

Tools That Work

2006 Catalog

When NASA needed a special hand tool for the International Space Station, they called Bondhus. They needed the very best tool for the most demanding of applications. NASA discovered what millions of professional tool users around the world already

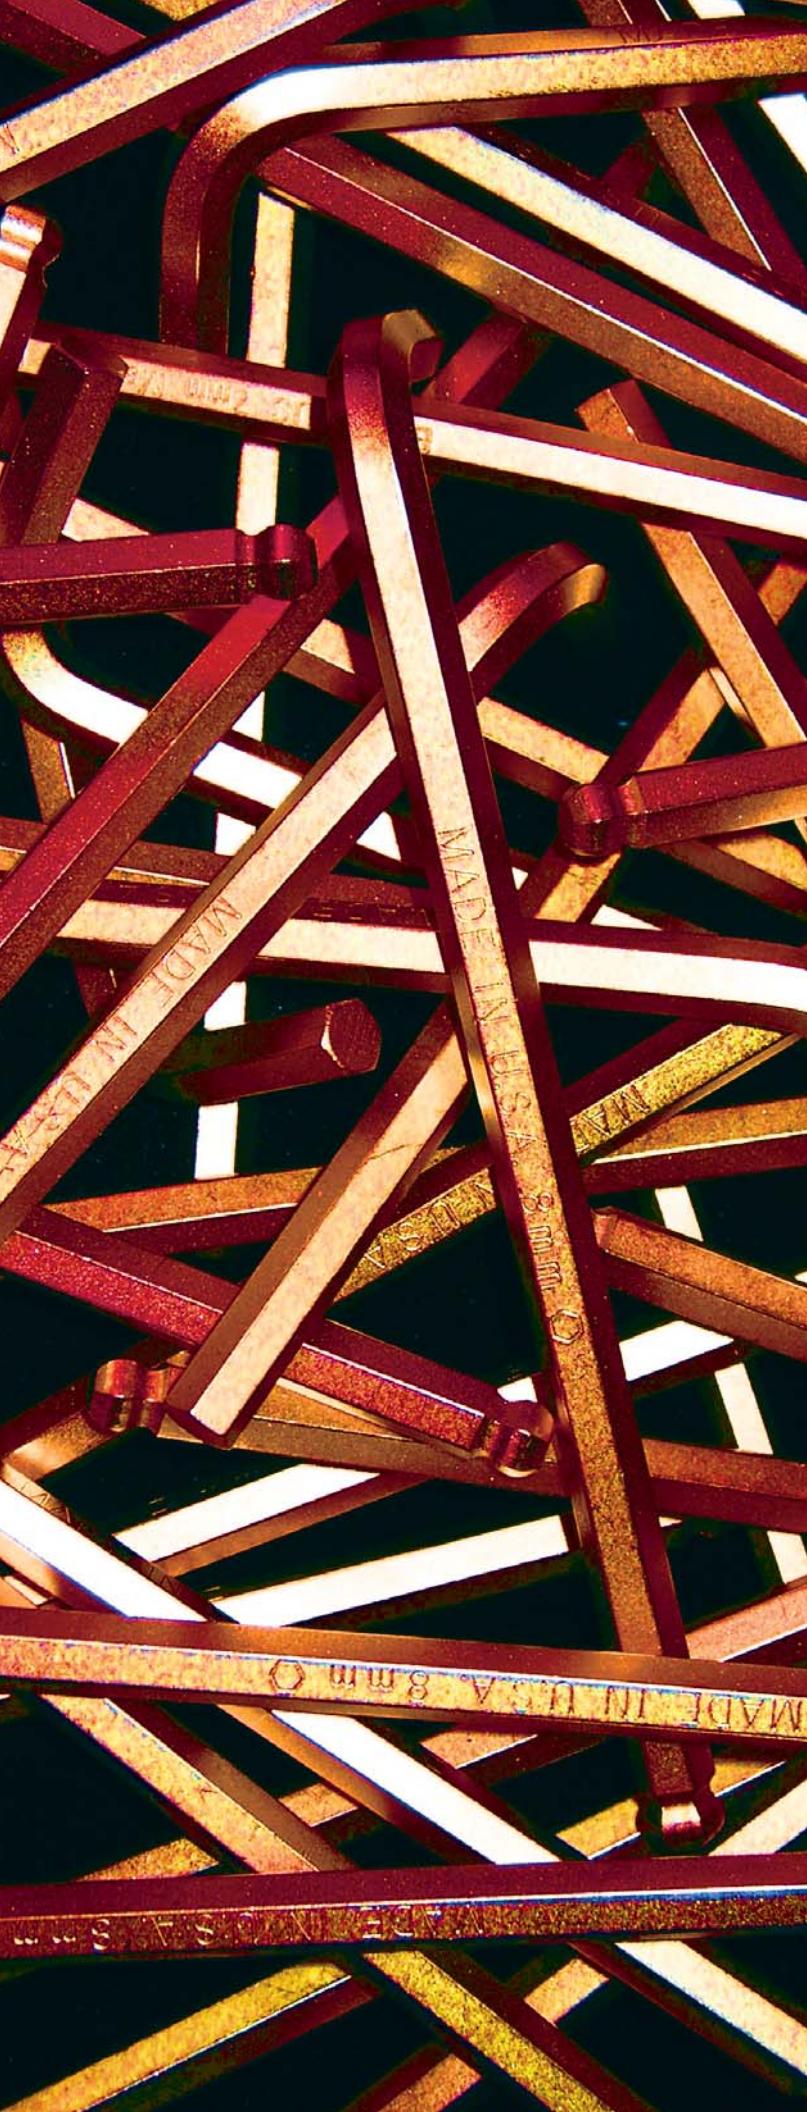

know — Bondhus tools work in even the most difficult circumstances.

Bondhus tools are demanded by the most discriminating hand tool users in more than 60 countries all around the world. Bondhus strength and consistency of quality are the standards by which hand tools are judged. Why do tool professionals at NASA and all over the world demand Bondhus tools? Whether they work in space or on an oil rig in the middle of the ocean, the tools they use have to work the first time... they don't have time to go back for a replacement.

Bondhus tools are made in the U.S.A. and are available in more than sixty countries including:

Argentina • Australia • Belarus • Belgium • Brazil • Canada • Chile • China • Costa Rica • Czech Republic • Denmark • England • Finland • France • Germany • Greece • Hong Kong • Hungary • Iceland • India • Israel • Italy • Japan • Jordan • Korea • Luxembourg • Mexico • New Zealand • Netherlands • Norway • Philippines • Poland • Portugal • Puerto Rico • Romania • Russia • Singapore • Slovak Republic • Spain • Sweden • Switzerland • Taiwan • Thailand • Turkey • Vietnam • West Indies

A note from John Bondhus

