and procedures established by the organized medical staff for utilization of physician-employed physician assistants functioning in that institution, and under the direction and supervision of a designated physician who has been approved by the state medical licensing board to supervise that physician assistant in accordance with a specific utilization plan and who shall be directly responsible as the attending physician for the patient care services delegated to his physician assistant.

5. The AMA opposes legislation or proposed regulations authorizing physician assistants to make independent medical judgments as to the drug of choice for an individual patient.

6. In view of an announced interest by HHS in considering national legislation which would override state regulatory systems for health manpower, the AMA recommends that present Association policy supporting state prerogatives in this area be strongly reaffirmed.

7. Our AMA opposes legislation or regulation that allows physician assistant independent practice.

(BOT/CME/CMS Joint Rep., I-80; Reaffirmed: CLRPD Rep. B, I-90; Reaffirmation A-99; Reaffirmed: CME Rep. 2, A-09; Reaffirmed: BOT Rep. 9, I-11; Appended: Res. 230, I-17)

H-160.947, "Physician Assistants and Nurse Practitioners"

Our AMA will develop a plan to assist the state and local medical societies in identifying and lobbying against laws that allow advanced practice nurses to provide medical care without the supervision of a physician.

The suggested Guidelines for Physician/Physician Assistant Practice are adopted to read as follows (these guidelines shall be used in their entirety):

(1) The physician is responsible for managing the health care of patients in all settings.

(2) Health care services delivered by physicians and physician assistants must be within the scope of each practitioner's authorized practice, as defined by state law.

(3) The physician is ultimately responsible for coordinating and managing the care of patients and, with the appropriate input of the physician assistant, ensuring the quality of health care provided to patients.

(4) The physician is responsible for the supervision of the physician assistant in all settings.

(5) The role of the physician assistant in the delivery of care should be defined through mutually agreed upon guidelines that are developed by the physician and the physician assistant and based on the physician's delegatory style.

(6) The physician must be available for consultation with the physician assistant at all times, either in person or through telecommunication systems or other means.

(7) The extent of the involvement by the physician assistant in the assessment and implementation of treatment will depend on the complexity and acuity of the patient's condition and the training, experience, and preparation of the physician assistant, as adjudged by the physician.

(8) Patients should be made clearly aware at all times whether they are being cared for by a physician or a physician assistant.

(9) The physician and physician assistant together should review all delegated patient services on a regular basis, as well as the mutually agreed upon guidelines for practice.

(10) The physician is responsible for clarifying and familiarizing the physician assistant with his/her supervising methods and style of delegating patient care.

(BOT Rep. 6, A-95; Reaffirmed: Res 240 and Reaffirmation A-00; Reaffirmed: Res. 213, A-02; Modified: CLRPD Rep. 1, A-03; Reaffirmed: BOT Rep. 9, I-11; Reaffirmed: Joint CME-CMS Rep., I-12; Reaffirmed: BOT Rep. 16, A-13)

H-310.913, "Physician Extenders"

1. In academic environments, our AMA will only support payment models for non-physician practitioners that do not interfere with graduate medical training.
2. Our AMA supports the concept that procedural training is a critical portion of resident education and the augmentation of patient care by non-physician practitioners should not interfere with a resident's ability to achieve competence in the performance of required procedures.
(Res. 208, I-10; Appended: CME Rep. 8, A-13)

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 301
(A-23)

Introduced by: Resident and Fellow Section

Subject: Increasing Musculoskeletal Education in Primary Care Specialties and Medical School Education through Inclusion of Osteopathic Manual Therapy Education

Referred to: Reference Committee C

Whereas, According to the American Osteopathic Association, osteopathic manipulative medicine/treatment (OMM/OMT) is special training for the musculoskeletal system that doctors of osteopathy receive to provide care that involves using the hands to diagnose, treat, and prevent illness or injury; and

Whereas, The evidence basis for OMT is quite broad and spans many disease processes and organ systems and supports its use as an adjunct treatment in a variety of conditions; and

Whereas, In order to train residents in osteopathic practice and principles (OPP) and osteopathic manipulative treatment (OMT), faculty must be available and qualified; and

Whereas, Osteopathic Recognition (OR) is a "designation conferred by the ACGME's Osteopathic Principles Committee upon ACGME-accredited programs that demonstrate, through a formal application process, the commitment to teaching and assessing Osteopathic Principles and Practice (OPP) at the graduate medical education level."; and

