# Introduction

The Chicago Metropolitan Agency for Planning (CMAP) is the official regional planning agency for the Chicago area. CMAP's most comprehensive plan ON TO 2050 provides guidance for transportation investment, local land use decision-making, environmental protection, economic development and other key regional issues. Through the CMAP [MPO Policy Committee](#), the agency carries out the federally required transportation planning process. As the metropolitan planning organization (MPO), CMAP must develop both a long-range metropolitan transportation plan and a short-range Transportation Improvement Program (TIP). [ON TO 2050](#) serves as the long-range metropolitan transportation plan for northeastern Illinois. The TIP is one of the implementation vehicles for ON TO 2050, and has a role to play in accomplishing the principles and recommendations of the plan.

This report documents the transportation funds available, programmed, and obligated within the CMAP region for Federal Fiscal Year (FFY) 2019, as required by [Title 23 U.S.C. §450.334](#). It also describes how the programmed and obligated project phases affect the achievement of performance targets established under [Title 23 U.S.C. §450.306\(d\)](#) and identified in ON TO 2050. Recent funding and programming actions, such as *Rebuild Illinois*, increases to state Motor Fuel Tax, and the STP-Shared Fund program were not in effect within FFY 2019 and are not included in this report.

## Transportation Programming

The programming process in northeastern Illinois is complex and is carried out by a number of partner agencies through the TIP. The TIP is northeastern Illinois's six-year agenda of surface transportation projects. Based on federal fiscal years (FFYs) that start on October 1, the TIP includes projects expected to receive federal funding in each FFY. The TIP also includes regionally significant projects funded by non-federal sources. Non-federally funded projects that are not regionally significant are not required to be included in the TIP. Many local municipal, township, county, state, and Tollway projects fall into this category.

The CMAP TIP is regularly amended by updating the details of the approved project list to reflect changes in project scope, schedule, and funding status. Amendments may be administrative in nature or may be formal amendments requiring a variety of agency and public review and approval by the MPO Policy Committee, or their designee. Amendments to CMAP's TIP must be approved by the State of Illinois for incorporation into the Statewide Transportation Improvement Program (STIP). The TIP and STIP changes must be approved by the Federal Highway Administration (FHWA) and Federal Transportation Administration (FTA), certifying that all federal transportation planning requirements were met. TIP amendments are completed and documented in the eTIP database.

The eTIP database is workflow based with each program of projects referred to as a "TIP Document" or "TIP Action." The TIP Document (or TIP) is the approved program of projects,

as amended throughout the federal fiscal year (FFY). A new TIP program is started each FFY (starting October 1), and is made up of the projects and line items that have funding in the starting FFY, plus the next four years. **Within this report, the status of programmed funds and projects' potential to influence performance targets is based on the TIP document [19-00](#), at the beginning of FFY 2019. Programming changes made throughout the year, such as the inclusion of projects awarded from competitive programs, are not accounted for when discussing "programmed" projects or funds.**

Within the TIP there are more than thirty individual project types, which are grouped into nine major categories throughout this report: Active Transportation, Bridge, Emissions Reduction, Freight, Highway, Safety, System Management/ITS, Transit, and Other. Project sponsors select the project type that reflects the main purpose and work to be done by a project. Most projects consist of work that goes beyond the project type. For example, Road Expansion projects often include maintenance and active transportation work types, in addition to the expansion. [Appendix D](#) provides a full list of project types within the major categories used in this report.

## Obligation of Funds

The terms "obligation", "authorization", "award", and "expenditure" are often used interchangeably when discussing investments in the implementation of transportation projects. However, there are subtle differences, most often based on the type of funding utilized for a project. Generally speaking, obligations occur before work starts on a project phase, based on programmed estimates of the cost of the phase. When actual costs exceed the estimates programmed, additional obligations may occur while work is ongoing, or when work is completed. When actual costs are lower than expected, previously obligated funds may be deobligated. **Within this report, "obligations" include both initial obligations and increases to those obligations. Deobligations are documented separately.**

For project phases utilizing federal funds from the FHWA, an obligation occurs when FHWA signs an authorization, which is a commitment to participate financially in a project. The obligation means that federal funds are assigned to the project and are available for reimbursement to the implementing agency. The Illinois Department of Transportation (IDOT) is responsible for submitting obligation requests to FHWA. The obligation process used by IDOT makes extensive use of advance construction (AC), a financial tool to advance project phases using non-federal funds (typically IDOT funds) while retaining eligibility for future federal funding. Advance construction is not a federal obligation at the time that a project phase enters into AC. IDOT will request an advance construction conversion (ACC) when needed, triggering a federal obligation. **Within this report, AC authorizations are documented separately from obligations. Matching and non-matching funds associated with federally-funded project phases are considered to be obligated at the time of the federal obligation.**

For projects utilizing federal funds from the FTA, an obligation occurs when the FTA approves a grant agreement between a project sponsor and the FTA. Matching and non-matching funds

associated with federally-funded project phases are considered to be obligated at the time of the federal obligation.

An award occurs when a construction bid is opened, a construction contractor or engineering consultant has been selected, and a contract has been executed. **For state or locally funded projects, “award” is synonymous with “obligation” in this report.**

## Performance Targets

As part of the Moving Ahead for Progress in the 21<sup>st</sup> Century (MAP-21) federal transportation bill and all subsequent transportation bills, a set of federal performance targets were required of states, MPOs, and transit agencies. These performance measures aim to use objective data to align federal transportation spending with federal goals around safety, infrastructure condition, congestion reduction, system reliability, freight movement and economic vitality, environmental sustainability, and reduced project delivery delays. CMAP, as an MPO, gathered information around these targets into the ON TO 2050 2018 System Performance Report<sup>1</sup> that was adopted with the ON TO 2050 plan. Since then, select targets have been updated as required. For example, the highway safety target must be updated annually, rather than on a four-year cycle used by most measures.

In order to better align spending with federal and regional priorities, CMAP added a performance measure indicator to the eTIP database. Project sponsors are asked to self-report which performance measures their project may impact. Since many projects in the TIP span multiple years from inception to completion, the actual impact of programming changes may take years to impact performance measures. In addition, the needs of many parts of the system are so large, that even a substantial increase in funding would need to be sustained for many years in order to measurably impact performance measures. This report represents CMAP’s first attempt to connect spending to federal performance measures. As the effort to collect this data has only begun, the ability to observe trends is limited, but should improve in future years.

## ON TO 2050 Regionally Significant Projects

[Regionally Significant Projects](#) (RSPs) are capital investments in the region’s expressways, transit system, and arterials with impacts and benefits that are large enough to warrant additional discussion through the regional planning process. These include large reconstruction projects and additions to the system. Careful selection of these projects must meet the federal standard of fiscal constraint, while also helping to achieve regional goals. These constrained projects can help the region meet today’s needs, adapt to changing mobility patterns for goods and people, and support economic success overall. Investment in RSPs must balance many

---

<sup>1</sup> CMAP 2018 System Performance Report

<https://www.cmap.illinois.gov/documents/10180/862153/FINAL+2018+System+Performance+Report+Appendix.pdf>

priorities, including carefully allocating the region’s limited transportation revenues. ON TO 2050 therefore includes a relatively small number of constrained RSPs as priorities and recommends further study of others that are classified as “unconstrained.” The plan focuses particularly on projects that reconstruct or enhance the existing network, with few expansion projects. This is due in part to the plan’s priorities and to fiscal constraint.

Regardless of the implementation schedule for RSPs, these projects are included in the approved TIP project list and all associated conformity determinations. (Conformity is the federally required process of an MPO ensuring that transportation investments do not worsen air quality violations or delay the region’s achievement of air quality standards.) For the purposes of constraining RSPs in ON TO 2050, the cost of fixing existing infrastructure is accounted for separately in the financial plan forecast, and only the cost associated with new capacity requires identifying additional available resources to meet fiscal constraint. In the TIP, all project costs are accounted for, including components that are considered maintenance or system preservation in ON TO 2050. Throughout this report, RSPs may be broken out of tables and figures for separate reporting.

## Projects programmed directly by CMAP

The Fixing America’s Surface Transportation (FAST) Act apportions certain federal funds to urbanized areas and non-attainment areas and delegates project selection authority to the MPO. With FFY 2019, this authority includes the [Congestion Mitigation and Air Quality \(CMAQ\) Improvement Program](#) which provides funding for projects and programs to help meet the requirements of the Clean Air Act (CAA) by reducing congestion and improving air quality and the [Transportation Alternatives Program \(TAP\)](#) which is funded with a set-aside of Surface Transportation Block Grant (STBG) funding for smaller-scale projects such as pedestrian and bicycle facilities. The portion of the set-aside that is programmed by the MPO is referred to locally as TAP–Local or TAP-L. Tables and figures highlighting projects utilizing these fund sources are found throughout this report.

## Projects intersecting economically disconnected and disinvested areas

A recommendation of ON TO 2050 is to [leverage the transportation network to promote inclusive growth](#). Throughout this report, investments programmed or obligated for projects that intersect with an [economically disconnected or disinvested area](#) (EDA) are discussed. The analysis for these discussions was completed using mapped project locations from CMAP’s eTIP database. Therefore investments made on projects that are not included in the TIP, projects for which CMAP does not have location information, projects classified as “regionwide,” or projects that are not location-based are not included in the analysis.