Prior to founding Bondhus Corporation, I spent many years as a tool and die maker. I have always taken pride in "working in the shop" and I understand and appreciate the value of high quality, long-lasting, time saving tools. I am personally appalled by second rate tools and I will never compromise usability or quality for lower manufacturing costs or gimmick design features. I am not only a tool maker, I'm a tool user, and I will never disappoint my customers by providing anything less than the finest tools available!

A handwritten signature in black ink that reads "John Bondhus". The signature is fluid and cursive, with a distinct script style.

Protanium® High Torque Steel is much more than "just steel" and much more than a "name." It is a specification, a process and a commitment to producing a level of tool performance unmatched by any competitor.

Protanium® high torque steel is not an 8650 grade steel, it is not a form of S2 and it is not a chrome-vanadium or chrome-moly type steel. It is custom mixed to a formula that is the result of many years of research and continuous development effort.

Bondhus works extensively with its' steel suppliers to ensure meticulous quality control, testing and documentation standards are adhered to. Conformance to Bondhus' specification means qualified technicians perform constant inspection, testing and evaluation steps to make sure the "no compromises" quality policy is always enforced. Over 60 separate tests guarantee that every tool manufactured is 100% within spec.

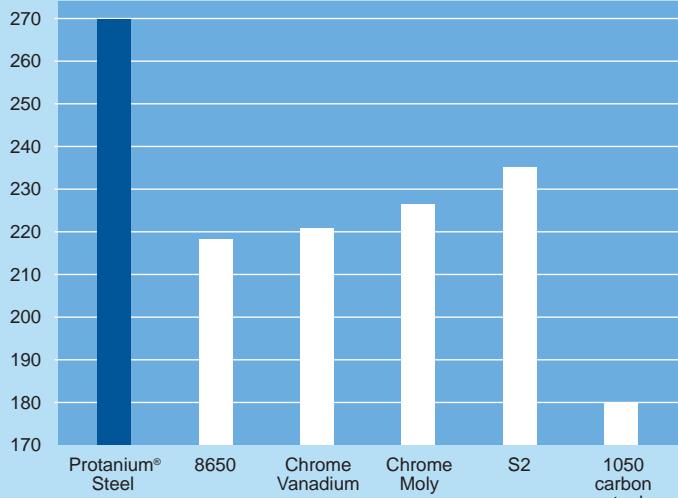

Customized heat treating processes are key to bringing out the superior strength properties of Protanium® high torque steel. Anyone with a piece of steel and a torch can perform some level of heat treating. Attaining results that push beyond industry accepted limits of performance requires equipment, skill, and years of research and development that Bondhus alone has committed itself to.