Whereas, Programs must meet criteria laid out by that committee and apply for recognition[1]; and

Whereas, Residents in a recognized program must be assessed for OPP knowledge and "skill proficiency in OMT as applicable to [their] specialty."[2]; and

Whereas, As of the 2021-2022 academic year there are approximately 250 PGY-1 GME programs with osteopathic recognition out of the 4,780 available programs (roughly 5%).[3]; therefore be it

RESOLVED, That our American Medical Association continue to support equal treatment of osteopathic students, trainees and physicians in the residency application cycle and workplace through continued education on the training of Osteopathic physicians (New HOD Policy); and be it further

RESOLVED, That our American Medical Association encourage education on the benefits of evidence-based Osteopathic Manual Therapy for musculoskeletal conditions in medical education of allopathic students and in primary care residencies. (New HOD Policy)

Fiscal Note: Minimal - less than $1,000

Received: 3/19/23

RELEVANT AMA POLICY

Definition of a Physician H-405.969

1. The AMA affirms that a physician is an individual who has received a "Doctor of Medicine" or a "Doctor of Osteopathic Medicine" degree or an equivalent degree following successful completion of a prescribed course of study from a school of medicine or osteopathic medicine.
2. AMA policy requires anyone in a hospital environment who has direct contact with a patient who presents himself or herself to the patient as a "doctor," and who is not a "physician" according to the AMA definition above, must specifically and simultaneously declare themselves a "non-physician" and define the nature of their doctorate degree.
3. Our AMA actively supports the Scope of Practice Partnership in the Truth in Advertising campaign.
Citation: CME Rep. 4-A-94; Reaffirmed by Sub. Res. 712, I-94; Reaffirmed and Modified: CME Rep. 2, A-04; Res. 846, I-08; Reaffirmed in lieu or Res. 235, A-09; Reaffirmed: Res. 821, I-09; Appended: BOT Rep. 9, I-09; Reaffirmed: BOT Rep. 9, I-11; Reaffirmation A-13; Reaffirmation A-15; Reaffirmed in lieu of: Res. 225, A-17; Reaffirmed: Res. 228, A-19; Reaffirmation I-22

Definition and Use of the Term Physician H-405.951

Our AMA:
1. Affirms that the term physician be limited to those people who have a Doctor of Medicine, Doctor of Osteopathic Medicine, or a recognized equivalent physician degree and who would be eligible for an Accreditation Council for Graduate Medical Education (ACGME) residency.
2. Will, in conjunction with the Federation, aggressively advocate for the definition of physician to be limited as defined above:
a. In any federal or state law or regulation including the Social Security Act or any other law or regulation that defines physician;
b. To any federal and state legislature or agency including the Department of Health and Human Services, Federal Aviation Administration, the Department of Transportation, or any other federal or state agency that defines physician; and
c. To any accrediting body or deeming authority including the Joint Commission, Health Facilities Accreditation Program, or any other potential body or authority that defines physician.
3. Urges all physicians to insist on being identified as a physician, to sign only those professional or medical documents identifying them as physicians, and to not let the term physician be used by any other organization or person involved in health care.
4. Ensure that all references to physicians by government, payers, and other health care entities involving contracts, advertising, agreements, published descriptions, and other communications at all times distinguish between physician, as defined above, and non-physicians and to discontinue the use of the term provider.
5. Policy requires any individual who has direct patient contact and presents to the patient as a doctor, and who is not a physician, as defined above, must specifically and simultaneously declare themselves a non-physician and define the nature of their doctorate degree.
6. Will review and revise its own publications as necessary to conform with the House of Delegates' policies on physician identification and physician reference and will refrain from any definition of physicians as providers that is not otherwise covered by existing Journal of the American Medical Association (*JAMA*) Editorial Governance Plan, which protects the editorial independence of *JAMA*.
7. Actively supports the Scope of Practice Partnership in the Truth in Advertising campaign
Citation: Res. 214, A-19; Reaffirmation I-22

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 302
(A-23)

Introduced by: Resident and Fellow Section

Subject: Antitrust Legislation Regarding the AAMC, ACGME, NRMP, and Other Relevant Associations or Organizations

Referred to: Reference Committee C

Whereas, The 1980 Sherman Antitrust Act was the first antitrust law to be signed by Congress, and outlaws "every contract, combination, or conspiracy in restraint of trade," and any "monopolization, attempted monopolization, or conspiracy or combination to monopolize"; and