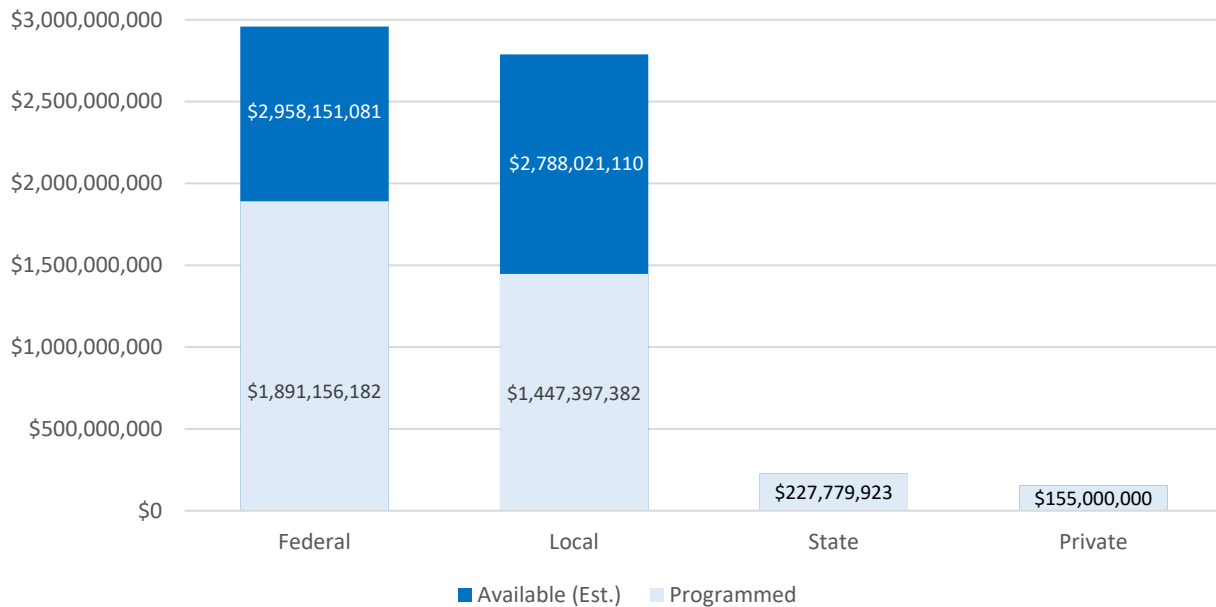

# Federal Fiscal Year 2019 Programming

CMAP estimates that approximately \$6.2 billion was available to the region for transportation capital projects in FFY 2019, including unobligated funds carried over from prior federal fiscal years. At the beginning of FFY 2019, over \$3.7 billion was programmed in the TIP in FFY 2019 for 591 unique projects. This includes federal funds from the Federal Highway Administration (FHWA) and Federal Transit Administration (FTA), state, local, and private funds to match the federal funds, and non-matching state, local, and private funds. Figure 1 illustrates the estimated available revenues and the funds programmed in the TIP at the beginning of the federal fiscal year.

Not included in the TIP are state, local, and other transportation funds that are utilized for projects that are not regionally significant and are therefore not required to be included in the TIP, such as just over \$1.4 billion in local Motor Fuel Tax (MFT) distributions, \$599 million of which were new deposits within FFY 2019, and a balance of over \$843 million from prior years' distributions.

**Figure 1. FFY 2019 Estimated Funding Available and Programmed**

Source: [FFY 2019 State Regional Resources](#) table, [IDOT MFT Monthly booklets](#) (October 2018 – September 2019), provided to CMAP in a summary spreadsheet, CMAP TIP.

These funds were programmed for all phases of project implementation, as shown in Table 1, from preliminary engineering through construction, for a variety of project types.

**Table 1. Projects programmed in FFY 2019, by type and phase (\$ millions)**

Overall Project Type <sup>2</sup>	#	ENG1 <sup>3</sup>	ENG2 <sup>4</sup>	ROW <sup>5</sup>	CON/CE <sup>6</sup>	ENG <sup>7</sup>	IMP <sup>8</sup>	Total
Active Transportation	93	\$5.6	\$4.2	\$4.0	\$112.8	\$0.0	\$0.0	\$126.6
Bridge	117	\$8.0	\$15.8	\$5.1	\$249.3	\$0.0	\$0.0	\$278.3
Emissions Reduction	4	\$0.00	\$0.00	\$0.00	\$0.00	\$0.00	\$39.6	\$39.6
Freight	6	\$4.3	\$0.0	\$0.0	\$93.7	\$1.1	\$63.5	\$162.5
Highway	258	\$16.6	\$174.3	\$176.7	\$1,832.4	\$0.0	\$0.0	\$2,200.0
Other	11	\$0.2	\$0.0	\$0.0	\$3.7	\$0.0	\$2.4	\$6.3
Safety	9	\$0.2	\$0.2	\$0.0	\$8.3	\$0.0	\$0.0	\$8.7
System Management/ITS	15	\$1.3	\$0.0	\$0.1	\$39.5	\$0.0	\$0.5	\$41.4

<b>Grand Total</b>	<b>591</b>	<b>\$36.2</b>	<b>\$194.6</b>	<b>\$185.9</b>	<b>\$2,360.2</b>	<b>\$2.6</b>	<b>\$943.8</b>	<b>\$3,723.4</b>

Source: CMAP TIP

ON TO 2050 contains more than 40 Regionally Significant Projects (RSPs), however only 15 of those projects have funds programmed within FFY 2019. The distribution of funding programmed for the RSPs is shown in Table 2. Due to the size and complexity of RSPs, the time it takes to complete these projects and realize their benefits is substantial.

**Table 2. ON TO 2050 Regionally Significant Projects share of programming by phase for each overall project type (\$ millions)**

Project Type	#	ENG1	ENG2	ROW	CON/CE	ENG	IMP	Total
Guideway Improvements	2	\$0.0	\$0.0	\$0.0	\$11.1	\$0.0	\$161.7	\$172.9
Intersection/Interchange Improvements	2	\$0.0	\$24.5	\$0.0	\$0.0	\$0.0	\$0.0	\$24.5
Road Expansion	8	\$2.0	\$121.4	\$146.2	\$646.8	\$0.0	\$0.0	\$916.5
Transit Line/Route Expansion	2	\$0.0	\$0.0	\$0.0	\$0.0	\$0.0	\$74.4	\$74.4
Transit Station/Stop Improvements	1	\$0.0	\$0.0	\$0.0	\$0.0	\$1.5	\$0.0	\$1.5
<b>Grand Total</b>	<b>15</b>	<b>\$2.0</b>	<b>\$145.9</b>	<b>\$146.2</b>	<b>\$657.9</b>	<b>\$1.5</b>	<b>\$236.2</b>	<b>\$1,189.7</b>

Will	\$253,154,859	\$14,581,613	6%
<b>Grand Total</b>	<b>\$3,723,383,487</b>	<b>\$1,433,177,106</b>	<b>38%</b>

Source: CMAP TIP, CMAP staff GIS analysis of project locations

When projects are selected for programming, their potential benefits should be considered. Although selection processes vary, typically by fund source or programming agency, the potential for programmed projects to influence performance targets is reported by project sponsors in the TIP. Not every project included in the TIP will directly influence the achievement of the federal performance targets, and many projects will influence more than one target. Figure 2. Funds programmed in FFY 2019 for projects which may influence federal performance targets (\$ millions) illustrates the funds programmed in the TIP in FFY 2019, by performance target. Because funding is programmed by project phase, and is not broken down by the scope of work, the sum of programmed funds in Figure 2. Funds programmed in FFY 2019 for projects which may influence federal performance targets (\$ millions) exceeds the actual total funds programmed in the TIP. Additionally, local projects not included in the TIP may also influence one or more targets.

**Figure 2. Funds programmed in FFY 2019 for projects which may influence federal performance targets (\$ millions)**

Source: CMAP TIP

When considering how the programmed funds may influence performance targets, the phase of funding must be taken into account. Implementation of transportation projects can take many years, so the benefits of projects currently in engineering or land acquisition phases will not be

realized right away. Program years reflect the start of each phase of a project, when funds are obligated, so even projects that have construction or implementation programmed in the current year may take several years to be completed and have an impact on the region's performance targets. Of all of the project phases programmed in the TIP in FFY 2019, only a fraction are targeting completion this year.

## **Federal Fiscal Year 2019 Accomplishments**

While the previous section of this report examined what the region planned to do in FFY 2019, this section discusses what was actually accomplished. As priorities, resources, and other factors shift throughout the year, so does the funding programmed for transportation projects. In fact, CMAP routinely processes eight to ten TIP amendments per year during which funding amounts, implementation schedules, and even project scope, are updated. Therefore, the amount of funding and projects discussed in the previous section of this report is not expected to exactly match the actual accomplishments for the year. Additionally, a significant portion of the funding that was obligated was not included in what was programmed in the TIP. In fact, funds were programmed in FFY 2019 on 591 unique projects, of which only 356 had funds obligated or placed in advance construction in FFY 2019. Another 1277 unique projects, 549 in the TIP and 728 that were not in the TIP, had some amount of funds obligated in FFY 2019. Of the 549 projects with obligations that were in the TIP, 40 were new projects added to the TIP via an amendment at some point throughout the year. The rest were either obligations due to the conversion of funds that were placed in advance construction in a prior year or were the result of schedule changes that accelerated funding from later years into FFY 2019.

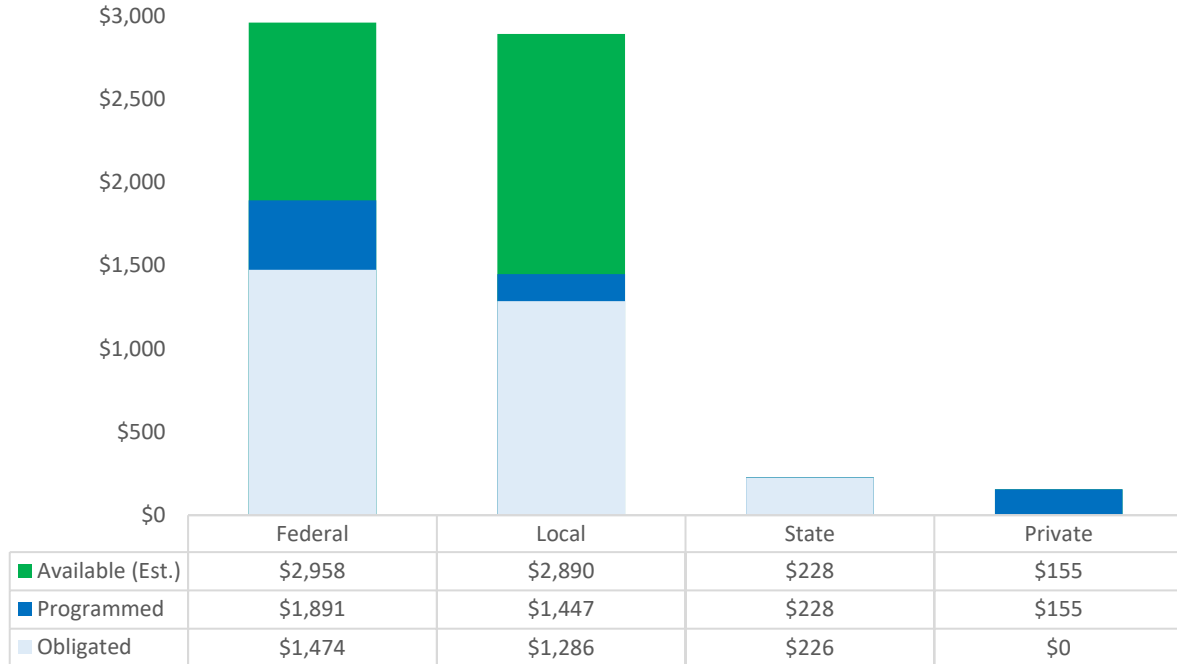

### **Obligated Funds**

The region actually obligated \$2.9 billion in FFY 2019 which is 78% of the funds programmed in the TIP at the beginning of the year, and 47% of the funds estimated to be available to the region, as illustrated in Figure 3. The programmed amounts utilized in this figure represent what was programmed in the CMAP TIP as of October 1, 2018 and do not include project phases that may have been planned for FFY 2019 that are not required to be included in the CMAP TIP or project phases that had funding added to or removed from FFY 2019 in the TIP.