Hex stock must be smooth and free of pits, burrs, and other imperfections. Bondhus demands 100% compliance from mills that supply steel.

Sharp edges are critical to the tool fitting properly in a fastener. Rounded corners are not accepted. They will cause slippage and failure. Bondhus maintains the toughest standards in the industry.

Grain size is monitored before and after heat treating. A small grain size helps assure conformance to strength and hardness standards.

4mm Tools — Average Stock Torque (in-lb)

Custom mixed steel and precise control of the heat treating process are two keys to producing the strongest hex and star tools in the world.

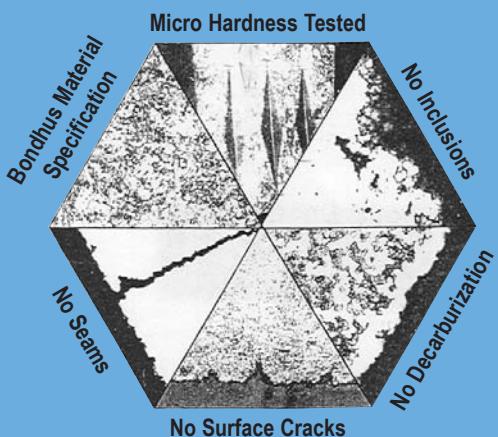

Average Torque (in-lb)

Hardness Rockwell C	Tensile Strength PSI	5/64" & 2mm	1/8"	5/32" & 4mm	1/4"	5/16" & 8mm	Protanium® Steel
61	360000	34	141	273	1125	2187	
59	340000	32	133	258	1063	2065	
57	320000	30	125	243	1000	1944	
55	300000	28	117	228	938	1822	
53	280000	27	109	213	875	1701	8650 Steel
51	260000	25	102	197	813	1579	
49	240000	23	94	182	750	1458	
46	220000	21	86	167	688	1336	
43	200000	19	78	152	625	1215	Carbon Steel
40	180000	17	70	137	563	1093	
37	160000	15	63	121	500	972	

Note

If hardness and good ductility are maintained, then the higher the tensile strength, the stronger the tool.

built to work hard... built to save time... built to last

Cracks, decarburization, seams, surface discontinuities, undisolved carbides, and inclusions are not unusual in common grades of steel. These conditions cause poor ductility and premature tool breakage. The Protanium® steel specification, however, does not allow for these conditions to exist.

Hardness and Ductility

Protanium® Steel is considerably harder than the steel produced by most Bondhus competitors. When competitors do have hardness values approaching that of Protanium® steel, they do so by sacrificing ductility.

Ductility is important to monitor, since as the hardness increases, so does brittleness and the potential for shattering. Every batch of Protanium® steel is tested by applying torque in a standard break test.

The Bondhus standard assures in excess of 99% of all breaks will actually break clean and straight. Most competitors cannot even hit 50% clean breaks. Tools that shatter are a hazard to both the user and equipment in the vicinity.

Hardness testing is performed during and after the heat treating process to accurately measure and constantly monitor hardness values.

Bondhus strives for consistent hardness throughout, not just on the surface. Micro hardness testing is performed beneath a microscope on polished cross sections encased in epoxy. Too much hardness causes brittleness; not enough causes premature wear.

Torsional tensile strength is monitored for every batch of steel. An ongoing effort is made to improve strength and reduce or eliminate shattering. The heat treating process is adjusted for every batch of steel to obtain maximum ductility and hardness.

Extensive lab testing has proven that Bondhus tools consistently generate up to 20% more torque than any other manufacturer in the industry. Independent lab testing results are available within the

Tech Library section at www.bondhus.com.

Inferior Tools are Expensive

Time is money, and the real cost of using an inferior tool is realized when something goes wrong. As anyone who works with mechanical devices knows, bad things occasionally happen. It's not a question of "if", but rather "when".

Stripped screw heads are one of those bad things that happen. A stripped screw head can no longer be removed with a hex tool. If it's in a difficult to reach location, where a clamping device cannot grip it, the task becomes particularly problematic.

The cost of a high quality hex tool is negligible compared to the cost of removing a broken or stripped screw. Will the removal take a few hours? An entire day? What is the real cost of an inexpensive, poorly performing hex tool?

Bondhus quality hex tools are made from Protanium® high torque steel and have sharper corners to generate maximum holding and turning forces within the screw to virtually eliminate stripped screw heads.

