

SAMSUNG BUSINESS

MagicInfo software licenses are labeled as “server licenses”. Each license allows a single commercial LFD to connect to a MagicInfo server, either for digital signage or videowall. One license is needed per LFD in a system.

Digital Signage Example: Customer wishes to create a network of 5 LFDs. They would install MagicInfo Server 7, and then they would need to purchase 5 of the MagicInfo Premium Unified Server License SKU (BW-MIP40PA). This license can be activated for either S Player or I Player. The customer will need to fill out a contact form, so a license can be sent. The customer will receive 1 license key from Samsung that will activate 5 connections on the server.

Videowall Example: If a customer is creating a 3x3 videowall (total of 9 LFDs), they would install MagicInfo Server 7, and then they would need to purchase 9 of the MagicInfo Premium Unified Server License SKU (BW-MIP40PA). The customer will need to fill out a contact form, so a license can be sent. The customer will receive 1 license key from Samsung that will activate 9 connections on the Server. The customer will also need a minimum of 1 license of the Videowall S or I Author (BW-MIV20AW or BW-MIV20AS).

MagicInfo Lite is a free basic version of MagicInfo, running on MagicInfo Server 7. **25 LFDs are included** permanently, at no cost. **Additional LFDs can be added by adding a license (CY-MILSSTS), 1 per LFD.**

Installing MagicInfo Server 7 provides a **5 display 60-day free trial** of MagicInfo Premium. This can be activated from the license management on the server directly.

Player S uses the onboard SoC (System on a Chip) media player; no additional hardware is required. Player I works with a user supplied PC.

Videowall Author licenses are sold as 1 license per installation on a customer's PC.

Part Number	MagicInfo Version	License Type
CY-MILSSTS	MagicInfo Lite – Server License	1 per LFD
BW-MIP40PA	MagicInfo Premium 6 – Unified Server License	1 per LFD