**Figure 3. Comparison of available, programmed, and obligated funds**

Source: CMAP TIP, IDOT *For the Record*, IDOT MFT records, FTA TrAMS database, FHWA FMIS database, Illinois Tollway

Obligation data is obtained from several Federal, Local, and State sources, as described below.

Federal Highway Administration (FHWA)

FHWA obligations are obtained from the FHWA Financial Management Information System (FMIS) database. FMIS data is linked to TIP projects through the unique federal project number assigned to each phase of projects utilizing an FHWA fund source and uploaded to the eTIP database nightly. FHWA obligations can be positive or negative.

FHWA Advance Construction (AC)

Advance construction (AC), a financial tool used to advance project phases using non-federal funds while retaining eligibility for future federal funding. Advance construction is not a federal obligation at the time that a project phase enters into AC, therefore within this report, AC authorizations are documented separately from obligations. AC obligations are obtained from FMIS and uploaded to the eTIP database nightly. When needed for reimbursement, an advance construction conversion (ACC) occurs, triggering a federal obligation. ACC actions are included in the FHWA obligations category.

FHWA Deobligations

Negative obligations, known as deobligations, typically occur when a project phase is completed, and a final voucher for work performed is submitted to FHWA for reimbursement. Any obligated funds not used for the project phase are deobligated and become available for

use on other project phases. Deobligated funds are not automatically allocated to the state or urban area from which they were deobligated. Within this report, deobligated funds are not included in the total obligations for the year.

#### Federal Transit Administration (FTA)

FTA obligations are obtained from the FTA Transit Award Management System (TrAMS). The federal funds included in FTA grants awarded within FFY2019 are considered to be obligated in FFY2019.

#### Transportation Development Credits (TDCs)

TDCs, commonly referred to as “toll credits,” are a federal-aid matching strategy that allow the substitution of certain previously toll-financed investments for matching funds on current federal-aid projects<sup>9</sup>. TDCs are sometimes referred to as a “soft match,” in that the match is a credit, instead of actual dollars. The use of TDCs allows federal funds to cover 100 percent of the project cost, instead of combining federal funds with local matching funds. TDCs are included in the obligations for the federal fund source used and are also reported separately. In FFY 2019 TDCs were used exclusively for transit projects within the CMAP region.

#### Transit Match

Transit matching funds are those funds utilized to meet federal requirements for providing local match of federal funds. Typically, the non-federal share is 20% of the phase cost, but may be higher or lower based on the federal fund source being utilized. Transit operators make significant use of TDCs to meet matching requirements, however if TDCs are not used as match, the matching funds identified in the TrAMS database are reported as Transit Match and are considered to be local funds.

#### State Match

IDOT annually publishes [For the Record](#) documenting the awards and obligations made each year. The published report is a summary of awards, and does not identify fund sources utilized for awards, however IDOT provides the underlying data to CMAP for use in compiling this report. Data utilized in this report is from the State Fiscal Year (SFY) 2019 *For the Record* report. However, because the SFY differs from the FFY, CMAP omitted obligations that occurred in July, August, and September of 2018 and requested unpublished data from IDOT for the months of July, August, and September, 2019 in order to report on FFY 2019 obligations. The *For the Record* data includes federal obligations, state and local matching and non-matching funds for projects that are let for construction or awarded through IDOT. State matching funds are those funds utilized to meet federal requirements for providing local match of federal funds. Typically, the non-federal share is 20% of the phase cost, but may be higher or lower based on the federal fund source being utilized.

---

<sup>9</sup> Source: FHWA Federal-aid Matching Strategies.

[https://www.fhwa.dot.gov/ipd/finance/tools\\_programs/federal\\_aid/matching\\_strategies/toll\\_credits.aspx](https://www.fhwa.dot.gov/ipd/finance/tools_programs/federal_aid/matching_strategies/toll_credits.aspx)

### State Non-Matching

In addition to matching federal funds, state funds are also utilized for stand-alone state projects, or to cover certain scope elements of federally-funded projects that are not eligible for the use of federal funds. State non-matching obligations are obtained from *For the Record*.

### Tollway

Obligations attributed to the Tollway are non-federal funds and are considered to be a “local” fund source. Obligation data was provided by the Tollway.

### Local Match

Local funds are also utilized to match federal funds on locally-maintained facilities, and in rare cases on state-maintained facilities. For stand-alone state projects, or to cover certain scope elements of federally-funded projects that are not eligible for the use of federal funds.

Typically, the non-federal share is 20% of the phase cost, but may be higher or lower based on the federal fund source being utilized or cost sharing agreements between the local agency and the state. Local matching obligations are obtained from *For the Record*.

### Local Motor Fuel Tax (MFT)

Local governments, including municipalities, counties, and township road districts receive a share of MFT collected by the state. Typically, these funds are utilized for maintenance, operations, and some local capital projects that are not required to be included in the CMAP TIP. IDOT is responsible for disbursing these funds and tracking their use and provides this data to CMAP. All debits to local MFT accounts that occurred within FFY 2019 are reported as obligations within this report.

### Local Non-Matching

Local funds may be utilized for stand-alone projects that are let for construction or awarded through IDOT, or to cover certain scope elements of federally-funded projects that are not eligible for the use of federal funds. Local non-matching obligations are obtained from *For the Record*. While some funds within this category may be MFT funds, these funds are reported in *For the Record*, rather than in the MFT data above.

Details of the obligated project phases are listed in [Appendix A](#) and are summarized by project type in Table 5 below.

**Table 5. FFY 2019 Obligations by overall project type and fund source (\$ millions)**

Overall Project Type	Obligations by source										Other transactions/sources		
	FHWA	FTA	State Match	State Non-Matching	Tollway	Local Match	Local (MFT)	Local (non-MFT)	Transit Match	Grand Total	FHWA (AC)	FHWA (Deobligations)	TDC

Nearly 75% of the \$1.2 billion that was programmed for phases of 15 RSPs in FFY 2019 (see Table 2) was obligated on 9 projects<sup>14</sup>, as shown in Table 7. An additional \$26.7 million was authorized in Advance Construction for three RSPs.

<sup>10</sup> MISC – Miscellaneous, such as “various” service contracts

<sup>11</sup> MNT – Maintenance, used only for local MFT funds, where there isn’t sufficient description to determine the phase

<sup>12</sup> OTH – Other phase, such as transit operations, bond repayment, and county engineer salaries

<sup>13</sup> For projects not included in the TIP, if the project title and description information provided was insufficient to determine an appropriate project type, a type of “Unknown” is indicated.

<sup>14</sup> RSPs with obligations:

Circle Interchange Reconstruction – RSP 33 (TIP ID 01-12-0019)

I-90 WB Improvements from IL 43 to I-190 – RSP 32 (TIP ID 03-18-0006)

Elgin-O’Hare East Extension & Add Lanes

Western O’Hare Bypass – RSP 20 (TIP ID 03-96-0021)

I-290 Eisenhower Expy from US 12/45/20 Mannheim Rd to Racine Ave – RSP 30 (TIP ID 04-00-0023)

IL 131 Green Bay Road from Russell Road to Sunset Avenue – RSP 13 (TIP ID 10-09-0024)

Southwest Service Improvements/75<sup>th</sup> St. CIP Elements – RSP 67 (TIP ID 01-07-0001)

Pulse Dempster Line – RSP 102A (TIP ID 17-18-0001)

CTA North Red/Purple Line Modernization – RSP 58A & 58B (TIP ID 16-10-9001)

I-294 Central Tri-State Reconstruction and Mobility Improvements – RSP 23 (TIP ID 13-16-0009)

CMAQ and TAP-L projects directly programmed by CMAP are subject to Active Program Management strategies to ensure these funds are obligated in a timely manner. In FFY 2019, 92% of these funds programmed by CMAP (see Table 3) were obligated for the overall project types and phases shown in Table 8 below. An additional \$38.9 million was authorized in AC, which combined with the obligations, accounts for 111% percent of the programmed funds.

**Table 8. CMAP programmed projects share of obligations by phase for each overall project type (\$ millions)**

As shown in Table 10, a significant portion of these obligations are from the Tollway, specifically the Tri-State Tollway (I-94/I-294/I-80) reconstruction project. Further analysis of the scope of these investments is needed in order to determine the potential benefits to the populations within these areas. Furthermore, the influence of non-mapped or region-wide projects is considerable. For example, a large part of the transit agencies' obligations tend to be on vehicles, which are in service in multiple locations. These projects may tend to benefit residents of EDAs but they cannot be considered investments geographically within EDAs.