Professional hex tools

deliver a level of performance not attainable by consumer grade tools. In addition, safety is a factor that can impact the "actual" cost of ownership. As a result, knowledgeable buyers and professionals alike recognize the serious dangers of inferior tools that shatter instead of breaking clean.

The purpose of a high quality tool is to provide a faster, easier, and less costly means of performing a task. Bondhus strives to provide not just "good" tools, but the finest tools available anywhere. Customer satisfaction is what we strive for.

Why a Bondhus Ball End Tool?

A ball end tip is a tremendous time saver. It allows a tool to be inserted into a screw head quickly, even from an angle or when working in the blind.

The concept by which the ball end tip slides into a screw head is known as funnel insertion. The side of the ball end directs or funnels the tool into the screw head, and precise machining ensures an exact fit between tool and screw head.

Bondhus is not a "me too" manufacturer of ball end tools; Bondhus invented the hex ball end and for almost forty years has been continually improving on this invention. Bondhus ball end tools sell better than the competition because they work better and last longer than competitor tools. It's that simple. Bondhus ball end tools significantly reduce the amount of time it takes to complete a task.

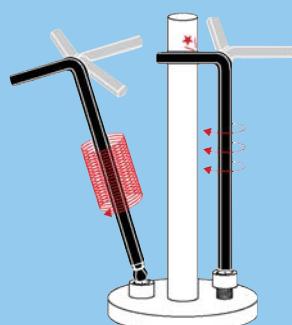

Angle entry to 25°

- Works in hard to reach areas
- Faster insertion and removal
- Precisely machined tip "funnels" itself into screw head

Ergonomic design

- Allow natural hand and wrist rotation
- Turns a full 360° in location
- Reduces user fatigue

Efficient design

- Works even in blind locations or near obstructions
- Eliminates need to continuously remove, reposition, and reinsert tool
- Engages to full depth
- Reduces 'stripping' problems

Bondhex™ Cases

Thirty years ago, Bondhus introduced the first molded case for organizing hex keys.

- Color coded for easy identification:
Inch (yellow)
Metric (red)
Star (green)
- Convenient storage holds tools firmly in place

- Organizes hex tools in a compact manner
- Sorts and prevents loose or lost hex keys
- A slight twist of the wrist releases tools from their locked position

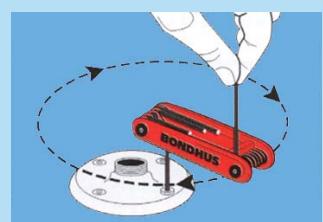

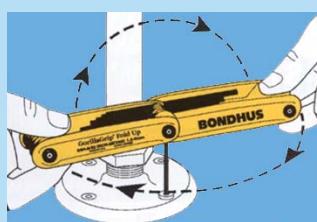

GorillaGrip® Folding Tools

Bondhus developed the molded handle that revolutionized the concept of fold up tools.

- Handle fits comfortably in a users hand
- Does not conduct heat or cold
- 40% stronger than comparable steel handles
- Time saving blade selection
 - Special flutes separate tools
 - Flutes allow quick selection of one blade at a time
 - Eliminates annoyance of having to constantly unstack blades to make a selection
- Eight different tips available

- Color coded handles for easy identification: Inch (yellow), Metric (red), Star (green).
- Turn & flip feature eliminates constant repositioning of tool when working near obstructions
- 90° stop feature converts the GorillaGrip® folding tool into a time saving speed wrench

built to work hard... built to save time... built to last

Stubby tools

Bondhus was the first U.S. manufacturer to introduce a complete line of short arm hex key tools for applications where a standard hex key cannot reach.

- Reach into low clearance areas and turn a screw
- No need to ever cut down and file a standard wrench again as a makeshift solution
- Tighter short arm radius than a standard hex key
- Short arm has hex tip, and long arm has a ball end tip for maximum time savings

ProHold® Tip Screw Holding Technology

Bondhus is the developer and exclusive manufacturer of patented ProHold® tip tools — the best screw holding technology available.

- Holds screws tight on the tool every time
- Available for both hex and star tools
- Bondhus is the only manufacturer making screw holding tools in sizes as small as .050" and 1.27mm
- Smooth tool rotation is preserved
- Does not reduce the strength of the tool or cause damage to the screw head
- Non-magnetic
- Never drop a screw again
- Available in a full range of Hex and Star sizes: .050" to 3/8", 1.27mm to 10mm, and T9 to T60

Handles Designed for Productivity

Ergonomically Shaped T-handles

Bondhus is the only U.S. manufacturer to design and build T-handles that fit the shape of a user's hand.