Whereas, The Sherman Antitrust Act was later followed in 1914 by the Federal Trade Commission Act which established the FTC and the Clayton Act which further defined specific practices that the Sherman Act did not ban, thus comprising the three core federal antitrust laws aimed to preserve the process of free market competition; and

Whereas, While these antitrust laws generally prohibit unlawful mergers and monopolistic business practices, it is ultimately left to the courts to ultimately decide case by case basis of legality; and

Whereas, In the current NRMP Match process, all applicants for the same training year are paid the same amount as determined by the hospital system at which they Match; and

Whereas, Following *Jung vs AAMC* and the Pension Funding Equity Act of 2004, there has been little change to the Matching process and residents are using other means to obtain fair wages, safe working environments, and other benefits that are unable to be negotiated within the current system; and

Whereas, Our American Medical Association holds multiple policies (H-383.992, H-383.990, D-383.983, and D-383.990) regarding antitrust in medicine primarily with the goal of preserving clinical autonomy, the patient-physician relationship, and ensuring fairness toward physicians and physician-owned entities in the application of antitrust laws; and

Whereas, The Match poses significant anticompetition concerns and the procompetitive effect of streamlining residency job applications and increasing percentage of position filled needs to be outweighed by the anticompetitive effect of the lack of negotiation power of residents; therefore be it

RESOLVED, That our American Medical Association study alternatives to the current residency and fellowship Match process which would be less restrictive on free market competition for applicants. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 3/19/23

RELEVANT AMA POLICY

Proposed Revisions to AMA Policy on the Financing of Medical Education Programs D-305.973
Our AMA will work with:
(1) the federal government, including the Centers for Medicare and Medicaid Services, and the states, along with other interested parties, to bring about the following outcomes:
(a) ensure adequate Medicaid and Medicare funding for graduate medical education;
(b) ensure adequate Disproportionate Share Hospital funding;
(c) make the Medicare direct medical education per-resident cost figure more equitable across teaching hospitals while assuring adequate funding of all residency positions;
(d) revise the Medicare and Medicaid funding formulas for graduate medical education to recognize the resources utilized for training in non-hospital settings;
(e) stabilize funding for pediatric residency training in children's hospitals;
(f) explore the possibility of extending full direct medical education per-resident payment beyond the time of first board eligibility for specialties/subspecialties in shortage/defined need;
(g) identify funding sources to increase the number of graduate medical education positions, especially in or adjacent to physician shortage/underserved areas and in undersupplied specialties; and
(h) act on existing policy by seeking federal legislation requiring all health insurers to support graduate medical education through an all-payer trust fund created for this purpose; and
(2) other interested parties to ensure adequate funding to support medical school educational programs, including creating mechanisms to fund additional medical school positions.
Citation: (CME Rep. 7, A-05; Reaffirmation I-06; Reaffirmation I-07; Reaffirmed: Res. 921, I-12; Reaffirmation A-13; Reaffirmed: CME Rep. 5, A-13)

National Resident Matching Program Reform D-310.977
Our AMA:
(1) will work with the National Resident Matching Program (NRMP) to develop and distribute educational programs to better inform applicants about the NRMP matching process, including the existing NRMP waiver and violations review policies;
(2) will actively participate in the evaluation of, and provide timely comments about, all proposals to modify the NRMP Match;
(3) will request that the NRMP explore the possibility of including the Osteopathic Match in the NRMP Match;
(4) will continue to review the NRMP's policies and procedures and make recommendations for improvements as the need arises, to include making the conditions of the Match agreement more transparent while assuring the confidentiality of the match;
(5) will work with the Accreditation Council for Graduate Medical Education (ACGME) and other appropriate agencies to assure that the terms of employment for resident physicians are fair and equitable and reflect the unique and extensive amount of education and experience acquired by physicians;
(6) does not support the current the "All-In" policy for the Main Residency Match to the extent that it eliminates flexibility within the match process;
(7) will work with the NRMP, and other residency match programs, in revising Match policy, including the secondary match or scramble process to create more standardized rules for all candidates including application timelines and requirements;
(8) will work with the NRMP and other external bodies to develop mechanisms that limit disparities within the residency application process and allow both flexibility and standard rules for applicants;
(9) encourages the National Resident Matching Program to study and publish the effects of implementation of the Supplemental Offer and Acceptance Program on the number of residency spots not filled through the Main Residency Match and include stratified analysis by specialty and other relevant areas;
(10) will work with the NRMP and ACGME to evaluate the challenges in moving from a time-based education framework toward a competency-based system, including: a) analysis of time-based implications of the ACGME milestones for residency programs; b) the impact on the NRMP and entry into residency programs if medical education programs offer variable time lengths based on acquisition of competencies; c) the impact on financial aid for medical students with variable time lengths of medical education programs; d) the implications for interprofessional education and rewarding teamwork; and e)

