TriClean Pro—Healthcare

The TriClean Pro uses patented technology of radio-frequency electric power to create atmospheric plasma from ordinary air. There is no need for vacuum conditions or expensive special gases. The atmospheric plasma produces highly oxidative transient gaseous chemical species that readily kill microorganisms and destruct odors caused by volatile organic compounds.

► Product Features

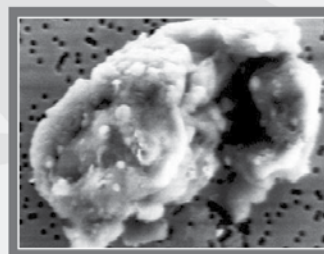

- Portable and free standing unit—automated, continuous operation
- User friendly—easy to read menu screen and multi-colored LCD indicators
- Vertical styling—for minimum floor space
- Low annual operating costs—minimal filter replacement
- Multi speed fan
- Minimal power Consumption

Normal *Aspergillus niger* spore

Cat. No. TCP200
(Price on request)

Neutralized plasma treated *A. niger* spore

► How the TriClean Pro Works

The device operates in two basic phases: capture and destruction. In the capture phase, ambient air that contains microorganisms and odor causing VOC's is pulled into the unit. Large particulate matter is re-moved by a pre-filter, while smaller particles and microorganisms are removed by the particulate filter. VOC's are trapped on a carbon mono-lithic filter. During the destruct phase, the fan operates at a lower speed, and the plasma grid is energized.

► Performance Data