- Mass of the full metal handle generates a flywheel effect for rapid insertion or removal of screws
- Tough coating resists damage and cushions grip
- Handle does not attract or hold dirt — excellent cleanup qualities
- Slight curve eliminates painful problem of handles digging into hands
- Handle welded directly to blade - eliminates loosening and wobbling of blade due to wear
- Focuses effort on turning a screw, instead of finding a comfortable grip on the handle
- Color coded for easy identification: Inch (yellow), Metric (red), Star (green)

ComfortGrip Screwdriver Handles

Bondhus was the first U.S. hex tool manufacturer to introduce cushioned grip style screwdriver handles for hex and star tools.

- Handles proportioned to blade size to prevent blade breakage
- Soft, cushioned handle with positive, non-slip surface
- Good grip even with wet or oily hands
- Reduces fatigue to accomplish more — with less effort
- Anti-roll on inclined or vibrating surfaces
- Color coded for easy identification: Inch (yellow), Metric (red), Star (green)

Star wing and flag handles

These are real time savers for special star and star plus applications.

-
- Can be gripped in many different ways
 - The green handle top allows for rapid fingertip spinning of tool
 - Handles generate needed torque to seat or break loose a screw — even the very delicate screws found in electronics applications

ProGuard™ dry surface protection is yet another Bondhus exclusive. It is the most effective solution in the industry for protecting tools from rust and corrosion.

Most hex tool manufacturers cut corners by providing inadequate protection against corrosion. Tool manufacturers deal with the problem of rust and corrosion by providing a range of solutions:

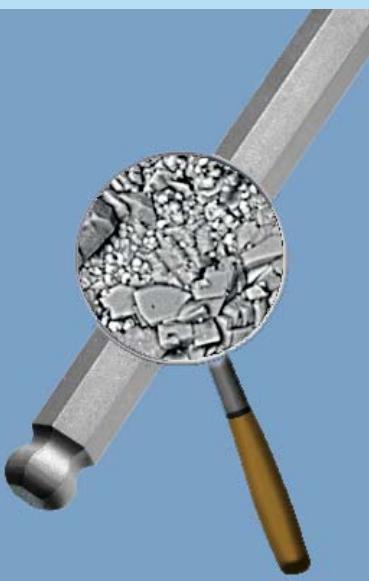

- Plating provides a degree of protection, but it eventually nicks, flakes or wears off, and allows water to seep in.
- Black oxide finishes provide only limited protection. Almost with the first use, the finish begins to wear off and allow water to penetrate through to the tool.

- Coating a tool with oil is nearly no protection at all. Almost immediately, it is vulnerable to rust and corrosion.

ProGuard™ dry surface finish is a radically different solution that offers vastly superior protection. It starts with caustic cleaning to remove all oxides and impurities on the surface. A proprietary electrolytic process is then used to grow a very tight and small grained crystal structure on the surface of the tool. In addition, a fast drying oil is used to provide yet a second line of protection. The resulting finish creates a surface that is very difficult for moisture and contaminants to penetrate.

Results of comparative Salt Spray performance testing, conducted by an independent lab, provide dramatic proof that the Bondhus ProGuard™ corrosion protection is up to five times more effective than any other solution available. Independent lab testing results are available within the

Tech Library section at www.bondhus.com.

Consistency Of Machining:

Every manufacturer advertises the "quality" of their tools. Independent laboratory testing, however, reveals results that are not always consistent with those claims.

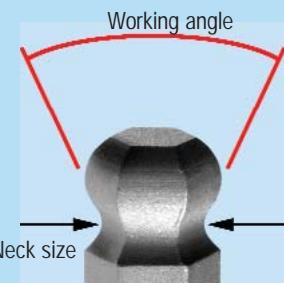

A tools' effectiveness is directly proportional to how well it fits into a fastener. Bondhus manufactures tools to the tightest tolerances in the tool industry. Every tool is designed for the absolute optimal fit in a fastener. Tighter tolerances mean the best possible fit between tool and fastener will always be achieved.

The Bondhus specification demands stock that is free of defects created in the drawing process, sharp and clean corners, precise machining and a tightly sealed surface to prevent damage from corrosion.

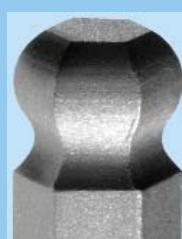

A poorly machined ball end tip does not fit properly into a screw head. It risks stripping the screw head and may not produce a

smooth rotating action, further hampering tool use.

Machining a ball end on a small tool is very difficult to accomplish. Compare the precision of a Bondhus .050" ball end and the tool of a typical competitor. (See photo at bottom of page.) Bondhus means precision.

Strength and working angle are two of the primary characteristics by which ball end tips are rated. Increasing neck size produces a corresponding increase in strength, but does so at the expense of allowable working angle. Conversely, a smaller neck size increases working angle, but decreases strength.