the implications for residents and students who achieve milestones earlier or later than their peers;
(11) will work with the Association of American Medical Colleges (AAMC), American Osteopathic Association (AOA), American Association of Colleges of Osteopathic Medicine (AACOM), and National Resident Matching Program (NRMP) to evaluate the current available data or propose new studies that would help us learn how many students graduating from US medical schools each year do not enter into a US residency program; how many never enter into a US residency program; whether there is disproportionate impact on individuals of minority racial and ethnic groups; and what careers are pursued by those with an MD or DO degree who do not enter residency programs;
(12) will work with the AAMC, AOA, AACOM and appropriate licensing boards to study whether US medical school graduates and international medical graduates who do not enter residency programs may be able to serve unmet national health care needs;
(13) will work with the AAMC, AOA, AACOM and the NRMP to evaluate the feasibility of a national tracking system for US medical students who do not initially match into a categorical residency program;
(14) will discuss with the National Resident Matching Program, Association of American Medical Colleges, American Osteopathic Association, Liaison Committee on Medical Education, Accreditation Council for Graduate Medical Education, and other interested bodies potential pathways for reengagement in medicine following an unsuccessful match and report back on the results of those discussions;
(15) encourages the Association of American Medical Colleges to work with U.S. medical schools to identify best practices, including career counseling, used by medical schools to facilitate successful matches for medical school seniors, and reduce the number who do not match;
(16) supports the movement toward a unified and standardized residency application and match system for all non-military residencies;
(17) encourages the Educational Commission for Foreign Medical Graduates (ECFMG) and other interested stakeholders to study the personal and financial consequences of ECFMG-certified U.S. IMGs who do not match in the National Resident Matching Program and are therefore unable to get a residency or practice medicine;
(18) encourages the AAMC, AACOM, NRMP, and other key stakeholders to jointly create a no-fee, easily accessible clearinghouse of reliable and valid advice and tools for residency program applicants seeking cost-effective methods for applying to and successfully matching into residency; and
(19) will work with appropriate stakeholders to study options for improving transparency in the resident application process.
Citation: CME Rep. 4, A-05; Appended: Res. 330, A-11; Appended: Res. 920, I-11; Appended: Res. 311, A-14; Appended: Res. 312, A-14; Appended: Res. 304, A-15; Appended: CME Rep. 03, A-16; Reaffirmation: A-16; Appended: CME Rep. 06, A-17; Appended: Res. 306, A-17; Modified: Speakers Rep. 01, A-17; Appended: CME Rep. 3, A-21; Modified: CME Rep. 1, A-22; Appended: Res. 328, A-22;

Collective Bargaining: Antitrust Immunity D-383.983

Our AMA will: (1) continue to pursue an antitrust advocacy strategy, in collaboration with the medical specialty stakeholders in the Antitrust Steering Committee, to urge the Department of Justice and Federal Trade Commission to amend the "Statements of Antitrust Enforcement Policy in Health Care" (or tacitly approve expansion of the Statements) and adopt new policy statements regarding market concentration that are consistent with AMA policy; and (2) execute a federal legislative strategy.
Citation: BOT Action in response to referred for decision Res. 209, A-07 and Res. 232, A-07; Reaffirmed: Res. 215, A-11; Reaffirmed: Res. 206, A-19;

AMA's Aggressive Pursuit of Antitrust Reform D-383.990

Our AMA will: (1) place a high priority on the level of support provided to AMA's Public and Private Sector Advocacy Units, which are key to successfully addressing the problems physicians face as a result of the current application of federal antitrust laws;
(2) through its private and public sector advocacy efforts, continue to aggressively advocate for a level playing field for negotiations between physicians and health insurers by aggressively pursuing legislative relief at the federal level and providing support to state medical society efforts to pass legislation based on the "state action doctrine";
(3) continue to advocate to the Federal Trade Commission and Department of Justice for more flexible and fair treatment of physicians under the antitrust laws and for greater scrutiny of insurers;
(4) continue to develop and publish objective evidence of the dominance of health insurers through its

comprehensive study, Competition in Health Insurance: Comprehensive Study of US Markets, and other appropriate means;
(5) identify consequences of the concentration of market power by health plans to enlist a Senate sponsor for a bill allowing collective negotiation by physicians; and
(6) develop practical educational resources to help its member physicians better understand and use the currently available, effective modalities by which physician groups may legally negotiate contracts with insurers and health plans.
Citation: Res. 908, I-03; Reaffirmation, A-05; Reaffirmed: BOT Rep. 10, I-05; Reaffirmation A-06; Reaffirmation A-08; Reaffirmed: BOT Rep. 09, A-18; Reaffirmed: Res. 206, A-19;

