# Sharpe® Series M80/M89 & M70/M74

High Performance Ball Valve Datasheet

# High Performance Ball Valve Sharpe® Series M80/89 & M70/M74

## Body Materials:

316 Stainless Steel, Carbon Steel, Alloy 20

## Overview:

Valves designed for high temperatures and severe service applications

The exceptional capabilities of metal sealing together with the advanced features of the new line of Sharpe API 608 valves, results in a superior valve that functions under the most demanding applications where soft seats are not an option.

## Design

### Mate-lapped ball and seat set

The design is based on a ball and two metal seats which are precision machined, and then mate-lapped together to provide an extremely tight fit.

Behind the seats are a spring or seal whose function is to enable sealing by applying a load to the sealing surfaces.

### Protected seat seal and springs

The seat design protects the seat seals and the springs from the media, which reduces problems associated with solidification of material in the valve.

The metal seated valves come in two configurations depending on the application.

### Bi-directional

Provides shut-off in both directions.

The valves have a symmetric build where both the upstream and downstream seats have a seat seal.

The seat seal material is polymeric or O-rings for low temperatures, and graphite or metal for high temperatures.

### Uni-directional

Provides shut-off in one direction.

The valve is built with an upstream spring and downstream seat seal.

The spring is assembled behind the upstream seat and is protected from the media. The spring material is specified according to the application media and temperature. All uni-directional valves carry a flow direction arrow.

Sharpe metal seated valves are designed for applications requiring resistance to erosion, abrasion, corrosion, and high temperatures beyond the capabilities of the currently available polymeric seat materials. Typical applications include Pulp and Paper, Petrochemical, Petroleum, Chemical, and Power industries to name a few.

# High Performance Ball Valve

## Sharpe® Series M80/89 & M70/M74

### Features

#### Important construction components

##### Tongue and Groove Design

Fully encapsulated body seals, allowing ends to be welded in-line, without time consuming and labor intensive disassembly.

Design compensates for bolt expansion and reduces the chance of external leakage.

Helps prevent seal ruptures in high pressure, cryogenic or steam applications.

##### Heavy Duty Stem Design

Stem diameters have been increased to meet the higher torque requirements of the most demanding applications.

Stem to ball contact area is wider and larger, allowing the valve to be used for higher torque applications.

Design allows for the use of 316 stainless steel stem material, rather than 17-4PH, for superior corrosion resistance.

##### ISO 5211 Top-Works Compatibility

The top-works offer compatibility for mounting a wider range of accessories.

Sharpe® actuators and accessories may be retrofitted on existing valves without disruption of line integrity.

##### Lockable Stem Extension

An option to move the valve top interface away from the pipe line to accommodate insulation.

##### Tamper Proof Locking Device

All Sharpe® Valves come standard with a lockable handle. The optional, Sharpe® exclusive, tamper proof locking device cannot be removed with a lock in place. When not being used with a lock its springs ensure the locking device snaps into place in the open or closed position to prevent accidental operation.

# High Performance Ball Valve

## Sharpe® Series M80/89 & M70/M74

## Features

Process compatibility of stem assemblies provide operational flexibility

### Stem assemblies

Various stem assemblies are available based on application requirements.

**Standard** – a multiple pack of chevron "V" shaped stem seals for better sealing in TFM™ or Nova materials.

**High Temperature** – double pack of flexible graphite seals for sealing under high temperature conditions.

**Fugitive Emission** – Two-pack stem seals in PTFE or graphite, with lantern ring to allow leak detection through the emission port(s).

**High Cycle** – unique design for demanding high cycle applications that consist of multi-system sealing devices in the stem bonnet.

### Stem sealing

#### Increased Stem Sealing Area

Allows for a range of sealing combinations for severe applications and other stringent design demands.

#### Live-loaded stem

Two pairs of concave and opposing spring washers provide additional compensation for seal wear.

#### Safe Design

Blowout proof stem ensures the stem cannot be blown out by accidental medium pressure rise.

#### Wear Resistance

The thrust washer is either metallic for higher temperatures and wear resistance, or PEEK for lower temperatures.

#### Anti-Static

Static build-up discharges by anti-static device in stem or the metallic thrust washer.

### Stem Trim for Sizes Greater than 3"

According to API 608 all valve sizes greater than 3" have an adjustable packing gland with thru bolt holes. Gland bolts pass through the holes and thread to the valve body. The position stops are bolted to the body and are not integral to the packing gland, gland flange or gland bolting.

# High Performance Ball Valve

# High Performance Ball Valve

## Sharpe® Series M80/M89 & M70/M74

### Note:

The maximum pressure/temperature ratings of the valve assemblies are limited to lowest of the body or seat material fitted.  
 The valve body ratings are based on ASME B16.34 rating for materials.  
 The graphs are based on laboratory testing and our experience in the field.  
 The seat ratings depend on the material, design, application, and function.

### Standard Port (84)

**Class 600** ½" – 2½"  
**Class 300** 3" – 4"

### Full Port (99)

**Class 600** ¼" – 2"  
**Class 300** 2½" – 3"

## Coating Options

The standard combination is a hard chrome plated (HCP) stainless steel ball and stainless steel seats with Stellite™ 6 hard facing. Other optional coatings are available, please refer to Sharpe® for more information.

## Shut Off Class

All the valves are tested to ANSI/FCI 70-2.  
 The seat standard leakage rates are Class V.

## Size Range

Three-piece	
Standard Port ( <b>M80</b> )	Class 800 ½" – 2½"

### About ASC Engineered Solutions

ASC Engineered Solutions is defined by quality—in its products, services and support. With more than 1,400 employees, the company's portfolio of precision-engineered piping support, valves and connections provides products to more than 4,000 customers across industries, such as mechanical, industrial, fire protection, oil and gas, and commercial and residential construction. Its portfolio of leading brands includes ABZ Valve®, AFCON®, Anvil®, Anvil EPS, Anvil Services, Basic-PSA, Beck®, Catawissa, Cooplet®, FlexHead®, FPPI®, Gruvlok®, J.B. Smith, Merit®, North Alabama Pipe, Quadrant®, SCI®, Sharpe®, SlideLOK®, SPF® and SprinkFLEX®. With headquarters in Commerce, CA, and Exeter, NH, ASC also has ISO 9001:2015 certified production facilities in PA, TN, IL, TX, AL, LA, KS, and RI.