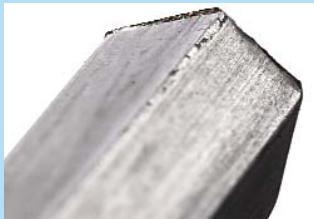

Bondhus Precision

Competitor poorly machined

built to work hard... built to save time... built to last

No Burrs: The clearance between a hex key and the screw into which it is inserted is typically .0005" or less on each side of the key, and even a small burr can interfere with or prevent insertion. If the socket of a screw head is on the small side of its tolerance, and the hex key is on the large side, any amount of burr will prevent proper insertion.

The imprecise nature of the competition's cutting method known as 'precision cutting' creates burrs that interfere with inserting the tool into a screw head.

Chamfering: Insertion of a straight hex or star tip into a screw head is much easier when all burrs are eliminated by chamfering the tip of the tool. Bondhus employs several styles of chamfers, using each style where it is most effective. The type of chamfer used is not critical. The point is to ensure that burrs are removed from all hex and star keys as shown by the Bondhus tool below.

Bondhus ball end tips are unique. They are capable of achieving superior torque while retaining a working angle of up to 25° because of

the superior torque and ductility characteristics of Protanium® steel. No other competitor can match this performance with common grades of steel.

Every Bondhus tool is subject to its own set of specifications. Bondhus is meticulous about quality control — no deviation from the spec, no seconds, no exceptions. Period.

At Bondhus, we believe in the quality of our tools and the warranty they carry is your proof. Not all warranties are created equal, and the tool industry is no exception. Reading the fine print often makes telling statements about the manufacturer's confidence in their own product.

Bondhus tools are designed by toolmakers to work hard, save time, and to last. Only Bondhus offers an unconditional lifetime warranty.

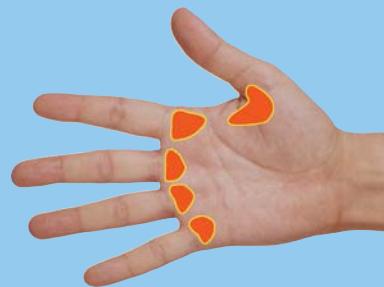

All Bondhus products are guaranteed for life. If you are not happy with a Bondhus® tool — for any reason — simply return it. A replacement will be shipped right out at no cost — no hassles, no questions asked!

Ergonomic Handle Designs

Good handle design doesn't just happen; it's the outcome of experience and design refinement performed by dedicated people who care about the tool user. Bondhus handles are designed by people who know, understand, and use tools for a living.

- **Tool user strength** is a major consideration in handle design because handles need to accommodate a range of hand strengths. Bondhus designs its handles to accommodate a wide range of user hand sizes and strengths.

- **Ergonomic designs** ensure all handles fit comfortably in the users hands. As a result, tool users experience less fatigue and the pain associated with aggressive or prolonged tool use. Non slip surfaces ensure good grip, even in wet or oily conditions.

- **Bondhus handles**, fitted with ball end blades, are designed and sized to match the torque capacity of each blade tip.

- **Blade torque** is accurately established for every blade and is consistently maintained in the manufacturing process. Variations in torque yield unpredictable results when the blade is coupled with a handle. Tool users can be confident that Bondhus handles will not over torque the blade, and result in damage to the tool.

Bondhus handles are well designed, are a joy to use, and greatly enhance a tool user's efficiency in performing a task. In addition, Bondhus handles are designed to protect both their blades and the fasteners they drive from wear and breakage.

ProHold® Tip Tools

Available in a full range of hex ball end and star sizes:
• .050" to 3/8"
• 1.27mm to 10mm
• T9 to T60

Color Coded

- Inch
- Metric
- Star

High Torque Steel:

- Up to 20% stronger, with more torque and twice the wear resistance of standard grades of steel.

Corrosion-resistant finish:

- Environmentally safe, provides better tool grip, resists solvents and is 5 times more corrosion resistant than competitor finishes.

Holds screws tight on the tool **EVERY TIME**

 **proFanium**
HIGH TORQUE STEEL

 **ProGuard**
DRY SURFACE TECHNOLOGY **DST**

Ball End Tools

Balldriver® tools are tremendous time savers

High quality machining means:

- Smooth rotational action
- Extended tip life
- Reduced fastener wear

Color Coded

- Inch
- Metric
- Star

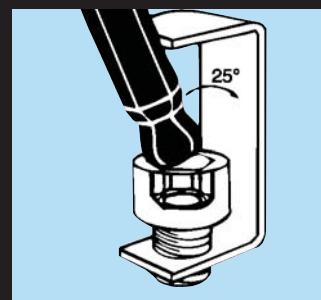

ProTanium™ High Torque Steel:

- Up to 20% stronger, with more torque and twice the wear resistance of standard grades of steel.