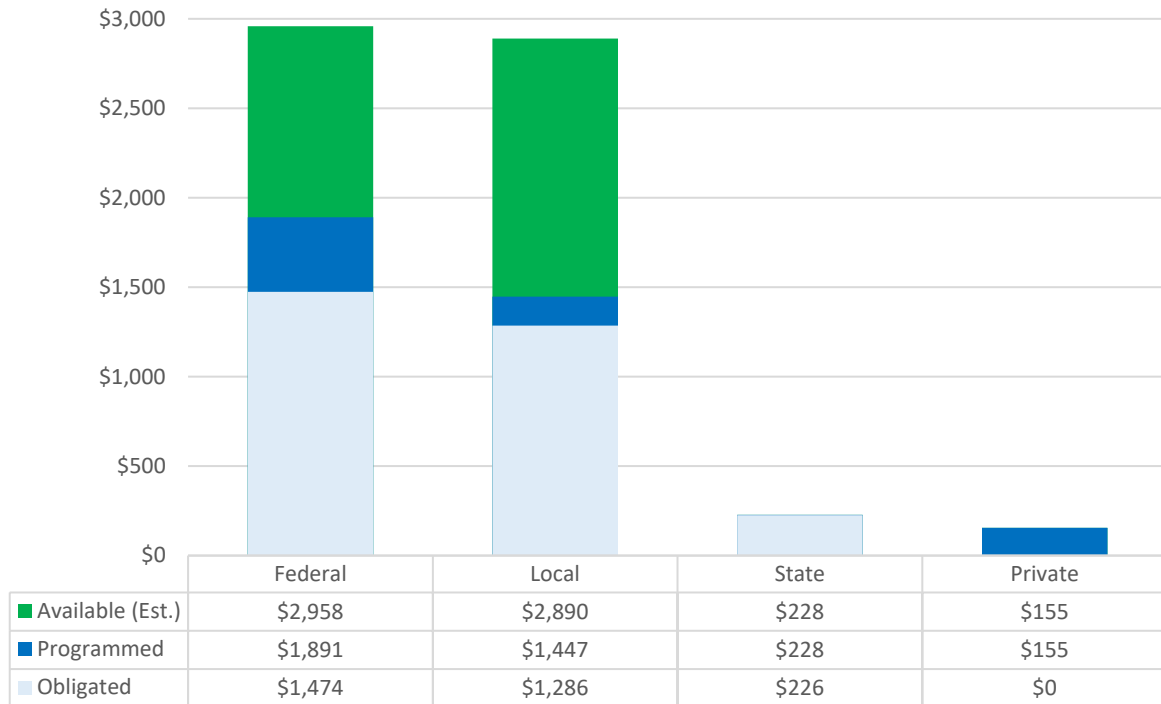

**Table 10. FFY 2019 obligations on projects intersecting economically disconnected and disinvested areas, by obligation type**

Obligation Type*	All FFY 2019 obligations**	FFY 2019 obligations on projects that intersect an EDA	Share of obligations on projects intersecting EDAs

The region accomplished many project phases within FFY 2019. However, the data presented in Figure 4 suggests that although there is vast need within the region, implementers were not able to fully program or obligate available funds. Understanding that this report represents a snapshot in time that does not necessarily align with implementers’ budget cycles or the construction season dictated by Chicago-region weather, the obligation rates are not necessarily concerning. Nevertheless, a closer examination of trends over a longer time period and specific project types, phases, and/or implementers should be completed in order to further ON TO 2050’s Prioritized Investment principle.

**Figure 4. Comparison of FFY 2019 available, programmed, and obligated funds**

Source: CMAP TIP, IDOT *For the Record*, IDOT MFT records, FTA TrAMS database, FHWA FMIS database, Illinois Tollway

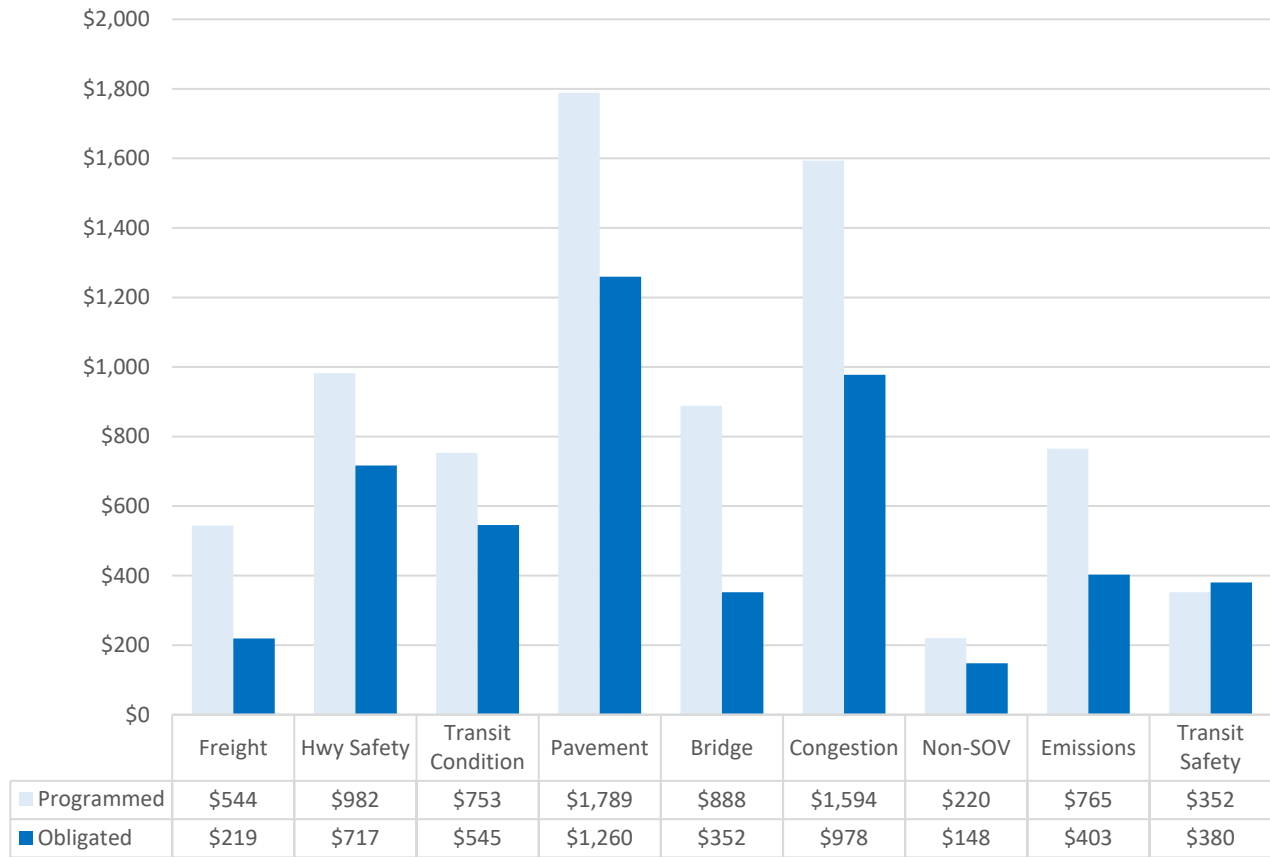

## Performance Targets

In addition to setting targets, CMAP is required to describe the anticipated effect of projects in the TIP toward achieving performance targets. Toward that end, CMAP has begun to collect data in eTIP on which performance measures each project will positively impact. Figure 5. Funds programmed in FFY 2019 for projects which may influence federal performance targets (\$ millions) shows data based on that information. Note that many projects impact multiple performance measures and are therefore counted for each measure. For example, a project reconstructing a roadway may reduce congestion, improve safety, and improve pavement condition. All dollars for that project would be fully included in the table below, as CMAP does not currently have a way to identify what portion of each project impacts each measure.

**Figure 5. Funds programmed in FFY 2019 for projects which may influence federal performance targets (\$ millions)**

Source: CMAP TIP

## Longer-term Trends

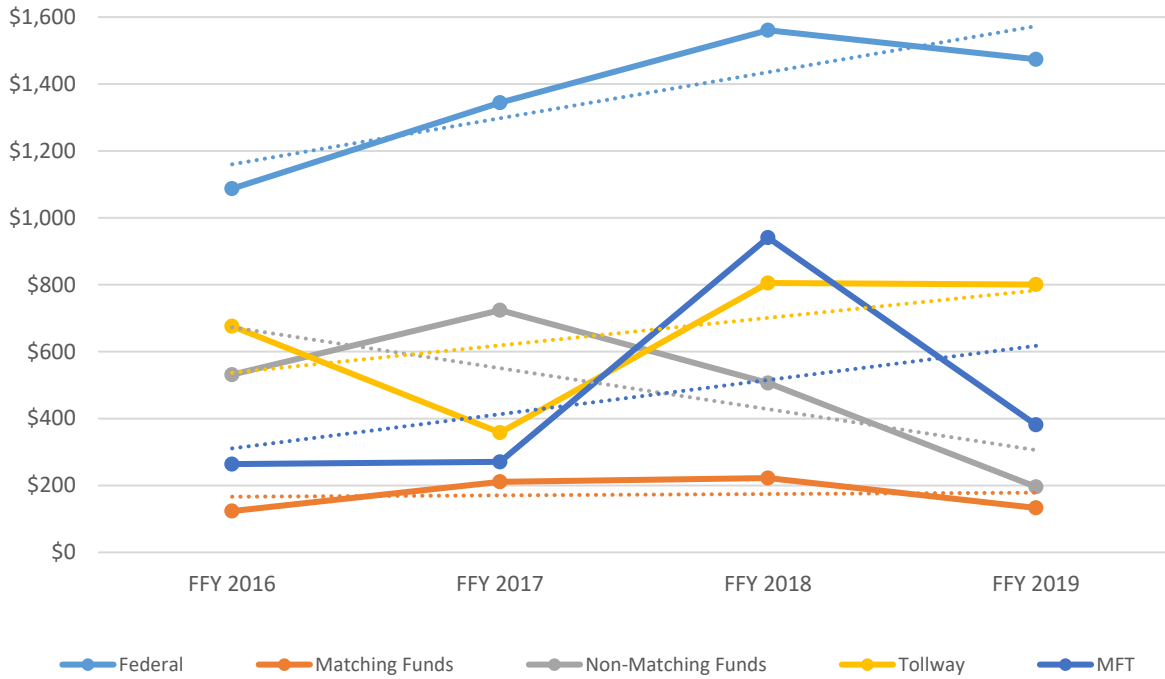

While this report is focused on a snapshot in time for FFY 2019, it is also important to consider the region’s trends over time, especially when faced with making programming decisions that will affect the region’s ability to meet performance targets.