Antitrust Relief H-383.992
Our AMA will: (1) redouble efforts to make physician antitrust relief a top legislative priority, providing the necessary foundation for fair contract negotiations designed to preserve clinical autonomy and patient interest and to redirect medical decision making to patients and physicians; and (2) affirm its commitment to undertake all appropriate efforts to seek legislative and regulatory reform of state and federal law, including federal antitrust law, to enable physicians to negotiate effectively with health insurers.
Citation: Sub. Res. 905, I-07; Reaffirmation A-08; Reaffirmed: Res. 215, A-11; Reaffirmed: BOT action in response to referred for decision Res. 201, I-12; Reaffirmed in lieu of Res. 218, A-15; Reaffirmed: Res. 206, A-19;

AMERICAN MEDICAL ASSOCIATION HOUSE OF DELEGATES

Resolution: 303
(A-23)

Introduced by: Resident and Fellow Section

Subject: Medical School Management of Unmatched Medical Students

Referred to: Reference Committee C

Whereas, The U.S. faces a projected shortage of up to 124,000 physicians within the next 12 years affecting all medical and surgical specialties and resulting in a significant decrease in access to care, especially among already underserved and rural populations[1]; and

Whereas, The number of NRMP applicants have been increasing over the past two decades, reaching all-time highs in the 2021 and 2022 match cycles of 48,700 and 47,675, respectively[2]; and

Whereas, Despite increases in residency positions in the over the past two decades within the NRMP from 20,598 positions in 2000 to 36,277 in 2022, the annual match rates amongst U.S. MD seniors (i.e., US medical school MD candidates applying through the NRMP in their final year of medical school) have remained between 92-95%, which amounts to over 1,000 U.S. MD seniors going unmatched or withdrawing applications each year after accounting for the Supplemental Offer and Acceptance Program (SOAP), while match rates of U.S. MD graduates (i.e., MDs applying for the NRMP Match after they have graduated from medical school) has consistently been between 50-60%, or over 700 MD graduates per year after accounting for the SOAP and withdrawn applications[2-5]; and

Whereas, The rate of unmatched NRMP residency applicants has decreased from 25% to 20% from 2006 to 2022, but due to increasing numbers of applicants, the total number of U.S. MD, DO, and IMG applicants who were unmatched at the end of each annual application cycle has remained over 4,000 since 2006[2-5]; and

Whereas, Medical school graduates have, on average, approximately $240,000 in total student loan debt, which has major financial implications, particularly for students unable to pursue clinical careers due to not matching into a residency program[6]; and

Whereas, Some of the individual factors associated with going unmatched include not being competitive in first-choice specialty, medical licensure exam scores, poor interviewing or interpersonal skills, not applying/interviewing/ranking enough programs, concerns raised in the Medical Student Performance Evaluation, professionalism concerns, school reputation, or poor SOAP strategy[7-9]; and

Whereas, It is generally accepted that the worsening physician shortage would be better ameliorated by fully trained physicians than by nurse practitioners or physician assistants, given their distinctive training and advanced practitioners need for physician supervision; and

Whereas, Not matching into a residency program is generally attributed to the individual factors, however, systemic factors contributing to not matching, including quality of medical school

education, structural racism, access to appropriate mentorship, and guidance, have been understudied and underexplained[10]; therefore be it

RESOLVED, That our American Medical Association convene a task force of appropriate AMA councils, medical education organizations, licensing and credentialing boards, government bodies, impacted communities, and other relevant stakeholders to:

1. Study institutional and systemic factors associated with the unmatched medical graduate status, including, but not limited to:
    a) The GME bottleneck on training positions, including the balance of entry-level position and categorical/advanced positions;
    b) New medical schools and the expansion of medical school class sizes;
    c) Race, geography, income, wealth, primary language, gender, religion, ability, and other structural factors;
    d) Student loan debt;
    e) Predatory business practices by medical schools, loan agencies, private equity, and other groups that prioritize profit over student success rates;
    f) The context, history, and impact of past reports on the state of undergraduate medical education, including the Flexner Report;
    g) The format and variations of institutional and medical organization guidance on best practices to successful matching;
2. Develop best practices for medical schools and medical organizations to support unmatched medical graduates, including, but not limited to:
    a) Tools to identify and remediate students at high risk for not matching into GME programs;
    b) Adequate data on student success rates (e.g., by specialty), and factors associated with success in matching;
    c) Medical school responsibilities to unmatched medical students and graduates;
    d) Outcomes-based tuition relief or reimbursement for unmatched students, wherein, unmatched students are returned some component of their tuition to ease the financial burden of being unable to practice clinical medicine;
    e) Transparent, equity-based solutions to address and ameliorate any inequities identified in the match process;
    f) Alternative, cost-neutral, graduate-level degrees with earlier graduation for students at high risk for not matching;
    g) Career opportunities for unmatched U.S. seniors and US-IMGs; and
3. Require transparency from stakeholders, including medical schools, about any actions taken based on the report of this task force, particularly with regard to the remediation of medical students. (Directive to Take Action)

Fiscal Note: Modest - between $1,000 - $5,000

Received: 3/19/23

RELEVANT AMA POLICY

National Resident Matching Program Reform D-310.977

Our AMA:
(1) will work with the National Resident Matching Program (NRMP) to develop and distribute educational programs to better inform applicants about the NRMP matching process, including the existing NRMP waiver and violations review policies;
(2) will actively participate in the evaluation of, and provide timely comments about, all proposals to modify the NRMP Match;
(3) will request that the NRMP explore the possibility of including the Osteopathic Match in the NRMP Match;
(4) will continue to review the NRMP's policies and procedures and make recommendations for improvements as the need arises, to include making the conditions of the Match agreement more transparent while assuring the confidentiality of the match;
(5) will work with the Accreditation Council for Graduate Medical Education (ACGME) and other appropriate agencies to assure that the terms of employment for resident physicians are fair and equitable and reflect the unique and extensive amount of education and experience acquired by physicians;
(6) does not support the current the "All-In" policy for the Main Residency Match to the extent that it eliminates flexibility within the match process;
(7) will work with the NRMP, and other residency match programs, in revising Match policy, including the secondary match or scramble process to create more standardized rules for all candidates including application timelines and requirements;
(8) will work with the NRMP and other external bodies to develop mechanisms that limit disparities within the residency application process and allow both flexibility and standard rules for applicants;
(9) encourages the National Resident Matching Program to study and publish the effects of implementation of the Supplemental Offer and Acceptance Program on the number of residency spots not filled through the Main Residency Match and include stratified analysis by specialty and other relevant areas;
(10) will work with the NRMP and ACGME to evaluate the challenges in moving from a time-based education framework toward a competency-based system, including: a) analysis of time-based implications of the ACGME milestones for residency programs; b) the impact on the NRMP and entry into residency programs if medical education programs offer variable time lengths based on acquisition of competencies; c) the impact on financial aid for medical students with variable time lengths of medical education programs; d) the implications for interprofessional education and rewarding teamwork; and e) the implications for residents and students who achieve milestones earlier or later than their peers;
(11) will work with the Association of American Medical Colleges (AAMC), American Osteopathic

Association (AOA), American Association of Colleges of Osteopathic Medicine (AACOM), and National Resident Matching Program (NRMP) to evaluate the current available data or propose new studies that would help us learn how many students graduating from US medical schools each year do not enter into a US residency program; how many never enter into a US residency program; whether there is disproportionate impact on individuals of minority racial and ethnic groups; and what careers are pursued by those with an MD or DO degree who do not enter residency programs;
(12) will work with the AAMC, AOA, AACOM and appropriate licensing boards to study whether US medical school graduates and international medical graduates who do not enter residency programs may be able to serve unmet national health care needs;
(13) will work with the AAMC, AOA, AACOM and the NRMP to evaluate the feasibility of a national tracking system for US medical students who do not initially match into a categorical residency program;
(14) will discuss with the National Resident Matching Program, Association of American Medical Colleges, American Osteopathic Association, Liaison Committee on Medical Education, Accreditation Council for Graduate Medical Education, and other interested bodies potential pathways for reengagement in medicine following an unsuccessful match and report back on the results of those discussions;
(15) encourages the Association of American Medical Colleges to work with U.S. medical schools to identify best practices, including career counseling, used by medical schools to facilitate successful matches for medical school seniors, and reduce the number who do not match;
(16) supports the movement toward a unified and standardized residency application and match system for all non-military residencies;
(17) encourages the Educational Commission for Foreign Medical Graduates (ECFMG) and other interested stakeholders to study the personal and financial consequences of ECFMG-certified U.S. IMGs who do not match in the National Resident Matching Program and are therefore unable to get a residency or practice medicine;
(18) encourages the AAMC, AACOM, NRMP, and other key stakeholders to jointly create a no-fee, easily accessible clearinghouse of reliable and valid advice and tools for residency program applicants seeking cost-effective methods for applying to and successfully matching into residency; and
(19) will work with appropriate stakeholders to study options for improving transparency in the resident application process.