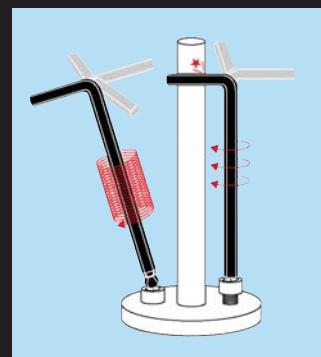

ProGuard™ Corrosion-resistant finish:

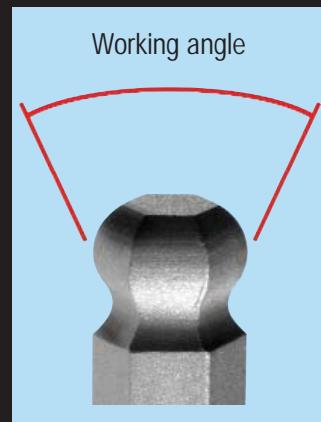

- Environmentally safe, provides better tool grip, resists solvents and is 5 times more corrosion resistant than competitor finishes.

Screws insert into screw head quickly, from up to a 25° angle, even when working in blind locations

Work efficiently, even near obstructions

Engineered to deliver the perfect balance between tip strength and working angle

Stubby Tools

Color Coded

- Inch
- Metric

High Torque Steel:

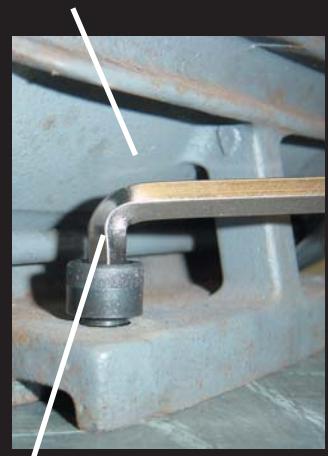

- Up to 20% stronger, with more torque and twice the wear resistance of standard grades of steel.

Corrosion-resistant finish:

- Environmentally safe, provides better tool grip, resists solvents and is 5 times more corrosion resistant than competitor finishes.

Low profile short arm allows entry into tight spots

Smaller inside radius for tight spaces

Ball end tip on long arm for fast insertion or extraction

Standard hex key can't fit in tight spots

Stubby hex keys eliminate the need to trim and file the short arm. A trimmed hex key introduces burrs, and still does not have the tight radius of a dedicated Stubby wrench.

Hex Key Tools

Chamfered tips for fast insertion and full tool engagement in the screw head

Twist-to-Lock case keeps keys organized by size

Sizes are printed on the case, making it easy to locate tools

Cases marked and color coded

Sorts and prevents loose or lost hex keys

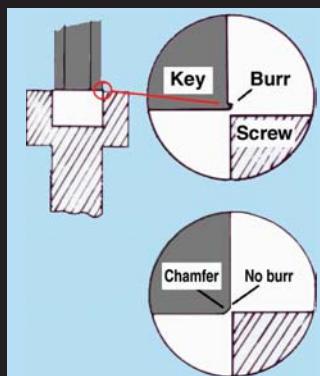

Twist to lock keys securely in place

Case may be used to increase leverage

Burr prevents key from fitting

Chamfered Bondhus key slides easily into screw head

Color Coded

- Inch
- Metric
- Star

High Torque Steel:

- Up to 20% stronger, with more torque and twice the wear resistance of standard grades of steel.

Corrosion-resistant finish:

- Environmentally safe, provides better tool grip, resists solvents and is 5 times more corrosion resistant than competitor finishes.

Hex and Star wrenches are also available

Hex Key Sets

Extra Long, Long, Short & Stubby

Bondhex™ cases provide a convenient means of keeping hex keys neat and organized. Sizes are printed on the case and allow identification at a glance.

Cases are color coded yellow for inch, red for metric, and green for Star tools. Case can be used in conjunction with the tool to increase torque.

 **Profanium**
HIGH TORQUE STEEL

 **ProGuard**
DRY SURFACE TECHNOLOGY **DST**

Screwdriver Tools

ComfortGrip

Color Coded

- Inch
- Metric
- Star

High Torque Steel:

- Up to 20% stronger, with more torque and twice the wear resistance of standard grades of steel.

Corrosion-resistant finish:

- Environmentally safe, provides better tool grip, resists solvents and is 5 times more corrosion resistant than competitor finishes.

Bondhus handles are designed and sized to match the torque capacity of each blade tip.