## Total Obligations

Total obligations are trending upward since 2016, but as shown in Figure 6, not all fund types are increasing at the same pace. In fact, the use of non-matching funds (state, local, and service board funds) is actually trending downward. This may indicate that the region has had a growing reliance on federal funds, which may be reduced somewhat through the passage of Rebuild Illinois.

**Figure 6. Obligations by fund type: 2016 - 2019 (\$ millions)**

Source: CMAP TIP, IDOT *For the Record*, IDOT MFT records, FTA TrAMS database, FHWA FMIS database, Illinois Tollway

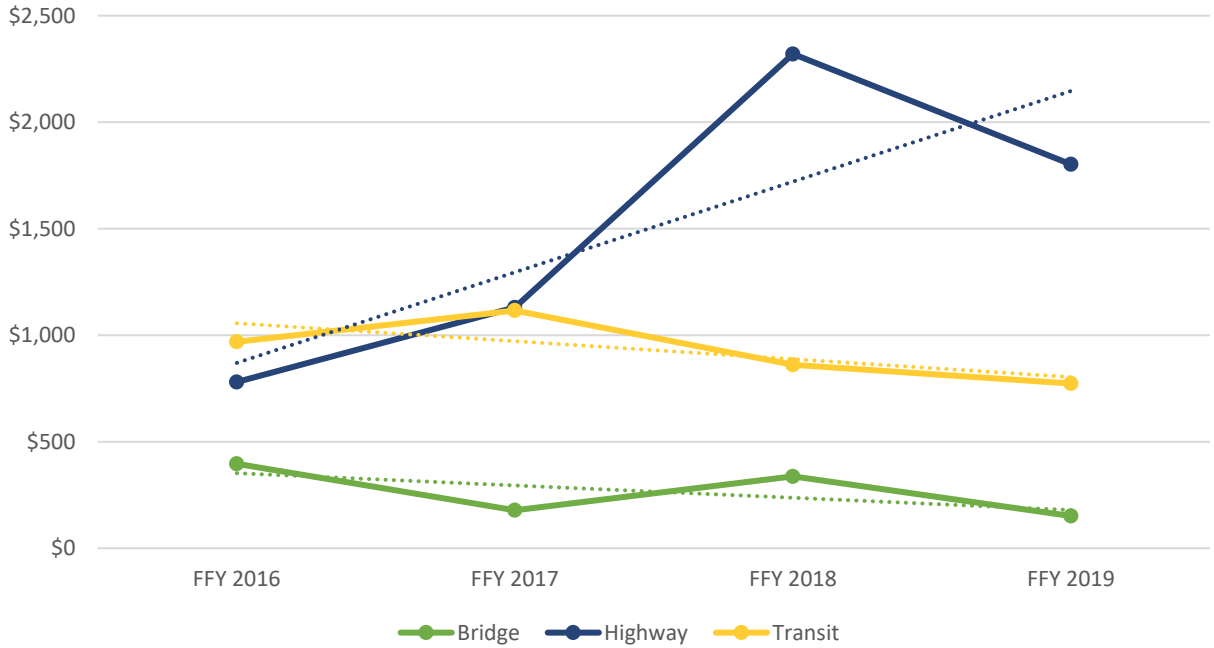

## Obligations by Project Category

Obligation trends by project category reflect both changes in priorities of programmers and project lifecycles. Figure 7. and Figure 8. show that while obligations are rising sharply for highway projects and modestly for freight, safety, and system management/ITS projects, obligations are trending downward for transit, bridge, active transportation, and emissions reduction projects.

Taken at face value, some aspects of these trends may seem alarming, however it is important to consider that the overall type assigned to a project typically does not capture the full scope of the project. For example, highway projects can also include large investments in bridges, active transportation, safety, and more. However, data is not available to break out costs for individual scope elements within projects. Significant commitment from the region’s programmers and implementers would be needed in order to obtain this data.

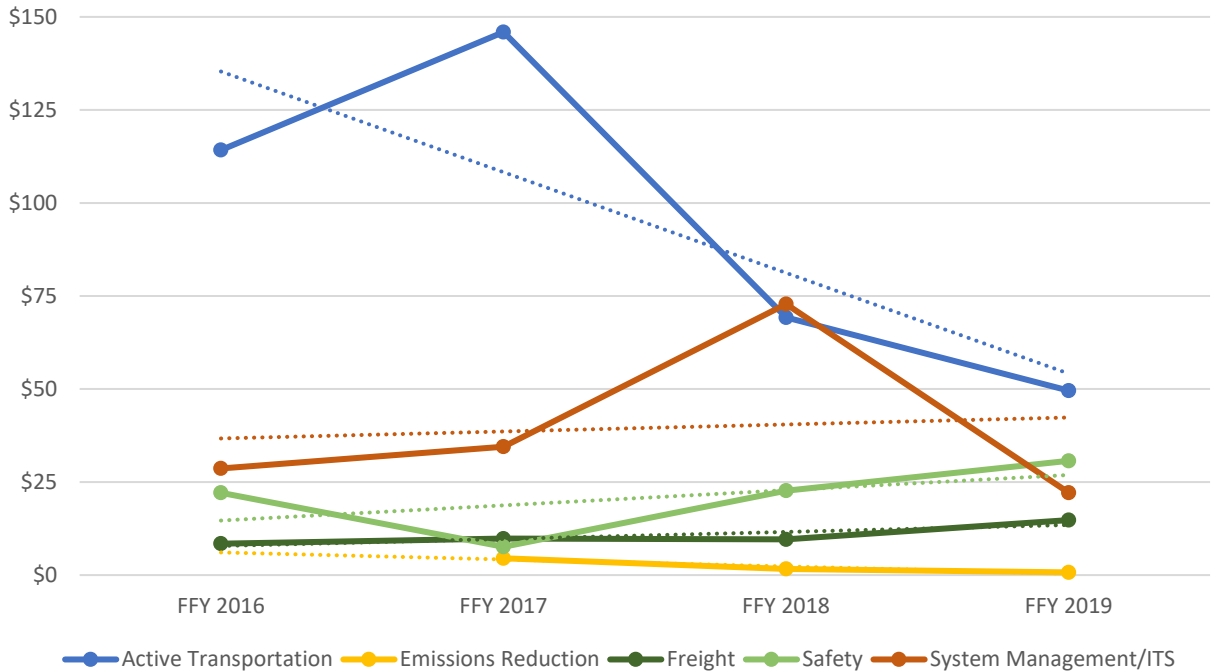

**Figure 7. Obligation trends by overall project type: 2016 - 2019 (\$ millions)**

Source: CMAP TIP, IDOT *For the Record*, IDOT MFT records, FTA TrAMS database, FHWA FMIS database, Illinois Tollway

**Figure 8. Obligation trends by overall project type: 2016 - 2019 (\$ millions)**

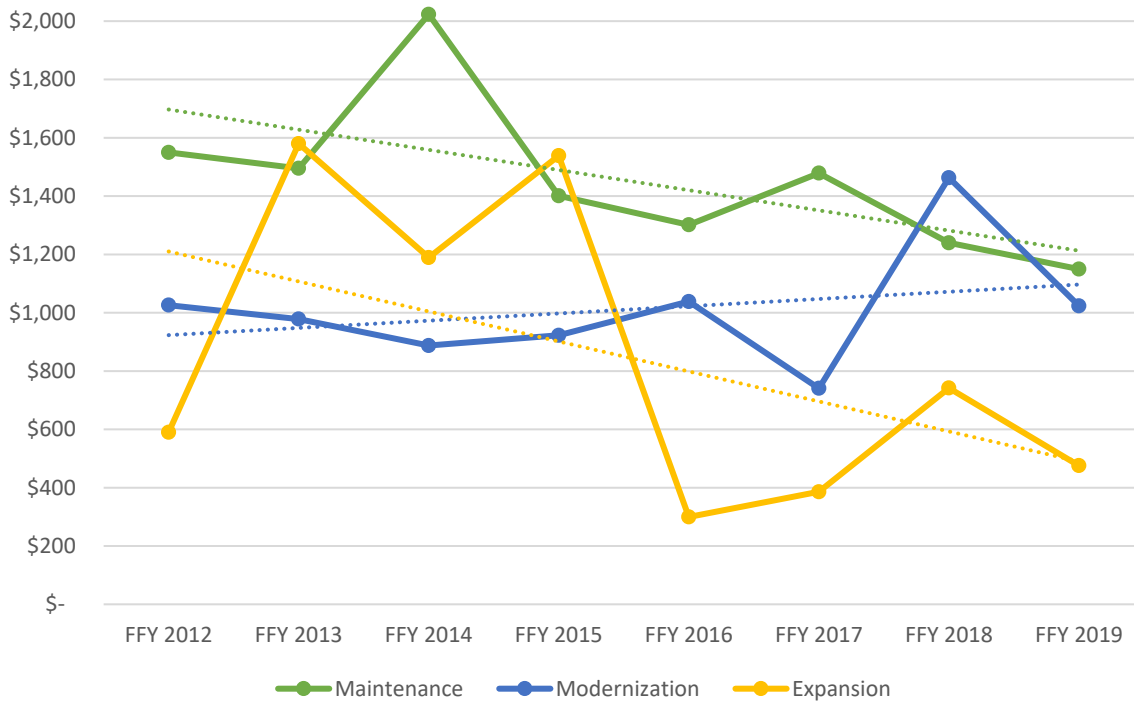

Source: CMAP TIP, IDOT *For the Record*, IDOT MFT records, FTA TrAMS database, FHWA FMIS database, Illinois Tollway

ON TO 2050 calls for the region to strategically invest resources by focusing on maintenance and modernization of the existing system. Since 2012 the funds obligated for modernization have been rising, while both maintenance and expansion have been declining, as shown in Figure 9. However, these figures are only rough estimates. A project that includes any expansion activities is considered to be an expansion project in this figure, and all funds obligated for the project are counted as expansion. Although we know that most expansion projects also include scope elements that are maintenance or modernization of the current system, the data sources available do not contain sufficient detail to break these costs out of the total project cost programmed or obligated. Significant commitment from the region’s programmers and implementers would be needed in order to obtain this data.