Preliminary Year Program Placement H-310.910
1. Our AMA encourages the Accreditation Council for Graduate Medical Education, the American Osteopathic Association, and other involved organizations to strongly encourage residency programs that now require a preliminary year to match residents for their specialty and then arrange with another department or another medical center for the preliminary year of training unless the applicant chooses to pursue preliminary year training separately.
2. Our AMA encourages appropriate stakeholders to explore options to decrease the burden upon medical students who must apply to separate preliminary PGY-1 and categorical PGY-2 positions.
3. Our AMA will work with the Accreditation Council for Graduate Medical Education to encourage programs with PGY-2 positions in the National Resident Matching Program (NRMP) with insufficient availability of local PGY-1 positions to create local PGY-1 positions that will enable coordinated applications and interviews for medical students.
4. Our AMA encourages the NRMP, the San Francisco Match, the American Urological Association, the Electronic Residency Application Service, and other stakeholders to reduce barriers for medical students, residents, and physicians applying to match into training programs, including barriers to “couples matching,” and to ensure that all applicants have access to robust, informative statistics to assist in decision-making.
5. Our AMA encourages the NRMP, San Francisco Match, American Urological Association, Electronic Residency Application Service, and other stakeholders to collect and publish data on a) the impact of separate matches on the personal and professional lives of medical students and b) the impact on medical students who are unable to successfully “couples match” with their significant others due to staggered entry into residency, utilization of unlinked match services, or other causes.

Closing of Residency Programs H-310.943
1. Our AMA: (a) encourages the Accreditation Council for Graduate Medical Education (ACGME) to address the problem of non-educational closing or downsizing of residency training programs; (b) reminds all institutions involved in educating residents of their contractual responsibilities to the resident; (c) encourages the ACGME and the various Residency Review Committees to reexamine requirements for "years of continuous training" to determine the need for implementing waivers to accommodate residents affected by non-educational closure or downsizing; (d) will work with the American Board of Medical Specialties Member Boards to encourage all its member boards to develop a mechanism to accommodate the discontinuities in training that arise from residency closures, regardless of cause, including waiving continuity care requirements and granting residents credit for partial years of training; (e) urges residency programs and teaching hospitals be monitored by the applicable Residency Review Committees to ensure that decreases in resident numbers do not place undue stress on remaining residents by affecting work hours or working conditions, as specified in Residency Review Committee requirements; (f) opposes the closure of residency/fellowship programs or reductions in the number of current positions in programs as a result of changes in GME funding; and (g) will work with the Centers for Medicare and Medicaid Services (CMS), ACGME, and other appropriate organizations to advocate for the development and implementation of effective policies to permit graduate medical education funding to follow the resident physician from a closing to the receiving residency program (including waivers of CMS caps), in the event of temporary or permanent residency program closure.
2. Our AMA will work with the Centers for Medicare and Medicaid Services (CMS) to establish regulations that protect residents and fellows impacted by program or hospital closure, which may include recommendations for:
A. Notice by the training hospital, intending to file for bankruptcy within 30 days, to all residents and fellows primarily associated with the training hospital, as well as those contractually matched at that training institution who may not yet have matriculated, of its intention to close, along with provision of reasonable and appropriate procedures to assist current and matched residents and fellows to find and obtain alternative training positions that minimize undue financial and professional consequences, including but not limited to maintenance of specialty choice, length of training, initial expected time of graduation, location and reallocation of funding, and coverage of tail medical malpractice insurance that would have been offered had the program or hospital not closed;
B. Revision of the current CMS guidelines that may prohibit transfer of funding prior to formal financial closure of a teaching institution;
C. Improved provisions regarding transfer of GME funding for displaced residents and fellows for the duration of their training in the event of program closure at a training institution; and
D. Protections against the discrimination of displaced residents and fellows consistent with H-295.969.
3. Our AMA will work with the Accreditation Council for Graduate Medical Education, Association of American Medical Colleges, National Resident Matching Program, Educational Commission for Foreign Medical Graduates, Centers for Medicare and Medicaid Services, and other relevant stakeholders to identify a process by which displaced residents and fellows may be directly represented in proceedings surrounding the closure of a training hospital or program.
4. Our AMA will work with the Accreditation Council for Graduate Medical Education, Association of American Medical Colleges, National Resident Matching Program, Educational Commission for Foreign Medical Graduates, Centers for Medicare and Medicaid Services, and other relevant stakeholders to:
A. Develop a stepwise algorithm for designated institutional officials and program directors to assist residents and fellows with finding and obtaining alternative training positions;
B. Create a centralized, regulated process for displaced residents and fellows to obtain new training positions; and
C. Develop pathways that ensure that closing and accepting institutions provide liability insurance coverage to residents, at no cost to residents.

