

PNY's PREVAIL Professional SSDs are designed to provide professionals with an eMLC NAND Flash memory drive, designed for use in workstations, servers, storage and NAS solutions.

Workstations can benefit greatly from an SSD, and the PNY Prevail Elite is an example of a drive that can drastically increase productivity and creativity. Professionals such as designers and engineers require both reliability and excellent performance when using the most demanding applications. When compared with HDDs, PNY Prevail SSDs will significantly increase a workstation's random read/write speeds, allowing users to optimize their workflows.

The PNY Prevail and Prevail Elite ranges are the perfect solution for CAD/CAM, 3D, Video Editing and Imaging workstations.

The PNY Prevail Elite's high I/O (up to 85,000 IOPS) and transfer rates and excellent power consumption compare very favorably with equivalent server drives (0.1 W + 5 W compared to 0.65 + 6 W or up to 3 W + 8 W). Key to the drive's positioning as a potential server model is its pricing, offering a viable solution to the server market. PNY also ensures that a structured support process for its professional customers, and guarantees long-term availability for the drive, should clients need to add or replace drives. Its endurance rating and warranty also make sure that the drive is a secure investment (the drive will withstand up to 1.5 PB of data transfer).