**Figure 9. Obligation trends by type of work: 2012 - 2019 (\$ millions)**

## Performance Targets

CMAP has looked at performance trends since 2015 on federally required performance measures. Table 11 and Table 12 show that there has been little progress on most measures in recent years. Progress toward targets is indicated by green bars in the last column, while movement away from targets is represented by red bars. Some measures have insufficient data to produce trends.

Declining condition trends indicate that recent spending has been insufficient or directed to areas that do not improve performance. As these performance measures are relatively new,

many projects that have recently been completed were planned and programmed before the federal program placed emphasis on these measures. A number of initiatives are underway to address specific measures that could reverse current trends with time. However, there is still significant work ahead to integrate these measures into planning and programming processes.

**Table 11. Current status of highway federal performance measures**

Category	Performance Measure	Measure					Targets				Trend	Progress

## Looking ahead: FFY 2020 - 2024

As the region’s implementers consider programming projects that will help the region to achieve performance targets and the goals of ON TO 2050, an examination of what is currently planned over the next five years is prudent. As was the case in FFY 2019, looking ahead at what is programmed in the TIP<sup>15</sup>, Figure 10. shows that all available revenues are not programmed, leaving opportunities to identify additional projects that can be added to the TIP to address performance targets.

**Figure 10. Comparison of FFY 2019 available, programmed, and obligated funds with available and programmed funds in FFY 2020 – 2024 (\$ millions)**

Source: CMAP TIP, IDOT *For the Record*, IDOT MFT records, FTA TrAMS database, FHWA FMIS database, Illinois Tollway

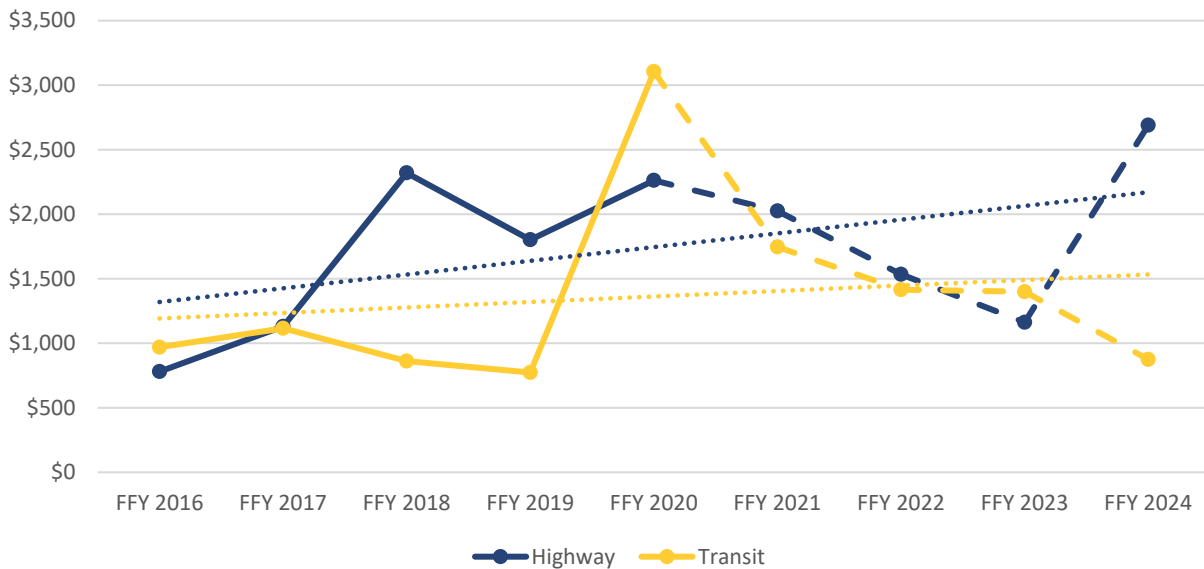

When looking ahead to the next five years, changes to the trends appear to be evident. However, when looking at these trends, it is important to note that based on FFY 2019 obligations data, funds programmed in the TIP represent only about 75% of the funds obligated each year in the region. In particular, non-federal funds, such as local motor fuel tax, are not required to be included in the TIP. While some local agencies, counties in particular, do

<sup>15</sup> Amounts shown are as of the beginning of FFY 2020. Estimated available funds are from the state/regional resources table, with estimated MFT revenues added to each FFY total at the same level as FFY 2019 and do not fully reflect increases from *Rebuild Illinois* or predicted decreases due to the COVID-19 pandemic.

program non-federally funded projects in the TIP, those projects represent a very small portion of the local investments in the region.

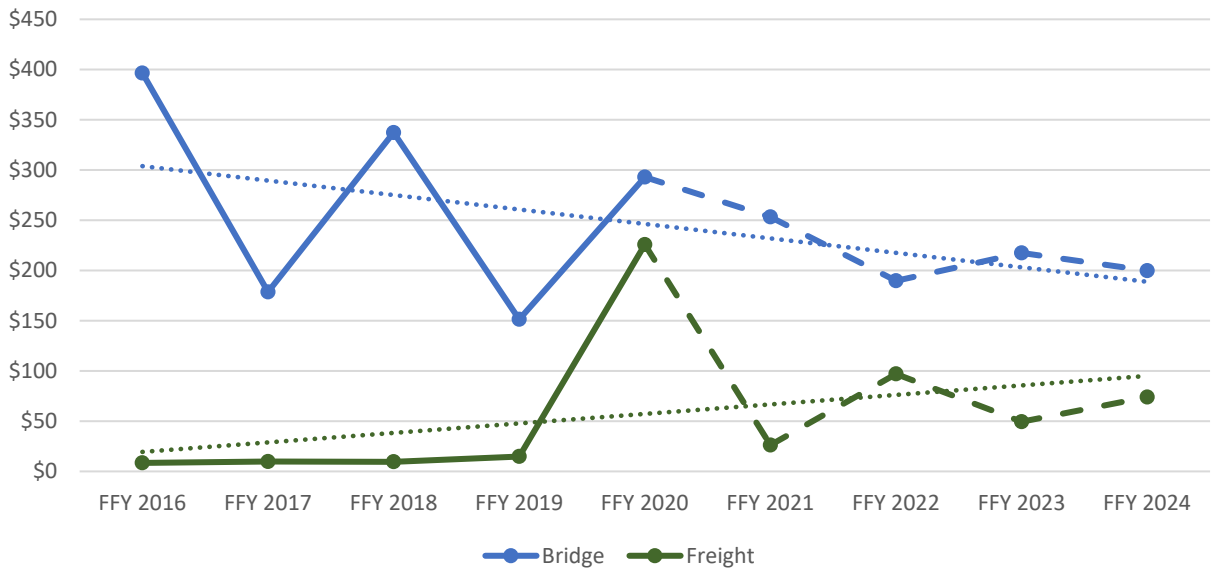

Looking forward at the project types that are planned to be implemented in FFY 2020 – 2024 and comparing programming trends to past obligation trends, Figure 11. shows a flattening of the growth in highway funding, but a shift from declining obligations to increased programming for transit projects. Figures Figure 11, Figure 12., and Figure 13. show that trends continue in the same declining direction for bridge, active transportation, and emissions reduction projects, while freight continues upward and safety and systems management/ITS projects shift from an increasing trend in obligations to a decreasing trend in programming.

**Figure 13. Share of annual obligations (2016-2019) and programming (2020-2024) by overall project type: other project types (\$ millions)**

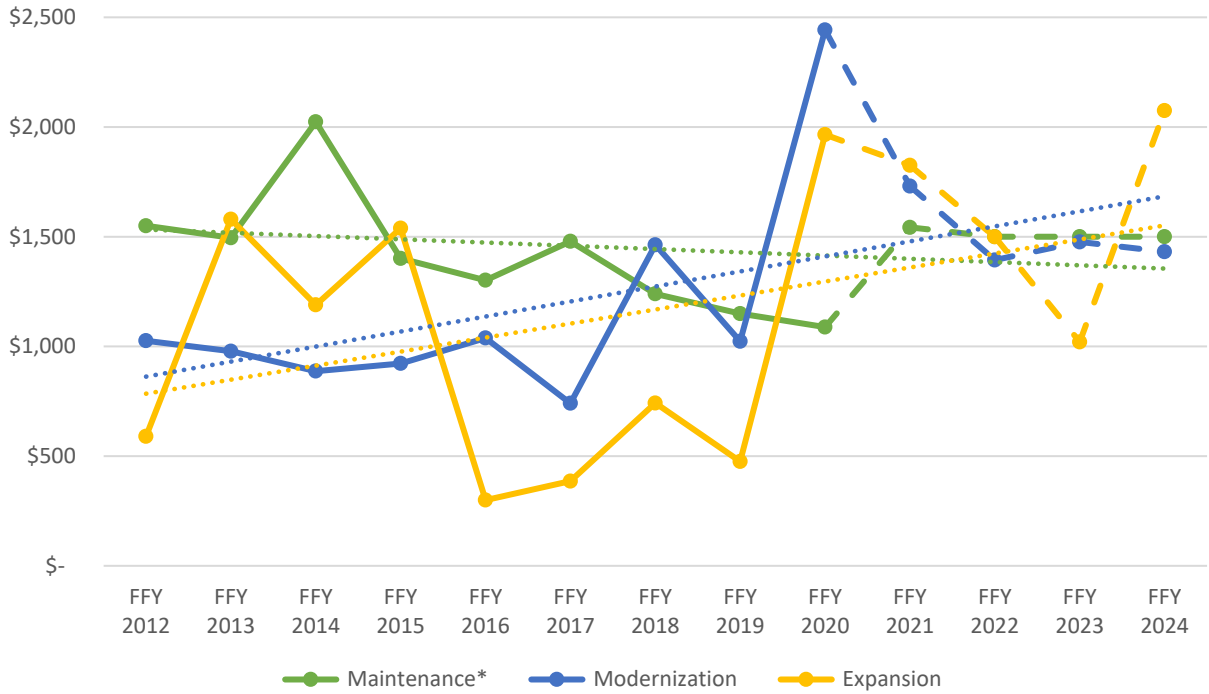

Source: CMAP TIP, IDOT *For the Record*, IDOT MFT records, FTA TrAMS database, FHWA FMIS database, Illinois Tollway

Adding programming data to the maintenance, modernization, and expansion trends, Figure 14 shows that investment in maintenance continues to decrease, modernization continues to increase, and although expansion obligations have been trending downward, that trend may shift based on currently programmed projects.