Eliminating Questions Regarding Marital Status, Dependents, Plans for Marriage or Children, Sexual Orientation, Gender Identity, Age, Race, National Origin and Religion During the Residency and Fellowship Application Process H-310.919
Our AMA:
1. opposes questioning residency or fellowship applicants regarding marital status, dependents, plans for marriage or children, sexual orientation, gender identity, age, race, national origin, and religion;
2. will work with the Accreditation Council for Graduate Medical Education, the National Residency Matching Program, and other interested parties to eliminate questioning about or discrimination based on marital and dependent status, future plans for marriage or children, sexual orientation, age, race, national origin, and religion during the residency and fellowship application process;
3. will continue to support efforts to enhance racial and ethnic diversity in medicine. Information regarding race and ethnicity may be voluntarily provided by residency and fellowship applicants;
4.encourages the Association of American Medical Colleges (AAMC) and its Electronic Residency Application Service (ERAS) Advisory Committee to develop steps to minimize bias in the ERAS and the residency training selection process; and
5. will advocate that modifications in the ERAS Residency Application to minimize bias consider the effects these changes may have on efforts to increase diversity in residency programs.
Citation: Res. 307, A-09; Appended: Res. 955, I-17;

Protection of Resident and Fellow Training in the Case of Hospital or Training Program Closure D-310.948
Our AMA will:
1. ask the Centers for Medicare & Medicaid Services (CMS) to stipulate in its regulations that residency slots are not assets that belong to the teaching institution;
2. encourage the Association of American Medical Colleges (AAMC), American Association of Colleges of Osteopathic Medicine (AACOM), and National Resident Matching Program (NRMP) to develop a process similar to the Supplemental Offer and Acceptance Program (SOAP) that could be used in the event of a sudden teaching institution or program closure;
3. encourage the Accreditation Council for Graduate Medical Education (ACGME) to specify in its Institutional Requirements that sponsoring institutions are to provide residents and residency applicants information regarding the financial health of the institution, such as its credit rating, or if it has recently been part of an acquisition or merger;
4. work with AAMC, AACOM, ACGME, and relevant state and specialty societies to coordinate and collaborate on the communication with sponsoring institutions, residency programs, and resident physicians in the event of a sudden institution or program closure to minimize confusion, reduce misinformation, and increase clarity;
5. encourage ACGME to revise its Institutional Requirements, under section IV.E., Professional Liability Insurance, to state that sponsoring institutions must create and maintain a fund that will ensure professional liability coverage for residents in the event of an institution or program closure; and
6. continue to work with ACGME, interested specialty societies, and others to monitor issues, collect data, and share information related to training programs run by corporate and nonprofit entities and their effect on medical education.
Citation: CME Rep. 3, I-20; Modified: CME Rep. 01, I-22;

Residency Interview Schedules H-310.998
1. Our AMA encourages residency and fellowship programs to incorporate in their interview dates increased flexibility, whenever possible, to accommodate applicants' schedules. Our AMA encourages the ACGME and other accrediting bodies to require programs to provide, by electronic or other means, representative contracts to applicants prior to the interview. Our AMA encourages residency and fellowship programs to inform applicants in a timely manner confirming receipt of application and ongoing changes in the status of consideration of the application.