Ergonomically designed handles deliver maximum torque with unrivaled comfort and grip

Slight texture of handles helps retain grip, even when hands are wet or oily

Fold Up Tools

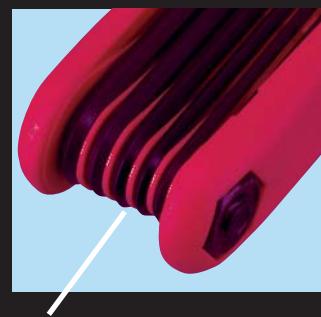

GorillaGrip® Fold Ups

Handle is 40% stronger than steel handles

Comfortable to hold, and does not conduct heat or cold

Protected by 7 US and foreign patents

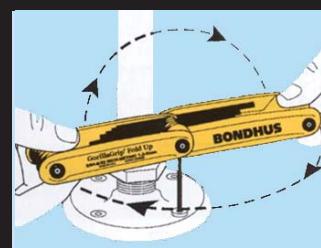

Patented Flutes:

Flutes allow for easy selection of one tool at a time

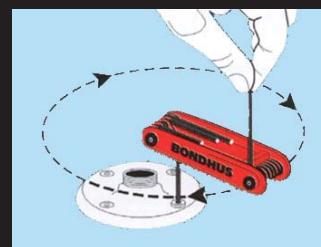

Quick Blade Selection:

Blades are accessed from both the top and bottom, eliminating the constant 'unstacking' of blades

Turn & Flip Feature:

Eliminates constant removal and repositioning in screw head when working against obstructions

Speed Wrench Feature:

90° stop converts the tool into a non-stop, time saving, speed wrench

Color Coded

- Inch
- Metric
- Inch & Metric

- Utility

High Torque Steel:

- Up to 20% stronger, with more torque and twice the wear resistance of standard grades of steel.

Corrosion-resistant finish:

- Environmentally safe, provides better tool grip, resists solvents and is 5 times more corrosion resistant than competitor finishes.

T-Handle Tools

Handle and blade are securely welded and will never loosen or slip.

Color Coded

- Inch
- Metric
- Star

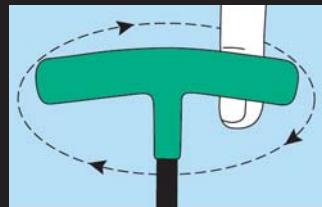

proTanium[®] High Torque Steel:

- Up to 20% stronger, with more torque and twice the wear resistance of standard grades of steel.

ProGuard[®] DST Corrosion-resistant finish:

- Environmentally safe, provides better tool grip, resists solvents and is 5 times more corrosion resistant than competitor finishes.

Heavy duty handle generates a flywheel effect for super fast insertion or removal of screws.

Handle is shaped for comfort and control, and is ergonomically superior to older style straight handles.

Available in 6, 9", and graduated blade lengths

Cushioned feel reduces fatigue

Handle sizes are engineered to match blade torque capabilities:

The 5/32, 3/16", 4 and 5mm blades, in ball end sets, have smaller handles to prevent over-torqueing.

The 3/32, 7/64, 1/8, 9/64" and 2, 2.5 and 3mm blades are always straight hex tips to prevent breakage. A T-Handle could easily over-torque and break smaller size ball end tips.

T-Handle Sets

Hex, Ball End & Star Sets with ProGuard™ finish

**Minimum torque capacities Bondhus tools generate without breakage.
Other manufacturer's tools may break with considerably less torque.

Discover the Bondhus Difference

#1 In Customer Service!

Here's why:

- No Minimum Orders
- No Stocking Requirements
- No Drop Ship Fees
- 97% Same-Day Order Fulfillment
- No Hassle Returns
- Lifetime Warranty
- Highly-Trained, Experienced In-House Customer Service Department
- End User Education
- Full Range of Hex & Star Products
- Free Sales Aides & Merchandisers
- Custom Manufacturing
- New Expanded Sales Hours:
7 am to 6 pm central time

Special Manufactured Products

As one of the few tool companies in the world that will do custom manufacturing, we can help you create the exact tool to fit your application or requirements.

- Call us at 800-328-8310 with your requirements. Our Customer Service Department will speak with you about:
Quantity
Tool type, length and diameter
Construction material and coating

With 35 years of experience, they can offer suggestions on the best tool configuration for your application.

- Our engineering department will quickly process your request and offer a quotation*. Upon your approval, CAD drawings will be created. A simple signoff is all that is required.
- Production will begin. Within approximately 8 weeks from final approval, your Special Manufactured Product will be shipped.

* F.O.B. Monticello, MN. Quotes are valid for 6 months.
Minimum order is \$750 per line item