**Figure 14. MME obligation (FFY 2012 - 2019) and programming (FFY 2020 - 2024) trends (\$ millions)**

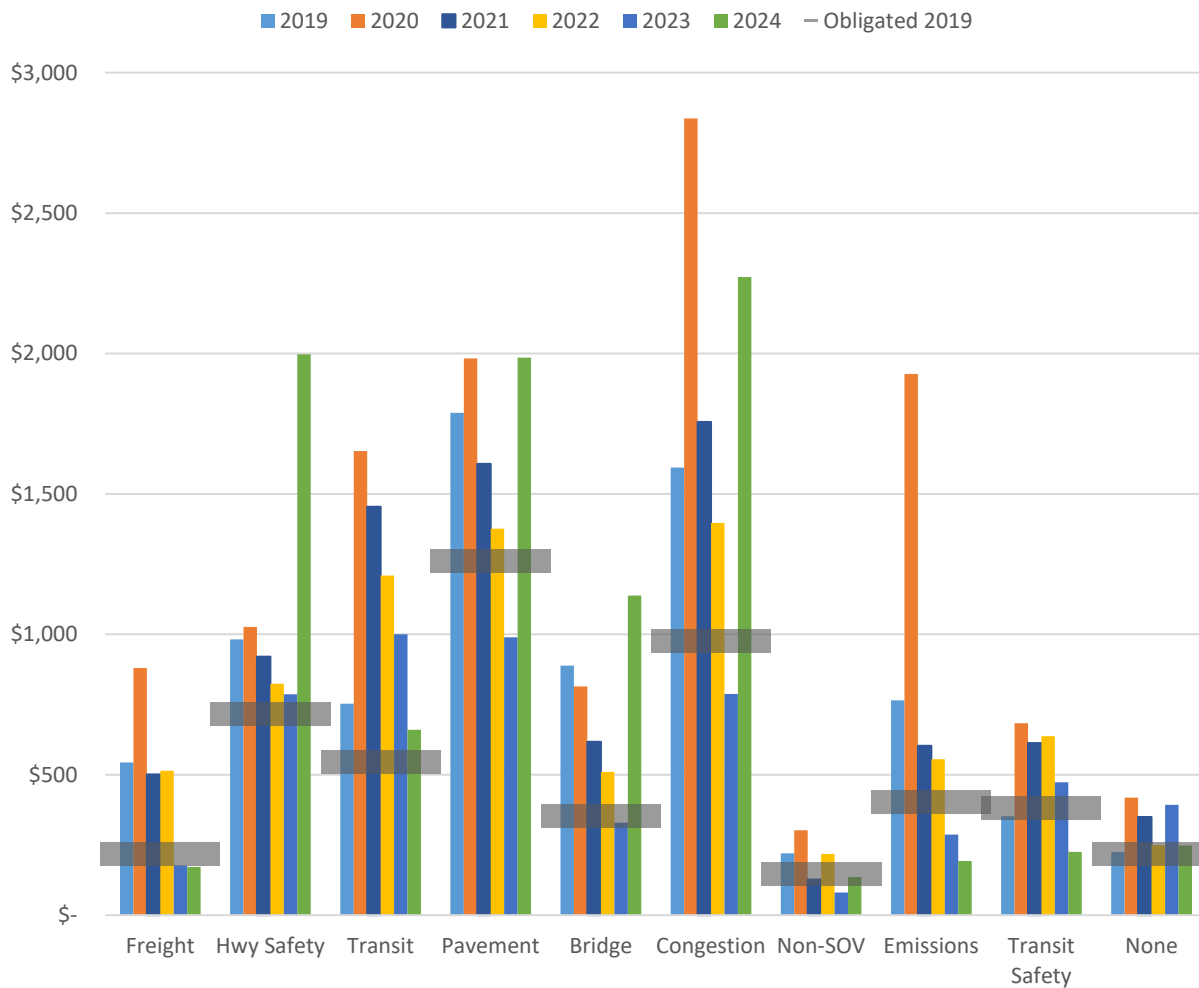

*\*Because maintenance projects are often locally funded, and therefore not included in the TIP, the amounts programmed were inflated based on the FFY 2019 ratio of obligations for projects in the TIP to obligations for projects not in the TIP to better represent expected trends.*

Source: CMAP TIP, IDOT *For the Record*, IDOT MFT records, FTA TrAMS database, FHWA FMIS database, Illinois Tollway

Programming for federal performance measures is higher for 2020 than 2019 in every performance area except bridge condition, as shown in Figure 15. Looking further out, programming declines for most areas. Several tollway and highway RSPs are programmed for major work in 2024, resulting in large increases for highway safety, pavement, and congestion.

**Figure 15. FFY 2020 – 2024 programming by federal performance measure, with 2019 obligations**

## Conclusions

By examining programming, obligation, and performance trends the region can make smarter programming choices in the future that can move the needle on our performance targets and the principles of ON TO 2050. We need to fully program our available resources and be nimble in actively managing our programs of projects so that we can adjust due to changing conditions, both physical and financial.

Knowing what projects are in the early phases of implementation now can help to predict when and where construction and implementation will occur to address performance needs and can also reveal where gaps exist so that projects to fill those gaps can start to be programmed sooner rather than later.

This report represents an initial attempt to connect programming to federal performance measures. The limited data available limits the analysis that can be done. The collection of additional information in the TIP and over additional year will enable analysis that more clearly indicates if our programming aligns with the region's targets.

# Appendices

## Appendix A: Line Item Obligation Details

Detailed information about the individual obligations that occurred within FFY 2019 are included below. This information is also available in an Excel [spreadsheet](#). Because slightly different information is collected for different types of obligations, there are five tables:

### [Table A.1. Federal Highway Administration \(FHWA\) Obligations](#)

Includes obligations made by the FHWA within the CMAP area between October 1, 2018 and September 30, 2019 (FFY 2019). Obligations may be positive or negative, and may represent a new obligation, a change to an obligation made in prior years, or a conversion of a prior Advance Construction (AC) authorization. The table is sorted by TIP ID, Phase, and Last Authorization Date.

### [Table A.2. Federal Highway Administration \(FHWA\) Advance Construction \(AC\) Authorizations](#)

Includes Advance Construction (AC) authorizations made by the FHWA within the CMAP area between October 1, 2018 and September 30, 2019 (FFY 2019) that were not converted to an obligation with FFY 2019. These authorizations represent FHWA consent to proceed with the implementation of the project phase utilizing non-federal funding, and to seek obligation through an Advance Construction Conversion (ACC) at a later date. The table is sorted by TIP ID and phase.

### [Table A.3. Federal Transit Administration \(FTA\) Authorizations](#)

Includes new grant awards or amendments approved by the FTA within the CMAP area between October 1, 2018 and September 30, 2019 (FFY 2019). The table is sorted by TIP ID and award date.

### [Table A.4. State and Local Match for FHWA Obligations](#)

Includes state and local funds used to match FHWA obligations, as reported in IDOT's annual *For the Record* report (October 1, 2018 – June 30, 2019) and as calculated from state letting information (July 1, 2019 – September 30, 2019). This table may include funds obligated by the state or local agencies to match FHWA projects that were authorized in Advance Construction (Table A.2). The table is sorted by TIP ID and IDOT Program ID.

### [Table A.5. Local Obligations](#)

Includes local funds obligated for transportation projects between October 1, 2018 and September 30, 2019, as self-reported by the Illinois Tollway, counties, and City of

Chicago, and as reported in IDOT's Motor Fuel Tax records. The table is sorted by Programmer, TIP ID (where applicable), Council, and Municipality or County.

The following fields are common to all tables, except where noted.

**TIP ID:** The unique identifier for the project in CMAP's Transportation Improvement Program (TIP).

**Programmer:** The agency responsible for managing the project within CMAP's TIP database.

**Council:** The subregional Council of Mayors geographic area in which the project is located. Used for summarizing data.

**Municipality, Township or County:** The municipality(ies), township(s) or county(ies) in which the project is located.

**Project Type:** The category of the project, based on the primary type(s) of work being done.

**Project Title:** The title of the project, as entered in the CMAP eTIP database by the programmer, or as provided within the data source used.

**Project Description:** A brief description of the project, as entered in the CMAP eTIP database by the programmer.

**All Work Types:** A listing of all scope elements included in the project, as entered in the CMAP eTIP database by the programmer. For brevity, work types are listed here by codes. An alphabetical key to those codes is available in the Appendix 3 of the [TIP Document](#). (Not included in Table A.5.) For projects funded with State (non-matching) or local (non-matching) funds that are not included in the TIP, a description of the work is provided (Table A.4).

**Phase:** The phase of work that was obligated. See [Appendix C](#) for a key to the acronyms used in this field.

**Authorization or Award Date:** The latest date within in the federal fiscal year that an authorization was made for the Federal Project and Federal Fund Code listed (Table A.1), the date on which the FTA grant was awarded or amended (Table A.3), the date state and/or local funds were awarded for the listed project phase (Tables A.4 and A.5). Due to data retrieval methods for obtaining FHWA AC obligations, specific dates for

these obligations are not collected or reported (Table A.2). Specific dates for data obtained from IDOT's *For the Record* may also be unavailable (Table A.4).  
ON TO 2050 RSP: A checkmark indicates the line item is part of an ON TO 2050 [Regionally Significant Project](#) (RSP).

Intersects an EDA: A checkmark indicates that based on location information provided in the CMAP TIP, the project is within or intersects an [Economically Disconnected or Disinvested Area](#) (EDA). There may be other projects that intersect EDAs that lacked sufficient location data to be identified.

Bicycle or Pedestrian: A checkmark indicates projects that include scope elements that are related to bicycle and pedestrian improvements, based on the selected work type(s) in eTIP or the project type, title, or description provided.

Programmed by CMAP: A checkmark indicates the line item is funded by a federal fund source for which CMAP selects and programs projects directly. (Not included in Tables A.4 or A.5.)

Source: The source(s) of data for the information presented.

Other line item identifiers, by table:

Federal Project: The unique identifier for the project phase within FHWA's Financial Management Information Systems (FMIS) database. A single TIP project may contain many federal projects. (Tables A.1 and A.2)

State Job: The unique identifier for the project phase within IDOT. Each State Job corresponds to only one Federal Project. (Tables A.1 and A.2)

FTA Grant #: The unique identifier for the grant containing the project with the FTA's TrAMS database. (Table A.3)

Agency ID: The unique identifier for the project used by the programming agency. (Table A.3)

IDOT Program ID: The unique identifier for the project phase used by IDOT (Table A.4)

MFT Section Number: The unique identifier for the project phase within IDOT's MFT database (Table A.5)

Type of funds obligated, by table:

Federal Fund Code(s) and Federal Fund Description: The fund code identifies the specific highway bill and fund type obligated. The federal fund description is the general federal program category obligated (Tables A.1 and A.2). In Table A.2, these sources represent the intended source to be used when the authorization is converted to an obligation in the future, however these sources are subject to change, based on their availability at the time of conversion. Detailed descriptions of fund codes can be found in FHWA's [A Guide to Federal-Aid Programs And Projects](#).

Fund: The type of FTA funds obligated (Table A.3).

Obligation, Authorization or Award, by table:

Obligation: The cumulative amount of federal funds obligated by FHWA for the Federal Project and Federal Fund Code listed throughout FFY 2019 (Table A.1) or the cumulative amount of local funds, including Illinois Tollway funds, obligated throughout FFY 2019 (Table A.5).

AC Authorized: The cumulative amount of federal funds authorized as "Advance Construction" by FHWA.

Federal Funds: The amount of FTA funds obligated (Table A.3). Includes amounts that are also listed in the "Match (TDC)" field.

Transit Match: The amount of funds provided by the transit agency to match obligated FTA funds (Table A.3).

Match (TDC): The amount of Transportation Development Credits (TDCs) applied in order to utilize FTA funds (Table A.3) in lieu of required match. These funds are not in addition to the "Federal Funds" listed, but are shown here for accounting purposes.

State Match: The amount of state funds used to match federal funds (Table A.4).

State (non-matching): The amount of state funds used for project phases not federally-funded or state funds used in addition to the required matching funds (Table A.4).

Local Match: The amount of local funds used to match federal funds (Table A.4).

Local (non-matching): The amount of local funds used for project phases not federally-funded or local funds used in addition to the required matching funds (Table A.4).

Table A.1 FHWA Obligations (excluding match)

08-18-0018	1-22203-0000	DuPage Council	DuPage	West Chicago	Road Maintenance	Forest Ave from Joliet St to IL 59 - LAFO	The project will include cold milling bituminous surface removal and resurfacing with hot mix asphalt leveling binder and surface course. In addition, there will be new street lighting added to the project corridor, pavement patching, crack sealing, intermittent curb and gutter replacement (in kind), detectable warnings and curb ramp improvements, pavement markings, strip reflective crack control, and detector loop replacement as needed. However, the cross section (i.e. number of lanes, width of pavement, etc.) will not change from existing. See existing and proposed typical sections. ## Appendix B: Line Item Obligations with Performance Target Influence

TIP programmers self-report the potential for projects to influence federal performance targets according to guidance from CMAP that relates project scope to the performance targets. All projects with obligations in FFY 2019 that are included in the eTIP database are included in [Table B.1](#) with the self-reported performance targets.

The fields in Table B.1 include the following:

**TIP ID:** The unique identifier for the project in CMAP's Transportation Improvement Program (TIP).

**Programmer:** The agency responsible for managing the project within CMAP's TIP database.

**Council:** The subregional Council of Mayors geographic area in which the project is located. Used for summarizing data.

**Municipality or County:** The municipality(ies), township(s) or county(ies) in which the project is located.

**Project Type:** The category of the project, based on the primary type(s) of work being done.

**Project Title:** The title of the project, as entered in the CMAP eTIP database by the programmer.

**Project Description:** A brief description of the project, as entered in the CMAP eTIP database by the programmer.

**All Work Types:** A listing of all scope elements included in the project, as entered in the CMAP eTIP database by the programmer. For brevity, work types are listed here by codes. An alphabetical key to those codes is available in the Appendix 3 of the FFY 2019-2024 Transportation Improvement Program document.

**Phase:** The phase of work that was obligated. For brevity, phases are listed by codes. See [Appendix C](#) for a list of codes.

**Obligation:** The amount of funds obligated or awarded (based on obligation type) within FFY 2019.

Obligation Type: The type of obligation.

ON TO 2050 RSP: A checkmark indicates the line item is part of an ON TO 2050 [Regionally Significant Project](#) (RSP).

Intersects an EDA: A checkmark indicates that based on location information provided in the CMAP TIP, the project is within or intersects an [economically disconnected or disinvested area](#) (EDA). There may be other projects that intersect EDAs that lacked sufficient location data to be identified.

Programmed by CMAP: A checkmark indicates the line item is funded by a federal fund source for which CMAP selects and programs projects directly.

Highway Safety: A checkmark indicates that the programmer reported that the project has the potential to influence highway safety performance targets.

Transit Asset Condition: A checkmark indicates that the programmer reported that the project has the potential to influence transit asset condition performance targets.

Pavement Condition: A checkmark indicates that the programmer reported that the project has the potential to influence pavement condition performance targets.

Bridge Condition: A checkmark indicates that the programmer reported that the project has the potential to influence bridge condition performance targets.

Congestion: A checkmark indicates that the programmer reported that the project has the potential to influence congestion performance targets.

Non-SOV Travel: A checkmark indicates that the programmer reported that the project has the potential to influence non-SOV travel performance targets.

Emissions Reduction: A checkmark indicates that the programmer reported that the project has the potential to influence emissions reduction performance targets. Note that this performance target is only applied to projects funded with federal CMAQ funds.

Transit Safety: A checkmark indicates that the programmer reported that the project has the potential to influence transit safety performance targets.

The performance target information contained in Table B.1 is incorporated into the downloadable Excel spreadsheet of FFY 2019 obligations and performance data.

## Appendix C: Abbreviations and Acronyms

AC	Advance Construction
ACC	Advance Construction Conversion
CE	Construction Engineering (Phase 3 Engineering)
CMAQ	Chicago Metropolitan Agency for Planning
CMAQ	Congestion Mitigation and Air Quality Improvement Program
CON	Construction
EDA	Economically disconnected and disinvested areas
ENG	Engineering
ENG1	Phase 1 Engineering (Preliminary Engineering)
ENG2	Phase 2 Engineering (Engineering Design)
Est.	Estimate
eTIP	CMAQ's online TIP database
FAST Act	Fixing America's Surface Transportation Act
FFY	Federal Fiscal Year
FHWA	Federal Highway Administration
FMIS	Financial Management Information System (FHWA database)
FTA	Federal Transit Administration
Hwy	Highway
IDOT	Illinois Department of Transportation
IMP	Implementation
ITS	Intelligent Transportation Systems
MAP-21	Moving Ahead of Progress in the 21 <sup>st</sup> Century
MFT	Motor Fuel Tax
MISC	Miscellaneous (project phase)
MNT	Maintenance (project phase)
MPA	Metropolitan Planning Area
MPO	Metropolitan Planning Organization
NHS	National Highway System
OTH	Other (project phase)
ROW	Right of way
RSP	ON TO 2050 Regionally Significant Project
SOV	Single-occupant vehicle
STBG	Surface Transportation Block Grant Program
STP	Surface Transportation Program
Sys. Perf.	System performance
TAP	Transportation Alternatives Program
TDC	Transportation Development Credit (commonly referred to as "toll credits")
TIP	Transportation Improvement Program

TrAMS	Transit Award Management System (FTA database)
ULB	Useful life benchmark
VOC	Volatile organic compounds
VMT	Vehicle miles traveled
NOx	Nitrogen Oxides
PM2.5	Fine particulate matter (2.5 microns or less in diameter)
PM10	Particulate matter (10 microns or less in diameter)

## Appendix D: TIP Project Types

Within the TIP there are more than thirty individual project types, which are grouped into nine major categories throughout this report: Active Transportation, Bridge, Emissions Reduction, Freight, Highway, Safety, System Management/ITS, Transit, and Other. Project sponsors select the project type that reflects the main purpose and work to be done by a project. Most projects consist of work that goes beyond the project type. For example, Road Expansion projects often include maintenance and active transportation work types, in addition to the expansion.

### **Active Transportation**

- Bicycle & Pedestrian
- Other Trails
- Safe Routes to Schools

### **Bridge**

- Bridge (work unspecified)
- Bridge Expansion
- Bridge Maintenance
- Bridge Repair, Rehab, or Replace
- Bridge Routine Maintenance

### **Emissions Reduction**

- Emissions Reduction

### **Freight**

- Freight Movement
- Rail-Highway Grade Separation

### **Highway**

- Intersection/Interchange Improvements
- New/Expanded Interchange
- Road Expansion
- Road Maintenance
- Road Modernization
- Road Signals & Signs

### **Safety**

- Safety

### **System Management/ITS**

- Intelligent Transportation Systems
- Road Operations
- Signal Systems

### **Transit**

- Guideway Improvements
- Other Transit
- Systems Improvements
- Transit Equipment & Furnishings
- Transit Line/Route Expansion
- Transit Operations
- Transit Station/Stop Improvements
- Transit Support Facilities
- Transit Vehicles (Bus/Rail)

### **Other**

- Drainage
- Other
- Parking
- Transportation Enhancements

The Chicago Metropolitan Agency for Planning (CMAP) is our region's comprehensive planning organization. The agency and its partners developed and are now implementing ON TO 2050, a new long-range plan to help the seven counties and 284 communities of northeastern Illinois implement strategies that address transportation, housing, economic development, open space, the environment, and other quality-of-life issues.

See [cmap.illinois.gov](http://cmap.illinois.gov) for more information.
